Every common ſailor who takes a ſhare in the toil, will hardly be preſumed fit for command. Being placed in the center of practical buſineſs, and taking ſome inferior part in it's tranſactions, is far from being ſufficient to qualify a young gentleman to hold the rudder of large concerns hereafter. The mechanic artizan and manufacturer, it is true, may be inſenſibly diſciplined to perform works of the hands with wonderful dexterity: even children, we know, may be trained to do extraordinary things that way, by reiteration of one and the ſame work. In like manner may the mechanical merchant be bred; but where ſo general a knowledge, ſuch variety of accompliſhments, ſo clear a head, and ſo much real judgment and addreſs are abſolutely neceſſary, no man, acquainted with the world, can imagine, that being bred in a parrot-like manner ſhould, at this time of day, enable the young merchant to excel in the arts of commerce.
We are not inſenſible there have been ſome gentlemen, who, deſtitute of all previous requiſite mercantile inſtruction, have, from very trifling beginnings, ſtruck into foreign commerce; and, by the uncommon ſtrength of their natural abilities, prompted by great induſtry, and favoured by a ſeries of fortunate events, have acquired great eſtates. Such as theſe we have known; and we have known likewiſe, that where this hath been done, without clandeſtine and diſhonourable meaſures, thoſe gentlemen have been of capacity and application as ſingular as their good fortune: they have indeed been perſons rather to be admired than imitated. But traders, who, without their ſuperlative talents, have been daring enough to follow ſuch examples, if for a time they have happened to ſhine in the commercial world, it has been like thoſe meteors in the natural; which, after furniſhing matter of aſtoniſhment for a while, have ſoon deſtroyed themſelves, and involved in their ruin all who have been unhappy enough to be within the ſphere of their influence.
Though we have thus taken the freedom to ſignify our diſapprobation of the uſual methods of bringing up our young Britiſh merchants in general, yet we are ſenſible, very ſenſible, that too many youth, as well among merchants as other ranks of men of buſineſs, reap little advantage by the happy opportunities they ſometimes enjoy, of excelling in their peculiar province. The beſt examples and inſtruction, the moſt intereſting incitements to attention and aſſiduity, make little impreſſion on the deſultory and inconſiderate. The diſtinguiſhed figure in trade ſome young gentlemen make, in compariſon to others, ſufficiently diſcriminates the ſuperior benefits they have received from thoſe counting-houſes, wherein they have been happily bred.
But what advantage can ſuch expect to receive, that are unhappy enough to fall into the hands of thoſe who are capable, yet not inclined; or of thoſe who are incapable, though well inclined, to do them juſtice? Inſtead of a conſtant ſucceſſion of merchants, eminent for their ſkill and ingenuity, may we not rather expect to ſee a daily declenſion? And may not the kingdom be thus left deſtitute of a competent number to proſecute it's foreign traffic, either with that emolument to themſelves, or that benefit to the ſtate it will admit of? Under ſuch melancholy circumſtances, it will be matter of no great admiration to hear woeful complaints and lamentations on the decay and badneſs of trade, when the defect and imperfection may manifeſtly lie in traders themſelves.
Without expatiating on a matter ſo apparent to every one, who will give himſelf the liberty candidly and impartially to weigh and conſider it, we ſhall only obſerve, That nothing ſeems more wanted than a proper place, or well regulated inſtitution for mercantile education; where the theory and practice

practice of trade might be taught, as near as could be at the ſame time; and a general knowledge of commerce, and it's practical arts communicated, as the firſt ſtep towards engaging in any branch of it.

And, as the reduction of the intereſt of money will have a tendency to induce many perſons of mature years to ſtrike into trade, as well as a greater number of young people to be trained up for it, in order to ſettle either at home or abroad: as the lowneſs of intereſt will certainly increaſe the number of Britiſh traders in Europe, and, it is to be hoped, the trade of the nation proportionably: and, as all other countries are increaſing their trade and traders likewiſe, it follows, that the ſkill, adddreſs, and ingenuity of our Britiſh merchants, cannot, at preſent, be too great. Whereas, when the trade of our own nation, as well as that of others, was in a very few hands in compariſon to what it is now, and the intereſt of money double and treble what it is at preſent: when theſe were the circumſtances of public affairs, and the benefits of trading between the Exchange and the Exchequer were extraordinary, as well as the profits on trade in general, numbers acquired very great eſtates, without any great accompliſhments. This great change in the ſtate of our affairs, pointing out the reaſonableneſs and neceſſity of the propoſed inſtitution, it is humbly preſumed, that it will prove as acceptable to all wiſe and good men, as the ſame is zealouſly intended for the public benefit and utility.

The General PLAN Delineated.

Of the ſeveral particulars to be taught in the propoſed COLLEGE.

It is propoſed to take no young gentleman into this mercantile ſeminary, under fifteen years of age; nor any but ſuch who are qualified in ſchool-arithmetic, and maſters of a tolerable current hand-writing *.

* It is my intention, ſome time or other to draw up a plan for the education of the Britiſh merchant from his infancy, as preparatory to his admiſſion into a college of this kind.

A thorough knowledge and expertneſs in mercantile computations being previouſly neceſſary to all other accompliſhments, it is propoſed to go through every diſtinct courſe relative thereunto; and that in ſo intelligible and ſcientific a manner, as the rationale of every thing may very clearly appear *. For as, from the whole of this deſign, we have in view the gradual exerciſe and improvement of the underſtanding, and inſenſibly ſtrengthening the judgment, ſo nothing, it is conceived, will be more naturally conducive thereunto, than demonſtrating the reaſon and foundation of all rules given in the courſes of our mercantile calculations; ſkill in figures being founded in reaſon †, facility of operation in reiterated practice: which the profeſſors ſhould not be wanting duly to promote.

* See our article MATHEMATICS.

† See our article ARITHMETIC.

Knowledge in the foreign exchanges being very eſſential to the qualification of the merchant, this ſubject ſhould be treated in all it's various lights.

That a clear idea may be formed of our intention with regard to this particular, it may be neceſſary to obſerve:

1. That the moſt conciſe and practical methods of converting the ſterling money of England into the monies of exchange and of account of all places throughout Europe be demonſtrated, according to the direct courſes of exchange eſtabliſhed for thoſe purpoſes, and vice versâ.

2. The methods of converting ſterling money into thoſe of all other places of commerce, wherewith England has no direct eſtabliſhed courſes of exchange, but is under the neceſſity of making uſe of the intermediate exchange of other places: together with the nature of the agios, and the manner of turning their bank monies into current, and the reverſe.

3. The manner of calculating all the foreign monies throughout Europe into thoſe of every other diſtinct country, either by direct or intermediate exchange; which makes a much greater variety of caſes than thoſe, who are not thoroughly acquainted with this extenſive ſubject, can imagine.

4. The art of arbitrating * the prices of exchange throughout all Europe †.

* Les arbitrages, en matiére de change, ne ſont autre choſe qu'un préſentiment d'un avantage conſidérable qu'un commettant doit reçevoir d'une remiſe ou d'une traite faite pour un lieu préférablement à une autre.

Le pair, ou l'égalité des monnoies courantes, ou le pair des places, qui eſt le point le plus délicat, le plus eſſenciel, & le plus innocu du commerce de change, & de banque, ſe prend en deux maniéres.

La premiére eſt au pair, qui ſuppoſe un juſte rapport & une valeur exacte de la monnoie d'un païs avec celle d'un autre, comme quand 1 rixdale de 50 ſols, monnoie courante de Hollande, ou d'Amſterdam, eſt comptée en égale valeur de 1 ∇ (a) de 60 ſols Tournois de France, ou de 54 deniers, ou pens, ou 4 ½ chelings d'Angleterre, & ainſi des autres places. Sans cette connoiſance, on ne peut pas ſavoir le profit ou la perte qu'on fait aux changes, ou ſur les merchandiſes étrangéres; car comme il y a un pair & egalité des meſures & des poids du monde, il eſt auſſi néceſſaire qu'il y ait un pair & egalité des monnoies; autrement un négociant ne ſauroit ce qu'il feroit, ni ſi le prix qu'on lui demanderoit d'une choſe, fût ce en change, ou en marchandiſe, ſeroit haut ou bas.

La ſeconde eſpéce d'égalité entre les places, eſt tirée des prix courans des changes, par laquelle on entend ſeulement cette proportion requiſe d'une place avec une autre place, par la connoiſance d'une ou de pluſieurs comparées entr'elles. Quelques-uns pourront dire que la connoiſſance du profit & de la perte qu'on fait, ſur des lettres de change, dépend du retour des ſommes à leur principe, & que le pair eſt une ſpéculation inutile. On peut répondre à cela que, ſi la connoiſſance du profit; & de la perte qu'on fait ſur les lettres de change, dépend du retour des ſommes à leur principe, & du lieu d'où elles ſont ſorties, on ne peut pas dire la même choſe de celles, qui ne retournent point, ſoit qu'elles ſoient emploiées, & conſumées dans le païs même, ſoit pour achat de marchandiſes, ſoit pour penſion, ou pour des affaires particuliéres.

D'ailleurs, s'il étoit néceſſare d'attendre ce retour, pour ſavoir le profit qui ſe fait ſur une lettre de change, & que cette connoiſſance dépendit de l'avenir, il faudroit conclure que dans le tems que l'on donne ou que l'on prend de l'argent à change, on ne le ſauroit pas, & s'il on ne le ſavoit pas, ce ſeroit négocier ſans connoiſſance de cauſe & au hazard, puis qu'on ignoreroit le profit ou la perte qu'on y feroit. Idem.

(a) Le lecteur eſt averti que cet ouvrage aiant été fait lorſque l'écu de France ne valoit que 60 ſols Tournoi, cet ecu étoit au pair avec la rixdale de Hollande de 50 ſols. Mais les monnoyes de France ont changé ſouvent depuis, & ſont ſujettes à des variations continuelles; ainſi au lieu de marquer la valeur d'écu de France dans la preſente anné 1731, on le ſuppoſe toujours de l'ancienne valeur de 60 ſols Tournois; à quoi on ſera attention. Traité General du Commerce, par Samuel Ricard d'Amſterdam.

† See our articles ARBITRATION of EXCHANGES, EXCHANGES, ENGLAND, HOLLAND, HAMBURGH, and ſuch other heads to which from theſe we refer.

This is a ſubject of great delicacy, not only in point of computation, but in point of application to the purpoſes of drawing and remitting money, and negociating bills of exchange throughout Europe, to the beſt advantage at all times. And what that advantage is, can never be known to any, except thoſe who are ſkilled in this important and myſterious branch. Thoſe merchants or negociators of foreign monies by exchange, who may be only acquainted with a few places, whoſe exchanges they are capable of arbitrating, cannot be judges of the profits to be made by other places: and therefore, for want of an univerſal knowledge herein, we will preſume to ſay, that daily opportunities, of no inconſiderable benefit, eſcape notice.

Although the inſtability of the exchange is juſtly enough compared to the wind, yet that inſtability is the very cauſe of the profit to be made thereby: and for this plain reaſon, becauſe it is ſcarce ever poſſible, that the courſes of exchange between ſeveral nations ſhould ebb and flow in an equality of proportion.

And whoever trades as a merchant, that is to ſay, as an exporter and importer in Europe, muſt of neceſſity have to do with bills of exchange, and with drawing or remitting: and, if ſo, he ſhould by no means be unacquainted with thoſe arts of making the beſt advantages by ſo doing; but this is not poſſible to be done, without being thoroughly ſkilled in their arbitration, to a demonſtrative exactitude.

The more general the trade of a merchant is, the more univerſal ſhould his knowledge in this particular be. And thoſe who may have views in dealing largely by exchange, will certainly find their account beyond expectation, in being fundamentally grounded in this ſubject; for a trader of a good general foreign correſpondence may, by this means, gain more by dint of credit and ſkill, than others, unacquainted herewith, can do, by dint of hard money *.

* See our articles ARBITRATION of EXCHANGE, HOLLAND, HAMBURGH.

A knowledge alſo of the intrinſic value of foreign coins, or ſpecie *, ſhould go hand in hand with the knowledge of exchange †; the profit ariſing upon the exportation or importation thereof, from one foreign country to another, being grounded on the due conſideration of both. To which ſhould be added, the nature of dealing in bullion gold and ſilver to the beſt advantage; the various calculations neceſſary to that end, and the methods pointed out that are proper to be taken, in order to prevent impoſition in regard thereunto ‡.

* That a more lively idea may be obtained of dealing in foreign ſpecie to the beſt advantage, we would recommend the collection of the ſeveral coins current throughout Europe, with the ſeveral ſtandards affixed thereunto, for the uſe of the college.

† See the article COINS.

‡ See the articles ASSAY, AQUA FORTIS, AQUA REGIA, BULLION GOLD and SILVER, FLUX, MERCURY, METALLURGY, MINEROLOGY, ORES, QUARTATION, REFINING, SILVER, TESTING.

That the young merchant may not be deficient in whatever has affinity with exchanges, there ſhould be compiled a ſuccinct collection of the eſſential cuſtoms and uſages of Britiſh and foreign merchants relating to bills of exchange, together with the principal law-caſes that have been determined in the courts of judicature in England and Scotland, and foreign countries *; which, with other occaſional admonitions, may not a little contribute to prevent his being unwarily drawn into litigious broils; than which, nothing is leſs compatible with a life of traffic.

* See the article BILLS of EXCHANGE.

From the knowledge of theſe particulars, the collegian ſhould be led to the compariſon of foreign weights and meaſures, and the methods of converting thoſe of one country into thoſe of any other *.

* See ENGLAND, HAMBURGH, HOLLAND, MEASURES, WEIGHTS.

It is unneceſſary to obſerve further upon this head, than that there is no poſſibility of underſtanding foreign invoices *, and accounts of ſales, without being capable to reduce the ſtandard weights and meaſures, as well as the monies of foreign countries, the one into the other. Nor without it can any previous computation be made, whether exportation or importation of merchandize, between nation and nation, will or will not turn to advantage.

* See INVOICE, and ACCOUNT of SALES.

Exportation and importation of domeſtic and foreign commodities leading to the buſineſs of the cuſtom-houſe, the calculation of the duties, ſubſidies, drawbacks, and bounties, becomes a qualification not the leaſt neceſſary in an undertaking of this nature; as it is below the dignity of the merchant to ſee wholly with the eyes of others, in what ſo nearly concerns his own intereſt *.

* See the PRACTICAL BUSINESS of the CUSTOM-HOUSE, at the end of each letter.

In regard to points of this nature, all due attention ſhould be given to the tariffs, duties, impoſts, and other charges, which are laid upon the Britiſh produce and manufacture in foreign countries; and to inculcate, at the ſame time, the prudential neceſſity of obtaining ſuch ſatisfactory knowledge, by pro forma accounts of ſales from foreign parts, before engagements are precipitately entered into *.

* See ACCOUNT of SALES, TARIFFS, TREATIES of COMMERCE.

To thoſe who have not been early exerciſed in numbers, and are not become expert in their operation, this variety of calculations may appear ſomething laborious. So it would be, if the method of inſtruction is not ſo peculiarly contrived as to render the whole rather an entertainment, than any thing like a diſagreeable drudgery.

The minds of young perſons are not to be touched by abſtracted ideas; they have need of agreeable and familiar images; they cannot reaſon, or be brought to delight in buſineſs, without being pleaſurably trained to them; and what is of the greateſt moment muſt be rendered lovely, and repreſented under ſenſible and beautiful forms.

Yet what depends upon practice and exerciſe, can only be obtained by practice and exerciſe, though the rules and principles of that practice ſhould be ever ſo well comprehended.

'I wiſh, ſays a wiſe man *, that Paluel or Pompey, the two 'famous dancing-maſters of his time, could have taught us 'to dance and cut capers by only ſeeing them do it, without 'ſtirring from our places, as ſome pedants pretend to inform 'the underſtanding, without ever ſetting it to work; or that 'we could learn to ride, handle a pike, touch a lute, or ſing, 'without the trouble of practice; or as theſe attempt to make 'us judge and ſpeak well, without exerciſing us in judging 'and ſpeaking †.'

* Montaigne.

† The great Mr. Locke ſpeaks to the ſame purpoſe. We are born with faculties and powers, ſays he, capable of almoſt any thing; ſuch, at leaſt, as would carry us farther than can eaſily be imagined: but it is only the exerciſe of theſe powers which gives us ability and ſkill in any thing, and leads us towards perfection.—A middle-aged ploughman will ſcarce ever be brought to the carriage and language of a gentleman, though his body be as well proportioned, and his joints as ſupple, and his natural parts not any way inferior. The legs of a dancing-maſter, and the fingers of a muſician, fall as it were naturally, without thought or pains, into admirable and regular motions. Bid them change their parts, and they will in vain endeavour to produce like motions in the members not uſed to them; and it will require length of time, and long practice, to attain but ſome degree of a like ability. What incredible and aſtoniſhing actions do we find rope dancers and tumblers bring their bodies to! Not but that ſundry, in almoſt all manual arts, are as wonderful; but I name thoſe which the world takes notice of for ſuch, becauſe, on that very account, they give money to ſee them. All theſe admired motions, beyond the reach, and almoſt the conception of unpractiſed ſpectators, are noting but the mere effects of uſe and induſtry in men, whoſe bodies have nothing peculiar in them, from thoſe of the amazed lookers on.——As it is in the body, ſo it is in the mind; practice makes it what it is, &c. Locke's Conduct of the Underſtanding, folio, page 375.

That the juvenile mind may not be diſagreeably wearied with too continued an attachment to the ſame thing, the conſtitution of the college ſhould be ſo modelled as to have interludes, by tranſition to matters of a lighter kind, which do not require that ſeverity of attention, yet to ſuch chiefly as have a cloſe connection with practical buſineſs in a real life of trade.

Amongſt theſe we look upon a facility in writing a plain, ſtrong, ſenſible letter of buſineſs upon all occaſions. As trade can only be carried on by an epiſtolary correſpondence, a good mercantile ſtyle may, perhaps, be as neceſſary a part in the education of the merchant as any thing elſe. Thouſands, in foreign trade, correſpond for many years without ever ſeeing one another; but they can ſee the intelligent man of buſineſs as thoroughly by his letters as by his converſation; and ſometimes better indeed; for many may get the light knack of prating, who are not able to write a correct and pertinent letter of buſineſs.

Letters of trade, wrote with judgment, and language ſuitable to the ſubject, beget reſpect and confidence. We have heard a worthy and ingenious merchant declare, That his being capable of correſponding in a manner ſomething ſuperior to the generality, was the means of getting him a very good eſtate, from a very ſmall beginning; this talent having brought him very large commiſſion buſineſs, a branch always deſired, not only as it brings a ſecure profit, but as it proves the means of gaining the young merchant, eſpecially, experience at the riſque of others.

They muſt have little knowledge of language who can imagine, that the mere tranſcription of other perſons letters, with precipitation, for the ſake of copies only, will ever qualify a young gentleman, with a ſmall ſhare of literature, to carry on a judicious correſpondence himſelf *. Nothing can effectually do this, but being properly put on the exerciſe of his own genius, and, from time to time, having his ſtyle corrected, with ſuitable admonition.

* Yet this is the only method taken to inſtruct them herein; which muſt be the reaſon why ſo few write grammatically or intelligibly; which I could ſhew by ſome thouſands of merchants letters in my poſſeſſion.

Though it is not neceſſary that the merchant ſhould be a perſon of great learning, yet it is abſolutely neceſſary he ſhould be capable of writing grammatically, otherwiſe his ſentiments are liable to be miſtaken, which will be attended with conſequences either injurious to himſelf or his correſpondents. And young gentlemen of this claſs muſt certainly ſtand in need of ſome aſſiſtance in this reſpect, unleſs they can be ſuppoſed to have a miraculous advantage over other perſons, and to obtain a facility to indite with brevity, fulneſs, and perſpicuity, by inſtinct or inſpiration.

Having arrived at a tolerable maſtery in ſtyle, as well as computation, the ſcene ſhould be diſcretionally diverſified; variety in applications of the mind being as occaſionally requiſite as variety in diet to the body. To this end, the young merchant ſhould be gradually initiated into a knowledge of the grand books.

That this part of his erudition may be rendered rather familiar and pleaſurable than otherwiſe, we judge it neceſſary to commence with communicating a knowledge of every diſtinct auxiliary to the principal books, and of the form of every kind of voucher, and of every ſort of inſtrument practiſed among merchants for their mutual ſecurity: ſuch as BILLS of LADING, CHARTER-PARTIES, POLICIES of INSURANCE, and the like *.

* See theſe ſeveral articles.

We would not be underſtood to mean the giving only a ſuperficial view of thoſe kind of writings and inſtruments, but to inculcate the nature, legality, and utility of them; and, at the ſame time, to enforce the neceſſity of ſuch writings and inſtruments being ſtrongly and intelligibly drawn to prevent ſtrife and litigations: as alſo ſhewing that, without ſuch legal vouchers, the grand books are of no authority, either in caſes of arbitration, or in the face of courts of judicature; theſe being no more than an artificial index to the original vouchers and teſtimonials.

From theſe inſtructions, ſo given as to make a proper impreſſion, the next ſtep ſhould be to proceed, in a natural progreſſion, to explain ſyſtematically the axioms and rational maxims and principles whereupon the whole art of accountantſhip, as practiſed by the moſt ſkilful merchants, according to the method of double-entry, is grounded. At the ſame time, the ſuperlative excellency of this art, in compariſon to all others that have been adopted to anſwer the like purpoſes, ſhould be amply illuſtrated, by appoſite examples; as it always exhibits the true repreſentation of a merchant's affairs:

and,

and, provided the books are duly poſted up, this excellent method is preventive of all deſtructive conſequences, which attend irregularity and confuſion in a trader's accounts *.

* This method of inſtruction is widely different from the ordinary one that is practiſed.

It is not neceſſary, indeed, that a merchant engaged in large concerns ſhould keep his own books, as he may probably employ his time to far greater advantage; but it is indiſpenſably neceſſary that he ſhould be capable of doing ſo: how is it poſſible, otherwiſe, that he ſhould be able to judge when they are kept as they ought to be? Nor can he be capable of ſo inſpecting them as to be duly acquainted with the ſtate of his own affairs *.

* There are many who have book-keepers, that are not judges whether their accounts are kept as they ought to be or not, according to the nature of their tranſactions. Is it at all extraordinary that ſuch ſhould be unſucceſsful?

It is unbecoming meanneſs, not to ſay a conſummate folly, in any man, whoſe fortune is daily at ſtake, to depend upon others to give him what they pleaſe for the ſtate of his affairs. It is juſtly proverbial among the Dutch, That the man who fails, did not underſtand to keep his accounts: and it may be truly ſaid, a merchant without that ſkill, is in as bad a ſituation as the mariner on the wide ocean, without chart or compaſs whereby to direct his courſe.

This inimitable method of accounts, being founded on the principles of reaſon, will prove a kind of practical logic to young people, when it is rationally and methodically communicated, not mechanically, and by rules depending on the memory only; which latter does not merit the name of inſtruction at all. And even rules, and the principles of reaſon whereon they are grounded, being ever ſo well underſtood, yet without the due application and exerciſe of thoſe rules and principles to uſeful purpoſes, they are little better than a dead weight to the memory, and a clog to the underſtanding: whereas, when theſe rules and principles are duly applied, and made habitual, by being reduced to practice in matters of uſe, they are a whet to the genius, and ſtrengthen the intellectual faculties *.

* The common way of inſtruction of this claſs of people is by mere rules, without any reaſon or demonſtration given of thoſe rules; which is a mere mechanical and parrot-like way of teaching; whereas, were young people habituated to know the reaſon of every rule they go by, in the courſe of their education, it would inſenſibly lead them to pry into the reaſon of every thing elſe, which would prove of no little aid to their underſtandings in general.

In order to apply theſe rules and principles of reaſoning to accounts, a conciſe introductory ſyſtem ſhould be formed, and that exemplified by tranſactions foreign and domeſtic, drawn from real buſineſs. And, that the young merchant may be completely grounded herein, he ſhould be afterwards exerciſed in ſtating the real occurrences of ſome of the greateſt and moſt univerſal merchants, from their original books.

Nor will ſuch original books of accounts be of uſe only to ground a young gentleman to the utmoſt perfection in the art of accountantſhip, but will, at the ſame time, familiarize to him ſo great a variety of intereſting tranſactions in foreign trade, conducted with judgment and addreſs, that will qualify him to launch into commerce with great advantage *.

* To this end, I would propoſe that the college ſhould be ſupplied with a great variety of complete ſetts of the real accounts of many diſtinguiſhed and eminent merchants deceaſed; they being of no other uſe to executors after being a few years in their poſſeſſion, there would be no great difficulty to obtain a great variety of theſe. If this ſeminary was furniſhed with the genuine accounts and letters relating thereto of the following merchants (a), who trod the Royal Exchange with ſupreme credit and dignity, the unexperienced might receive great benefit and advantage, by having judicious lectures read upon the ſame. For, by having the tranſactions of perſons of great experience and diſcernment before us, and their motives nakedly laid open, as appears by their genuine mercantile letters, no one will doubt but great knowledge may be thereby obtained for the conduct of young people; to know only the ſeveral ways of trading of the ſkilful and proſperous, is of no little utility; but to be let into the motives of their meaſures, and the addreſs whereby their many hazardous adventures have been conducted, is of no leſs benefit to the young trader than the genuine hiſtory of great ſtateſmen and commanders are to thoſe who ſhall aim at following their examples.

(a) The accounts we mean, are ſuch as thoſe of a Louvreure, St. Tinapey and Seignioret. Daniel Arthur, Braſiey and Smith, Turton and Guiger, William Henry Cornelíſon, Coppins, Sir David Exeter, Sir Peter Meyer, Sir Theodore Janſſen, Sir John Williams, Sir Randolph Knipe, Sir Peter Delmé, Samuel Sheppard, Sir Francis Eyles, James Milner, —— Olmius, Sir Samuel Clarke, Sir Alexander Carnes, Henry Carnes, Deborah Dunt, widow, Longuet and ſons. Sir Henry Furneſe, Sir James Bateman, Sir James Dollyffe, Sir William Chapman, Samuel Holden, and many of the other diſtinguiſhed merchants of the city of London, and other parts of the kingdom, as well as of the Britiſh factories in foreign parts, and numbers of others who are now living in the higheſt credit.

About twenty years ſince, ſome mercantile accounts of no little conſequence fell into my hands to audit and liquidate, between the late Samuel Holden, Eſq; governor of the Bank of England, and ſome conſiderable merchants of Ruſſia. In the examination of thoſe accounts, it was neceſſary for me to conſult the courſe of correſpondence for many years back; and I muſt confeſs it not only gave me great ſatisfaction as well as advantage, from the peruſal of Mr. Holden's letters in particular, for they were penned with great ſagacity: Cicero himſelf, perhaps, had he been bred a merchant, could not have formed a mercantile epiſtle more laconic, elegant, and perſpicuous; whereas thoſe of many of his correſpondents were as mean and unintelligible as their buſineſs was injudiciouſly conducted.

Thus rationally introduced into this method of accounts, in all it's ordinary forms, as practiſed by the moſt ingenious and experienced, our young traders ſhould afterwards be inſtructed ſo to contract their accounts, as to have much leſs writing than is commonly uſed in moſt counting-houſes. The auxiliary books ſhould not only be contrived in a method far more conciſe than uſual, but other parts of their accounts kept in a much ſhorter manner than is generally practiſed, and yet without the leaſt deviation from the ſpirit and eſſence of this incomparable art.

The uſefulneſs of the abridgment propoſed, in this reſpect, will conſiſt in keeping the books always duly poſted up; without which it is impoſſible the merchant ſhould, at all times, be ſo thoroughly acquainted with his affairs as he ought. But thoſe who are not complete maſters of this art, although they may perfectly underſtand the common methods, yet have ſo much writing therein, and thereby find it ſo laborious, that they frequently practiſe leſs accurate methods of accountantſhip, only to ſave ſo much writing; which is too often attended with no little diſorder and confuſion in their affairs.

That every advantage may be reaped which this art of accountantſhip will admit of, the ſtudent ſhould be put alſo into the method of keeping, with very little trouble, an abſtract of the ſtate of his affairs, within the compaſs of a pocket-ledger, as a conſtant check and remembrancer for the due government of his concerns.

That no point of practice in any counting-houſe whatever may be concealed, the uſual methods of making out accounts of ſales, invoices *, &c. ſhould be laid open, together with the nature of all intermediate accounts, which are made uſe of in order to anſwer ſuch purpoſes as may be thought neceſſary by the more ſkilful.

* Though many of thoſe arts are not ſtrictly juſt and honourable, yet the young merchant ſhould not be ignorant of them, leſt he ſhould be liable to daily impoſition by others.

Method and regularity being the life of the trader's affairs in general, the ſame ſhould not be neglected in every circumſtance relating thereunto. Thus the due arrangement and methodizing of the original vouchers of his tranſactions, for immediate reference, ſhould be duly inculcated and exemplified. As the grand books are of no authority without them *, the one ought to be as regularly diſpoſed as the other, in the way they will admit of. Neglects of this kind, either by miſplacing or loſing thoſe teſtimonials, being productive of great perplexity and vexation in public buſineſs, order and regularity in all things cannot too early be made habitual.

* Much deceit and knavery have been practiſed by ſubtle bankrupts and others, by forging formal waſte-books, journals and ledgers, &c. ſeemingly very regularly kept, &c. which have too often paſſed for genuine, becauſe the ſeveral vouchers have not been duly ſcrutinized into from whence thoſe accounts have been formed.—This is what ſhould be ſtrictly examined into by the commiſſioners of bankrupts, and counſel in their pleadings, &c. and by thoſe who enter into partnerſhips, &c.

Moreover, the trader, whoſe whole fortune, or more, is frequently embarked in buſineſs, and whoſe anxiety is often ſufficiently engaged for the event of his enterprizes, ſhould be accuſtomed, from his youth, to treaſure up all knowledge relative to his profeſſion; more eſpecially ſo, ſince it frequently admits of a variety of occurrences, no leſs ſingular than intereſting. It will, therefore, hardly be thought unneceſſary to familiarize him to keep a well-contrived alphabetical regiſter of all ſuch eſſential occurrences, as may be requiſite for him to have recourſe to throughout the whole of his life. For it is little to the reputation of the trader to be obliged to aſk information of others, in important tranſactions which relate to himſelf; and in ſuch too, probably, as either paſſed through the counting-houſe where he was bred, or perhaps, his own; yet, for want of a proper memento, he may ſometimes commit ſuch egregious miſtakes, as may prove an injury to his eſtate, as well as blemiſh to his character.

The next buſineſs ſhould be to furniſh the young merchant with ſome knowledge relating to the funds and ſtocks of this kingdom; negociations of that ſort, on the account of foreigners, and others, having multiplied with the increaſe of the national debt.

We would not be underſtood to mean the knowledge of the ſtock-jobber only, but ſuch a knowledge of the funds, in

their foundation on the public credit, and how they are affected ab extra, as well as ab intra, ſo as to diſtinguiſh the real from the fictitious cauſes of the fluctuation of their prices. However mankind may have been miſled, and infatuated at times, yet doubtleſs there are touch-ſtones, whereby an obſerving perſon may paſs a very good judgment when there is money to be got or loſt, by this our ſtanding lottery *.

* There is ſo great variety of artifices practiſed at certain conjunctures, to raiſe and fall ſtocks for the private intereſt of jobbers, and thoſe who are in the ſecret of public affairs and great companies, that they would take me up a volume to diſplay in their proper colours. See the articles BUBBLES, STOCKS, STOCKJOBBING.

Provided this ſhould be no otherwiſe ſerviceable than to prevent a raſh and indiſcreet dabbling in ſtock-jobbing, it may prove the ſaving, though it ſhould not the improving of a fortune. The young trader may hereby receive information enough upon this head, to enable him to give ſuch ſeaſonable advice to correſpondents, as may be the means of gaining him no inconſiderable commiſſions in that ſhape, though his own fortune ſhould not admit of his occaſionally trading in the ſtocks for himſelf.

In the courſe of this mercantile progreſs, the next ſtep neceſſary ſhould ſeem to be to give the young merchant a general ſurvey of the trade and commerce of the world *.

* See the ſeveral nations of the world throughout this Dictionary, and their principal provinces, countries, duchies, &c. for commerce.

However unneceſſary ſome may imagine this general knowledge of trade, who look not beyond the circle of their particular branch, yet we cannot help thinking ſuch knowledge may prove of no little advantage to the trader of genius: for it is the nature of foreign commerce to be variable and fluctuating; that branch which ſhall afford conſiderable profit at one time, may be ſcarce worth engaging in at another; by reaſon the greater the advantage is, the greater is the confluence of traders into that branch in particular: multitudes thus ſtriking into one and the ſame trade, foreign markets are glutted, and the Britiſh, as well as other produce and manufactures, become a drug.

Other cauſes likewiſe conſpire to this. All nations are now convinced that trade is the beſt ſource of wealth and of power: wherefore ſome are daily attempting either to ſupply themſelves with what they took from others, or other nations are attempting to obtain a ſhare in their ſupply.

But whoever conſiders in what manner the more ſkilful merchant proſecutes his trade, will hardly diſallow the neceſſity of a pretty general knowledge therein. As, 1. Our national produce and manufacture being more than our conſumption, a part is exported; and, in return, foreign goods, or bullion, or both, are brought home. 2. Selling the goods exported at one port, and loading there to ſell at another, whereby a larger profit is made than if the goods exported had been carried directly thither. 3. Bringing away the produce and manufactures of other countries, from whence and when they are cheap, to ſupply countries when and where the ſame ſell dear. 4. Bringing home the produce of other countries, and exporting the ſame in manufactures. 5. Freighting and hiring out ſhipping to various parts of the world.

The merchant, by thus knowing how the ſeveral parts of the world are connected with each other in their mutual intercourſe of commerce, how the redundancies of this country ſupply the deficiencies of that, will be capable of foreſeeing when any ill conſequences threaten either that branch of traffic in which he is particularly concerned, or the trade of his country in general. It will open to his view by what means ſeveral branches have been acquired; how ſome have been ſtagnated and loſt; and what meaſures may be taken by the government, in concert with the practical merchant, to revive them, or ſupply the miſchief, by opening new channels of commerce.

It is too little knowledge of trade, not too much, that will make the merchant raſhly adventurous and projecting, upon weak and groundleſs foundations. A perſon, knowing in more branches than one, will of courſe embrace that which is the more ſuitable to his fortune, and the leaſt hazardous. As many have been undone by raſhly graſping at a greater ſhare of buſineſs than they had either capital or ability to manage; ſo, on the other hand, many have been ruined by an unaccountable attachment to one branch, when common prudence cried aloud for their relinquiſhing a ruinous trade, and ſtriking into the proſperous.

This part of the inſtitution, therefore, it is preſumed, may prove a ſovereign preſervative againſt each extreme of imprudence; our intention hereby being to prevent precipitate engagements, and too projecting a turn on the one hand, as likewiſe too contracted a view, and puſillanimity on the other.

It is not by the merchant as by the particular mechanic or artizan. The potter cannot eaſily ſtrike into the buſineſs of the ſhipwright, any more than the latter can into that of the watchmaker or the weaver, &c. This is not parallel in regard to merchant and merchant: for the exporter of woollen goods can as eaſily export tin or lead, or hard ware, &c. and have his returns by exchange in dollars of Leghorn, or ducats of Venice, as well as in dollars of Spain, or millrees or moidores of Portugal, &c. Or cannot the merchant who ſent woollen goods to Spain or to Italy, ſend another ſpecies of woollen goods to Ruſſia, and have his return in robles, Ruſſia hemp, linen, rhubarb, or pot-aſh, &c. as eaſily as in Spaniſh dollars, wines and raiſins? In fine, the imports and exports to and from his own nation to all others, together with a knowledge of their monies, weights, and meaſures, duties, impoſts, and all cuſtomary charges, ought to be familiar to the accompliſhed merchant; that, upon the declenſion of any particular branch of national trade, he may apply himſelf to the more advantageous for the time being.

Or, even if the national trade in general ſhould undergo a temporary declenſion, yet the trade of the world will afford the true-bred merchant eternal opportunities of advantage: ſuch a one will find no difficulty to trade in various branches, from one foreign nation to another, as it were independent of his own, whilſt all the profits are brought home, and center within himſelf.

We are not unaware it may be objected, that a merchant cannot have that univerſal knowledge in the qualities of commodities, neceſſary for variety of foreign markets, &c. and, therefore, cannot ſo eaſily turn himſelf from one branch of foreign trade to another. To which it may be replied: were merchants obliged to depend wholly upon their own judgment herein, there would be ſome weight in the objection. But this is not the caſe. For the reputation of manufacturers and warehouſemen, and other dealers, in their negociations with merchants, is not only at ſtake in one reſpect, but they can ſafely depend upon well experienced brokers and packers in others, to prevent impoſitions of this nature: ſo that there is not that neceſſity for the merchant to have ſo deep a knowledge in the qualities of goods in general, as if the caſe was otherwiſe. However, this matter ſhould by no means be diſregarded in a collegiate eſtabliſhment; a mercantile muſæum, or repoſitory, being indiſpenſably neceſſary to ſuch a deſign, which ſhould be furniſhed with ſamples * of the unperiſhable ſtaple commodities and produce of the principal trading parts of the world.

* To theſe ſhould be joined labels, deſcribing the diſtinguiſhable characteriſtics of their ſeveral qualities, according to the degrees of compariſon: this will accuſtom a young perſon to form ſome judgment in the qualities of thoſe commodities wherein he may be hereafter induced to trade. If this expedient ſhould have no other effect than to make a proper impreſſion, that the merchant himſelf ſhould not be wholly regardleſs of the qualities of thoſe commodities wherein he may happen to deal, it may anſwer a very good purpoſe, but can prove no way detrimental: he may chuſe whether he will regard any but thoſe he may occaſionally traffic in, and ſuch he cannot be too well acquainted with. See the articles MANUFACTURERS, MECHANICS, MUSÆUM.

Very far from raiſing an uncontroulable adventurous ſpirit, in cauſeleſsly rambling from one branch of trade to another, on the contrary, every meaſure ſhould be uſed to check it, by throwing in ſuch a weight of prudential knowledge as will ballaſt the moſt towering and extravagant diſpoſition of that kind.

In view to which, the tutors ſhould not be wanting to inſtil the neceſſity of guarding againſt caſualties and injurious events, in every ſhape, ſo far as the extent of human foreſight may be preſumed to go in the train of buſineſs. Thus with regard to exportation for proper, or company account, the neceſſity of pro forma accounts ſhould be duly inforced, before adventures are undertaken; as alſo the prudence of buying at beſt hand, and judiciouſly dividing the hazard, by not truſting too large a capital upon one bottom, or in one hand; not to trade beyond themſelves, or leave their concerns too much to others; of prudentially inſuring, not only from the danger of the ſeas, but from the danger of bad debts in foreign parts. For young people ſhould be admoniſhed rather to be contented with ſmaller profits, than not to allow the uſual extra commiſſion, for a good correſpondent to remain the middle man upon thoſe occaſions, perſons of experience well knowing the meaſures too often taken by factors, provided they have not this extra-allowance.

Theſe, and all other ſuch-like meaſures, ſhould be duly regarded by the inſtructors; ſince not only the improvement, but the ſecurity of the merchant's fortune, as trading in the capacity of a principal for his own account, ſo greatly depends. And although, by purſuing meaſures ſo circumſpect, our young merchant's profits, at firſt ſetting out for himſelf, may be leſs than thoſe of more bold adventurers, yet he will much ſooner grow rich than thoſe who make too much haſte to become ſo.

Acting likewiſe in the capacity of a factor does not require leſs precaution: for a juſt and honourable regard, had, in the way of trade, to the intereſt of others, ſeldom proves detrimental to our own. Whether this is not one, and even the moſt effectual means to increaſe commiſſion buſineſs, we leave thoſe to judge who act as principals themſelves. As trading in this

ſhape

ſhape is the moſt beneficial and ſecure, ſo it is not the leaſt delicate to conduct to the beſt advantage. In reſpect to a matter of this importance to the young merchant, the beſt advice ſhould be inculcated. To which end, thoſe meaſures ſhould be pointed out that have been ſucceſsfully taken by the more judicious to gain commiſſions.

No employment requiring a more ready uſe of the principal modern languages than the mercatorial, a collegial inſtitution would be judged materially deficient, if deſtitute of profeſſors to train up thoſe ſtudents properly therein: wherefore, for whatever branch of trade the young merchant may be intended, he ſhould, through the courſe of this education, be able to obtain either a knowledge of the French language, or the Italian, the Spaniſh, the Portugueze, or even the Dutch, High or Low; and, indeed, a facility in writing of ſeveral, or all of them, is neceſſary for the general merchant: for, although ſome may think that the French alone, from it's univerſality *, ſufficient, yet many foreigners will rather prefer a Britiſh correſpondent, who writes his native language well, than that of him who only writes the French or the Engliſh.

* It has proved no mean ſtroke of the French policy to make their language ſo univerſal as they have done. Among their ſyſtem of arts for the propagation of their commerce, there is no one, perhaps, that has more tended to render it univerſal than this, however ſome may ſlightly think of it. Where there is one book in the Engliſh language read throughout the world, there are doubtleſs many thouſands of the French; and ſuch is the vanity of that nation (a), that they are ſuperlatively modeſt in decrying moſt others, in order to render their own the more ſuperb in the eyes of ſtrangers. The beſt of every thing is ſcarce any where to be found but in France; and they as arbitrarily govern the faſhions of the world, in what ſhall be eat, drank, and wore, in other nations, as they are governed at home. Are not alſo the furniture, buildings, and even the pleaſures of the reſt of mankind, in a great meaſure, ſettled by this grand regulator of modes and faſhions? How far this, with the univerſality of their language, has contributed to univerſalize their commerce, I am afraid has never been ſufficiently conſidered in this kingdom. This is apparent from many parts of our work.

(a) See Mr. Addiſon's Freeholder, No. 30. and biſhop Spratt's Anſwer to that diſingenuous Frenchman Sorbiere.

What renders this the more neceſſary is, that ſuch who are pretty general traders, and not capable themſelves of writing in the modern languages, as their affairs may require, are under the daily neceſſity of applying to thoſe who make it their buſineſs to tranſlate for them, and write anſwers to their foreign letters. Now, beſides the meanneſs and expence of ſuch a practice, do not ſuch merchants run the hazard of having the arcana of their buſineſs betrayed, and themſelves therein ſupplanted? Nor are hired tranſlators themſelves always able to give the genuine ſenſe of a letter, or to write a pertinent anſwer, with the proper turn of phraſe. How injurious a practice of this kind may frequently prove, we leave thoſe to conſider whom it may concern. Moreover,

When a merchant has eſtabliſhed his credit among the trading world for worth, honour, and punctuality, there is no end of his correſpondence. It is the common practice among merchants of honour, all over the world, to make mutual tenders of their ſervices upon any natural occaſion that offers, which is taken cordial and reſpectful: and, if they meet with a correſpondent who writes their language well, and takes their ſenſe clearly, it is frequently inſtrumental to produce profitable negociations that, perhaps, might never have been the caſe, if the agreeable correſponding language had been wanting.

The moſt capital houſes of mercantile trade throughout Europe being generally compoſed of ſeveral partners, for the greater ſatisfaction of foreign correſpondents, it is cuſtomary for the one or the other of thoſe partners to travel into foreign countries, in order to make the better judgment of the credit and fortune of their correſpondents, cement ties of commercial friendſhip with others, and extend their traffic in general. Where ſuch travelling correſpondents meet with traders who ſpeak their own language with propriety, it ſhould ſeem to have a tendency to promote more harmony than is cultivated with thoſe who do not; in the ſame manner as we obſerve ſtrangers, who think alike, and between whom there is a ſimilitude of manners, ſhall, at firſt ſight, contract permanent and beneficial friendſhips.

As foreign merchants reſort to England with this intent, ſo the Engliſh frequently take the tour into foreign countries. But, to go without language, he may almoſt as well be deaf as dumb: he ſtands but an indifferent chance to cultivate advantageous friendſhips, and promote the honour and intereſt of the houſe wherein he is concerned. Few foreigners ſpeak Engliſh, which makes it the more neceſſary for the Engliſh to ſpeak and write the language of foreigners with whom they do or are likely to correſpond.

That a knowledge of geography is peculiarly neceſſary to the merchant, need not be urged; and that ſome ſkill in navigation is likewiſe requiſite, cannot be leſs obvious, ſeeing they have conſtant concerns with maſters of ſhips and inſurances, &c.

That the merchant ſhould make ſome farther advance than this into the mathematical literature, will hardly be diſputed, when we take a comprehenſive view of the nature of his employment; for, although we ſuppoſe him to be an expert practical arithmetician, yet, methinks, he ſhould not be mechanically ſo only: he ſhould be habituated from his infancy to know the reaſon of all rules by which he works [ſee ARITHMETIC], for then he will apply his ſkill in figures pertinently to whatever occurs, which otherwiſe is ſcarce poſſible; and it is better to ſee with our own eyes than through the medium of others. A man, indeed, may content himſelf with the common theorems for gauging and menſuration, &c. yet to work only by line and by rule, illy becomes ſo high a character. We cannot therefore but think, that ſuch a knowledge in algebra and geometry, as will lead the merchant into the rationale of every calculatory qualification for which he may have occaſion, muſt be of uſe to prevent deception. How far alſo ſome knowledge in this ſcience may be helpful to the improvement of the underſtandings in general of young people of this claſs, may deſerve conſideration. [See our article MATHEMATICS.] Likewiſe how uſefully a knowledge in ſome parts of philoſophy might contribute to his proſperity in many branches of trade wherein he may be engaged, appears from various parts of this work. See the article PHILOSOPHY.

The buſineſs of this claſs of traders being not only under the controul of the peculiar and municipal laws of their country, but to the eſtabliſhed cuſtoms and uſages of the mercatorial, as well as many branches of the civil law, and the laws of nations and commercial treaties; it will hardly be ſaid, that the merchant ſtands in need of no knowledge of this kind. Certain it is, if he is ignorant of the penalties to which he is liable, and the rights and privileges to which his profeſſion entitle him in any reſpect, he not only runs the riſque of daily impoſition, but of abſolute ruin. It is therefore we have, throughout the courſe of this work, pointed out moſt of the laws and uſages of every kind, to which this trader is liable.

As the public funds of this kingdom, and the great monied corporations eſtabliſhed in conſequence thereof, are chiefly under the management and direction of the moſt diſtinguiſhed merchants of the city of London, does it not become neceſſary that they ſhould be thoroughly informed in what relates to the ſupport of the public credit, when the truſt repoſed in them is for no leſs than the property of 170 millions of ſterling money? We do not intend, by what is here ſaid, to ſignify the crafty ſkill of ſtockjobbing, we having before touched that point; we mean, that in this college ſhould be taught, in a proper manner, a perfect knowledge of the public revenue in every branch thereof, all the laws relating thereto, and the ſeveral variations which the funds have undergone: upon the whole, here ſhould be taught, ſcientifically, the real principles to preſerve public faith and credit, the foundation on which the property of the monied intereſt ſtands, at preſent; what meaſures may be reaſonably judged expedient in future, for the due ſecurity of ſo conſiderable a proportion of the wealth of the nation, as well as what are the moſt general eligible ways and means to raiſe the public ſupplies hereafter on all emergencies, the moſt for the general intereſt and honour of the kingdom. See the articles DEBTS [NATIONAL DEBTS], CREDIT [PUBLIC CREDIT], FUNDS, INTERERT of MONEY, and MONEY.

The ſtudy of commerce, as well as that of the public funds and revenue in a national and political view, both in general, and as the ſeveral branches of it come occaſionally under the conſideration of the legiſlature, or the public, by intended regulations, becomes another principal particular to be cultivated in this ſeminary.

This part of knowledge will, we apprehend, be thought of no little importance to the mercantile proſperity, as it has been deemed a great merit in merchants, on public conjunctures, to have afforded ſatisfaction to their fellow-citizens, in their aſſociations in this metropolis upon thoſe intereſting occaſions; and the higheſt honour to have given the legiſlature ſatisfactory accounts in matters of concernment to the traffic of the kingdom.

The memorable defeat of the French bill of commerce, in the reign of the late queen Anne, is ſufficient to confirm the truth of this *.

* When Great-Britain, under the conduct of the late duke of Marlborough, had reduced France to the neceſſity of ſuing for peace, there were two treaties ſet on foot, the one of peace, the other of commerce. But the treaty of commerce could not take effect, unleſs the parliament conſented to reduce the high duties, and take off the prohibitions ſo wiſely laid on French commodities. As this would have deſtroyed all the beſt branches of our trade, and deprived many hundred thouſand of our manufacturers of their ſubſiſtence, it began to give an alarm; which became general amongſt the merchants and traders, who knew the fatal

conſequences of it. Many pamphlets were publiſhed, to convince our legiſlators, that the preſerving our looms, and the rents of Great-Britain, were of greater conſequence to the nation, than gratifying our palates with French wine. This treaty, however, was to be ſupported at any rate; which occaſioned ſeveral ingenious merchants of long experience, and well ſkilled in trade, together with the late earl of Halifax and earl Stanhope, to uſe their utmoſt endeavours to defeat it; which they effectually did, by the ſatisfactory accounts thereof they laid before both houſes of parliament, and from what they publiſhed from time to time, under the title of the Britiſh Merchant, or Commerce preſerved.

Sir Charles Coke, merchant at that time, made ſo clear a defence of our trade at the bar of the houſe of lords and commons, that he was afterwards deſervedly made one of the lords commiſſioners of trade and plantations, and choſe a member of parliament.

Sir Theodore Janſſen, Bart. alſo, furniſhed many uſeful materials, which contributed towards the carrying that national point.

James Milner, Eſq; merchant, and member of parliament, made appear, before the houſe of commons, the great importance of our trade to Portugal, and of the treaty of commerce which ſupports the ſame, in oppoſition to the French bill of commerce.

Mr. Nathaniel Torriano, merchant, ſhewed the conſequence of opening the French trade according to the propoſed treaty, in ſo ſtrong and ſo clear a light, as to convince even them who diſcouraged his ſpeaking before parliament, of the deſtruction that muſt have inevitably fallen upon our country, had that treaty been rendered effectual by parliament.

Mr. Joſhua Gee, Mr. Chriſtopher Haynes, Mr. David Martin, and ſeveral other very able and diſtinguiſhed merchants, well acquainted with the intereſts of the trade of the nation, were extremely helpful likewiſe in defeating that pernicious treaty, and therefore lateſt poſterity will have their names in honourable remembrance.

But we need go no further than our preſent time for inſtances of this kind. We had a conſpicuous example before us, in one of the late repreſentatives of this great city in parliament; who upon all occaſions, manifeſted ſo ſuperlative a knowledge in the general commerce of the nation, as deſervedly to be diſtinguiſhed with the higheſt honour and applauſe: which, one would think, ſhould animate every young merchant to endeavour, next to his province, to excel in this kind of knowledge.

And, although every one cannot expect to be bleſſed with the genius of a Barnard and a Beckford, yet every merchant of diſtinction ſhould be emulous to exert himſelf in the ſervice of his country, in a manner ſo conſiſtent with his profeſſion. Every trader having a private intereſt in the promotion of the general trade, and practical traders having greater opportunities than others of knowing the true intereſt of the nation in that reſpect, it ſeems a duty owing to themſelves, as well as their country, to turn their thoughts ſometimes that way. Beſide, in regard to their own particular intereſt, if they are not thoroughly acquainted with the political nature of that peculiar branch of trade, wherein they are perſonally concerned, how is it poſſible they can duly ſupport and defend it on any great exigencies, in the eye of the legiſlature?

For the proper inſtruction of the ſtudents in each of theſe branches, it is ſuppoſed, that the college is provided with tutors well accompliſhed to act their reſpective parts with all advantage to the collegians, and credit and honour to themſelves.—It is ſuppoſed likewiſe, that the college is provided with a library of the beſt authors in all the modern languages, who have treated upon the ſeveral ſubjects before enumerated, and with a complete mathematical and philoſophical apparatus for every purpoſe intended.

And now, if the reader will take a tranſient retroſpect in his mind of what has been ſaid, he will hardly ſcruple to grant, that merchandizing, and the united qualifications neceſſary to form this ſkilful Britiſh trader, have as good a claim to the appellation of an art or a ſcience, as moſt that are ſo honoured and diſtinguiſhed: ſhould we ſay, that commerce is the grand ſupport of moſt other arts that are ſolidly uſeful to mankind, it is no more than it deſerves; and therefore it will not be thought unreaſonable, that PRACTICAL TRADE, and MERCANTILE NEGOCIATIONS in general, ſhould be reduced to as regular a method of inſtitution, as it's inferior and dependent arts.

Of the PLAN of EXECUTION.

If the judicious reader ſhould be candid enough to admit the preceding plan of particulars to be unexceptionable, and that there is nothing intimated therein, but what appears indiſpenſibly neceſſary to train up the merchant ſuitably to his great employment; yet it may be ſaid, this is no great advance towards the carrying ſuch a deſign to it's deſirable height of perfection, in point of execution: it is far eaſier to ſuggeſt the particulars requiſite, than to obtain fit and capable perſons for the office of inſtructors in an eſtabliſhment of this kind. There is more difficulty attending this, perhaps, than there is in any other literary inſtitution; for, if the diſtinct branches hereof were to be taught in the ordinary ſcholaſtic way, which is practiſed in public ſchools and other collegial ſeminaries, I am afraid it would fruſtrate the end propoſed, and rather mar than forward the ſtudent in his accompliſhments.

The merchant is expected to engage in trade for himſelf, and hazard his fortune therein, by the age of 23 or 24 at fartheſt: many are impatient to ſtay ſo long: whereas the learned profeſſions, as they are diſtinguiſhed, give the ſtudent, upon the general, above ten years more in his application, before he is judged capable to make any tolerable figure in life; and that by ſubſiſting only on the intereſt of his fortune, if he has any, but not hazarding the principal money, as the young merchant is obliged to do, before he can raiſe any ſort of reputation in the commercial world.

This being the caſe, and the ſkilful merchant ſtanding in need of ſo great variety of knowledge, in order to preſerve and improve his fortune, every expedient ſhould be deviſed, every art practiſed, that will conduce to give him the greateſt fund of uſeful knowledge in the leaſt time.

Without entering into a critic upon the uſual methods of education in England, which, indeed, have been ſufficiently expoſed by learned men already; we ſhall only endeavour to ſhew in general, wherein, we apprehend, the method for accompliſhment of the merchant ought to differ from that which is commonly practiſed, in regard to the more learned claſſes of the community.

The life of the merchant being a converſable one, his employment leading him to tranſactions even from the mechanic and manufacturer to the miniſter of ſtate, his method of erudition, methinks, ſhould be as different from that ſcholaſtic way, as his profeſſion is from all others: the man of buſineſs has not 20 years to devote to the mere ſtudy of languages, metaphyſics, and criticiſm, &c. Prudence directs him to apply early to thoſe things indiſpenſibly requiſite to proſperity in his employment; and what may adorn the learned profeſſions, might ſpoil him for his own *.—When the merchants accompliſhments are equal to, or above his employment, and not his employment ſuperior to his accompliſhments, then he may be at liberty to make what advances leiſure and prudence will admit, in the belles lettres and the liberal arts; but to aim at this before, is acting as wiſely as the peaſant, who by turning ſtar-gazer got ſmothered in a ditch.

* Sir William Temple gives it as his opinion, that even the men of learning may be ſo overladen with learning, as to be weaker in point of judgment than if they had leſs.—So the merchant, if overſtocked with that ſort of literature which may be above or beſide his province, he may be the worſe merchant, though the greater ſcholar.—What Sir William ſays may deſerve attention—'Who can tell, ſays he, whether learning may not even weaken invention, in a man that has great advantages from nature and birth; whether the weight and number of ſo many other men's thoughts and notions may not ſuppreſs his own, or hinder the motions and agitations of them, from which all invention ariſes; as heaping on wood, or too many ſticks, or too cloſe together, ſuppreſſes, and ſometimes quite extinguiſhes a little ſpark that would otherwiſe have grown up to a noble flame. The ſtrength of the mind, as well as of body, grows more from the warmth of exerciſe than of clothes; nay, too much of this foreign heat, rather makes men faint, and their conſtitution tender and weaker than they would be without them.'—Temple's Works, vol. i. fol. p. 158. If this obſervation of Sir William's ſhould prove true, the merchant, with a ſhare of learning ſuitable only to his profeſſion, added to his converſable knowledge of the world, and the conſtant exerciſe of his own judgment in active buſineſs, may become a much wiſer man, a more uſeful member to the community, than the profound ſcholar, whoſe underſtanding is drowned in the ocean of knowledge borrowed only from others.

Upon the whole, what we would mean to ſay is, that there ſhould ſeem to be a certain pitch of literature, beyond which it is dangerous for the commercial man to advance; and really the field of knowledge, which the nature of the mercatorial employment requires, is not ſo ſcanty as ſome may be wont to think *: nor ſhould the manner of communication of what is requiſite be in the ordinary ſcholaſtic way, the merchant's time being limited, as before obſerved, to ſo few years, for the courſe of his erudition.

* See our Univerſal Dictionary throughout, in what relates to his accompliſhments.

Nor will a profound knowledge, in every mercantile branch which we have particularized, anſwer the end: there are perhaps, many far more learned divines, lawyers, and phyſicians, who live in obſcurity, than thoſe who gain their thouſands a year, and make a pompous figure in life: ſome ſtudy the externals, the knowledge of the world, and the craft of riſing without merit, while others ſtudy only to deſerve what they never arrive at.—The merchant muſt be the

man of the world, as well as ſkilful in the requiſites of his profeſſion; but his being immured in a college to converſe only with the dead letter, and the jargon of the ſchools, will render him as unfit for his profeſſion, as Sir Iſaac Newton was for a dancing-maſter.

Wherefore the queſtion is, what is the beſt method to train up this man of buſineſs? We ſay he muſt not be deficient in ſome of the principal modern languages, nor ſhould he be incapable of reading a Latin author at leaſt, though it may not be neceſſary for him to be a claſſical critic. If he enters the college with a childiſh ſmattering of this tongue only, he ſhould not leave it, without ſuch a fundamental maſtery, that he can improve himſelf therein at intervals, even in the height of his mercantile concerns.

The buſineſs of languages, eſpecially the learned ones, as they are eminently diſtinguiſhed, is made an Herculean toil, in the packhorſe road of an ordinary Engliſh education; yet no nation has better helps to facilitate their acquiſition.—We abound with Engliſh tranſlations, both literal and free, of the poets as well as proſaic authors, more than ſufficient to enable a perſon to read any of the reſt; ſufficient, however, to capacitate the man of buſineſs to read any he may chuſe; and he has ſcarce ever occaſion to ſpeak or write that dead language; though why the Engliſh, as well as foreigners, ſhould not be accuſtomed to ſpeak the Latin, there can be no ſubſtantial reaſon given, perhaps.—The Engliſh are remarkable for writing Latin inferior to none; and why they ſhould not ſpeak it equally well, if trained to it, is not eaſy to ſay. Becauſe we can never be able, ſay ſome, from the change of cuſtoms, and the extraordinary difference of idiom, &c. to ſpeak that language with a Roman elegancy, are we therefore not to attempt it all? Would not a converſable uſe in this dead language, from our infancy, greatly expedite the acquiſition of the modern, which have a near affinity therewith? This will hardly be gainſaid *.

* 'If a man could be got, ſays our great Mr. Locke, who, himſelf ſpeaking good Latin, would always be about your ſon, talk conſtantly to him, and ſuffer him to ſpeak or read nothing elſe (a), this would be the true genuine way, and that which I would propoſe, not only as the eaſieſt and beſt, wherein a child might, without pains or chiding get a language which others are wont to be whipped for at ſchool, ſix or ſeven years together; but alſo as that wherein at the ſame time he might have his mind and manners formed, and he be inſtructed to boot in ſeveral ſciences; ſuch as are a good part of geography, aſtronomy, chronology, anatomy, beſides ſome parts of hiſtory, and all other parts of knowledge of things, that fall under the ſenſes, and require little more than MEMORY. For theſe, if we would take the true way, our knowledge ſhould begin, and in thoſe things be laid the foundation; and not in the abſtract notions of logics and metaphyſics, which are fitter to amuſe than inform the underſtanding in it's firſt ſetting out towards knowledge.

'When young men have had their heads employed a while in thoſe abſtract ſpeculations, without finding the ſucceſs and improvement, or that uſe of them which they expected, they are apt to have mean thoughts, either of learning or themſelves; they are tempted to quit their ſtudies and throw away their books, as containing nothing but hard words and empty ſounds; or elſe to conclude, that, if there be any real knowledge in them, they themſelves have not underſtanding capable of it. That this is ſo, perhaps, I could aſſure you upon experience. Amongſt other things to be learned by a young gentleman in this method, whilſt others are only taken up with Latin and languages, I may alſo ſet down geometry for one, having known a young gentleman, bred ſomething after this way, able to demonſtrate ſeveral propoſitions in Euclid, before he was thirteen.'

(a) This is the method by which the celebrated Montaigne was taught Latin, and from which very probably Mr. Locke might borrow the thought. What Montaigne ſays of himſelf may deſerve regard:—'No doubt but Greek and Latin are very great ornaments, and of very great uſe, but we buy them too dear: I will here diſcover one way, which alſo has been experimented in my OWN PERSON, by which they are to be had better cheap, and ſuch may make uſe of it that will. My father having made the moſt preciſe enquiry that any man could poſſibly make, amongſt men of the greateſt learning and judgment, of an exact method of education, was by them cautioned of the inconvenience then in uſe, and made to believe that the tedious time we applied to the learning of the languages of thoſe people who had them for nothing, was the ſole cauſe we could not arrive to that grandeur of ſoul and perfection of knowledge with the ancient Greeks and Romans: I do not, however, believe, that to be the only cauſe: but the expedient my father found out for this was, that in my infancy, and before I began to ſpeak, he committed me to the care of a German, who ſince died a famous phyſician in France, totally ignorant of our language, but very fluent, and a great critic in Latin.

'This man, whom he had fetched out of his own country, and whom he entertained with a very great ſalary for this only end, had me continually in his arms: to whom there were alſo joined two others of the ſame nation, but of inferior learning, to attend me, and ſometimes to relieve him, who all of them entertained me with no other language but Latin. As to the reſt of his family, it was an inviolable rule, that neither himſelf, nor my mother, man nor maid, ſhould ſpeak any thing in my company, but ſuch Latin words as every one had learnt only to gabble with me. It is not to be imagined how great an advantage this proved to the whole family; my father and my mother, by this means learning Latin enough to underſtand it perfectly well, and to ſpeak it to ſuch a degree, as was ſufficient for any neceſſary uſe; as alſo thoſe of the ſervants did, who were moſt frequent with me.—To be ſhort, we did Latin it at ſuch a rate, that it overflowed to all the neighbouring villages, where there yet remain, that have eſtabliſhed themſelves by cuſtom, ſeveral Latin appellations of artizans and their tools. As for what concerns myſelf, I was above ſix years of age before I underſtood either French or Perigordin, any more than Arabic; and, without ART, BOOK, GRAMMAR, or PRECEPT, WHIPPING, or the expence of a TEAR, had by that time learned to ſpeak as pure Latin as my maſter himſelf. If, for example, they were to give me a theme after the college faſhion, they gave it others in French, but to me they were of neceſſity to give it in the worſt Latin, to turn it into that which was pure and good; and Nicholas Grouchi, who writ a book de Commitiis Romanorum, William Guirentes, who has writ a comment upon Ariſtotle, George Buchanan, that great Scotch poet, and Marcus Antonius Muretus, (whom both France and Italy have acknowledged for the beſt orator of his time) my domeſtic tutors, have all of them often told me, that I had in my infancy that language ſo very fluent and ready, that they were afraid to enter into diſcourſe with me; and particularly Buchanan, whom I ſince ſaw attending the late mareſchal de Briſac, then told me, that he was about to write a treatiſe of education, the example of which he intended to take from mine, for he was then tutor to that count de Briſac, who afterwards proved ſo valiant and brave a gentleman. As to Greek, of which I have but a ſmattering, my father alſo deſigned to have taught it me by a trick, but a new one, and by way of ſport; toſſing our declenſions to and fro, after the manner of thoſe, who by certain games, and tables and cheſs, learn geometry and arithmetic: for he, amongſt other rules, had been adviſed to make me reliſh ſcience and duty by an unforced will, and of my own voluntary motion, and to educate my ſoul in all liberty and delight, without any ſeverity or reſtraint.'

Beſides the practice of converſation, as recommended by Mr. Locke and Montaigne, and indeed by all the learned men of other nations, the next means is tranſlation; which, according to the learned Mr. Aſcham *, who was preceptor to queen Elizabeth, ought to be double; that is to ſay, not only Latin into Engliſh, but the ſame Engliſh again into the original Latin, whereby learners have the claſſical authors to correct themſelves by: which, being of the pure Roman phraſe, is a far better ſtandard for correction than the judgment of the generality of ſchoolmaſters.

* See the Schoolmaſter: or, A plain and perfect way of teaching children to underſtand, write, and ſpeak the Latin tongue. By Roger Aſcham, Eſq; preceptor to her majeſty queen Elizabeth, corrected and reviſed, with an addition of explanatory notes, by the Rev. Mr. James Upton, A. M. rector of Brimton in Somerſetſhire, and late fellow of King's College in Cambridge. Printed in the year 1711, for Benjamin Tooke, at the Middle Temple Gate in Fleet-Street.—This I think one of the beſt books I ever met with to help youth forward in the Latin tongue, with great eare and pleaſure, and which I myſelf have experienced.

'But, if ſuch a man cannot be got, ſays Mr. Locke, who ſpeaks good Latin, and, being able to inſtruct your ſon in all theſe parts of knowledge, will undertake it by this method, the next beſt is to have him taught as near this way as may be, which is by taking ſome eaſy and pleaſant book, ſuch as Æſop's Fables, and writing the Engliſh tranſlation (made as literal as it can be) in one line, and the Latin words which anſwer each of them, juſt over it in another. Theſe let him read every day over and over again, 'till he perfectly underſtands the Latin; and then go on to another fable, 'till he be alſo perfect in that, not omitting what he is already perfect in, but ſometimes reviewing that, to keep it in his memory. And, when he comes to write, let theſe be ſet him for copies; which, with the exerciſe of his hand, will alſo advance him in Latin. This being a more imperfect way than by talking Latin unto him, the formation of the verbs firſt, and afterwards the declenſion of the nouns and pronouns perfectly learned by heart, may facilitate his acquaintance with the genius and manner of the Latin tongue, which varies the ſignification of verbs and nouns, not as the modern languages do, by particles fixed, but by changing the laſt ſyllables. More than this of grammar * I think he need not have, 'till he can read himſelf Sanctii Minerva, with Scioppius and Perizonius's notes.

* The abſurdity, ſays the late ingenious Mr. Clark of Hull, in his New Latin Grammar, of teaching the Latin tongue by a grammar in Latin, is ſo very groſs, that one would wonder how it ſhould ever enter into the head of any perſon of common ſenſe, much more how it ſhould ever become a national practice. But common cuſtom, in moſt caſes of importance, is ſo far from being the rule of right, that it is the very reverſe of it, and in no caſe more flagrantly than this. The impoſing of public prayers for the uſe of the people in a language they know not, as ſenſeleſs and ridiculous a practice as it is, it is not more ſo than it is to pretend to teach a language by rules writ in the very language to be learnt, and which conſequently the learner cannot underſtand, or make any uſe of, 'till they are rendered into a language he does know; and then it is the tranſlation only, and not the original, that is of uſe to him. In ſhort, the moſt rude and barbarous nations upon earth cannot furniſh us with any inſtance of a cuſtom that carries more of ſtupidity in the front of it. And therefore it is ſomewhat ſtrange, that a practice ſo miſchievous, as well as ridiculous, ſhould not long ſince have had a ſtop put to it by law. Our legiſlators have almoſt all in their turns been conſiderable ſufferers by it; and, unleſs they pleaſe by their authority to prevent it, their poſterity after them are like to ſuffer on in the ſame manner to the end of the world. For public cuſtom is ſeldom to be conquered but by authority, eſpecially where people are got into the wrong way, ſo perverſe or weak are

the generality of mankind. It is, therefore, very much to be wiſhed, the legiſlature would take the matter under conſideration, and, to ſave a deal of pain and plague, as well as a miſerable waſte of time to the youth of the nation, put an effectual ſtop to the ſenſeleſs and barbarous cuſtom of teaching the Latin tongue by a Latin grammar. They have highly merited of the people of Great-Britain, by delivering them from a grievance of a like nature, the uſe of the Latin tongue, or doggerel rather under that denomination, in the practice of the law.

Another act of that nature, in pity to the poor ſuffering youth of the kingdom, would, I dare ſay, be as kindly and thankfully received, by all true lovers of their country and good letters. Whether it may be reaſonable or proper for authority to impoſe the uſe of any one grammar, I ſhall not take upon me to determine here; but this I ſhall be bold to ſay, that it is as reaſonable to forbid by law the pretence of teaching the Latin tongue by a grammar writ in Latin, as it is to forbid the uſe of that language in the public worſhip of God. Both practices are equally ridiculous, though not equally pernicious. For the thing propoſed in both caſes is utterly unattainable. Youth can no more learn by the help of a language they do not underſtand, than the people can pray to God in a language they do not underſtand, which every body ſees to be impoſſible, and nonſenſe to pretend.—So far the ingenious Mr. Clark.

In teaching of children this too, I think, is to be obſerved, that, in moſt caſes where they ſtick, they are not to be farther puzzled, by putting them upon finding it out of themſelves; as by aſking ſuch queſtions as theſe, viz. which is the nominative caſe in the ſentence they are to conſtrue? or demanding what auſero ſignifies, to lead them to the knowledge what abſtulere ſignifies, &c. when they cannot readily tell. This waſtes time only in diſturbing them; for, whilſt they are learning, and apply themſelves with attention, they are to be kept in good humour, and every thing made eaſy to them, and as pleaſant as poſſible *. Therefore, whenever they are at a ſtand, and are willing to go forwards, help them preſently over the difficulty, without any rebuke or chiding; remembering, that, where harſher ways are taken, they are the effect only of pride and peeviſhneſs in the teacher, who expects children ſhould inſtantly be maſters of as much as he knows: whereas he ſhould rather conſider, that his buſineſs is to ſettle in them habits, not angrily to inculcate rules, which ſerve for little in the conduct of our lives; at leaſt are of no uſe to children, who forget them as ſoon as given. In ſciences where their reaſon is to be exerciſed, I will not deny, but this method may ſometimes be varied, and difficulties propoſed on purpoſe to excite induſtry, and accuſtom the mind to employ it's own ſtrength and ſagacity in reaſoning. But yet, I gueſs, this is not to be done to children whilſt very young, nor at their entrance upon any ſort of knowledge: then every thing of itſelf is difficult, and the great uſe and ſkill of a teacher is to make all as eaſy as he can. But particularly, in learning of languages, there is the leaſt occaſion for poſeing of children. For languages, being to be learned by ROTE, CUSTOM, and MEMORY, are then ſpoken in greateſt perfection, when all rules of grammar are utterly forgotten. I grant the grammar of a language is ſometimes very carefully to be ſtudied, but it is only to be ſtudied by a grown man, when he applies himſelf to the underſtanding of any language critically, which is ſeldom the buſineſs of any but profeſſed ſcholars. This, I think, will be agreed to, that if a gentleman be to ſtudy any language, it ought to be that of his own country, that he may underſtand the language which he has conſtant uſe of, with the utmoſt accuracy.' See Locke of Education.

* Theſe ſentiments of Mr. Locke have induced many to oblige the public with literal tranſlations of ſeveral of the introductory claſſical authors, for the uſe of ſchools; and which, I doubt not, have proved extremely helpful; eſpecially when the learners have been exerciſed by Mr. Aſcham's method of double tranſlation, and the grammar rules have been explained at proper times, in plain Engliſh. Many teachers of the dead languages are ridiculous and pedantic enough, to act in defiance of the opinion of Mr. Locke, Montaigne, Aſcham, and other the moſt learned men in Europe, as might be eaſily ſhewn, and will not ſuffer youth to have all thoſe helps for which theſe great men have ſo wiſely contended: yet too many of theſe learned aſſes are obliged to make uſe themſelves of theſe very auxiliaries, which they deny to children; in which a gentleman and myſelf once accidentally detected his ſon's ſchoolmaſter at his own houſe.—Muſt not this be, with deſign to make the children believe, that their maſters are ſo ſuperlatively profound in theſe languages, that they ſtand in need of no expoſitors or annotators, when they really ſtand in need of them as much as the youths themſelves? Or, muſt it not be with intent to lay every obſtacle in the way of their improvement, that they may exert their perceptorial tyranny with leſs reſtraint? There cannot be too many helps for the acquiſition of languages, both ancient and modern; and thoſe, I am afraid, who the moſt ſtrenuouſly oppoſe them, I ſhall always ſuſpect, ſince the above accident, have the greateſt occaſion for them.

Monſieur Rollin, than whom few have better underſtood the method of training up youth in the learned languages, is of the ſame ſentiment: 'La premiere queſtion, dit-il, qui ſe 'préſente, eſt de ſavoir quelle méthode il faut ſuivre pour 'enſeigner la langue Latine. Il me ſemble qu'à préſent l'on 'convient aſſez généralement que les premiers régles que 'l'on donne pour apprendre le Latin, doivent être en Fran-'çois, parcequ'en TOUTE SCIENCE, en toute connoiſſance, 'il eſt naturel de paſſer d'une choſe CONNUE & CLAIRE à une 'choſe qui eſt INCONNUE & OBSCURE. On a ſenti qu'il n'e-'toit pas moins abſurde, & moins contraire au bons ſens, 'de donner en Latin les premiers préceptes de la langue La-'tine, qu'il le ſeroit d'en uſer ainſi pour le GREC, & pour 'toutes les LANGUES E'TRANGERES.'

Thoſe who would require greater ſatisfaction in relation to the method ſuggeſted for the ſpeedy and familiar acquiſition of languages, we refer them to conſult not only thoſe principal authors beforementioned, but ſuch alſo who have followed the principles of thoſe learned men, and wrote, ſince their time, upon the utility of the plaineſt and moſt literal tranſlations (ſomething in the way propoſed by Mr. Locke) in order to facilitate the knowledge of the Latin tongue in particular *.—And, after the ſtudent is a maſter of theſe ſeveral authors; by the conſtant exerciſe of the method of double tranſlation, and having the grammatical rules familiarly explained to him occaſionally in plain Engliſh, he will be able of himſelf to read with pleaſure ſeveral of the other claſſical authors; eſpecially thoſe with free and elegant tranſlations, ſuch as thoſe wrote by Guthrie, Melmoth, Dunſter, Dr. Martyn, and divers others; as alſo thoſe commentators who have wrote in Latin upon the Roman claſſics. Upon the whole, however neceſſary ſome learned men may think it, that the youth of this nation, intended for the learned profeſſions, ſhould plod on in the old way of gaining a knowledge of the dead languages, it is to be hoped that the parents of thoſe who are intended for merchants, will think it the worſt method that can be taken for them: and what is the worſt method for their attainment of a knowledge in the Latin tongue, can never be the beſt to be followed in relation to the modern languages.—They muſt be acquired by conſtant converſation with ſuch who ſpeak with propriety; by double tranſlation, and by having the grammatical part eaſily explained in their native language, from the mouth of the tutor, and not by a multitude of rules got by heart, which only ſerve to burthen the memory, render learning diſagreeable to youth, and retard their proficiency.—If I remember right, biſhop Spratt, in the Life of Cowley, ſays, That he could never be brought to learn the Latin tongue by grammar rules, and yet few of the moderns have wrote that language with greater purity.

* The firſt that I remember to have appeared upon this occaſion, was Mr. Philips, ſub-preceptor to his royal highneſs the Duke. (2.) Mr. Clark, of the public grammar-ſchool of Hull, author of two Eſſays on Education and Study, of A New Grammar of the Latin Tongue, and Literal Tranſlations of ſeveral of the Introductory Latin Claſſics. (3.) Doctor Stirling. (4.) N. Bailey, Mr. Watſon, and others.

Before we diſmiſs this point of language, we will take leave to make one obſervation more; which I have never met with in any of thoſe authors who have wrote upon the beſt methods of obtaining a knowledge of languages. The reader, however, will pleaſe to take notice that what we are about to ſay is only intended as a requiſite addition to what has been already propoſed by Mr. Locke, Mr. Aſcham, and thoſe other authors before quoted, in regard to the uſefulneſs of prepared literal tranſlations, &c.

Another thing we deſire the reader will pleaſe to obſerve, is, that we take it for granted no youth is admitted into the college before the age of 15 at leaſt, and that he has been ſomewhat initiated into Latin and French, and can write his native language tolerably, together with a pretty good current hand.

Now, what we would humbly ſubmit to further conſideration is, in relation to the moſt natural method of making uſe of proper literal tranſlations in the propoſed college, in order to render the ſpeaking and underſtanding of the Latin tongue, or any of the modern languages, very eaſy and familiar to the mercantile ſtudent: and what we have to propoſe is comprehended under the few following words:

The conſtant proper uſe of a LIVING DICTIONARY, and a LIVING GRAMMAR, and proper LITERAL TRANSLATIONS.

That all literal tranſlations may be made a proper uſe of, by the means of a living dictionary, it is propoſed there ſhall be a kind of deſk, elevated to a pitch proper for the purpoſe, wherein there ſhall always be one perſon conſtantly tranſlating, with an audible voice, either Latin into Engliſh, or Engliſh into Latin; or French into Engliſh, or Engliſh into French; and the like of any other modern language to be learned; and thoſe tranſlations to be in as literal a manner as the different idoms of the languages will admit of, ſo as to be perfectly intelligible.—At the ſame time ſhould be explained, viva voce, the peculiar cuſtoms and antiquities of the Romans, when any thing occurs that renders the ſame neceſſary to the better underſtanding the author which is thus publicly tranſlating.

1. Let

1. Let it be ſuppoſed, that, while ſuch a conſtant tranſlator, during the hours of education, is going on, a profound ſilence is preſerved, and due attention is given by the ſtudents to ſuch tranſlation.
2. Let it be ſuppoſed, likewiſe, that one ſingle day only in the ſix is allotted for the explication of the rules of grammar, of any author that has been tranſlated, in the ſame public way, relating to the peculiar language to be acquired.
Theſe ſimple exercciſes being ſuppoſed to be ſteadily purſued, in regard to any language, what may we reaſonably preſume to be the conſequence?
In this exerciſe, the reader will pleaſe to obſerve, that the ear and the memory of youth only are conſtantly employed, with reſpect to the point of double tranſlation; and that the underſtanding is familiarly worked upon, in order to imbibe and retain the rules of grammar, without the leaſt diſagreeable application or fatigue.
It is by the conſtant uſe of the tongue, the faculties of hearing and the memory only, whereby mankind obtain the knowledge to ſpeak, write, and underſtand their native languages; and if, in the public way of teaching any other languages, we can fall nearly upon the like meaſures, is it not very reaſonable to hope and expect that any other languages may be thereby acquired as familiarly and inſenſibly as we do our mother tongues? That this muſt be the effect of ſuch exerciſes, we have not only the judgment of ſo great a man as Mr. Locke, but the experience of a Montaigne, our great queen Elizabeth, and Madam Dacier.
By thumbing over the DEAD DICTIONARY and DEAD GRAMMAR, a youth of 15 ſhall, perhaps, make ſhift, with Herculean toil, and the help of his ſchool-fellows, to hammer out, in a very pitiful way, thirty or forty lines of an author in a day, the greateſt part of which he too often as ſoon forgets as learns: whereas, by means of the conſtant exercciſe of the LIVING DICTIONARY, and the LIVING GRAMMAR, and LITERAL TRANSLATIONS, he may, with great eaſe and pleaſure, learn ſome hundreds of lines in a day, and retain the greateſt part of the words and phraſes in his memory.
Whether theſe exerciſes will be attended with advantages ſo ſuperior to what the ordinary ones are, it may be neceſſary to enter into a further eclairciſſement of the plan propoſed.—To which end, the reader is deſired further to obſerve, that
The whole college is ſuppoſed to conſiſt only, or chiefly, of young ſtudents who are deſigned for the mercatorial employment.—That their continuance therein is propoſed to be from the age of 15 to 19, and that the whole number of them ſhall be divided into four or more claſſes; that is, thoſe of the firſt year's ſtanding ſhould be of the firſt claſs, thoſe of the ſecond of the next, &c.
At the firſt commencement of this inſtitution, the freſh men, who enter at 15, muſt be aſſiſted, as much as poſſible, by the means propoſed, for the firſt year, by the tutors; but, upon their entrance into the ſecond year, thoſe of the firſt year may, in a great meaſure, be inſtructed by the meaſures ſuggeſted, by their fellow ſtudents of the ſecond year's ſtanding; and thoſe of the ſecond year's ſtanding be inſtructed by thoſe of the third; and thoſe of the third by thoſe of the fourth year's ſtanding; which will prove of no leſs eaſe to the tutors, than benefit to themſelves.—To explain myſelf.
1. It is preſumed that thoſe ſtudents who enter into the ſecond year have, in the way propoſed, gone through two, three, or more of the introductory Latin claſſical authors, beſides two or three French authors * which are proper for the occaſion. At the ſame time, the reader is deſired to obſerve, that there are ſtated times for their improvement in figures, and their mechanical hand-writing, and ſomething of geography.

* The plaineſt proſe authors we judge beſt to begin with.

2. That three or four, or more, of the moſt expert ſtudents of the ſecond claſs ſhould be conſtant public tranſlators to thoſe of the firſt claſs, the tutor always attending to explain difficulties, as they occurred.—Thoſe of the third claſs to thoſe of the ſecond, and thoſe of the fourth to thoſe of the third claſs, &c.
3. This will refreſh the memories again of the ſtudents with the authors which they had read in their prior claſs, habituate them to a graceful pronunciation and elocution, and prove of great eaſe to the lungs of the tutor, whom we cannot preſume to be capable of continuing a public tranſlation ſeveral hours in the day; but this may be very eaſily done by a requiſite number of the ſtudents of a ſuperior claſs, in the preſence of the tutor appointed for the inſtruction of the claſs.
4. By theſe ſimple exerciſes, ſteadily and judiciouſly purſued, the ſtudents cannot trifle away a moment's time of the hours allotted for their inſtruction, which they do when left intirely to themſelves, with the uſe only of their dead dictionary and grammar, and without any proper tranſlation to aſſiſt them.
5. It is ſuppoſed, as before intimated, that there is a profound ſilence always preſerved in the room of public tranſlation; that is, nothing is to be heard but the continued voice of the public tranſlator for the time being.—If any thing is capable of fixing the attention of youth, this method ſeems to bid very fair for it, becauſe it is not attended with the leaſt degree of toil or perplexity, every obſtacle to their advancement being agreeably removed.
6. In order to judge whether due attention hath been given by every individual to the voice of the public tranſlators, it ſhould be an eſtabliſhed rule for the tutor to cauſe, every day, ſuch as he may ſuſpect of inattention to mount the deſk, and to retranſlate publicly ſuch a part of what has been done, perhaps, ſeveral times over by the appointed tranſlators; and thoſe who prove delinquents, and appear to be remarkably neglectful, will not only be thus ignominiouſly expoſed, but they ſhould be puniſhed, by being that day confined to ſome extraordinary exerciſes, while their fellow ſtudents, who had behaved well, ſhould be indulged in their diverſions, and admitted to a table, for their meals, where there was ſomething more delicate than at the table of ſuch delinquents.—Something of this kind might be attended with very happy conſequences to the youth, and of no little eaſe to the reſpective tutors.
We ſhall ſay no more in relation to languages.—The next points are thoſe of FIGURES and ACCOUNTANTSHIP; and theſe, likewiſe, and ſuch other parts of the mathematics, and, experimental philoſophy, as we have touched upon, we would have taught as much in the ſame way as their peculiar nature will admit of; we mean, with relation to the rationale of the rules given for the practical operations of arithmetic, and the principles whereupon the art of accountantſhip by debtor and creditor, is founded, &c. together with proper lectures upon the mathematical and philoſophic parts.—But, as the utility of the arithmetic and accountantſhip branches, in particular to the merchant, depends upon the ready and expert practice, the greateſt variety of examples ſhould not be wanting to exercciſe the ſeveral rules and principles thereof: yet theſe examples, alſo, we would have all performed in a public way, that the ſtudent ſhould not have it in his power at all to trifle away his time: for that we judge a very eſſential point to be guarded againſt throughout the whole of this inſtitution: but this can never be effectually done, provided a public lecturer, or demonſtrator, is not conſtantly employed in thoſe parts, as well as in the languages, and the ſilence and attention of the ſtudents are, at the ſame time, ſo diligently engaged as thoroughly to comprehend whatever they are thus publicly inſtructed in; and are able, alſo, to exerciſe the ſame in thoſe practical uſes which the nature of their employment may occaſionally require: yet this cannot be effectually done, unleſs they have great variety of practical exerciſe in the ſeveral and reſpective branches *. Wherefore,

* That the fundamental principles of every branch may be duly impreſſed upon the mind, they ſhould, together with proper examples, be fairly written, at the proper times appointed for that purpoſe, into books, by every individual ſtudent; and they ſhould be alſo taught how to keep an alphabetical common-place book, wherein to regiſter whatever they may hereafter have occaſion to refer to.

The reader will pleaſe to obſerve, that another material and general principle, whereupon we propoſe the PLAN of EXECUTION to be founded, is, GREAT PRACTICE AND EXERCISE, in every branch of erudition. And, to corroborate our opinion herein, we ſhall again appeal to the authority of Mr. Locke:
'No body is made any thing by hearing of rules, ſays he, or 'laying them up in his memory; practice muſt ſettle the habit of doing, without reflecting on the rule; and you may 'as well hope to make a good painter or muſician extempore, 'by a lecture, and inſtruction in the arts of muſic and painting, as a coherent thinker, or ſtrict reaſoner, by a ſett of 'rules, ſhewing him wherein right reaſoning conſiſts.' Locke's Conduct of the Underſtanding, vol. iii. p. 395.
With reſpect to the knowledge of the laws, cuſtoms, and uſages relative to the employment of a merchant, thoſe likewiſe, we apprehend, ſhould be inculcated not only by PUBLIC LECTURE, but by FAMILIAR CONVERSATIONS upon the ſubjects of averages, baratries, bottomrees, bankruptcies, charter-parties, demurrages, exchanges [bills of exchange] and all other the variety of occurrences that ariſe in the courſe of practical buſineſs, all which will afford a wide field for improvement in matters of real uſe.—In relation to the method of inſtruction by public lecture, that is obvious enough to every one.—But what we mean by familiar converſation, may require ſome explanation. To which we ſhall only obſerve, that one or two evenings in the week, after the college exerciſes, ſhould be ſet apart for thoſe ſtudents, who are competently advanced, to give their opinion in the Engliſh language, or any other of the modern, in the preſence of the proper profeſſor appointed for this branch, upon any of the before-mentioned ſubjects, or any other relating to mercantile affairs; it being ſuppoſed, that the ſubject has been given out ſome days beforehand, in order for them to conſult the proper books in the college, or their own libraries, for that purpoſe.
By this pleaſing converſible exerciſe, the young ſtudents will be early inured to reflection, and retention of what they read, when they are under the neceſſity of communicating publicly

what authors they have conſulted upon the occaſion.—Beſides, many of thoſe points may lead to ſome debate; the profeſſor may ſtart objections, and aſk their free opinions, when the ſubject is properly opened by him: and, by familiar interrogatories made from the chair, this will naturally draw out ſuch anſwers as will ſhew who have, and who have not been aſſiduous in their applications to underſtand the ſubject from the books of authority.

The great Montaigne ſays, 'If I was compelled to chuſe, I 'ſhould ſooner, I think, conſent to loſe my ſight than hear- 'ing and ſpeech. The Athenians and Romans held the ex- 'erciſe of familiar conference and debate in great honour in 'their academies.' Mr. Locke had ſo high an opinion of it's utility, as to recommend it in the following words: 'That 'there ſhould be propoſed to young gentlemen rational and 'uſeful queſtions, ſuited to their age and capacities, and on 'ſubjects not wholly unknown to them, nor out of their way: 'ſuch as theſe, when they are ripe for exerciſes of this nature, 'they ſhould extempore, or after a little meditation upon the 'ſpot, ſpeak to, without penning of any thing: for I aſk, if 'we will examine the effects of this way of learning to ſpeak 'well, who ſpeak beſt in any buſineſs, when occaſion calls 'them to it, upon any debate, either thoſe who have ac- 'cuſtomed themſelves to compoſe and write down before- 'hand what they would ſay; or thoſe, who thinking only 'on the matter, to underſtand that as well as they can, uſe 'themſelves only to ſpeak extempore. And he that ſhall 'judge by this, will be little apt to think that accuſtoming 'him to ſtudied ſpeeches and ſet compoſitions is the way to 'fit a young gentleman for buſineſs *.'

* Cicero, if I may be allowed once to mention ſuch a name in a deſign of this nature, ſomewhere ſpeaks of C. Curio, who had never read any books of eloquence, nor made any hiſtorical collections, nor underſtood any thing of the public or private part of the law; yet was ſo happy in expreſſing himſelf, as to be eſteemed one of the beſt orators of his time. What gained him this applauſe, was a clear ſhining phraſe, and a ſudden quickneſs and fluency of expreſſion, which was acquired purely by the benefits of his private education, being always uſed to a correct way of ſpeaking in the houſe wherein he was brought up.

The ſame exerciſes of conſtant public lectures and public converſations, we alſo judge to be the moſt naturally adapted to the attainment of the other branches enumerated in the general plan, and, therefore, we ſhall only further obſerve,

1. The reader will pleaſe to remark in general, throughout the execution of every part of the propoſed plan, we would recommend a ſimilitude and uniformity of practice, viz. the conſtant exerciſe of the faculties of hearing, ſpeaking, and regiſtering by writing, the fundamental principles of whatever ſhall be taught in the college; and this without any retardment whatever to the progreſs of the ſtudent, every difficulty being agreeably removed as ſoon as it occurs.

2. The variety of capacities among youth, it is to be feared, is commonly too little attended to in their education: methods, ſuitably adapted to one genius, mar, blunt, and confound another. To prevent prejudicial conſequences of this kind, our plan of execution is ſo deviſed as to ſuit any variety of capacities and diſpoſitions. The ſlower genius and milder complexion will here have the faireſt play to exert itſelf, without that awe and perplexity which often nips it in it's tender bud. On the other hand, the ſtrongeſt and moſt nervous capacity, the genius of the greateſt ſprightlineſs and vigour, will have every advantage to fix it's fire, and agreeably mould and faſhion it to application.

Emulation in youth, like ambition in men, exciting to the moſt laudable endeavours, no expedient ſhould be wanting firſt to raiſe, and afterwards to cheriſh and ſupport this noble paſſion.

One motive of this kind will be peculiar to theſe young gentlemen: which is, their being made ſenſible how eaſily they may advance each other's credit and intereſt in the way of trade: but, without ſuitable qualifications to play ſkilfully into each other's hands, they ſhould be convinced that they can never hope to reap ſuch benefit by their mutual intercourſe of friendſhips.

The experienced well know how merchants properly ſituated at home and abroad may promote one another. This is often done by perſons bred in ſeparate practical counting-houſes in the ordinary way: but, where young people are bred up together, in the like maxims and practices, and where perſonal friendſhips are contracted from their youth, they will more naturally fall upon meaſures for their common advantage: eſpecially ſo, when ſuch have been properly pointed out to them in the courſe of their collegial erudition, and deeply impreſſed in their tender years.

In carrying the whole of this deſign into execution, the natural and ordinary practices of men of ſenſe and genius ſhould be made the principal guide. From art ſhould be only borrowed ſuch helps as will aid and aſſiſt, no way cramp and ſuppreſs, the intellectual powers and faculties: and how far thoſe powers and faculties will carry youth, under an inſtitution whoſe ſole foundation is to render every acquiſition as pleaſing and delightful as poſſible, has, perhaps, ſcarce ever been duly experimented *. In the common methods of acquiring knowledge, men ſeem generally too intent upon the dead letter: whereas, if the real converſible practices of mankind, properly regulated and conducted, and improved by natural and engaging arts, were made the principal foundation in every kind of literary inſtitution, we might indeed, have fewer pedants, but more truly uſeful members of the community.

* 'Un maître habile & attentif met tout en uſage pour rendre 'l'étude aux jeunes gens agreable. Il prend leurs teins: 'il étudie leur goût: il conſulte leur humeur: il méle le 'jeu au travail: il paroit leur en laiſſer le choix: il ne fait 'point une régle de l'étude: il en excite quelquefois le deſir 'par la refus même, & par la ceſſation, ou plû-tôt par l'in- 'terruption: en un mot, il ſe tourne en mille formes, & 'invente mille adreſſes pour arriver à ſon but.' Rollin des Belles Lettres. Du Government des Colleges.

'I would not, ſays Montaigne again, have this pupil of our's 'impriſoned and made a ſlave to his learning; nor would I 'have him given up to the moroſity and melancholic humour 'of a ſour, ill-natured pedant. I would not have his ſpirit 'cowed and ſubdued, by applying him to the rack, and tor- 'menting him, as ſome do, fourteen or fifteen hours a day, 'and ſo make a pack-horſe of him. Nor ſhould I think it 'good, when, by reaſon of a ſolitary and melancholic com- 'plexion, he is diſcovered to be much addicted to books, to 'nouriſh that humour in him, for that renders him unfit for 'civil converſation, and diverts him from better employments. '—The place of education, adds he, ſhould be painted with 'the pictures of joy and gladneſs, Flora and the Graces, as 'the philoſopher Speuſippus did his; that, where their profit 'is, they might there have their pleaſure too.'

We would not have it ſignified, that theſe young gentlemen can be expected to arrive at ſo great a maſtery in every thing we have ſuggeſted, as to become perfect proficients therein. The youth of many, and the ſhortneſs of time propoſed for their continuance in the college, cannot well allow of this. But we take upon us to ſay, that all who have tolerable natural abilities can ſcarce avoid contracting ſo good a habitude of attention and application to buſineſs, as will grow up with them throughout the whole of their lives, and, indeed, qualify them ever after to be their own inſtructors. 'It is not, 'as Mr. Locke obſerves, the buſineſs of education, in reſpect 'to knowledge, to perfect a learner in all, or any of the ſci- 'ences, but to give his mind that freedom, that diſpoſition, 'thoſe habits, that may enable him to attain any part of 'knowledge he ſhall apply himſelf to, or ſtand in need of in 'the future courſe of his life.'

It having been a diſpute among the learned world, whether a public or a private education is to be preferred, it may be neceſſary to obſerve, that, according to the propoſed inſtitution, the end of both may be effectually anſwered at the ſame time: and that not only in regard to the point of mercantile accompliſhment, but in regard alſo to the morals of young people; for ſuch ſhould be the diſcipline eſtabliſhed for the conduct of this deſign, that every moment of time might be properly regulated, even that portion allotted for diverſions, in order to render them innocent, at the ſame time that they are manly, pleaſurable, and healthful.

Some of the wiſeſt men in all ages have been of opinion, that there is no one living to whom nature has not given a capacity to underſtand ſome one ſcience, or to be better formed to excel in one employment or profeſſion, rather than in another. Many there are, who, to no purpoſe, applying to one branch of knowledge or buſineſs, have made very great proficiency by being turned to a different.

As many, we preſume, are bred to merchandizing, or, as a learned divine expreſſes himſelf upon a ſimilar occaſion, have run their heads againſt a counting-houſe, who might have done their country notable ſervice at a plough tail, the propoſed inſtitution will ſerve as a proper place of trial, in order early to diſcover whether a youth has, or has not, a ſuitable capacity for the merchant. This will be eaſily diſcernable in two years time, at furtheſt; and if he does not happen to be well turned for that employment, it will not be too late for a parent to think of ſome other, more agreeable to his ſon's natural genius and capacity: for, however common it may be, it is never the leſs ridiculous, inſtead of adapting the ſtudies or profeſſion of a youth to his genius, to act the reverſe, by adapting his genius to his ſtudies or profeſſion. To this it may be imputed, that many formed by nature to ſhine in ſome principal poſt, to be the envy of foreign nations, and admiration of poſterity, and the honour and ornament of the age in which they lived, have been utterly loſt to themſelves and their country.

And ſo eaſy, familiar, and engaging, ought the manner of exerciſing, and reducing to practice every branch of the plan, that it will be ſcarce poſſible for a young perſon to have any latent abilities for a merchant, and thoſe not to appear in the moſt conſpicuous manner. So that our inſtitution, conſidered in this light alſo, cannot but prove of great public utility, it having as happy a tendency to the ſaving eſtates, in private families, by keeping thoſe out of trade who are unfit for it, as

to the raiſing great ones, by throwing others into it with every advantage.

The reaſon for propoſing the regulation as well of the plan of execution as the general one, is, that, in caſe there ſhould be occaſion to call in aſſiſtants under the chief profeſſors, the method of execution may, on no account whatever, be deviated from by ſuch aſſiſtants; for that would be leaving them to a random way of inſtruction, without any check or controul, and ſuffering them to break in upon the ſeveral parts of the inſtitution, as regulated for the acquiſition of each branch: which would prove detrimental to the order and connection of the whole. Beſide, nothing is more common than for inferior aſſiſtants, who are capable only to act ſome underpart, to have different methods of inſtruction, peculiar to themſelves; and as the incapacity, or ill-conduct of thoſe aſſiſtants, may make it frequently neceſſary to change them, was the method of inſtruction to be changed at the ſame time, it would eternally bewilder the young ſtudents and greatly retard their progreſs. But, by adhering inviolably to a well-digeſted plan of execution, as ſtrict an eye will be kept over aſſiſtants, that they ſteadily perform their duty, according to the method preſcribed to them, as is over the young people themſelves; whereby it will not be in the power either of the one or the other to trifle away their time, and neglect the performance of what is daily expected of both *.

* Le principal eſt comme l'ame, qui met tout en mouvement, & qui préſide à tout. C'eſt ſur luy que roule le ſoin d'établir le bon ordre, de maintenir la diſcipline, de veiller en général ſur les études & ſur les mœurs. Rollin des Belles Lettres.

By this ſteady and uniform diſcipline in executing the whole, what may appear very difficult, and even impracticable to ſome, will be found quite otherwiſe to thoſe who have a juſt idea of the happy and extraordinary effects of order and regularity; for thoſe effectually preſerve what the contrary abſolutely deſtroy.

Merchants coming ſo early in life into the buſineſs of the world, have not time for the attainment of what is called a learned education. It is, therefore, our plan is ſo deviſed, as, in a great meaſure, to ſupply that deficiency. And what the intelligent reader will obſerve to be peculiar to it is, without young people who are intended for buſineſs running the hazard of being captivated with ſuch refined and ſcholaſtic ſpeculations as might not only prove detrimental, but abſolutely ruinous to their way of life.

Nor is it leſs obſervable, that the utility of this inſtitution does not altogether conſiſt in the proper choice of matter, but in the manner of communication; the method of conducting the whole being ſuch as will inſenſibly engage young minds in the habit of cloſe thinking, ſteadineſs, and attention, as well as inſpire them with ambition to excel in their peculiar province. Theſe are qualifications that cannot be ſet at too high a rate; for, while young people's minds are thus emuloufly engaged, their morals will be more effectually preſerved, than by all other meaſures, perhaps, that could be taken for that purpoſe.

The time propoſed for the continuance of theſe young gentlemen in the college, is from 15 to 19 years of age: in which they will be qualified to enter into any counting houſe whatſoever, of the moſt extenſive and univerſal trade; and there can be no doubt but their ſuperior qualifications will prove an agreeable recommendation to the more ſkilful and ingenious merchants, though they may be quite otherwiſe to thoſe of the oppoſite turn. Such a fund of pertinent knowledge will our young merchant be furniſhed with, and ſo expert will he be in every part of the buſineſs of the practical counting-houſe, that he cannot fail to form a right judgment of every thing he ſees tranſacted during the time of his clerkſhip: nor will it be in the power of the ignorant or the artful, in any reſpect whatever, to perplex or miſguide him. From having alſo ſuch principles inculcated in his youth as ſerve to raiſe an emulation, excite induſtry, and fix the attention to buſineſs, no advantages will eſcape his notice, through negligence or want of diſcernment. On the contrary, he will be able to break through all obſtacles to his advancement, and not only to make the moſt of every fortunate occurrence that falls in his way, but, if ſuch are wanting, even to frame beneficial occaſions for himſelf.

It may be reaſonably enough preſumed, that many who are already engaged, will regret their not being bred according to the propoſed eſtabliſhment. Such, however, may receive no little advantage, even by the peruſal of theſe papers; at which we ſhall heartily rejoice. And if any of thoſe gentlemen, after the expiration of their ordinary clerkſhips, ſhould be inclined to think they might reap any benefit by this inſtitution, they ſhould be admitted, and treated in the moſt gentleman-like manner.

It is far from being the leaſt diſreputation to any gentleman to be inſtructed in what ſo nearly concerns his intereſt, and whereon the whole happineſs of his life depends; eſpecially ſo, when he has never had proper opportunities of being ſuitably inſtructed before: but it is a very deplorable ſituation, for the young merchant to be liable to be daily over-reached and outwitted, if not abſolutely ruined, by correſpondents more knowing than himſelf in the arts of negociating buſineſs. It is moſt certainly, therefore, far more adviſeable for ſuch, after the completion of their ordinary clerkſhip, to wait a year or two, if needful, for thorough qualification, before they raſhly hazard their fortune. It may poſſibly too be as requiſite for many to unlearn ſome things, as to acquire others before they turn ſelf-adventurers. Young people, eager and ambitious to make a figure in trade for themſelves, may think it loſt time to wait at all for their due accompliſhment. This is a great miſtake. Let them conſider, that, to ſave and improve their fortunes is gaining time, but to loſe them quite otherwiſe.

Advertisement.

If the public ſhould judge it neceſſary to introduce any other kind of accompliſhment into a college of this nature, that may be eaſily done, provided any thing of this kind ſhould take place: I have only intimated thoſe qualifications that are indiſpenſably neceſſary.

That the public may be apprized for whom this inſtitution is deſigned, it is proper to inform them, that it is calculated chiefly for the following claſſes of gentlemen.

1. For the ſons of merchants deſigned for trade, whom their parents would chuſe to have brought up according to the propoſed plan; their own counting-houſes not admitting of their being bred in ſo methodical and ſcientific a manner.
2. For others, intended for any particular branch of merchandizing whatever; as that of a Portugal, Spaniſh, Ruſſia, Hamburgh merchant, &c. &c. who, after having been four years under this inſtitution, will be qualified to enter, either at home or abroad, into any of thoſe reſpective counting-houſes, with all deſirable benefit and advantage.
3. For ſuch gentlemen who, having paſſed the uſual time of their clerkſhip, think they may reap any advantage from this inſtitution.
4. For the ſons of American planters.
5. For the ſons of ſuch wholeſale dealers whoſe engagements in trade, both at home and abroad, are often as extenſive as thoſe of very eminent merchants.
6. For gentlemen of maturity, who are poſſeſſed of handſome fortunes, and would gladly engage in trade as merchants for themſelves, or in conjunction with others, could they be expeditiouſly accompliſhed in a genteel manner.
7. For ſuch gentlemen who may have expectation of conſulſhips, &c. wherein a knowledge in the practical arts, cuſtoms, and uſages of merchants, is abſolutely neceſſary.
8. For thoſe gentlemen who have views of being ſettled in any of the chief branches of the public revenue, or for ſuch who would be accompliſhed to ſuperviſe buſineſs they may think proper to carry on, by the means of clerks or agents, wherein a complete knowledge of figures and accountantſhip is requiſite.
9. For gentlemen who may chuſe to carry on foreign trade, by being their own ſupercargoes, or for ſuch who are intended for ſupercargoſhips belonging to any of the capital trading companies.
10. For ſuch young gentlemen of fortune, who may be expected hereafter to take a ſhare in the government and direction of any of the great trading or monied corporations.
11. For young gentlemen intended to be called to the bar, to whom a knowledge in the practical mercantile arts and accountantſhip may prove beneficial, in order to enable them the better to unravel ſuch complicated caſes in mercantile accounts, as may come before them in their pleadings, relating either to the foreign or domeſtic tranſactions of merchants *. And

* Litigations among traders making ſo large a ſhare in the buſineſs of the bar, a ſtudent of the law cannot have too minute and comprehenſive a knowledge of the practical arts of merchants, as they relate both to their foreign and domeſtic negociations.

To ſet this matter in it's proper light would require a diſtinct tract. As theſe learned gentlemen, however, are ſo thoroughly ſenſible of this, we ſhall only obſerve, what a celebrated lawyer, who had entered deeply into the ſtudy of practical trade, ſays upon the ſubject of the exchanges; which will be found to hold good alſo, in regard to other the principal parts of mercantile tranſactions.

After having recounted the names of many of his profeſſion, eminent for their abilites, who have written on the exchanges; and having ſhewn the great importance of the ſubject: this writer ſpeaks in the following manner:

'This ſubject of the exchanges contains many very knotty 'points, and is held among all the lawyers to be dark, 'difficult and intricate.

'1. Becauſe the method of exchanging, now in uſe, differs 'widely from the ancient practice.

'2. Becauſe controverſies relating to exchanges are not ſo 'common as others, and therefore leſs underſtood.

'3. Becauſe of the conciſe abſtruſe terms, in which ex-'change-contracts are expreſſed, and which lawyers are 'quite ſtrangers to.

'4. Becauſe of the daily new inventions, by which the 'matter has been rendered ſo intricate, that, beſides the 'negociators themſelves, there are very few, even among

'the

'the men of literature, who underſtand it. And merchants 'have ſtruck out ſo many arts in the negociation of ex-'changes, that they exceed the keenneſs of moſt wits, that 'attempt to determine the controverſies relating to them: 'and, indeed, the difficulties attending them are to be re-'ſolved only into the depth of mercantile ſkill and ſubtilty: 'ſo that it is no wonder, that Navar, in his tract of uſury, 'a man of great learning, and eſpecially converſant in ſub-'jects of this kind, confeſſes to have learnt the whole 'praxis of exchanges, of which he there treats, from the 'capital merchants of his city.

'Thoſe who take depoſitions in caſes of this kind, con-'tinues the ſame author, are often perplexed and confound-'ed: wherefore perſons, profoundly ſkilled in the practi-'cal arts of the exchanges, ſhould be appointed to hear 'evidence on theſe occaſions. Lawyers are, for the gene-'ral part, wanting in the firſt rudiments and principles of 'theſe negociations; and are at a loſs to aſcertain facts, 'from whence judgment ſhould proceed. Intent on looſing 'the knot, whoſe texture they are unacquainted with, the 'more they labour, the firmer the tie. Since, therefore, they 'are ſo ignorant of the uſages and cuſtoms which relate to 'merchandizing, wherein merchants themſelves only are 'perfectly ſkilled, it is not to be admired, that traders in 'general, as I have heard many of them declare, had ra-'ther truſt to their own judgment, than reſt on the opinions 'of the ableſt lawyers.' Sigiſmundi Scacciæ Tractatus de Commerciis & Cambiis.

12. Laſtly, For any young gentlemen of honour and fortune, to whom a practical knowledge of figures and mercantile accountantſhip may be of uſe, as well in their private affairs * as thoſe which concern them in a public capacity †: as alſo to give them a true idea of the art of merchandizing, in order the more familiarly to initiate them into the ſtudies of the national commerce in general. Likewiſe to initiate young perſons of quality into a well-grounded knowledge in the PUBLIC REVENUE, the TARIFFS in relation to merchandizes in foreign nations, and TREATIES of COMMERCE, ſubſiſting between the ſeveral ſtates of Europe; for all theſe might be regularly taught in this college.

* 'Merchants accounts, ſays Mr. Locke, though a ſcience 'not likely to help a gentleman to get an eſtate, yet poſſi-'bly there is not any thing of more uſe and efficacy to 'make him preſerve the eſtate he has. It is ſeldom ob-'ſerved, that he who keeps an account of his income and 'expences, and thereby has conſtantly under view the 'courſe of his domeſtic affairs, lets them run to ruin: and 'I doubt not but many a man gets behind-hand before he 'is aware, or runs farther on, when he is once in, for 'want of this care, or the ſkill to do it. I would there-'fore adviſe all gentlemen to learn perfectly merchants ac-'counts, and not to think it a ſkill that belongs not to 'them, becauſe it has received it's name, and has been 'chiefly practiſed by men of traffic.'

† Beſides, ſuch is the excellency of this art, that whoever is fundamentally grounded in it's rationale, will as familiarly apply it to the accounts of the nation, as to his own perſonal affairs. None who are thoroughly acquainted with the extenſive application of this method of account keeping, will think this is ſaying too much of it. See the article NATIONAL ACCOUNTS. Of what benefit this may prove to the nation, and how uſeful and honourable to themſelves in a public capacity, need not be ſaid.

Of the dignity of the MERCHANT, and the conſequences of this inſtitution to the PUBLIC.

The mercantile ſtation, it is certain, affords as large a proſpect for opulent acquiſitions as any other; and eſtates got by trade have, perhaps, been far more numerous, than thoſe by any other way whatſoever. [See the article COMMERCE.] As the relation alſo merchants ſtand in to the community, is not inferior to moſt in point of importance, ſo neither have they been behind-hand with any, in their zealous attachment to the intereſt of thoſe countries and princes, that have duly protected and encouraged them in their commerce. Hiſtory furniſhes remarkable inſtances of this. At preſent we ſhall take notice of a few only, which are ſufficient to endear the character of a merchant to every nation, that depends upon foreign trade for it's ſupport.

Charles the Vth, emperor of Germany, being reduced to great diſtreſs by the unhappy expedition of Tunis, experienced a powerful ſuccour in money from the Fuggers, a ſingle family of merchants only, but at that time the moſt opulent and diſtinguiſhed traders of Auxbourgh. For the ſecurity and repayment of thoſe large ſums, wherewith they had ſupplied the government, his imperial majeſty gave them written obligations, under his royal hand and ſeal.

To give a demonſtration of their zeal to the intereſt of their country, and their inviolable attachment to the perſon of his majeſty, thoſe merchants requeſted the emperor, as he was one day taking an airing by their houſe, to do them the honour to regale himſelf, to which his majeſty readily condeſcended. After the collation was over, thoſe merchants deſired permiſſion of the emperor to burn a faggot of cinnamon in the hall, where the entertainment was made, not only with intent to adminiſter all they could to his majeſty's delight, but to give further proof of their hearty affection to his perſon and government. Which they did, by bundling up thoſe bonds of ſecurity they had taken for their money with the faggot, and ſet fire to them before the emperor's face.

Another inſtance not leſs remarkable, is that of the memorable James Cœur, a merchant of Bourges. This gentleman alone, by the wiſdom of his counſels and the certainty of his caſh, humbled the houſe of Burgundy, ſecured the crown of France to the lawful heir Charles the VIIth, and by him to the branches of Valois and Bourbon, who ſucceeded.

The conduct of the merchants of St. Malo is another example worthy attention. Thoſe gentlemen being highly exaſperated by the demand made at the congreſs of Gertruydenburgh to Lewis XIV. of employing his troops to compel his grandſon Philip V. then king of Spain, to abandon the crown, united all their profits together, which they had made by trade in the Spaniſh colonies in America, and generouſly laid thirty-two millions in gold at the foot of the throne; and that at a time too, when the finances of France were totally exhauſted, by a ſeries of unſucceſsful events: which ſuccour, being timely applied, vigorouſly renewed the war, and anſwered the end of that nation.

Sir Thomas Greſham, our own countrymen, the founder of a college in London, for the promotion of the liberal arts, and of the Royal Exchange for the convenience of the traders of this metropolis, is another inſtance well deſerving our notice, as it manifeſts how far it is in the power of merchants, even of one private merchant, to ſupport governments under the greateſt emergency.

This worthy citizen of London lived in the time of king Edward the VIth, who was conſiderably indebted to the merchants of Antwerp, for money borrowed at intereſt to ſupply the exigencies of the ſtate. Payment of intereſt at that time being a great incumbrance to the nation, various expedients had been conſulted by the king and his council, to diſcharge thoſe debts; which, being due to foreigners, brought great contempt upon the crown, and the public credit of England. The meaſures which had been ſuggeſted for repayment, were, either to tranſport ſo much treaſure out of the realm, or to remit the ſame by way of exchange.

The kingdom being already greatly exhauſted of its gold and ſilver, the former was impracticable, without being ruinous to trade; and, the exchange between England and Antwerp being at no more than ſixteen ſchillings per pound of our currency, negociating the debt by foreign bills would have ſunk the exchange ſtill more to our diſadvantage. By which means the exportation of our gold and ſilver in the way of trade, would have been more and more augmented. Yet for the nation to continue in debt, was ſtill increaſing the evil; more eſpecially ſo, as the creditors were foreigners, and the intereſt ſent out of the kingdom. Beſide, the creditors inſiſted on their money, or a compliance with ſuch uſurious meaſures, for a prolongation of time, as would have brought ſuch high indignity upon the nation, as to have diſabled them from borrowing more money, but upon the moſt ſcandalous terms.

And yet, more money the government wanted, inſtead of being in a capacity to diſcharge the old debts. Under theſe circumſtances the nation was greatly perplexed, and no meaſures could be thought of to extricate the kingdom from theſe embarraſſments, 'till Sir Thomas undertook the affair. By whoſe great knowledge in trade and ſkill in the exchanges, he exonerated the nation from it's weighty incumbrances, without ſending any money out of the kingdom.

And, although the exchange was then at ſixteen ſchillings, he ſo wiſely managed this negociation, that he paid off the king's debts as they fell due, at an exchange of twenty and twenty-two ſhillings per pound. Whereby the king ſaved no leſs than an hundred thouſand marks clear, by this great merchant's knowledge in the exchanges.

By thus raiſing the exchange alſo ſo much in favour of England, at that critical conjuncture, the price of all foreign commodities fell proportionably *. Which ſaved the kingdom in general, and that, in a very little time, no leſs than between three and four hundred thouſand pounds ſterling more: a round ſum even at this time of day, but would now be near four times that ſum, in proportion to the different values of money.

* 'Whoever deſires to know the ſtate of our foreign trade, 'or our ſituation as to tranſactions in money with other 'countries, unleſs where ſubſidies are paid to princes a-'broad, armies or fleets maintained, or the dividends or 'ſtate of our ſtocks belonging to foreigners, may have in-'fluence: unleſs in theſe caſes, the courſe of exchange in-'dicates the ſtate of our commerce, as truly as the pulſe 'does that of the human body.' Sir Iſaac Newton's Tables of the Aſſays of foreign Coins. See the articles COIN, BALANCE of TRADE, EXCHANGE.

When exchange is againſt a nation, the goods exported from that nation are ſold for ſo much leſs, and goods imported from the other ſo much dearer as the exchange is above the par; ſo that the exchange, being once againſt a nation, contributes to keep itſelf ſo. The exchange with Holland being

ing generally againſt England, in time of peace as well as war, affects this kingdom more than, perhaps, has been ſo thoroughly weighed and conſidered, as could be deſired; for as Amſterdam is made the center of commercial correſpondence between the ſeveral parts of Europe, the rate of exchange between us and Holland, muſt proportionably affect that between us and other countries with which we have dealings; more eſpecially with thoſe we negociate bills with always through the medium of Holland. See the article HOLLAND.

Nor did the advantages to the nation from the eminent ſkill of this great Engliſh merchant, terminate here only. For, as, when the exchange was ſo greatly to the diſadvantage of England, gold and ſilver were daily exported out of the kingdom in great plenty; ſo by wiſely raiſing it, in the courſe of his money negociations for the ſervice of the ſtate, he cauſed the ſame to be brought back again, to the general emolument of the whole trading intereſt.

Nor did the wiſdom of Sir Thomas's counſels prove only of the higheſt honour and advantage to king Edward's reign, but to thoſe of his ſucceſſors, queen Mary and queen Elizabeth; both of theſe princeſſes having made choice of him for the management of their money, and their mercantile affairs. With queen Elizabeth he was in ſo high eſteem, that ſhe not only knighted him, a matter of very high dignity in thoſe days, but honoured him in every reſpect; and came in perſon to the Exchange, which he had erected for the convenience of the merchants and honour of the city of London, and cauſed the ſame to be proclaimed by heralds and a trumpet, the ROYAL EXCHANGE: and Sir Thomas was afterwards honoured with the appellation of the ROYAL MERCHANT.

Thomas Sutton, Eſq; another renowned Engliſh merchant, and founder of the Charter-Houſe in London, an act of benevolence worthy of a great prince, a few years after the death of Sir Thomas Greſham, by being the grand inſtrument of getting the Spaniſh bills proteſted at Genoa, in 1587, retarded, for a whole year, the ſailing of the Spaniſh armada, deſigned to enſlave theſe kingdoms, which proved the happy means of defeating the invaſion.

Theſe are ſome of the memorable feats performed by merchants, by private merchants only; and theſe, without particularizing more, are ſufficient to evince the truth of what has been ſuggeſted to their eternal honour. And, although, great ſtateſmen, admirals, and generals, with the aid of the public purſe, and their thouſands and their ten thouſands to co-operate with them, may perform great atchievements; yet we find that one family of merchants has been the ſupport of an emperor in great diſtreſs; that another ſingle merchant alone gave the crown to the houſe of Bourbon; that one was a principal cauſe of defeating the Spaniſh armada, and another the reſtorer of the public credit of England, and the honour of the crown, when in great contempt amongſt all the princes of Europe: and may be truly ſaid, in concert with that able miniſter Walſingham, to have laid the foundation of all the commerce and navigation we enjoy at preſent.

But it is not needful to go far back for inſtances of the eminent ſervices that merchants have manifeſted to the Britiſh empire in particular; it is recent in every one's memory, that, in the late unnatural rebellion, the ſupport of the public credit, and, in conſequence thereof, the ſecurity of the eſtabliſhment of the preſent moſt auguſt, and illuſtrious royal family upon the throne of theſe kingdoms, was owing to that glorious and ever-memorable aſſociation of the merchants and traders of the loyal city of London.

The merit of perſons of diſtinguiſhed character in trade cannot, in the general, be meaſured, but by thoſe who are well acquainted with their trading negociations. As they paſs through life without much eclat, the world is little acquainted with their important ſervices and utility to the ſtate; whilſt the hiſtories of men in great public capacities are tranſmitted to poſterity with all the pomp and magnificence of repreſentation. Yet certainly that is the more profitable admonition, which is drawn from the eminent virtues of men, who move in a ſphere nearer levelled to the common reach, than that which is derived from the ſplendid portrait of the victories and tranſactions of great ſtateſmen and commanders; which ſerve but for the imitation of few, and make rather for the oſtentation, than the true inſtruction of human life. It is from the practice and example of perſons of private condition, that we are more naturally taught to excel in our private capacities: and, had we the genuine hiſtories of many eminent merchants, giving a lively idea of their riſe and progreſs in buſineſs, and of the important ſervice they have been to their reſpective communities, they would naturally incite the trading part of this nation to emulate their accompliſhments: and this would prove a more effectual means to produce a race of ſkilful Britiſh traders, than romantic narratives a race of heroes.

Nor has the ſecurity of ſtates and empires been only owing to the occaſional zealous exertion of the wiſdom and the power of merchants, but they are in a great meaſure the daily and perpetual ſupport of all trading countries. For, as nations are at preſent circumſtanced, thoſe which are ſo ſituate, as to be obliged to ſubſiſt chiefly within themſelves, and without any intercourſe of commerce with others, can never be able to maintain ſo great a ſhare of power, as thoſe which carry on an extended foreign traffic. Domeſtic trade, only ſhifting property from hand to hand, cannot increaſe the riches and power of a nation; whilſt foreign trade, under wiſe laws and regulations, bringing in a conſtant balance of treaſure in favour of a nation, will proportionably augment it's weight of intereſt, and at length give it the balance of power.

Great-Britain being encompaſſed with powerful nations, who are earneſtly bent on cultivating the arts of commerce and navigation, with the utmoſt ſtretch of their addreſs and policy; muſt ſhe not ſoon become a ſacrifice to thoſe neighbouring potentates, if deſtitute of a race of ingenious and well accompliſhed merchants? For, as theſe are the only ſource of our maritime ſtrength, ſhe could not long continue, but by their means, that happy independent empire ſhe is at preſent.

The philoſopher may arrive to a high pitch of improvement in agriculture, arts, and ſciences; the huſbandman, the artizan, and manufacturer, may reduce this ſpeculative knowledge to practical uſes, with the greateſt ſkill and dexterity on their parts; governments may enact the wiſeſt laws, and give all deſirable encouragement for the advancement of commerce, yet what will theſe avail, without the penetration and ſagacity of the merchant, to propagate the produce of our lands, and the labour of our artiſts and manufacturers into foreign countries, with advantage to the ſtate as well as to himſelf?

'It is foreign trade, ſays a great lawyer *, that is the main 'ſheet anchor of us iſlanders; without which the genius of 'all our uſeful ſtudies, and the which renders men famous 'and renowned, would make them uſeleſs and inſignificant 'to the public. When man has fathomed the bottom of all 'knowledge, what is it if not reduced to practice, other 'than empty notion †? If the inhabitants of this iſland were 'learned in all the languages between the riſing and ſetting 'of the ſun, did know and underſtand the ſituation of all 'places, ports, and countries, and the nature of all mer'chandize and commodities, were acquainted with the or'der and motion of all the ſtars, knew how to take the la'titude and longitude, and were perfectly read in the art of 'navigation, to what purpoſe would all be, if there were 'no foreign trade? We ſhould have no ſhips to navigate to 'thoſe countries, nor occaſion to make uſe of thoſe lan'guages, nor to make uſe of thoſe commodities; what 'would this iſland be but a place of confinement to the in'habitants, who, without it, could be but a kind of her'mits, as being ſeparated from the reſt of the world: it is 'foreign trade that renders us rich, honourable, and great; 'that gives us a name and eſteem in the world; that makes 'us maſters of the treaſures of other nations and countries, 'and begets and maintains our ſhips and ſeamen, the walls 'and bulwarks of our country; and, were it not for foreign 'trade, what would become of the revenue for cuſtoms, and 'what would the rents of our lands be? The cuſtoms would 'totally fail, and our gentlemens rents of thouſands per 'annum would dwindle into hundreds.'

* Molloy De Jure Maritimo & Navali.

† Every ſtep that is made in the progreſs of knowledge, whether it proceed from reading, obſervation, or experience, ought to be applied to the affairs and tranſactions of life; for this is, in truth, the only proper uſe of all kinds of ſtudy; which, without it becomes not only an uſeleſs, but a troubleſome ſort of pedantry, more calculated to interrupt and confound, than to ſerve and promote a true genius. Eſſay on the Education of a Nobleman, printed 1736.

Since then it is ſo unexceptionably apparent, that foreign traffic is our grand preſervative both by ſea and land, and ſince, as lord chancellor Bacon juſtly obſerves, MERCHANTS AND TRADERS ARE IN A STATE, WHAT THE BLOOD IS TO THE BODY, the abilities and ingenuity of this part of the community is moſt certainly of the laſt importance to the whole Britiſh empire.

From theſe conſiderations there naturally ariſes the idea of dignity, as inſeparably annexed to the character of the merchant; he being a principal party in the ſecurity and preſervation, as well as in the conſtant ſupport of the kingdom: and from hence we may preſume it is, that family alliances have been ſo frequently contracted between the gentry and the trading part of the nation. [See the article COMMERCE.]

'Nor, ſays the learned biſhop Sprat, ought our gentry to 'be averſe from the promoting of trade, out of any little 'jealouſy, that thereby they ſhall debaſe themſelves, and 'corrupt their blood: for they are to know, that traffic and 'commerce have given mankind a higher degree than any 'title of nobility, even that of civility and humanity itſelf. 'And at this time, eſpecially above all others, they have no 'reaſon to deſpiſe trade as below them, when it has ſo great 'an influence on the very government of the world *.'

* Vide Hiſtory of the Royal Society.

There are but few who are capable of diſtinguiſhing themſelves in any eminent degree, in the grand leading debates of ſenates; much fewer of conducting fleets, armies, or the councils of princes. The talents of a Burleigh or a Colbert are very rare indeed, ſo are thoſe of a Blake or a Marlborough. But every tolerable capacity may make a pretty good figure in trade, by being bred with the advantages of the propoſed inſtitution. And as amongſt theſe there will be, doubtleſs, different degrees of capacities, as well as of aſſiduity and application, the young perſon who ſhall happily have an extraordinary turn for mercantile acquirements, may become a Greſham, a Barnard, a Gore, Vanneck, &c. whilſt the ſame genius in the army, the navy, or any branch of the civil government, might have lived and died, perhaps, in obſcurity.

As in theſe ſeveral capacities there is but one path to greatneſs, and few amongſt a numerous gentry have opportunity or abilities to become eminent therein, many of the younger branches of our beſt families paſs their days in an inglorious eaſe, quite loſt to themſelves, as well as the public: whereas, if they turned their eyes to commerce, it would furniſh them with a thouſand means, whereby they might promote themſelves, and reflect a luſtre on their ancient ſtock.

Merchants, it is true, have no exemption from thoſe caſualties, to which the whole human ſpecies is liable; yet, in the way of trade, theſe are often balanced by proſperous contingencies. When it happens otherwiſe, the really unfortunate ſcarce ever want ſuccour in diſtreſs. Even when misfortunes have proceeded from unhappy miſtakes in point of conduct, yet, where neither integrity and ſkill have been wanting, ſuch rarely fail to riſe again, in ſome reputable channel of buſineſs or other, dependent on merchants; of which there are numberleſs inſtances. For it is no undeſerving encomium on the trading claſs of the community, to ſay of them, that no perſons, under the heavens, ſhew greater humanity and generoſity, towards an unfortunate yet upright fellow-trader: which conſideration is no ſmall inducement for the younger branches of our moſt honourable families to engage in commerce.

Moreover, when it ſo falls out, that any of our noble and honourable families enjoy a numerous progeny, and the patrimonial eſtate is greatly diminiſhed by fortunes to the younger, wherein lies the indignity for the elder to be privately intereſted with a younger brother of abilities bred to merchandizing? Might not ſuch meaſures contribute to free the family inheritance from too weighty incumbrances? If the fortune of the younger does not happen to be competent, wherewith to carry on that compaſs of lucrative commerce that preſents itſelf, an additional capital will enable him to do it: and the elder, having a proportion of the profits for the hazards he runs, will afford him better intereſt for money than he can otherwiſe make at preſent. It is the conſtant practice in Holland and Italy, for thoſe of the higheſt honour to be intereſted in this manner with merchants of eminence; and in France this practice has been thought ſo beneficial to the ſtate, that it has been encouraged and enforced by ſeveral royal edicts *. And, perhaps, this has not been a ſtroke of policy the leaſt refined for the advancement of the trade and navigation of that kingdom; ſuch meaſures frequently ſupplying private traders with as large capitals in trade as they can employ therein, and thoſe upon terms quite eaſy and agreeable. Engagements of this nature are called by the French Societez en commandites †. See the article ANONYMOUS.

* This edict is ſo remarkable as to deſerve notice.

EDIT DU ROY,

Portant que les nobles pourront faire le commerce de mer, ſans deroger à la nobleſſe. Donné à S. Germain en Laye, au mois d'Aouſt 1669.

LOUIS par la grace de Dieu, roy de France & de Navarre: A tous preſens & à venir, ſalut; Comme le commerce & particulierement celui qui ſe fait par mer, eſt la ſource feconde, qui apporte l'abondance dans les etats, & la répand ſur les ſujets à proportion de leur induſtrie, & de leur travail, & qu'il n'y a point de moyen pour acquerir du bien, qui ſoit plus innocent, & plus legitime: auſſi a-t-il toûjours été en grande conſideration parmi les nations les mieux polies, & univerſellement bien reçû, comme des plus honneſtes occupations de la vie civile, &c. &c. A ces cauſes, deſirant ne rien obmettre de ce qui peut d'avantage exciter nos ſujets à s'engager dans le commerce, & le rendre plus floriſſant, & de nôtre grace ſpeciale, pleine puiſſance & autorité royale, nous avons dit, & declaré, & par ces preſentes ſignées de nôtre main, diſons, & declarons, voulons & nous plait, que tous gentils-hommes puiſſant par eux ou par perſonnes interpoſées, entrer en ſocieté, & prendre part dans les vaiſſeaux merchands, denrees & merchandiſes d'iceux ſans que pour raiſon de ce, ils ſoient cenſez & réputez déroger à nobleſſe, pourvû toutefois qu'ils ne vendent point en détail, &c. &c.

Signé LOUIS, & ſur le reply par le roy, COLBERT.

This was ſtrongly enforced again by another edict in December 1701, which is called Edit du roy, qui permet aux nobles, excepté ceux qui ſont revêtus de charges de magiſtrature, de faire commerce en gros, & qui declare quels ſont les merchands & les negocians en gros.

† Celui qui voudra faire ſocieté en commandite, doit jetter les yeux ſur un merchand qui ſoit homme de bien, & capable des manufactures, ou du commerce qu'il veut entreprendre; car ce'ſt ſur ſa fidelité, & ſon induſtric qu'il doit fonder l'eſſperance qu'il a de profiter en lui confiant ſon argent, &c. Parfait Negociant, Savary.

Perſons of low grovelling minds, and little induſtry themſelves, are often ſtrangely chagrined and irritated againſt thoſe who attempt any thing new in the public ſervice, though high commendable in itſelf, and the very attempt highly meritorious. With ſuch ſordid and pitiful ſpirits, the ſhadow of novelty, in any undertaking, is condemnation ſufficient. As ſuch deſerve rather pity or contempt, we ſhall only comfort them with what that wiſe and public-ſpirited prelate, biſhop Sprat *, has again obſerved; who, ſpeaking of the firſt eſtabliſhment of the Royal Society of London, ſays, 'That, if all things which are new be deſtructive, all 'the ſeveral means and degrees by which mankind has riſen 'to the perfection of arts were to be condemned. If ſo, to 'be the author of new things, be a crime, how will the firſt 'civilizers of men and makers of laws, and founders of governments eſcape? Whatever now delights us in the works 'of nature, that excels the rudeneſs of the firſt creation, is 'new. Whatever we ſee in cities or houſes above the firſt 'wildneſs of fields, and meanneſs of cottages, and nakedneſs of men, had it's time, when this imputation of novelty might as well have been laid to its charge. It is not 'therefore an offence to profeſs the introduction of new 'things, unleſs that which is introduced prove pernicious in 'itſelf, or cannot be brought in without the extirpation of 'others which are better.'

* Vide Hiſtory of the Royal Society.

As nothing of this kind can be alledged againſt the preſent inſtitution, it's novelty, with the judicious part of mankind, will render it the more praiſe-worthy; it requiring greater induſtry, and different talents to ſtrike out new paths to knowledge, rather than ſupinely to plod on in the old, when much better can be found.

And, as there appears to be a glorious ſpirit in the legiſlature to promote the trade of the kingdom to the utmoſt; as his majeſty himſelf has, by his royal ſpeech from the throne, expreſſed his earneſt recommendation of, and his hearty concurrence * with, every wiſe meaſure to advance the national commerce; we may reaſonably hope, this our humble attempt will meet with the approbation of all true friends to our trading intereſt.

* 'Let me earneſtly recommend to you the advancement of 'our commerce, and cultivating the arts of peace, in which 'you may depend on my hearty concurrenc and encouragement.' His Majeſty's Speech, Nov. 29, 1748.

It is no great honour to the Britiſh nation, that there ſhould be a neceſſity for the younger ſons of our nobility and gentry to be ſent to Holland and elſewhere out of the kingdom, for mercantile qualifications. But, when we have an inſtitution within ourſelves far ſuperior to any in other countries, it will be as little credit as advantage to Britiſh youth, to go abroad for what they can have much better at home.

And, if a young gentleman is intended to ſettle in a counting-houſe abroad, or to travel before he enters into trade for himſelf, his having ſpent a few years under this inſtitution, will far better capacitate him to reap proper advantage by either, than the crude, immethodical, and narrow way can, in which the generality are bred at preſent.

It is eaſy enough to hit blots, and to point out evils highly detrimental to the community. The many wiſe may diſcern the grievance and lament it, but the remedy generally lies deep, and in the hands of few; and to thoſe few is the world indebted, for the execution of all deſigns of public utility and happineſs. Whether ſuch is not the nature of the preſent, is ſubmitted to thoſe who are judges of it's merit and tendency.

Before I draw to the concluſion, I would deſire the reader will pleaſe to ſuppoſe the following plain caſe, viz. that two young perſons, of equal age and abilities, are placed in the reſpecting counting-houſes of their own fathers, who are merchants inferior to none for eminence, ſkill, and ingenuity in their profeſſion, and both equally ſolicitous that their ſons ſhould become ſo likewiſe: let it be further ſuppoſed, that the one of thoſe young perſons is bred, previouſly to his being taken into buſineſs under his father, a few years under the propoſed inſtitution, at the age propoſed, and the other not, but is turned into his father's counting-houſe as raw and as ignorant as the generality really are; I would appeal to every man of ſenſe and impartiality, who is a judge of the uſefulneſs of our plan, and capable of ſetting a due value upon a proper mencantile qualification, which of thoſe young people is likely to become the beſt accompliſhed merchant, and to be the moſt proſperous in his employment?

Could the experiment be fairly tried, is there not all imaginable reaſon to believe, that the one would be better qualified

for

for buſineſs, by being a ſingle year afterwards only in his father's counting-houſe, than the other would in three, or perhaps in five years? The one would be capable of making a good judgment of all he ſaw tranſacted without any inſtruction, and thereby might naturally delight in buſineſs; while the other, for want of the like foundation, might never underſtand his buſineſs as he ought, and therefore take an invincible diſreliſh to it; whereby, inſtead of becoming the complete merchant deſired, he might, on the contrary, become only an eternal diſquietude to the beſt of parents.

If this is not unlikely to prove the caſe, when a young perſon is bred, even under the eye of an own father, anxious for his ſon's welfare, what may we preſume to be the conſequence, when he has not the like happy opportunity of being trained up under a parent? When this is the caſe, is it not the moſt adviſeable for ſuch a young gentleman to lay the beſt foundation he can, before he enters into any merchant's counting-houſe whatever? For, if he falls into the hands of a man of honour and ſkill, of one who does not intend only to take his money, but do him juſtice, will not a young perſon ſo previouſly accompliſhed, as we propoſe, be infinitely more capable of reaping the benefit of his ſituation, than one deſtitute of thoſe advantages?

But if, on the other hand, a young perſon is not ſo happy as to fall into ſuch a merchant's counting-houſe, is it not highly prudential, that he ſhould be ſecure of a good foundation before-hand, in order to make the beſt advantage under the worſt ſituation?

The reader will pleaſe to obſerve, that this inſtitution is intended to train up the young merchant from 15 to 19 years of age, in order the better to prepare him than he is, by being bred in the ordinary way, for admiſſion into any merchant's practical counting-houſe; wherein, if we ſuppoſe him placed for three or four years more, he may be then ſufficiently accompliſhed to hazard his eſtate in trade, and not before. But,

That experienced merchant Sir Francis Brewſter, who lived in the reign of king William the IIId, has propoſed a different way of breeding up young merchants of condition and fortune to practical commerce; which, as it ſeems to coincide in ſome reſpect, with our propoſed inſtitution of a mercantile college, the reader may not be diſpleaſed with that merchant's ſentiments: and, indeed, if our young merchant was firſt regularly trained up in the literary mercantile college we would eſtabliſh, his entrance into Sir Francis's college, if well regulated for the purpoſe, might, perhaps, as well, if not better qualify him for practical trade, than the ordinary way of going apprentice generally does.

'I think it a mortal diſtemper, ſays Sir Francis, in trade (nor to be cured, becauſe in the firſt concoction) that we have ſo few men of univerſity learning converſant in true mercantile employments: if were there as much care to have men of the beſt heads and education in it, as there is in the law, the nation would fetch more from abroad, and ſpend leſs in law-ſuits at home. We have it reckoned up by the infallible author, as the glory of a city, That her merchants were princes and nobles; their buſineſs and tranſactions in the world with ſuch, is more than belongs to any other ſett of men: would it not then be the honour of a nation, as well as profit, to have men of the beſt ſenſe and learning in the foreign negoce of a kingdom? If ſuch had been in the trade of theſe kingdoms, it ſeems reaſonable to believe, we had not loſt the moſt conſiderable navigating trade and employment of our ſeamen.

It would be an aſtoniſhing obſervation to men of any country but our own, to ſee more heads employed in Weſtminſter-Hall to divide the gain of the nation, than there are heads on the Exchange to gather it together. I have ſometimes thought, that, if theſe kingdoms lay not under the confuſion and unintelligibleneſs of underſtanding in trade, as the builders of Babel did in languages, we might, without the ſin of thoſe arrogant architects, erect ſuch towers in trade, as might overtop the univerſe in that myſtery.

We ſee how all arts and ſciences have been improved in this kingdom within the compaſs of one century, but amongſt them all the merchant's part the leaſt: and the reaſon is plain, men of ſmall learning and moderate underſtanding are generally put in it: for, though there are ſome excellent parts and clean heads among them, yet the major part are not ſo poliſhed: I ſpeak not this to abate the reſpect that I ſhall always think is due to the profeſſion, and all men in it, but we know it is the vanity of the nation: ſcarce a tradeſman but if he have a ſon that a country ſchoolmaſter tells him would make a ſcholar, becauſe he learns his grammar well, but immediately paſſes the approbation of his kindred, who judge it pity ſo hopeful a youth ſhould be loſt in trade, the univerſity is the only ſoil fit for him to be planted in.

By ſuch diſpoſition of the youth of our nation, many a good tradeſman is loſt, and poor ſcholars in every reſpect made; and, if this humour prevails in mechanics, and men of ordinary quality, much more, and with better pretenſions, it affects our gentry; to be ſure the eldeſt ſon is above trade, and if the younger be of a quaint and ſtudious temper, they are thought fit for the law, not many for the pulpit, which I confeſs I likewiſe think a miſtake in our gentry: had we more of them in the clergy, we ſhould have fewer to deſpiſe, that might be better builders of houſes than of the church.

But, to return to what I obſerve of the improvement in all the employments in the kingdom, I ſee none that have arrived to that vaſt increaſe as thoſe in the law: this, perhaps, is accounted an evil, but I will not quarrel with that long robe, I hope it will be no offence to wiſh them among us, [the merchants] but not with their bar-gowns; they would, in my opinion, look better in a COUNTING-HOUSE than in the TEMPLE; and, had the humour of our anceſtors run that way as much as it did for the law, there might have been as great an enlargement in maritime traffic and navigation, as there is now of the laws: I preſume none will ſay, that they began with equal numbers; trade had the primogeniture, and ſet forth with the employment of the people, before there could be work for lawyers; and I believe thoſe of beſt value amongſt them do not think their growth and gain contribute to either in the advantage of the nation, though without the profeſſion there can be no ſecuring property; but, perhaps, the numbers make more work than there would be if they were leſs: Hamburgh, though a place of great trade, allows but two: and, though our foreign plantations are filled with men of no better principles than they leave behind them, yet they have few among them who raiſe their fortunes by the law; for which no reaſon can be given, but that there is not a foundation and nurſery for that profeſſion to breed up men of learning and ingenuity in.

I have been the longer on this ſubject, becauſe there ſeems to me an expedient in this matter; and that is, to make ſuch proviſion for noblemens and gentlemens children, as may be equally reputable with the inns of court, for young gentlemen to come to from the uuiverſities, and, with leſs charge than their expence in ſeven years ſtudying the law, become expert in trade.

To be thus managed: in each maritime city and conſiderable port of the kingdom, to have a COLLEGE built, in which there may be ſome perſons of experience in trade, to teach and direct in the myſtery of it, to all parts of the world: and, that they may have the practice, as well as theory, that every perſon entering himſelf into the ſociety may be obliged to bring in a thouſand pounds ſtock, which will make a capital, perhaps, of 20 or 30,000 l. ſterling, to traffic with in 30 cities, &c. in the kingdom: they to be obliged to ſpend five years in this ſociety, and at the end of that term, to receive the principal they brought, allowing the caſualty of profit and loſs, as it happens: going thus out, they will be entered in trade, and probably have a fund to begin with; and, by this means, trade will fall into the hands of gentlemen, perſons of learning and conſideration in the nation, and likewiſe preſerve from misfortunes numbers that now miſcarry in their ſtudies of the law, through ill converſation, and having no employments.

To this project (a word now traduced to contempt, though in itſelf of good ſignification both for peace and war) I foreſee two objections that will be made againſt it, and they are theſe:

Firſt, This will make too many merchants.

Secondly, That this will leave no room for younger brothers, that have nothing to prefer them in the world but a ſmall ſum to put them apprentice to a merchant, by which they often raiſe their fortunes in the world.

To the firſt I anſwer, That the evil of having too many merchants is in the numbers that are bred up from apprentices, many of which, coming into buſineſs without FUNDS, ſtrain their credit, which to keep above water, they are forced to venture at all ways that have but a probability of ſucceſs, to keep themſelves in buſineſs, and then, to comply with their credit, often fall to loſs, which in the end brings them to misfortune, and that begets an opinion that there are too many traders; whereas the true reaſon is the want of STOCK, not NUMBER of merchants.

The ſecond objection, That this will hinder merchants from taking apprentices, is in part anſwered in the firſt, that their number prejudices trade: but there is a farther conſideration in this matter, and that is, two ſorts of youths ſtand candidates for a mercantile education, gentlemen with a capital, others of leſs quality, with none. I think it will admit of no queſtion which ſhall be preferred, and that the other may be more profitably employed for the nation and themſelves, in trades that require more labour and leſs ſtock.

But, after all I have ſaid, my wiſhes are greater than my expectation, to ſee trade thus courted in a kingdom that treats it as ſome do their wives, conſidering them no farther than to the production of a legitimate poſterity, reſerving their careſſes and delights for a miſs: ſo the humour of this age ſeems to incline, whilſt foreign commerce is neglected, and mens thoughts and deſigns run after offices and employments in the ſtate; to pay which, ſpider like, the nation ſpins out her bowels to catch flies; and the ſimile goes farther, ſuch food turns into poiſon, where it feeds men faulty in their morals; and ſuch too often ſupplant better men, or find ways to be preferred before them: to ſay this will be no offence to deſerving men; and, for others, I ſhall only deſire them to ſuſpend their reſentments until the ſecond part comes forth, and

then they will have more reaſon, becauſe it will come in my way to be more particular, when I come to ſpeak of the trade of Ireland; in which there have of late been ſuch notorious demonſtrations how ill men in offices and places of truſt may ruin and deſtroy a kingdom, as admits of no defence. I have for this the authority of both houſes of parliament, in their addreſſes to the king: and the infallible author tells us, That he who ſaith to the wicked, Thou art righteous, the people will curſe, nations ſhall abhor him.' Sir Francis Brewſter's Eſſays on Trade and Navigation, 1695.

And now it may be proper juſt to review what we may reaſonably expect to be the obvious and apparent conſequences of this inſtitution to the public, which will be chiefly comprehended under the following particulars, viz.

I. It will raiſe a noble ſpirit of emulation among our young Britiſh merchants to excel each other in the arts of merchandizing; from whence the nation in general, as well as individuals, may reap unſpeakably more benefit and advantage by trade and navigation.

II. It will enable our young merchants the better to cope with foreigners, in all the methods of negociating mercantile buſineſs of every kind, which may prevent their being made the dupes of ſome of thoſe ſubtle traders who are very artful in drawing young people of good fortunes into ſchemes of trade, which always prove beneficial to the one, but very often greatly injurious to the other.

III. It will qualify ſuch young people who may be placed at ſeveral of the Britiſh factories abroad, to promote each other's intereſt in the way of trade, in a manner not ſo generally known and underſtood, as well as the intereſt of thoſe who ſhall continue at home.

IV. It will capacitate them ſo to correſpond with foreign nations, as to obtain the moſt uſeful kind of intelligence from time to time; whereby they will the better know when and where there is money to be got, by trading between one foreign nation and another, as well as between their own and others.

V. It will qualify them either to be particular or general merchants; or particular ones generally, and general ones occaſionally; wherein conſiſts the judgment, in ſome meaſure, of the moſt ſkilful and vigilant merchant.

VI. It may have a tendency to convince the younger branches of our moſt honourable families, that the art of merchandizing does not require ſuch mean talents as ſome of them have been wont to think; but that, on the contrary, there is ſcope enough to employ the moſt capacious underſtanding, and the fineſt genius: and that foreign trade affords as large a field for profit and honour as any other employment whatever.

VII. It cannot fail to have the happieſt tendency to prevent misfortunes and bankruptcies amongſt thoſe merchants who ſhall be thus regularly bred.

VIII. It may give the young merchant ſo good a knowledge of the fundamental principles and maxims of policy, whereupon the true intereſt of the national commerce is grounded, as to render them the better capable hereafter to diſtinguiſh themſelves in the promotion of the ſame, upon all public occaſions and emergencies.

IX. It may prove of benefit and advantage to the lawyer, the gentleman, and nobleman, in the lights wherein repreſented, to paſs a year or two in this college, even after he has left any other univerſity.

Remarks upon this article of Mercantile College.

1. The reader will pleaſe to obſerve, by the references we have made throughout this article, that our Dictionary of Commerce is eminently calculated for the accompliſhment of the Britiſh merchant in whatever we have pointed out as the moſt eſſentially neceſſary for him to be inſtructed in, and may prove as helpful to the profeſſors in ſuch a college, as to the ſtudents themſelves.

2. That an inſtitution of this kind will raiſe the character of the merchant to ſuch a degree of knowledge in this employment, as will render him capable of embracing or ſtriking out every kind of honourable advantage which the nature of his employment will admit of, and thereby put him above the ſcandalous arts of robbing the public revenue, or breaking to grow rich upon the ruin of his creditors: in brief, a collegial courſe of erudition will excite the younger branches of the beſt families in the kingdom, with fortunes ſuitable, to commence merchants, and, conſequently, will tend abſolutely to exclude from this reſpectable profeſſion all low-bred people, deſtitute of fortune as well as education.

3. That this inſtitution is adapted to form perſons of worth and quality in general, for the accompliſhed men of buſineſs * of any kind, the better to enable them to preſerve and improve their eſtates, be they either in land, or in the public funds.

* The lord Verulam touches upon the Doctrine of Business; which, notwithſtanding he has conſidered it in a light ſomething different to what the judicious reader will obſerve we mean by it, from the drift of our Dictionary; yet, having ſo near an affinity with what we aim at, that great man's ſentiments may well deſerve attention in this reſpect.

'1. We divide the doctrine of buſineſs, ſays lord Bacon, 'into the doctrine of various occaſions, and the doctrine of 'riſing in life. The firſt includes all the poſſible variety of 'affairs, and is as the amanuenſis to common life; but the 'other collects and ſuggeſts ſuch things only as regard the 'improvement of a man's private fortune; and may, therefore, ſerve each perſon as a private regiſter of his affairs. '2. No one hath hitherto treated the doctrine of buſineſs 'ſuitably to it's merit, to the great prejudice of the character both of learning and learned men: for from hence 'proceeds the miſchief which has fixed it as a reproach 'upon men of letters, that learning and civil prudence are 'ſeldom found together. And, if we rightly obſerve thoſe 'three kinds of prudence which we lately ſaid belong to 'civil life, that of converſation is generally deſpiſed by 'men of learning as a ſervile thing, and an enemy to contemplation; and, for the government of ſtates, though 'learned men acquit themſelves well when advanced to the 'helm, yet this promotion happens to few of them: but, 'for the preſent ſubject, the prudence of buſineſs, upon 'which our lives principally turn, there are no books extant about it, except a few civil admonitions, collected into a little volume or two, by no means adequate to the 'copiouſneſs of the ſubject. But, if books were written 'upon this ſubject, as upon others, we doubt not that 'learned men, furniſhed with tolerable experience, would 'far excel the unlearned, furniſhed with much greater experience, and outſhoot them in their own bow (a).'

(a) 'This may be extended to civil knowledge in general, ſo as to 'comprehend not only politics, converſation, and buſineſs, but alſo 'commerce, and the particular arts of agriculture, navigation, architecture, war, trades, &c. for a man of general knowledge, ſuch 'as the author, or Mr. Boyle, for inſtance, muſt needs be more capable of improving any particular arts or ſciences than a perſon 'wholly bred up to and employed about one buſineſs only.' Shaw's note.

4. That, although a method of education, accommodated to the man of buſineſs in a manner ſo ſuperior to what is generally given him, may be attended with a greater expence, yet, it is to be hoped, that will never be an objection againſt it's public eſtabliſhment, it being intended only for ſuch people of condition and fortune who can and will chearfully afford it.

'It is the worſe ſort of huſbandry, ſays the great Mr. Locke, 'for a father not even to ſtrain himſelf a little for a ſon's education, which, let his condition be what it will, is the beſt 'portion he can give him.

'He, as the ſame author continues, that at any rate procures 'his child a good mind, well principled, tempered to virtue 'and uſefulneſs, and adorned with civility and good breeding, makes a better purchaſe for himſelf than if he had laid 'out the money for an addition of acres: ſpare it in toys and 'play-games, in ſilks, ribbons, and laces, and other uſeleſs 'expences, as much as you pleaſe, but be not ſparing in ſo 'neceſſary a part as this. It is not good huſbandry to make 'his fortune rich, and his mind poor; and I have often, with 'great admiration, ſeen people laviſh it profuſely in tricking 'up their children in fine cloaths, lodging and feeding them 'ſumptuouſly, allowing them more than enough of uſeleſs 'ſervants, and yet, at the ſame time, ſtarve their minds, 'and not take ſufficient care to cover that which is the moſt 'ſhameful nakedneſs, viz. their natural wrong inclinations 'and ignorance. This I can look on as no other than a ſacrificing to their own vanity, it ſhewing more their pride 'than true care of the good of their children: whatſoever 'you employ to the advantage of your ſon's mind, will ſhew 'your true kindneſs, though it be to the leſſening of your 'eſtate. A wiſe and good man can hardly want either the 'opinion or reality of being great and happy; but he that is 'fooliſh or vicious can be neither great nor happy, whatſoever 'you leave him. I aſk you, whether there be not ſome men 'in the world whom you had rather have your ſon be, with 'Five Hundred Pounds per annum, than ſome others 'you know with Five Thousand?'

Of the erecting of the propoſed College.

Do not the famous univerſities of this nation demonſtrate, that there is no people in the world more liberal in their donations towards the building of colleges for every literary kind of inſtitution? And ſhall we entertain an opinion that a Mercantile College will not one day obtain an eſtabliſhment in this kingdom, which may enable the nation the better to ſupport all others? Shall we be daily very bountiful in our ſubſcriptions towards the erection and ſupport of infirmaries and hoſpitals, for the maintenance of the poor; and ſhall we not think of the erection of a college, which will impower individuals the more generouſly to contribute to the ſupport of ſuch laudable charities? Is there leſs wiſdom in the eſtabliſhment of a ſeminary to guard merchants againſt misfortunes, than to provide a college for them after their ruin? Shall the nation never have another Gresham nor a Sutton? But, if no individual ſhould ever think of an eſtabliſhment of this kind, what is it that the merchants of this kingdom are not able to do from their own purſes? Or, why may not their application to parliament be attended with the deſirable ſucceſs, if the public ſhould be lukewarm to promote this deſign in another ſhape? Will it be leſs honour to the kingdom to build a college for the education of her merchants, than a repoſitory for the productions of nature and arts? Is it not the induſtry and ingenuity

gennity of the merchant that ſtamp a value upon thoſe productions, and are the great ſupport of all art and ſcience? Is not the merchant daily called upon to take a ſhare in the legiſlative power, and why ſhall not ſuch a reſpectable member of the community be trained up with advantages equal to the other principal claſſes of people in the ſtate?

MERCHANT-COURT, or COURT-MERCHANT, is a kind of judicatory power inveſted in merchants, choſen for that purpoſe in ſeveral parts of Europe, in order to decide and determine, in a ſummary way, all differences and litigations among themſelves and their dependants.

'Courts of merchants ſhould be erected for the ſpeedy deciding all differences relating to ſea affairs, ſays the judicious Mr. Carey, which are better ended by thoſe who underſtand them, than they are in Weſtminſter-Hall, where all things are tried by the nice rules of law; and, therefore, after much attendance and expence, are often referred by the judges to ſuch as are converſant in trade. By this means the merchants would ſoon ſee ſhort ends to their differences; but no general rules can be given for theſe courts, which muſt be ſettled as they ſuit the conveniencies of trading cities.'

'I aſk pardon of the learned gentlemen of the long robe, ſays the remarkable De Foe, if I do them any wrong, having no deſign to affront them, when I ſay, that, in matters of debate among merchants, when they come to be argued by lawyers at the bar, they are ſtrangely handled. I myſelf have heard very famous lawyers make ſorry work of a cauſe between the merchant and his factor; and, when they come to argue about exchanges, diſcounts, proteſts, demurrages, charter-parties, freights, port-charges, aſſurances, barratries, bottomries, accounts current, accounts in commiſſion, and accounts in company, and the like, the ſolicitor has not been able to draw a brief, nor the counſel to underſtand it: never was young parſon more put to it to make out his text, when he's got into the pulpit without his notes, than I have ſeen a counſel at the bar, when he would make out a cauſe between merchants: and I remember a pretty hiſtory of a particular caſe, by way of inſtance, when two merchants contending about a long factorage-account, that had all the niceties of merchandizing in it, and labouring on both ſides to inſtruct their counſel, and to put them in when they were out; at laſt they found them make ſuch ridiculous ſtuff of it, that they both threw up the cauſe, and agreed to a reference; which reference, in one week, without any charge, ended all the diſpute, which they had ſpent a great deal of money in before to no purpoſe.

'Nay, the very judges themſelves (no reflection upon their learning) have been very much at a loſs in giving inſtructions to a jury, and juries much more to underſtand them; for, when all is done, juries, which are not always, nor often, indeed, of the wiſeſt men, are, to be ſure, ill umpires in cauſes ſo nice, that the very lawyer and judge can hardly underſtand them.

'The affairs of merchants are accompanied with ſuch variety of circumſtances, ſuch new and unuſual contingencies, which change and differ in every age, with a multitude of niceties and punctilio's; and thoſe again altering as the cuſtoms and uſages of countries and ſtates do alter, that it has been found impracticable to make any laws that could extend to all caſes: and our law itſelf does tacitly acknowledge it's own imperfection in this caſe, by allowing the cuſtom of merchants to paſs as a kind of law, in caſes of difficulty.

'Wherefore it ſeems to me a moſt natural proceeding, that ſuch affairs ſhould be heard before and judged by ſuch as, by known experience and long practice in the cuſtoms and uſages of foreign negoce, are of courſe the moſt capable to determine the ſame.

'Beſides the reaſonableneſs of the argument, there are ſome caſes in our laws in which it is impoſſible for a plaintiff to make out his caſe, or a defendant his plea; as, in particular, when his proofs are beyond ſeas, for no proteſts, certifications, or procurations, are allowed in our courts as evidences; and the damages are infinite and irretrievable by any of the proceedings of our laws.

'For the anſwering all theſe circumſtances, a court might be erected by authority of parliament, to be compoſed of ſix judges commiſſioners, who ſhould have power to hear and decide as a court of equity, under the title of A Court-Merchant.

'The proceedings of this court ſhould be ſhort, the trials ſpeedy, the fees eaſy, that every man might have immediate remedy where wrong is done: for, in trials at law about merchants affairs, the circumſtances of the caſe are often ſuch, as the long proceedings of courts of equity are more pernicious than in other caſes, becauſe the matters to which they are generally relating, are under greater contingencies than in other caſes, as effects in hands abroad, which want orders, ſhips and ſeamen lying at demurrage, and in pay, and the like.

'Theſe ſix judges ſhould be choſen of the moſt eminent merchants of the kingdom, to reſide in London, and to have power by commiſſion to ſummon a council of merchants who ſhould decide all caſes on the hearing of both parties, with appeal to the ſaid judges.

'Alſo to delegate by commiſſion petty councils of merchants, in the moſt conſiderable ports of the kingdom, for the ſame purpoſe.

'The ſix judges themſelves to be only judges of appeals; all trials to be heard before the council of merchants, by methods and proceedings ſingular and conciſe.

'The council to be ſworn to do juſtice, and to be choſen annually out of the principal merchants of the city.

'The proceecings here ſhould be without delay; the plaintiff to exhibit his grievance by way of brief, and the defendant to give in his anſwer, and a time of hearing to be appointed immediately.

'The defendant, by motion, ſhall have liberty to put off hearing, upon ſhewing good cauſe, not otherwiſe.

'At hearing, every man to argue his own cauſe, if he pleaſes, or introduce any perſon to do it for him.

'Atteſtations and proteſts from foreign parts, regularly procured, and authentickly ſignified in due form, to paſs in evidence; affidavits in due form, likewiſe atteſted and done before proper magiſtrates within the king's dominion, to be allowed as evidence.

'The party grieved may appeal to the ſix judges, before whom they ſhall plead by counſel, and from their judgment to have no appeal.

'By this method, infinite controverſies would be avoided, and diſputes amicably ended, a multitude of preſent inconveniencies prevented, and merchandizing matters would in a merchant like manner be decided, by the known cuſtoms and methods of trade.'—So far De Foe.

'Notwithſtanding there be in the capital of Spain, ſays a judicious Spaniſh author, a board of trade, compoſed of miniſters of great merit, I apprehend it would be good policy to introduce into it a greater number of perſons of underſtanding and ſkill in commerce, either from their own experience in mercantile affairs, or by being long employed in offices that have a connection with trade, or by having made this important intereſt their particular ſtudy. But, to explain theſe and other meaſures tending to make this board more extenſively uſeful, it will be neceſſary to conſider the thing more fully.

'In ſeveral towns of France, and other kingdoms, there are conſulſhips [ſee the article CONSULS] or courts made up of private perſons, of good underſtanding, as well for the better conduct and advancement of commerce, as to decide SPEEDILY, and at SMALL CHARGE, all cauſes and diſputes that may ariſe in buſineſs; a cuſtom which it is our intereſt to imitate in thoſe cities of Spain that have the beſt diſpoſition for trade (as it has been ordered at Burgos, &c.) but it requires one to enter farther into particulars, in order to lay down ſuch a plan as will ſecure to the public all thoſe advantages it may receive from thence; and I ſhall advance no farther at preſent than to obſerve, that theſe courts ſhould have a conſtant correſpondence with the ſuperior board or council of commerce reſiding in the capital, and to which they ought to be ſubordinate.'

The ſubſtance of Sir Joſiah Child's opinion in regard to the eſtabliſhment of a MERCHANT-COURT.

'I have conceived great hopes, ſays he, that this kingdom will at length be bleſſed with a happy method for the ſpeedy, eaſy, and cheap deciding of differences between merchants, maſters of ſhips, and ſeamen, &c. by ſome court or courts of merchants, like thoſe which are eſtabliſhed in moſt of the great cities and towns in France, Holland, and other places; the want of which in England is, and has ever been, a great bar to the progreſs and grandeur of the trade of this kingdom.

For inſtance, if merchants happen to have differences with maſters and owners of ſhips, upon charter-parties, or accounts beyond ſea, &c. the ſuit is commonly firſt commenced in the admiralty-court, where, after tedious attendance and vaſt expences, probably juſt before the cauſe ſhould come to determination, it is either removed into the delegates, where it may hang in ſuſpence 'till the plaintiff and defendant have empty purſes and grey heads; or elſe, becauſe moſt contracts for maritime affairs are made upon the land (and moſt accidents happen in ſome rivers or harbours here, or beyond ſea, and are not in alto mari) the defendant brings his writ of prohibition, and removes the cauſe into his majeſty's court of King's-Bench; where, after great expences of time and money, it is well if we can make our own counſel, being common lawyers, underſtand one half of our CASE, we being amongſt them as in a foreign country, our language ſtrange to them, and theirs as ſtrange to us. After all, no atteſtations of foreign notaries, not even public inſtruments from beyond ſea, being evidences at law, and the accounts depending, conſiſting, perhaps, of an hundred or more ſeveral articles, which are as ſo many iſſues at law, the cauſe muſt come into Chancery, where, after many years tedious travels to Weſtminſter, with black boxes and green bags, when the plaintiff and defendant have tired their bodies, diſtracted their minds, and conſumed their eſtates, the cauſe, if ever it be ended, is commonly,

monly, by order of that court, referred to merchants, ending miſerably, where it might have had at firſt a happy iſſue, if it had begun right.

From whence follow theſe national inconveniencies:

1. It is a vaſt expence to the perſons concerned.

2. It takes off men from following their callings, to the public loſs, as well as the particular damages of the party concerned, that time being loſt to the nation which is ſpent in law-ſuits.

3. It makes men, after they have once attained indifferent eſtates, to leave trading, and, for eaſe, to turn country gentlemen; whereas ſkilful and experienced men are the only perſons that might match other nations in trade.

4. It is, in my opinion, a great cauſe of the prodigality, idleneſs, and injuſtice of many of our maſters of ſhips in England, and, conſequently, a wonderful bar to the growth of our Engliſh navigation; who knowing that their owners cannot legally eject them, eſpecially if the maſter have a part of the ſhip himſelf: but that remedy to the owners will be worſe than the diſeaſe, which occaſions maſters to preſume to do thoſe things, and be guilty of ſuch neglects as naturally they would not, if they ſtood more upon their good behaviour.

I could ſay much more of the damage this nation ſuſtains by the want of a law-merchant; but that is ſo evident to all men's experience, that I ſhall not longer inſiſt upon it, but proceed humbly to propoſe ſome particulars; which, being duly conſidered, may peradventure by wiſer heads be improved towards the cure of this evil, viz.

1. That it be enacted, That there ſhall be erected, within the city of London, a ſtanding court-merchant, to conſiſt of twelve able merchants, ſuch as ſhall be choſen by the liverymen of the ſaid city, in their common hall, at the time, and in the manner herein after limited and appointed.

2. That the ſaid twelve perſons ſo to be elected, or any three or more of them, ſitting at the ſame time and place, and not otherwiſe, ſhall be accounted judiciary merchants, and authorized to hear and determine all differences and demands whatſoever, which have ariſen, and are not otherwiſe determined, or may any ways ariſe between merchants, tradeſmen, artificers, maſters and owners of ſhips, ſeamen, boatmen, and freighters of ſhips, or any other perſons having relation to merchandizing, trade, or ſhipping, for or concerning any accounts of merchants, freights of ſhip or goods, bill or bills of exchange, or bills of bottomry, or for work done upon, or materials delivered to the uſe of any ſhip, or money due for ſale of goods, or any other things relating to trade or ſhipping.

3. That any three or more of them, as the judges did lately at Clifford's-Inn, may proceed ſummarily to the hearing and determining of any ſuch differences, and that their ſentence ſhall be final, from which there ſhall be no appeal or review, otherwiſe than as is herein after-mentioned, nor any writ of error lie for the removal or reverſal of the ſame.

4. That they, or any three of them, may ſo iſſue out ſummonſes for convening all perſons before them, as the judges did, &c.

5. That they be a court of record, as the judges were, &c.

6. That they take nothing for their own pains, directly or indirectly, but ſix-pence each for ſigning every final order in every cauſe whereof the value of money to be paid does not exceed 10l. and twelve-pence for all cauſes not exceeding the value of 100l. and only two ſhillings each for all cauſes exceeding the value of 100l.

The ſaid fees to be due and payable only to ſuch and ſo many of the ſaid judiciary merchants as heard the ſaid cauſes, and ſigned the judgments or final decrees.

7. That, for rewards to officers, the juſticiary merchants do conſtitute a table of reaſonable fees, to be confirmed by the two lord chief juſtices, and lord chief baron of the Exchequer.

8. That, in any caſe determined by a leſs number than ſeven of the ſaid judiciary merchants, there may be an appeal to ſeven or more, as was lately practiſed in the afore-mentioned judicature.

9. That they may have power to levy execution upon eſtates real or perſonal, with ſuch reſtrictions as the parliament ſhall pleaſe to appoint.

10. That the extent of the juriſdiction of the ſaid court ſhall be to all places within 10 miles of London, or only to the late lines of communication, as the parliament ſhall think fit.

11. That the ſaid judiciary merchants and their officers, before they exerciſe their authority, do take ſuch oaths as the parliament ſhall pleaſe to appoint.

12. That, if any of the judiciary merchants be proſecuted for exerciſing any of the powers that ſhall be committed to them, they may plead the general iſſue, and give the act in evidence for their defence.

13. That no writ or writs of ſuperſedeas, certiorari, or injunction, out of any of his majeſty's courts, ſhall ſuperſede or ſtay execution, &c.

14. The act to continue probationarily ſo long as the parliament ſhall think fit.

15. That the twelve judiciary merchants ſhall be choſen yearly, by all the freemen that are liverymen of London, in the Guild-Hall of the ſaid city, or by ſo many of them as ſhall be preſent at ſuch elections, upon every Monday yearly before the feaſt of St. Michael, or as the parliament ſhall appoint, in manner following:

Every liveryman then preſent to deliver unto any two ſuch aldermen and four commoners as the lord mayor and court of aldermen for the time being ſhall appoint, to take the view or ſcrutiny of election, a paper containing the names of ſuch twelve perſons as he thinks beſt to be elected for the purpoſes aforeſaid, ſetting his the ſaid elector's own name on the backſide of the ſaid paper; and the next Monday after, in the ſaid Guild-Hall, the ſaid two aldermen and four commoners, or as many of them as ſhall have taken the ſcrutiny, ſhall publicly declare unto the lord mayor, aldermen, and commoners then preſent, who are the twelve perſons choſen by the majority of votes, and how many votes each of them had.

16. If it happen that any of the judiciary merchants die before the end of the year, or refuſe to undertake the truſt, it be lawful for the liverymen to chuſe another or others, toties quoties, and the lord mayor be enjoined to ſummon halls for that purpoſe.

17. That every year ſix of the old judiciary merchants go off in courſe, and be incapable of being re-elected, and ſix new ones choſen in their ſtead, viz. all the twelve to be rechoſen, but only ſix of the old ones, that had the moſt voices, to hold the next year, although more of them ſhould happen to be elected for the next year.

Objection I. The objections that I can foreſee will be made againſt this conſtitution are, that it thwarts that moſt excellent order of our Engliſh juries.

Anſwer I. I anſwer, That I hope there is no Engliſhman more in love with juries than myſelf; but it is evident that the common way of trials does not well reach the variety and ſtrangeneſs of merchants caſes, eſpecially in relation to foreign affairs.

Anſwer II. What better jury can a merchant hope for, than twelve able and honeſt merchants, choſen by the collective body of the whole city, and ſuch as ſhall all of them ſtand upon their good behaviour, to be turned out with ignominy the next year, if they do not equal right to all men?

Objection II. The admitting of no appeals from a court merchant ſeems too arbitrary.

I anſwer; while we chuſe our judges ourſelves for merchants caſes, and may remove them ourſelves, in my opinion, they can be no more too arbitrary than too much power can be given to referees, when both parties deſire an end of their differences: beſides, if their power be not great, the deſign of cheap, ſpeedy, and ſhort iſſues, will be loſt. But, if it ſhall pleaſe the parliament, there may be in the act an appeal reſerved to the houſe of lords; the money condemned to be paid or depoſited before the appeal be allowed.'

An edict of Henry II. king of France, concerning the MERCHANT-COURT of the city of Rouen.

The preamble only relating to the eſtabliſhment of an exchange for the aſſembling of the merchants, we ſhall paſs that over, and only take notice of what relates to the point under conſideration.

'And, for the greater eaſe and advantage of the merchants of our city of Rouen, and being deſirous to gratify them in every thing, as far as it is poſſible, that they may not be diſtracted, and drawn off from their other buſineſs and affairs, by being obliged to give their attendance at ſundry courts of judicature, by reaſon of ſuits and pleas occaſioned by litigations and differences ariſing among them in their traffic: our will and pleaſure is, that the merchants of our ſaid town of Rouen, as well natives as foreigners, frequenting the ſaid place, ſhall every year cauſe a ſociety of merchants to meet in the lodge of the ſaid bourſe, at what time they think fit; out of which ſociety of merchants they ſhall chuſe three officers, viz. one PRIOR and TWO CONSULS, who ſhall remain in authority one year, at the end of which new ones ſhall again be choſen, by the plurality of voices: which election and nomination being fully ended, the ſaid prior and conſuls ſhall have preſent power in them to take knowledge, and to give judgment between all men, of what eſtate, quality, or condition ſoever they be, of all ſuits, controverſies, and differences touching matters of MERCHANDIZING, or buying and ſelling, in manner as the conſervator of the fair at Lyons, and the prior and conſuls at Thouloufe do, as well for obligations, bills of debt, receipts, blanks, ſigned bills of exchange, ſecurities, aſſociations, and partnerſhips of merchants, either general or particular; alſo of aſſurances, accompts, tranſports and contracts for matters aforeſaid, or any thing belonging thereunto; with all full power, and according to the manner, judgments, and condemnation of the ſaid conſervator of Lyons, and prior and conſuls of Thouloufe; and the judgments and ſentences, decrees and ordinances, commiſſions and commandments of the ſaid prior and conſuls of Rouen, by ſpeeches, proviſions, or ſentences definitive, ſhall remain in as much force and effect for any matter judicially determined, as the cauſes which the conſervator of Lyons, and prior and conſuls of Thouloufe, and divers other of our judges do decide: and the ſame ſhall be executed by our ſerjeants and officers, in ſuch manner and form as they are in their behalf

above-

above-named, either by committing to priſon, or by inflicting other puniſhments, if it be ſo decreed and ordained; and to that end ſhall our meſſengers and officers be bound to perform the executions, and our goalers and keepers of priſons ſhall likewiſe be bound to keep all ſuch priſoners in ſuch manner as if they were committed unto them by our aboveſaid judges, with the like bond and penalty (if any eſcape happen) as they are bound to keep the priſoners to them committed by the authority of the ſaid judges: for ſo we have enjoined, and do enjoin our meſſengers, and other officers, goalers, and keepers of priſons, upon ſuch penalties as the caſe ſhall require, and according as by the ſaid prior and conſuls ſhall be limited and appointed with regard to the demerits of the offenders.

Moreover, we have permitted, and do permit, if need be, that our ſaid prior and conſuls do take unto them twenty of the ſaid merchants, or a greater or a ſmaller number, as they ſhall think convenient, to aſſiſt them in their proceedings and judgments in cauſes of merchandize, bills of exchange, aſſurances and differences as aforeſaid, and to cauſe to be executed their ſentences, judgments, and ordinances of pledges and conſignments, proviſions, ſeizing of goods, and all other condemnations, ſentences, or appointments, to proceed therein by criers and proclamations, giving notice to the parties concerned themſelves, or leaving notice at their houſes by proof, ſales, depoſitings, deliveries, and definitive execution, as the caſe ſhall require.

And we likewiſe give them power to direct the ſame proceſs, and to proceed therein according to the ordinances, as well in matters ſummarily as by proviſion, as acknowledgment of bills, ſubſcriptions, and bills of exchange: and the like in regard to pledges and conſignments, upon one only default, duly proved by ſummoning the perſon at his houſe, or fixing there a copy of the commiſſion, or proceſs, in all places where it is lawfully to be done.

And touching other matters, where two defaults ſhall be made, or perſons twice ſummoned, they ſhall proceed, obſerve, and keep their courſe according to the king's ordinances. And for all matters wherein they ſhall give ſentence of execution to paſs in all places of our court of parliament at Rouen, and in all other places of our kingdom, where need ſhall require, without any diſturbance or moleſtation to be made by any of our judges, juſtices, or officers, either againſt them or their deputies; neither ſhall they let or hinder any ſummons or arreſt, exploit or aſſignment to be done before them: and to give their aſſiſtance in cauſes appertaining to, or touching matters of traffic, and all things thereunto belonging, againſt all merchants trading in our ſaid city of Rouen, and their factors, agents, and dealers, ſent by them into other countries, regions, or provinces, as well within as without our kingdom, countries, and dominions under our obedience for the cauſe of traffic, merchandize, and buſineſs of trade, and all things whatſoever thereunto belonging.

And we will and ordain, that they may bring their cauſes and proof for all matters aforeſaid, before the ſaid prior and conſuls for the time being, whether it be for the rendering of account and ſatisfaction of part or of whole, or condemnation in penalties, or other condemnations for fines or treſpaſſes, and for all other things that ſhall be requiſite, concerning and belonging to trade and merchandize, according as they ſhall deſerve; in which we have authorized them, and do give them power to uſe the ſame forms as the ſaid conſervator at Lyons, prior and conſuls at Thouloufe, and others our judges do: and to cauſe execution to be ſerved on the offenders, either by arreſts, attachments, and ſale of goods, or by impriſonment of the parties condemned, as they ſhall think good: prohibiting all our judges to take cognizance of any matter or plea thereunto belonging; which command ſhall be noticed unto them, and unto all perſons to whom it ſhall appertain, by the firſt of our officers or ſerjeants that ſhall be required ſo to do, whom we enjoin to perform the ſame accordingly, to the intent that the EXTRAVAGANT CHARGE AND EXPENCE that merchants might be otherwiſe put to in proſecuting their factors and ſervants before other judges, may be by that means intirely avoided.

And we have further permitted, and do give authority to the prior and conſuls to apply all ſuch penalties of money as by them ſhall be inflicted upon perſons for contempt, and other offences, the one half to our uſe, and the other half to the uſe of the aforeſaid bourſe at Rouen, allowing them, alſo, abſolute liberty and power to chuſe and conſtitute an advocate and an attorney, who ſhall by all lawful means labour to procure the benefit and advantage thereof, and defend the ſame, and ſhall direct all proceſſes and cauſes as well before the ſaid prior and conſuls, as before all other judges. And to the end that merchants may aſſemble themſelves, as well to conſult of their common affairs as to conſtitute and appoint the ſaid advocate and attorney, without being ſubject to repair to us or our judges for leave, when need ſhall require: WE will and ordain, That all judgments that ſhall paſs before the prior and conſuls, being ſealed with their ſeals, and ſigned by a clerk by them appointed, be it for impriſonment, ſale, diſpoſing of goods, or otherwiſe, ſhall be held for real and lawful, without any conſtraint to have our further commiſſion or liking, according as was permitted by our moſt illuſtrious father the king, unto the merchants of our city of Lyons, by their letters patents, given in the month of February, in the year of our Lord 1535; reſerving unto our court of parliament, at our ſaid city of Rouen, the juriſdiction and cognizance of the ſaid diſcords and differences, by way of appeal, to our parliament in our aforeſaid city of Rouen.

And to the end that all appeals proceeding from the judgments and ſentences that ſhall be given by the ſaid prior and conſuls, may be ſpeedily, and without delay, ended and determined in our ſaid court of parliament: WE have ordained, and do hereby ordain, all our loving and truſty preſidents and counſellors (holding our ſaid court of parliament) to appoint to the ſaid merchants, without delay, one day in every week, ſuch as they ſhall think convenient, to hear, determine, and decide the ſaid appeals, as recorded. And, in regard to the proceſs in writing, there ſhall another record be made, to the end that the ſaid appeals may be ended, in the SAME DAY, to avoid the prolonging of ſuits, to the RUINING and CONSUMING of the MERCHANTS.

And to the intent that the ſaid place for meeting of the merchants twice a day may be intirely quiet, and without any diſturbance, our will and pleaſure is, and we do ſtrictly command, that none of our ſerjeants or officers preſume to enter into the ſaid place, nor to make any arreſt (for any cauſe) of any perſon whatſoever, during the time of thoſe two accuſtomed hours of meeting; and, if ſuch arreſt ſhould be made during the ſaid hours, we have declared heretofore, and do declare by theſe preſents, the ſame to be void and inſufficient, charging all our judges not to have any regard thereunto.

And as we are informed that the buſineſs of aſſurance is of late greatly improved by the merchants of the ſaid city of Rouen, to the manifeſt advancement of the traffic and commerce thereof; to the end that the policies of aſſurance, and all other writings thereunto belonging, may receive full force and vigour, we have permitted, and do by theſe preſents permit, that all merchants frequenting the ſaid place (either now, or in time to come) may aſſemble themſelves as often as it ſhall be needful to nominate and chuſe by the plurality of voices, one truſty and expert merchant amongſt them, ſuch as they ſhall think meet and well underſtanding the buſineſs of aſſurance, who ſhall make and record the ſaid policies; which the inſurers ſhall under-write at all times hereafter, in the ſaid place and liberties of the ſaid city of Rouen; which merchant ſo choſen ſhall likewiſe (being thereto required) draw out accompts of ſuch ſums as ſhall happen to be due, receiving for his pains and time ſpent in performing the functions of his ſaid office, according as ſhall be thought meet by the ſaid merchants; of all which inſurances he ſhall keep a perfect and exact record, to which record and copies thereof, and all other acts and writings by him made and ſigned concerning the matter of inſurances, we will and ordain that all manner of credit ſhall be given before all judges and others, to whom it ſhall appertain: nor ſhall any other perſon or perſons whatſoever have any thing to do or meddle in the ſaid buſineſs of aſſurances, not being before choſen and admitted thereunto by the ſaid prior and conſuls, and by the ſaid merchants as aforeſaid.

And we do hereby command and give in charge to all perſons holding our courts of parliament, great conſtables, admirals, vice-admirals, ſtewards, and their deputies, and to all other judges and officers whom it ſhall concern, that they do cauſe to be read, proclaimed, and regiſtered this our preſent will, declaration, permiſſion, and ordinance, and the ſame to be obſerved and kept by all perſons accordingly, that the merchants may uſe and enjoy the force and benefit thereof, plainly and peaceably, without any contradiction: moreover, WE do charge and command our attorney-general that he do with all diligence cauſe all theſe things to be plainly and truly executed, and that he do certify us of his diligence in ſo doing. For ſuch is our pleaſure; and that notwithſtanding any ordinances, cuſtoms, ſtatutes, privileges, prohibitions, &c. to the contrary; which in this caſe, without doing prejudice to them in others, we have made void, and do make void. And, becauſe ſundry perſons may have occaſion to uſe this our grant in divers places, our pleaſure is, that credit ſhall be given to all ſuch copies thereof as ſhall be made by any of our loving and truſty notaries and ſerjeants, or under-ſecretaries, &c. in as ample manner as to the original: and, to this effect, we do give you full power and authority, and eſpecial charge and commiſſion by theſe preſents, commanding all our juſtices, officers, and ſubjects to obey you in this caſe. And to the end that this may remain eſtabliſhed for ever (our own right in all other cauſes reſerved) we have hereunto cauſed our ſeal to be put.—Given at Paris in the month of March, and in the year of our Lord 1556, and of our reign the tenth.

Signed by the KING, then in council, and ſealed with green wax, &c.

REMARKS.

We have now ſeen the ſubſtance of what has been urged in favour of the eſtabliſhment of a court-merchant in Great-Britain;

Britain; and how long ſince the ſame was firſt introduced into France, may be ſeen under the article CONSUL.

The great objection that hath been made againſt an eſtabliſhment of this nature, is, that merchants are not ſufficiently ſkilled in the laws, cuſtoms, and uſages, which have relation to their own profeſſion; and, therefore, they can never be competent judges in regard to every kind of litigation which may come before them. The experience, however, of other nations has ſhewn, that the mercantile world is contented at preſent, in the general, rather with the determinations of a judicatory of their own fraternity, than thoſe of lawyers. But, although merchants, from their long attention to concerns of this nature, and the regiſtering the reports of their predeceſſors, may, in time, become very knowing and judicious in determining differences between their brethren and their dependants, yet at the firſt commencement, they certainly muſt be very unexperienced.—But, if a mercantile college, as we have propoſed, ſhould ever take place in this nation, this would lay the proper foundation for training up merchants, as well in a knowledge of the laws, cuſtoms, and uſages, relative to their employment, as in their other eſſential qualifications. See MERCANTILE COLLEGE.

MERCURY, is a mineral, or a ponderous metallic water, agreeable to moſt metals, and judged by ſome to be the original matter, whereof all are conſtituted; it more cloſely adheres to gold, than to any other, by it's penetrating and diſſolving quality.

Mercury, or quickſilver, is the moſt heavy of all fluids, totally volatile in the fire, and incongealable by any degree of cold hitherto known. It's gravity, compared with that of ſpirit of wine, the lighteſt of all fluids, is as 14,000 to 866; it comes the neareſt in weight to lead, to which it is as 14,000 to 11,325. By bare agitation alone in a glaſs veſſel, or by being expoſed to a ſmall heat, it yields a ſoft black powder, of a ſharp braſſy taſte: a greater degree of heat changes mercury into a heavy, ſhining, red, friable powder, of a ſharp nauſeous taſte. The black and the red powder, may be revived into fluid mercury, by a more intenſe heat. Quickſilver amalgamates with gold, ſilver, lead, and tin; with copper not ſo eaſily; with zinc and biſmuth imperfectly; but has not been yet found to act on iron or the regulus of antimony. It is ſoluble in mineral acids, but with greater facility in ſome than another: vinegar, and the acids extracted from vegetables, have no effect upon it: neither have alkaline or neutral ſalts: the nitrous acid readily diſſolves it into a pellucid liquor: neither the marine or vitriolic acid acts upon it, unleſs highly concentrated. It readily joins to ſulphur, and ſublimes along with it into a red powder; from this it is eaſily ſeparated by abſorbent earths, fixed alkaline ſalts, regulus of antimony, and all metals, except gold.

It is ſometimes to be found running in the veins of the earth, in the perfect form of quickſilver, but much the greater quantity of it is drawn from a mineral ſtone called natural cinnabar.

Of extracting mercury from the ore or mineral earth.

They firſt grind the mineral earth into powder, which done, they pour a large quantity of water thereon, ſtirring the whole briſkly about, 'till the water becomes very thick and turbid. The water having ſtood 'till it be ſettled, it is poured off, and they throw on freſh, which they agitate as before. This they repeated 'till the water at length comes away perfectly clear: after which, all remaining at the bottom of the veſſel is mercury, and other mineral matter.

To this mercurial matter is added the ſcoria of iron, putting the whole in large iron retorts, and ſo diſtilling it; by which means all the heterogeneous, mineral, and terreſtrial part is ſeparated therefrom, and the mercury left pure.

THE UTILITY OF MERCURY IN WORKING THE GOLD AND SILVER MINES IN SPANISH AMERICA.

Mercury is of great uſe in the Weſt-Indies, becauſe they cannot extract the ſilver from the native mineral without it, and therefore vaſt quantities are ſent over from Old Spain every year. See the article SILVER.

No perſon is allowed to carry over quickſilver to the Spaniſh Weſt-Indies, but the king; and the attempting the contrary is puniſhed with death and forfeiture of goods, which does not altogether deter men from committing this offence. And, though his majeſty might conſiderably increaſe his revenue, by ſelling it at a high rate, ſince the mines without it would turn to no account, yet it has been always ordered to be ſold at the price it ſtands in, paying all charges. The quickſilver, taken out of the mine at Almaden, not ſufficing formerly to ſupply the mines of New Spain, it was ordered, that certain quantities of this metal ſhould be ſent thither from the mines of Grancavelica in Peru, by the South Sea, and about 15,000 quintals, that is, 75 tons, were ſent yearly, for three or four years. But this being found prejudicial, becauſe under this pretence they carried great quantities of China and Spaniſh commodities from New Spain to Peru, which is very prejudicial to the trade of Spain, and had always been prohibited; therefore no more quickſilver was permitted to be carried from the mines of Grancavelica.

Theſe mines falling in, and therefore yielding no quickſilver for ſome years, all the Weſt-Indies were ſupplied out of Europe, which took up vaſt quantities; for the kingdom of Peru alone requires no leſs than 6000 quintals, that is, 300 tons: abundance was, therefore, brought out of Germany, and all the provinces of the Weſt-Indies well ſtored; and, in the year 1628, there were 12,000 quintals, that is, 600 tons, in the king's warehouſe, which made it doubtful how to ſend over ſo great a quantity. The commanders of the biggeſt ſhips, made a difficulty of carrying above 2000 quintals, that is, 100 tons of quickſilver. Though the expence in New Spain be not every year ſo much, 6000 quintals have been ſent thither in one year. It is ordered, that 200 quintals, that is, ſo many hundred weight, be ſent yearly to the new kingdom of Granada, and 100 to the province of Guatimala. but this is not regularly obſerved. This commodity being ſo abſolutely neceſſary for the plate trade, when the Spaniſh flota has miſſed being ſet out, two galleons have been ſent with the quickſilver. Great intereſt has been made, that quickſilver might be ſent by the way of Buenos Ayres, on pretence that it was very chargeable carrying that which is taken out of Grancavelica to the mines of Potoſi, but it was never granted.

The quickſilver from the mine at Almaden, being brought very ſlowly to Seville, the commiſſioners of the India-Houſe are often forced to ſend officers to haſten the carts and horſes upon the road, and expreſſes to Almaden, to expedite their ſetting out. The putting it up for ſea has been always left to the care of this court, but more particularly to the factor, which has been practiſed ſeveral ways; but, that now in uſe being the beſt, it will not be amiſs to give an account of it in this place.

Every half quintal, or half hundred, is put into a ſheep's ſkin, well bound with hempen cords, and that into a tight caſk, nailed down; and three of theſe caſks, containing a quintal, or an hundred and a half, into a cheſt, which being nailed and bound over with hempen ropes, is wrapped with coarſe mats, and bound over again. Upon every cheſt is faſtened the king's arms, painted on linen cloth, and thoſe cheſts are for New Spain, for thoſe carry but a quintal that are for the firm land. It would be proper they ſhould not put it up before the galleons or flota are ready to ſail, becauſe, if they lie long, the ſkins are in danger of rotting. A commiſſary is appointed to go into the ſhips that carry quickſilver, who gives bond to the factor for the delivery of them to the king's officers at the port they are deſigned for: and, to make good the deficiencies of the regular convoy-duty, the maſters are obliged to pay for ſuch goods as they take aboard. Theſe commiſſaries are appointed by the preſident of the India-Houſe, and, being brought before the chamber of direction, give ſecurity; and, for their trouble and hazard, are allowed 12 ducats for every 18 quintals, accounted a ton, which is paid by the king's officers where they deliver the quickſilver. This commodity pays the duty for convoys, but no other, and is never carried to the cuſtom-houſe, but goes directly to the king's ſtorehouſe. See the articles AZOGA SHIPS of Spain, and DIRECTION CHAMBER of Spain.

Mercury is alſo uſed in the gilding of ſilver, and other metals.

CURIOUS OBSERVATIONS.

That the mercurial principles exiſt in vegetables.

There is a method, ſays a famous Chineſe author, of drawing mercury from wild purſlane. For this purpoſe you nced only take the little leaves of purſlane, bruiſe them in a mortar, with a peſtle of the wood of Egyptian thorn; then expoſe them to the riſing ſun for about three days, and, when they are dry, toaſt them ſo as not to deſtroy their nature and virtues; put this maſs in a well-varniſhed earthen veſſel, which you muſt cloſe well, and bury in the earth 49 days; after which, take out the veſſel, and you find quickſilver in perfection.

Nothing is more certain than this ſecret; and in the ſhops of Pekin they ſell two ſorts of mercury, the one taken from mines, which is called chapchoveir, and the other obtained from plants, which is called tſaſchonien.

Theſe different operations of the Chineſe diſcover to us, that, in the principles of plants, there is iron, which may induce us to think that there may be mercury in certain plants; and, if we reflect on the nature of plants, and ſearch for that which moſt probably contains quickſilver, we have reaſon to believe that purſlane does ſo; for, in ſhort, the Chineſe herbaliſt, who in this agree with the greateſt botaniſt of Europe, gives to purſlane the virtues that are found in mercury. The purſlane, ſays he, is cold in it's nature, kills worms, and all ſorts of vermin, and is uſefully employed againſt noxious humours, which it diſſipates; and becauſe in it's nature it is volatile, it removes obſtructions in the veſſels of the human body.

Be this as it will, it is very probable that quickſilver, drawn from plants by the ſolution and ſeparation of their principles, would be free from ſeveral impurities which naturally attend that obtained from mines; for by being exalted into the minuteſt parts of the plants, it muſt be freed from the ramous and ſulphureous fibres, with which it abounds more or leſs, and from which it is ſeparated by paſſing it thorough a ſheep's ſkin.

Should

Should this receipt by experience be found true, we may reap from it a double advantage; the firſt of which is, that everywhere, and in a ſhort time, we may procure a ſufficient quantity of mercury. The ſecond and moſt conſiderable is, that, by the quickſilver extracted from purſlane, we may judge better of the different uſes of this plant, and may determine more certainly for what time, and with what precautions, it may be uſed, according to the different ſituations of perſons, whether in health or ſickneſs. Beſides, it's juice, prepared in a certain manner, might act upon metals diſpoſed to receive it.

MERIONETHSHIRE, in Wales, is bounded on the ſouth by Cardiganſhire, from which it is ſeparated by the river Dovy; with Montgomeryſhire and Denbighſhire on the eaſt; Carnarvonſhire and part of Denbighſhire on the north; and the Iriſh Sea on the weſt, for a length of 35 miles. It is about 35 miles in length, from Abdyvy in the ſouth to Llanſanfred in the north-eaſt; and about 25 in breadth, from Harlech in the weſt to the oppoſite part of it on the eaſt.

The air of this country is bleak, and not very healthy, by reaſon of the vapour ariſing from the Iriſh Sea. The ſoil, being rocky, is generally as bad as the worſt in Wales, bearing but thin crops of corn; yet there is pretty good paſture in the vallies for black cattle and ſheep, which are the chief ſupport of the inhabitants; and it is well furniſhed with deer, goats, fowl, and fiſh, eſpecially herrings, which are taken on the coaſt in abundance.

HARLECH, or HARLEGH, in the noth-weſt part of the county, has a harbour for ſhips, but no ſhips for the harbour.

DOLGELLY, at the foot of the mountain Idris, is an ordinary country-town, but of good account for the ſale of Welch cottons, and has an indifferent market. Here are pretty commodious inns for travellers.

BALA is the only market-town of the mountains, and is ſituate near Pimble Meer.

METALLURGY, the art of ſmelting, refining, compounding, and working metals from the mineral earth to the utenſil.

Under the articles ALLAY, AQUA FORTIS, AQUA REGIA, ASSAY, CINNABAR, COPPER-MINES, FLUX, GOLD, SILVER, and all the other metals, we have diſtinctly and amply treated of the divers metallurgical operations; to which we refer the reader. For what has further relation to this topic, ſee the articles METALS, MINEROLOGY, MINES, ORES, QUARTATION, SMELTING.

From what is ſaid under the preceding heads, the following particulars are obſervable.

REMARKS ON METALLURGY IN GENERAL.

1. We learn from the foregoing enquiry, that different mineral and metallic matters bear different relations to melted lead in fuſion: whence ſome of them will not mix therewith, but float on it's ſurface: that others evaporate, and others vitrify in it; whilſt ſilver and gold remain unaltered by it, and unimpaired. See the article ASSAY.

2. That the nobler metals have nearly the ſame relation to quickſilver as they have to melted lead; as being readily drank up by them both, ſo as thus to be ſeparated from other heterogeneous matters. See the article ASSAY.

3. That teſting, in the large way, is improveable by finding a properer matter than bone-aſhes, for the making of teſts, by working without bellows; and again by uſing pit-coal, and a well-contrived furnace. See ib.

4. That the art of aſſaying is hitherto imperfect, but capable of receiving conſiderable improvement from chemical and mechanical knowledge. Ib.

5. That the troubleſome and expenſive method of ſeparating gold from ſilver, by quartation, may be advantageouſly ſuperſeded, by means of fuſion, or a dexterous management of the fire. Ib.

6. That gold and ſilver are rarely rendered abſolutely pure, or ſeparated from all other kinds of metallic or mineral matters; and that to purify them in this manner requires the uſe of better methods than thoſe commonly uſed for the purpoſe, though the thing is ſtill performable by art, and a ſuitable proceſs. Ib.

7. That the particular hiſtory of common metallic fuſion is wanting, for the improvement of metallurgy. Ib.

8. That, when the ore of an imperfect metal is in immediate contact with the fire or fuel, eſpecially if charcoal, it yields the more and the better metal than when contained in a crucible, or kept from touching the coals. Ib.

9. That a languid fire leſſens the yield of an ore; but a briſk one, if not too long continued, increaſes it. Ib.

10. That the buſineſs of ſmelting in perfection depends, (1.) Upon uſing a degree of fire ſuitable to the ore. (2.) Procuring a quick and thin fuſion of the ſcoria. And, (3.) A cloſe contact of the metal with the fuel or coals. Ib.

11. That ſulphur has different effects upon the different metals; which effects being well noted, rules of practice might be thence derived, for the farther improvement of metallurgy. Ib.

12. That metalline recrements, or the ſlags of metals once ſmelted, have been wrought over again to profit, on account of the imperfect manner wherein the ores were originally treated for their metals. Ib.

13. That the ignobler metals are ſeparable from each other by the application of proper degrees of heat, ſo as to make the more fuſible melt away from the leſs fuſible, at leaſt with the aſſiſtance of lead. Ib.

14. That all metals are reducible, by burning or calcination, to terreſtrial powders, or calces; which, by being melted with any inflammable matter, aſſume their metalline form again. Ib.

15. That the great enemies to ductility, or the true metallic nature, are ſulphur, cobalt, and things compounded thereof [ſee ORES]; but that all unctuous and inflammable bodies are friendly to metals, and promote or reſtore their ductility, when melted therewith. See ASSAY.

16. That copper may be made to approach the colour of gold, and, at the ſame time, not loſe, but increaſe it's ductility, by being amalgamated with, and diſtilled from quickſilver; and that probably many artificial or compound metals are diſcoverable, by mixing various metalline and mineral bodies together, ſo as greatly to inrich and improve the art of metallurgy. See METAL.

17. That ſteel is made by a proper application of fire to iron, in a cloſe place, ſo as to prevent the open air from communicating freely with the iron.

18. That metals receive particular alterations in their texture, or conſiſtence, according to the nature of the ſolid ſubſtance, or liquor wherein they are quenched or cooled. See ib.

19. That, in general, ores are no more than a natural looſe mixture of metallic matters, along with earthy and ſulphureous ones: whence artificial ores, may be readily made, by calcining a metal with ſulphur, and mixing it with earth; ſo as, with heat, to form ſolid lumps of ore, reſembling thoſe dug out of mines. See ORES.

20. That numerous experiments remain to be made, and facts of nature, or obſervations, to be regiſtered, or the relation of bodies to be found, before this uſeful ſubjects of metallurgy can be brought to it's ultimate perfection. See ASSAY and METALS.

METALS, are a ſpecies of very ſubtile, yet opake earth, diſpoſed to form a tenacious, and, conſequently, a malleable, aggregate, which is fluid in the fire, more or leſs ſonorous in the air, and of a great degree of ponderoſity.

They are commonly divided into perfect and imperfect, and theſe again into complete and incomplete metals.

The perfect metals are ſuppoſed to be two, viz. gold and ſilver; and the imperfect ones four, viz. copper, lead, tin, and iron, which are otherwiſe ſaid to be complete metals.

The incomplete metals are biſmuth, zink, or ſpelter, regulus of antimony, and regulus of arſenic: which have weight, appearance, and fuſibility at the fire, in common with real metals, but are brittle, and all more or leſs volatile.

Yet theſe are not exactly all the ſpecies of incomplete metals; for many other ſubſtances are found thus far metallic, though neglected, either becauſe their manner of preparation and uſe remain unknown, or becauſe they may be indirectly referred to ſome of the above-mentioned claſſes.

It has been a prevailing opinion, that the imperfect metals differ only by accident from the perfect, on account either of digeſtion, or the tenacious adheſion of heterogeneous ſubſtances.

By digeſtion or concoction we here underſtand rather the effect of the operation, than the operation itſelf, viz. a cloſer combination of thoſe very attenuated particles, which in common mercury yet appear, as it were, individually diſtinct; whence, as ſingle corpuſcles, they prove unable to ſuſtain the impulſe of the fire, but are thereby raiſed in the form of a ſubtile fume into the air. Now, theſe very ſubtile and moveable particles may be conceived fixable two ways: firſt, by aggregation, ſo that ſeveral particles ſhall be tenaciouſly aggregated into one molecula. Something of this kind happens in mercury precipitated per ſe [ſee MERCURY]; which, tho' it was before exceeding volatile and fluid, ſo as to evaporate in a fume of exceeding fine parts, it is now made ſomewhat more fixed, and exhibits thoſe very ſubtile atoms joined together into more ſenſible corpuſcles, under the form of a dry powder. We do not, indeed, from hence infer, that mercury of itſelf is an immature metal, which, without the addition or ſeparation of any other thing, may be reduced to a perfect metal: let it ſuffice to have ſhewn by this phænomenon, that a greater degree of fixedneſs may be derived from an aggregative connection of particles.

Nature, according to ſome, produces every metal almoſt inſtantaneouſly. If in the bowels of a mountain, ſay they, or any deep parts of the earth, a vapour ſhould ariſe from a ſubſtance, utterly unknown to us à priori, that lay either there before, or is generated on the ſpot; or, if this ſubſtance itſelf, in the form of ſuch a vapour, ſhould ſucceſſively riſe and creep through the cavernous body of vaſt tracks of rocks, the veins and clefts of flints, or the interſtices of huge beds of leſſer ſtones, and every-where move about 'till it impinges upon a certain ſpecies of a ſubtile vitreſcible earth, which is fitted to receive it, or to become one therewith, here it muſt lodge as in it's matrix, 'till ſome more powerful impulſe diſturbs it.

We may the better conceive how this ſhould happen, from an example of that mud found at the head of ſprings, which, as Becher remarkably obſerves *, receives and concentrates the aqueous vapour, notwithſtanding the diurnal heat of the ſun. And after the ſame manner do alkalies receive and tenaciouſly detain the humid vapours of the air.

* Phyſic. Subterran. §. 11. cap. 3. §. 6.

And as vapours of a different kind, ſuch as the mercurial, arſenical, ſulphureous, &c. come to mix in certain proportions along with that original vapour, and fix therewith in a proper matrix, hence may proceed the various ſorts of perfect and imperfect, complete and incomplete metalline bodies: or from any error in the ingredients, as to proportion, &c. wrong conformations or degenerate metals may ariſe.

That the metallic principles may thus wander through the earth, in the form of vapour, ſeems countenanced by the common obſervation of thoſe mines which take their courſe near the ſurface of the earth. For, if a mineral vein lies ſhallow, it often gives manifeſt ſigns of being ſupplied with ſuch a vapour, not only in ſummer, by changing the colour of the ſtones that lie over it, but alſo in winter, by diſſolving the ſnow that lies along the tracks where it runs.

And this kind of exhalation is by the miners called the ſtorm. The like vapours alſo frequently happen by the burrows and caverns of the mine, whilſt they are digging the vein for the metal already formed therein, and ſometimes make the place very hot, ſometimes occaſion coughs and hoarſeneſs, and ſometimes again when they are large, and mixed with other mineral vapours, they prove ſuffocative. The workmen have commonly notice hereof given them by their lights ſuddenly burning larger and brighter; upon which they immediately quit the place.

At leaſt, therefore, it may more eaſily be conceived that metals ſhould be thus, as it were, inſtantaneouſly generated, than that the imperfect metals ſhould, as ſome ſuppoſe, be converted into the perfect, barely by a long-continued concoction in the earth, or by lying therein for ſome hundreds of years, without the addition of any new matter, or any diminution of the old. This ſeems very hard to conceive; but there is nothing abſurd, in allowing, that, upon a due concurrence of the metalline principles, metals ſhould be immediately produced: and that, if theſe principles meet improperly, either as to number, proportion, or heterogeneity, they ſhould either remain perpetually in that wrong ſtate of mixture they would then have, or at ſome time or other, whether ſooner or later, upon the fortuitous or natural acceſſion of ſome principle that was before deficient, they ſhould be actually perfected or deſtroyed by the admixture of one that is heterogeneous.

Caſes of this latter kind are ſometimes met with in mines; where too large a proportion of mercurial, corroſive, ſaline, arſenical matter or vapour, coming upon and adhering to the truly metallic parts of the ores, eſpecially thoſe of the imperfect metals; the parts of ſuch ores are thereby turned ſometimes into running mercury, ſometimes into cobalt, arſenic, tutty, cadmia, and ſometimes into common ſulphur.

And if, in ſuch a caſe, the mercury thus diſſolving and overflowing the metallic parts of theſe ores, be ſuppoſed to become the true mercuries of bodies, and to contain a quantity of the real metallic earth, ſo as ſometimes to be nothing but gold overpowered and rendered fluid by too great a proportion of mercury, we have little to object to ſuch a ſuppoſition: eſpecially if we conſider that it ſeems countenanced by the increaſed ſpiſſitude and ſluggiſhneſs of theſe mercuries, their greater ſpecific gravity in compariſon of common mercury, and the golden ſpot they leave behind, when evaporated upon a ſilver plate.

The contents of a metallic vein are thus frequently perverted, at the time that a ſubterraneal heat comes upon them; when, if the vein be ſuperficial, the whole maſs of metallic matter is corrupted, and thrown off into the air: whence the remaining veins are afterwards found to be nothing but an imperfect matrix, containing a ruſty red earth, like the lapis hæmatites, that runs therein after the manner of an ore indeed, but yields no metal; whence ſuch matter is by the workmen called dead metal.

This evaporation becomes ſometimes ſenſible, though without flame, or any manifeſt odour; but may be diſtinguiſhed from far, eſpecially in a dewy morning, by the undulation and fluctuation it occaſions in the air, over the whole track from which it riſes. And if, after ſuch a phænomenon, the vein be found empty of metal, the workmen in their language, ſay, the ſtorm has carried it away. But, at other times, ſuch an exhalation is attended with a violent flame, and the ſmell of burning ſulphur reaching to the diſtance of a mile, or more; when all the adjacent graſs, and other vegetables, are burnt up, and the workmen ſometimes ſcorched or ſuffocated in the mines.

But farther, if the rock, ſtones, or other mineral matters dug in the mines, or if the ſtamped ſlag, or powdered ſcoria gained in the melting of the metal, be ſtrewed upon the track of a vein, they have, after many years lying, been found impregnated with a metallic matter; probably becauſe they afforded a commodious matrix for the mineral fumes or exhalations, which every-where breathe out along the track they were laid on.

It muſt be obſerved, that one kind of heterogeneous bodies either hinders the completion of metals more than another, or obſcures them when they are complete. An example to which purpoſe we have in the gold ore that is intermixed with martial flints; where a dry, ſtyptic, powdry earth, preventing the fuſion, detains the fine ſingle particles of the perfect metal and ſeparates and wears them aſunder, when they would aggregate, and ſo prevents the ore from yielding it's true quantity of metal by fuſion, or all that is by aqua fortis found to contain.

Nor does it, perhaps, appear leſs ſtrange that ſome ores which are mixed with ſulphur, arſenic, and the like rapacious bodies, ſhould afford a leſs quantity of pure metal, when theſe volatile ſubſtances are firſt driven from them by calcination with a naked fire in the open air, than when they are either totally, or very conſiderably, detained by corroſive alkalies, quick lime, glaſs, &c. for it is manifeſt, that ſuch ſubſtances are not found to touch the ſubſtance of perfect gold brought into a body, much leſs to raiſe up or carry off any part thereof.

The truth of the caſe appears to be this: that thoſe rapacious minerals do not, in the open calcination, ſo much affect or carry off the whole individuum, or complete atoms of the gold, as ſome one or other conſtituent part of ſuch atoms, whether it be mercurial, that called ſulphureous, or earthy.

Remarks.

With relation to the ſeparation of metals from their various ores, ſee the article Metallurgy.

Of the Artificial or Factitious Metals.

The method of making Prince's Metal.

Take ſix ounces of copper, and melt it in a wind furnace; add to it an ounce of zink; then, ſtirring the whole well together, pour out the metal. The copper and the zink may be put into the crucible together, if firſt covered over with the black flux [ſee Assay and Flux] which prevents the avolation of the zink, or preſerves it's metalline form.

Remarks.

This is an expeditious method of making a fine kind of braſs; whereas the common method, with lapis calaminaris, requires a conſiderable length of time, and a violent fire: for this purpoſe they calcine and powder the calamy, then mix it with a little charcoal-duſt, and to ſeven pounds of this mixture add five of copper-plates, then, giving eleven or twelve hours fire, the copper imbibes about one third of it's weight of the calamy.

It is here remarkable, that the calamy, though no complete metallic body, nor malleable, ſhould yet conerete along with the copper, ſo as not only to increaſe it's weight, but alſo to extend with it under the hammer; which zink, in making the prince's metal, does not do, though it appears in all reſpects of a more metallic nature than calamy.

The agreements and diſagreements of theſe two bodies, zink and lapis calaminaris, may deſerve to be farther enquired into by particular experiments. The inflammability of zink is very remarkable, for it burns durably of a bluiſh-white flame in the fire, and thus reſolves into a white calx.

Many curious phænomena and unexpected reſults, happen upon mixing metallic and mineral bodies in the fire; all which deſerve to be tried, and noted as Facts that might at leaſt direct to the diſcovery of ſeveral new and uſeful mixtures, or compoſitions of metals. We might be encouraged to proſecute this enquiry, from thoſe pretty imitations of gold lately introduced, for the making of watches, buckles, cane-heads, ſnuff-boxes, &c. but, perhaps, a better imitation of gold, for theſe and other purpoſes may be obtained by M. Homberg's method of treating copper with quickſilver: for, if an amalgame be made of one part pure copper, and three parts quickſilver, and the amalgame be boiled in river water for two hours, then have the quickſilver diſtilled off, and cohobated once, the remaining copper, being now fuſed, will be found of a beautiful colour, and more ductile than common copper, ſo as to become well fitted for watch-work, gilding, and the finer machines and utenſils.

For the methods of extracting metals from their ores, ſee Metallurgy.

OLD MEXICO, or NEW SPAIN. This country lies between north latitude 7. 30. and 30. 40. and is bounded on the ſouth-eaſt by the iſthmus of Darien, or Panama; and on the north-weſt by New Mexico. It is divided into three audiences, or ſovereign diſtricts, governed by a viceroy appointed by the king of Spain.

The three diſtricts, or courts of audience, are, 1. Guadalajara; which contains the provinces of Cinaloa, Culiacan, Chamephan, Xaliſco, Guadalajara Proper, Zacatecas, and New Biſca. 2. Mexico; including the provinces of Mechoacan, Mexico Proper, Panuco, Tlaſcala, Guaxaca, Tabaſco, and Ycatan. 3. Guatimala; containing the pro-

vinces of Chiapa, Sonoeuſca, Guatimala Proper, Vera Paz, Honduras, Nicaragua, Coſta Rica, and Veragua.

Though it lies for the moſt part within the torrid zone, yet the air is very temperate, and generally reckoned extraordinary wholeſome. It produces divers ſorts of grain, fruits, and herbs, rich mines of gold and ſilver, and good paſturage. It's chief grain is wheat, barley, pulſe and maize; the chief fruits pomegranates, oranges, lemons, citrons, cherries, apples, figs, and coeoa-nuts; and it's principal commodities are wool, cotton, ſugar, ſilk, cocheneal, feathers, honey, balm, amber, ſalt, tallow, hides, tobaeco, ginger, and various medicinal drugs.

The Spaniards, who have long been ſole maſters of this country, have taken ſueh care to keep all foreigners out of it, that the lawful commeree between this part and Europe is in their hands, and ſubject to the direction of their crown.—To ſhew in what manner the ſame is carried on, it may be neeeſſary to explain what ſo often occurs in our news-papers, by the appellations of galleons, the flota, the flotilla, regiſter-ſhips, and guarda coſtas.

A galleon may be termed a very large old-faſhioned man of war, of three or four decks [ſee the article GALLEONS] with a vaſt deal of room for merchandizes, which ſhould be loaded only on the king's account, but are generally ſo much crouded with other goods, as to be in no condition to defend themſelves. This fleet conſiſts of eight ſuch men of war, the five largeſt of which have 50 braſs cannon, beſides an advice-frigate of 40. There are from 12 to 16 merehantmen which ſail with this fleet, with cargoes for the account of private perſons, after having purehaſed their licences at a pretty dear rate; and each of them is one half bigger, at leaſt, than is expreſſed in it's ſehedule. The chief intent of the galleons is, to carry warlikes ſtores, and other neceſſaries, for Peru: and this is what ſpecially diſtinguiſhes the galleons from the flota.

The flota, which is intended for Mexico, conſiſts of three men of war, which carry nothing but on the king's account; and the merchantmen that fail with them are uſually about 16, from 400 to 1000 tons burthen. This flota, which ſails about Auguſt, to have the favour of the winds that reign about November, to facilitate its paſſage to La Vera Cruz, commonly calls at Puerto Rico for freſh water and proviſions; and, after paſſing in ſight of Hiſpaniola, Jamaica, and Cuba, aceording to the ſeaſon of the year, or the nature of the winds, paſſes either by the coaſt of Jucatan, or higher through the gulph of Mexico, to La Vera Cruz, at the bottom of it.—It's paſſage has been computed as follows, viz. from Cadiz to the Canary Iſles 250 leagues, in about 10 days; to the Antilles 800, in 20 days: to the moſt weſtern point of the iſle of Cuba 500 leagues, in 20 days; to La Vera Cruz 260 leagues, in about 12 days: in all 1810 leagues, in about nine weeks.—As the flota is deſigned to furniſh not only Mexico, but the Philippine Iſlands, they are forced to ſtay there a good while, and ſometimes to winter there.

The cargo they carry baek to Europe is not ſo rich as that of the galleons, though it is ſaid to be rieher every year than other, becauſe of the increaſe of the Spaniſh ſettlements in New Mexico.—The flota commonly leaves La Vera Cruz in May, but ſometimes not 'till Auguſt; then it ſails for the Havannah, from whence it generally returns, eſpecially in time of war, with the galleons to Old Spain. See the article FLOTA.

As ſoon as the galleons and flota are arrived at the Havannah, the flotilla, or little fleet, ſo called, becauſe it conſiſts of ſome of the lighteſt and cleaneſt ſhips is detaehed to Europe; which, beſides money and merchandize, carries an exact account thither of the contents both of the galleons and the flota, that the court may the better judge what convoy is neceſſary to be ſent for them, as well as to regulate the indulto [ſee INDULTO] proper to be levied on the merchants, in proportion to their reſpective intereſts in the galleons and flota. The flotilla conſiſts commonly of five ſhips, from 20 to 44 guns, and is employed to guard the coaſt from free-booters, as alſo to convoy the plate to Panama. The great fleet remains ſo long at the Havannah for theſe two reaſons chiefly, viz. waiting for a wind, or for the regiſter-ſhips, which they are to convoy home.

A regiſter-ſhip has it's name from it's being regiſtered, with all the effects embarked in Spain, in books kept for that purpoſe in the chamber of Seville. For, when a company of merehants there think that the European goods are much wanted at ſome partieular ports in the Spaniſh Weſt-Indies, they preſent a memorial to the council of the Indies, praying permiſſion to ſend a ſhip of 300 tons burthen, or under, to ſuch port; and, having obtained it, they pay a eertain ſum, between 30,000 and 50,000 pieces of eight to the crown, beſides preſents of a conſiderable value to the king's officers. Then, to prevent any ſuſpieion of fraud, they regiſter their ſhip and cargo conſiſtent with their petition and licenee: whereas the ſame ſhip, ſo regiſtered as under 300 tons, generally carries above 600 tons of goods, beſides accommodation for paſſengers.—Copies from the regiſters are tranſmitted to the governor and royal offieers at the port to which the regiſter-ſhip is bound; and ſuch is their diligence and integrity, that when the ſhip is come to an anchor, they certify after a pretended narrow enquiry, that this ſhip of 600 or 700 tons does not carry quite 300 together, and ſend baek ſuch certifieate, properly aſcertained, with the ſhip to Europe, together with a bill of lading, in the ſame ſtrain of computation *.—By theſe regiſter-ſhips 2 or 300 per cent. is ſometimes gained, which enables the owners to pay ſo liberally for cheating the king, after having firſt got the money by robbing the ſubjects.—Theſe regiſter-ſhips go yearly to Buenos Ayres, St. Martha, Porto Cavallo, and other places, to whieh neither the galleons nor flota come; yet they generally return with them, as they ſometimes go out with them, though, when outward bound, they leave them in a certain latitude.

What gave riſe to the Spaniſh guarda coſtas, as they are called, or guard ſhip, was the illicit trade ſaid by the Spaniards to be carried on in thoſe parts, ſome years ſince, by the Dutch and Engliſh, though notoriouſly by the former, partly with the connivanee of the Spaniſh governors, and partly by foree. The guarda coſta, being ſtationed at Carthagena, put an end to this miſchief for a ſhort time, by ſinking one of the interlopers, and taking two; the cargoes of whieh were worth above 100,000 l. and by hanging all at once 16 Spaniſh merchants, that, on a ſignal given, came on board from the ſhore to trade with them †. But the captains of theſe guarda coſtas, inſtead of taking real contraband traders, infeſted the Engliſh commerce ſoon after, and took what they could, without diſtinction, under frivolous pretences at firſt, and at laſt without any at all. The governors reaping vaſt profit from the prizes whieh they brought into their ports, they ſent ſueh fallacious accounts of the captures to the court of Madrid, as produced that obſtinacy of theirs which involved them in the late war with Great-Britain.

* If the officers belonging to the king of Spain will defraud their own crown of it's revenues, in their concerns with Spaniards themſelves, Spain cannot wonder that their officers ſhould countenance and encourage an illicit trade with foreigners in the Spaniſh Weſt-Indies; and, if the great fault lies at the door of the Spaniſh officers, the labouring oar to prevent ſuch illicit commerce lies chiefly upon the court of Spain itſelf, and not upon thoſe courts whoſe ſubjects are allured by their officers and ſubjects to carry on a contraband trade.

† Were the like meaſures ſteadily purſued, they would not only have put a temporary, but an eternal ſtop, to illicit trade. And does not this prove that the Spaniards have it in their own power to put a ſtop to this trade whenever they pleaſe?

Though the general aecounts of New Spain place mines of gold and ſilver in almoſt all the provinces, yet we are aſſured that both are only found in the Province of Mexico. Of ſilver, it is publiſhed there are no leſs than 1000 mines in the Mexican empire; but gold only is found in Veragua and New Granada. There is an exceeding great quantity of ſugar in this country, chiefly on the ſide of the gulph of Mexieo, Guaxaca, &c. ſo that here are more ſugar-mills than in any part of Spaniſh America; but it is chiefly conſumed in the city of Mexico, and particularly the monaſteries, in chocolate, ſweet meets, preſerves, and eonfectionary wares; of which, however, there is a vaſt deal ſent from Guaxaca, Guatimala, and other provinces, to Mexico and to Panama, from whence it is carried by ſea to Lima, Guyaquil, and Baldivia. There is a great home trade in the goods manufactured of it's cotton. They have the beſt indico in the world; and the trade in that of cocheneal is managed wholly by the merchants of Mexico and Carthagena, who buy to export them to Europe. Cocheneal is found in the governments of Taſbaico and Guaxea; dyers-wood in the bays of Campeachy and Honduras; and ſome pearl at Vera Cruz, and the Pearl Iſlands, &c. Nicaragua, Campeachy, and Guaxca ſend great numbers of blaek cattle to Mexico. Large quantities of ſnuff are brought from the Havannah to Vera Cruz, and there ſold to the merchants of Mexieo. Cocoa, whieh is a great article in their merchandize, is chiefly produced at Guatimala, Vera Paz, Sozonuſeo, Ciudad Real, and Guaxca (which yield the beſt in America) and ſent to Los Angelos and Mexico, Panama, Lima, Carthagena, Porto Bello, and from thence to Europe. The nuns of Guaxaca have the chief manufacture of chocolate from the nut, of which it is thought more is drank in the city of Mexico than all Old Spain.

It is ſaid the people of Nicaragua and the Honduras employ 30,000 mules and horſes to carry corn, ſugar, cocoa, &c. into the inland provinces, and particularly to the city of Mexico. And, when the galleons come from Old Spain, the numbers of carriages, men and horſes employed to carry their treaſure from Mexico, and the country of Pachuca, to La Vera Cruz, are incredible.

The carriage of the European goods that come by the galleons baek again to other parts, is a very conſiderable article of trade, as is alſo the carriage of tobacco, ſugar, and other produce of Guatimala and Guaxaca, whieh comes from the ſouth coaſt by ſea to La Vera Cruz, all whieh is ſaid to employ 60,000 horſes, mules and aſſes, beſides a proportionable number of men. Cocheneal, in particular, is thus brought over the mountains from the country of Guadalaxara, 320 miles

miles north-weſt from Mexico. So much ſilver it alſo brought from Zacatecas, in the ſame province, that it is ſaid 6000 mules are employed in the carriage.

Of the ſeveral audiences in MEXICO, or NEW SPAIN.

I. GUATIMALA. Joſeph Acoſta, who was on the ſpot, and gives the beſt account of New Spain, in that work called his Natural and Moral Hiſtory of the Indies, makes this audience about 300 leagues in length, upon the South Sea; but it is indented by ſo many great bays in the North and South Seas, that the breadth is not half ſo much, it being in ſome places not 30 leagues, though in others 150. Acoſta ſays it is in general a fruitful country, eſpecially in Indian corn and cocoa, and abounds in cattle and good paſture.

VERAGUA. This, which is the firſt, though the leaſt province of not only the audience of Guatimala, but of North America, joins on the weſt to Coſta Rica; on the eaſt to the government of Panama; and has the North Sea on the north, and the South Sea on the ſouth.

SANTA FE', or FOY, in the middle of the province, is the place where the king of Spain keeps officers for caſting and refining of the gold. It ſtands at the head of a river that runs into the North Sea.

PUEBLO NUEVO or the NEW TOWN, ſtands in a bay of the South Sea, betwixt Baja Honda and Chiriqui, ſeven leagues from each, and 60 miles ſouth-weſt from Santa Fé, according to Moll, though others make it 75. Here is a large river, that falls into a ſandy bay; and on the eaſt ſide, where the true channel lies, there is a round hill.

Right before the mouth of the river is an iſland of the ſame name, about one league from the main. There is a low point juſt within, called Rhenchiera, where the Spaniards uſually build ſhips.

It is but three leagues up the ſtream, and may be ſeen from the road.

Pueblo has been ſeveral times taken by the buccaneers.

CHIRIQUITA, or CHIRIQUI, on the ſame coaſt, 35 miles weſt of Pueblo Nuevo, ſtands in a plain of ſavannahs, ſurrounded with coppices and farms; and the chief trade of it is in tallow and leather. The harbour lies on a pretty large river, about a league from it's mouth, and three from the town, to which is a pleaſant paſſage; but there is only one way to enter the river, and that dangerous. This river falls into the bay called Galſo-Dolce, which muſt be diſtinguiſhed from that near the bay of Honduras.

VERAGUAS, which ſtands on the river of it's name, is a poor place, and drives no other trade than working the mines, where the ſlaves are compelled to dig and waſh the earth in the neighbonring rivers, wherein bits of gold are often found as big as peas.

ST. JOHN DE CUEBLO, is an iſland upon this coaſt, which the buccaneers place 24 leagues weſt from Panama, and ſix from Pueblo Nuevo, and makes 12 leagues in compaſs. It is deſert and mountainous, but full of wood, eſpecially maſt-timber, and has fine rivers.

COSTA RICA PROVINCE, or the RICH COAST, is ſo called from it's rich mines of gold and ſilver, thoſe of Tinſingola being preferred by the Spaniards to the mines of Potoſi: but otherwiſe it is mountainous and barren. It has Veraguas province on the ſouth-eaſt; and that of Nicaragua on the north-eaſt, reaches from the North to the South Sea, about 90 leagues from eaſt to weſt, and is 50 where broadeſt, from north to ſouth.

CARTAGO, the capital, 10 leagues from the North, and 17 from the South Sea, on each ſide of which it has a port, and is 90 miles eaſt of Nicoya. Mr. Gage ſays, that in his time there were rich merchants here, who traded by land to Panama, and by ſea to Porto Bello, Carthagena, and the Havannah, and from thence to Spain.

NICOYA ſtands 30 miles weſt of the gulph of Salinas, a large bay of the South Sea, on the frontiers of Nicaragua. It is a pretty town, and the head of a Spaniſh diſtrict, near the mines, which was taken and plundered by the buccaneers in 1687. It ſtands on the river Cipanſo, which is navigable to it by large periaguas. The Spaniards trade from hence to Panama in ſalt, honey, maize, wheat, fowls, and a purple juice of a ſhell-fiſh in the neighbouring bay, with which they dye * their threads and wool, to mix with their Segovia cloth. This fiſh, which is, therefore, called the purpura, is not eatable. It lives about ſeven years, but hides itſelf about the riſing of the dog-ſtar. The ſhells, which the Indians are emdloyed by the Spaniards to gather in the ſpring, about Chira, Golfo, Di Salinas, and other parts of this coaſt, being rubbed together, produce a ſlime like ſoft wax, made uſe of by the dyers: but the chief dye is in the mouth of the fiſh, and the fineſt juice in the white vein. The bay receives ſix rivers, has 20 iſlands, good anchorage and warehouſes; and the banks of the rivers are full of villages, farms, and plantations of ſugar canes.

* This is an inſtance that nature affords matters for dyeing that are little ſuſpected; and it is very likely that we could eaſily do without logwood, if we had not an unqueſtionable right to cut it in the bays of Campeachy and Honduras.

The province of NICARAGUA, or the NEW KINGDOM of LEON, has Guatimala Proper, and the South Sea, on the weſt; the North Sea and Honduras on the north and eaſt; and the South Sea, with Coſta Rica, on the ſouth and weſt. The winter here is rainy and tempeſtuous: in ſummer the air is exceſſive hot, but healthy. It is reckoned the moſt woody province in all New Spain. It produces good hemp and flax, and the wood uſed by dyers in Europe, called Nicaragua wood, but little wheat. It abounds with black cattle and hogs, but has few ſheep. It has plenty of balm, cotton, ſugar, axi, which is the American pepper, honey, and wax, liquid amber and turpentine, with which, and ſilver work, the inhabitants drive a conſiderable trade to Panama and Nombre de Dios. Whales and ſea-monſters are frequent on the coaſt, but, as for the country, it is ſo pleaſant as well as fruitful, that it is, as it were, the garden of America, the hills and rivers being full of gold, the trees and woods perfumed; and, when the Spaniards firſt came to it, they called it Mahomet's Paradiſe.

The other town is GRANADA, which ſtands on the ſouth-ſide of the lake 60 miles ſouth-eaſt from Leon, where the Spaniards have mills for making of ſugar, there being abundance of canes in the neighbourhood. It is the moſt frequented of any town in North America, for the merchants of Guatimala diſpatch their goods from hence by the way of Carthagena, as thinking it ſafer than to ſend them by the gulph of Honduras, where they are often intercepted, in time of war, by the Engliſh and Dutch.

NEW SEGOVIA, is a city 30 leagues from both the former, to the north.

JAEN, at the mouth of the lake Nicaragua, 30 leagues from the North Sea. Here goods are uſually lodged that come to or from the North Sea by the river, where they unload at the cataracts, and embark them in other veſſels.

REALEJO, or RIA LEAXA, on a plain a league from the fort called Poſſeſſion, and 15 leagues north-weſt from port St. Juan, ſtands on a river which falls into the South Sea 30 miles north-weſt from Leon, which city it ſerves as a harbour. It is capable of receiving 200 veſſels, and the king of Spain's ſhips for the South Sea were formerly built here. There are intrenchments to defend the harbour, which is 3 leagues below the town, and very fine docks, but it has ſuffered much from the buccaneers. It's chief trade is in pitch, tar, and cordage, for which it is the moſt noted place in all Spaniſh America; they being exported from hence to Carthagena, Porto Bello, La Vera Cruz, and even to the Havannah. A fine river of the ſame name runs into the haven, which is ſafe from all winds, and has five iſlands within it fit for careening ſhips. The adjacent country is pleaſantly watered with rivers, whereof that which runs into the haven has eight branches, whereby goods are carried to and from the villages, farms, and ſugar plantations belonging to the inhabitants of this town and Leon. The port is the moſt in uſe for ſhipping of any in all theſe ſeas, eſpecially between Acapulco and Panama, ſhips coming to it from all parts of the South Seas. It is ſheltered by an iſland at the mouth of it that breaks off the ſea, which would otherwiſe come rolling into the harbour, with waves as high as mountains. The iſland, lying thus in the entrance, forms two channels into it, one to the ſouth-eaſt, the other to the north-weſt, the laſt of which is by much the beſt for navigation; ſo that none but ſmall craft go into the former.

The province of HONDURAS, or CAMAIAGUA, extends eaſt and weſt along the North Sea above 130 leagues, and in ſome places is near 60 leagues over from north to ſouth, but it is narrower at both ends. It has the North Sea on the north and eaſt, Nicaragua on the ſouth, Guatimala Proper on the ſouth-weſt, and Vera Paz on the weſt. The country conſiſts generally of hills and deep dales, and has a good air. It is rendered the more fruitful, by the inundations of it's river about Michaelmas, when the natives carry the water by canals to their fields and gardens. In many parts of the country, the ſoil bears Indian corn thrice a year. It moreover yields European wheat and peaſe, and has excellent paſture, with honey, wax, and abundance of all ſorts of proviſions, beſides mines of gold and ſilver. The country was once exceeding populous, 'till it was thinned by the Spaniards, who are ſaid to have tortured and put many of them to death, to make them diſcover their gold and ſilver; beſides many more whom they killed afterwards, by forcing them to work in the mines, and carry burdens beyond their ſtrength.

The bay of Honduras, which, as was formerly that of Campeachy, is noted for cutting of logwood, and lies betwixt cape Honduras in north latitude 15½, and cape Catoche, the eaſtermoſt point of Yucatan, in latitude 21½. The great lake of Nicaragua runs into it, by a river called Rio d'Anugelos or Angelos, which is only navigable by ſmall craft. There are ſeveral ſmall iſlands in the bay, of which we have no deſcription, particularly the Pearl Iſland, a little to the north; but they do not fiſh up ſo much pearl here as formerly, nor ſo large. Into this bay a ſmall river alſo runs from the province of Veraguas, which the Spaniards call Rio de Sucre, or the Sugar River, becauſe of the ſugar-works here; of which the country is ſo full, that, did not the Spaniards

niards conſume ſuch quantities of it in the ſweet-meats, preſerves, conſerves, &c. which they ſpend here, and in thoſe they ſend home as preſents, beſides what they uſe to ſweeten their chocolate, limonades, and other luſcious liquors, they might be able to ſend many ſhip-loads of ſugar to Europe from theſe two provinces.

REMARKS.

As it may here be expected we ſhould give an account of the cutting of logwood * by the Engliſh, &c. ſo much complained of by the Spaniards, and aſſigned by them as a juſt provocation for their depredations on our ſhips, before the commencement of the laſt war in 1740; we ſhall give it as brief as poſſible from Capt. Uring, who was ſent over deputy-governor of the iſlands of St. Lucia and St. Vincent, by the late duke of Montague the governor, and from Mr. Atkins, in his Voyage to Guinea, Braſil, and the Weſt-Indies.

* Under the article LOGWOOD, we have ſtated the nature of this trade, and the right that Great-Britain has to the cutting the ſame, as well in a certain part in the bay of Honduras, as in that of Campeachy: ſince the writing of which, an eminent merchant has obliged me with a map of the river Belleſe (a,) in the bay of Honduras, which I have particularly mentioned, drawn by Capt. Uring, who was a relation of his, and referred me to the peruſal of the captain's voyages upon the logwood trade. I had, indeed, frequently met with thoſe voyages quoted, and read the whole of his expedition to St. Lucia, but never before met with his map of the river Belleſe, nor with the account he himſelf gives of the logwood trade as carried on there. But what the captain ſays, upon this occaſion, corroborates the information that I have intimated to have received from others: and, therefore, as what I have urged, in relation to the before-mentioned river Belleſe, proves to be matter of FACT; it is to be hoped, that ſome attention may be given to the expedient which I have done myſelf the honour humbly to ſuggeſt, with a view only to reconcile thoſe unhappy miſunderſtandings, which ſtill ſubſiſt between the crown of Great-Britain and that of Spain, in relation to the cutting of logwood in the bays of Campeachy and Honduras. The above was obſerved before the laſt war, and the DEFINITIVE TREATY of 1763.

(a) See Capt. Uring's Voyage from Madeira to Jamaica and the bay of Honduras, p. 354 and 362.

The country where the Engliſh cut their logwood is, ſays the captain, all a flat, and great part of it a moraſs, with ſeveral large lagunes, which are very often overflowed. In the dry ſeaſon, when the logwood-cutters have found a great number of trees, they build a hut near them, where they live during the time of their cutting. When they have cut down the tree, they chip off the bark and lay it in heaps, making paths to each, that, when the rains come in, which overflow the ground, they are ſo many channels, where they go with ſmall currents and land them, bringing them ſometimes 30 miles to the Barcaderas, from whence the buyers come to fetch it at the price of about 5 l. a ton Jamaica money. During the floods, the logwood-cutters dwell at the Barcaderas, which are 42 miles up the river, where they have their huts built upon high banks, to ſecure them in the time of the floods. As ſoon as they have notice of any veſſel's arrival at the mouth of the river, they flock down, in order to purchaſe what things they want, which are chiefly wine, rum, and all ſorts of liquors, proviſions, and ſmall arms, powder and ſhot, cutlaſſes or hangers, and ozenbrigs, which is almoſt all their apparel, except hats and ſhoes; and their pavilions are alſo made of ozenbrigs, becauſe of the multitudes of muſkettoes and other biting and ſtinging flies.

Mr. Atkins obſerves, that the logwood-cutters were originally ſettled in the bay of Campeachy; but, being diſturbed by the Spaniards, removed to the bay of Honduras, where they ſupport themſelves by force of arms, having, according to late accounts, 1500 maſters and ſervants. The river that runs up to the Barcaderas, is not only narrow and full of alligators, but has a ſtrong current from the land freſhes, and the banks are ſo covered with ſhrubs, that it is difficult to row the boats which carry the effects. At the ſeaſon for cutting logwood, which is once a year, they remove their tents ſometimes many miles from their chief reſidence to follow the wood, which runs in a vein or line of ſome miles, perhaps like minerals in the earth, and they run over as many, perhaps, without finding a ſtick of it. They cut it in large pieces, and leave it on the ground 'till the land floods favour their bringing it into the river, from whence the canoes take it and carry it to their grand ſtore at the Barcaderas. As they know what they muſt expect from Spaniſh clemency, they are always provided with good arms to defend themſelves deſperately againſt attacks, which are always by ſea, but ſeldomer here than they uſed to be in the bay of Campeachy. A ſervant, which is the firſt ſtep with ſeamen into the trade, is hired at a ton of logwood per month, and, having one day in ſeven to himſelf, he makes about 10 l. a month; ſo that, if they are ſober fellows, they in time become maſters and join ſtocks, or trade independently.

They have a king choſe from among themſelves, and his conſort has the title of queen, and they are governed by certain rules of their own making. The ſhips that come into the bay are on their guard alſo, and fetch the logwood down in flat-bottomed boats. The crew of each is allowed on the voyage a bottle of rum and ſome ſugar, and they row generally in the night becauſe of the ſtinging flies, and reſt in the day. See the article LOGWOOD.

TRUXILLO, or TRUGILLO, ſtands on an eminence in the north ſide of the province 45 leagues north-eaſt from Valladolid, and one from the North Sea; it is ſituated between two rivers, the mouths of which, and ſome iſlands that lie before, form the harbour, which lies at the bottom of a bay called St. Giles, is above two leagues broad, and is defended by a caſtle; but it has been plundered ſeveral times by the buccaneers. It is ſaid to be the only harbour on this coaſt capable of trade, but has very little: the town lies a league up one of the rivers. The harbour is deep and ſecure, the country exceeding fruitful, and the ſoil moiſt and rich; and, notwithſtanding the hot climate, it is exceeding populous. It produces both corn and grapes twice a year, and the cattle brought from Spain increaſe here prodigiouſly.

GRACIAS A DIOS, ſtands at the mouth of a river, upon a rocky mountain, which has ſome gold mines in it's neighbourhood, and was built the ſame year as Valladolid, from which it lies about 27 leagues to the weſt, to ſecure the miners. Mr. Gage ſays, that the neighbouring valley abounds with wheat, which is tranſported for the moſt part to Guatimala, and breeds very good mules and horſes.

ST PEDRO, which Laët ſays is the reſidence of the farmers of the king of Spain's cuſtoms for this province, is above 30 miles north-eaſt from Gracias a Dios. It lies in a hot unhealthy climate, but had a great trade before the diſcovery of Golfo Dolce, by which commodities are now carried up into the country. In 1666, the town was burnt by the buccaneers.

RUATAN, or RATTAN, is an iſland in the bay of Honduras, which was deſert, and only the reſort of pirates, 'till a few years ago, when the Engliſh began a ſettlement on it. It lies 8 leagues from the Moſquito ſhore, and about 200 leagues weſt by ſouth from Jamaica; it is about 30 miles long and 13 broad, naturally fortified with rocks and ſhoals, excepting the entrance of it, which is ſo narrow, that only a ſingle ſhip can paſs it at a time, which was to be guarded by two forts. The view of this ſettlement was not only to ſecure a great trade in logwood, but to traffic with the Spaniards of Guatimala for cocheneal, indico, &c. For this purpoſe, 300 land forces, commanded by Major Cawfield, ſailed from Jamaica the 13th of Auguſt 1742, under convoy of the Litchfield, and five other men of war, and on the 23d arrived at Port Royal harbour in this iſland, one of the fineſt in the world, where 500 ſail of ſhips may always ride ſafe. This iſland is overgrown with wood, but remarkably healthful, and not near ſo hot as Jamaica, there being ſtrong eaſterly winds here commonly to cool it. It has plenty of excellent water, a great number of wild hogs and deer, ducks, teal, pigeons, and parrots, and the ſea abounds with fiſh of all kinds, particularly crab-fiſh and fine turtle *.

* The poſſeſſion of this iſland would have proved a great ſecurity to our logwood trade in the river Belleſe in the bay of Honduras.

The Moſquito, or Muſquito Indians, are a nation on the continent betwixt Truxillo and Honduras, ſo ſituate between moraſſes or inacceſſible mountains, and a coaſt full of rocks and ſhoals, that no attempts againſt them by the Spaniards, whom they mortally hate, could ever ſucceed. Nevertheleſs they are a mild inoffenſive people, of much morality and virtue, and will never truſt a man who had once deceived them. They marry only one wife, and never part with her, unleſs for adultery, which is ſeldom known among them; and ſo great a regard is ſhewn to matrimony, that even an elder brother, unmarried, gives precedence to a younger, if married. They have no kind of vice among them, nor any occaſion for magiſtrates. When the duke of Albermarle was governor of Jamaica, theſe people put themſelves under the protection of the crown of England, and their king received a commiſſion from his grace, under the ſeal of that iſland, ſince which they have not only been ſteady in their alliance with the Engliſh, but warm in their affections, and very uſeful to them on many occaſions. When their king dies, the next male heir goes to Jamaica, to certify that he is next in blood, and he receives a commiſſion in form to be king of the Moſquito's, 'till which he was not acknowledged as ſuch by his countrymen; though, after all, unleſs he is at war, he has no revenues nor guards, and very few prerogatives, being obliged, in time of peace, to fiſh and fowl for the ſupport of himſelf and his family; yet he has preſents ſometimes from the government of Jamaica and the Engliſh traders, who often touch there. Nay, ſo fond are they of every thing that is Engliſh, that the common people are proud of every chriſtian or ſurname given them by our ſeamen, who honour their general and other grandees with the titles of ſome of our nobility *.

* Theſe people likewiſe may be rendered very ſerviceable to the Engliſh in ſupport of their logwood trade in the bay of Honduras.

The province of GUATIMALA PROPER extends, according to the Sanſons, 150 leagues along the coaſt of the South Sea, and 30 or 40 in breadth; hut Capt. Cook makes the length only 70 leagues. It has the province of Honduras on the north-eaſt, Vera Paz on the north-weſt, Nicaragua on the eaſt, Sononuſco on the weſt, and the ſea on the ſouth.

The ſoil in the vallies is exceeding fruitful in corn, indico, cocheneal, and other rich drugs for dyeing, as well as cacao, and other Indian fruits; produces balms, bezoar, liquid amber, choice gums, ſalt, brimſtone; and has large fine paſtures, ſo covered, ſays Mr. Gage, with cattle, that ſome graziers are ſaid to have herds of 40,000 black cattle, and as many ſheep. The cattle run wild in the mountains, where they are hunted by the blacks, and great numbers are ſent annually to Spain. Here are alſo ſeveral plantations of ſugar, and mines of ſilver. But Cook ſays, their grain does not hold a year.

The rivers of this province abound with all ſorts of good fiſh. Cotton is a ſtaple commodity, as is alſo wax; and their bees make honey as white as the comb itſelf.

ST JAGO DE GUATIMALA, the chief town and the old city, which was one of the fineſt in New Spain, was utterly deſtroyed by a dreadful hurricane and earthquake in 1541, when 120,000 Spaniards loſt their lives. It was built at the bottom of a volcano, with two tops, from one of which fire iſſued, from the other water. The preſent city, which is not only the capital of this province, but alſo of the audience, the reſidence of the preſident, and the royal courts, the ſeat of a rich biſhop, ſuffragan of Mexico, an univerſity, and the center of commerce in all thoſe parts, ſtands in a fine valley on a river, about three leagues from the volcano, and is reckoned one of the largeſt cities in North-America. It is well built and populous, being thought to contain about 8000 families; and the citizens carry on a great trade, not only through all the provinces of Mexico, but even into Peru, by the ports of La Trinidad and Realejo, the one 25 leagues, the other 46 from it; and it's trade with Spain is from Golfo Dolce, that runs into the North Sea at 60 leagues diſtance.

Many vaſt eſtates are got here by trade, and, when the merchants have left off, they go generally to reſide at Mexico. The chief commodities in which they deal, are hides, indico, annatta, ſilveſter, cocheneal, cacao, &c. and, indeed, no city can lie more commodious for an extenſive trade, and be ſafer at the ſame time from pirates and privateers, for it ſtands 8 leagues (which Moll and Sanſons call 40 miles) from the South Sea, and about 40 leagues from the gulph of Mexico, by which it drives alſo a great trade; but it is ſtill liable to frequent earthquakes as well as to eruptions, from the volcano above-mentioned.

TRINIDAD, or LA SONSANATE, a port town on a bay of the South Sea, 4 leagues from Acaxatla, 65 miles ſouth-eaſt of Petapa, and 162 from Guatimala, conſiſts of four or five hundred Spaniſh families, beſides Mulattoes and Indians, and has five churches and a monaſtery. It is the place to which all goods are tranſported that are brought to Acaxatla from Peru and Mexico. It is 3 leagues from the harbour to the town, which is of great reſort, it being the chief place of trade betwixt New Spain and Peru, and the neareſt landing harbour to Guatimala for ſhips from Panama, Peru, and Mexico, but is a place of no defence. There are three volcanoes in the neighbourhood. The coaſt is low, and has good anchorage.

ST. SALVADOR, or CUZCATTAN. Moll places it at the head of a river, that runs about 47 miles, and falls into the harbour of St. Michael, 150 miles eaſt from Guatimala. In the bottom where the town ſtands, there are manufactories of ſugar and indico, and ſome farms of cattle.

VERA PAZ PROVINCE, has the bay of Honduras and the province of Chiapa on the north, that of Guatimala on the ſouth, Honduras on the eaſt, and Soconuſco, with part of Chiapa, on the weſt.

The chief commodities are drugs, eſpecially medicinal gums, ſarſaparilla, China root, and mechoacan, achiotte, liquid amber which drops from trees, cacao, cotton, wool, honey, maize, wax, and feathers, of which the Indians make curious works.

CHIAPA is an inland province, having Tabaſco on the north, Yucatan on the north-eaſt, Soconuſco on the eaſt and ſouth, Veraz Paz on the eaſt, and Guaxaca on the weſt. Here are great woods of pine, cypreſs, cedar, oak, myrtle, and walnut-trees and wood-vines; trees that drop roſin, aromatic gums, balſam and liquid amber, tacamahaca, copal, and others that yield ſovereign balſam. Here is no want of corn, pears, apples, quinces, cacao, and cotton, and cocheneal grows wild.

The chief of it's rivers is that of Chiapa, which runs from the north croſs that part of this country, which is inhabited by the Quelenes, and falls into the ſea at Tabaſco. It is in ſhort well watered, and drives a pretty briſk trade with the neighbouring provinces, eſpecially in cocheneal and ſilk; wherein the Indians employ their wives, in making handkerchiefs of all colours, which the Spaniards buy and ſend home. Mr. Gage ſays, that, though the Spaniards reckon it one of the pooreſt countries in America, becauſe it has no mines or ſand of gold, nor no harbour on the South Sea, yet it is bigger than moſt provinces, and inferior to none but Guatimala; that it is a place of great importance to the Spaniards, becauſe the ſtrength of all their empire in America depends upon it: and that it ought to be well fortified, becauſe of the caſy entrance into it by the river of Tabaſco Puerto Real, and it's vicinity to Jucatan.

The places of chief note are two towns, both called CHIAPA. The one is inhabited by the Spaniards, the other by the Indians. It's chief trade is in cacao, cotton, wool, ſugar, cocheneal, and ſmall pedlars wares. The friars are the chief merchants of European goods, and the richeſt men both in the city and country.

The audience of MEXICO.

This, which is the nobleſt part of the Spaniſh dominions, is bounded on the north with New Mexico, on the eaſt with the North Sea, or gulph of Mexico, has the South Sea on the ſouth and ſouth-weſt, and on the ſouth-eaſt ſide it joins the provinces of Chiapa and Soconuſco in the government of Guatimala.

It is divided into ſeven provinces, viz. Jucatan, Tabaſco, Guaxaca, Mexico Proper, Mechoacan, Tlaſcala, and Panuco.

The province of JUCATAN, or YUCATAN, is a peninſula, ſurrounded on the weſt and north by the gulph of Mexico, betwixt the bay of Campeachy on the ſouth-weſt, and that of Honduras on the ſouth-eaſt, and has the little province of Tabaſco on the ſouth-weſt, and that of Vera Paz in the audience of Guatimala on the ſouth. Here it is joined to the continent by an iſthmus not 40 leagues in breadth, and runs out into the ſea 100 leagues. It is in all reſpects a moſt noble country. It extends from north latitude 17 to 21, 30, and weſt longitude 88 to 92. The climate is pretty warm in the ſummer, which begins in April and ends in September. They have ſcarce any rain in the winter ſeaſon, which, however, is indifferently cool, excepting January and February, which are almoſt as hot as in the middle of ſummer; yet in the main it is a very healthy country, eſpecially a mountainous tract, which runs from Salamanca on the weſt, quite acroſs it to the eaſt. The ſoil, when duly cultivated, bears plenty of corn, cotton, and indico, and abounds with all ſorts of cattle, wild beaſts, honey, wax, and fowls, and on the coaſts are taken great pieces of amber: but, as no mines were ever found in it, the Spaniards have not been fond of ſettling here.

MERIDA is it's capital city, the ſeat of a governor, and the ſee of a biſhop near the north ſide of it, betwixt the gulph of Mexico and Honduras, about 12 leagues from each.

CAMPEACHY, or as it is called by the Spaniards ST. FRANCISCO DE COMPEACHE, the ſee of a biſhop, is 120 miles ſouth-weſt of Merida.

It ſtands on the ſhore, in a ſmall bending of the land, near the mouth of a river, which falls into it's bay on the ſouth-weſt angle of this province; and is the only town on all the coaſt to cape Catouche, at the north-eaſt point, that lies open to the ſea. It makes a fine ſhew, the houſes being built all of good ſtone. There is a dock and good fort at one end of the town, with a governor and garriſon, which commands both the town and harbour; nevertheleſs, in 1659, the Engliſh ſtormed it and took it with only ſmall arms, and it was taken again by ſurprize in 1678, by the Engliſh and buccaneers. The port is large but ſhallow. It uſed to be a noted market for logwood, as we obſerved in Honduras. See our article LOGWOOD.

The chief manufacture of the adjacent country, beſides ſalt and logwood, is cotton cloth, which is the cloathing of all the natives, and even of the poorer Indians. Capt. Dampier gives this account of the bay: it runs in deep within land, betwixt cape Condecedo on the eaſt, and St. Martin's cape to the weſt, which is 120 leagues, and has many broad lakes that are navigable. From cape Condecedo it is 15 leagues ſouth to Salinas, where is a ſmall harbour and a large pond near the ſhore, which yields abundance of ſalt that is tranſported to the gulph of Mexico. In May or June when the ſalt kerns, not leſs than 40 or 50 Indian families at a time come and rake it aſhore in heaps: then covering them with dry graſs and reeds, they ſet fire to them, which burns the outſide, giving it a black cruſt, which afterwards defend the ſalt againſt the rains.

TABASCO province is bounded with that of Guaxaca on the weſt, on the eaſt by that of Jucatan, on the ſouth by part of the audience of Guatimala, and on the north by the gulph of Mexico, on which it extends from eaſt to weſt about 40 leagues. It being a narrow ſlip by the ſea-ſhore, the climate is not very healthy, nor the ſoil exceeding fruitful, yet the people have good farms, well ſtocked with cattle, which yields them conſiderable profit; and moreover, they have great plenty of Indian wheat and cacao, which they ſend on the backs of mules to Vera Cruz. Moſt of the country is flat and moiſt, has marſhes and lakes, abounding with fiſh, ſome of them very large, as manatees and tortugas.

GUAXACA province reaches from the bay of Mexico on the north to the South Sea, having the province of Tlaſcala on the north-weſt, and thoſe of Chiapa and Tabaſco on the ſouth-eaſt. It extends near 95 leagues along the South Sea, 50 along the bay of Mexico, and near 120, according to ſome; along the ſide of Tlaſcala, but not above 50 on that of Chiapa. The air is good and the ſoil fruitful, eſpecially in mulberry-trees, ſo that it produces more ſilk than any province in America, except that called the valley of Guaxaca; moſt parts of it are mountainous, yet it abounds with wheat, cattle, ſugar, cotton, honey, cacao, plantanes, and other fruits. It has rich mines of gold, ſilver, and lead, and all their rivers have gold in their ſands; caſſia, cocheneal, cryſtal, and copperas, likewiſe abound here; ſo that were the people induſtrious, they might be the richeſt in the Weſt-Indies. But they are habituated to a ſlothful life by the clergy, who have 120 monaſteries here.

The vanello, a drug ſo valuable for it's perfume, and uſed to give a flavour to chocolate, is the produce of this province. It grows, indeed, in ſundry parts of Mexico, but is no where ſo plentiful as here.

GUAXACA, the capital of this province, is a biſhop's ſee, and the ſeat of a governor; 120 miles weſt of Spirito Santo, 230 miles ſouth of Mexico, in the ſweet valley of Guaxaca, which is 40 miles long, and 20 broad, and in the road which leads through Chiapa to Guatimala. It is a middling city, but has a great trade with both the North and South Seas. The river here is not fortified, ſo that ſmall veſſels might eaſily ſail up, and ſubdue the country. The beſt chocolate in America is made here by the nuns, and exported to Spain. In the neighbouring valley there are many rich towns, cloiſters, and churches, an excellent breed of horſes, and great herds of black cattle and ſheep, which afford wool to the clothiers of Los Angelos, and hides to Spain.

ST. ILDEFONZO DE LAS ZAPATECAS is a town on a hill, 20 leagues from the former. It's territory is rich in gold, cotton, and Indian wheat; and the river Alvarado, or at leaſt a branch of it, is navigable to it by banks.

SPIRITO SANTO ſtands at the foot of mountains, on the north coaſt, towards the frontiers of Tabaſco. The inhabitants trade in cotton, maize, and gold.

TECOANTEPEQUE lie at the bottom of a bay, in the South Sea, above 100 miles eaſt from Guatulco. According to ſome, Mr. Gage ſays, that ſmall veſſels traded on this coaſt in his time, and that it was the chief fiſhing harbour in all this country. It had alſo rich merchants, who dealt not only to Mexico, but to Peru, and the Philippine iſlands, and by land, to Guatimala, to which there was a plain road along the coaſt.

TEPANATEQUE is a town at the foot of the mountains Quelenos, which, according to Gage, is one of the pleaſanteſt in the country, and the beſt furniſhed with fleſh, fowl, and fiſh, it lying near the ſea and a river, and among rich farms, ſtocked with, from one thouſand, to four thouſand head of cattle a-piece.

TLASCALA province, or Los ANGELOS, has alſo the advantage of lying both on the North and South Sea, having that part of the former, which is the gulph of Mexico, on the eaſt; the province of Guaxaca, on the ſouth-eaſt; the Pacific Ocean, on the ſouth; the province of Mexico Proper, on the weſt, and that of Panuco, on the north-weſt. It's climate, ſoil, and product, are much the ſame with thoſe of Mexico Proper.

PUEBLOS DE LOS ANGELOS, the preſent capital of the province, and much the fineſt place in it. It even vies, for magnificence, with the city of Mexico; and the wealth of the place, or rather of the clergy, may be gueſſed at, from the yearly revenue of the cathedral and chapter, which amounts to three hundred thouſand pieces of eight.

The beſt felts in the country are made in this city, and it has a mint, and a glaſs-houſe, the firſt that was known in all New Spain.

LA VERA CRUZ, the grand port of New Spain, on the North Sea. There was an old town of this name, which falling to decay, by reaſon of the badneſs of the port, and other cauſes, this new town was built at about 15 or 16 miles further to the eaſt, there being a port, ſmall, but ſafe, and ſo well ſituate, that it was capable of being effectually protected by a fort on a rock of a neighbouring iſland, which was accordingly built, and called St. John de Ulua.

This new Vera Cruz is not a place of very great extent, being not inhabited by any Spaniards of diſtinction, by reaſon of it's unwholſome ſituation, between vaſt tracts of dry land on one ſide, and rank bogs on the other; yet, as to trade, this is one OF THE MOST CONSIDERABLE PLACES, PERHAPS, IN THE WORLD: it is the natural CENTER OF THE AMERICAN TREASURE, AND THE MAGAZINE OF THE BULK OF THE MERCHANDIZE THAT GOES OUT OF NEW SPAIN, OR IS TRANSPORTED FROM EUROPE. It abounds, in A WORD, WITH THE TREASURES OF BOTH THE INDIES. It receives a vaſt quantity of Eaſt-India commodities, overland, every year, from Acapulco. [See the article ACAPULCO.] At the ſame time, the warehouſes are generally full of European goods; and, in fact, the merchants here carry on as great a trade as it is poſſible for the Spaniards well to carry on throughout America.

This place has not only a very conſiderable commerce from Mexico, but by Mexico from the Eaſt-Indies; likewiſe from Old Spain, from Cuba, St. Domingo, Jucatan, and from Peru, by the way of Porto Bello; from Carthagena, and all the iſlands in the North-Sea; alſo by the river Alvarado, which goes up Zapotecas, St. Ildefonſo, and towards Guaxaca, and by the river Grijalva, running up to Tabaſco, Los Zeques, and Chiapa. The goods are ſent from hence to Mexico, Puebla de los Angelos, Sacatecas, St. Martino, and other inland places, upon horſes and mules, or in waggons drawn by oxen, and carts drawn by mules. The Barlovento fleet, which is a ſmall ſquadron, employed to clear the coaſt from pirates; and interlopers come hither conſtantly in October.

When the flota, which is always obliged to winter here, arrives, and unloads the goods from Old Spain, and takes in thoſe of Mexico, as well as the merchandize that comes from the Philippine iſlands, by the Acapulco ſhips, a fair is opened here, which laſts many weeks; ſometimes 'till the ſhips are ready to depart: then this place may be ſaid to be immenſely rich; but the moſt wealthy merchants not only reſide at the city of Los Angelos, the far greater part of the year, but alſo keep their plate there, till ſuch time as the flota is juſt ready to go off, [ſee the article FLOTA,] which ought regularly to be in May, but is ſometimes detained 'till Auguſt: therefore, the conſtant inhabitants of this place are only Mulattoes and Meſtizoes, with a few Spaniſh factors, who, after a ſhort ſtay, make vaſt fortunes; inſomuch, that he is reckoned an inconſiderable fellow, who is not worth an hundred thouſand pounds. The inhabitants, ſlaves and all, are computed at about three thouſand, and the city is about half a Spaniſh league in compaſs. The ſoil is barren, ſo that their proviſions are far fetched, and dear bought. Vera Cruz having been taken and plundered by the buccaneers, ſeveral times, the Spaniards have built ſeveral forts, and keep centinels all along the coaſt.

The old town ſtands about a mile from the ſhore, and was called Vera Cruz, becauſe Cortez landed here on Good Friday, in 1518.

The new town, which our ſailors commonly call La Vera Cruz, ſtands 12 leagues to the north-weſt of the river Alverado, according to Dampier, and 60 leagues ſouth-eaſt from Mexico, of which it is reckoned the eaſtern port, as Acapulco is the weſtern. The men are haughty, and fond of ſtate and eaſe; for which reaſon they are ſlothful, though they underſtand trade very well.

ALMERIA, called VILLA RICA by the Spaniards, becauſe of the gold they found here on their arrival, lies on the coaſt above 20 leagues north of the former, has an indifferent port, and a better air than Vera Cruz, with a ſmall river, good ſprings of freſh water, and a dry country behind it; all which are wanting in Vera Cruz. It is ſaid that a great clandeſtine trade is drove here, between ſome Spaniſh merchants on ſhore, and the French of St. Domingo and Martinico.

The province of MEXICO Proper has that of Tlaſcala on the eaſt, that of Mechoacan on the weſt, that of Panuco on the north, and the Pacific Ocean on the ſouth. The climate is very variable, yet both pleaſant and temperate. The ſoil is remarkably fruitful, and all the neceſſaries of life extremely cheap. It's commodities are much the ſame with thoſe of Mechoacan, only the mines yield much more ſilver, which ſometimes alſo hold a very conſiderable portion of gold. It is ſaid to excel all the provinces of America, in corn, cattle, and fruits; and it's lakes and rivers abound with variety of good fiſh, ſo that the tribute of the lake of Mexico alone, is above twenty thouſand crowns a year.

The royal city, and archbiſhop's ſee of Mexico, is the capital of this province, of the audience, and of all New Spain, and the ſeat of the viceroy; it ſtands in the lake of it's own name, on the eaſt ſide of a valley, at the foot of a ridge of hills; and, according to the Spaniſh writers, lies in the latitude of 19, 40. That we may paſs a good judgment of the opulence of this city, it may be obſerved, that the tenths, collected from the 11 ſuffragan biſhops, under it's archbiſhop, (viz. Puebla de los Angelos, Mechoacan, Guaxaca, Guadalaxara, Guatimaga, Yucatan, Nicaralua, Chiapa, Honduras, and New Biſcay,) are computed at about half a million of pieces of eight, thoſe prelates receiving, at leaſt, 1,200,000 pounds ſterling a year. Though this may help us to form ſome idea of the wealth of the Mexicans, it may be ſtill farther conjectured, from this obſervation, viz. that there was brought into the king's exchequer here, in 1730, more than a million of marks of ſilver, as the king's duty from the mines, which ought to be one fifth of the metal taken out of them. According to this, the whole produce of the mines muſt amount to five millions of marks; and a mark being equivalent to eight of our ounces, if we compute this ſilver at five ſhillings the ounce, then the inhabitants of Mexico receive TEN MILLIONS OF MONEY PER ANNUM FROM THEIR MINES.

As to the wealth of the merchants in particular, it may be more eaſily imagined than aſcertained, conſidering that they pay five or ſix times more for European goods, than they are to be had for where they are manufactured. Thus, a piece of ſcarlet cloth, worth, in London, TWENTY-FIVE, OR TWENTY-SIX SHILLINGS A YARD, ſhall be ſold here at SIXTY AND SEVENTY PIECES OF EIGHT PER YARD; and it is common for a Spaniard to give frequently A THOUSAND PIECES OF EIGHT FOR A NEW SUIT OF CLOATHS: ſo that when this is conſidered, and that the money they return, is in proportion to ſuch a valuation, what muſt be ſaid of the wealth of this place? In ſhort, the warehouſes of the merchants ſhew it, who, againſt the time they go to Vera Cruz, to meet the flota from Old Spain, hire a prodigious number of horſes, mules, and carriages, to carry the ſilver they have ready to be ſhipped there, and to pay for ſuch goods as they ſhall purchaſe; ſo that it is no wonder the galleons bring off, from ſixteen to twenty millions of pieces of eight ſometimes from St. John de Ulua. See the article GALLEONS.

In the goldſmith or plate-worker's ſtreet here, which is called the PLATERIA, next to the great ſquare or market-place, the ſhops are furniſhed with ſuch a variety of utenſils and ornaments of gold, ſilver, and jewels, as is not to be paralleled in any other city in the world; for the very negroe wenches, that walk by the ladies coaches here, WEAR BRACELETS OF GOLD, AND PEARL NECKLACES, AND JEWELS IN THEIR EARS; and the black foot-boys are dreſſed in rich liveries, DAUBED WITH GOLD AND SILVER LACE. Here they are always making church and family plate, eſpecially when the merchants are beſpeaking goods againſt the arrival of the galleons, at which time the ſhops and warehouſes are filled with cheſts of plate, deſigned for Old Spain, &c. piled up to the very cielings. The glaſſes, or faſhes, like thoſe of our goldſmith's ſhops, are full of gilt plate in ſervices and ſetts; the cabinets filled with vaſt quantities of rubies, emeralds, and pearls, rings, large jewels, and numberleſs toys, but eſpecially gold ſnuff-boxes enamelled and ſet with rubies and emeralds, of which, it is ſaid, that ten thouſand are ſometimes to be ſeen in this ſtreet; and hardly a fleet departs for Old Spain, that does not carry off at leaſt five thouſand of them. The Mexicans have been perfected in the art of working plate by the Chineſe, who come hither every year.

ACAPULCO lies in the ſouth-eaſt corner of this province, on a bay of the South Sea, and about 210 miles ſouth-eaſt from Mexico, of which it is the chief port on this ſea, as it is the chief mart on the coaſt. It is allowed to be an excellent harbour, far ſuperior to any on this coaſt for it's being ſpacious, and withal ſo ſafe, that ſeveral hundred ſhips may anchor in it, without the hazard of damaging one another. The mouth of the harbour is croſſed by a low iſland, about a mile and half long, and half a mile broad, which leaves a good wide deep channel at each end, where ſhips may ſafely go in and out with the advantage of the winds. They muſt enter with the ſea wind, and go out with a land wind, which ſeldom or never fail to ſucceed each other, in their proper ſeaſon of the day and night. The weſtermoſt channel is the narroweſt, but ſo deep, that there is no anchoring, and the Manilla ſhips paſs in that way; but thoſe from Lima enter through the ſouth-weſt channel. This harbour runs in north, about three miles; then growing very narrow, it turns ſhort about to the weſt, and runs about a mile farther, where it ends. The town ſtands on the north-weſt ſide, at the mouth of this narrow paſſage, cloſe by the ſea; and, at the end of the town, there is a platform with a great many guns. Oppoſite to the town, on the eaſt ſide, there is a high ſtrong caſtle, ſaid to have forty guns of a very great bore. Ships commonly ride near the bottom of the harbour, under command both of the caſtle and platform.

The commerce of this place, with Peru, is not, as many writers have miſtaken, confined only to the annual ſhip from Lima; for, at all other ſeaſons of the year, except that wherein the Acapulco ſhip arrives, which is about Chriſtmas, the trade is open, and ſhips of Peru come hither frequently, to ſell their own commodities, and carry back thoſe of Mexico: but, becauſe the great importance of this place, is owing to the annual ſhips of Lima and Manilla, therefore ſome writers have been ſo miſtaken, as to think that theſe are all the veſſels which come hither: whereas, the only commerce which the Philippine iſlands have with the reſt of the world, is by this port of Acapulco. Indeed, 'till within theſe thirty years paſt, there never was more than one annual ſhip, which paſſed between Manilla and Acapulco; but now there are two, one a prodigious unweildy galleon, of a thouſand, or twelve hundred tons, and the other a frigate, or convoy, which carries betwixt twenty and thirty guns. This is the effect of that ſtrict regulation, whereby the inhabitants are tied down, to ſend no more than this ſhip every year; which is laden with all the product of the Eaſt, ſuch as ambergris, civet, bezoar, large oriental pearl, vaſt quantities of piece goods, and gold duſt, to the value of one hundred thouſand pounds ſterling. This voyage to Acapulco is extremely dangerous, and the longeſt, by far, that can be made from land to land: they touch indeed at Guam, one of the Ladrones iſlands, and, except a day or two's ſtay there, paſs three thouſand leagues, without ſeeing any thing but ſea or ſky; but no wonder ſuch hazards are run, if it be conſidered, that the captain of the galleon makes forty thouſand pieces of eight, the pilot twenty thouſand, each of his two mates nine thouſand, and every common ſeaman, with prudent management, a thouſand.

They ſail generally from Manilla towards the latter end of June, and arrive here always about ten days before, or after Chriſtmas. About the ſame time comes the annual ſhip from Lima, laden with the richeſt commodities of Peru, as quickſilver, cacao, &c. and at leaſt with two millions of pieces of eight, to be laid out in the purchaſe of Indian commodities, at the fair of Acapulco, which laſts ſometimes thirty days; at which, ſuch as come from the Eaſt-Indies, furniſh themſelves with European goods, brought hither over-land from Vera Cruz.

This ſhip from Lima ſtays 'till the Manilla ſhip arrives, and then returns. At this fair, Acapulco, which at other times is but a paultry town, conſiſting of two or three hundred thatched houſes, becomes a populous city, crowded with the richeſt commodities of both the Indies, and with merchants from Mexico, Lima, Cuſco, and all capital places of Peru, and even from Chili; inſomuch that every houſe is then an inn, beſides the huts and tents erected without the town; and people pay a dollar per day for their ordinary.

When the fair is over, the goods belonging to the Mexican merchants are tranſported over-land by mules; thoſe which are ſent to Peru, are laden not only on the annual ſhip, but on many others, and the galleon as ſoon as poſſible, prepares for her return to Manilla. It is to be obſerved, that heretofore the Lima ſhip was only a ſmall twenty-gun ſhip; but ſince the Britiſh privateers have found the way to the South Seas, this veſſel carries not leſs than 40 guns; and is moreover allowed one tender, ſometimes two. The galleon returns from hence to Manilla, in much leſs time than ſhe comes; for in her paſſage from latitude 17 to 19, ſhe runs away before the wind, and performs a voyage of about two thouſand leagues, in ten, twelve, or thirteen weeks at moſt. She commonly carries ten millions of dollars from hence, out of which are paid all the king of Spain's garriſons in the Philippine iſlands, which amounts to no leſs than two thouſand five hundred pieces of eight. Dampier ſays, the two Manilla ſhips make the voyage alternately; that in June, when that which ſets out in April from Acapulco arrives at Manilla, the other ſets out for Acapulco, and ſtretches to north latitude 36, or 40, 'till ſhe meets with a wind that brings her to the American ſhore. She falls in firſt with California, and never fails of a wind to bring her from thence, ſouth along the coaſt, to Acapulco, and ſets her paſſengers for Mexico a ſhore at Salagua.

The ſhips fitted out from Acapulco to Manilla, formerly went one year, and returned the third year; afterwards once in two years; but the trade is ſo much increaſed ſince, and it is managed with ſuch diſpatch at the Philippine iſlands, that there are now two ſhips ſent yearly from hence, which return about the end of the ſame year. Theſe carry out no leſs than ten millions of pieces of eight every year: that is to ſay, in money and goods; of which laſt they carry great cargoes, both of European and American ſorts. The goods they bring to Acapulco, from the Philippine iſlands, are white and painted callicoes and chints, diamonds, and elephents teeth; fine muſlins, plain, ſtriped, and flowered; India romalls, and eſpecially atlaſſes, taffaties, and damaſks; tea, eſpecially bohea; cloves, of which they ſometimes bring from ſixty to a hundred ton at a time; nutmegs and mace, from twenty to thirty ton; cinnamon, of Borneo pepper, a greater quantity than ever; ſaltpetre and ſulphur, quickſilver, ſticklack, and ſeveral drugs; china ware, and laquered japan. Theſe goods are diſperſed from hence to all the coaſts of Peru and Chili, which being ſo long, cannot but employ abundance of men, as well as ſhips, which generally return with gold from Chili, ſilver from Peru, and corn and fruits from both. See ACAPULCO.

PORT MARQUIS is a good harbour, a league to the eaſt of Acapulco, where the ſhips from Peru generally run in contraband goods.

PACHUCA, 60 miles north from Mexico, noted for ſilver mines in it's neighbourhood, of which Gemelly ſays, that in the ſpace of 6 leagues, there are not leſs than a thouſand, one of them called the Trinity, at which one thouſand men were employed every day, and from whence, in ten years time, they dug forty millions of ſilver; but that many of them were worn out, and others dangerous to work. When any perſon diſcovers a mine of gold or ſilver, he has the advantage of it, on paying the fifth of the product to the king; but if he forſakes it three months, without reaſons approved by the court, it falls wholly to the king.

PANUCO province is bounded on the north, by Neuleon and part of the audience of Guadalajara; on the eaſt, by the gulph of Mexico; on the ſouth, by the provinces of Tlaſcala and Mexico Proper; and on the weſt, by that of Mechoacan. It is ſituated under the tropic of Cancer, part in the

the temperate, and part in the torrid zone, about 55 leagues in length, and the ſame in breadth. That part next to Mexico is the beſt and richeſt, abounding with proviſions, and having ſome veins of gold, and mines of ſalt, but turns out very little for want of hands. The part adjacent to Florida is wretchedly poor and barren. This country was one of the firſt diſcoveries of the famous Cortez, who took a great deal of pains to conquer and plant it, though it is a country rather fruitful and pleaſant than rich, many of the inhabitants having choſe to retire to Florida, rather than be ſlaves at home. This province is but indifferently peopled, and little notice taken of it in many authors, though it was a very extended ſea-coaſt along the gulph of Mexico, with ſeveral roads and creeks, but no great ports.

It's capital, which is the ſee of a biſhop, is of the ſame name, and ſo is the river whereon it ſtands. The city lies about 17 leagues from the ſea, and 60 north-weſt from Mexico. It was built in the year 1520, by order of Cortez, and called St. Iſtevan del Puerto. It contains about five hundred families. It is ſaid to have a large harbour, but ſuch a bar, that no great ſhips can enter; yet the river is navigable within land, by veſſels of five hundred ton, which might, it is thought, reach the mines of Zacatecas.

MECHOACAN province is bounded on the north by part of Panuco, and the provinces of Zacatecas and Guadalajara; on the eaſt, by another part of Panuco, and Mexico Proper; on the ſouth, by the latter, and the South Sea, which together with Xaliſco, alſo bounds it on the weſt and north-weſt. It extends 70 leagues along the ſea, and is of a greater length up the land. It lies in an extraordinary good climate, and fertile ſoil, and is withal ſo wholſome a country, that ſick people come hither for health, from other parts of Mexico. It has ſome medicinal waters, which have ſeveral degrees of heat, and abounds with rivers and ſtreams of clear brackiſh waters, which are of admirable uſe; for though the meadows, through which they run, produce a rank kind of graſs; yet, inſtead of prejudicing their cattle, it makes them exceeding fat and fine. Here is a numerous breed of good horſes, both for the ſaddle and harneſs; likewiſe, plenty of honey and wax, and of all ſorts of fiſh. Corn of all kinds grows here in plenty, ſo that it has ſometimes come up to one hundred fold; and no country in the world is better furniſhed with trees, either for fruit or timber. It's commodities are ſarſaparilla, ſulphur, indico, caſſia, ſaſſafras, cacao, ambergris, vanillas, hides, wool, cotton, ſilk, ſugar, &c. But the chief commodity of all, is ſilver, of which here are ſeveral mines (beſides others of gold and copper), and it's roots, called mechoacan, and ſometimes white rhubarb, from it's colour and effects: which was formerly in very high repute, and ſold in Europe at a great rate; but by reaſon of jalap being found to anſwer all intentions better, it is of late much ſunk both in reputation and price.

Here are ſeveral kinds of trees, noted for their odoriferous gums and balſams. Beſides their great and ſmall cattle, here are herds of ſwine, without owners, wild boars, hares and rabbets, and, among others, that ſort of goats in which the bezoar is found. And Francis Ximenes obſerves, there is a ſort of bezoar found in the rivers, which he ſays, is waſhed down from the mountains, where there is a great ſtore of bole-armoniac.

COLIMA is a large rich town, upon the South Sea, and near the borders of Xaliſco, in the moſt pleaſant and fruitful valley in all Mexico, producing much cacao, caſſia, and other things of value, beſides ſome gold. In the neighbourhood grows the famous plant alcacazan, which is reckoned a catholicon for reſtoring ſtrength, and a ſpecific againſt all poiſon. The natives apply the leaves to the part affected, and judge of the ſucceſs of it's operation by their ſticking or falling off.

NATIVIDAD, in this neighbourhood, is ſaid to be a good port, from whence ſhips ſail for the Philippine iſlands; it lies not far from cape Corientes, and ſerves as a harbour to Colima.

GUADALAJARA audience, or the kingdom of NEW GALICIA, lies fartheſt to the north of the three audiences of New Spain, though it is on the coaſt of the South Sea. It extends betwixt north latitude 20 and 25. On the eaſt and ſouth it has Panuco, and ſeveral provinces of the audience of Mexico; on the north the kingdom of New Mexico; and, on the weſt it is waſhed by the South Sea and the gulph of California, on whoſe coaſt it ſtretches above 200 leagues, from ſouth eaſt to north-weſt; but it is very irregular within land, and the north part eſpecially is very narrow, yet in ſome places it is reckoned 500 miles broad.

It's climate differs much, by reaſon of it's ſituation, partly in the temperate, and partly in the torrid zone; yet it is far more temperate than any other part of New Spain, and in the general, reckoned wholeſome; ſo that it is common for people to live here to an hundred years of age.

The land, for the moſt part is ſo mountainous and woody, that the coaſt looks like a deſert. It is ſaid the Spaniards have deſerted the coaſt on purpoſe, that if ſtrangers ſhould land they may not find any temptation to ſtay, becauſe, beſides the ſilver mines already mentioned, there have been ſome of gold lately diſcovered near Compoſtella, of very great value: and they chuſe to tranſport the ore by mules to Mexico, rather than expoſe ſo valuable a product to be intercepted by foreigners, if they ventured to ſend it in ſmall veſſels by ſea. The country upon the whole, is pretty fruitful, and produces European and Indian grain in ſuch plenty, that the former yields an hundred fold, though it is often deſtroyed by locuſts.

Here are moſt ſorts of vegetables, better than ours, plenty of ſugar-canes, cochineal, and bees without ſtings.

The paſtures abound with all ſorts of cattle, and the woods with veniſon, pines, and oaks, but are infeſted by wolves, and ſcorpions. Here are pepper, and medicinal herbs, that cure all ſores, green ſtones, that are a ſpecific againſt the gravel, fragrant flowers, valuable drugs, and rich mines of ſilver, copper, and lead. On the coaſt, alſo, there is a good pearl-fiſhery. The better ſort of Spaniards are maſters of the ſilver mines, and ſubſiſt by trade.

This audience is ſubdivided into ſeven provinces, as follow:

GUADALAJARA Proper, which is the principal province, and gives name to the whole audience, is bounded on the eaſt and ſouth by the province of Mechoacan; on the north by that of Xaliſco; and a corner of it is waſhed by the South Sea on the weſt. Notwithſtanding it's ſituation under the torrid zone, it is healthful, temperate, and fruitful, producing not only good timber, but European and Indian wheat in great plenty, and all fruits of both countries, beſides the vaſt treaſures of ſilver commonly taken out of it's mines.

XALISCO province, the moſt ſouthern on the coaſt, is waſhed by the South Sea on the ſouth and weſt; bounded by the provinces of Guadalajara and Mechoacan on the eaſt; and ſeparated from Chiamettan on the north, by a narrow ſlip of land belonging to the province of Guadalajara, and running out to the ſea.

It abounds with Indian wheat and ſilver mines, but has very little cattle of any ſort. According to Herrera, Menardes, and Laet, from this province is brought the oil, as the Spaniards call it, of the infernal fig-tree, which, among other excellent qualities, is good for diſſolving tumours, and expelling wind and all cold humours, by anointing the belly, and taking a few drops of it in a glaſs of wine, as alſo by clyſters. It is likewiſe of excellent uſe for ulcers in the head, and deafneſs.

Though XALISCO, an ancient city, is the capital, yet that which is the moſt conſiderable of the province is COMPOSTELLA, near the South Sea, about 30 miles to the north of it. It is a rich town, and has ſeveral mines of ſilver at St. Pecaque, in it's neighbourhood, where the Spaniards keep many hundred ſlaves to work in them; but the city is a bad ſituation, the ſoil being ſo barren that there is no paſture for cattle.

CHIAMETTAN province lies under the tropic of Cancer, one half in the temperate, and the other in the torrid zone, ſtretched along the South Sea on the weſt; bounded by Zecatecas on the north-eaſt; by Culiacan on the north-weſt; and by Xaliſco and Guadalajara on the ſouth and ſouth-eaſt. It is a fruitful ſoil, and yields much wax and honey, beſides mines of ſilver. The river of St. Jago falls into the ſea here. It is one of the chief on the coaſt, and is half a mile broad at the mouth, but much broader within, where three or four rivers meet together. It has 10 feet water on the bar at ebb.

The chief town here is ST. SEBASTIAN, on a river of the ſame name, towards the mines of Zacatecas, a little place, where they purify the ſilver ore.

ZACATECAS province, ſo called from it's ancient inhabitants, is an inland country, well inhabited, and abounding with large boroughs. It has New Biſcay on the north; Panuco on the eaſt; Mechoacan, Guadalajara, and Chiamettan on the ſouth; and part of Chiamettan and Culiacan on the weſt. It is, like the former, part in the temperate and part in the torrid zone, is about 100 leagues in length, and 45 where broadeſt. The weſt part of this province would not be inhabited were it not for it's mines, which are many, and the richeſt in America, for in all other reſpects it is of no value, as having no water, and producing no ſort of proviſion; but the eaſt part abounds with fruit, corn, and has many woods full of deer.

NEW BISCAY province is bounded by New Mexico on the north; by part of Florida, and Panuco on the eaſt; by Zacatecas on the ſouth; and by Culiacan on the weſt. It is about 100 leagues from eaſt to weſt, and 120 from north to ſouth. It's being well watered makes it fruitful; and it's ſituation a little above the tropic of Cancer renders it temperate. Though there is a mountainous barren part, called Topia, yet moſt of the country is pleaſant, abounding with all manner of proviſions; and though it has no communication with the ſea, yet the inhabitants are very rich, not only in corn, cattle, &c. but alſo in ſilver mines and ſugar works.

ST. BARBARA, ST. JOHN'S, and ENDE, are three little towns, built by the Spaniards for defence of the large ſilver mines in the neighbourhood, and are therefore well inhabited, particularly the firſt, which lies 243 miles north of Zacatecas. The ſecond lies about 70 miles north of that, and is equally rich in mines and minerals; and the third, which is alſo rich in mines, lies 70 miles weſt of the ſecond. Theſe are the mines which Hennepin ſays M. De La Salle aimed at, when

he ranged the coaſt of Florida, on pretence of ſeeking the mouth of the Miſſiſſippi.

CULIACAN province has that of Cinaloa on the north; New Biſcay, and the Zacatecas, on the eaſt; Chiamettan on the ſouth; and the gulph of California on the weſt. It abounds with all ſorts of fruits. The great river La Sal, in this country, is well inhabited on each ſide. Dampier ſays, it is a ſalt lake, in which there is good riding, though it has a narrow entrance, and that it runs 12 leagues eaſt, parallel with the ſhore. There are ſeveral Spaniſh farms and ſalt-ponds about it.

CINALOA province, which is the moſt northern of this audience, and ſtretches out farther to the weſt, has the gulph of California on the weſt; the province of Culiacan on the ſouth; and the kingdom of New Mexico on the north and eaſt. The air is ſerene and wholſome, and, beſides paſtures abounding with cattle of all kinds, the ſoil bears all ſorts of fruit and grain, particularly Indian wheat, as alſo cotton, with the manufacture of which the natives cloath themſelves, after the Mexican faſhion.

NEW LEON, a province between New Biſcay and the gulph of Mexico; but all the account we find of it is in Martiniere. He calls it a kingdom, and bounds it on the north and north-eaſt by the Rio Brava, or Del Nort, which falls into the gulph abovementioned; on the ſouth by the province of Panuco, or the county of Guaſteca; and, on the weſt, by New Biſcay; but ſays it has no towns, nor any conſiderable ſettlements; yet has many mountains, in which there are mines, whereof the moſt known are thoſe of Cinalao to the north, and Guanahate to the ſouth.

NEW MEXICO, ſo called becauſe of it's being diſcovered ſince the Old Mexico, or New Spain, which we laſt deſcribed, is ſometimes ſtiled by the Spaniards a kingdom, and ſometimes a province. It is bounded on the north by high mountains, beyond which is a country altogether unknown; by Louiſiana on the eaſt; by ſome of the provinces of New Spain on the ſouth; and, on the weſt, by the gulph of California and the Rio Colorado.

But whether the limits on the north and eaſt ſhould be contracted or extended, is what we ſhall not pretend to determine, for there are no people that we know of to the north of New Mexico, nor is there a twentieth part of the country within the limits ſpecified that is either cultivated or inhabited; nor is it any more certain how we might venture to extend the limits of it on the eaſt ſide towards Florida, no one having attempted to fix the bounds between theſe two countries, except the French, who have introduced LOUISIANA into their maps, in the room of FLORIDA, bounding it with the Britiſh plantations on the eaſt, and New Mexico on the weſt. The extent has not been diſcovered: however, this may be ſaid, that what has been diſcovered extends 300 leagues north from New Biſcay; and there is no leſs from the ſtraights of California on the weſt, towards Florida and New France on the eaſt.

As it lies in the midſt of the temperate zone, it is a very pleaſant climate; the ſummers are very warm, and the winters pretty ſharp; but then the former are neither ſultry nor unwholſome, and the latter are clear, without being intolerable. The weather, upon the whole, is, generally ſpeaking, agreeable to the ſeaſon, and refreſhing to an European conſtitution.

The ſoil is beautifully interſperſed with riſing grounds, and with rivers well ſtored with fiſh; abounds both with fruit and timber-trees: produces turquoiſes, emeralds, and other precious ſtones, and has mines of gold and ſilver, and feeds all ſorts of wild and tame cattle, eſpecially cows. Here are alſo ſeveral ſorts of fowl: and, in fact, it is ſaid to be as pleaſant, plentiful, and rich a country as any in the world. There are few great rivers in it, but ſeveral little ones run into the gulph of Mexico; and there are divers bays and creeks on that coaſt, which might eaſily be converted into ports.

The greateſt part of this vaſt country is ſtill in the hands of the natives.

Of the various nations in this large territory, mentioned by the Spaniards, the principal are the Apaches. Theſe thinking themſelves aggrieved by the Spaniſh government, about the cloſe of the laſt century, made a general inſurrection, and did a vaſt deal of miſchief; but were at laſt ſuppreſſed, and have ſince been curbed by ſtronger garriſons. Mr. Dampier has more than once mentioned the POSSIBILITY OF PENETRATING HERE TO THE GOLD MINES, BY MAKING A DESCENT ON THE SHORE, OPPOSITE TO CALIFORNIA; AND, IT IS CERTAIN, ALSO, ON THE OTHER HAND, THAT THE SPANIARDS HERE WILL RUN NO LITTLE HAZARDS FROM THEIR NEIGHBOURS, THE FRENCH, [now the ENGLISH] if the latter ſhould come to have numerous ſettlements on the RIVER MISSISSIPPI. See CALIFORNIA, MISSISSIPPI.

The particular nations of this kingdom, or province, being not diſtinguiſhed from one another by any certain limits, we cannot give any particular diviſion of it into provinces and towns, as has been our method almoſt every where elſe, with relation to the principal places of trade; we muſt content ourſelves, therefore, with ſhewing the face of the country, from the beſt general account that we can find of it, which is from the Spaniſh travellers.

The following deſcription of this country, is taken from the accounts given by father Alonſo de Benavides, printed an hundred years ago at Madrid, with ſome ſmall additions, from other perſons who travelled here, as well as he, and from later accounts, which may be ſeen in Laet, Herrera, and others ſince them.

The way to it's capital, Santa Fé, (of which we ſhall preſently ſpeak) is through the province of Conchos, which is parted from New Biſcay by the river of the ſame name. Next follow the Toboſos, Tarrahumares, Tepoanes, Tomites, Sumas, Hanos, and other ſavage nations, for 100 leagues north and north-weſt. Next follow the Apaches, a mighty nation; and here again we meet the north river, where New Mexico properly commences, and extends 100 leagues north from St. Anthony of Seneca, the firſt town of the Biroros, to the town of St. Jerome, in the province of the Taoros. New Mexico, properly ſo called, contained ſeveral nations in this order. At the north river begins that of the Piros, a civilized people, who are clad, dwell in houſes, are ſubjects to their chiefs, and have abundance of Indian wheat, other grain, and cotton; the ſoil being fruitful and the air wholſome. The Tebas are next, inhabiting 15 towns; then the Queres, ſeven; and next the Tompires, 15; the chief of whom are the Chilili. Farther to the north are the Tanos, in five towns; and beyond them the Peicis, in one great town. Seven leagues weſt of them is the metropolis Santa Fé, where only 250 Spaniards, not above 50 of them ſoldiers, kept all this vaſt country in awe, only by the terror of their name; but their numbers are ſince mightily increaſed, not only there, but in all the other towns we mentioned. Not far from Santa Fé, towards the north river, live the Teoas, in eight villages, being the firſt who embraced Chriſtianity, and moſt paſſionate lovers of the Spaniards. Weſt of them are the Hemes; and to the north of them the Picaries; and beyond them the Taoſits. Again, weſt of the Queres, is the town of Acoma, above-mentioned; and, 30 leagues farther weſt, the Zanis, in 12 towns; and, at the ſame diſtance, the Moquis: all of theſe are now Chriſtians, whoſe lands are fruitful, and abounding in cattle and wild beaſts, as do their rivers with excellent fiſh.

All this country of New Mexico, properly ſo called, is almoſt encompaſſed by the numerous and warlike nations of the Apaches, above-mentioned, differing from all the other natives in language, being clad in deer-ſkins, and living in tents, which they carry with them wherever they go.

Some geographers divide New Mexico into 15 provinces, many of the Spaniſh writers into 18, of which they give us barely the names; but the lateſt geographers ſeem to divide it only into five. On the other hand, ſome writers have ſubdivided it into 20, nay 25 provinces, and furniſhed us with the names of as many towns; but we find no deſcription of any, but that which is by all agreed on to be the capital city, viz.

SANTA FE'. It ſtands 130 leagues from the ſea, near the ſource of that Rio Del Nort which runs a great way through the country ſouthward, and then bending eaſt, falls into the gulph of Mexico. It is ſaid to be a rich city, regularly built, and is the ſee of a biſhop, ſuffragan of Mexico, as well as the ſeat of the governor of the country.

California, though reckoned a part of New Mexico, yet we have treated it ſeparately, for the ſake of making ſuch remarks which more particularly concern the intereſt of Great-Britain. See CALIFORNIA.

REMARKS before the laſt war, and DEFINITIVE TREATY of 1763.

From this view of Mexico belonging to the Spaniards, we may paſs a good judgment of the immenſe treaſures of this part of America; and, conſequently, how unſpeakably beneficial theſe extenſive territories muſt prove to the Spaniſh monarchy, when the commercial ſyſtem which that court has adopted ſhall be brought to maturity. See the articles BISCAY, CATALONIA, FISHERIES, INDIAN-HOUSE of Spain, SPAIN, and SPANISH AMERICA, ACAPULCO, AMERICA.

The Spaniards, though an indolent nation, whoſe colonies were really ſo rich, ſo great, and ſo far extended, as were enough even to glut their utmoſt avarice, yet gave not over, 'till, as it were, they ſat ſtill, becauſe they had no more worlds to ſearch for; or, at leaſt, 'till there were no more gold or ſilver mines to diſcover.

The Portugueze, though an effeminate, haughty, and, as it were, a decayed nation in trade, ye how do they go on daily increaſing their colonies in the Brazils, in Africa, as well on the eaſt ſide as on the weſt? And how do they increaſe their commerce in all thoſe countries, by reducing the numerous nations in Melinda and Zanguebar, in Congo, in Angola, to the direction, œconomy, and to the government of commerce? whereby they ſubdue whole nations of ſavages to a regular life, and, by that means, bring them to be ſubſervient to trade as well as to government.

But how little has Great-Britain done of this kind? How little have we gained upon the natives of America in all our colonies? How few of them are brought to live among us, how few to be ſubject to us? All our colonies ſeem to be carried on upon the mere ſtrength of our own people, nor can we ſay that we have any one conſiderable nation reduced to intire obedience, and brought to live under the regularity and direction of a civil government, in all our plantations; a very few in New England only excepted.

As for new colonies and conqueſts, how do we ſeem intirely to give over even the thoughts of them, though the ſcene is ſo large, the variety ſo great, and the advantages ſo many? On the contrary, we ſeem to forget the glorious improvements of our anceſtors, ſuch as the great Drake, Cavendiſh, Smith, Greenfield, Somers, and, above all, the yet greater Sir Walter Raleigh, upon the foot of whoſe genius almoſt all the Engliſh diſcoveries were made, and all the colonies and plantations, which now form what they call the Engliſh empire in America, were eſtabliſhed.—Theſe we ſeem to ſit down with, as if we had done our utmoſt, were fully ſatisfied with what we have, that the enterprizing genius was buried with the old diſcoverers, and there was neither room in the world, or inclination in the people, to look any farther.

Whereas, on the contrary, the world preſents us with large ſcenes of trade, new platforms for buſineſs, enough to prompt our ambition, and even to glut our avarice; yet we ſeem to have little ſpirit for the adventure: and how ſhould we, 'till our men in power are brought to revive this ſpirit? And the parliament, we are perſuaded, will not want zeal to forward laudable endeavours.

Nor is there any want of people amongſt us; on the contrary, here are thouſands of families who want buſineſs, want employment, want encouragement; and many that want no ſtocks to carry with them, and are ready to go abroad, were the adventuring ſpirit revived, and ſome men fired with warmth for the undertaking, and but vigorous enough to make the beginning.

This is the way to raiſe new worlds of commerce, to enlarge and extend new funds of trade, to open doors for an increaſe of ſhipping and manufacture. The places are ſo many, and the advantages ſo great, for the making ſuch attempts, that nothing is more wonderful of it's kind, than to ſee how backward we are to puſh on our own advantages, and to plant in the moſt agreeable climate in the world, in a manner ſo advantageous as never to be ſupplanted, and ſuch as ſhould make the Engliſh poſſeſſions abroad five times as great, as opulent, and as profitable to Old England, as they have ever been yet.

The deſcription of theſe places, ſo proper for planting, ſo ſuited for commerce, and ſo qualified to enrich and aggrandize the Britiſh nation, is ſhewn throughout the courſe of this work; and, when the trading genius revives, and the adventuring ſpirit is reſtored amongſt us, then it will appear there will neither want encouragement to ſuch undertakings, or adventurers to embrace the encouragements which offer. Nothing is to me more evident, than that the civilizing the nations where we and other Europeans are already ſettled, bringing the naked ſavages to cloath, and inſtructing barbarous nations how to live, has had a viſible effect already in this very article. Thoſe nations call upon us every year for more goods than they did the year before, as well woollen manufactures as others. The Portugueze colonies in the Brazils, and on the eaſt coaſt of Africa, are an unanſwerable proof of this. The European manufactures now ſent to thoſe colonies, are above five times as many as were ſent 30 or 40 years ago; and yet the Europoan inhabitants in thoſe colonies are not increaſed in proportion: we might give inſtances of the like in other places abroad, and that not a few: ſee in particular the articles EAST-INDIA TRADE in general, EAST-INDIA COMPANY of England, DUTCH EAST-INDIA COMPANY, AFRICAN TRADE, ENGLISH AFRICAN COMPANY, BRITISH AMERICA, CALIFORNIA.

New planting colonies, and farther improving thoſe already ſettled, will effectually increaſe this improvement: for like cauſes will have like effects: cloathing new nations cannot fail of increaſing the demand of goods, becauſe it increaſes the conſumption, and that increaſed demand is the proſperity of our trade.

Here then is an undiſcovered ocean of commerce laid open to us; and many ſpecimens are humbly ſuggeſted throughout this work, which, if entered upon with the authority, power, and vigour of the public, would open ſuch new channels of traffic among us, as it would be very hard for our manufacturers to overſtock the markets, and as no petty prohibitions in Europe could ſtop the current of it.—This, we conceive, is one eſſential part of the grand commercial ſyſtem which this nation ought ſteadily and reſolutely to purſue.

It is ſurprizing, that in a nation where ſuch encouragements are given for planting and improving, where colonies have been ſettled, and plantations made with ſuch ſucceſs; where we may truly be ſaid to have filled the world with the wonders of our growing poſſeſſions, and where we have added not provinces only, but kingdoms to the Britiſh dominions, and have launched out to ſo great an extent of commerce, ſince the days of our great Elizabeth: that now we ſhould, as it were, put a full ſtop at once to all our great deſigns, check the humour of increaſing, and, from a kind of myſterious unaccountable ſtupidity, turn indolent in this reſpect, when other nations are purſuing the contrary meaſures; not as if we found no more room to launch out, for the contrary to that is apparent; but as if we had enough, and ſought no more dominions wherein to propagate and extend our maritime commerce.

In all other caſes, and among all other nations, ſucceſs encourages men to go on; increaſing they endeavour to increaſe, Creſcit amor nummi, &c. ſo in trade, the enlarging the bounds of a plantation, the ſwelling and thriving of commerce, and the advantages to the merchant and planter in all thoſe things, certainly increaſes the deſire of planting, enlarges commerce, and fires the merchant with the deſire of extending his adventures, ſearching out new colonies, forming new ſchemes of trade, and puſhing at new diſcoveries, for the increaſe of his trading advantages.

REMARKS on our article MEXICO ſince the laſt war, and the DEFINITIVE TREATY of peace in 1763; occaſioned by the reported infraction on the part of the Spaniards, of the XVIIth article of the ſaid treaty, relative to our logwood cutters ſettled in the bay of Honduras. See our article LOGWOOD.

Let any gentleman peruſe this our article of MEXICO or NEW SPAIN; let him conſider only that part of it, LA VERA CRUZ, and he cannot but entertain a very high and exalted idea of the prodigious treaſures of this part of NEW SPAIN: and muſt it not make the heart of a Briton glad, that he is ſoon likely to have an eſtabliſhed near neighbourhood to a place as actually rich as it is repreſented, without exaggeration? Muſt not every Engliſhman rejoice, that now he is intitled to a ſituation in the BAY OF MEXICO at all; a ſituation, though not at preſent in a very wealthy condition; yet from its proximity to MILLIONS of MEXICAN TREASURES, may prove lucky enough to become inſtrumental in ſome meaſure, to put Britons one day in poſſeſſion of thoſe very treaſures, which have excited Spain to treat this kingdom ſo ill for many years paſt. For if the Spaniſh dons ſhould ſhew their ſupercillious airs againſt Engliſhmen, and ſhall dare to commit depredations upon them as they did in the times of a pacific Britiſh adminiſtration; ſhould our Spaniſh neighbours preſume again to cut off the ears of Britons, as they heretofore have done, in the exerciſe of their rightful navigation to, and from their own colonies, and ſhall offer to ſearch Britiſh ſhips on the high ſeas, and moleſt our logwood cutters in their privileges of carrying on that trade, which they have ſo lately acknowledged our right to do: if the treaſures of Spain make them forget themſelves, we hope they will remember, that that very nation who lately diſpoſſeſſed them of the HAVANNAH is able to do ſo again; nay, we conceive, that we are in a much better capacity to do it now than we were before the laſt war. For can the Spaniards flatter themſelves that, on another rupture with them, we ſhall not make the beſt uſe of our near neighbourhood to that key of the Spaniſh Indies? Can they ſuppoſe that this nation will not render the PORTS OF ST. AUGUSTINE in the GULPH OF FLORIDA, as well as PENSACOLA and MOBILLE in the GULPH OF MEXICO, and alſo the right of navigation to, and from the MISSISSIPPI, through that gulph, with their poſſeſſion of the FLORIDAS, as beneficial as they will admit of? The Spaniſh miniſtry cannot think or ſuppoſe otherwiſe. And if the court of Spain ſhould again reſolve upon a freſh rupture with Great-Britain, we cannot doubt but the preſent near neighbourhood to the Havannah, will greatly contribute to enable us to retake the ſame, and that both at leſs danger and leſs expence than we were at in the laſt war. We may have a good fleet in the harbour of PENSACOLA, there being water ſufficient for ſixty gun ſhips; and even ſeventy gun ſhips, the largeſt requiſite in that country in time of war, if they were built flat-bottomed, like the Dutch ſhips, might paſs every where in that harbour. Nor would our ſituation at MOBILLE be uſeleſs on ſuch an occaſion: and as the Floridas are likely to grow populous, and to receive ſtrength from Georgia and South Carolina, &c. we ſhould not be deſtitute of conſiderable aid of men and proviſions to man and victual a good fleet, at far leſs expence than we have been obliged to do. Our fleets in the gulph of Mexico, together with another from Jamaica, would not find any great difficulty, we apprehend, to become once more maſters of the Havannah; and if that ſhould prove the caſe again, we can hardly believe that it would be in the power of Spain, and France acting in concert with them, to diſpoſſeſs us: and if ſo, it is reaſonable to think that the court of England will rather be inclined at any future peace, to keep it as a pledge for the future good behaviour of the Spaniards, than to reſtore it to them again; for Great-Britain, having for near theſe forty years experienced the maltreatment of the Spaniards, who have occaſioned the nation to be burthened with MILLIONS upon MILLIONS of PUBLIC DEBTS and TAXES, cannot, conſiſtent with her own ſafety and preſervation, be ſuppoſed

to

conſide in the Spaniards any more after their flagrant violation ſo ſuddenly of the DEFINITIVE TREATY. Nor would Spain dare to break the treaty, ſo ſoon eſpecially, did they ſuppoſe, that we are not in a capacity to reſent their treatment, and retake and keep the Havannah for ever after, with no leſs care than hitherto we have done our European Gibraltar; and if we determine to take and hold this key of the Spaniſh treaſure, what hinders but we may become abſolute maſters of the whole Mexican gulph, and poſſeſs ourſelves of the immenſe wealth of this part of America. We could then repoſſeſs ourſelves of the bay of Campeachy on the one ſide of the gulph, as we are poſſeſſed of the Floridas on the other; and what hope could Spain have to diſpoſſeſs us? The Mexicans could not reſiſt the maritime force of England, and when we had the Havannah, France could not aſſiſt Spain to wreſt it out of our hands; and therefore it ſeems no way unreaſonable or viſionary to ſuppoſe, that another immediate Spaniſh war, would put Great-Britain in the full poſſeſſion of all the commerce and treaſures of Mexico. Was this the caſe, ſuch new acquiſition of trade and wealth, would put us in a capacity to diſcharge thoſe public debts, and annihilate thoſe burthenſome taxes, which the Spaniards have been inſtrumental to lay upon this kingdom: and without we do reſolve to make ourſelves amends for the prodigious expence this nation has put us to, ſince the peace of Utrecht, what will avail going to war with them more? We may as well ſet down tamely with inſult after inſult, 'till they ſhall repeat their depredations as formerly, ſearch our ſhips on the high ſeas in their rightful navigation to and from our own colonies, and cut off the ears of Britons as they heretofore have done. We muſt expect a repetition of the like ſcene over again; and be contented with additional debts and taxes, 'till we can raiſe no more money to go to war at all, and then farewel the trade and navigation of theſe kingdoms!

After this nation has ſuſtained the expence of 500 millions of money by the four laſt great wars, 'tis full time to think of reaping ſome equivalent compenſation for ſo immenſe a burthen, which we have bore for ſo many years. And who is to intimidate us from poſſeſſing the treaſures of Mexico for our reimburſement?

Our poſſeſſions in the gulphs of FLORIDA and MEXICO, ſeems to have laid a very good foundation for this further new acquiſition; an acquiſition, that would amply repay the expence if taken; and if the Spaniards once more, and ſo ſuddenly, and ſo ungenerouſly provoke us to quarrel with them, we are inclined to believe, it will prove of unſpeakable benefit and advantage to this kingdom, by opening to us ſuch new ſcenes of commerce we ſhould never have thought of obtaining.

While this is writing, a letter from our colony of Georgia in North America concludes thus: 'We are certainly informed, that the French have ceded NEW ORLEANS, and all their territories on the weſt ſide of the MISSISSIPPI river, to the SPANIARDS; which is a very favourable event for theſe ſouthern provinces, as the latter have no influence over the INDIANS, and are by no means that enterprizing people which the French are: and, in ſhort, we are under no kind of apprehenſion of their diſturbing our ſettlements. By this ceſſion the French have now no poſſeſſion of any part of the continent of NORTH-AMERICA.'

We may therefore, be the more likely one day, to get and keep poſſeſſion of the Spaniſh Mexican treaſures, if they provoke the crown of Britain to a freſh rupture with the Spaniards. See our article LOGWOOD.

MIDDLESEX, a county in England, is divided from Surry on the ſouth by the Thames, from Eſſex on the eaſt by the river Lea, and the Meere ditch, from Buckinghamſhire on the weſt by the river Coln and the Shore ditch, and it has Hertfordſhire on the north. It is not above 21 miles in length, ſcarce 15 in breadth, and not above 80 miles in circumference. It comprehending the two great cities of London and Weſtminſter, and thoſe rich villages of Hackney, Highgate, and Hampſtead, on the north-ſide of thoſe cities and their ſuburbs, it is by much the moſt opulent and populous county in England.

It's air in general is ſweet and wholſome; and, as the whole county is made rich by the neighbourhood of thoſe two ſplendid cities, ſo it's ſoil is extremely improved by their compoſt.

LONDON is the metropolis of England, the capital of all the Britiſh dominions, and the moſt renowned city in the whole world, as well for the numbers as for the wealth of it's inhabitants: for it's univerſal commerce, it's admirable polity, it's eſtabliſhments for learning as well as trade. It is ſituate on the north-ſide of the Thames, with a gentle riſe from that noble river, and ſtands on a gravelly loamy ſoil, which greatly conduces to the health of it's inhabitants. It is environed with fine kitchen-gardens, delightful plains, and beautiful elevations, that are adorned with a great number of ſplendid country-ſeats of it's citizens.

The dimenſions of London within the walls, are 3 miles and 165 feet, but, taking in that world of buildings from Blackwall in the eaſt to Tothill-fields in the weſt, and beyond Groſvenor and Hanover-ſquares, they are in length from Knightſbridge beyond Hyde-park corner to Poplar, 7 miles $\frac{1}{2}$, and from Poplar along by the Thames to Peterborough-houſe beyond Weſtminſter horſe-ferry, above 6 miles $\frac{3}{4}$: and it's breadth, from the ſtones-end at Newington-butts in Surry, to Jefferies's alms-houſes in Kingſland-road in Middleſex, 3 miles and 31 poles; though in other places, as from Peterborough-houſe to Montague-houſe, it is but 2 miles; and in ſome places not half a mile; as in Wapping. It's circumference, reckoning from Peterborough-houſe by Tothill-fields and the ſkirts of the town to Limehouſe, is, at leaſt, 18 miles.

Various have been the conjectures as to the number of inhabitants. The moſt accurate accounts we have, reckon them between 7 and 800,000 within the walls, and it's dependencies without at 1,500,000.

Certain it is, that this city may boaſt itſelf to be the largeſt in extent, the moſt populous, and the beſt inhabited, and that by as civil, rich, and ſober a people, their number being conſidered, as any in the world. And, for a general trade throughout the univerſe, all others muſt give her the precedence.

In order to give the reader a more diſtinct idea of the general commerce of this city, we ſhall ſubjoin an account of the ſeveral companies of the city of London, according to their precedence, beginning with the 12 principal ones, of one of which the lord-mayors have generally made themſelves free at their election, if they were not ſo before; for they are not only the moſt ancient, but the richeſt, many of them having had the honour of kings and princes to be their members, the apartments of their halls being fit to entertain a monarch.

Companies.	Charitable gifts paid yearly, and privileges, &c.
1. Mercers - - l. 3000	Excluſive of 20 per cent. paid yearly to the widows of ſubſcribing clergymen during life, purſuant to a propoſal accepted in 1698, when they ſettled a fund of 14,000 l. a year for that purpoſe.
2. Grocers - - 700	
3. Drapers - - 4000	
4. Fiſhmongers - 800	
5. Goldſmiths - 1000	They had a privilege from Ed. IV. to inſpect, try, and regulate all gold and ſilver wares throughout the kingdom, and to puniſh all workers in either that adulterated the ſame.
6. Skinners - - 700	
7. Merchant-taylors 2000	They were once ſtiled Taylors, and Linen-Armourers.
8. Haberdaſhers - 3500	Were anciently ſtiled Milaners, becauſe that they dealt moſt in what came from Milan.
9. Salters - - - 500	
10. Ironmongers - 1800	In 1724, Mr. Betton, a Turkey merchant, left 26,000 l. in truſt; one moiety of the profits of it to be always applied to the ranſom of Britiſh captives from Mooriſh ſlavery; the other for the poor of the company, and to the charity-ſchools in the city and it's liberty.
11. Vintners - - 600	
12. Clothworkers - 1400	
13. Dyers - -	
14. Brewers - -	
15. Leatherſellers -	Hen. VII. made their wardens inſpectors of ſheep, lamb, and calves leather throughout the kingdom.
16. Pewterers - -	By act of parliament 25 Hen. VIII. their wardens had the inſpection of pewter throughout England.
17. Barber ſurgeons -	In the reign of Hen. VIII. the ſurgeons of this company, then but 19, were exempted by parliament from ward and pariſh-offices, and from military ſervice.
18. Cutlers	
19. Bakers	
20. Wax-chandlers	
21. Tallow-chandlers	
22. Armourers -	The Braſiers are united to this company.
23. Girdlers - -	Queen Elizabeth incorporated the Pinners and Wire-drawers with them.

24. But-

Companies.	Charitable gifts paid yearly, and privileges, &c.
24. Butchers	
25. Sadlers - -	This company has been highly honoured by the late prince of Wales, not only in accepting it's freedom, but in condeſcending to be it's perpetual maſter.
26. Carpenters	
27. Cordwainers	
28. Painter-Stainers	
29. Curriers	
30. Maſons	
31. Plumbers	
32. Innholders	
33. Founders -	All braſs weights made in London, or three miles from it, muſt be ſized with the company's ſtandard, and have their mark; the avoirdupois to be ſealed at Guildhall, and the Troy at Goldſmith's hall. And the company are impowered by charter to view and ſearch all braſs-weights, and braſs and copper-ware made within the ſaid diſtrict.
34. Poulterers	
35. Cooks	
36. Coopers	
37. Tylers and Bricklayers	
38. Bowyers	
39. Fletchers -	It is only a company by preſcription.
40. Blackſmiths	
41. Joiners and Cielers	
42. Weavers	
43. Woolmen	
44. Scriveners	
45. Fruiterers	
46. Plaiſterers	
47. Stationers - -	This company, which alſo includes bookſellers, letter-founders, printers, and book-binders, have a ſtock which is employed in printing almanacks, primmers, pſalters, many ſchool-books, &c. of which they have the ſole privilege, by virtue of a grant from the crown. They pay about 300l. a year in penſions and other charities.
48. Embroiderers	
49. Upholders	
50. Muſicians	
51. Turners	
52. Baſket-makers	
53. Glaſiers - - -	The glaſs-painters are incorporated with them.
54. Horners	
55. Farriers	
56. Paviours	
57. Loriners	
58. Apothecaries -	They are exempt from ward and pariſh offices, and have a ſpacious phyſic-garden at Chelſea; which, in 1721, was granted to the company for ever by Sir Hans Sloane, Bart. the lord of the manor, on condition of their paying a quit rent of 5l. and continuing it always as a phyſic-garden, and of preſenting every year to the Royal Society 50 ſamples of different ſorts of plants there grown, 'till they amount to 2000.
59. Shipwrights	
60. Spectacle-makers	
61. Clock-makers	
62. Glovers	
63. Comb-makers	
64. Felt-makers	
65. Framework-knitters	
66. Silk-throwers	
67. Silkmen	
68. Pin-makers	
69. Needle makers	
70. Gardeners	

Companies.	Charitable gifts paid yearly, and privileges, &c.
71. Soap-makers	
72. Tin-plate-workers	
73. Wheelwrights	
74. Diſtillers	
75. Hatband-makers	
76. Patten-makers	
77. Glaſs-ſellers and looking-glaſs-makers	
78. Tobacco-pipe-makers	
79. Coach and harneſs-makers	
80. Gunſmiths	
81. Gold and ſilver wire-drawers	
82. Long bow-ſtring-makers	
83. Card-makers	
84. Fan-makers	
85. Woodmongers	
86. Starch-makers	
87. Fiſhermen	
88. Pariſh-clerks - -	By a decree of the ſtar-chamber-court in 1625, they obtained a privilege to keep a preſs in their hall, for printing the weekly bills of mortality, by a perſon appointed by the archbiſhop of Canterbury. They are, by their charter, to make a report of all the weekly chriſtenings and burials in their ſeveral pariſhes every Tueſday.
89. The carmen are a fellowſhip by act of common-council, with the title of Free carmen of the city of London.	
90. The porters, conſiſting of tackle and ticket porters, are another fellowſhip.	
91. The wherrymen and lightermen of this city and neighbouring places, were, by act of parliament in the latter end of the reign of king William, conſtituted a ſociety, to be under the direction of the court of lord mayor and aldermen.	

Upon the whole, it appears, that the companies are 91, and they have 52 halls, and the number of liverymen, according to the account made out in 1728, is 8217. The ſums of money yearly diſtributed in charity, by 23 of the companies only above-mentioned, amount to 23,655l. And, if but 40l. each be alſo given to charitable uſes yearly by the remaining 68, which ſeems to be no extravagant ſuppoſition, take them one with another, the whole would amount to no leſs than 26,375l. per ann.

Of the incorporated ſocieties of merchants, and of the ſhipping belonging to the port of LONDON.

1. The firſt ſociety we ſhall mention is the RUSSIA COMPANY, firſt incorporated by queen Mary, anno 1555, and not only impowered to carry on an excluſive trade to all parts of the Ruſſian empire, but likewiſe to all ſuch countries as they ſhould diſcover in thoſe northern parts; which they did ſoon after much to their advantage, viz. the Cherry Iſlands, Greenland, Nova Zembla, Davies's Streights, and Newfoundland: and, in conſideration of thoſe valuable diſcoveries, their privileges were confirmed by parliament, and enlarged by king James I. but the company is not, at preſent, ſo conſiderable as it was, private merchants being admitted into the trade on payment of 5l. which has greatly contributed to extend this commerce. The Ruſſia merchants export from England, particularly from the city of London, coarſe cloth, long ells, worſted ſtuffs, tin, lead, tobacco, &c. and England imports from Ruſſia, hemp, flax, linen-cloth, linen-yarn, Ruſſia leather, tallow, furrs, iron, potaſhes, &c. to a very conſiderable value. See the article RUSSIA.

2. The EAST-INDIA COMPANY, firſt incorporated by queen Elizabeth; but, about the beginning of the protectorate of Oliver Cromwell, it being imagined that the laying open their trade would be a very great benefit to the nation, it was therefore made general, and ſo continued 'till the year 1657, when the ſeparate trade having proved fatal to the undertakers, they were, for the good of the whole, united to the company by the legiſlature. In 1698, a new Eaſt-India company was eſtabliſhed by act of parliament, whereby the old company was diſſolved, after a term of years; but, for the ſake of their mutual intereſts, the companies were joined in 1702, and ſince ſtiled, The United Company of Merchants trading to the Eaſt-Indies. The commerce of this great company being carried on from the city of London, has no little tendency to enrich that metropolis. For the nature and merits of this company, ſee the articles EAST-INDIA TRADE in general, and EAST-INDIA COMPANY in particular.

3. The LEVANT, or TURKEY COMPANY, was at firſt incorporated by queen Elizabeth, and their privileges confirmed and augmented in the reign of king James I. when they were impowered to trade to the Levant, or eaſtern part of the Mediterranean, particularly to Smyrna, Aleppo, Conſtantinople, Cyprus, Grand Cairo, Alexandria, &c. This trade is now open to every merchant who pays a ſmall conſideration. The whole is carried on from the city of London. The goods exported from hence to Turkey are chiefly broad cloth, long ells, tin, pewter, lead, ſteel, iron, &c. and the Engliſh merchants frequently buy up French and Liſbon ſugars to tranſport thither, as well as bullion from Cadiz. The chief commodities imported hither from Turkey, are raw-ſilk, goat's wool, grogram-yarn, cotton-wool and yarn, dyeing ſtuffs of various kinds, rhubarb, galls, and other drugs, leather, cotton, &c. See LEVANT TRADE.

4. Here alſo the AFRICAN COMPANY is ſettled, which has proved more beneficial to this city and our American plantations, than to itſelf. See the article ENGLISH AFRICAN COMPANY.

5. The HUDSON'S-BAY COMPANY, incorporated by king Charles II. They carry on from the city of London chiefly, a profitable trade to all the places with Hudſon's-Bay and Streights, where they have ſundry factories, to which the natives bring their fine beaver, and other rich furrs and commodities of the country, and exchange them for the Engliſh woollen manufactures, haberdaſhery, hard-wares, &c. See the article HUDSON'S-BAY COMPANY.

6. The moſt conſiderable by much of all the trading companies in this city, was that of the SOUTH SEA, eſtabliſhed by act of parliament in the 9th year of queen Anne, for paying off a debt of 9,177,967 l. due from the government, and not provided for by parliament, for erecting a corporation to carry on a trade to the South Sea, and for encouragement of the fiſhery, &c.—By another the following year, the company (after the diſcharge of the debt due to them from the government) was made perpetual. In the year 1714, the capital of the company was enlarged by act of parliament to 10 millions, for which they received intereſt at 6 per cent.—In the never-to-be-forgotten year 1720, an act of parliament paſſed, to enable the ſaid company to increaſe their capital, by redeeming ſeveral of the public debts. By the account of ſubſcriptions upon this occaſion, the capital ſtock of the company was increaſed from 10 to 33,543,263 l. 8s. 3d. For the effects hereof, ſee the article SOUTH SEA COMPANY, and BUBBLES.

By the firſt mentioned act, the corporation was veſted in the ſole trade to and from all countries on the eaſt ſide of America, from the river Oroonoko to the ſouthermoſt part of Terra del Fuego; and on the weſt ſide thereof, from the ſouthermoſt part of the ſaid Terra del Fuego, through the South Sea to the moſt northern part of America, not exceeding 300 miles from the continent on the ſaid weſt ſide (excepting Braſil, &c. in poſſeſſion of the king of Portugal, and Surinam in that of the States General) and the company was to be the ſole proprietors of all iſlands, forts, &c. which they ſhould diſcover within thoſe limits, to be held under the annual rent of an ounce of gold.—By letters patent alſo from the crown, one pound in every hundred pounds capital ſtock, was directed to be raiſed by the members, and employed in improving, enlarging, and carrying on the fiſhery of this kingdom for the uſe of the company.—In purſuance of the ſaid firſt act, the proprietors of navy-bills and tickets, and army-debentures, were incorporated by the name of The Company of Merchants of Great-Britain trading to the South Seas, and other parts of America, and for encouraging the fiſhery.—And, on the peace that followed in 1713, queen Anne transferred to the ſaid company the benefit of the aſſiento contract made with Spain. [See ASSIENTO CONTRACT.]

The company's application to trade with ſo large a capital, the effects of their traffic both to Greenland and the Weſt-Indies, and cauſes thereof, and how much they might have contributed to the paying off, by the reduction of intereſt, the national debt, and eſtabliſhing the ſinking fund, will appear under the article South Sea company; where alſo will appear ſome ſecret hiſtory; which will ſhew how much the proſperity of this company has been regarded, and how greatly the trading intereſt of the city of London, as well as that of the whole kingdom, might have been promoted, in conjunction with that of the company. See SOUTH SEA COMPANY.

We now proceed to, though we mention it the laſt, the oldeſt of all the incorporated ſocieties of merchants, who chiefly carry on their trade from the city of London; that is, the Hamburgh company. They were originally ſtiled, the MERCHANTS OF THE STAPLE, i. e. of the wool-ſtaple, and afterwards merchant adventurers.—They were firſt incorporated by king Edward I. and, by leave of the duke of Brabant, made Antwerp their ſtaple, or mart for the Low-Countries, where the woollen manufactures flouriſhed more, at that time, than in any other country; for the company's buſineſs, at firſt, ſeems to have been chiefly the ſending of our Engliſh wool unwrought.

King Edward III. obſerving the prodigious trade of the Netherlands to proceed from that city's being made the ſtaple for our wool, and what great ſums were paid by England for the cloth that was made there of it's own wool, removed the wool-ſtaple, firſt to Calais, in his French territories, and then to ſeveral great towns in England, with a deſign to have our wool manufactured at home; but, unhappily for Britain, he was ſo deeply engaged in the French wars, that he did not purſue it.

Queen Elizabeth enlarged the trade of this company of adventurers, and impowered them to treat with the princes and ſtates of Germany, for a proper place for the ſtaple or mart of the woollen manufactures they exported, which was at length fixed at Hamburgh; from whence they obtained the name of the Hamburgh company. They had alſo Dort, in Holland, aſſigned them for another mart. This trade, at preſent, lies open for every merchant, on paying a trifling ſum to the company; ſo that this ſociety now have very little advantage from their incorporation. See the article HAMBURGH.

In order to encourage, and render the trade of this great city the more ſecure, both to the ſeparate, as well as the joint adventurers, here is eſtabliſhed, by act of parliament, two public offices, or corporations, for the inſurance of ſhips and merchandizes, from hazards by ſea, viz. The one called the ROYAL EXCHANGE ASSURANCE company, which is kept in a part of that building; and the other called the LONDON ASSURANCE company, kept near the Royal-Exchange.—See the article ASSURANCE.

Beſides theſe aſſurance offices from the hazards at ſea, it may not be amiſs to ſhew the ſplendor of this city, to take notice that there are other public offices eſtabliſhed, for inſuring both houſes, goods and merchandizes, from loſs and damage by fire; which keep a number of firemen in pay, with ſilver badges of their reſpective offices, to aſſiſt in quenching fires: there are others again, of inſurance upon lives, from which the ſubſcribing ſurvivor very often has a conformable dividend, upon the death of the relation or friend named in the policy, for paying a ſmall yearly contribution while the deceaſed lived.

We ſhall now take a view of the ENGLISH SHIPPING, that trade to and from the port of London, from a liſt of all the ſhips that belonged to this city, which was taken in the year 1732. From the general regiſter at the cuſtom-houſe, it appears, that the total number of veſſels is 1417, and of the men that navigate them, 21,797. And the number of ſhips that arrived at foreign parts, as well as from the ſeveral ports of Great-Britain, in one year from Chriſtmas 1727, viz. Britiſh ſhips from ports beyond the ſea, 1839, foreign ſhips, 213*, and coaſters, 6837; in the whole, 8889. It is obſerved, that this number, prodigious as it is, has been conſiderably increaſed in divers years ſince: for in that part of the Thames, which is properly the harbour, and where the ſhips uſually deliver and take in their cargoes, viz. that which is properly called the Pool, from Limehouſe-reach to the cuſtom-houſe quay, &c. there have been ſometimes computed 2000 ſail of all ſorts, that really go to ſea, beſides barges, or lighters and yachts. And in the river, from London-bridge to Blackwall, are three wet-docks for repairing them, and 33 yards for building them; including the building of lighters, hoys, &c. but excluding all boat-building, wherry, and barge-building above-bridge.

* The average of the burthen of FOREIGN SHIPS has been pretty accurately computed at 86,094 tons, annually employed by ENGLAND (excluſive of thoſe carrying proviſions from Ireland). And the tonnage of Britiſh ſhips, belonging to England, in the foreign and coaſting trade, at 320,000 tons; which, if actually employed, does not amount to four times the quantity of foreign tonnage; and hence a calculation may be formed, of the natural growing ſtrength of our neighbouring maritime powers, ſo far as particularly relates to their trade carried on with England. See the article NAVIGATION.

Upon an eſtimate made of the ſhare which London has in foreign trade, with regard to the reſt of the kingdom, it has been judged to have about one fourth of the whole, at leaſt, if a computation may be made by the produce of the cuſtoms, which are about three to twelve.

How conſiderable a figure this city makes in the government of the kingdom, appears by the influence her inclinations and actions have had upon the affairs of the whole nation, in paſt ages, as well as they have in the preſent. It is eaſy to perceive, that this city muſt have gradually ariſen, from it's firſt beginning to it's preſent grandeur, through a long tract of ſucceſſives times and ages, by the benefit of TRAFFIC, with the concurrence of the favour of princes, and likewiſe the convenience and advantage of it's ſituation.

The number of people in London, render this city the center of foreign commerce; here a great quantity of goods, from all foreign countries, are brought in, becauſe here is always a market,

market, and here they can be conſumed; whereas, take all the other ports of England, many of them can ſend ſhips loaden out, but few can bring them loaden home; for example:

The city of Briſtol is the moſt capable of this next to London, and even Briſtol cannot always diſpoſe of the loading of ſhips home; Yarmouth can ſend, pernaps, 8 or 10 large ſhips out to the Streights, viz. to Cadiz, to Malaga, to Leghorn, to Venice every year, laden with red-herrings. But if theſe ſhips load back with currants from Zant, oil from Gallipoli, ſilk and linen, raiſins and oil from Meſſina, ſilk and wines, fine oils, anchovies, capers, &c. from Leghorn; ſilks, and pepper, and ſulphur, and blocks of marble from Genoa, what ſhall they do with thoſe at Yarmouth? They muſt all unlade, and deliver their cargoes at London, and in like manner of the reſt; ſo that the bulk of London makes the trade of England, and thoſe people are greatly miſtaken, who imagine that the growing magnitude and ſplendor of this city, is too much for the whole country; alledging, that the nation is liver-grown, and muſt die of a pleura. The city, ſay they, drawing away the nouriſhment from the country, as a dropſy ſwells the body, but draws the nouriſhment away from the extreme parts.—But this ſhould ſeem to be a miſtake; the ſimile will not hold; for this ſwelling the body of the city, makes it the grand center of nouriſhment to the whole nation; and, as every part of the kingdom ſends up hither the beſt of their produce, ſo they carry back a return of wealth: the money flows from the city into the remoteſt parts, and furniſhes them again to increaſe that produce, to improve the lands, pay rent to their landlords, taxes to their governors, and ſupply their families with neceſſaries; and all this is the apparent effects of trade, derived from the metropolis.

Nor ſhould we know any thing conſiderable of this trade, if the greatneſs of the city did not cauſe it; here the manufactures, as well as produce of the ſeveral counties, are amaſſed for ſale, as well for the circulation of commerce at home, as the exportation to countries abroad.

Here ſhips from all parts arrive, and ſeveral of the moſt conſiderable branches of trade are confined to this city by law: the Eaſt-India trade is all ſettled here; the Greenland trade deliver all here; the Italian thrown ſilk is confined to be imported here, and here only, and at no other port in England: here the African company import a conſiderable part of their gold, as the South Sea company did alſo their ſilver when they carried on trade: in a word, London is the great gulph of the Britiſh trade; and, as it comes in here, ſo it goes out again from hence to all parts of the nation, circulating in home trade from the merchant to the conſumer.

Nor let us ſuppoſe that the influence of this city is ſmall, at the remoter diſtances of the country, but juſt the contrary; for multitudes of people are employed in the extremeſt parts of England, for the ſupply of London, either with food or fuel, or manufactures, and that to a degree almoſt beyond credibility: for example:

Coals.

What a prodigy of trade does the bare bringing coals, from the north to London, keep up in the nation? Certain it is, that no leſs than 30,000 people are always employed underground, in digging them at Newcaſtle upon Tyne; a thouſand ſail of ſhips are employed in carrying them, and ten thouſand ſeamen, lightermen, keelmen, and boatmen, in the loading, carrying, and unloading the coals.

Provisions in general.

The trade carried on, with reſpect to the article of proviſions only, is not the leaſt conſiderable; the butter trade in Yorkſhire and Suffolk; the cheeſe trade in Wilts, Glouceſter, Warwickſhire, and Cheſhire, all remote from London, and all employed for the ſupply of London; where (according to the moſt moderate accounts) above fifty thouſand tons of cheeſe is conſumed in a year, and as much butter; with this difference only, that the butter is moſt of it made near London, that is to ſay, within 40 or 50 miles, the cheeſe generally from 70 to 150 miles.

The multitudes of people concerned in, and employed by theſe things in the moſt remote parts of the kingdom, are not to be conceived, much leſs calculated, but by thoſe who underſtand the particular funds of proviſions, and the places where they are made: how many lands do they cauſe to be cultivated and improved, by the vaſt ſtocks of cows fed on them? How many, by the numbers of black cattle fed in the fartheſt parts of England, every way, as in Lancaſhire and Weſtmoreland, the North-riding of Yorkſhire, the counties of Lincoln, Norfolk, Suffolk, Kent, and Suſſex? And ſuch cattle too, as are to be ſeen in no other parts of the world. Again, the prodigious extent of grounds, in the wilder and remoter parts of Scotland one way, and Wales another, and the mountains of Yorkſhire and Durham another; all employed in breeding, as the other are in feeding the ſtores of black cattle for the market in London.

The like may be ſaid of the ſheep, which take up whole counties and tracts of lands in ſeveral parts of the country; as in Leiceſter and Lincolnſhire, Northampton and Bucks, the bank of Tees, and Rumney-marſhes in Kent, all theſe for large ſheep: Saliſbury-plain, Dorcheſter, and Wincheſter, and Marlborough downs, and all the open country between, for near 50 miles ſquare, for middling-ſized ſheep; as likewiſe the Cats-would-hills, Leominſter-fields, the ſouth downs in Suſſex, Banſted-downs, Newmarket, and Lincolnheaths, whoſe numbers are numberleſs, and all for the ſupply of London.

What an infinite number of people do theſe employ? what millions of acres of land do they improve? and how do they create and propagate trade, even in the remoteſt corners of the iſland, all moved, ſupplied, and the trade ſupported by the prodigious demand of all theſe things at the capital city? not half of which would be felt, if the capital city and it's adjacent multitudes were ſeparated, and dwelt in ten or fifteen ſeveral cities, remote from one another, and every one ſubſiſting, as it were, by itſelf; I ſay, though there would be the ſame number of people to feed, there would not be half the trade or buſineſs occaſioned to feed them.

It is ordinarily ſaid, that there are 30,000 higlers, and travelling market folks, as we call them, about this city, a poor ſort of people that are wholly employed to bring butter, eggs, pigeons, and poultry, &c. to the London markets, and bring veal, pork, and ſmaller things up and down, from houſe to houſe, and every one of them almoſt have a horſe, ſome more, ſome carts, &c.—The like of gardeners, whoſe number is prodigiouſly increaſed, and who now keep carts, and whole teams of horſes, or large luggage boats upon the river, and employ an incredible quantity of land, for 10 miles round the city.

Theſe are ſome of the benefits of a capital city, as to trade: we might give a great many examples of other advantages, which a conflux of people neceſſarily brings with it; but the magnitude of the Engliſh inland commerce is a teſtimony of it; the influence of the city upon it all has evidently been, not the ſupport only, but the very birth and foundation of the trade itſelf.

The article of malt, and malt-liquor, affords another extenſive branch of trade in this city. The number of inns, and public drinking and eating-houſes, which are to be ſeen in London, and the parts adjacent, is even ſo ſcandalouſly great, that, ſhould it be made public, ſtrangers would hardly think it credible: but if we alſo conſider the number that depend upon them, ſuch as maltſters, malt makers, brewers and their ſervants, horſes, carriages, farmers, plowmen, &c. who all get their bread by the drinking trade in this city; reckoning from the ſowing of the barley to the conſumer of the liquor; how many thouſands more would there ſtill be, that would have their bread to ſeek, and new employments to look out for, if the drinking of malt-liquor was to be taken wholly out of trade, and the practice of it at once left off?

The city of Roſtock, in the duke of Mecklemburg's country, is famous for it's brewery, and for the great quantity of beer they brew there, and export to other countries; and, indeed, it is the principal trade of the whole port; yet I am informed, that there are two brewing offices in London, that brew a greater quantity of beer than all that city: and, if it is true, that there are two brewers in London, who brew each of them 1000 barrels a week, which make 104,000 barrels a year, I believe Roſtock cannot go beyond it.

From the beer and ale, let us paſs to the diſtillers of malt-ſpirits, who, in this city, do not conſume leſs than 200,000 quarters of malt every year, beſides 15,000 hogſheads of cyder, in the diſtilling or drawing ſpirits. Add to this, all the ſeveral quantities of ſpirits extracted from melaſſes, from eager, and damaged wines, and bottoms; whoſe number we cannot eaſily gueſs at.

Conſider, likewiſe, the wines, brandy, rum, cyder, and other liquors conſumed in this city, which, according to ſome, is not leſs than 50,000 tons of wine, and 10,000 tons of brandy, cyder, and all other liquors.

The quantity of the woollen manufactures, conſumed and trafficked in within this city, is immenſe. The wool and the oil uſed, are the great principles of this manufacture in general, and are brought from different channels to the hands of the manufacturers; and, indeed, paſs a long way in the ordinary courſe of trade, before they meet at the clothier's houſe.—The oil chiefly comes from Gallipoli, a city in the gulph of Otranto in Italy, and in the kingdom of Naples, as likewiſe from Seville and Cadiz in Spain, and from Faro, Figuera, Liſbon, and Oporto, in Portugal.—We need not add, that this is imported by the merchant, bought by the tradeſmen, and ſold to the manufacturer.

The wool has many channels, as well from abroad as at home.—Wool from abroad makes only two articles. 1. Spaniſh wool, of which we need ſay no more than is ſaid of oil; it is moſtly imported in large quantities from Spain, by London merchants, is bought by London tradeſmen, ſold again to the clothier; being moſtly worked up with the Engliſh wool, and mixed together, the Spaniſh being too fine and ſhort, to uſe by itſelf, except in ſome particular goods. 2. Iriſh wool,

admitted to be imported.—We have ſometimes, and in ſmall quantities, a good ſort of wool from Barbary, the African wool being of good ſubſtance, a long full ſtaple, and not very coarſe.—We have alſo ſometimes Carmenia wool imported from Turkey, which is very good, but the quantity very ſmall.—3. The Engliſh wool is the principal article of this manufacture.

The weavers of Spittlefields, London, ſend exceeding great quantities of wool into remote counties, to be ſpun; they particularly employ a great part of the poor of the whole counties of Cambridge, Bedford, and Hertford; nay, they even ſend large quantities into the north, as far as Weſtmoreland, to be ſpun, and the yarn is brought back in the ſame manner to London.

Beſides the great conſumption of the woollen manufactures in general, in London, the exports from thence to foreign nations is not leſs than three quarters of what is ſent out of England.

The ſilk manufacture of Spittlefields is arrived to a greater degree of perfection, than that of any other nation. France long ſurpaſſed all countries in the world, and, indeed, engroſſed a great part of the trade in Europe, in this general article of apparel; but, as we now vie with them in quality, it is to be hoped we may likewiſe do ſo in the cheapneſs; and then we cannot fail greatly to increaſe our exportations herein.

The hard-ware manufacture, and the trade in metals in general, within the city of London, and from that port to foreign countries, is an article of no little conſideration. Our Birmingham hard-ware has arrived at ſo great perfection, that it beats that of the whole world, not only in the excellency of workmanſhip, but in point of cheapneſs alſo.—And, with regard to the quantities of tin and lead, theſe are not found in greater plenty, than they are in Great-Britain, in any ſtate of Europe; and our exports, in theſe articles, from our metropolis, tend greatly to inrich the whole kingdom in general, as well as the citizens of London in particular.

The quantity of corn conſumed in the city of London, and parts adjacent, is ſo great, and the way of it's being brought thither ſo different, that it is ſcarce poſſible to make an accurate computation of it: it is our felicity, in England, that, how great and grievous ſoever taxes have been, we are not yet come to a gabelle, or tax upon corn; as is the caſe of Italy, and many other countries, and may in time become our caſe, if wars and public perplexities increaſe upon us. Were that our caſe, an evil of this kind would have enabled us to have calculated, exactly, the quantity of corn brought to the London market, as well as to all the reſt of the great corn markets in England.

It may ſuffice, at preſent, to obſerve, that beſides the prodigious quantity of corn and meal, and malt, brought by ſea, and by the navigation of the Thames, and other rivers; ſuch as the Medway, the Lea, and ſeveral ſmaller rivers, to London, the like of which is not to be ſeen in the world; there is alſo a very great quantity, eſpecially of meal and malt, brought by land-carriage, from the counties of Surry, Kent, Suſſex, and Hampſhire; for the wheat is carried by land, even beyond Wincheſter, to Farnham market, and from thence to the mills about Guildford, and all the adjacent country, and then to London by water.

In like manner wheat is brought from Northamptonſhire; nay, from Harborough in Leiceſterſhire, and from Bedford, to the great markets of Hempſtead, St. Albans, and Hitchin; and being then ground at innumerable mills, in the county of Hertford chiefly, which abounds with ſuch mills, is brought to London by land-carriage.

This vaſt carriage of corn and meal to London is a branch of trade, and is to be reckoned as ſuch; for there are many farmers, and others that are not farmers, who keep teams of horſes, on purpoſe to let them out, for the bringing of corn and malt to London; and generally theſe carriages return laden with coals, grocery, wine, ſalt, oil, iron, cheeſe, and other heavy goods, for ſhop-keepers, and tradeſmen of the country, and it is a very great return they make for the mere expence of this carriage.

By the computations of the burials and chriſtenings in this city, one may be enabled to compare the bigneſs and populouſneſs of it with other great cities in the world. As, for example, in the year 1707, the chriſtenings in the imperial city of Vienna, amounted to 3,963, and the burials to 4,354; whereas the burials in London, the ſame year, were 21,600, and the chriſtenings 16,066.

Yet farther, to ſet forth the ſurpaſſing eminency of this city, on account of the vaſt numbers of people it conſiſts of, Sir William Petty makes a compariſon under divers heads, between that and Paris, now one of the moſt flouriſhing cities in Europe, and to exceed it in all theſe particulars following: I. In the wealth and great eſtates of the inhabitants, the number of their ſervants, and greatneſs of their equipages. II. In the wholeſomeneſs of the air. III. In the cleanly and more convenient way of living. IV. In the preference of the river Thames to that of Seine, both in pleaſantneſs and navigableneſs, and in the wholeſomeneſs of it's waters, and the great bridge of London built over it. V. In the ſhipping and foreign trade; London therein incomparably exceeding both Paris and Roan. VI. In the cheapneſs of all the moſt neceſſary ſorts of food, and the great variety and plenty of all ſorts of drink. VII. In the cheapneſs, likewiſe, and goodneſs of fuel, and conveniency of ſtowage. VIII. In the magnificence of the churches; none at Paris being ſo great as St. Paul's hath been and now is, none ſo beautiful as king Henry the Seventh's chapel. IX. In the courts of inns and chancery, and the lawyers chambers. And, laſtly, in the hoſpitals, ſo many and ſo richly endowed, and for the relief of multitudes of miſerable and diſtreſſed people of all ſorts.

Collected bodies of people are alſo a particular aſſiſtance to trade; and, therefore, to have one great and capital city in a kingdom is a very great advantage to trade, and much more than if the ſame number of people dwelt in ſeveral places. For example:

Suppoſe the city of London, and it's ſuburbs, to contain 1,500,000 people, as ſome have computed, though we believe that number to be much too large, it ſeems far more to the advantage of the whole kingdom, in reſpect to it's commerce, that it ſhould be ſo, than that the ſame number of people were divided equally, and lived in 15 ſeveral cities, remote from one another.

It is the ſame as to navigation: it is much better that they have here one commanding port, one noble navigable river, than that they had, in their divided and remote ſituation, as above, 15 navigable rivers, one to every city.

Spain is a remarkable inſtance of this: there is no capital city, except that, or rather the village of Madrid, where the court reſides, which is ſuppoſed to contain 300,000 people; but it has neither ſea-port or inland navigation, no navigable rivers being near it; the neareſt is the Tagus, or Toledo, which is not only diſtant 12 leagues, at leaſt, but does not open into the ſea in the ſame dominions, but in Portugal; ſo that it is no navigation at all as to Spain.

Spain has abundance of other populous cities and ſea-ports in it, diſperſed and remote from one another, as Seville, Granada, Valencia, Toledo, Cordova, and ſeveral others.

Seville has at leaſt 300,000 people in it alſo, and ſeveral of the reſt from 100,000 to near 200,000, at Cadiz, Barcelona, Malaga, Saragoſſa, Valencia, Granada, which laſt city our beſt geographers reckon to be very near as populous as Seville or Madrid; the beſt accounts we can meet with from the Spaniards themſelves are as follow:

1. Madrid, 24,000 families, half of which are of nobility and quality, having from 20 to 30 and upwards in family, the reſt being of the ordinary rate.

Beſides eſtimating the king's houſhold at the Pardo, which, including the ordinary guards, is ſaid to contain always 12,000 ſouls. 2. Seville, containing 60,000 families, at ſix in a houſe, 360,000 ſouls. 3. Granada, 50,000 families. 4. Malaga. 5. Cordova. 6. Valencia. 7. Barcelona. 8. Saragoſſa. 9. Cadiz. 10. Majorca; each of theſe 15,000 families; which, with the poor and the religious houſes, make far above 100,000 in each city.

The reaſon of naming theſe cities will appear preſently: put them all together, they are not ſuppoſed to contain more people than the city of London, and thoſe adjacent towns to London which depend upon their ſupply of proviſions from the city, including alſo the ſhips in the river.

Now as theſe cities ſtand all remote from one another, and moſt of them in the moſt rich and fertile ſoil, or near the ſea-coaſts, or on the banks of navigable rivers, their ſupply of proviſions, fuel, cloathing, equipage, furniture, and take it of as many kinds as you pleaſe, does neither come with difficulty, call for multitudes of hands to be employed in raiſing, procuring, fetching, or carrying them; nor does it influence the country to any perceptible degree, except, perhaps, for 20 or 30 miles round them. But were all theſe cities, that is to ſay, the number of the inhabitants included in them, all joined in one capital, ſuppoſe Madrid, and though you were to ſuppoſe Madrid had a noble navigable river coming up to it, ſuch as the Tagus, or the Ebro, or the Guadalquiver, it is evident the whole kingdom of Spain, large and ſpacious as it is, for it may be reckoned almoſt 500 miles ſquare, would be engaged and influenced, more or leſs, in ſupplying that one city with proviſions.

All the ſea coaſts, and all the cities and ports upon thoſe coaſts, would be buſied, and fleets of ſhips employed to furniſh wine, corn, oil, fruits, and foreign importations of every kind, all to the capital port of Madrid.

All the inland provinces would be engaged and employed in ploughing and ſowing the lands, to raiſe corn, planting vines and groves of olives, to make wine and oil for this great metropolis.

All the rich meadows and paſtures would be improved to feed and fatten the black cattle, to nouriſh the cows, ſuckle the calves, and furniſh beef, veal, and milk, butter, cheeſe, &c. and all the mountains, the foreſts, and plains, for breeding the black cattle and horſes before they come to thoſe rich paſtures; alſo the plains muſt be covered with flocks of ſheep, which are now diſperſed and ſcattered a few and few together: and thus, as it is in England, every province would be providing ſomething for the capital.

Nor is it a juſt objection to ſay, the ſame number of people will conſume the ſame quantity of proviſions, in whatever ſituation they may be placed; for, though the quantity ſhould be the ſame, yet the influence upon trade, occaſioned by it's being all pointed to one center, is ſuch as quite alters the caſe, and would put the whole body of the people into motion, as it is in England. What fleets would there be employed to bring oil from Seville and Majorca, wine from Cadiz, Malaga, Alicant, Barcelona, and Galicia, &c. fiſh, wrought iron and ſteel, all ſorts of weapons, fire-arms and artillery, from Bilboa and St. Antonia, and ſilk and wool from Segovia and Valencia, and the like from other parts?

What an infinite number of horſes, mules, and carriages, and carriers, muſt be employed by land from all the inland provinces, to carry the product of the earth directly to Madrid, or, if too remote for that, to carry them to the ſeveral ſea-ports where thoſe ſhips and fleets were to take them on board! How is this the cauſe of employing a thouſand ſail of ſhips, and, perhaps, three times as many in England, to bring the coals from one place, ſalt from another, cheeſe from another, lead from the north, block-tin from the weſt, corn from Hull, from Lynn, and from all the coaſts of Norfolk, Suffolk, Eſſex, Kent, Suſſex, and Southampton; fiſh from all the ſeas on the eaſt and ſouth ſides of the iſland, and ſo of the reſt?

How many thouſands, I might ſay hundreds of thouſands, of men and horſes are employed in the carrying and re-carrying to and from London the growth of England, and the importations of foreign countries? And how many of theſe would ſtand ſtill and want buſineſs (nay, want bread, perhaps) if this great city was divided into 15 cities, as above, and they were ſituated in ſo many different places, remote from one another, where the country within 20 or 30 miles round them would be ſufficient for them, and able to ſupply them, and where every port would import their own goods from abroad.

In a word, we ſhould have a general want of buſineſs; whereas now all the world (in this city) are in a hurry, and fully employed, in carrying out and fetching in.

Particularly obſerve another article, the number of people at London makes this city the center of foreign commerce: here a great quantity of goods from all foreign countries are brought in, becauſe here is always a market, and here they can be conſumed; whereas, take all the other ports of England, many of them can ſend ſhips loaden out, but few can bring them loaden home, as before ſhewn.

To bring this to our ſubject: all theſe proviſions expended at Madrid, what do they for the country as to trade? Some benefit they are, it is true, to the neighbouring provinces; ſo is our city of Briſtol to it's counties: but how far in the country from them does that employment extend? How far do they feel the influence? Perhaps in Spain the country may be concerned in furniſhing corn 20 or 30 miles, and cattle 40 or 50; but, after that, we find little or nothing of it.

At Briſtol, indeed, they carry corn a great way, by water, down the rivers Severn and Avon, out of Glouceſterſhire and Worceſterſhire, and from the vale of Eveſham; they likewiſe bring cyder from Herefordſhire, down the Wye, Cheſhire cheeſe by the Severn, out of Shropſhire, and butter from South Wales, by ſea: and ſo Briſtol may, in ſome degree, affect all thoſe counties.

But their black cattle are ſupplied from Somerſetſhire and Wales, and their mutton and corn, cheeſe and bacon, from Wilts and Glouceſterſhire, all counties juſt adjoining; and, after 20 miles from them, even in thoſe counties, you ſcarce find any mention of Briſtol: nay, one way, there are other cities and great towns that intercept the proviſions; ſo that very little comes that road, except beef; I mean Somerſetſhire, where there are the city of Wells, the city of Bath, and the towns of Bridgewater and Froom; the latter more populous, perhaps, than both the two former put together, though cities.

Thus trade receives but little influence from ſuch places as Madrid in Spain, or Briſtol in England, except it be juſt in the adjacent counties, and within 20 or 30 miles of the place.

But bring this back to the great city of London, and conſider the multitudes of people there, and the exceeding numbers which are gathered ſouthward into the counties and towns for 30 or 40 miles round London, almoſt every way; how all the country round is made populous by the vaſt run of buſineſs occaſioned by the neighbourhood of the city; inſomuch that it is ſuppoſed, if there is a million and a half of people in London and it's ſuburbs, there is at leaſt half a million more in Middleſex, and in thoſe parts of Eſſex, Surrey, and Kent, which lie ſo adjacent to London as to be within about 10 miles of it: now, for the ſupply of theſe two millions of people, we find the whole kingdom more or leſs engaged, and the wheels of trade are ſet a-going by it almoſt all over the iſland.

We take this propoſition about great cities, and the number of people collected together making trade, to agree in ſome meaſure with what you may obſerve in the ſpring of the year, from the variety of the ſeaſons; take a time of drought, and, when the earth, for want of rain, is dried, hard, and parched up, comes a light flying ſhower, and wets the ſurface a little, and goes off; then comes a hot gleam from the ſun, and licks it up; and by and by comes another daſh of wet, and then more ſunſhine: and ſo on ſucceſſively and alternately, ſeveral times a day, and for a week or a fortnight together.

Theſe light flying ſhowers anſwer no end, do little or no good; the ſun dries it up as faſt as it wetted, and, by the long intervals between, all the benefit is loſt; the ground remains hard, ſterile, and barren ſtill; it is all one as a drought.

But would the ſame quantity of rain fall all in one ſhower, was there a weight of water ſufficient to ſet nature at work, ſink down to the root, and duly moiſten the plants, give drink to the thirſty earth, and ſet the priſoners free, (I mean the ſeeds, which lie baked and blocked up in the earth, and cannot get out) then the earth is refreſhed, and every thing thrives and flouriſhes as it ſhould do.

I think the ſimile is pretty juſt: a ſmall body of people do nothing as to this article of trade; they do not influence trade, even in proportion to their numbers; like a ſmall ſtream of water to a mill, it not only will not make the wheel go at a proportioned rate, but it runs by, or under it, goes off in waſte, and does not make the mill go at all; it runs all away to no purpoſe.

Here is a ſmall city, and there a large town; they are good to depend upon the capital, and to have the capital, in many things, depend upon them; but they are not able to ſubſtitute a capital, and to ſtand in the room of it: when they come to have the general body, the whole nation's trade depend upon them, inſtead of a capital city, then they are nothing at all, they are of no importance.

They tell us France is ſo ſituated by the aſſiſtance of navigable rivers, that there are two and forty large cities which have all a communication with the great city of Paris by water, either by ſea or river navigation; and what is the conſequence? Not that theſe cities make Paris great and rich, but that all theſe cities are made rich and great by the city of Paris.

We ſay the ſame of London, though not as to river-navigation; but the whole kingdom of England, by it's communication with London, is the ſame; it is not the kingdom makes London rich, but the city of London makes all the kingdom rich. The country correſponds with the city, but the city correſponds with all the world; the country ſupplies the city with corn and cattle, that is to ſay, with proviſions; yes, and if there was not ſuch a city to take off and conſume them, what would the country do? How muſt the product of the land be ſold? How the rents paid? The land muſt lie waſte and uncultivated, the cattle would run wild, and devour the country, or be ſtarved and die: the country ſends up their corn, their malt, their cattle, their fowls, their coals, their fiſh, all to London; and London ſends back ſpice, ſugar, wine, drugs, cotton, linen, tobacco, and all foreign neceſſaries to the country; and, above all the reſt, that uſeful drug called money: ſo that ſtill it is the capital city that is the life of the country, and keeps them all in motion.

Again, the countrymen ſheer their ſheep, ſell their wool, carry it from place to place; the manufacturers ſet it to work, to combing, carding, ſpinning, winding, twiſting, dyeing, weaving, fulling, dreſſing; and thus they finiſh their numberleſs manufactures. But what muſt they do with them? What could a Madrid or a Briſtol do for them? Briſtol could take off ſome, indeed, and does export a proportion with it's neighbours; but London is the center of the groſs body of manufacture; London anſwers the end of every trade abroad, and of every manufacture at home; be it Mancheſter for cotton ware, Yorkſhire for coarſe cloth, kerſies, &c. Wilts and Glouceſter for fine cloths; Norwich for ſtuffs; Wales for flannels; all goes to London, and all have their money in return from London.

London conſumes all, circulates all, exports all, and, at laſt, pays for all; and this is trade: this greatneſs and wealth of the city is the ſoul of the commerce to all the nation; and, as there is the greateſt number of tradeſmen in this city that are to be ſeen in any place in the world, ſo they again ſupport and ſupply an innumerable number of ſhopkeepers and tradeſmen of every kind in the country, and in every part of the country.

It may be thought a little aſſuming to ſay, the city ſupports the tradeſmen of the country, but the fact is plain; you cannot go to a ſhopkeeper of any note in the remoteſt town in England, but he holds ſome correſpondence at London; or elſe he muſt be a mean tradeſman, that buys his goods of ſome of his better-furniſhed neighbours, and they buy at London: ſo that the other may be ſaid to buy at London too, only he does it at ſecond-hand.

Nor is this all; but, as all theſe country tradeſmen buy at London, ſo they all are in debt at London more or leſs; they all owe the London ſhopkeepers money; ſo that the whole country may in ſome reſpects be ſaid to trade upon the city's ſtock, the London tradeſmen giving them all credit.

It is, indeed, a little remote from the ſubject of inland trade, or elſe it is very remarkable and worth our obſerving, that the city of London trades with ſuch an immenſe ſtock, that it may be ſaid they give credit to all the world more or leſs; all the trades they carry on abroad, almoſt in every part of the world, are carried on by the ſtrength of their ſtocks; they

do not receive the goods from abroad, and ſo make the returns back to the ſeveral countries from whence they come, but they ſend their own goods firſt out, and receive the goods of other countries back in payment.

Thus in all the ports of Spain, Portugal, Italy, and Turkey, the merchants of London have their houſes (as they call them) there; the warehouſes are piled full up to the cielings with Engliſh bales; Engliſh ſtocks carry on the trade; in a word, we give credit to all the world.

Not a fleet of Portugueze ſhips from the Brazils, not the galleons or flota from New Spain, but a ſhare of the gold of the firſt, and the ſilver of the laſt, is the product of Engliſh ſtocks, and belongs to London merchants, whoſe goods, ſold upon credit at Liſbon and Cadiz, went firſt out to America to purchaſe that gold and ſilver.

Not a Turkey fleet, or a ſhip from Leghorn, Meſſina, or Genoa, how rich ſoever freighted with the fineſt raw and thrown ſilk, the choiceſt drugs and gums, but it is all the effects of the merchants of London, and in return for credit firſt given by the city of London.

It is the like in the plantation trade; all the New England trade, the Jamaica trade, the Barbadoes trade, it is all carried on by the ſtocks of the Engliſh merchants.

The ſugars, the tobaccoes, the furrs, the turpentine, the cacao, the indico, and all the reſt of the produce of our colonies, come home in return from all thoſe iſlands for the goods long before conſigned to them chiefly from London; ſo that, in fine, almoſt all the plantations are managed upon the ſtock and ſubſtance of the citizens of London.

To bring it all back to what we have obſerved before: as this vaſt correſpondence abroad is thus carried on by the city of London upon it's own ſtock, and they give credit to all the world; ſo, when thoſe returns come back, they diſperſe all thoſe goods again among the country tradeſmen, and give them credit too; and this is the effect of a capital city: a capital city carries on a capital trade, and enriches and employs the whole country; which, if the ſame people dwelt in a divided and ſeparate capacity, would not be the caſe at all.

So many deductions muſt be made from the home trade, that thouſands, nay hundreds of thouſands of people now employed in collecting the commerce thus to one place, would then be left without buſineſs, and by conſequence without bread; as in the country, if the ſheep fed all about the farmers houſes as the ſwine do, or were domeſtics like their dogs, and not in flocks, requiring to be tended and directed, there would be no employ for all the ſhepherds, which in the weſt and northern parts of England are maintained by keeping, and waiting upon, and folding them; ſo the neceſſary attendance upon the trade, as it all goes up to, and comes back from London, how many thouſands of people does it employ?

Moreover, this capital city is the grand ſource and ſupport of the public credit of the whole ſtate, as hath been experienced upon numberleſs occaſions.—Here the circulating power of all the public funds, and the public revenue is conſtantly exerciſed, for the benefit of the kingdom in general, and for the convenience of its traffic.—This is the center of paper circulation, by the means of that national and noble eſtabliſhment the bank of England, and the high credit of it's eminent and opulent bankers, who are not inferior, in point of wealth, honour, and ſagacity, to thoſe of any ſtate or empire in the whole world.

What numbers of the greateſt and moſt illuſtrious nobles of this kingdom have ſprung from the city of London [ſee our article COMMERCE], and what ſome of the merchants of this capital have done for the ſupport of the kingdom in general on the moſt critical emergencies, ſee our article MERCANTILE COLLEGE. However, to add another inſtance to what I have elſewhere ſaid:—'The parliament granted, ſays Rapin, king Richard II. a ſubſidy for the maintenance of the war: but it was clogged with this condition (which ſhewed they were reſolved to be upon their guard during the minority) that the money ſhould be lodged in the hands of Philpot and Walworth, two very noted ALDERMEN of LONDON, who were ordered to take care that it ſhould be expended only in repulſing the French and Caſtillians, in league againſt England.—In the mean time the duke of Lancaſter, who was vexed to ſee money, granted the king by the parliament, in the hands of two citizens of London, haſtened not the getting ready the ſhips neceſſary for the defence of the coaſts. This affected negligence gave occaſion to a great many complaints. But he pleaded in his excuſe that he could not form any project, leſt it ſhould not be approved of by thoſe who had the management of the money. In fine, he importuned ſo the other regents upon that ſcore, that the two aldermen were ordered to put into his hands the ſums they had in charge. He promiſed, for his part, that the coaſts ſhould be better guarded, and the merchantmen protected. However, it was a good while before he ſent a fleet to ſea, becauſe he expected from Bayonne ſome ſhips which were to join thoſe he had equipped.

Whilſt the fleet was getting ready, the earls of Arundel and Saliſbury had orders to go to Normandy and take poſſeſſion of Cherbourg, which the king of Navarre had promiſed to deliver up to the Engliſh. Hardly were they got to ſea, when they met ſome Spaniſh men of war, who fiercely attacked them, and did them ſome damage. Notwithſtanding this, they put a garriſon into Cherbourg, which opened the Engliſh an inlet into Normandy, as Calais did into Picardy. Before the fleet deſigned to guard the coaſts was ready, a Scotch pirate, one Merier, ſeeing that the Engliſh neglected the northern ſeas, entered the port of Scarborough, and carried off the merchantmen that lay there. This ſucceſs having inſpired him with greater hopes, he cruized a long time in thoſe parts, and took conſiderable prizes. The damages the merchants ſuſtained, on this occaſion, caufed freſh complaints againſt the duke of Lancaſter, who ſo ill performed his promiſe.

Philpot, whom I mentioned before, full of indignation to ſee the Engliſh merchants expoſed to the ravages of this pirate, undertook to do, at his OWN EXPENCE, what the duke neglected to do with the public money. He fitted out ſome ſhips, on board of which he put a THOUSAND SOLDIERS, and, having found the Scotch pirate, he defeated him, took him priſoner, and returned in triumph to London. This action, which gained him the applauſes of the people, offended the regent, who thought it of dangerous conſequence to ſuffer a private perſon to undertake a thing of that nature without the government's leave. But he vindicated what he had done, with ſuch good reaſons and with ſo much modeſty, that he was acquitted.—This, among many others mentioned throughout this work, is a memorable action of a LONDON MERCHANT to preſerve the commerce of the nation!

As king Richard the IId of England was very fond of pomp and magnificence, his expences far exceeded his revenues, ſo that he was forced to make uſe of ſeveral illegal methods to ſupply his occaſions. He had a mind once to try the affections of the city of London, by deſiring them to lend him only a thouſand pounds ſterling: but, though it was no great ſum, they bluntly denied him *; which ſo mortified him, that not long after, there being a tumult † in the city, occaſioned by a baker's boy, he deprived the city of it's privileges, turned out the mayor, eſtabliſhed a warden in his room, and removed the courts of judicature to York; and it afterwards coſt the city no leſs than 10,000 l. to recover it's charter.

* It is ſaid that an Italian merchant, who offered to lend him that ſum, was mobbed, and, according to Rapin, cut to pieces.

† Our hiſtorians tell us, that this was the occaſion of the tumult; a baker's boy, paſſing through Fleet-ſtreet with a baſket of bread, a ſervant belonging to the biſhop of London, as Caxton ſays (but, as Sir John Hayward ſays in his Life of Henry IV. to the biſhop of Saliſbury, wherein he agrees with Hollingſhead and others) took out a loaf, and abuſed the boy, who demanded it, in ſuch a manner as raiſed a mob, that threatened to fire the biſhop's palace, into which he retired for ſhelter, 'till the magiſtrates came and ſuppreſſed them.

An order to the courts of juſtice at Weſtminſter, to remove to York, dated at Stamford, March 13, 1392.

The eſtabliſhment of a warden of London, in the room of the depoſed mayor, dated June 25, 1392, at Nottingham-caſtle *. A receipt for 10,000 l. ſterling, paid to the king by the city of London, to regain his good-will, dated February 28, 1393, at Weſtminſter.

* This warden was Sir Edward Dalyngrugge, who, being thought too favourable to the citizens, was quickly removed, and Sir Baldwin Baddington, a perſon of a rougher temper, put in his place, who by his prudent conduct pleaſed both the king and the city. It appears by the account we have of this reign, in the Compleat Hiſtory of England, vol. i. and in that called the Life and Reign of King Richard II. compiled by a perſon of quality, and from the accounts of Knighton and Walſingham, that the biſhop of Saliſbury, having an old grudge againſt the citizens, who were generally reckoned favourites of Wickliff's doctrine, took the opportunity of the riot before-mentioned, to ſtimulate and heighten the king's diſpleaſure againſt the city to that degree, that he threatened to raze it to the ground; but, at the mediation of ſome of the nobility, ſent for the mayor, ſheriffs, aldermen, and 24 others of the ableſt citizens to his court, then held at Nottingham; where, impeaching one another in hopes to curry favour with the king, the mayor was committed to Windſor-caſtle, and the reſt to other goals. Mean time, the queen, the duke of Glouceſter, the biſhop of London, and other perſons of diſtinction, interceding with the king heartily for the city, he was ſo pacified that he ſet out for London, being met from the city by 400 men on horſeback, clad all in one livery, and innumerable multitudes on foot, a ſolemn proceſſion of the clergy, and 500 boys in ſurplices, the balconies being hung with tapeſtry and pictures, the conduits flowing with wine, &c. Beſides, they preſented the king with a crown of gold of great value, and another of the ſame metal to the queen, together with a picture of the Trinity worth 800 l. and ſeveral other great gifts, by which means they obtained all their old privileges: but, after all this, they were forced to pay 10,000 l. or elſe they muſt have ventured the effects of the king's freſh

freſh diſpleaſure. The biſhop of London, who had ſuch a great hand in the reconciliation, was not only highly honoured by the citizens all his life, but after his death; the mayor, aldermen, and companies, made nine proceſſions a year to Weſtminſter, where he lay buried, to pray for his ſoul. Mr. Rapin obſerves, that Richard lived to repent his ſevere treatment of this city, by which he entirely loſt the citizens hearts, who afterwards convinced him, how dangerous it is for a king of England to have that metropolis for his enemy. Rymer's Fœdera.

And, how zealous the citizens of London were in bringing about the revolution, upon the abdication of the late king James, appears from what follows*:

* See the Revolution vindicated; in anſwer to the two memorials, and the proteſtation againſt the peace of Ryſwic, and other papers publiſhed in king James's name. State Tracts of 1707, folio.

'About ten o'clock, the lords ſpiritual and temporal about the town, came to Guildhall, and, ſending for the lord mayor and aldermen, agreed on a declaration, which among other things bears—'That they did reaſonably hope that, the king having iſſued out his proclamation and writs for a free parliament, they might have reſted ſecure under the expectation of that meeting: but, his majeſty having withdrawn himſelf, and, as they apprehended, in order to his departure out of the kingdom, by the pernicious councils of perſons ill affected to the nation and their religion, they could not, without being wanting to their duty, be ſilent under thoſe calamities, wherein the popiſh councils which ſo long prevailed, had miſerably involved theſe realms; they did therefore unanimouſly reſolve to apply themſelves to his highneſs the prince of Orange, who, with ſo great a kindneſs to theſe kingdoms, ſo vaſt expence, and ſo much hazard, had undertaken, by endeavouring to procure a free parliament, to reſcue them, with as little effuſion of Chriſtian blood as poſſible, from the imminent dangers of popery and ſlavery; and declare, that they will, with their utmoſt endeavours, aſſiſt his highneſs in the obtaining ſuch a parliament, in which their laws, and libertics, and properties, and religion, might be ſecured, and the proteſtant religion and intereſt over the whole world ſupported and encouraged, to the glory of God, the happineſs of theſe kingdoms, and the advantage of all princes and ſtates in Chriſtendom that may be therein concerned.—And ſuch a parliament they would endeavour to have with all ſpeed, they ſay, and ſo it ſeems were reſolved not to wait 'till king James's return.

It was ſigned by 31 lords and biſhops, and ſent to the prince by four of their number.

This declaration of the lords was followed the ſame day by two addreſſes to the prince, one from the LORD MAYOR, COURT of ALDERMEN, and the COMMON COUNCIL, and the other from the lieutenancy of LONDON. The firſt bears thanks to God almighty for having bleſſed his highneſs's endeavours with miraculous ſucceſs, and thanks to his highneſs for appearing in arms to reſcue theſe kingdoms from ſlavery and popery, and to eſtabliſh, in a free parliament, their religion, laws, and liberties, upon a ſure and laſting foundation. That they had hitherto looked for ſome remedy for thoſe oppreſſions and imminent dangers from his majeſty's conceſſions, and concurrences with his highneſs's juſt and pious purpoſes expreſſed in his declaration. But, herein, finding themſelves finally diſappointed by his majeſty's withdrawing himſelf, they preſumed to make his highneſs their refuge; and, in the name of the CAPITAL CITY, they implored his protection, and begged that he would repair to the city, where they aſſured him he would be received with univerſal joy and ſatisfaction, as quickly after happened. The lieutenancy or militia of the city, in their addreſs, expreſſed the deep ſenſe they had of what they owed to him. That without his undertaking they had been undone; that it was their firm reſolution to venture all that was dear to them, to attain the glorious ends of his declaration: that they had put themſelves into ſuch a poſture, as with the bleſſing of God was ſufficient to prevent all ill deſigns, and to preſerve the city in peace 'till his arrival; which they deſired he would haſten, for the perfecting the great work which he had ſo happily begun, to the general joy and ſatisfaction of them all. How well this lieutenancy ſtood affected to the late king, and had proved firm to him 'till now that he abandoned them, is known.'

Further REMARKS.

That the reader may entertain a juſt idea of the importance of this city to the commerce of the kingdom, we ſhall give him the deſcription of the Royal Exchange of London, from our countryman, that inimitable writer Mr. Addiſon; for authorities have often more force than the ſtrongeſt reaſoning, or the cleareſt demonſtration.

'There is, ſays he, no place in the town, which I ſo much love to frequent as the Royal Exchange of London. It gives me a ſecret ſatisfaction, and, in ſome meaſure, gratifies my vanity as I am an Engliſhman, to ſee ſo rich an aſſembly of my countrymen and foreigners conſulting together upon the private buſineſs of mankind, and making this metropolis a kind of emporium for the whole earth; I muſt confeſs, I look upon high change to be a great council, in which all conſiderable nations have their repreſentatives. Factors, in the trading world, are what ambaſſadors are in the politic world. They negociate affairs, conclude treaties, and maintain a good correſpondence between thoſe wealthy ſocieties of men, that are divided from one another by ſeas or oceans, or live on the different extremities of a continent. I have often been pleaſed to hear diſputes adjuſted between an inhabitant of Japan and an alderman of London; or to ſee a ſubject of the Great Mogul entering into a league with one of the Czar of Muſcovy. I am infinitely delighted in mixing with theſe ſeveral miniſters of commerce, as they are diſtinguiſhed by their different walks, and different languages. Sometimes I am joſtled among a body of Armenians, ſometimes I am loſt in a crowd of Jews, and ſometimes make one in a group of Dutchmen. I am a Dane, Swede, or Frenchman, at different times; or rather fancy myſelf like the old philoſopher, who, upon being aſked what countryman he was, replied that he was a citizen of the world.

Though I very frequently viſit this buſy multitude of people, I am known to nobody there but my friend Sir Andrew, who often ſmiles upon me, as he ſees me buſtling in the crowd, but at the ſame time connives at my preſence, without taking any farther notice of me. There is, indeed, a merchant of Egypt, who juſt knows me by ſight, having formerly remitted me ſome money to Grand Cairo; but, as I am not verſed in the modern Coptic, our conferences go no farther than a bow and a grimace.

This grand ſcene of buſineſs gives me an infinite variety of ſolid and ſubſtantial entertainments. As I am a great lover of mankind, my heart naturally overflows with pleaſure at the ſight of a proſperous and happy multitude; inſomuch that, at many public ſolemnities, I cannot forbear expreſſing my joy with tears, that have ſtolen down my cheeks. For this reaſon, I am wonderfully delighted to ſee ſuch a body of men thriving in their own private fortunes, and at the ſame time promoting the public ſtock; or in other words, raiſing eſtates for their own families, by bringing into their country whatever is wanting, and carrying out of it whatever is ſuperfluous.

Nature ſeems to have taken a particular care to diſſeminate her bleſſings among the different regions of the world, with an eye to this mutual intercourſe and traffic among mankind, that the natives of the ſeveral parts of the globe might have a kind of dependance upon one another, and be united together by their common intereſt. Almoſt every degree produces ſomething peculiar to it. The food often grows in one country, and the ſauce in another.

The fruits of Portugal are corrected by the products of Barbadoes, the infuſion of a China plant ſweetened with the pith of an Indian cane. The Philippic Iſlands give a flavour to our European bowls. The ſingle dreſs of a woman of quality is often the product of an hundred climates. The muff and the fan come together from the different ends of the earth. The ſcarf is ſent from the torrid zone, and the tippet from beneath the pole The brocade petticoat riſes out of the mines of Peru, and the diamond necklace out of the bowels of Indoſtan.

If we conſider our own country in it's natural proſpect, without any of the benefits and advantages of commerce, what a barren, uncomfortable ſpot of earth falls to our ſhare? Natural hiſtorians tell us, that no fruit grows originally among us, beſides hips and haws, acorns and pig-nuts, with other delicacies of the like nature; that our climate, of itſelf and without the aſſiſtance of art, can make no farther advance towards a plum than to a ſloe, and carries an apple to no greater perfection than a crab; that our melons, our peaches, our figs, our apricots and cherries, are ſtrangers among us, imported in different ages, and naturalized in our Engliſh gardens; and that they would all degenerate and fall away into the traſh of our own country, if they were wholly neglected by the planter, and left to the mercy of our ſun and ſoil. Nor has traffic more enriched our vegetable world, than it has improved the whole face of nature among us. Our ſhips are laden with the harveſt of every climate. Our tables are ſtored with ſpices, and oils, and wines. Our rooms are filled with pyramids of China, and adorned with the workmanſhip of Japan.

Our morning's draught comes to us from the remoteſt corners of the earth. We repair our bodies by the drugs of America, and repoſe ourſelves under Indian canopies. My friend Sir Andrew calls the vineyards of France our gardens, the Spice Iſlands our hot-beds, the Perſians our ſilk-weavers, and the Chineſe our potters. Nature, indeed, furniſhes us with the bare neceſſaries of life, but traffic gives us a great variety of what is uſeful, and at the ſame time ſupplies us with every thing that is convenient and ornamental. Nor is it the leaſt part of this our happineſs, that, whilſt we enjoy the remoteſt products of the north and ſouth, we are free from thoſe extremities of weather which give them birth; that our eyes are refreſhed with the green fields of Britain, at the ſame time that our palates are feaſted with fruits that riſe between the tropics.

For

For theſe reaſons, there are not more uſeful members in a commonwealth than merchants. They knit mankind together in a mutual intercourſe of good offices, diſtribute the gifts of nature, find work for the poor, add wealth to the rich, and magnificence to the great. Our Engliſh merchant converts the tin of his own country into gold, and exchanges his wool for rubies. The Mahometans are cloathed in our Britiſh manufacture, and the inhabitants of the frozen zone warmed with the fleeces of our ſheep.

When I have been upon the change, I have often fancied one of our old kings ſtanding in perſon, where he is repreſented in effigy, and looking down upon the wealthy concourſe of people, with which that place is every day filled. In this caſe, how would he be furprized to hear all the languages of Europe ſpoken in this little ſpot of his former dominions; and to ſee ſo many private men, who in his time would have been the vaſſals of ſome powerful baron, negociating, like princes, for greater ſums of money than were formerly to be met with in the royal treaſury? Trade, without enlarging the Britiſh territories, has given us a kind of additional empire. It has multiplied the number of the rich, made our landed eſtates infinitely more valuable than they were formerly, and added to them an acceſſion of other eſtates as valuable as the lands themſelves.'

It is ſaid of England, by way of diſtinction, and we value ourſelves upon it, that it is a trading country: and king Charles II. who, though he was not the beſt governor, was the beſt acquainted with the world of all the princes of his age, uſed to ſay, THAT THE TRADESMEN WERE THE ONLY GENTRY IN ENGLAND: his majeſty ſpoke it merrily, but it had a happy ſignification in it. For

Our tradeſmen, eſpecially thoſe of the great city we have been deſcribing, are not as in other countries, the meaneſt of our people: ſome of the greateſt and beſt families among not the gentry only, but even the nobility, have been raiſed from trade, owe their beginning and their eſtates to trade: and we may add, that theſe families are not aſhamed, as they have no reaſon, of their original. See our article COMMERCE.

We have in England a numerous and an illuſtrious nobility and gentry, and it is true, alſo, that, not ſo many of thoſe families have raiſed themſelves by the ſword as in other nations, though we have not been deſtitute of military heroes.—But trade and learning have been the true principal channels by which our gentlemen have raiſed their fortunes and ſplendor to the prodigious height we now behold them. As ſo many of our noble and wealthy families are ſprung from trade, ſo it is true, that many of the younger branches of our gentry, and even of the nobility itſelf, have deſcended again into the ſpring from whence they flowed, and have become tradeſmen: whence it is that we ſaid above, our tradeſmen in England, eſpecially in London, are not, as in other countries, always of the meaneſt of the people. Nor is trade in this kingdom a mean employment: it is on the contrary, the readieſt way for men to raiſe their fortunes and families: and, therefore, it is a field for men of figure and diſtinction to enter upon.

It reflects, therefore, not a little upon the underſtandings of thoſe refined heads who pretend to depreciate that part of the nation, which is ſo infinitely ſuperior in wealth to the families who call themſelves gentry, and ſo infinitely more numerous. The wealth of the nation lies chiefly among the trading part of the people; though there have been a great many families raiſed by the late wars, by great employments, and by renowned actions abroad, to the honour of the Engliſh gentry; yet how many more families among the tradeſmen have been raiſed to immenſe eſtates, even during the ſame period, by the attending circumſtances of the wars? ſuch as the cloathing, the paying, the victualling, and furniſhing, &c. both army and navy? And by whom have the prodigious taxes been paid, the loans ſupplied, and money advanced upon all occaſions? By whom are the banks and companies carried on? On whom are the funds levied, and by whom the public credit upheld? Have not the trade and tradeſmen borne the burthen of the wars? Is not trade the inexhauſtible fund of all funds, and upon which all the reſt depend?

As is the trade, ſo in proportion are the tradeſmen; and how opulent are tradeſmen in almoſt all the ſeveral parts of England, as well as in London? How ordinary is it to ſee a tradeſman go off of the ſtage, even but from mere ſhopkeeping, with from 10 to 40,000 l. eſtate, to divide among his family? On the contrary, take the gentry in England in general, what with high living, which is grown ſo much into a diſeaſe, and the other ordinary circumſtances of families, we find few of the lower gentry, that is to ſay, from 6 to 700 l. a year downwards, but they are in debt, and in neceſſitous circumſtances, and many of much larger eſtates alſo. How are the ancient families worn out by exceſs and family misfortunes, and the landed eſtates poſſeſſed by a new race of tradeſmen, grown up into families of gentry, and eſtabliſhed by the immenſe wealth gained in the ſhop, the warehouſe, or the counting-houſe? How are the ſons of traders now ranked among the prime of the gentry? How are the daughters of London traders at this time adorned with the ducal coronets? Nay, many of our trading gentlemen at this time refuſe to be ennobled, ſcorn being knighted, and content themſelves with being known to be rated among the richeſt commoners in the nation? And it muſt be acknowledged, that, whatever they may be as to court-breeding, and the external politeſſe, they, generally ſpeaking, are inferior to none of the gentry in the knowledge of the world.

In how ſuperior a port or figure, as we ſay, do our tradeſmen live to what the middling gentry either do, or can ſupport? An ordinary tradeſman now, not in the city of London only, but in the inland counties, as well as the out-ports, ſhall ſpend more money by the year than a gentleman of 4 or 500 l. a year can do, and ſhall increaſe his fortune every year too: whereas the gentleman ſhall, at the beſt, ſtand ſtill, juſt where he began, nay, perhaps, decline; and as for the lower gentry, from 100 l. a year to 300 l. or thereabouts, though they are often high in their appearance, yet a ſhoemaker in London ſhall keep a better houſe, ſpend more money, cloath his family better, and yet grow rich too: is it not evident, therefore, where the difference lies? An eſtate is a pond, but trade is a ſpring.

This being the caſe in England, it is no wonder that our tradeſmen fill the liſts of our nobility and gentry; no wonder that the gentlemen of the beſt families marry tradeſmens daughters, and put their younger ſons apprentices to tradeſmen. And how often do theſe younger ſons come to buy the elder brothers eſtates, and reſtore the family, when the head of the houſe, proving unhappy in his conduct, for want often of employment, has waſted his patrimony, and is obliged to make out the bleſſing of Iſrael's family, where the younger ſon bought the birth right, and the elder was doomed to ſerve him?

Trade is ſo far from being inconſiſtent with a gentleman in this kingdom, that it makes gentlemen, and has peopled this nation with gentlemen, and will continue ſo to do, while it ſhall be ſupported in proportion as it may be in neighbouring countries; for, after a generation or two, the tradeſmens children, or at leaſt their grand-children, become as good gentlemen, ſtateſmen, parliament-men, privy-counſellors, judges, biſhops, and noblemen, as thoſe of the higheſt birth and the moſt ancient families. See the article COMMERCE, and various other parts of this work.

They tell us a ſtory of the old lord Craven, who was afterwards created earl of Craven by king Charles II. that, being upbraided with his being of an upſtart nobility, by the famous Aubery, earl of Oxford, who was himſelf of the very ancient family of the Veres, earls of Oxford, the lord Craven told him, that he [Craven] would cap pedigrees with him [Oxford] for a wager: the earl of Oxford laughed at the challenge, and began, reckoning up his famous anceſtors, who had been earls of Oxford for a hundred years paſt, and knights for ſome hundreds of years more. But, when my lord Craven began, he read over the family thus: I am William lord Craven, my father was LORD MAYOR OF LONDON, and my grandfather was the LORD KNOWS WHO; wherefore I think my pedigree as good as yours, my lord (meaning the earl of Oxford.) The ſtory is to my purpoſe: for, let the grandfather be who he would, his father, Sir William Craven, who was lord mayor of London, was a wholeſale grocer, and raiſed the family by trade; and yet no body doubts but that the family of Craven is, at this day, as truly noble as moſt.

In Italy, and eſpecially at Venice, we ſee every day the ſons of merchants, and other traders, who grow in wealth and eſtates, and can advance, for the ſervice of their country, a conſiderable ſum of money, viz. from 60,000 to 100,000 dollars, are accepted to honour by the ſenate, and tranſlated into the liſt of the nobility; and in all ages the beſt princes have thought fit to reward the extraordinary merit of their ſubjects with titles of honour, and to rank men among their nobility who have deſerved it by great and laudable actions, whether the dignity of their birth, and the antiquity of their families, intitled them to it or not.

The word tradeſman, in England, does not ſound ſo deſpicable as it does in other countries; and to ſay a gentleman-tradeſman, is not ſo great an impropriety as ſome people are wont to think; and, indeed, as trade is now flouriſhing in England, the wealth of our tradeſmen increaſing, it is very probable a few years will ſhew us ſtill a greater race of trade-bred gentlemen than ever England yet had.

The very name of an Engliſh tradeſman will, and does already obtain in the world; and as our ſoldiers, by the late wars, gained the reputation of being ſome of the beſt troops in the world, and our ſeamen are at this day, and very juſtly too, eſteemed the beſt ſailors in the world: ſo the Engliſh tradeſmen may, in a few years, be allowed to rank with the beſt gentlemen in Europe; and, as the prophet Iſaiah ſaid of the merchants of Tyre, That her traffickers were the honourable of the earth. Iſa. xxiii. 8.

In the mean time, it is evident their wealth, at this time, out-does that of the like rank of any nation in Europe; and, as their number is prodigious, ſo is their commerce; for the inland commerce of England (and it is of thoſe tradeſmen and traffickers that we are now ſpeaking of in particular, who carry on trade from the metropolis to the moſt remote parts of the kingdom) is certainly the greateſt of it's kind of any of the globe; the conſumption of all ſorts of goods, both of our manufacture

manufacture, and of foreign growth being ſo exceeding great. All this confirms, that trade in England neither is or ought to be levelled with what it is in other countries, or the tradeſmen depreciated as they have been in ſome nations, and as ſome of our gentry would pretend to in England; but that, as many of our beſt families roſe from trade, ſo many branches of the beſt families in England, under the nobility, have been put apprentices to tradeſmen in London, and ſet up and followed thoſe trades, when they have come out of their times, and have thought it no diſhonour to their blood.

If I might be permitted, not only without offence, but with a moſt reſpectful intention, theſe obſervations might not injudiciouſly or ſarcaſtically be applied to the ladies of this kingdom, many of whom are ſo ſcandalized at that mean ſtep, as they call it, of marrying a tradeſman, even a London tradeſman: it may be modeſtly told them, for their humiliation, that, however they think fit to act, ſometimes thoſe tradeſmen come of better families than their own; and oftentimes, when they have refuſed and contemned them to their loſs, thoſe very tradeſmen have married ladies of ſuperior fortune to them, and have raiſed families of their own, who, in one generation, have been ſuperior to thoſe nice ladies, both in dignity and eſtate; and have, to their great mortification, been ranked above them upon all public occaſions.

The whole glory and greatneſs of England then being thus raiſed by trade, and in a great degree, by that of it's metropolis, it muſt be unaccountable folly and ignorance in us to leſſen that one article in our own eſteem which is the only fountain from whence we all, take us as a nation, are raiſed, and by which we are inriched, and maintained with dignity and ſplendor. The ſcripture ſays, ſpeaking again of the riches and glory of the city of Tyre, which was, indeed, at that time, the great emporium of the world for foreign commerce, and from whence all the ſilks and fine manufactures of Perſia and India were exported all over the weſtern world, That her merchants were princes; and in another place, By thy traffic thou haſt increaſed thy riches, Ezek. xxviii. 5. Certain it is, that our traffic has increaſed our riches and our power; and it is alſo certain, that one principal foundation of all our traffic is the grandeur and magnificence, as well as the wealth, the honour, and ſagacity of it's renowned citizens of London.

And here, in juſtice to the well-intentioned and judicious writer, I would beg permiſſion to recommend to candid peruſal a performance * lately publiſhed, which does no leſs honour to the author, than he zealouſly intends glory and advantage to the city of London.

* An Eſſay on the many advantages accruing to the community from the ſuperior NEATNESS, CONVENIENCE, DECORATIONS, and EMBELLISHMENTS of great and capital CITIES; particularly applied to the city and ſuburbs of LONDON. Addreſſed to Sir John Barnard, Knt. ſenior alderman and ſenior repreſentative in parliament of the ſaid city. Printed for Mr. Whitridge, at the Royal Exchange, 1754.

'The decorations and fine embelliſhments of cities, ſays this 'ingenious gentleman, more eſpecially of great and capital 'ones, whilſt they reflect honour, ſtate, and dignity on their 'ſovereigns, their country, and their own particular magiſtrates and citizens, will ever be found productive of perpetual acceſſions of wealth and commerce, of people, power, 'and influence; ſeeing a general reſort to, and reſidence at, 'ſuch finely-adorned cities, by perſons of high rank and 'opulence, will neceſſarily occaſion much money to be 'brought thither, and will as neceſſarily bring much employment to their people *.'—And again: 'A ſeaſon like 'the preſent, ſays he, of profound peace and tranquillity, is 'undoubtedly the only proper one for the ſubject of this eſſay; a ſubject, as herein peculiarly applied to our great 'metropolis, not before handled by any, as far as I know. 'Whilſt almoſt every conſiderable city beyond ſea, and many 'of our own at home (as Dublin, Edinburgh, Briſtol, Glouceſter, Bath, &c.) are diligently embelliſhing and adorning, 'juſtly perceiving the ſubſtantial benefits ariſing therefrom, 'ſhall the city of London remain any longer ſupine and inactive, until it be rivalled, and in ſome manner eclipſed, 'by cities both abroad and at home, not even ſo conſiderable as one of her ſingle wards!

* See page 2.

'Since the laſt general pacification, almoſt every nation in 'Europe is puſhing into commerce, manufactures, and fiſheries more than ever was known before. It therefore behoves us, who ſtill hold the ſuperiority in trade and navigation, not only to keep the ground which we gained by perſeverance and induſtry, and have ſo long held, but which 'we are in no ſmall danger of loſing, by the indefatigable 'application of our moſt dangerous rivals in both; but likewiſe to ſtudy every means in our power to attract the rich 'and noble to reſort to us, from every corner of Europe; 'whereby our commerce, manufactures, and ſhipping, our 'wealth and our people, would be greatly increaſed. Theſe, 'and ſuch-like conſiderations induced me to fall into this 'hitherto untrodden path*.'

* See Introduction.

In the application of theſe ſentiments to the city of London in particular, the gentleman gives a ſummary view of the benefits which would reſult to the city from his deſign; which are comprized under the following particulars.

'I. REPUTATION, ſingly conſidered, is queſtionleſs beneficial: but although the completion of our ſcheme be extremely well calculated for advancing our reputation and 'glory beyond ſeas, this would nevertheleſs be the leaſt of 'it's good conſequences.

'II. By the ſuppoſed general reſort of foreigners to our metropolis, it is eaſy to conceive how great the additional demand would be for all the various neceſſaries, conveniencies, 'and ſuperfluities, whether for nouriſhment, cloathing, equipages, plate, jewels, pictures, books, toys, medals, &c. for 'all which London would then undoubtedly be the general 'mart and ſtaple.

'III. Very conſiderable, alſo, would the additional employment be of our manufacturers, artizans, farmers, ſhopkeepers, labourers, &c.

'IV. All which would neceſſarily tend to the proſperity and increaſe of our foreign commerce, navigation, and plantations, and, conſequently, of our ſeamen, as well as of all 'the various occupations dependent on commerce, ſhipping, 'and plantations.

'V. Another obvious conſequence from the premiſes would 'be a proportionable increaſe of the public revenues, of cuſtoms, exciſe, &c. whereby our heavy national debt would 'be the ſooner diſcharged.

'VI. The increaſe of the rents of houſes (as well as of their 'number and goodneſs) in London, and even of the rents and 'improvements of lands in the country, would be alſo another neceſſary conſequence.

'VII. And, as our manufacturers, artizans, farmers, and 'labourers, would find fuller employment, both in town and 'country, this would neceſſarily leſſen our poor rate, at preſent ſo exorbitant, and ſo grievouſly burthenſome to the 'bulk of our people.'

REMARKS in 1764.

Since the public-ſpirited writer of the before-mentioned eſſay wrote the ſame, the city of London bears a different and more ſplendid aſpect than what it did. The taking down the city gates has proved very ornamental; and the alterations about making to the Bank of England, are likely to add no little luſtre to the center of our metropolis. Whether the firſt intimation hereof was derived from what the judicious gentleman obſerves in his eſſay, I cannot ſay; but it looks ſomething like it. He ſays, 'The Bank is 'a good houſe, but ſituated in too narrow a ſtreet; where 'a perpetual conflux of wheel-carriages of all kinds, 'occaſions very frequent obſtructions to buſineſs. This 'might in a good degree be remedied, if that prudent 'corporation would purchaſe and demoliſh four houſes 'fronting their great gate; whereby a good coach and foot-way might be opened directly from thence into Cornhill, 'which would likewiſe open an advantageous view of the 'fine front of that ſtructure.'

I cannot paſs this eſſay over without noticing one thing this ingenious gentleman mentions, concerning 'A MERCANTILE LIBRARY being placed in the MANSION-HOUSE to 'be conſulted by all the citizens as occaſion may require.' I could wiſh that this our labour, might fall into the hands of this gentleman, and that he would turn to our article MERCANTILE COLLEGE, where he will find ſuch a MERCANTILE LIBRARY as he recommends, might be of far more public utility than at the MANSION-HOUSE.

The duchy of MILAN in Italy. The Milaneſe is one of the fertileſt provinces of Italy: it is bounded on the weſt by Piedmont, Savoy, and Montferrat, on the ſouth by the Appenine mountains and the territory of Genoa, on the eaſt by the ſtates of Venice, Parma, and Mantua, and on the north by the territory of Valois, the Griſons, and Switzerland.

The whole country is well watered and very fruitful. Beſides the rivers Teſino, Po, Adda, and Seſſia, are many ſmaller, and ſeveral great lakes which furniſh it with plenty of fiſh.

This duchy is commonly divided into the following 13 territories, viz.

I. The MILANESE, properly ſo called, having the Comaſco on the north, the Lodeſan on the eaſt, the Pavieſe on the ſouth, and the Navoreſe on the weſt.

MILAN, the capital of the duchy, is not only well peopled, but is one of the moſt trading cities in Italy. It's principal manufactures are thoſe of the ſilken and woollen, ſteel and iron work, prodigiouſly neat, eſpecially ſword hilts, ſnuff and tobacco-boxes, buckles, and the like. They likewiſe work very neat on a ſort of rock-cryſtal, which is brought hither from the Alps, and Glacuris of Savoy, ſome pieces of which are large enough to be worked into fine looking-glaſſes of about 12 inches by 13: but this laſt kind is very difficult to work. The citizens here are very rich, and the gentry numerous.

II. The Paviese hath the Milaneſe Proper on the north, the country of Bobbio on the ſouth, the Lodieſe on the eaſt, and the Laumellineſe on the weſt; and ſo fertile, that it is commonly ſtiled The garden of the duchy of Milan. But here are no towns of any trade.

III. The Lodesan lies along the river Adda, between the Cremoneſe and Comaſco. It hath Milan Proper on the north, the Pavieſe on the weſt, and the Placentine on the ſouth, and is a very fertile and well-peopled diſtrict.

New Lodi is a rich and populous town on the river Adda. They breed a vaſt quantity of cattle in the territory about it, and it is famed likewiſe for making excellent cheeſes, and of a monſtrous bigneſs, ſome of which weigh above 500 pounds, and far exceed the Parmeſan in taſte, as alſo for dried neats tongues, and a fine ſort of earthen-ware, not inferior to the Dutch Delft.

IV. The Cremonese has Parmeſan on the ſouth, the Mantuan on the eaſt, Lodeſan on the weſt, and the Breſciano on the north. It is fertile in good wines and fine fruits.

It's only place of note is the city of Cremona.

V. Comasco, or the territory and county of Coma, lies between the Bergameſe, the Griſons, the Valteline, and the four Italian bailiwicks belonging to Switzerland.

VI. The county of Anghiera is ſituate at the foot of the Alps, between Switzerland and the territory of Valais on the north, Aoſta on the weſt, and the Vercelleſe and Novareſe on the ſouth. It is ſmall, but very fertile and well inhabited.

VII. The Novarese lies between the Milaneſe Proper, Piedmont, Seſſia, and the Vigeveneſe, and is a fertile and pleaſant country.

VIII. Vigevanese. IX. Laumellinese. X. The Alexandrino. XI. The Tortonese. XII. The vallies of Sessia. XIII. The Bobbiese, or territory of Bobbeio, in none of which are any trading towns worth mentioning.

MINERAL is a compound foſſil, wherein there is ſomething diſcoverable like metal, but not malleable; it being joined or compounded with ſome other foſſil, as ſalt, ſulphur, earth.

To write of metals and minerals, intelligibly and with tolerable perſpicuity, is a taſk much more difficult than to write of either animals or vegetables. For thoſe carry along with them ſuch plain and evident notes and characters, either of diſagreement or affinity with one another, that the ſeveral kinds of them, and the ſubordinate ſpecies of each, are eaſily known and diſtinguiſhed, even at firſt ſight; the eye only being fully capable of judging and determining their mutual relations, as well as their differences.

But in the mineral kingdom the matter is quite otherwiſe Here is nothing regular, whatever ſome may have pretended: nothing conſtant or certain. Inſomuch that a man had need to have all his ſenſes about him, to uſe repeated trials and inſpections, and that with all imaginable care and warineſs, truly and rightly to diſcern and diſtinguiſh things, and all little enough. Here is ſuch a vaſt variety of phænomena, and thoſe many of them ſo deluſive, that it is very hard to eſcape impoſition and miſtake. Colour, or outward appearance, is not all to be truſted. A common marcaſite or pyrites ſhall have the colour of gold moſt exactly, and ſhine with all the brightneſs of it; and yet upon trial, after all, yield nothing of worth, but vitriol and a little ſulphur; whilſt another body, that hath only the reſemblance of an ordinary pebble, ſhall yield a conſiderable quantity of metallic and valuable matter.

So likewiſe a maſs, which to the eye appears to be nothing but mere ſimple earth, ſhall, to the ſmell or taſte, diſcover a plentiful admixture of ſulphur, allum, or ſome other mineral.

Nor may we with much better ſecurity rely upon figure, or external form. Nothing more uncertain and varying. It is uſual to meet with the very ſame metal or mineral, naturally ſhot into quite different figures, as it is to find quite different kinds of them all of the ſame figure. And a body that has the ſhape and appearance of a diamond, may prove, upon examination, to be nothing but cryſtal, or ſenelites: nay, perhaps, only common ſalt or allum, naturally cryſtallized and ſhot into that form.

So likewiſe, if we look into their ſituation and place in the earth, ſometimes we find them in the perpendicular intervals, ſometimes in the bodies of the ſtrata, being interſperſed amongſt the matter whereof they conſiſt, and ſometimes in both. Even, if I may ſo ſpeak, the gemmeous matter itſelf, with this only difference, that thoſe gems, e. gr. topazes, amethyſts, or emeralds, which grow in the fiſſures, are ordinarily cryſtalized, or ſhot into angulated figures: whereas, in the ſtrata, they are found in rude lumps, and only like ſo many yellow, purple, and green pebbles.

Not but that even theſe, that are thus lodged in the ſtrata, are alſo ſometimes found cryſtalized, and in form of cubes, rhombs, and the like. Or if we have reſpect to the terreſtrial matter, wherein they lie in thoſe ſtrata, here we ſhall meet with the ſame metal or mineral embodied in ſtone, or lodged in coal, that elſewhere we found in marl, in clay, or in chalk.

As much inconſtancy and confuſion is there in their mixtures with each other, or their combinations amongſt themſelves. For it is rare to find any of them pure, ſimple, and unmixed, but copper and iron together in the ſame maſs: copper and gold, ſilver and lead, tin and lead, yea ſometimes all the ſix promiſcuouſly in one lump.

It is the ſame alſo in minerals, nitre with vitriol, common ſalt in allum, antimony with ſulphur, and ſometimes all theſe together. Nor do metals only ſort and herd with metals in the earth, and minerals with minerals, but both indifferently and in common together. Lead with ſpar, with calamine, or with antimony: iron with vitriol, with allum, with ſulphur: copper with ſulphur, with vitriol, &c. yea, iron, copper, lead, nitre, ſulphur, vitriol, and, perhaps, ſome more, in one and the ſame maſs.

In a word, the only ſtanding teſt and diſcriminative characteriſtic of any metal or mineral muſt be ſought for in the conſtituent matter of it; and it muſt firſt be brought down to that, before any certain judgment can be given. And, when that is once done, and the ſeveral kinds ſeparated and extracted each from the other, the homogeneous maſs of one kind is eaſily diſtinguiſhable from any other; gold from iron, ſulphur from nitre, and ſo of the reſt. But, without this, ſo various are their intermixtures, and ſo different the face and appearance of each, becauſe of that variety, that ſcarcely any thing can be certainly determined of the particular contents of any ſingle maſs of ore by mere inſpection.

I know that by experience and converſation with theſe bodies, in any place or mine, a man may be enabled to give a near conjecture at the metallic or mineral ingredients of any maſs commonly found there, but this merely becauſe he hath made trial of other like maſſes, and thereby learned what it is they contain. But, if he remove to another place, though perhaps very little diſtant, it is ten to one but he meets with ſo different a face of things, that he will be there as far to ſeek in his conjectures, as one who never before ſaw a native ore; until he hath here made his trial as before, and ſo further informed himſelf of the matter.

Metals being ſo very uſeful and ſerviceable to mankind, great care and pains hath been taken, in all ages, in ſearching after them, and in ſeparating and refining of them. For which reaſon it is, that theſe have been accurately enough diſtinguiſhed and reduced to ſix kinds, which are all well known.

But the like pains have not been taken in minerals, and therefore the knowledge of them is ſomewhat more confuſed and obſcure. Theſe have not yet been well reduced, or the number of the ſimple original ones rightly fixed; ſome of which are only compounds, the matter of two or more kinds being mixed together, and, by the different proportion and modulation of that matter, variouſly diſguiſed and diverſified, having been reputed all different kinds of minerals, and thereby the number of them unneceſſarily multiplied. Of this we have an inſtance of the gem kind: where of all the many ſorts reckoned up by lapidaries, there are not above three or four that are originals; their diverſities, as to luſtre, colour, and hardneſs, ariſing from the different admixture of other adventitious metallic and mineral matter. It is ſufficient for my preſent deſign to remark in general, that thoſe minerals, and ores of metals which are repoſited in the bodies of the ſtrata, are either found in grains, or ſmall particles, diſperſedly intermixed with the corpuſcles of earth, ſand, or other matter of thoſe ſtrata: or elſe they are amaſſed into balls, lumps, or nodules. Which nodules are either of an irregular and uncertain figure, ſuch as are the common pyritæ, flints, agates, onyx's, pebbles, cornelians, jaſpers, and the more like: or of a figure ſomewhat more regular and obſervable, ſuch as the belemnites: the ſeveral ſorts of mineral coral, of the ſtelechites, and of the lapis mycetoides*: the aſtroites, or ſtarry ſtone, as well that ſort with the prominent, as that with the plane, and that with the concave ſtars: the ſenelites, the echinated cryſtalline balls, with many more analogous bodies.

* Vulgarly called fungites.

Thoſe which are contained in the perpendicular intervals of the ſtrata are, either ſuch as are there accumulated into a rude heap, without any particular form or order, being only included betwixt the two oppoſite walls or ſides of the ſaid intervals, which they wholly or partly fill, as there is a greater or leſs quantity of them; in which manner ſpar is uſually found therein, and other minerals, as alſo the common ores of lead, tin, iron, and other metals, or elſe ſuch as are of ſome obſervable figure. Of this ſort are the ſparry ſtiriæ, iceycles, called ſtalactitæ*: the native ſaline iceycles, or ſal ſtalacticum: the vitriolum ſtalacticum nativum: the vitriolum capillare: the alumen ſtalacticum, and capillare: minera ferri ſtalactica, which, when ſeveral of the cylindric ſtiriæ are contiguous, and grow together in one ſheaf, is called bruſh iron-ore: and, laſtly, the argentum arboreſcens & capillare.

* Or rather ſtagonitæ.

Hither alſo ought to be referred the cryſtallized ores and minerals, e. gr. the iron-rhombs: the tin grains: the mundic

dic grains: the teſſellated pyritæ, or ludis Paracelſi: cryſtallized native ſalt, allum, vitriol, and ſulphur. As likewiſe the gems or ſtones that are found in theſe perpendicular intervals, ſhot into cubes, into pyramidal forms, or into angulated columns, conſiſting ſometimes of three, but moſt commonly of ſix ſides, and mucronated, or terminating in a point, being either opake or pellucid: or partly pellucid, and partly opake and coloured, black, white, grey, red, purple, blue, yellow, or green, e. gr. cryſtal, the pſeudo-adamantes, the Corniſh ſtones, the Briſtol ſtones, cryſtallized ſpars, the amethyſt, the ſapphire, the topaz, the emerald, and ſeveral others.

Remarks.

With regard to the tokens and characteriſtics upon the ſurface of the earth, of ſuch places as may be reaſonably preſumed to contain ſome kind of mineral or metalline earths of value, ſee the article Minerology.

MINERAL WATERS. Theſe are chiefly of three kinds. Some are corporeal (we want a better word for it) others ſpirituous, and the reſt both corporeal and ſpirituous. Thoſe we call corporeal mineral waters, contain fixed and ſolid particles of minerals and foſſils, which may be ſeparated from the water, and ſeen with the naked eye; ſuch as theſe are of two ſorts: ſome carry large particles of minerals and foſſils, which may be eaſily perceived in the water itſelf; nor are they, properly ſpeaking, mixed with the water, and ſome have in them grains of gold, ſilver, &c. and, therefore, are called auriferous, argentiferous, &c. but ſuch are not properly termed mineral waters, becauſe they have not thoſe particles mixed with them, but ſeparate; neither do they receive any property from them: yet, becauſe men admire ſuch rivers, and their explication hath a great affinity with the deſcription of mineral waters properly ſo called, we thought fit to mention them under the ſame heads; to which may be added bituminous fountains, &c.

Corporeal mineral waters are ſuch as contain ſolid particles of foſſils, but ſo minute that they are intirely mixed, and cannot well be diſtinguiſhed by the ſight, unleſs they are made to ſubſide by art, or a long ſpace of time, or by concretion are brought to a viſible maſs; ſuch as ſalt and ſulphureous fountains, &c. and chemical waters, in which metals are diſſolved.

Spirituous waters are thoſe that contain only ſuch a volatile ſpirit as is found in minerals, but have no fixed particles in them; and, therefore, their compoſition can never be made viſible.

We call thoſe waters both corporeal and ſpirituous which contain not only fixed and ſolid particles of minerals, but alſo volatile and ſpirituous; of all which we ſhall give examples.

How mineral waters are generated.

1. If the water be carried under-ground with a rapid courſe, among metalline and mineral earths, which is eaſily looſened, it is evident that it waſhes particles from it, and may carry along with it grains of theſe minerals: and this is the generation of theſe corporeal mineral waters that hold grains in them.

2. If the mineral waters are imperfect, and not ſo cloſely joined as vitriol, ſulphur, &c. or even ſalt, which, of their own nature, eaſily mix with water; and, if a rivulet of water runs through beds or mines of ſuch minerals, or be ſtrained through them (without a channel or duct) the water, when it breaks out at the fountain, will have ſmall particles of theſe minerals mixed with it, and will be corporeal mineral water, of a ſubtile compoſition, according to the ſmallneſs of the atoms. Now, whether the water can in like manner diſſolve or unite with itſelf the particles of metals, is to be queſtioned, becauſe they are hard and ſolid, and, therefore, are not eaſily blended with water. This may be done, but not with ſimple or common water, but by vitriolic and ſalt ſpirituous water, like aqua fortis [ſee Aqua Fortis] for that diſſolves metals into atoms, and eaſily unites them with itſelf, ſo that they do not ſubſide at the bottom, unleſs they be ſeparated by art: in like manner, when ſuch water runs through a metallic earth, it may diſſolve the metalline particles, and unite them with itſelf; and thus are the corporeal mineral waters of the ſecond ſort accounted for and explained.

3. Before metals are formed in the bowels of the earth, ſteams and vapours are condenſed about the extant corners of the rocks, to which they adhere, being at firſt but of a ſoft ſubſtance, and afterwards hardened by degrees; if, therefore, the water ſhould gleet through the places where ſuch vapours are in commotion, it becomes impregnated with them: and thus ſpirituous mineral and metalline waters are produced.

Imperfect minerals alſo make mineral waters of their own nature, after another method, viz. when, being heated by a ſubterraneous, or their own proper heat, they ſend forth ſpirits and vapours, as ſulphur, vitriol, ſalt, coal, &c. and ſuch exhalations is always ſtirred up, where there are ſuch minerals, among which the permeating water is impregnated with the ſpirit. Some think theſe ſpirituous waters may be generated by being only carried through a metallic earth, or by having their receptacles in it, or in their mines; but it is found to the contrary by experience, that water receives no quality from metals and minerals, though they ſhould be immerſed in it a great many years. Therefore, rejecting this opinion, it is moſt reaſonable to ſuppoſe, that theſe waters receive a certain ſpirit from the firſt principles of metals, as we may call them; or we may ſay, that ſuch waters are impregnated with the ſubtile ſpirits of vitriol, ſalt, &c. by the help of which a ſpirit is extracted from hard metals; but we do not lay ſo great ſtreſs upon this latter cauſe, for a queſtion will ariſe again, about the generation of this ſpirituous, mineral, vitriolic, and ſalt water.

From theſe together it appears, how mineral waters, both corporeal and ſpirituous, are generated.

There are innumerable kinds of mineral waters, according to the diverſity of the particles they receive from different minerals.

We have explained how mineral waters receive theſe particles, from which their extraordinary qualities ariſe. Now, becauſe there are divers kinds of minerals, it hence follows, that mineral waters are various, and almoſt infinitely different in their qualities, not conſiſting of one kind of water impregnated with only one ſort of mineral, but of various kinds, mixed with various ſorts. Wherefore mineral waters are either ſimple or mixed; and the mixed have two, three, four, or more ſorts of foſſils in them.

Hence are, 1. Metallic waters, as of gold, ſilver, copper, tin, lead, iron, &c.

2. Salt waters, as of common ſalt, nitre, allum, vitriol, &c.

3. Bituminous waters, ſulphureous, antimonial, as of coal, ambergris, &c.

4. Waters proceeding from various kinds of earth and ſtones, viz. as lime-ſtone waters, chalk, oker, cinnabar, marble, alabaſter, &c.

5. Mercurial waters, &c.

All theſe kinds of waters are to be underſtood three ways, viz. 1. Some of them are corporeal, either ſenſibly ſo, or by a refined and ſubtile commixture. 2. Others are ſpirituous. 3. Others are both corporeal and ſpirituous.

Theſe differences may be applied to the ſeveral kinds of mineral waters. For example: there are golden waters, which are, 1. Corporeal, that carry grains of gold of ſuch magnitude, that, with ſmall trouble, they are diſcernible, by reaſon of their groſs or coarſe mixture. 2. Corporeal, that carry very minute particles of gold, well mixed with them; and, though the ſmalleſt particles of gold do, of their own nature, ſink to the bottom of water, yet that there are ſuch, appears from the aqua regia [ſee Aqua Regia] in which gold is diſſolved into atoms; but this aqua regia is not a ſimple water, neither dees any water carry atoms of gold in it, unleſs it be before impregnated with other mineral particles. 3. Spirituous golden waters, that have engendered a ſpirit and vapour in the earth, from which gold is produced. 4. Golden waters, that are both corporeal and ſpirituous, viz. that have both atoms of gold, and the ſpirit that produces it.

Thus we are to apply this four-fold variety to all ſorts of mineral waters, whether ſimple or mixed (from whence innumerable ſpecies are produced); for either the bodies of foſſils, or their ſpirits, or the body of one foſſil with the ſpirit of another, are mixed or engendered in the water: ſo leaden waters are of four kinds, viz. 1. Viſibly corporeal. 2. Corporeal by a ſubtile mixture. 3. Tinctured by the ſpirit of lead. 4. Impregnated both with the body and ſpirit of lead. And theſe four participations of minerals are to be applied to mercurial waters, &c. and more eſpecially to ſalt, vitriolic, and ſulphureous waters, becauſe in theſe nature itſelf diſplays a four-fold variety; though it is to be doubted whether there be corporeal particles of a ſubtile grain in metalline waters.

Spirituous metallic waters are alſo very rare; but the water of ſalt, ſulphur, &c. both corporeal and ſpirituous, is very common, becauſe theſe foſſils are found in greater plenty, and their particles are alſo ſooner adapted to atoms, and diſſolved by the water; beſide, they frequently emit ſteams and vapours.

Let us explain this four-fold variety of participation by one example of gold.

In the country of Tyrol, and the neighbouring places, there are ſeveral rivers that carry grains of gold; and the Rhine, the Elbe, the Danube, and ſeveral other great rivers, do the like alſo, as other rivers do other metals and minerals. The Rhine carries grains of gold, mixed with clay and ſand, in many places, but eſpecially at theſe, viz. 1. Near Coire, in the Griſons country. 2. At Mayenfield. 3. At Egliſan. 4. At Soking. 5. At the town of Augſt, not far from Baſil. 6. At Newburg. 7. At Saltz. 8. At Worms. 9. At Mentz. 10. At Bacherach. 11. At Bonn, &c. The auriferous rivulets which the Rhine receives, the reader may ſee in Thurnheuſerus, and alſo thoſe that run into the Danube and Elbe. Small grains of gold are found in the Elbe in theſe places: 1. At Lotomeritz in Bohemia. 2. At Purn. 3. At Dreſden in Meiſen. 4. At Torgaw. 5. At Magdeburg. 6. At Lawenburgh tower, about five miles from Hamburgh. Several other auriferous rivers are given an account of in the forecited book of Thurnheuſerus; and ſuch as carry other metals and minerals. And theſe are auriferous corpo-

real waters of the firſt kind, carrying viſible grains, which are not ſo properly called mineral, or golden waters, becauſe the golden grains are not mixed with the water, but only carried in it by it's rapid motion, the water itſelf being uncompounded with it.

2. Corporeal golden waters of fine mixture, whoſe atoms are united with the atoms of gold, like the chemical aqua regia which diſſolves gold, and unites it by atoms to itſelf: for ſince it is poſſible that there may be in nature ſuch water as this of the chemiſts, which may run through golden earth, or gold mines, it is reaſonable to ſuppoſe that it eats out particles, and diſſolves them into atoms, and unites them to itſelf; and from this cauſe proceed thoſe (or ſuch-like) golden rivulets as are deſcribed by Thurnheuſerus, in his account of the Danube, Rhine, &c.

3. Spirituous golden waters are but very few, ſome of which, perhaps, are enumerated among the reſt by Thurnheuſerus; but theſe are not ſo much known, becauſe golden earth and gold mines are very ſcarce; beſides, where there are ſuch mines, there is ſuch a mixture of other minerals, that they are not perceptible. Nevertheleſs, there are ſome rivulets in the high Alps of Bohemia, that are ſaid to participate of theſe golden ſpirits, as in the Frichtelberg mountains in Sileſia. The hot baths alſo in the biſhopric of Coire are believed to be impregnated with this kind of ſpirit; yet, becauſe of the mixture of other minerals in a greater quantity, this quality is rendered leſs perceptible.

4. Golden waters that carry both the atoms and ſpirit of gold, are ſome of thoſe rivulets mentioned by the abovenamed Thurnheuſerus.

Let us alſo give an example of ſalt waters.

1. Corporeal ſalt waters, which carry groſs and undigeſted particles of ſalt, are found in many places, and ſufficiently known, as fountains, whoſe waters produce ſalt, and ſea-water, from which ſalt is extracted by boiling.

2. Subtile corporeal ſalt waters, which contain ſalt diſſolved in the minuteſt atoms, are ſuch as are very ſalt, and yet very clear, as many ſalt fountains are, and ſea water that is thin and fine; though there is a great difference in this ſubtile mixture. Hereto may be referred the urine of all animals.

3. Spirituous ſalt waters, which do not contain the particles of ſalt, but only the ſpirit of it, are of ſuch a nature, that, if ſeveral tons be ever ſo much boiled, they will not yield any ſalt. There are a great many of theſe in Germany, and other places, but they are ſeldom without mixture.

4. Corporeal and ſpirituous ſalt-waters, which contain the particles and ſpirit of ſalt. Almoſt all corporeal waters have ſome ſmall portion of ſaline ſpirits in them, but few of them any quantity. Thus the fountains about the city of Saltzinge, near the Rhine, are ſalter than other ſalt ſprings, and yet yields leſs ſalt, becauſe their ſharp and brackiſh taſte is heightened by a ſpirit or volatile ſalt.

Hence it appears how this four-fold variety of participation is to be applied to the ſeveral kinds of mineral waters, viz. to vitriolic, allum, and lead waters, &c.

To enumerate the moſt remarkable varieties of mineral waters. In the foregoing propoſitions we have explained the kinds and differences of mineral waters, taken from their nature, which conſiſt in having mineral particles in them, which they carry, or with which they are impregnated; but, becauſe theſe varieties are not ſo perceptible to the ſenſes, and there are ſeveral mixtures of minerals that cauſe various, and almoſt unaccountable properties in the waters, therefore they are not ſo eaſily known and diſtinguiſhed by the vulgar; for waters (and other bodies) become famous among mankind, and receive their names from their manifeſt qualities, which ſtrike and affect the ſenſes, whoſe cauſe and explication are to be deduced from their compoſition and participation. There are, therefore, ten ſpecies of waters, or liquids, that flow out of the ground, which are commonly taken notice of by the vulgar: 1. Acid waters. 2. Bitter. 3. Hot. 4. Very cold. 5. Fat and oily. 6. Poiſonous or deadly. 7. Coloured. 8. Boiling. 9. Waters that harden bodies, change their colour, or otherwiſe alter them. 10. Saline. 11. To theſe may be added ſuch as are inveſted with other uncommom properties. All kinds of waters deſcribed by authors may be referred to one or other of theſe heads.

MINEROLOGY, that previous part of metallurgy, which teaches the ways of finding, judging, and digging of mines. Minerology is an art that requires a conſiderable compaſs of knowledge, before it can be practiſed to advantage: for, as this art includes the diſcovery, ſinking, and working of mines, it requires a competent ſkill in the nature, effluvia, and effects of mineral matters, whether earths, ſalts, ſulphurs, ſtones, ores, bitumens, gems or metals. It likewiſe requires a knowledge of the internal ſtructure of the earth and it's various ſtrata, with a competent ſkill in ſubterraneous architecture, menſuration, hydraulics, levelling, and mechanics; without which, we can never judge what mountain, plain, or valley, is proper to be dug; in what manner to dig it; how to diſcharge the water that may flow in upon the works; how the beds of ore and ſtone will dip or run; how the various kinds of earths, marble, and other mineral or metallic matters, are to be cut through or broken; or how the general proceſs of mining ſhould be conducted, in order to procure, with the leaſt expence, or bring to open day, the principal matter or ore required.

And, even when all theſe difficulties are conquered, no more than half the work is effected; and the end can ſtill be never obtained, without a tolerably exact knowledge of ſeveral chemical operations, viz. trituration, torrefaction, lotion, calcination, cementation, fuſion, amalgamation, and the like: whence it may be laid down as a rule, that every directing metalliſt ſhould not only be tolerably verſed in the ſeveral parts of natural philoſophy, but particularly be well acquainted with chemiſtry.

And, perhaps, it may not be improper to intimate, that many metallurgical attempts have miſcarried, merely for want of a competent ſkill to conduct them. The under workmen, in this way, are generally a head-ſtrong ignorant people, that cannot be managed without the uſe of ſome good political rules, and a knowledge much ſuperior to their own. Yet, how little ſoever the art of minerology may have been underſtood, hiſtory affords us numerous examples of plentiful fortunes and immenſe treaſures raiſed from mines, as well by private perſons, as particular ſtates and kingdoms. But the vulgar, and even philoſophers not verſed in trade, generally eſteem the buſineſs of mining precarious, uncertain, and unproſperous; eſpecially when compared with agriculture, or other arts, exerciſed more in the open day.

The truth is, mines are liable to many contingencies, being ſometimes poor, ſometimes ſoon exhauſtible, ſometimes ſubject to be drowned, eſpecially when deep, and ſometimes hard to trace. Yet there are many inſtances of mines proving highly advantageous for hundreds of years: the mines of Potoſi are, to this day, worked with nearly the ſame ſucceſs as at firſt: the gold mines of Cremnitz have been worked almoſt theſe thouſand years, and our Corniſh tin mines are extremely ancient: in general, the profit of mines, compared with that of agriculture, is immenſely greater in the ſame time, ſo as to compenſate largely for their want of certainty. Even lead mines generally yield twice or thrice the returns of the richeſt ſoils, improved in the ordinary manner, either by nature or art. What then ſhall we ſay of the mines that are rich in the nobler metals? The nett profit of the ſilver alone, dug in the Miſnian ſilver mines of Saxony, in the ſpace of eight years, is computed at a thouſand ſix hundred and forty-four millions, beſides ſeventy-three tons of gold *.

* See Pet. Albin. in Chronic. Miſn. Miner. German.

Many mines have been diſcovered by accident: a torrent firſt laid open a rich vein of the ſilver mine at Fribourg in Germany Sometimes a violent wind, by blowing up trees, or overturning the parts of rocks, has diſcovered a mine. The ſame has happened by violent ſhowers, earthquakes, thunder, the firing of woods, or even the ſtroke of a plough-ſhare, or a horſe's hoof.

The art of mining does not wait for theſe favourable accidents, but directly goes upon the ſearch and diſcovery of ſuch mineral veins, ores, or ſands, as may be worth the working for metal.

The artificial inveſtigation and diſcovery of mines depend upon a particular ſagacity, or acquired habit of judging, from particular ſigns, that metallic matters are contained in certain parts of the earth, not far below it's ſurface.

The principal ſigns of a latent metallic vein ſeem reducible to general heads; ſuch as (1.) The diſcovery of certain mineral waters. (2.) The diſcolouration of the trees or graſs of a place. (3.) The finding of pieces of ore on the ſurface of the ground. (4.) The riſe of warm exhalations. (5.) The finding of the metallic ſands, and the like. All which are ſo many encouragements for making a ſtricter ſearch, near the places where any thing of this kind appears. Whence rules of practice might be formed, for reducing this art to a greater certainty.

But, when no evident ſigns of a mine appear, the ſkilful mineraliſt uſually bores into the earth in ſuch places as, from ſome analogy of knowledge, gained by experience (or by obſerving the ſituation, courſe, or nature of other mines) he judges may contain metal.

This method of boring conſiſts in the uſe of a ſett of ſcooping-irons, made with joints, ſo as to be lengthened at pleaſure; and thruſt down to a conſiderable depth below the ſurface of the earth, ſo as, when taken out again, to bring back ſamples of the earth, or mineral matter, from the depth whereto the iron deſcended; much after the manner that ſamples of ſugar are taken by the inſtrument called a REST, out of the hogſhead.

After a mine is found, the next thing to be conſidered is, whether it may be dug to advantage. In order to determine this, we are duly to weigh the nature of the place, and it's ſituation, as to wood, water, carriage, healthineſs, and the like; and compare the reſult with the richneſs of the ore, the charge of digging, ſtamping, waſhing, and ſmelting. This is a matter of œconomical prudence.

Particularly the form and ſituation of the ſpot ſhould be well conſidered. A mine muſt either happen (1.) In a mountain. (2.) In a hill. (3.) In a valley, or (4.) In a flat. But mountains

tains and hills are dug with much greater eaſe and convenience, chiefly becauſe of the drains and burrows, as the miners call them; that is, the adits, or avenues, may be here readily cut, both to drain off the water, and to form gangways for bringing out ore, &c.

In all the four caſes, we are to look out for the veins, which the rains or other accidental things may have laid bare; and, if ſuch a vein be found, it may often be proper to open the mine in that place, eſpecially if the vein proves tolerably large and rich: otherwiſe, the moſt commodious place for ſituation is to be choſe for the purpoſe, viz. neither on a flat, nor on the tops of mountains, but on the ſides: for the mineraliſt is always to exerciſe his judgment, in due choice of a place to begin the work.

The beſt ſituation for a mine is a mountainous, woody, wholeſome ſpot, of a ſafe eaſy aſcent, and bordering upon a navigable river. And, ſuch a place as this being the ſtandard of goodneſs, all others may be judged of as they approach to, or recede from it.

Wood is indiſpenſibly neceſſary for making the neceſſary inſtruments, engines, and huts; as alſo for fencing the pits, or avenues, and ſupporting the rock, where large caverns are made, by digging away the ore: and again, for ſupplying fuel to the melting works, unleſs where pit-coal will ſerve the turn. But, though no wood or coal ſhould grow upon the ſpot, it may often be ſupplied by means of a navigable river, or cheap carriage. And thus there are ſome rich mines in the hotter climates, without ſo much as a ſhrub growing near them.

Plenty of water ſhould never be wanting, and is beſt ſupplied by a river; whence it may be commodiouſly derived by pipes, into the lavadero's, ſmelting-huts, &c. or even brought into the burrows themſelves, and made to work the ſubterraneous machines. Theſe are conveniencies not conſtantly to be expected from caſual rains, or the torrents of the mountains.

The roads and conveniencies of carriage, to and from the adjacent parts, muſt be likewiſe regarded, as well for the ſale of the metal produced, as the conveyance of goods, and the neceſſaries of life to the workmen: for it rarely happens, that proviſions are afforded upon the ſpot where metals are found.

The places abounding with mines are generally healthy, as ſtanding high, and every way expoſed to the air: yet ſome places, where mines are found, prove poiſonous, and can upon no account be dug, though ever ſo rich. The way of examining a ſuſpected place of this kind is, to make experiments upon brutes, by expoſing them to the effluvia or exhalations, to find the effect.

But a conſiderable advantage may ſometimes be made, without the labour and expence of digging: for, as ſprings and rivulets are frequently the outlets of mines, it may happen that the ſand of ſuch waters ſhall be worth the waſhing for metal, in which manner large quantities of gold-duſt are often procured: and hence it appears to be, that the ſands of many rapid rivers contain gold; and even the ſand of the ſea in ſome places, though the latter in ſo ſmall a proportion as ſeldom to be worth the waſhing. But the ſand of ſuch rivers wherein ſtamped ores are continually waſhed, may frequently deſerve to be aſſayed.

The veins of a mine greatly differ from each other, in depth, length, and breadth. Some ſtretch obliquely from the ſurface towards the central parts of the earth, and theſe are called deep veins: others lie ſhallow and circular, ſo as to encompaſs a large ſpace; theſe are termed ſpreading veins: others poſſeſs a great part of the ſpace they lie in, both in length and breadth, and theſe are called accumulated veins, being no more than a ſpace poſſeſſed by a group of foſſils of one certain kind. But to give the hiſtory of veins, and fibres, which are ſmaller veins, their differences, their directions, their interſections, their different goodneſs, their diſcontinuations, their riſing, falling, &c. would be a large work. Let it, however, be obſerved, that theſe things ſeem to proceed in a certain order, though the laws of them have not been well obſerved, ſo as to afford the ſure rules of practice: whence it ſometimes happens, that, after a vein has been ſucceſsfully tried for ſome time, it dips, breaks off, or takes a different courſe, leaving the workmen as it were at fault.

When a vein of ore is found, and all things prepared for the work, if the vein be of the deep kind, it is firſt to be laid bare and a pit to be ſunk upon it, at the mouth whereof a ſhed is to be raiſed, and a crane, or barrel and winch fixed, for craning up the ore. The pit is to be ſunk either perpendicular or oblique, according as the vein happens to run.

It is alſo uſual, in this caſe, to cut a burrow or adit, into the ſide of the hill. This burrow is uſually cut twice as high as wide, that the workmen may commodiouſly paſs along it with their barrows and burdens, being for that purpoſe uſually about ſeven feet and a half high, and almoſt four feet wide. If this ſide pit reaches to the firſt pit, it becomes a true burrow, open at both ends, and thus renders the work more facile and commodious, as the ore may be now wheeled out in barrows, inſtead of being craned up to the mouth of the pit. After the ſame manner it is uſual to dig many caverns into the ſides of the mountain, in order to ſcoop out the ore; ſo that ſometimes there are thus ſeveral burrows made, to the eaſe and advantage of the work.

The art of digging the veins varies according to the nature of the vein, or according as it is ſoft or hard. The ſoft vein is generaly dug with the ſpade, and turned out into wooden trays, placed underneath to receive it: but the hard veins are knocked out with a gad, or kind of chiſſel and hammer. But, if the ore is ſo hard as to be incapable of breaking in this manner, they uſually ſoften it with fire, which has the power of rendering the hardeſt and moſt flinty ſtones brittle and friable. But a ſtill more expeditious method is the working with gunpowder, by means whereof much of the hardeſt rock may be ſhivered and ſplit in a very little time; a ſmall parcel of powder being laid in a long hollow cut for that purpoſe, after the nature of a gun-barrel, and fired as it were at a touch-hole; a ſmall vent, where the quick-match is applied, being left for the purpoſe, and the orifice being otherwiſe hard ſtopped up with clay.

The manner of purſuing and digging all ſorts of veins, the ways of under-propping and diſcharging the water from the works, the ſinking of air-ſhafts, curing of damps, and the like, to the beſt advantage, requires more philoſophy than the generality of mere workmen, or the common miners have, though their experience may as much aſſiſt the theoretic philoſopher, as the diſcernment of the latter may that of the former.

Remarks on Minerology.

We learn from the preceding enquiry, that, to practiſe minerology and metallurgy to advantage, a conſiderable knowledge in natural philoſophy, as well as in the operations of chemiſtry, in relation to the point of metallurgy, is required.

That many miſcarriages, in mineral attempts, have been owing to the want of a competent ſkill of mechanics, hydraulics, and chemiſtry.

That the profit attending the ſcientifical working of mines is generally greater, and upon the whole more conſiderable, than that of agriculture or merchandize.

That there are two ways of diſcovering mines, viz. by accident and by art: the latter whereof belongs to the intelligent mineraliſt.

That the art of diſcovering mines depends upon a certain ſagacity, which may be acquired by uſe and practice; or upon the obſervation of particular ſigns, that generally denote a mine; and again upon the method of boring, according to ſome analogy of knowledge, gained by being converſant with the common appearances, ſituations, and other phænomena of mines.

That the art of diſcovering mines is reducible to rule, ſo as not to be mere conjecture, or gueſs-work.

That, in general, mines are to be firſt opened where a vein is, by accident, or otherwiſe, laid bare, eſpecially if it prove large or rich: but, where no ſuch encouragement appears, the ſide of the hill is principally to be choſe for the opening.

That a deliberate conſideration, and a competency of œconomical prudence, are uſually required to determine beforehand, whether a mine, after it is diſcovered, may be wrought to profit.

That the moſt perfect ſituation of a mine is to be mountainous, woody, eaſy of aſcent, healthy, bordering upon a navigable river, and good roads.

That metals may be ſometimes obtained to advantage without digging, or barely by waſhing the ſands of certain ſprings and rivers.

That mineral veins differ greatly from each other, and accordingly require different methods of digging, which may be reduced to ſtandard rules of practice.

That the buſineſs of mining is improvable, by diſcovering better methods of preventing or curing the damps in mines, rendering poiſonous mines wholſome, or defending the bodies of the workmen againſt their ill effects; as alſo by diſcovering better methods of raiſing or diſcharging the waters, following the veins, breaking the rock, getting up the ore.

Before we take leave of this article, what the learned Dr. Edward Browne ſays, with regard to the miner's compaſs, in his Travels through Hungary, Theſſaly, Macedonia, &c. may deſerve the attention of thoſe, who may become adventurers herein.

'They [the miners] ſays he, work, towards one, two, or three of the clock; for the miner's differs from the mariner's compaſs, being not divided into 32, but into 24 points.—This is very true, not only in regard to the Hungarian and German miners, but with reſpect to our own coal miners: where, if you aſk any of the workmen about the courſe of the veins, they anſwer you, that it dips towards ſix o'clock, which is utterly unintelligible to common people. The truth of the matter is, that the miner's and mariner's compaſs is founded upon different principles, though it is to be doubted, whether a method might not be found of uſing the mariner's compaſs to great advantage in mines; but at preſent we have not room to inſiſt upon this, and ſhall therefore content ourſelves with obſerving, that in the miner's compaſs the upper twelve o'clock anſwers to the meridian of the place

where the mine is, and from thence the hours are marked on each of the ſemicircles; ſo that ſix o'clock makes a quadrant on each ſide, and each of the hour lines is diſtant from the other 15 degrees; ſo that, in fact, the miner's compaſs is a kind of dial; and, when they ſay they have worked to ſuch an hour, they mean that they work to ſuch a point as the ſun bears from them at the time of the day which they mention.'

'Kircher, in regard to this diſcovery of mines, ſays, we muſt allow, that all the ſigns for the diſcovery of mines, here mentioned, are founded on a weak bottom, and that there is none of thoſe ſuppoſed marks, whereby one can be ſure and certain, after you have diſcovered the place that contains ore, neither what quantity nor what kind it holds; for theſe ſigns will direct as well to ſulphur, antimony, ſalt, mercury, lead, iron, copper, tin, as to ſilver and gold. But, by virtue of the WINCHEL-ROD, we may with confidence diſtinguiſh the one from the other, and know what kind of ore the mines contain: for, by holding in each hand a piece of gold, the rod which thereby attracts the atoms of the gold, will beat or move to no other metal; with ſilver it will do the ſame, as thoſe who profeſs themſelves profeſſors of that art affirm:' which we are afraid is a groſs impoſition, and that Kircher herein might be deceived by ſome of the artifices of miners, which leads us to take ſome notice of them.

'The operation with the virgula divina, ſays Mr. Gabriel Plattes *, is thus to be performed: ſome obſerve a ſet day and hour, with certain words and ceremonies at the cutting up of the ſame, which I have found to be little to the purpoſe. Thus I worked about Midſummer, in a calm morning: I cut up a rod of haſel of the ſame ſpring's growth, almoſt a yard long; then I tied it to my ſtaff in the middle, with a ſtrong thread, ſo that it did hang even, like the beam of a balance: thus I carried it up and down the mountains where lead grew, and before noon it guided me to the oriſice of a lead mine; which I tried, having one with me with an hatchet of iron, and a ſpade; and, within two hours, we found a vein of lead ore, within leſs than a foot of the graſs: the ſign that it ſheweth is to bow down the root-end towards the earth, as though it would grow there, near unto the oriſice of a mine: when you ſee it do ſo, you muſt carry it round about the place, to ſee that it turneth in the ſpring ſtill to the place, on which ſide ſoever you ſtand.

* See his Diſcovery of Subterranean Treaſures, p. 4. 5.

The reaſon of this attraction, continues he, I conceived to be of kin to the loadſtone, drawing iron to it by a ſecret virtue, inbred by nature, and not by any conjuration, as ſome have fondly imagined.

And the reaſon of this my opinion was, becauſe that, in divers of my practical experiments, I have obſerved an attraction betwixt ſeveral things, like that of the loadſtone and iron; and, if it were to good purpoſe, I ſuppoſe that I could ſhew more experience of that kind than any man in England.'—But the truth of the ſure diſcovery of valuable mines or minerals by ſuch-like means as here pretended, has not yet been made experimentally appear to the ſatisfaction of the learned world.

Further REMARKS ON MINEROLOGY.

OF THE DECEITS AND IMPOSITIONS OF MINERS, AND OTHERS IN LEAGUE WITH THEM, IN ORDER TO GUARD THE PUBLIC AGAINST THEM.

1. After the practiſing every art to induce adventurers to hazard their money and give the miners employment, they uphold the adventurer's ſpirit, from time to time, by fair promiſes and plauſible appearances: and, when they find that people begin to be quite wearied out, they then think it time to produce ſome ore; which they frequently have conveyed under-ground from ſome other mine, to engage the adventurers ſtill to keep them employed.

2. But, when no more ore appears, then they amuſe people with the notion, that what they had diſcovered was only a leader to ſome vein, and that the vein could not be far off: thus they lead their dupes on, 'till perhaps, they do at length really diſcover a vein of ore: but, that they may make the moſt of it to their own advantage, they will then tell the adventurers, that they find it is in vain for them to go on in that place any longer, for that they ſee no likelihood of reaping any advantage.—Thus the firſt adventurers are impoſed on to deſiſt, when they might carry on the work to profit, as they were drawn in to continue it, when there was not the leaſt view of advantage.

3. The miners fixing their private mark upon the ſurface of the earth where the vein was diſcovered draw others in, for a time, to hazard their money in other places; and at length apply to ſome perſons to work where the real mine is, for a fortnight, three weeks, or a month, for nothing; for that they are, by certain ſecret ſigns, known only to themſelves, convinced, that there is a good vein there; and, provided they ſhall have ſuch an extra-conſideration, if they, in that time, diſcover a mine, and have the ſole working thereof, they will engage gratis. This naturally draws adventurers, the mine is really found, and thoſe reap the ſole advantage of it, who never hazarded one ſhilling in it's diſcovery.

4. Artful and villainous projectors alſo are frequently in combination with the miners, to deceive people by the following arts:

1. Theſe projectors prevail on the miners to give out that a valuable mine is diſcovered; ſamples of the ore are produced, and aſſays made by aſſay-maſters of credit, who pronounce the ore to yield ſo much metal. This being confirmed by divers aſſays, numbers are ſeduced to hazard their money, in concert with the projector's emiſſaries, when the whole is ſunk in the pockets of the infamous ſchemers and miners.

2. It has been ſaid, that, in order to draw people into thoſe adventures, ſome tons of ore have been often purchaſed from other mines, carried to places where there was none, and pretended to be there diſcovered. A wealthy gentleman, and of experience in mining in CORNWALL, was thus egregiouſly impoſed upon by thoſe villains, though he had the circumſpection to go down into the mine himſelf, and ſee with his own eyes; and was, as I have been well informed, greatly redueed.

3. Another art ſaid to have been practiſed by theſe deceivers is, the making of an artificial mineral, abounding richly with gold and ſilver.—This they do, by melting a portion of gold and ſilver with ſome ſulphureous marcaſite or mineral, and break the ſame in ſuch a manner as to appear like a native mineral; by which, upon the aſſay's yielding real gold and ſilver, people are impoſed upon.

Theſe are the ſhameful impoſitions to which perſons are liable; ſo that unleſs they live in the neighbourhood of places that abound with mines, can depend upon the fidelity of the miners, and have ſufficient judgment themſelves, and will venture thier perſons down into the mines from time to time, there is no great dependance to be made upon the report of others.

Certain it is, that many have got great eſtates by mining; and if they reſide upon the ſpot, and have competent ſkill to guard themſelves againſt fraud and deluſion, people may often ſtand a good chance of great gain for very little hazard.

MINES, are places in the earth, out of which metals, minerals, and other kinds of earth are dug.

So many different kinds of foſſils as there are, ſo many various names have their mines, viz. gold-mines, ſilver-mines, copper-mines, iron-mines, coal-mines, ſalt-mines, and ſuch as produce gems, &c.

The moſt celebrated gold and ſilver mines, are

1. Thoſe of PERU and CASTELLA DEL ORO, which are the richeſt in the world, yielding gold and ſilver in abundance, and not being deſtitute of other metals; inſomuch that the natives of Peru and the Spaniards uſed to boaſt, that this kingdom was founded upon gold and ſilver. [See the article PERU.]

Girava, a Spaniſh writer, affirms, that there were formerly mines about the town of Quitto, which produced more gold than earth. And, when the Spaniards made their firſt expedition into this golden country, they found ſeveral houſes, eſpecially in the regal city Cuſco, which were all covered over within and without with plates of maſſy gold. And the officers of the Peruvian forces not only wore ſilver armour, but all their arms were made of pure gold. The moſt rich and advantageous mine of ſilver is in the mountains of Potoſi, where 20,000 labourers are daily employed to dig it. Theſe mines produce that vaſt quantity of gold and ſilver, which the king of Spain receives out of America every year, to the mortification of other kings and potentates; and which he therefore keeps fortified, with ſtrong forts and garriſons.

2. There are excellent rich mines of ſilver in the JAPAN ISLANDS, whence they are called, by the Spaniards, the Silver Iſlands. There are alſo ſome mines of gold found there, but theſe are not ſo rich as formerly.

3. There were more plentiful gold-mines formerly in ARABIA, than at preſent.

4. In the mountains of PERSIA, and in CHINA, there are ſome ſilver-mines.

5. In GUINEA there are ſeveral mountains that produce gold, but they are remote from the ſhore, and the gold duſt that is brought from thence, is not dug out of the ground, but gathered up and down by the natives. Their inland kings are however ſaid each to poſſeſs his mine, the product of which he ſells to the neighbouring merchants, and they again to others, 'till it reaches the ſea-coaſt, where it is exchanged with the Europeans.

6. In MONOMOTAPA, there are found rich mines of gold and ſilver, and alſo in Angola, both of which are thought to be parts of one continued vein.

7. GERMANY excels the reſt of the kingdoms of Europe for plenty of mines, of which ſome produce ſmall quantities of gold, others abundance of ſilver, and a great many of them copper, iron, lead, vitriol, antimony.

8. SWEDEN is enriched with the beſt copper-mine of any hitherto diſcovered, it is in a vaſt high mountain, which they call Kopperberg, out of which as much copper is dug as makes up a third part of the king's revenue. Here are alſo numerous iron mines, and ſome ſilver-mines, but the latter ſcarcely defray the expence of digging them.

9. There are mines of precious ſtones found in the iſland of CEYLON, and alſo in CONGO (where there is a ſilver-mine, and ſo much marble, that the earth under-ground is thought to be all marble) and in PERU, about PORTOVIGO, in SMARAGDINA, and in GUIANA, near the coaſt of which there is a ſmall iſland called ST. MARIA, which yields a pretty deal of gold, if we may believe the Dutch. In the kingdom of GOLCONDA, there is a mine which yields precious ſtones, particularly diamonds in abundance, but it is not now dug.

10. In CHILI there are mines yielding gold, ſilver, and gems, but the warlike inhabitants, ſetting more by iron-weapons than gold or ſilver, have partly killed, and partly driven away, the Spaniards, and demoliſhed the mines that were but newly begun.

11. The iſland of MADAGASCAR abounds in iron and tin, with a moderate quantity of ſilver, a little gold, but no lead. Wherefore the natives value leaden ſpoons above ſilver ones.

12. In the iſland of SUMATRA it is reported, that there are rich mines of gold, ſilver, braſs, and iron, and that the king in one year, (viz. in 1620) received into his treaſure 1000 pounds weight of gold.

13. In the PHILIPPINE ISLANDS, and in JAVA, HISPANIOLA, CUBA, and others, there are found mines of gold, ſilver, copper, and iron; and, in the mountains of SIAM, there are got gold, ſilver, and tin.

14. There are mines of ſalt in POLAND at POCHNIA, four miles from CRACOW (where large lumps of tranſparent white ſalt are cut out of the ground) in TRANSYLVANIA, in the county of TYROL, and in places near the CASPIAN SEA, not far from the river WOLGA, over againſt the iſland KISTOWAT, where the Ruſſians dig their ſalt and boil it to a more pure ſubſtance, and afterwards tranſport it to all parts of Ruſſia. In CUBA there is a whole mountain of ſalt. All the mountains in the iſland of ORMUS, at the mouth of the Perſian gulph, are of ſalt, which may be gathered in any part of them, in ſuch great quantities, that the very walls of their houſes are built of cryſtalline ſalt. In a valley in PERU, about eighteen miles from LIMA to the northward, are found deep and large pits of ſalt, where every one may take away what quantity he pleaſes, becauſe it continually increaſeth, and ſeemeth impoſſible to be exhauſted. In AFRICA there is no other ſalt uſed, but ſuch as is dug out of pits or quarries, like marble, of a white, greeniſh, or aſh colour. All India fetch their ſalt from the great ſalt-mines of BAGNAGAR in COROMANDEL, &c.

In DERBYSHIRE, YORKSHIRE, FLINTSHIRE, in ENGLAND, there are conſiderable lead-mines, and ſome copper. CORNWALL abounds with tin-mines. SUSSEX, SOMERSETSHIRE, with iron, &c. SCOTLAND and IRELAND alſo, and the BRITISH PLANTATIONS in NORTH AMERICA, have numerous mines, many of which are wrought to great advantage.

Of the GENERATION of MINES.

Mines are commonly found in high mountains, becauſe the heat does concenter and unite better there than in low grounds, and conſequently there is a ſtronger fermentation for the production of metals.

The hardieſt, the weightieſt, and moſt compact metals, are generated, when by fermentation there has been an entire ſeparation of the groſs parts; for they are only a coagulation of very ſubtile particles, and a ſtrict union of theſe very ſmall pores.

Metals lie in mines very often like great trees, which ſpread their branches towards all ſides; whence it is, that many have thought they were nouriſhed as plants and animals, by juices which run and circulate in the veins or veſſels ſuppoſed to be within them; but, if the thing be examined narrowly, it may eaſily be conceived, that theſe branches of metals (which are called veins by thoſe who deal in mines) happened only by the running of the metallic matter through ſeveral ſmall canals, before it was coagulated; which may have been occaſioned by the fermentation that ſwells the matter, and forces it to open the circumadjacent earth in divers places. This fermentation alſo raiſes very often (even to the top of the mountain where there is any metal) ſtrings of ſome marcaſite or metallic earth, which is taken as a great ſign of metals by thoſe who ſearch after them.

Becauſe it would be a very laborious and unpleaſant work to dig for metals, without ſome reaſonable aſſurance of finding them; therefore ſome have ſtudied to know the ſeveral characteriſtics, by which it may be concluded, that ſuch and ſuch places do afford mines.

There are, indeed, ſometimes mines, whoſe veins appear in the very ſurface of the earth, ſo that none can doubt of finding them. [See AFRICA.] But, if none others were ſought after, we ſhould not have ſuch abundance of metals. Some therefore of the following marks may be added to thoſe already given for diſcovering mines.

Firſt, It is to be conſidered whether the ridges and tops of mountains, their chinks, cavities, or pits digged in them, do yield any marcaſites, or pieces of metal; for that is a ſign there is a mine ſomewhere about: and, to find out the place, you muſt follow the ſtring, or track, of theſe marcaſites.

Another ſign of a neighbouring mine is, when there are found, in the ſand of any rivulet, or ſpring, ſmall pieces of marcaſites; for thoſe have been carried off by the waters, which commonly come out of mountains; and ſo, by tracing the rivulet or water to it's head, you may come at laſt to the mine itſelf.

A third mark of a mine is, when abundance of hot waters, or waters which have a mineral taſte, flow from a mountain, or any other place: for the places where metals are generated are always invironed with theſe waters, which is the occaſion of no ſmall trouble and difficulty to thoſe who dig in mines.

A fourth ſign of a mountain's having a mine in it is, when it is bare and barren, without trees, and having very few plants upon it; or when thoſe that grow there are pale, and without any freſh colour: for the mineral vapours which ariſe through the pores of this mountain, burn the roots of theſe plants.

Indeed, ſometimes metals are found in very green and fertile mountains, where there are many trees, and other plants; for the metallic vapours do either ariſe there in a leſs quantity, or are of a different nature, and ſo do not hinder the growth of plants in theſe mountains: or, perhaps, the mines lie at the bottom of them, or may be covered with ſome hard ſtone, which intercepts the exhalation of the vapours from the plants.

Finally, ſome very ſkilful in mines pretend to know, whether there be any in a mountain, by adverting to the reflection of the ſun-beams. There being ſo much water in mines, which neceſſarily muſt be drawn off, therefore they commonly rather begin at the foot of the mountain than at the top, becauſe the waters may this way be more eaſily drained.

Then they dig a vault near to the foot of the mountain, which ought to be continued, in a ſtraight line, the neareſt way to the body of the mine; but many do often amuſe themſelves with the ſmall veins of the metal which they meet with, and upon that account leave the right way, and ſo both loſe their time, and ſpoil their work: beſides that, they expoſe themſelves to great danger; for they ſhake the ſoft ſtones, which, by this means, fall down in great quantity, filling up what they had digged, and ſometimes cruſhing the very workmen. To avoid this accident, they uſe to prop the roofs of their vaults, or rooms which they dig, with great rafters of wood, to prevent the falling of the looſe earth and ſtones, and then they work by proper inſtruments for looſening the metal itſelf.

Metals differ from other minerals in being malleable, which the others are not.

They are accounted ſeven, gold, ſilver, iron, tin, copper, lead, and quickſilver; this laſt is not malleable of itſelf, but is ſo mingled with the others, that it is thought to be the ſeed of metals.

Aſtrologers have conceived that there was ſo great an affinity and correſpondence between the ſeven metals beforenamed and the ſeven planets, that nothing happened to the one but the other ſhared in it; they made this correſpondence to happen through an infinite number of little bodies, that paſs to and from each of them; and they ſuppoſe the corpuſcles to be ſo figured, that they can eaſily paſs through the pores of the planet and metal they repreſent, but cannot enter into other bodies, becauſe their pores are not figured properly to receive them; or elſe, if they do chance to get admittance into other bodies, they cannot fix and ſtay there to contribute any nouriſhment; for they imagine that the metal is nouriſhed and perfected by the influence that comes from it's planet, and ſo the planet again the ſame from the metal.

For theſe reaſons they have given theſe ſeven metals the names of the ſeven planets, each according as they are governed: and ſo have called gold the ſun, ſilver the moon, iron Mars, quickſilver Mercury, tin Jupiter, copper Venus, and lead Saturn.

They have likewiſe fancied that each of theſe planets has his day apart to diſtribute liberally his influence on our hemiſphere: and ſo they tell us that, if we work upon ſilver on Monday, iron on Tueſday, and ſo of the reſt, we ſhall attain our end much better than on other days.

Again, they have taught us that the ſeven planets do every one govern ſome particular principal part of our bodies; and, becauſe the metals do repreſent the planets, they muſt needs be mighty ſpecific in curing the diſtempers of thoſe parts, and keeping them in good plight. Thus they have aſſigned the heart to gold, the head to ſilver, the liver to iron, the lungs to tin, the reins to copper, and the ſpleen to lead.

Thus you ſee, in ſhort, what ſome of the moſt ſober aſtrologers do fancy concerning metals; and they draw conſequences from hence which it would be too long here to relate. I have told you what the ſobereſt among them ſay; for nothing can be ſo abſurd as what ſome of them would have us believe.—But this has been judged by the moſt eſteemed philoſophers mere whim and enthuſiaſm.

Never-

Nevertheleſs, if we could be ſatisfied that experience confirmed what theſe perſons have offered to maintain, we might then have reaſon to think there were ſome likelihood in their doctrine, although their principles were found to be altogether falſe; but in truth there is nothing to confirm their opinion, and we find it every day plain enough, that the faculties and virtues are utterly falſe which they attribute to the planets and metals. The metals, indeed, are of good uſe in medicine, and excellent remedies may be drawn from them; but their effects may better be explicated by cauſes near at hand than the ſtars.

Working in metal is very ancient, even from the firſt age of the world; in the time of Tubal Cain, according to the teſtimony of Moſes, they had got the art of working with a hammer, and they knew how to make utenſils of tin and iron. It is very probable that, in the time of that lawgiver, they practiſed chemiſtry, becauſe of the children of Iſrael, under Aaron, made themſelves a golden calf; and Moſes, after he came down from Mount Sinai, in a great wrath againſt the people, reduces this calf to aſhes; which was, we may reaſonably ſuppoſe, done by diſſolution and precipitation, and mercury. See the articles METALS, METALLURGY, MINERALS, MINEROLOGY.

REMARKS.

As land produces more or leſs corn according to it's goodneſs or fertility, and the labour employed in manuring it; ſo the mines of iron, lead, copper, coal, tin, ſilver, &c. produce more or leſs according to the richneſs of the veins, and of the labour of digging, drawing off the waters, melting, refining, &c. The labour of the ſilver miners is the deareſt, by reaſon of the danger and mortality attending it; and the ſilver miners are eſteemed to live, at a medium, but five or ſix years in that labour.

The value of metals is like every thing elſe, proportionable to the land and labour that enters into their production; and the price of them varies according to the demand and conſumption, which depends principally on the fancy and manner of living of the proprietors of land.

If all the tin that is drawn annually out of the mines of Cornwall, and which commonly ſells at London for about 100,000 l. has every year a conſtant conſumption and vent, the land and labour that enter into it's production are equal to the land and labour that produce any other quantity of commodities which ſell for 100,000 l.

But if every body rejected the uſe of tin, and made uſe of earthern ware inſtead of it, it would ceaſe to be in eſteem, and to have a value, and the tin adventurers would diſcontinue the work of the tin mines.

Let us ſuppoſe in a ſtate without foreign trade, that a regular and uniform quantity of copper is annually dug out of the mines for the common uſes of life, as pots, kettles, pans, and kitchen ware, to replace the quantity of copper which is yearly conſumed by fire, or worn away, and then that copper is begun to be made uſe of as money; this additional demand of copper will make it dearer, and encourage the digging out of the mines more of it than uſual, and there will be more copper yearly required to replace that which is conſumed.

All ordinary metals, as iron, lead, tin, copper, coals, &c. are conſumed by fire, the computation of the land and labour that goes to their production. See the article LABOUR.

But ſilver and gold are not conſumed by fire, and they wear out ſo ſlowly by friction and attrition, that they may be eſteemed permanent metals in this regard, as well for their other qualities, as their volume, ſubdiviſion without waſte, the impoſſibility of falſifying them, &c. They ſeem beſt fitted of any metals or commodities to ſerve for money.

If there were conſtantly an equal demand and conſumption in a ſtate of corn and wool, there would be alſo a conſtant proportion of value between them, ſuppoſing alſo an equal quantity of each to be conſtantly produced.

In this caſe, a meaſure of wheat would always bear a conſtant proportion of value to a pound of wool; and an accomptant might, by imagining aliquot parts, find out a common meaſure to know how much wool is worth ſo much wheat.

But, in regard the conſumption of theſe and all other commodities, as well as their quantities in a ſtate, vary frequently, or rather conſtantly, no accomptant or algebraiſt can fix any proprortion of value between them.

Money alone (I do not here conſider what is uſed for money) naturally finds out this proportion, and the quantity of money which is brought to market to barter for each kind of commodity, readily fixes the proportion of value that is between them all, Quæ eadem uni tertio ſunt eadem inter ſe. Every body who brings his money to market knows what money he has to lay out, or, at leaſt, what he intends to lay out for the expence of that day.

The working of mines is undertaken either by private perſons, or by companies of ſuch, or by corporations endowed with certain privileges, as the Mine-Adventurers, &c.

Further REMARKS.

The ſubſtance of what has been ſuggeſted for the advancement of mining, ſeems to be reducible to what follows, viz.

There is not any method that appears ſo conducive towards effectually carrying on works of mining and ſmelting, as that which is eſtabliſhed in Sweden; there the whole buſineſs is under the direction and management of commiſſioners, in the ſame manner as there is in this kingdom a board of trade and plantations, where the principal branches are under the niceſt regulations imaginable: they have two perſons who are principally employed, and under whoſe direction are put all the machine works belonging to their mines; theſe again have mechanics under them, who are very induſtrious, and continually aiming at ſome improvements; then, in order to promote diſcoveries, they appoint people in every province and county, who are called minor metal ſearchers; becauſe their daily employment and conſtant buſineſs, is to ſurvey the grounds, and examine the mountains, for all kind of metalline ores, minerals, veins, beds, &c.

Whatever diſcoveries happen to be made by theſe, they are inſtantly reported to the grand board; to which, if they ſeem likely to prove beneficial, orders are iſſued out immediately, and miners are ſet to work in the moſt advantageous manner: after the ſame method are all the other branches of this ſcience carried on, in which the ſame ſpirit prevails.

In order to facilitate and accompliſh the perfection of this ſcience, and to range it's laws in ſuch a juſt order, ſo as to render the whole into a compleat body of mining and ſmelting, the following method, we apprehend, will not appear irrational or impracticable.

1. Both mining and ſmelting ſhould be treated in an hiſtorical manner: a juſt account of them ſhould be brought down from the earlieſt ages to this preſent time, in which particular notice ſhould be taken, what improvements have been made, and what declenſions and decays it has ſuffered, and in what ages and in what nations, they have happened.

2. A true theory muſt be eſtabliſhed: the ſymptoms, which by experience have been confirmed to be characteriſtics, whether good or bad, ſhould be laid down in their proper order; the rationale of them be given; thoſe that are equivocal ranged under one claſs, and thoſe that are univocal or pathognomnic under another: it ſhould be ſhewn likewiſe, how they are dependent upon each other, or how one is the neceſſary conſequent of the other: taking care, that the whole be demonſtrated in ſuch a plain and eaſy manner, that it may juſtly be ſaid to be adapted to the meaneſt capacity, though ſounded upon an exact ſyſtem of natural philoſophy; ſo that a proper regard is to be taken, that nothing is aſſerted, but what may, and is made evident from the ſame principles.

3. All the branches of the mechanical part of mining, or the various ways of working under-ground, ſhould be familiarly particularized, and made as clear as poſſible; the different methods of different countries be faithfully repreſented; for from every one of them ſomething may be collected, towards improving our own: wherefore we muſt not forget to mention the tools, which, with all curious under-ground ſtructures, ſhould be delineated in a lively and intelligible manner upon copper-plates.

4. Draughts of all machines appertaining to mine-works, ſhould, in like manner, be exactly exhibited upon copper-plates: in this branch we need not be aſhamed to borrow from foreigners; amongſt thoſe that have been invented by the Swedes, we ſhall find a great many worthy of our obſervation; for they have excelled all other nations, particularly in one, which, in all reſpects, anſwer the end in a very ſurprizing manner, without the aſſiſtance of ropes; as is particularly deſcribed by Mr. Swedenborg, in his Regno Subterraneo.

5. As the mineral veins of one country differ from thoſe of another; for inſtance ſake, we will mention two of the moſt material: veins on the continent are in long ranges and rakes, they are not there liable to bars or out-cuts; they, therefore, moſt commonly run pretty ſtrait and certain, for as many miles as the courſe of the mountains will admit of; they are entirely unacquainted with beds and bellies in their mines, which are moſt commonly called Pipe-works: ſo on the contrary, in all iſlands, the ranges or rakes are ſeldom found to run in ſtrait lines; their veins are very uncertain, ſeldom continue long; they are frequently impeded with bars or out-cuts of the rocks, and the ore is too often found in bellies and pipe-works: in fine, they have ſcarce any thing alike or common with thoſe on the continent, except the underſets, which are generally the ſame in moſt places.

The ſame uncertainty and irregularity holds good, and extends itſelf even to the very rocks and mountains, which in this kingdom are different, in different counties; thoſe in Flintſhire are moſt commonly ſoft, thoſe in Montgomeryſhire hard, and thoſe in Cardiganſhire are in no reſpect like thoſe of either place; theſe differences are ever to be cautiouſly weighed and conſidered, for they occaſion a different method of ſcrutiny and examination, as well as a different one of working; nor can we borrow any light from our neighbours into this affair, the picture muſt abſolutely be taken from the original: therefore, if any author ſhould attempt to write a diſtinct treatiſe of this art, and deſcribe the particular method of working which ought to be purſued in a particular county or ſoil, before he can pretend to render ſuch an under-

taking complete and beneficial to the inhabitants, and proficients of the place he deſigns it for; he muſt ſurvey the mineral mountains very careſully, that he may be able to compoſe his Geographia Subterranea in a correct and ſkilful manner; for, if this is not done, how can he be ſuppoſed to form his maps exactly true? How will he be able to deſcribe the labouring part? How will he be capable of diſtinguiſhing the promiſing ſymptoms from thoſe that are otherwiſe? How will he manifeſt the product of the mountains, and point out the way by which they may be worked to the beſt advantage? Yet all theſe things muſt be diligently obſerved, and punctually proſecuted; theſe rules muſt be ſtrictly regarded by every writer that deſigns his labour to benefit the nation, to ſerve the proprietor, and to inſtruct the ignorant. In fine, he muſt follow the example of the accurate coaſt-ſurveyor, that not only points out the ſafeſt roads and harbours, but likewiſe manifeſts the dangerous ſhoals and rocks; therefore, let the ſubterranean geographer deſcribe the barren, as well as the fertile mountain, for by that he will give us to underſtand the promiſing ore-bearing ſigns, and vice verſa; for a good guide ought not only to be acquainted with the main road, through which he is to conduct his traveller, but he ſhould alſo know the bye ones, that he may not be at a loſs to get into the main one, if by any accident he ſhould happen to be thrown out of it.

6. When he comes to the ſmelting part, he muſt lay down a general hiſtory of the produce of nature in the caverns of the earth; he muſt give us a deſcription of the various ſorts of ores and minerals, by ſhewing us not only the different properties which eſſentially diſtinguiſh one ſpecies from another, but likewiſe the diverſity that may be found in each ſpecie; theſe, according to their ſeveral degrees and natures, are to be diſtributed into proper claſſes, divided and ſubdivided under proper heads; giving to each it's inſeparable characteriſtics, whereby to diſtinguiſh it from the reſt; telling us how and where they are commonly found, what appearances they afford when analyzed, what principles they are compoſed of, what mixed bodies they are incorporated with, what compoſitions and fluxes are moſt ſuitable to them, to free them from other heterogeneous mixture, and ſet at liberty their pureſt contents: in fine, it muſt be ſet forth after what manner they are to be treated, and what diſcoveries have been made in this reſpect in different ages; exhibiting exact draughts of furnaces that are and have been uſed in foreign countries as well as in our own, that choice may be made of thoſe that are the beſt adapted for the purpoſe; pointing out their perfections and imperfections, that they may be farther improved, as the artiſt ſhall have occaſion.

7. The mine and mineral manufactures are fully to be treated of, the materials that all are compoſed of be regiſtered; how they are produced, and after what manner they are obtained in foreign countries, even in the common way of ſmelting, muſt be clearly ſet forth: theſe would make a conſiderable article in the trade and manufactures of this kingdom; for the materials of thoſe commodities are to be met with in great abundance, in ſeveral parts of this country.

8. The whole work muſt be concluded, with giving compleat inſtructions on the art of aſſaying metalline and mineral ores in ſmall quantities [ſee the article ASSAY]; nothing here ſhould be omitted, which can in any ſhape be conducive to this purpoſe, for it is of very great and material concern.

If a treatiſe ſhould be executed, that laid out a plain plan, founded upon a ſolid theory, the whole confirmed and eſtabliſhed by experiments, it might reaſonably be expected, that mining and ſmelting would undoubtedly raiſe their head; it might juſtly be concluded, that theſe two arts would ſoon come into a flouriſhing ſtate in this kingdom; that they would in a few years gain the aſcendancy, even over thoſe where the mines are worked to the greateſt perfection yet known.

MINORCA, an iſland in the Mediterranean Sea, ſituate about 100 miles ſouth of the coaſt of Catalonia in Spain, and about 20 miles eaſt of the iſland Majorca, and is 30 miles long and 12 broad.

The ſoil of this iſland is of ſeveral kinds; that of the hills and upper grounds, is of a colour nearly approaching to black. It is light, fine, and extremely fertile; and, though it is very thinly ſpread over the face of the rock, it yet produces tolerable crops with very little cultivation. It has a ſmall intermixture of ſand, which diſpoſes it to ſeparate freely before the plough; a quality very advantageous to the Minorquins, as it ſaves them a world of labour as well as expence.

The ſoil of the plains is far leſs fertile than that of the riſing grounds. It is cold and clayey, and equally unfit for agriculture and paſture; and produces only a ſour herbage, that is exceſſively diſtaſteful to cattle, great plenty of ſpart (a kind of ruſhes) in many places, a variety of weeds. The vallies, indeed, have been enriched by the earth that has been waſhed on them from the adjoining hills to a great depth: but the hills have been impoveriſhed by the ſame means, and in the ſame proportion. However, we frequently ſee ſtone-walls, that have probably ſtood many ages, run acroſs the ſides of the hills to detain the ſoil; and ſuch hills yield good crops to the very ſummit, which muſt otherwiſe have had their rocky entrails laid bare, as is viſible, wherever this caution has been neglected.

Iron ore is ſo plentifully diſperſed over the whole face of the earth, that it is not ſurprizing we find it in Minorca. It's ferruginous colour and great weight diſtinguiſh it, in many flat maſſes, of from four to ten inches diameter, in moſt parts of the iſland. But it is not converted to any uſe here, either on account of it's unfitneſs to make iron alone, the ſcarcity of fuel, or the want of ſkill in the natives.

But of lead ore here is a mine at St. Puig, which has been worked to advantage within theſe 40 years, and the ore ſent into France and Spain, for the uſe of the potteries of thoſe countries. The proprietor diſcontinued his work on ſome ſmall diſcouragement; and it muſt be owned, that theſe people are of all mankind the moſt eaſily put out of conceit with an undertaking, that does not bring them in mountains of preſent gain, or that admits of the ſlighteſt probability of diſappointing their moſt ſanguine expectations: nor will their purſe admit of many diſappointments; and thus their poverty co-operating with their natural deſpondence and love of eaſe, is the principal cauſe of their backwardneſs to engage in projects, though never ſo promiſing, for the improvement of their private fortune, and the advantage of the commerce of their country. This lead ore went under the name of Vernis among the natives, as it was wholly uſed by the potters in varniſhing and glazing their earthen veſſels.

There are few exports of any account, and they are obliged to their neighbours for near one third of their corn, all their oil and aguardiente, and ſuch a variety of articles of leſs conſideration, that nothing could preſerve them from a total bankruptcy, but the Engliſh money circulated by the troops, which is exchanged for the daily ſupplies of proviſions, increaſed by the multiplication of vineyards, the breeding of poultry, and the production of vegetables, in a proportion of at leaſt five to one ſince the iſland has been in our poſſeſſion.

It will not require many words to enumerate their exports: they make a ſort of cheeſe, little liked by the Engliſh, which ſells in Italy at a very great price; this, perhaps, to the amount of eight hundred pounds per annum. The wool they ſend abroad may produce nine hundred pounds more. Some wine is exported, and, if we add to it's value that of the home conſumption, which has every merit of an export, being nine parts in ten taken off by the troops for ready money, it may well be eſtimated at ſixteen thouſand pounds a year. In honey, wax, and ſalt, their yearly exports may be about four hundred pounds; and this comes pretty near the ſum of their exports, which we eſtimate together at eighteen thouſand one hundred pounds ſterling per annum.

A vaſt balance lies againſt them, if we conſider the variety and importance of the articles they fetch from other countries, for which they muſt pay ready caſh. Here it may be neceſſary to withdraw ſome things from the heap, ſuch as their cattle, ſheep, and fowls, on which they get a profit; for the country does not produce them in a ſufficient abundance to ſupply them, eſpecially when we have a fleet of men of war ſtationed there.

Their imports are, corn, cattle, ſheep, fowls, tobacco, aguardiente, oil, rice, ſugar, ſpices, hard ware, and tools of all kinds, gold and ſilver lace, chocolate, or cacao to make it, tobacco, timber, plank, boards, mill-ſtones, tobacco-pipes, playing cards, turnery ware, feeds, ſoap, ſaddles, all manner of cabinet-maker's work, iron ſpikes, nails, fine earthenware, glaſs, lamps, braſiery, paper, and other ſtationary wares, copperas, galls, dye ſtuffs, painters bruſhes, and colours, muſical inſtruments, muſic, and ſtrings; watches, wine, fruit, all manner of fine and printed linens, muſlins, cambrics and laces; bottles, corks, ſtarch, indigo, fans, trinkets, toys, ribbands, tape, needles, pins, ſilk, mohair, lanthorns, cordage, tar, pitch, roſin, drugs, gloves, firearms, gunpowder, ſhot and lead; hats, caps, velvet, cotton, ſtuffs, woollen cloths, ſtockings, capes, medals, veſtments, luſtres, pictures, images, agnus Dei's, books, pardons, bulls, relicks, and indulgencies.

REMARKS on MINORCA.

The Spaniſh dons here are above trade, and the reſt of the natives are unable to exerciſe it to any purpoſe. Yet if this infatuated people would ſet themſelves ſeriouſly to make the moſt of their native produce, a few years induſtry would enable them to traffic with their neighbours to advantage, and even to provide exports of conſiderable value for an Engliſh market. To inſtance in a few: the cotton ſhrub has been tried here, and ſucceeds to admiration: they have ſpart growing in many places, in ſufficient plenty to make all their own cordage, and to ſpare. The tunny fiſh abounds on their coaſt, and they might eaſily fall into the method of curing it: by this the French of Languedoc and Provence, their neighbours, make a vaſt advantage.

They have abundance of olive-trees, yet they make no oil of the fruit, and are utterly ignorant of the right method of pickling it.

Some capers they pickle; and might, from the frequency of the plant, improve this into a very valuable export.

Hemp and flax do extremely well, and might be increaſed, and manufactured for exportation. Their canes and reeds are of uſe in the clothiers trade, but they export none; and they have great plenty of excellent ſlate, but do not work it. It might poſſibly anſwer to ſend their cantoon ſtone to England as ballaſt; but certainly their marble would be a valuable commodity with us, of which no country can boaſt a greater quantity in proportion, nor of greater beauty or variety, than this poor iſland.

Squills they have in abundance, maſtic, aloes, and ſome other drugs, which they neglect.

Their bees thrive well, and ſhould be carefully managed, and increaſed as much as poſſible; their wax is inferior to none, and their honey cannot fail of being extremely delicate and fine in a country abounding with ſuch a variety of aromatic plants, and is, therefore, in high eſteem every where.

They raiſe a little tobacco, but ſeldom half the quantity they conſume; and they make a kind of ſnuff, in ſmall quantities, which is in no reſpect inferior to that of Liſbon.

Their neighbours of Majorca make good advantage of their plantations of ſaffron, which theſe people uſe in their cookery, and yet will not take pains to raiſe it.

Their palm-trees, for want of a proper cultivation, produce no dates; and they ſend none of their fruit abroad, though they have it in their power to ſupply us with as good figs, prunes, almonds, raiſins, pomegranates, oranges, lemons, and ſeveral other kinds, as any country in Europe.

But we will cloſe theſe hints of what an induſtrious people might do to inrich themſelves, and this indolent generation of men careleſsly overlook, with the mention of ſalt, a ready-money commodity every-where, and of which they might eaſily make a thouſand times the quantity they now do. Their method requires little trouble. There are a great many places on the coaſt of the iſland, where the rock is but little higher than the ſurface of the ſea, and is flat for a great way together. In gales of wind the ſea is beat all over theſe levels; and the ſalts have, by degrees, corroded the ſofter parts of the ſtone, and reduced it's face to an infinite number of ſmall cavities, divided from each other by the more ſolid veins, which have reſiſted their impreſſion.

Theſe cavities they fill with water from the ſea, by means of ſcoops, and one day's ſun ſuffices to evaporate the water, and leaves the concreted ſalt dry in the cells. The women and children gather it in the evening, and carry it home; and the cells in the rock are filled as before.

Having inſtanced ſome of the natural produce of this iſland ſlighted by the inhabitants, which yet are capable of being improved into very valuable articles of commerce; we will attempt an eſtimate of the charge they are at in their importations.

From authentic papers, which contain an exact account of their harveſts for thirty-ſeven years, it appears, that there are annually raiſed here 53,501 quarters of wheat, and, 22,683 of barley, one year with another.

Wheat is their only bread-corn, all their barley being given to their beaſts. Of the laſt they ſeldom import any; but they have occaſion for 35,000 quarters of wheat every year; which, at nine ſhillings each, amount to 15,750 l. They import oil yearly to the value of 10,000 l.

By an exact account of their aguardiente for 14 years, we find they import annually of this ſpirit a quantity that coſts them 9250 l. allowing only 10 per cent. for the profit of the farmers; and this, at ſix-pence a quart, makes their yearly conſumption of this ſpirit to be upwards of 1540 hogſheads.

They import tobacco to the amount of 1200 l. a year.

We may compute that their imports in linen and woollen goods of all kinds do not come to leſs than 15,000 l. It is not poſſible to make a nice calculation of the value of all the reſidue of their imports, but we may reaſonably ſet them at 20,000 l.

So that here we have an annual expence of 71,200 l. from which if we deduct 18,100 l. the amount of their exports, the remainder, 53,100 l. ſterling, is a clear balance of trade againſt them.

To enable theſe people, in ſome meaſure, to ſupport the charge of this great balance, we are to reckon the large ſum of money yearly brought into the iſland, and ſpent among them by the troops; a ſum that falls but little ſhort of their whole balance; the greateſt part of which goes to market for the common neceſſaries of life.

Every vintage produces 18,000 hogſheads of wine; and, if we allow for the clergy 2000 hogſheads, and for all the reſt of the natives 1000, the remaining 15,000 hogſheads are ſold, to the Engliſh, for 27,825 l. in ready money, the price of a hogſhead, taken at a medium, being 35 ſhillings.

This is a very conſiderable article in their favour; and they are ſo ſenſible of the advantage they draw from their vineyards, that they are continually enlarging them and increaſing their number, notwithſtanding they are taxed to near half their value.

They are, indeed, tied down to a ſet price for their red wine, and the aforacion, or rate, is ſettled the beginning of the year; but, for the little white wine they make, they are at liberty to drive their bargain as advantageouſly as they can.

It is certain this people can never be rich, unleſs they become induſtrious; the ſea is open to them, as well as to their neighbours, on every ſide, who thrive by a foreign commerce, and yet not one of them can victual or navigate their veſſels near ſo cheap as theſe ſlothful Minorquins, who lie in the center of ſo many trading ports, that it is amazing how they can have ſo long overlooked their true intereſt, and ſuffered themſelves to be ſupplied with ſo many of the neceſſaries of life in foreign bottoms.

The Minorquins are naturally liſtleſs, and, if they contrive the means to keep their families from poverty, they are but little ſolicitous to enquire into the arts and manufactures by which ſudden fortunes are acquired on every ſide of them. Tell them the Malteſe are inriched by the quantities of cummin and anniſe-ſeed they export; remind them that the plant which produces the canary-ſeed grows ſpontaneouſly all over the iſland; or that a gum is produced from the maſtic-tree, of very great value abroad (and though this tree is an incumbrance which they eagerly root out of their grounds) they treat you as a viſionary, and, with a ſhrug of contempt, ſeem to thank heaven that they have no turn to whims and projects, but are contented to jog on in the plain track which their fathers trod before them.

MISSISSIPPI, MESSASIPPI, or MESCHASIPPI, a country of North America, bounded by Canada on the north; the Britiſh plantations on the eaſt; the gulph of Mexico on the ſouth; and the principality of New Mexico on the weſt. Miſſiſſippi river, which gives the name to the country, riſes in Canada, and runs to the ſouthward, 'till it falls into the gulph of Mexico. It is a large navigable river, ſaid to run above 2000 miles; to which, as well as the adjacent country, the French lay claim, and have poſſeſſed themſelves of part of the country ever ſince the year 1712, giving the river the name of St. Louis, and the country the name of LOUISIANA, and have made great efforts towards planting it, as it is a moſt fruitful and deſirable country, of vaſt extent; though the eaſt part of it, in reality, belongs to Great-Britain [ſee LOUISIANA,] and the weſt to the Spaniards, who have planted part of theſe countries long ſince, and are every day extending their ſettlements into it. The French raiſed the expectations of their people ſo high in relation to the immenſe riches that were to be acquired by planting it, and being ſettled ſo contiguous to the Spaniſh mines in MEXICO, in the year 1719, that every one was ready to throw his money into the ſtocks, which the company ſold at upwards of 2000 per cent. But the government ſeized moſt of the money, and the adventurers were ruined; which put a ſtop to the planting this country at that time: but it has been encouraged ſince; and, if the Engliſh do not oppoſe their encroachments, before they are too powerful on that ſide, they are like to be very troubleſome neighbours to the Britiſh plantations.

REMARKS on the MISSISSIPPI before the laſt war.

This French Miſſiſſippi ſcheme, as well as the Engliſh South Sea ſcheme, tending to the deſtruction of fair and honourable commerce, and to the ruin of the public credit of nations, it will be expected that we ſhould not ſlightly paſs over a matter of this nature, in order to guard poſterity againſt the like enormous bubbles.—See the articles BUBBLES and ACTIONS. The ſhort hiſtory of this remarkable ſcheme is as follows, viz.

The regent of France having nothing more at heart than to diſcharge the ſtate-bills, which amounted in value to ſome hundreds of millions, bethought himſelf, among other expedients, of erecting a company that ſhould have the ſole privilege of the trade of Miſſiſſippi, a large fruitful country in North America. Mr. Law, a Scotch gentleman, whoſe genius always carried him to the ſtudy of trade and money, contrived the plan of this eſtabliſhment, which was made in 1717, of which he was appointed the principal director.

Every body was admitted to ſubſcribe to this company; and the ſtock firſt propoſed to be raiſed, was only ſixty millions of livres, to be ſubſcribed in ſtate-bills. Nevertheleſs, though this was no great ſum, and though the ſtate-bills might be bought at between 60 and 70 per cent. diſcount, and were received at par, or without any loſs in the company's ſubſcriptions; yet, at firſt, people were not forward to ſubſcribe, becauſe they were ſtill ignorant of the advantages which might accrue to them from the company.

The ſixty millions being at length completed, the ſtate enlarged the capital to a hundred millions, and granted the company the farm of tobacco, which produced four millions per annum, for the paying the intereſt of the ſaid hundred millions, at the rate of 4 per cent.

The grant of this farm gave ſuch a ſudden credit to the ſubſcribed bills (ſince called actions, or ſhares) that their price roſe to a hundred and twenty, Mr. Law having ſo well managed the farm of tobacco, that the company made thereby conſiderable profits. Some time after the actions fell even to par, but they roſe again in a few days.

After this, a new creation of actions was made, for the ſum of 25 millions, which were delivered at 110. The companies of India and China were incorporated with that of Miſ-

M I S

ſiſſippi in 1719; whereupon the price of the actions roſe from 100 to 200. About that time, the Miſſiſſippi company aſſumed the name of the India company.

When it appeared that the people of France took a reliſh to theſe actions, 'till then unknown in that kingdom, and that they were eager to lay out their money this way, being perſuaded the company would make great profits, which would be divided among the owners of thoſe actions, Mr. Law, in concert with the regent, formed a mighty project for enlarging the credit and profits of this company. An arrêt of the council of ſtate was publiſhed for circulating bank bills to the value of 25 millions in the Miſſiſſippi company. To this advantage the ſtate ſhortly afterwards added a grant of the coinage for nine years, and other ſpecious encouragements.

Theſe privileges made the actions immediately run up to 500; but they ſell afterwards to 445, only upon the news of Mr. Law's being taken with a ſlight indiſpoſition. After this, the actions roſe again in a few days to 610, and ſoon fell to 560. All this happened a little after Midſummer, 1719.

The company finding their credit ſo well eſtabliſhed, propoſed to advance to the king a loan of 50 millions, in 15 monthly payments; and, in order to raiſe this ſum, they obtained an arrêt of council for the creation of 25 millions of actions, upon the foot of 200 per action. But, as there was a conſiderable time allowed for the payments, and that the actions ſold for three times that price, the company reſerved to themſelves a power to diſpoſe of them, at what times they thought fit: whereby they kept in reſerve a fund ſufficient to buy merchandize, to build neceſſary ſhips, and ſettle good colonies in Miſſiſſippi; for thus the proprietors expected to receive very great ſums from the ſale of part of thoſe actions, made at different times; the other part thereof having been at firſt delivered to the chief proprietors of the old ones, according to the purport of the arrêt.

About the end of Auguſt, the company propoſed to the king to make another loan of 1200 millions of livres, at 3 per cent. intereſt; and, at the ſame time, to take the five great farms, paying to the ſtate three millions and a half more than was given by the perſon who then held the leaſe, that is, 52 millions yearly, for the ſpace of nine years, the term of the leaſe granted to the company. Out of this ſum, they were every year to receive 36 millions, for the ſpace of 25 years, for the intereſt of 1200 millions they had engaged themſelves to advance to his majeſty, in order to reduce to 3 per cent. the intereſt of the ſtate debts upon the town-houſe of Paris, and others, which uſed to carry 4 per cent. which reduction ſaved the king 12 millions of livres yearly. The company's privileges were then prolonged to the year 1770.

The French fondly hoping that the company would get immenſe profits by trade, and principally by the direction of the general farms, which, 'till then, had been very illy managed, ran more than ever into theſe actions; ſo that, in a few weeks, they advanced to 1200.

Every thing at Paris then aſſumed a ſmiling countenance; money grew ſo common, that people did not know where to put it out at 3 per cent; the public ſecurities, which before were at great diſcount, now ſold for 10, nay, 15 above their par; the tradeſmen had a greater vent for their goods; the workmen were better paid for their work; the value of land about Paris roſe to 50, and even to 60 years purchaſe; many noblemen repaired their broken fortunes, and others grew very rich, by the great advantages they made in dealing in the actions of this new company.

Numbers of people never known in the world, and who ſprung from nothing, were all of a ſudden ſeen riding in their coaches, only by ſtriking into this trade, by which, in a very few months, they had gained vaſt ſums.

As the company had undertaken to lend the king 1200 millions, they found it neceſſary, in the month of September following, to raiſe 500 millions, by the ſale of 50 millions of actions, at the rate of 1000 per action, which was ten times the original value of the actions.

The ſubſcriptions were filled in a few hours; nay, they were obliged to return a third part that was ſubſcribed above the ſums, which amounted to 775 millions. The ſubſcribers were not obliged to pay the whole ſum all in at once, but in ten monthly payments; which, however, was afterwards altered for their convenience.

The firſt payment of theſe new ſubſcriptions was ſold the very next day at cent. per cent. profit.

In a few days afterwards, books were again opened to take in ſubſcriptions for the like ſum, upon the ſame conditions and reſtrictions as the former; and they were filled in as ſhort a time.

The company's caſhiers were forbidden, by an arrêt of council, to receive for thoſe ſubſcriptions, or in the nine payments remaining to be made for the laſt, any money or bank bills, but only ſtate bills, or other the king's debts therein ſpecified; which greatly raiſed the value of the effects royaux, or public ſecurities.

This way of borrowing money, or rather of bringing into the company near 1000 millions of livres of the king's debts, having ſucceeded perfectly well, the company again opened their books for 500 millions more, and with the like ſucceſs. About that time, every action was divided into two parts, each valued at 5000 livres; for the reſt, the actions were on paper, payable to the bearer; ſo that the owners might at any time exchange them for ready money, or bank notes, which were altogether as good, and more convenient than money.

The firſt payment of theſe three ſubſcriptions, far from falling, roſe conſiderably, that it quickly went at 1, 2, and even 300 per cent. profit; ſo that ſuch ſubſcribers as were willing to transfer their new ſubſcriptions to other perſons, did, in a few weeks, double and tripple, nay quadruple the money which they had advanced for that firſt payment.

Nevertheleſs, theſe laſt ſubſcriptions ſunk the price of the old ones, though the old ones were of the ſame nature, and as good as the laſt. The old ſubſcriptions fell almoſt at once to 760, becauſe the ſubſcribers to the laſt wanting money to anſwer the ſecond payment, which was ſo near, were forced to ſell their firſt ſubſcriptions.

The company, in order to put a ſtop to this fall, cauſed notice to be given at the bank, that they would repay them at 900. This advertiſement gave ſuch a ſupport to the credit of thoſe old ſubſcriptions, that, in leſs than a month, they went at 1200, as before, and even roſe higher, while the new actions fluctuated about 1300.

But, what contributed to it moſt, was, an arrêt of the council of ſtate, allowing a longer term for the firſt payments that were to be made upon the new ſubſcriptions. The whole ſum borrowed by the company in theſe three new ſubſcriptions being 1500 millions, they repreſented to his majeſty, that the loan they were to make to the ſtate amounting to 300 millions more than they at firſt propoſed, it was reaſonable the company ſhould be allowed an annual intereſt of 45 millions, after the rate of 3 per cent. inſtead of the 36 millions already granted: to which his majeſty conſented.

Upon the whole matter, the ſums of the ſeveral ſubſcriptions made at different times, are as follow:

60 Millions of the firſt ſubſcription,
40 Millions of the ſecond,
25 Millions of the third,
25 Millions of the fourth,
50 Millions of the fifth,
50 Millions of the ſixth,
50 Millions of the ſeventh,

300 Millions, the total of the actions.

When theſe actions ſold at 1000, their total value amounted to 3000 millions of livres, of which ſum the king did not owe the company much above half, which made the real and intrinſic value of every action to be 550.

We ſhall now give you an eſtimate of the ſums which the company were ſaid to have in their power to divide yearly, by which the ſubſcribers were made to expect very good dividends.

The company were to receive every year,

	Millions.

Without reckoning what ſome other branches were to produce, as the fiſhery, the refining and parting of bullion of gold and ſilver, the traffic of ingots of the ſame bullion, which the goldſmiths and merchants were obliged to buy of the company, and ſell at a certain ſpecified ſtandard. So that the profits ſchemed to ariſe from all this, were to have been above 25 millions: for the ſtate were to ſupport the credit of the company, though at the expence of yielding up the profits of the bank, and ſeveral other privileges.

The advantages propoſed to accrue to the king from the eſtabliſhment of the India company, were ſet forth as follow:

The eſtabliſhment of the India company in France, ſay the memoirs of thoſe times, has not only been of infinite advantage to the ſubjects of the kingdom, by opening the purſes of the rich, that ſtrove who ſhould put their money in firſt, but the king alſo has gained by it very conſiderably; ſince all the branches of his revenues muſt bring ſums into his coffers, infinitely beyond what was ever known before, by reaſon of the circulation of the ſpecies, which is certainly three times greater than ever, as is manifeſt from the price of proviſions, land, and merchandizes. The regent has found in the ſubſcriptions of this company a ſource almoſt inexhauſtible, whereby he has made large gifts in actions to the officers of the army, and the king's houſhold, and to a number of private gentlemen, by which means they are grown rich. Mr. Law on his part, has done ſervice to vaſt numbers of people, even

even to his enemies, in putting them in a way to make their fortunes. Since the circulation of the ſpecie has been reſtored, the regent has taken off ſeveral taxes in Paris, and the provinces, ſo that all France ſhares the advantages of his happy adminiſtration.

By this ſcheme, the revenues of his moſt Chriſtian majeſty will increaſe 40 or 60 millions a year, and yet the people will be eaſed of many taxes, and of the burden of many uſeleſs officers, who have been actually paid back the money they gave for their places.

Now, if a judicious man will impartially judge of what hath paſſed, and what is now doing in France, in relation to commerce and the revenues, he muſt own, that from the remoteſt ages, hiſtory does not record any thing ſo inconceivable. One cannot reflect on this, without being brought to confeſs, that the prince who is at the head of affairs, knows how to make uſe of the readieſt and moſt agreeable means of ſetting France in the moſt flouriſhing ſtate it ever was in. Has not the world always ſaid of him, that he had a ſuperior genius, and fit for every thing? Beſides the arts and ſciences, to which he all his life devoted himſelf, he is a perfect maſter of accompts, without which he had never carried the affairs of France to the height they now are. Mr. Law's ſcheme had not ſucceded ſo well under the reign of a prince, whoſe natural and acquired parts had been inferior to his who is now guardian of the royal authority.

The eſtabliſhment of the royal bank of Paris.

Mr. Law ſet up the bank at Paris by the royal authority, ſome time before the eſtabliſhment of the Miſſiſſippi. It was governed much like the bank of England, the regent having reſerved to himſelf the inſpection of their accounts: there was at firſt ſome difficulty in eſtabliſhing it's credit, the French having no notion of the convenience of an eſtabliſhment ſo advantageous. But, as the regent was convinced of the great benefit that would accrue to the public from it, his royal highneſs took all the care imaginable to make them ſenſible of it. In a ſhort time there were ſeveral arrêts in favour of the bank, the chief of which was that which required the officers who levied the king's taxes, to receive the bank notes in payment of the revenues. The French, ſeeming at length to be ſenſible of the conveniency of making payments in notes payable to the bearer, it was ordered in the beginning of the ſummer 1719, that the bank bills ſhould be increaſed to the ſum of four hundred millions. It was permitted by the ſame arrêt, to the royal bank to ſet up bank offices in all the mint-towns of the kingdom, except Lyons, which declared againſt receiving any; yet ſoon after the merchants of Lyons, of their own accord, very earneſtly ſolicited to obtain the privilege of a bank in their city.

The increaſe of bank bills to the ſum of 400 millions of livres not being ſufficient, a larger quantity were delivered out about the cloſe of the ſame ſummer for 120 millions of livres, each bill being for the ſum of 10,000 livres.

But even this was found inſufficient to anſwer the demands that were daily made, which moved the regent to iſſue out an arrêt in October following, ordering the bank to give out to the value of 120 millions more, and that the notes ſhould be likewiſe for 10,000 livres each.

The ſum total of all the bills which the bank had iſſued out at the end of the year 1719, amounts to ſix hundred and forty millions, which exceeded the value of the bills circulated by all the other banks in Europe put together.

It will not be amiſs to obſerve, that there were bank notes for ſmall ſums as well as great; ſome of ten, ſome of a hundred, and others of a thouſand livres; thoſe of ten thouſand amounting but to two hundred and forty millions of livres.

Likewiſe a new addition of three hundred and ſixty millions was ordered in bank bills, which, with the ſix hundred and forty millions before, amounted to a thouſand millions of livres, making then above 38 millions of pounds ſterling, upon the par of exchange; for the crown in ſpecie of France, which was then current in that kingdom for five livres and two fifths, or an hundred and eight of their pence, was worth in weight and fineneſs but four ſhillings and three halfpence Engliſh money.

An ARRET, ordering in what manner payments ſhall be made, as well in Paris as in the provinces, and regulating the difference between bank money and the current coin. December 21, 1719. Extracted from the regiſters of the council of ſtate.

The king having cauſed the ſeveral arrêts iſſued concerning the bank and the lowering of the coin to be laid before him, his majeſty judged, that it would tend to the good of the ſtate, and the benefit of his ſubjects, as well as to the advancing of the public credit, to put his people in a way to avoid the loſſes which are ordinarily occaſioned by the variation in the currency of the coin. To which end, his majeſty being in council, by the advice of the duke of Orleans regent, has ordered, and orders,

I. That the bank money ſhall be and remain fixed at five per cent. above the value of the current coin, at which price bank bills ſhall be delivered out as well at the general office in Paris, as at the other offices in the provinces; the bearers of the ſaid bills, after they ſhall be given out by the bank, being left at liberty to negociate them at ſuch higher rate as they ſhall find convenient.

II. It is his majeſty's will, that beginning from the day of the publication of the preſent arrêt in the city of Paris, from the firſt of March next, in thoſe towns where are offices of the mint, and from the firſt of April following in the other towns and places of his kingdom, the gold and ſilver coins, as well thoſe ſtruck purſuant to the edict of May 1719, as thoſe ſtruck this preſent month of December, ſhall not be offered nor received in payments; that is to ſay, the ſilver coins, but for payments under the ſum of ten livres, and the gold coins but for payments under the ſum of 300 livres; and that the payments above the ſaid ſums ſhall be made in bank bills, on the penalty to the offenders herein of confiſcation of the amount of the payments, and of a fine of 300 livres.

III. It is his majeſty's intention, that the India company pay in bank bills the produce of the impoſts and duties which they ſhall receive; and as to the payments that they ſhall make in money for ſums under ten livres in ſilver, and 300 in gold, which their officers may receive, the ſaid company ſhall pay five per cent. augmentation; his majeſty authorizing them to receive the ſaid five per cent. from the perſons liable to thoſe duties, upon payments of ſums under ten livres in ſilver, and 300 in gold.

IV. It is alſo his majeſty's will, that reckoning from the day of the publication of the preſent arrêt, the payments of foreign bills of exchange, ſhall be made in bank bills; and this notwithſtaading the arrêt of the 27th of May laſt, from which his majeſty derogates.—Done in the king's council of ſtate, his majeſty therein preſent, held at Paris the 21ſt of December, 1719.

The grand ſupport of this ſcheme was the great territory of Louiſiana, otherwiſe called Miſſiſſippi. See the article LOUISIANA.

That we may have a juſt notion of the nature of this remarkable project, the following further account of the proceedings in France, for raiſing a PAPER CREDIT, and ſettling the Miſſiſſippi ſtock, may not, perhaps, be thought altogether uſeleſs.

It was many years ago, ſay the writers of thoſe times, ſince the French court regretted the height of the public credit in England. They looked upon it as the great, and perhaps, the only advantage we had over them in war; namely, that by the eſtabliſhed reputation of the public funds here, and the authority of parliamentary credit, whatever ſum of money was voted in England, though the funds did not produce it many years, and though the loans were prodigiouſly great, yet the public could command the money in a few days, perhaps, in a few hours.

This was as much the terror of our neighbours, as it was the honour and advantage of England; and foreigners have been heard to ſay, That there was no getting the better of England by battle, no, though victory was always on their ſide. That, while we had thus on inexhauſtible ſtorehouſe of money, no ſuperiority in the field could be a match for this ſuperiority of treaſure; for money being the ſinews of the war, it had long ſince been a received maxim, that the longeſt purſe, not the longeſt ſword, would be ſure to conquer at laſt.

It was in vain that the late king of France, though he had an abſolute command of the greateſt, and, at firſt, the wealthieſt nation in the world, tried all the arts that human wit could invent to raiſe a fund of credit in his kingdom; the whole council of France could never dictate to him the method how it ſhould be done; this coy miſtreſs, called Credit, could never be wooed; the more he purſued her, the faſter ſhe fled from him; and he had the continual mortification to ſee his national credit fall, even by the ſame methods which made our national credit riſe; and our credit here grew daily, and at laſt increaſed to ſuch a height, that from paying 12 and 14 per cent. for money, and ſtruggling with infinite difficulties to get it brought in, we came to reducing the intereſt from 6 to 5 per cent. and after to have the public command of what money we pleaſed at 4 per cent. and had it brought in faſter than we had occaſion for it.

It is not poſſible to repreſent the projects, and infinite arts and practices, which the king of France uſed to command credit; all which were diſappointed by the frequent exigencies of his affairs, forcing him to violate the faith and honour of his edicts: whereas in England, one parliament always voted the making good deficiencies, and no miſapplication of money could be made, but every fund was kept ſacred to it's peculiar ſpecial appropriation: ſo that no man whatever having lent his money to the government on the credit of a parliamentary fund, has been defrauded of his property.

Thus the arbitrary government of the king of France, deſtroyed the very nature and fundamental principle of public credit; and the limited power of the crown of Great-Britain (the ſtrings of the purſe being in the hands of the parliament) has been the reaſon and foundation of ſuch an immenſe boundleſs credit, that nothing can hurt or deſtroy it, unleſs

unleſs the parliament ſhould invert their way of acting, and take into their hands the ſame abſolute power, which it is their buſineſs to reſtrain, and wound and injure themſelves; that is to ſay, the people whom they repreſent.

But fate and the fortunes of France, at the period we are ſpeaking of, turned the tables, and we ſaw the ſame arbitrary power that in the late reign in France plunged them into an inſuperable debt, and into an irrecoverable ſtate of deficiency and diſcount, raiſed an inconceivable ſpecies of mere air and ſhadow, realizing fancies and imaginations, viſions, apparitions, and making the mere ſpeculations of things, act all the parts, and perform all the offices of the things themſelves; and thus in a moment their debts were all vaniſhed, the ſubſtance was anſwered by the ſhadow, and the people of France made the inſtruments of putting the cheat upon themſelves: the name of the thing is made an equivalent to the thing itſelf, tranſpoſing the debts from the king to themſelves, and being contented to diſcharge the public, owe the money to one another.

As this is the mere conſequence of a boundleſs power in the king, by which he is made able to put every ſcheme, however impracticable in other places, in a courſe of operation there; ſo that every limitation of power, which is, in other caſes our glory and advantage, is the reaſon why, let our credit be what it will, our debts remain, and muſt be diminiſhed by the ſlow fire of parliamentary proceedings, and by no other way.

And thus for once in the world, tyranny has the whip-hand of liberty, for nothing can be done in England like this; even the parliament itſelf is limited, and there are it's redeemable and unredeemable funds, the laſt of which are a burthen, nothing but the number ninety-nine (years) * can put an end to: but in France they have an unbounded liberty to act as they pleaſe.

* The reader will obſerve, that this was the ſtate of our funds at the time we are ſpeaking of.

Let no man miſtake me here, ſays our author, as if I were bewailing the incumbrances of national privileges, and ſuggeſt, that it was pity we ſhould be a nation of liberty with ſuch a burthen of debt; on the other hand, let us be, ſay I, a free nation deep in debt, rather than a nation of ſlaves owing nothing; and, indeed, even in this the condition of France and England ſtands in a poſture much to our advantage when compared together; namely France, a kingdom immenſely rich as a government, wretchedly poor as a people; England, a government embarraſſed in debt, exhauſted of funds, and not able eaſily to get out of debt; but as a people immenſely rich, rich in the particular and private wealths of the ſubjects; poor, that is to ſay, encumbered in debt, ſpeaking of the public ſtate of things, as a government; and yet with all this, while the public credit is upheld, we can never be ſaid to be poor.

It remains now, that we look into this flagrant deluſion of paying a nation's debts, as it is practiſing upon the ignorant people in France: never, in my opinion, was any number of people ſo hooked in to put a ſham upon themſelves, and then call it paying of the king's, or the public debts; for it is no more than a parcel of fools diſcharging the king of his debts, and owing it to one another. And this is another reaſon of this piece of magic in France; for the very want of credit in France, has been the reaſon of their obtaining the credit of paying their debts. This paradox ſhall be unriddled immediately, thus: had not the public credit been bad, had not the ſtate bills, that is to ſay, the public credit, run at 60 to 63 per cent. diſcount, the people would never have brought themſelves to part with them for the bonds, or ſhares in a new company, a brat of ſtate, which has it's life in the king's breath, and muſt die whenever that breath pleaſes to determine it.

Mr. Law, being firſt acquainted with the ſolid immoveable ſtate of credit in England, and ſeeing the fluctuating manner of things in France, plainly ſaw alſo, how eaſy it was to puſh theſe things there, which he could not ſo much as think of in England, without apprehenſions of being pulled in pieces by the rabble. He wiſely concluded, that a foundation of credit muſt be laid, before any ſufficient project could be founded upon it, and ſo the firſt thing he did was the raiſing of a royal bank in France, by the concurrence of the king, whoſe ſanction there, as the parliament would be here, was abſolutely neceſſary for ſuch a work.

Now let the ſchemes engrafted ſince, or then deſigned to be engrafted upon the foot of this beginning be what they will, it is evident Mr. Law made a right judgment, and that nothing could be projected for the public ſervice of any kind, without an eſtabliſhed credit to center ſomewhere.

It was impoſſible this ſhould be grafted upon the government, the endeavours to bring it to paſs before having been rendered abortive, by the frequent exigencies of that ſtate, forcing them to break in upon royal edicts and royal promiſes; by which means the few men that had any money were made cautious, and were grown too wiſe to put it into hands, which they could not depend upon for the demand of it again, when it ſhould be wanted.

It remained then to reſolve, that credit could now be only raiſed upon the forming ſocieties of private men, who were maſters of caſh, and able to ſupport the credit they took, with whom it might be ſafe to venture the depoſit of money, and who, by an exact currency of payments, might in conſequence and by degrees, obtain the name and title of a ſafe fund, and become the baſis of proper credit for the whole kingdom; a thing at that time greatly wanted, for the advantage of trade in France, as well as for the purpoſe deſigned by Mr. Law. This almoſt, by the nature of the thing, would be called a Bank, and would be managed by the firſt adventurers, in their own right, and independent of the king, or of any branch of the government; ſo that except by mere plunder, even all one as by rifling the city of Paris, the king could never lay his hand upon any thing, which was put into their keeping.

This was a well laid deſign, had there been no more projected than was pretended. For, upon the credit and capital ſtocks of the firſt ſubſcribers, there was immediately a clear proſpect of a running caſh, eſtabliſhed upon juſt foundations, and ſufficient to anſwer all the buſineſs of France. When this ſcheme was ſhewn to the regent, he was penetrating enough not to ſee immediately, that it was too beneficial a thing not to be encouraged, as well for the credit of the nation in general, as for the uſe of the government in particular; and, therefore, received it with open arms, and aſſured Mr. Law of his favour and protection: and, as they found his firſt ſcheme capable of great improvements, he was encouraged to employ his thoughts effectually to thoſe improvements, that ſomething might be brought to paſs for the public good, and eſpecially to reſtore credit to France. In proſecution of this confidence, the bank was eſtabliſhed, the patents were expedited for it's foundation; the king begins the ſubſcription, the duke regent follows, and innumerable others; they are impowered to take in a hundred millions original ſtock, and to give out bills for current caſh payable at demand, and to the bearer, juſt after the manner in England. They lent money upon jewels, plate, and things of real value, and upon mortgage of lands at 3 per cent intereſt; they diſcounted bills, and took in money, iſſuing bills of credit payable at demand; and it is inconceivable the mighty increaſe of buſineſs they had upon their hands in ſo little time, and the immenſe ſums of money they had by them in ſpecie.

Mr. Law having thus ſucceſsfully finiſhed this great affair, was at leiſure to enquire what further projects might be founded upon this of a royal bank: he was too knowing not to have in his head the general idea of all thoſe things which have happened ſince: but he knew, that ſuch a fund of credit being once well eſtabliſhed, nothing could miſcarry that was founded upon it; for, as half the projects in the world become abortive, for want of ready money and credit, ſo when once a good project was ſupported with a flaſh of ready caſh, they muſt be weak managers indeed, if they miſcarry.

The firſt thing of moment he went upon, was the planting a colony in the Weſt-Indies, or in North America. He knew, indeed, that the planting the Louiſiana, or the country on the river Miſſiſſippi, would not produce any great effects, at leaſt in his time: for the ſettling a colony, however proſperous in it's beginning, is a work of time, and muſt take up ages. But Mr. Law, like a man of penetration, knew that two things would be abſolutely neceſſary for this deſign: 1. To have the king approve it; and, 2. To make his ſcheme popular, to have ſomething in view beyond not only what he could manage, but even beyond what he ever intended in the propoſal. Having ſtarted the project of Miſſiſſippi, he branched it out in a different manner from all projects; for he did not deſcend from the Miſſiſſippi ſcheme as the general to the ſubſequent things as the particulars, but he aſcended from the Miſſiſſippi ſcheme as a particular, to a Weſt-India company as the general.

His next work was to propoſe the foundation on which the company was to be eſtabliſhed, viz. a ſubſcription of ſtock; and here he ſhewed his firſt maſterly ſtroke, and that he had concerted all the ſteps and meaſures of his management from the beginning.

The public credit in France was ſtill low, nor did the riſing credit of the royal bank add any thing to it, but rather diminiſh it, and let the world ſee that private credit in France might revive, but public credit could not: the ſtate bills, and annuities on the town-houſe loans, and all the paper circulation, were, at this time, exceeding low, namely, from 57 to 63 per cent. diſcount; it was, therefore, the eaſieſt thing in the world to eſtabliſh a fund for any new undertaking that was but tolerably promiſing, where the ſubſcribers could be allowed to ſubſcribe theſe dying credits at a par, and put that into ſtock at 100 livres, which coſt the purchaſer but 37 to 40 livres per cent. and this thing alone filled his firſt ſubſcription.

We ſee the credit of the company riſing to an immenſe height, by the aſſiſtance of the government, and the management of Mr. Law, their director; we ſee the following myſteries, or, indeed, miracles, wrought in the compaſs of a few weeks, things as incredible as the greateſt impoſſibility in nature

could be thought to be; things which, when done, were as a dream, even to thoſe that ſaw them; even the people who have the money in their hands, and who have received their ancient debts, ſo long given over, look amazed, and conſider again and again, whether they are awake or aſleep; the particulars are as follow:

Firſt, we have ſeen them bring the people to refuſe or decline payment, of what they would before have given half the debt to be ſecured of.

Secondly, The ſtate bills, that were before little better than waſte paper, made worth 10 and 20 per cent. above par.

Thirdly, We have ſeen them gain 1350 millions of money in leſs than a month's time, by ſelling the air, and putting a real value upon an imaginary value.

Fourthly, We have ſeen the king's revenues augmented to millions a year, by abating the taxes on the people.

Fifthly, We have ſeen the general farms raiſed four millions a year to the king, and yet 12 millions a year paid leſs by the people.

Sixthly, We have ſeen them pay 1500 millions of debt for the king, without one penny of money.

Seventhly and laſtly, We have ſeen a private gentleman raiſe himſelf, by the dexterity of this management, to be the greateſt ſubject in the world; to have all the nobility, the princes, the public miniſters, and even the government itſelf, at his beck, and above 300 coaches in a morning at his levée, himſelf behaving with all the modeſty imaginable; not elevated by his good fortune, nor diſcompoſed by the application to ſo much buſineſs, but calm and ſerene, and always preſent to himſelf, anſwering briefly and pertinently to every new diſcourſe, receiving 6 or 700 gentlemen in a morning, diſpatching every body's buſineſs with a readineſs inimitable, and every day producing new wonders in the great affair of the public, which was upon his hands.

As the advantages of public buſineſs thus flowed in, the credit of the ſtock neceſſarily advanced; and we were ſurprized in England, to find that every poſt the price ſtarted up whole hundreds in a day, 'till at length we ſaw the ſtock up at 1150 and 1200 per cent. and, after that, to 2050 per cent. Now was the time for Mr. Law to give the blow he had in view.

The multitude of people who came every hour to Paris, and run their money into the ſtock, made this project not rational only, but natural, viz. that they might enlarge the capital ſtock, by engrafting a farther ſubſcription; and, that the new ſubſcribers might have encouragement to ſubſcribe, they ſhould be allowed to ſubſcribe at 1000 livres each, original ſtock. Purſuant to this reſolution, an arrêt was publiſhed, empowering the company to take new ſubſcriptions, upon the firſt foot of the ſtock for 50 millions, the ſubſcribers paying 10,000 livres each; for which they had credit in the company's books, for one action, or ſhare, of 100 livres original ſtock. Thus the company, receiving 1000 millions of livres for 50 millions original ſtock advance, were clear gainers by the ſubſcription no leſs than 450 millions of livres; and this doubled by the ſecond ſubſcription of 50 millions, made the company's gain amount to 900 millions of livres; add to that a third, it made it 1350 millions.

Add to this, that the firſt ſtock of the company was much of it ſubſcribed by the government itſelf, by the king, and by Mr. Law, as in the company's name; and, being ſold afterwards at 1000 and 1100 per cent. put above 200 millions into their pockets, beſides what Mr. Law was ſaid to have gained for his private account.

From this time forward, the ſtock is grown up to a prodigy of 2050 per cent. It is true it ſunk a little on the approach of the time of payment for the firſt three months, which was to be paid on the 1ſt of January, viz. 300 livres per ſhare, and this, for want of money, ſunk the ſtock to about 1850; but Mr. Law, who never wants a remedy for theſe diſeaſes, immediately calls a meeting of the directors, and agrees to declare a dividend of profits, to amount to 6 per cent. upon the ſtock, which, though it be a trifle on the preſent advanced price, yet was really conſiderable in itſelf, and amounts to a very great ſum, no leſs than ſix millions and upwards: however, it was agreed that the company really gained near 100 millions extraordinary, by ſelling her own ſubſcriptions, and buying and ſelling her own ſtock; ſo that they were able very eaſily to divide 20 per cent. on the firſt ſtock, which would have been 1 per cent. upon the after-advance.

This is a brief account of the prodigious riſe and greatneſs of the French India ſtock, to which we ſhall only add, that all the world ran to Paris; the prodigious ſums ſtrangers laid out in the ſtock, and the numbers that reſorted to negociate there, filled that city with money and people, and, conſequently, with trade; and they tell us, there was nothing to be ſeen but new coaches, new equipages, new liveries, and buying new furniture; innumerable families were inriched by this ſurprizing advance of ſtock: in a word, there were no leſs than 1200 new coaches ſet up, and half a million of people more than was before; ſo that no lodgings were to be had; and they built new houſes and ſtreets in every place where they had room.

On the 30th of December, N. S. there was a general meeting of the India company, at the royal bank, at which were preſent the duke of Orleans, regent of the kingdom, the duke of Chartres, and the duke of Bourbon. The company having firſt approved and confirmed what had been done in it's name by the directors, ſince the laſt meeting, took into conſideration ſeveral articles before them, and reſolved, that the dividend for the year 1720 ſhould be 40 per cent. upon the 300 millions of actions; and that the ſubſcriptions, which made part of the 200 millions, ſhould be intitled to the dividend of the years 1718 and 1719, at the rate of 4 per cent. per ann. as ſoon as they were full, and converted into actions. They likewiſe reſolved, that, for the good of the public, and to give countrymen and foreigners an opportunity of buying and ſelling theſe actions, an office ſhould be erected, wherein the company would buy and ſell actions at fixed prices; which office was accordingly erected, the 2d of January, N. S. five days after, Mr. Law was ſworn comptroller-general of the finances of France. But, whether his head turned giddy upon this ſtupendous elevation, it appeared ſoon after, by the various arrêts of council which he cauſed to be iſſued out, in relation to the coin, that he was not a little embarraſſed.

REMARKS on our article MISSISSIPPI, ſince the laſt WAR, and the DEFINITIVE TREATY OF PEACE, 1763.

Under our article of LOUISIANA, particularly in our REMARKS ſince the DEFINITIVE TREATY of 1763, we have ſhewn the diſadvantages, which our Britiſh colonies in North-America were under, in reſpect to their want of a ſufficient quantity of good lands there, whereby our planters might raiſe variety of ſtaple commodities, which we are, at preſent, obliged to take at a great expence from divers other countries, provided our people were ſituated in thoſe freſh and good lands on the Miſſiſſippi for that purpoſe. Under this article, we ſhall continue the thread of our intended obſervations upon this material point.

Our article LOUISIANA is concluded, with obſerving, that if the preſent ſtate and condition of our North-American colonies is not ſoon changed, by being put upon the planting and cultivation of ſuch ſtaple commodities as we are now compelled to take of other nations, we ſhall force theſe coloniſts into the arts of farming, manufactures, trade, and commerce, which would interfere with the commercial intereſts of Great-Britain.

Some of our colonies, perhaps, may imagine, they cannot ſubſiſt with theſe employments; which, indeed, would appear to be the caſe in their prefent ſtate: but that ſeems to be as contrary to their true intereſt, as it is to their condition of Britiſh colonies. They have neither ſkill, materials, nor any other conveniencies, to make manufactures; whereas their lands require only culture to produce a ſtaple commodity, provided they are poſſeſſed of ſuch as are fit for that purpoſe. Manufactures are the produce of labour, which is both ſcarce and dear among them; whereas lands are, or may and ſhould be made, both cheap and in plenty, by which they may always reap much greater profits from the one than the other. That is, moreover, a certain pledge for the allegiance and dependence of the colonies; and at the ſame time makes their dependance to become their INTEREST. It has been found by frequent experience, that the making of a ſtaple commodity for Britain is more profitable than manufactures, provided they have good lands to work.

It were to be wiſhed indeed, that we could ſupport our intereſt in America, and thoſe ſources of navigation by countries that were more convenient to it, than thoſe on the Miſſiſſippi. But that we fear is not to be done, however it may be deſired.

We wiſh we could ſay as much of the lands in FLORIDA, and on the bay of MEXICO, as of thoſe on the Miſſiſſippi: but they are not ſo good, any thing contiguous to the coaſts, however convenient they may be in other reſpects to navigation.

The moſt convenient part of thoſe countries ſeems to be about MOBILLE and PENSACOLA; which are, as it were, an entrepôt between our ancient ſettlements and the Miſſiſſippi, and ſafe ſtation for our ſhips. The port of ST. AUGUSTINE in the GULPH of FLORIDA, will alſo be of no little utility to our navigation in theſe parts; and what the lands may be deficient in, in many reſpects, near the coaſt, the ſituation of the above-mentioned ports may jointly contribute to ſupply.

As the harbour of PENSACOLA will appear to be a conſiderable acquiſition to Britain, it may be of ſome uſe to give the following account of it from F. LAVAL, royal profeſſor of mathematics, and maſter of the marine academy at TOULON; who was ſent to Louiſiana, on purpoſe to make obſervations in 1719; and had the accounts of the officers, who took PENSACOLA at that time, and ſurveyed the place.

'The colonies of Penſacola, and of Dauphin iſland, are at preſent on the decline, the inhabitants having removed to ſettle at Mobille and Bilexi, at New Orleans, where the lands are much better; for at the firſt the ſoil is chiefly ſand, mixed with little earth. The land, however, is covered with woods of PINES, FIRS, and OAKS; which make good timber as well as Ship-Iſland. The road of PENSACOLA is the only

good

good port thereabouts for LARGE SHIPS, and SHIP-ISLAND for ſmall ones, where veſſels, that draw from 13 to 14 feet water, may ride in ſafety, under the iſland, in 15 feet, and a good holding ground; as well as in the other ports, which are all only open roads, expoſed to the ſouth, and from weſt to eaſt.

Penſacola is in north latitude 30° 25′, and is the only road in the BAY of MEXICO, in which ſhips can be ſafe from all winds. It is land-locked on every ſide, and will hold a great number of ſhips, which have very good anchorage in it, in a good holding ground of ſoft ſand, and from 25 to 34 feet water. You will find not leſs than 21 feet water on the bar, which is at the entrance into the road, provided you keep in the deepeſt part of the channel. Before a ſhip enters the harbour, ſhe ſhould bring the fort of Penſacola to bear between north and ſouth ¾ eaſt, and keep that courſe till ſhe is weſt, or weſt ¼ ſouth, from the fort on the iſland of St. Roſe; that is, 'till that fort bears eaſt, and eaſt ¼ north. Then ſhe muſt bear away a little to the land on the weſt ſide, keeping about midway between that and the iſland, to avoid a bank on this laſt, which runs out to ſome diſtance weſt-north-weſt from the point of the iſland.

If there are any breakers on the ledge of rocks, which lie to the weſtward of the bar, as often happens; if there is any wind, that may ſerve for a mark to ſhips, which ſteer along that ledge, at the diſtance of a good muſket-ſhot, as they enter upon the bar, then keep the courſe above-mentioned. Sometimes the currents ſet very ſtrong out of the road, which you ſhould take care of, leſt they ſhould carry you upon theſe rocks.

As there is but half a foot riſing on the bar of Penſacola, every ſhip of war, if it be not in a ſtorm, may depend upon 19, perhaps 20 feet of water, to go into the harbour, as there are 21 feet on the bar. Ships that draw 20 feet muſt be towed in. By this we ſee, that ſhips of 60 guns may go into this harbour; and even 70 guns ſhips, the largeſt requiſite in that country in time of war, if they were built flat-bottomed like the Dutch ſhips, might paſs every where in that harbour.

In 1719, Penſacola was taken by Mr. Champmeſlin, in the Hercules man of war, of 64 guns, but carried only 56; in company with the Mars, pierced for 60 guns, but had only 54; and the Triton pierced for 54 guns, but carried only 50; with two frigates of 36 and 20 guns *.

* The admiral was on board of the Hercules, which drew 21 feet water, and there were but 22 feet into the harbour in the higheſt tides, ſo that they deſpaired of carrying in this ſhip. But an old Canadian, named Grimeau, a man of experience, who was perfectly acquainted with that coaſt, boaſted of being able to do it, and ſucceeded; for which he was the next year honoured with letters of nobleſſe. DUMONT (an officer there at this time,) vol. ii. p. 22. BELLIN, from the French admiralty cheſts, makes but 20 feet of water on the bar of Penſacola. The difference may ariſe from the tides which are very irregular and uncertain on all that coaſt, according to the winds; never riſing above three feet, ſometimes much leſs. In 24 hours the tide ebbs in the harbour for 18 or 19 hours, and flows 5 or 6. LAVAL.

This road is ſubject to one inconvenience; ſeveral rivers fall into it, which occaſion ſtrong currents, and make boats and canoes, as they paſs backwards and forwards, apt to run aground; but as the bottom is all ſand, they are not apt to founder. On the other hand, there is a great advantage in this road; it is free from worms, which never breed in freſh water, ſo that veſſels are never worm-eaten in it.'

The many advantages that would enſue, from the well peopling of thoſe ſouthern parts of the continent with proteſtant foreigners, are hardly to be enumerated. We might thereby people and ſecure thoſe countries, and reap the profits of them, without any loſs of people; which are not to be ſpared for that purpoſe in Britain, or any of her dominions. This is the great uſe and advantage that may be made of the expulſion of the French from thoſe northern parts of America. They have hitherto obliged us to ſtrengthen thoſe northern colonies, and have confined the people in them to towns and tow ſhips, in which their labour could turn to no great account, either to themſelves or to the nation; by which we have, in a great meaſure, loſt the labour of one half of the people in our colonies.

But as they are now free from any danger in their borders, they may extend their ſettlements with ſafety, diſperſe themſelves on plantations, and cultivate thoſe lands, that may turn to ſome account, both to them and to the whole nation. In ſhort, they may now produce ſtaple commodities for this nation, on which the intereſt of the colonies, and of the kingdom in them, chiefly depends; and which we can never expect from thoſe colonies in their preſent ſituation.

The commodities which theſe ſouthern parts of North-America promiſe to afford us, are HEMP, FLAX, and SILK, thoſe great articles and neceſſary materials of very valuable manufactures; for which alone this nation pays at leaſt a MILLION AND A HALF A YEAR, and could never get them from all the colonies we have. COTTON and INDICO in plenty, are alſo eſtimable. Not to mention COPPER, IRON, POT-ASH, which with HEMP, FLAX, and SILK, make a great balance of trade againſt the nation, and not a little contribute to drain it of it's treaſure; when we might certainly have thoſe commodities from our colonies for manufactures, and both ſupply ourſelves, and others with them. WINE, OIL, RAISINS, and CURRANTS, &c. thoſe products of FRANCE and SPAIN, on which this nation expends ſo much of her treaſure, to enrich her enemies and rivals in trade, might likewiſe be had from thoſe her dominions, and export in return her manufactures for them, equivalent in time to what ſhe does to FRANCE and SPAIN.

Britain thereby might cut off thoſe reſources of her reſtleſs enemies, ſecure her colonies for the future, and prevent ſuch calamities of war as we have experienced, and cultivate the arts of peace.

Some have ſaid that LOUISIANA, &c. is never likely to turn to any account, becauſe the French have made ſo little of it. But that objection, however common, will appear to proceed only from the ignorance of thoſe who make it. No country can produce any thing without labourers; which it is certain, the French have never had in LOUISIANA, in any numbers ſufficient to make it turn to any greater account than it has hitherto done. The reaſon of this appears not to be owing to the country, but to their proceedings and miſconduct in it. Out of the many thouſand people who were contracted for by the grantees, to ſend to LOUISIANA in 1719, there were but 800 ſent; and of theſe the greateſt part were ruined by their idle ſchemes, which made them and others abandon the country entirely. The few again, who remained in it were cut off by an Indian maſſacre in 1729, which broke up the chief promiſing ſettlements they had in the country, thoſe of the NATCHES and YASONS, which were never afterwards re-inſtated. Inſtead of encouraging the colony in ſuch misfortunes, the miniſter, Cardinal Fleury, either from an ill-judged ſpirit of œconomy, or becauſe it might be repugnant to ſome other of his views, withdrew his protection from it, gave up the public plantations, and muſt thereby, no doubt, have very much diſcouraged others. By theſe means, they have had few or no people in LOUISIANA, but ſuch as were condemned to be ſent to it for their crimes, women of ill fame, deſerted ſoldiers, inſolvent debtors, and galley-ſlaves, 'who looking on the country only as a place 'of exile, were diſheartened at every thing in it; and had 'no regard for the progreſs of a colony, of which they were 'only members by compulſion, and neither knew nor con-'ſidered it's advantages to the ſtate. It is from ſuch people, 'that many have taken their accounts of this country; and 'throw the blame of all miſcarriages in it upon the country, 'when they have been only owing to the incapacity and 'negligence of thoſe who were intruſted to ſettle it *.''

* Charlevoix's Hiſt. N. France, Tom. iii. p. 447.

REMARKS on the MISSISSIPPI SCHEME.

That we may judge more fully of the effects of this extraordinary ſcheme, it will be neceſſary to conſult the following French arrêts.

'The king having cauſed to be examined in his council, the condition to which the kingdom was reduced before the eſtabliſhment of the bank, that he might compare it with it's preſent condition: it has appeared to his majeſty, that the high rate of money had done more damage to the kingdom than all the expences which the late king had been obliged to be at during the ſeveral wars: the avarice of the lender having riſen to that height, as to demand more intereſt for a month than the laws allowed for a whole year.

This uſury had even ſo weakened the kingdom, that his majeſty's revenues were not paid, but by multiplying compulſions on thoſe who were liable to pay them. The price of the products of the earth being hardly ſufficient to pay the charge of the culture and the taxes, the proprietors received nothing for their lands. This general miſery forced part of the nobility to ſell their eſtates at a low price, to maintain themſelves in his majeſty's ſervice; and the other part of the nobility had their lands ſeized. The king's favours were their only reſource, and his majeſty was not in a condition to grant them, and even could not pay the ſalaries of officers, and the penſions which had been granted for the reward of ſervices. The manufactures, commerce, and navigation, were almoſt at a ſtand; the merchant and trader were reduced to bankruptcy, and the artificer compelled to abandon his native country, to ſeek employment among foreigners. Such was the condition to which the king, the nobility, the merchants, and the people were reduced, while none but the lender of money lived in plenty; and the kingdom was like to fall into a general diſorder, had not his majeſty applied a ſpeedy remedy to theſe evils.

By the eſtabliſhment of the bank, and of the India company, the king has reſtored things to good order: the nobility have found, in the increaſe of the value of their lands, means to make themſelves eaſy: manufactures, commerce, and navigation, are re-eſtabliſhed: the lands are cultivated, and the artificer

artificer works. But, notwithſtanding the viſible advantages which thoſe eſtabliſhments have procured, there were perſons malignant enough to form a deſign to deſtroy them: and this obliged his majeſty to iſſue an arrêt of his council, of the 5th of March laſt, for ſupporting, by the decrying of money, the credit of thoſe ſo uſeful and neceſſary eſtabliſhments. By that arrêt his majeſty reduced the different ſpecies of the India company's bills to one ſort, and ordained that actions (or ſhares in the ſtock of that company) might be converted into bank notes, and thoſe notes into actions, according to the proportion, which at that time was reckoned to be the moſt juſt with reſpect to the value of the coin. This decrying of money, and favouring of actions, empowered debtors to clear themſelves. It remained for his majeſty to find an expedient for employing the ſums which were to be paid back to minors, to hoſpitals, to communities, and others the moſt privileged creditors: and, at the ſame time, for re-eſtabliſhing the value of the coin in ſuch proportion as might ſuit foreign commerce, and the vent of the products of the country. His majeſty has provided for theſe ſeveral things by his arrêts, and particularly by his declaration of the 11th of March laſt, which orders the reduction of the value of the coin: but, as that reduction muſt neceſſarily produce a diminution, not only of the price of commodities, and of moveable goods, but alſo of the value of lands, and other immoveable eſtates, his majeſty has judged the general intereſt of his ſubjects required, that the price, or nominal value of the India company's actions, and of bank notes, ſhould be leſſened, for maintaining them in a juſt proportion with the coin and other commodities of the kingdom, for hindering the too high value of coin from ſinking the public credit; for giving, at the ſame time, to the privileged creditors, means for employing to the better advantage the ſums which might be repaid to them; and, laſtly, for preventing the loſſes which his ſubjects might ſuffer in commerce with foreigners. And his majeſty has the more willingly reſolved upon this deduction, becauſe it will be even beneficial to the proprietors of the India company's actions, and of bank notes, for the dividends on them will be more to their advantage, and will be convertible into money of intrinſic value, which will produce at leaſt 50 per cent. more in real coin, or bullion, after the reduction, than at preſent. Upon all which, the Sieur Law, the king's counſellor in all his councils, comptroller-general of the finances, having made his report, his majeſty being in his council, with the advice of Monſ. the duke of Orleans, regent, has ordained and ordains:

Article I. That the actions of the India company ſhall be reduced, that is to ſay, beginning from the day of the publication of the preſent arrêt, to 8000 livres; on the 1ſt of July to 7500 livres; on the 1ſt of Auguſt to 7000 livres; on the 1ſt of September to 6500 livres; on the 1ſt of October to 6000 livres; on the 1ſt of November to 5500 livres; and on the 1ſt of December to 5000 livres.

II. That the bank notes ſhall alſo be reduced, ſo that they ſhall not be received in payments, that is to ſay, from the day of the publication of the preſent arrêt, thoſe of 10,000 livres but for 8000 livres; thoſe of 1000 livres for 800 livres; thoſe of 100 livres for 80 livres; and thoſe of 10 livres for 8 livres: that, on the 1ſt of July next, the ſaid notes ſhall be reduced, viz. thoſe of 10,000 livres to 7500 livres; on the 1ſt of Auguſt to 7000 livres; on the firſt of September to 6500 livres; on the firſt of October to 6000 livres; on the firſt of November to 5500 livres; the leſſer notes in like proportion; and, on the 1ſt of December of the preſent year, the ſaid notes ſhall remain reduced and fixed, viz. thoſe of 10,000 livres to 5000 livres; thoſe of 1000 livres to 500 livres; thoſe of 100 livres to 50 livres; and thoſe of 10 livres to 5 livres.

III. His majeſty foreſeeing that thoſe of his ſubjects who are poſſeſſed of conſiderable ſums in bank notes, may convert them with advantage into the India company's actions, and being willing to favour ſuch perſons as have not fortunes ſufficient to employ them that way, his majeſty ordains, that, during the courſe of the preſent year, and 'till the 1ſt of January, 1721, the bank notes ſhall be received by the receivers of the tallies and other taxes, at the office of his majeſty's farms, and even at the ſalt warehouſes, at the full value the ſaid notes were at before the reductions ordained by the preſent arrêt, yet without the abatement for the future of the 4 ſols per livre, or of the 10 per cent. granted by the arrêts of the 29th of January, the 5th of March, and the 28th of April laſt. The ſaid bank notes ſhall likewiſe be received for their full value, at the office appointed for the diſtribution of contracts for annuities for life, purſuant to the arrêt of council of the 16th of the preſent month.

IV. His majeſty's will is, that all bills of exchange drawn or endorſed in foreign countries to be paid in France, ſhall be paid in bank notes, according to the currency and value of the ſaid notes, known in foreign countries the day of the date of the ſaid bills of exchange: and, for avoiding abuſes and diſputes which might ariſe, becauſe the greateſt parts of the endorſement made in foreign countries are without date, his majeſty's intention is, that the bills of exchange made and payable in France, and which ſhall be endorſed in foreign countries, ſhall be likewiſe paid in bank notes, according to the currency and value of the ſaid notes at the time of the date of the bills. Done in the king's council of ſtate, his majeſty preſent, held at Paris the 21ſt day of May, 1720.'

Signed PHELYPEAUX.

REMARKS.

The ſtile and contents of the preamble of that arrêt ſhew, that the council of France thought their ſcheme beyond the poſſibility of miſcarrying; and, therefore, begun to execute the laſt part of it, viz. to lower or raiſe their bank bills and actions of the company as they pleaſed, which they had ſubſtituted in the room of gold and ſilver. This did not ſucceed according to their expectation; for people refuſed to take bank notes; which occaſioned ſo much diſturbance and murmurings, that, on the 25th of May, the government was obliged to poſt guards in the market places, to prevent tumults. The parliament met extraordinarily, and ſent deputies to make remonſtrances againſt the arrêt aforeſaid; and ſome of their deputies were appointed to confer with ſome counſellors of ſtate, in the preſence of the regent, to concert meaſures for preſerving the public peace, and preventing the intire ruin of trade.

The firſt thing that was judged proper to be done, was to revoke the fatal arrêt of the 21ſt, which was accordingly declared void by an arrêt of the 27th, whereby the bank notes were declared to be current, as before the former arrêt. Commiſſaries were appointed to examine the books and caſh of the bank, and the accounts of the India company; and, to proceed therein, payment was ſtopt at the bank the 29th of May, but they began to pay again the 1ſt of June.

On the 31ſt of May another arrêt was publiſhed for proroguing, to the 1ſt of July next, the lowering of the new ſpecies, which was to begin the 1ſt of June, purſuant to the declaration of the 11th of March, inſerted above, and making current, for that time, the old ſpecies of gold and ſilver. By the ſame arrêt his majeſty permits all his ſubjects, and others, to import gold and ſilver ſpecies bullion into the kingdom, which before was only permitted to the company. By another arrêt of the 1ſt of June, the prohibition publiſhed ſome time ago, forbidding people to keep by them above 500 livres in ſpecie, and allowing the company to ſearch all houſes whatever, was taken off.

Theſe diſpoſitions removed, in part, the uneaſineſs of the people; and, in order to recover and ſupport the public credit, which had been deeply wounded, the following arrêt of the council of ſtate was publiſhed:

'Upon the petition preſented to the king in his council, by the general directors of the India company, in the name of the ſaid company, ſetting forth, That, by the accounts they have delivered, it appears, that, by their ſeveral operations, and the actions they have called in again, and have now in their poſſeſſion, they have a fund of above 300 millions of livres: that, in reſpect to their commerce, they have undertaken great things, advantageous for the proprietors and ſtate: that they have increaſed their ſhips already ſent out, or ready to ſail to 105, without including brigantines and frigates, and have ſent rich cargoes; and that, notwithſtanding the multiplicity and quickneſs of their operations, their books have been found in the moſt exact order: that as to the adminiſtration of the truſt committed to them within the kingdom, they have increaſed, beyond what could be expected from them, the produce of the farms, and the general receipts of the finances, by the good order they have eſtabliſhed therein: but that, in order to render more and more the eſtabliſhment of the ſaid company ſolid and advantageous to the proprietors, they are of opinion, it is neceſſary to leſſen the number of the actions, and reduce them to 200,000, inſtead of the 600,000, which were created purſuant to the edicts of December 1717, and May 1719, and of the arrêts of the 27th of July, 13th and 28th of September, and 2d of October following: that the company having called in near 300,000 actions, and being in a condition to re-call what is wanting to make up that number, there remains nothing to be done for the execution of this project, but to ſuppreſs as well thoſe 300,000 actions belonging to the company as the 100,000 belonging to his majeſty; which ſaid 100,000 actions being a profit made by his majeſty, the company hope his majeſty will give them this new mark of favour and protection, which will enable the company, by new operations, to diſcharge what they owe to his majeſty and the bank, to call in, by theſe means, a conſiderable number of bank bills, and reduce them to the number his majeſty ſhall think neceſſary for maintaining circulation and commerce: that with theſe views, and to ſecond the intentions of his majeſty in relation to the creation of rents or annuities on the town-houſe of Paris for 12,500,000 livres, making a capital of 500 millions, the ſaid company offers to yield and make over again the 12,500,000 livres, part of the forty-eight millions which his majeſty has aſſigned to the company on the aids and gabels, in deduction and for diſcharging the engagements contracted by the ſaid company with his majeſty: that the ſaid company deſire his majeſty to authorize them to demand from the

the proprietors, a fupplement of three thouſand livres per action, which ſupplement is to be voluntary; but ſuch proprietors who ſhall pay the ſame, ſhall have a dividend of 3 per cent. at the rate of 12,000 livres per action; and that ſuch who ſhall not think fit to pay that ſupplement or additional ſum, ſhall have only the dividend of 200 livres per action, which was granted by the reſolution of the company of the 30th of December laſt: that the condition of the company is ſuch, that they may look upon the dividend of 3 per cent. as a fixed and certain revenue; and, that the public may be ſure of it, the directors and many of the moſt conſiderable proprietors, who have joined them, humbly deſire his majeſty to give them leave to form a ſociety of inſurance, which ſhall have a ſtock of 20,000 actions, amounting at the rate of 12,000 livres each action, to two hundred and forty millions, the profits of which are the principal, and ſhall be anſwerable for the dividend of 3 per cent. to be paid to the proprietors; who ſhall advance the ſupplement aforeſaid, and ſhall inſure the dividend on the foot aforeſaid of 3 per cent. and likewiſe for the 200 livres per action to thoſe who do not furniſh the ſaid ſupplement; upon condition nevertheleſs, that the overplus of the profits of the company, beyond the 3 per cent. and 200 livres per action incurred to the owners of the ſaid actions, ſhall belong to the ſociety of inſurance.—That to perfect and put that plan into good order, and give all the ſecurity that can be deſired, it would be neceſſary, that an exact account be taken by ſuch commiſſaries of the council as his majeſty ſhall be pleaſed to appoint, of all the ſubſcriptions, premiums, and actions, called in by the company, and now in their poſſeſſion, to be burnt at the town-houſe, in the preſence of the ſaid commiſſaries, the provoſts of merchants and eſchevins.—That two hundred thouſand bills, each of one action, with the dividends of three years, be made out, to be numbered from number 1 to number 200,000 incluſive, ſigned by one of the general directors and one of the commiſſaries appointed by his majeſty, and ſealed with the ſeal of the company, and that within a certain term, which ſhall be preſcribed by his majeſty, all the actions, in the hands of the public, be brought in to be converted into new actions, and that the old be afterwards burnt with the formalities aforeſaid. For which his majeſty being willing to provide, the report being heard, the king being in his council, with the advice of Monſ. the duke of Orleans regent, has ordained and ordains.

This arrêt contains ſix articles, which are in ſubſtance as follow:

I. The king appointed commiſſaries to take an account of the number of the ſubſcriptions, premiums, and actions, of the India company, which they have called in or converted into bank notes.

II. His majeſty accepts the offers made by the ſaid company, to make over again unto him the hundred thouſand actions his majeſty yielded to them by the arrêt of the 24th of February laſt, and in conſequence thereof diſcharges the company from the nine hundred millions they had obliged themſelves to pay to his majeſty in ten years, for the ceſſion of the hundred thouſand actions aforeſaid. And his majeſty being willing to contribute, on his part, to the leſſening of the number of actions, in order to reduce them to two hundred thouſand, the number propoſed by the company, ordains that the ſaid hundred thouſand actions ſhall be burnt, as alſo the three hundred thouſand which the company propoſed to ſuppreſs.

III. His majeſty fixes the number of actions of the company to two hundred thouſand, and declares they ſhall not be augmented upon any pretence whatſoever; and, to make up that number, orders two hundred thouſand bills, of an action each, to be printed, with the dividend of the years 1721, 1722, 1723, numbered, ſigned, and ſealed, as above, and all the old actions, premiums, and ſubmiſſions, to be burnt in the preſence of the commiſſaries of the council, provoſt of merchants, &c. Declaring farther, that all actions, ſubſcriptions, or premiums, which ſhall not be brought in before the 1ſt of September next, ſhall be null and void by virtue of the preſent arrêt.

IV. The actions that are in the hands of the public, and thoſe depoſited and regiſtered in the books of the company, are to be converted within that time into new actions.

V. The company is allowed to demand from the proprietors a ſupplement, or additional fund of three thouſand livres per action, to be paid in ſix months; that is, five hundred livres per month; but ſuch proprietors, who ſhall not think fit to furniſh that additional ſum, ſhall continue to enjoy their dividend of two hundred livres per action.

VI. His majeſty approves and authorizes the ſociety of inſurance, propoſed by the directors, to conſiſt of the ſaid directors, and as many proprietors of ſtock, as ſhall be willing to concern themſelves therein: that the ſtock of the ſociety be for twenty thouſand new actions, which ſhall be forthwith depoſited, for ſecuring the payment of the dividend of ſuch proprietors as will enſure the ſame therein, and the overplus of the ſaid dividend is to belong to the ſociety of inſurance. Done in the council of ſtate, June 3, 1720.

Signed PHELYPEAUX.

This reduction of two thirds of the actions, and the ſociety for inſuring the intereſt thereof, was regarded as the likelieſt means to retrieve the public credit: but the people had been ſo frighted, that they would not meddle with bank notes, except in payment for their goods, which they raiſed four times above their real value, or upon a very great diſcount: but what effect this project had, we ſhall ſee hereafter; and ſhall here take notice, that Mr. Law reſigned his office of comptroller-general of the finances on the 19th of May, and two officers of the Swiſs guards were ſet upon him; but on the 3d of June they were ordered to leave him, and the duke D'Antin was ſent to acquaint him, that he was to continue at the head of the bank, and of the India company: but, on the 7th of that month, the ſeals were taken from Mr. D'Argenſon, and reſtored to the chancellor Dagueſſau.

Soon after this, the government, finding that the public affairs did not take the turn they expected, ſeemed to be undoing by degrees what had been ſo lately done; and, at the ſame time, fell to uſing very extraordinary methods to oblige thoſe who had remitted any money abroad, to re-call it into France, as will appear by the following unexampled ordinance.

The king's ordinance, requiring all his ſubjects who have remitted money into foreign countries to re-call the ſame, dated the 20th inſtant, is as follows:

His majeſty being informed, that many of his ſubjects, who, in theſe latter times, have got conſiderable fortunes, forgetting what they owe to their country, inſtead of laying out their money in purchaſes in the kingdom, or promoting commerce and manufactures, have ſent the greateſt part thereof into foreign countries, and have concerned themſelves in their trading companies; and that ſome others of his ſaid ſubjects keep in the ſaid foreign countries conſiderable ſums in ſpecie, with a deſign to place the ſame there, which has kept up the courſe of exchange to the advantage of foreigners, and has occaſioned the exporting out of the kingdom a conſiderable quantity of ſpecie: and his majeſty, conſidering how much it is important to remedy an abuſe ſo contrary to the laws of government, and at the ſame time ſo prejudicial to the ſtate, and the neceſſity of providing againſt the ſame, however, without conſtraining the liberty of commerce, to which his majeſty is always reſolved to continue his protection; his majeſty, with the advice of Monſ. the duke of Orleans regent, has ordained and ordains, That in general, all his ſubjects, of what quality or condition ſoever they be, who are concerned in companies of commerce in foreign countries, ſhall be obliged to re-call their funds, and cauſe the ſame to be brought again into the kingdom within two months at the fartheſt, reckoning from the day of the publication of this preſent ordinance; which ſhall be likewiſe obſerved by thoſe who have depoſited any money out of the kingdom, excepting, nevertheleſs, the funds of bankers, which merchants and traders have there for their commerce, or for their own account, or the particular ſocieties they have in the ſaid foreign countries, upon a penalty to ſuch as ſhall act contrary thereunto, of double the ſum they have remitted into foreign countries: which penalty, whereof one half is to belong to his majeſty, and the other to the informer, ſhall not be remitted or reduced, or moderated upon any pretence whatſoever. His majeſty forbids, moſt expreſsly, all his ſubjects, of what quality or condition ſoever they be, to intereſt and concern themſelves in any trading companies in foreign countries, or to place any money therein without his ſpecial leave; requiring the lieutenant-general of the police of Paris, the intendants of the ſeveral provinces, &c. to cauſe theſe preſents to be obſerved, and to be read, publiſhed, and affixed, where occaſion ſhall require, &c. Done at Paris, June 20, 1720.

Signed LEWIS,
And lower, PHELYPEAUX.

Mean while the affairs of the finances fell into ſo great diſorder, that the court, ſeeing little hopes of retrieving them, applied to the parliament, whoſe deputies and the miniſters of ſtate had ſeveral conferences together. But the parliament refuſing to come into the meaſures the court had projected, this produced an open rupture between them, and the parliament was removed from Paris to Pontoiſe in the following manner. On the 1ſt of July, by three in the morning, the muſqueteers, the life-guards, the French and Swiſs guards, and the archers of the marſhalſea were in arms; and a ſtrong detachment was ſent to the palace where the parliament meets, with orders to ſuffer no aſſembly there; and about the ſame time letters, under the royal ſignet, were ſent by muſqueteers to all the preſidents and other members of the parliament, requiring them to repair to Pontoiſe (a place within ſix leagues of Paris) in forty-eight hours.

Upon the whole, this remarkable ſcheme created far more confuſion in France, than there is at preſent, and proved the moſt groſs and enormous cheat and impoſition upon the public,

lic, that ever was hatched; nor is it to be parallelled, except by the famous æra of the South Sea year in England.

This tampering with the public credit, under colourable pretexts of raiſing mountains of treaſures, always terminates in nought but empty bubble and chimæra, to the ruin of commerce and induſtry, and the uſeful arts, and therefore cannot be too much guarded againſt in all wiſe ſtates: for which reaſon we have taken due notice of it. See the articles Actions, Bubbles, Credit [Public Credit], Debts [National Debts], Funds, Monied Interest.

MODENA, a duchy in Italy, compoſed of ſeveral principalities, viz. the duchy properly ſo called; thoſe of Reggio, of Mirandola, and Coreggio; the principality of Carpio; the ſeignories of Saſſuola, Trigalla, and the greater part of that of Carſagnano —It is bounded on the north by the duchies of Mantua and Mirandola; on the eaſt with the Bologneſe, and the territories of the Church; on the ſouth with Tuſcany and the republic of Lucca; and, on the weſt, by the duchy of Parma.

This country is fertile and delightful, produces plenty of corn, wine, and other valuable commodities, ſufficient not only to maintain, but to inrich it's innabitants, were they not ſo grievouſly loaded with taxes. But the misfortune is, that the dukes of it keep a court too ſplendid and magnificent for their income; ſo that they are obliged to rack their ſubjects, and reduce them almoſt to beggary, in order to vie with other princes in grandeur.

The duchy, or territory of Modena, properly ſo called, has it's name from it's capital; and, beſides that and the dependencies of it, contains the country of Frignano, and part of Carſagnano. The chief towns of it are Modena, the capital, Baſtia, Final, Frignano, Seſtola, and Carſagnano.

Modena is ſeated in a ſpacious plain, on a fine canal, between the rivers Panaro and Secchia, and is of a ſmall oblong figure, nearer to a round. The city has nothing that ſhews the inhabitants to be rich, or to carry on any conſiderable commerce.

Bastia is a ſmall pretty town in the Modeneſe Proper, pleaſantly ſituated on an iſland formed by the river Panaro, about 16 miles below the city of Modena.

Final, or Finale, is likewiſe ſituated on an iſland made by the ſame river, on the north-eaſt of Modena, and upon the confines of Mantua. It is often called Final Modeneſe, to diſtinguiſh it from a famed ſea-port of that name on the coaſt of Genoa.

Frignano, or Frigano, is a little city and territory in the ſame duchy, at the foot of the Apennines, on the frontiers of the Bologneſe, near the ſpring head of the Panaro.

Carsignano, Carfeniano, Grafignano, the laſt territory in the Modeneſe Proper, ſituate at the foot of the Apennines, and between that duchy and the republic of Lucca. The territory runs on each ſide of the Secchia.

It's chief town, of no great note, is called Castel Novo De Carsignano, with ſome other villages, part of which belong to the republic of Lucca.

Carpi, a city and territory in the duchy of Modena, with the title of principality, is fortified with a good caſtle, and did formerly belong to the houſe of Pio, who were lords of it. It is ſeated in a beautiful fertile plain, upon a canal cut from the river Secchia, about 11 miles north of Modena, and four from Correggio.

Sassuolo, Sassuoli, is ſituated on the river Secchia, and gives name to a lordſhip ſituate between Reggio, Modena, and Correggio, and is in the poſſeſſion of a prince of the houſe of Eſte, who is commonly ſtiled marquis De St. Martino.

The principality of Reggio takes it's name from the city of that name, called Regium Lepidi, to diſtinguiſh it from Reggio, another famed town in Calabria. It is ſituate in a very fertile plain, is well inhabited, and very rich, though it's air be not ſo wholeſome as other parts of Italy.

The duchy of Modena, properly ſo called, comprehends one of the faireſt and moſt fruitful countries in Italy, abounding with corn, wine, oil, and fruits, is very populous, and inhabited by an ingenious and induſtrious people. The ſmall country of Frignano, bordering on the Bologneſe, is annexed to it on one ſide, and part of the country of Carſagnano on the other, the reſt belonging to the republic of Lucca. It is very mountainous, but far from being deſpicable, ſince in theſe mountains there are mines of great value; and the inhabitants are a race of people robuſt, hardy, and brave, as any in Italy. The duchy of Reggio lies weſt from that of Modena, and is by ſome accounted the more conſiderable duchy of the two, and, indeed, ſo it is, if we conſider it's dependencies, ſuch as the principalities of Correggio and Carpi, the former heretofore poſſeſſed by princes of the ſame name, and the latter belonging to the family of Pio. In the north-weſt corner of this duchy ſtands Bercello, upon the Po, formerly a place of great ſtrength, yielded by the late duke of Modena, in 1701, to the imperialiſts, to facilitate their military operation in Italy, and, for that reaſon, beſieged, taken, and intirely demoliſhed by the French in 1705; nor has it been ever ſince reſtored to it's ancient condition.

The duchy of Mirandola, including that of Concordia, is about 20 miles in length, and five in breadth; it is a very beautiful and a very plentiful territory, full of villages, and the country round about them thoroughly cultivated.

Mirandola is ſtrong by ſituation, and has been formerly well fortified.

The city of Concordia ſtands on the Secchia, at the diſtance of ſix miles from Mirandola; between which cities there is a fine canal, called the Navilio, which facilitates the commerce of both.

Theſe duchies were very great acquiſitions to the family of Eſte, ſince their revenues are moderately computed at 100,000 crowns a year.

The whole eſtates of the duke of Modena have the duchies of Mantua and Guaſtalla on the north; the grand duchy of Tuſcany on the ſouth, together with the territories of the republic of Lucca; the Bologneſe, and the duchy of Ferraia, on the eaſt; and the duchy of Parma on the weſt. The extent of theſe countries, from ſouth to north, is about 56 Engliſh miles, and they are about 50 miles in breadth, from weſt to eaſt. The duke of Modena, in time of peace, enjoys a revenue of about 100,000l. ſterling a year at leaſt, with which he maintains a very ſplendid court, and when his circumſtances renders it requiſite, can keep up a body of 8000 regular troops. The greateſt inconvenience in the ſituation of his country is, that he has no communication with the ſea; which might be eaſily removed, if he could recover, either by treaty or force, the duchy of Ferrara, which lies upon the gulph of Venice.

MOGUL EMPIRE. See Indostan.

MOLDAVIA, a principality of European Turkey, bounded by the river Neiſter, which divides it from Poland, on the north eaſt; by Beſſarabia on the eaſt; by the Danube, which ſeparates it from Bulgaria, on the ſouth; and by Walachia and Tranſilvania on the weſt; being 240 miles long, and 150 broad, ſituate in a good air and fruitful ſoil, producing corn, wine, rich paſtures, a good breed of horſes, oxen, and ſheep, plenty of veniſon, game, fiſh, and fowl, and all European fruits, and is well watered with the rivers Danube, Pruth, Neiſter, &c.

The capital city is Jassy.

MOLUCCA ISLANDS. See Indian Islands.

MOMBAZA, a ſubdiviſion of Zanguebar, on the coaſt of Africa, a country ſubject to the Portugueze, which furniſhes them with ſlaves, gold, ivory, rice, fleſh, and other proviſions, with which they ſupply their plantations in Brazil, &c.

MONEY.

Of the Origin of Money.

In the moſt early ages, when trade was carried on, as there was no money, men uſed to barter one commodity for another, a cuſtom that ſtill obtains among the ſavage unpoliſhed nations of Chili on the South Sea, in the land of Jeſſo in the Eaſt-Indies, and other barbarous countries. But, as ſuch a method of bartering commodities was, on many occaſions, attended with great difficulty, and always inconvenient, men agreed to make choice of one commodity, which being in general and conſtant eſteem, an equivalent quantity of it might always remove the difficulty of bartering in kind.

The ſame opinion concerning the origin of money we find expreſſed very much to our purpoſe, in the firſt book of Ariſtotle's Politics, ch. 6. 'As all uſeful things, ſays he, could 'not, without great difficulty, be tranſported from place to 'place, it was reſolved, by common conſent, that, in bar-'tering commodities, they ſhould reciprocally give and re-'ceive ſome ſubſtance, which, being in it's nature applicable 'to the purpoſes of life, might, at the ſame time, be eaſily car-'ried about.' From which words of Ariſtotle it is very plain, that the introduction of money was owing to the difficulty of bartering, as human ſociety could not ſubſiſt without the exchange of neceſſaries, nor could this matter be managed without the uſe of money.

To determine, therefore, this ſubſtance that ſhould be in univerſal and conſtant eſteem, they made choice of gold and ſilver, not only becauſe they were more valuable than other metals, but alſo becauſe, in the various uſes to which they might be applied, they were particularly adapted to the ſupport and improvement of human life. But, becauſe there was a conſiderable difference in the nature of theſe two metals, and gold was more precious than ſilver, both by it's intrinſic worth and greater ſcarcity, and alſo far exceeded the other in the expence that was neceſſary for working it, as appears by the tax that is paid to the ſovereign lords of mines, who require no more than five in the hundred of gold, whereas they exact twenty in the hundred of ſilver; therefore a greater value was aſcribed to gold. And, becauſe the baſer metal ought to be given in greater meaſure, that what was wanting in value might be made up in quantity; for this purpoſe it was neceſſary to fix the proportion between them, by a certain determinate rule: whence it is, that in the practice of commerce, though formerly the proportion of gold to ſilver was ſettled as ten to one, yet at preſent the matter is ſo regulated almoſt all over Europe, that one ounce of gold is reckoned equal in value to 15 of ſilver, or thereabouts. See the article Coin.

When

When this ſubſtance was agreed upon at firſt, as we have obſerved, the particular quantities of it were originally determined by their bulk and weight only; but afterwards, to ſave the trouble of proving this weight upon every occaſion, it was coined into a certain form by public authority, and impreſſed with a mark of diſtinction, expreſſing the quantity each piece contained, ſo that it ſhould always have the ſame determinate value, and be every-where the ſame, both for matter and weight.

In order to inquire more particularly into the nature of money, and the better to illuſtrate what we have further to offer concerning the effects it produces in trade, and the various advantages and diſadvantages of one kingdom in reſpect of another, ariſing from money; it muſt be conſidered, that we are to diſtinguiſh two ſorts of value in money; the one intrinſical, founded in the rate or value according to which it uſes to paſs: and though, in different places, on ſeveral preſſing occaſions, the extrinſical value of money may be raiſed higher, at the diſcretion of the ſupreme power, ſuch is the nature of commerce, that in it money is never eſtimated but as to its intrinſic value; ſo that, in the courſe of trade, money can have no higher value than a maſs of the ſame metal and quantity would have, if given in barter for any ſort of goods. We muſt alſo obſerve further, that ſuch is the cuſtom of well-regulated kingdoms, that, when foreign money is ſuffered to paſs current therein, ſo much is deducted from the extrinſical value as is neceſſary for defraying the charge of coining, and it never paſſes for more than it's intrinſical value; and the intention of this regulation is, that the money of the ſtate itſelf, which bears the ſtamp and authority of the prince, may always have the preference. From all which conſiderations it is extremely plain, that it is a matter of the utmoſt conſequence that the ſyſtem of money be ſettled under ſuch fixed regulations, as that it may conſtantly keep pace with the courſe of trade, and never in the leaſt deviate therefrom; it being certain, that no variation can ever happen in this reſpect, but it will, at the ſame time, produce a remarkable alteration in commerce.

After all, however certain it may ſeem that money is that which alone conſtitutes the riches of a nation, and it cannot be denied that, conſidered in itſelf, it has this prerogative, yet it will never diſcover it's effects, if it is not put in motion by commerce; ſo that, as the body of a planet, being in itſelf opaque, would never diſcover to us it's form and figure, if (according to that hypotheſis) it did not revolve round the ſun, whoſe light preſents it to our view, we muſt form the very ſame judgment concerning money; which, it is certain, has in itſelf no power at all to increaſe and multiply, and thereby to form the riches of a kingdom, or even, on the contrary, to reduce it to poverty; for, if a proſperous or unfavourable motion were not communicated thereto by commerce, we ſhould never be ſenſible of it's effects. And, becauſe we can no otherwiſe arrive at a clear and diſtinct knowledge of theſe effects but by a fixed and certain rule, which can ſhew with accurate exactneſs the ſituation of any kingdom, with regard to it's internal and external commerce, that is, whether the balance of trade ſtands in equilibrio, or is inclined to either ſide: and ſeeing there is not a more infallible rule by which this knowledge can be attained than the courſe of exchange, ſee the article EXCHANGE.

REMARKS on the article MONEY.

Of the INCREASE and DECREASE of the ACTUAL QUANTITY of REAL or HARD MONEY in a STATE.

Let us familiarly conſider the land eſtate of a country, where the general circulation is carried on by 2000 ounces of ſilver: this money paſſes through ſeveral hands, and always returns into thoſe of the undertakers, whom we ſuppoſe the proprietors of it.

Let us likewiſe ſuppoſe, theſe undertakers have received 2000 ounces more for a preſent from Americans, ſo as that each undertaker has double the quantity of money he had before, and that the quantity of money in all becomes 4000 ounces of ſilver.

Each undertaker will endeavour to enlarge and augment the quantity of his buſineſs: ſo the farmer's commodities will grow dearer in the altercations, by the greater demand made by the undertakers: but, perhaps, this will not immediately double the price of things, becauſe ſome of the farmers will at firſt be ſatisfied with a greater price than uſual, but afterwards the price will double in the altercations; each undertaker will deſire to live better than he did before, ſince he has got his additional ſum, and, conſequently, he will conſume in his family more wine and meat than uſual; therefore wine and meat will grow proportionably dearer than bread; and the farmers will endeavour to have more of theſe kinds the next ſeaſon, ſince they yield in proportion a better price than corn, and, conſequently, the corn will become ſcarcer, and grow dearer alſo.

This increaſe of conſumption of the produce of land, which, on the footing now introduced, cannot maintain all the inhabitants, will make it neceſſary for ſome of them to ſeek their livelihood elſewhere. Theſe will be chiefly turned away by the proprietor of the land, who, having but 6000 ounces per annum for his eſtate, cannot maintain his family as before, ſince all commodities are grown dearer. The labourers and journeymen, remaining, not being able to ſubſiſt upon their uſual wages, muſt have an augmentation, as well as the remaining ſervants of the proprietor: and, in all the changes this new quantity of money produces, the farmers ſeem to be the only gainers, and the proprietors the only loſers. The undertakers, who buy their commodities and materials dearer, will be for turning the loſs upon the conſumers: but, as they are themſelves conſumers with reſpect to one another, they will find the expences in their families increaſe beyond the additional conſumption of meat, wine, &c. they intended; and, when the money introduced into barter ſhall gradually have doubled the price of every thing, they will be obliged to retrench the ſaid additional conſumption, ſince their double quantity of money carries on but the ſame undertakings their ſingle quantities carried on before; otherwiſe they will turn bankrupts, and be ruined, which is commonly the caſe, in regard people do not often care to retrench their expences; and then others, who have ſaved money, will ſet up in their places.

The proprietor, at the expiration of his leaſe, will demand 12000 ounces for his rent, inſtead of 6000: ſince the price of the farmers commodities is doubled; and, if he returns to his former manner of living, he will call back his ſervants, whom he had ſent away, or have others in their place; and the new undertakers will live upon the ſame footing of conſumption as the firſt, the farmers will have the ſame profits out of the lands that the farmers had at firſt, and all the diſpoſitions of this eſtate will turn nearly to it's primitive ſtate, with this difference only, that the farmers, who ſaved money are richer, and the undertakers, who ruined themſelves, are forced to turn journeymen to others, who are ſet up in their room, and that 4000 ounces circulate inſtead of 2000.

Theſe changes, or ſomething like them, commonly happen in a ſtate, when a ſudden quantity of money is introduced into the general barter; but, becauſe money moſt commonly increaſes but ſlowly and gradually, commodities riſe in their value inſenſibly.

Let us again ſuppoſe there are ſilver mines on this eſtate, that an undertaker farms them from the proprietor, or from the farmers, that the veins are ſo rich that he ſhall quickly get out of them the additional quantity of 2000 ounces on our hypotheſis.

This new quantity of money will cauſe much the ſame variation in the price of all commodities, as we obſerved in the preceding example. The undertaker, or mine-adventurer, will increaſe his expence, and give great encouragement to the miners and others he employs. The facility wherewith he gets money will make him generous, and he will more chearfully than before beſtow money on the poor. The douceurs he gives to thoſe he employs will encourage them alſo to ſpend more than uſual. All that are concerned under him feel the influence of his opulence, and conſequently conſume more commodities than uſual. They will enhance the price of them in the altercations; and, which way ſoever theſe additional 2000 ounces of ſilver come into barter, they will raiſe the price of things. The circulating money will be 4000 ounces inſtead of 2000, and the price of commodities will be double.

It may be worth while to obſerve here, that we may diſtinguiſh ſeveral channels and walks of circulation at market. The corn, or bread market, is proportioned to all the inhabitants in general, ſince the meaneſt workman muſt have bread, as well as the greateſt lord. The wine-market correſponds to a ſmaller number of inhabitants, but yet is very conſiderable, ſince not only the proprietors of land and money penſioners and officers, but likewiſe ſeveral middling undertakers, tradeſmen, and workmen, drink more or leſs wine. The butchers, or meat-market, is much the ſame. The wild fowl market, and that of rarities and delicacies, correſponds to a ſmaller number of inhabitants, as lords, wealthy proprietors, and others.

So that, if the additional money which is brought into a ſtate is at firſt all in the hands of the wealty ſort, the price of wild fowl may very well riſe, and continue high, without influencing the price of bread; and the price of wine and meat may riſe long before bread grows dearer: but it will, at the long-run, affect the price of bread alſo.

Whenever the additional quantity of money decreaſes, it will create an additional expence proportionable, mediately or immediately, and enhances, conſequently, the price of commodities.

If we ſuppoſe that 10 perſons increaſe the expences of their family on the eſtate we mentioned before, that they raiſe the price of wine, meat, &c. in the altercations, without much affecting that of bread: the farmer will have another year more cattle and wines, and, conſequently, leſs corn, and ſo corn will then grow alſo dearer.

There is generally a ſtock of every commodity in a nation exceeding the yearly conſumption; which anſwers the ſudden and extraordinary conſumption; and, as that waſtes, the commodities grow dearer, and the dearneſs again, if it continues, makes ſeveral families diminiſh their conſumption, 'till

things

things return to their primitive ſtate as to the conſumption. But the dearneſs of the commodities continues, ſince the quantity of money in barter correſponds to it, and a double quantity of money in the hands of undertakers, when the price of things is doubled, has but the ſame effect the ſingle quantity had before.

If the additional quantity of money belongs to money-lenders, it will diminiſh intereſt, and at the ſame time increaſe the undertakings, which conſequently will enhance the price of commodities, by an additional demand. The money-lenders will increaſe their expence and conſumptions, and the additional undertakers will do the like; the demand for workmen in the ſeveral undertakings will raiſe the price of their wages; the price of things will keep up in barter, ſince the quantity of money continues to anſwer the advanced price, though ſeveral of the undertakers ſhould break.

But, if an additional QUANTITY OF CREDIT * ſhould by the acceleration of circulation, and barters by evaluation, make the 2000 ounces anſwer the ſame circulation as 4000, it will have pretty much the ſame effect as 2000 ounces increaſe of money. It will occaſion an additional number of undertakers, who will increaſe the price of commodities, which will grow dearer in the altercations. Theſe will enhance the conſumption, &c. but, when ſome of them come to break, their example will ſtagnate circulation, and the ready money only will carry it on as before; and conſequently money will grow ſcarcer, and commodities will grow cheaper, and the difficulties in circulation will make the undertakers ſell cheaper than they bought, and ſeveral of them will break and diminiſh their conſumption, &c. So that a ſudden augmentation of credit may for ſome time anſwer the ſame ends and purpoſes, as the ſudden increaſe of the quantity of money, but will not continue to keep up the price of commodities, as the real quantity of additional money does: but, when a quickneſs of circulation is gradually introduced into barter, and continues naturally in the manner and methods of carrying on the undertakings, we don't ſee why it may not have conſtantly the ſame effect in keeping up the price of things.

* This ſhews how injurious the effects of long perſonal credit are to trade in general. See the article CREDIT [PRIVATE CREDIT.] I cannot but think that a cuſtom ſo injurious to trade in general, might and ſhould be prevented.

I have enlarged upon theſe particulars and circumſtances, to ſhew by what methods and ſteps in the detail of barter, an additional quantity of real money in a ſtate increaſes the price of all commodities. As to the fact itſelf, it ſeems ſufficiently proved by experience, and agreed upon by all hands. Mr. Locke lays it down as a principle, and frequently inſinuates, that the price of all commodities is proportionable to the actual quantity of circulating money. But he ſeems to have clearly loſt the view of this ſubject, when he ſuppoſes, nevertheleſs, that the profits and advantages made in a ſtate increaſe without bounds, with the increaſe of the quantity of money: whereas it follows from his own principles, that, if the money is doubled, the price of commodities is alſo doubled, and conſequently that a double quantity of money will buy but the ſame quantity of commodities, if they are doubled in their value. [For what occaſions the riſe of labour and commodities, ſee the articles DUTIES, DEBTS, [PUBLIC DEBTS], TAXES, LABOUR.]

Let us now examine how things find their proportion in a ſtate, when the price of commodities riſes, either by an additional quantity of money introduced into barter, or by the ſcarcity of commodities and bad years.

When there happens a great demand for any kind of commodities, ſeveral families will conſume leſs of it than uſual, by reaſon of it's dearneſs: a man who commonly eats three pounds of bread in a day, will ſubſiſt if he has but two pounds; and a ſtate which maintains 1,000,000 of inhabitants, will, with little difficulty, and without any ſenſible hardſhip, maintain 1,100,000, and even 1,500,000 with difficulty and famine: but things will afterwards find their own proportion, and the inhabitants will proportion themſelves in number to the means they find to ſubſiſt on, according to the manner of living of the place.

Hitherto we have not any where conſidered foreign trade; but, by a commerce with foreigners, a ſtate may maintain a greater number of inhabitants than the land can maintain. For example:

The inhabitants of Provence may buy wool of the Spaniards, and pay the value of it with about a quarter part of the ſame wool manufactured; and export the other three quarters of it manufactured to Barbary, and bring home, in exchange for it, more corn than will anſwer the maintenance of all the workmen, undertakers, exporters, and importers, concerned in the whole commerce in queſtion.

The little iſland of St. Dennis near Paris contains three pariſhes, the buſineſs of theſe inhabitants is moſtly tanning of leather: the iſland produces nothing for their ſuſtenance: they ſell their labour in exchange for the produce of the lands of the continent, which maintains them: their tanned leather is moſtly conſumed at their doors [at Paris]. If it were to be tranſported, and conſumed in Italy, it would ſcarce maintain them, becauſe of the expence of the remote carriage.

But the Dutch find means, by the cheapneſs of their navigation, to exchange their labour with remoter parts, where the produce of their labour is not voluminous; their manufactures of linen, their bleaching, their herring and whale-fiſhery anſwer the charge, and ſo does their ſawed timber and ſhipping to ſome places; for their ſaw-mills, one with another, ſave the labour of 25 perſons. See the article LABOUR. That circumſtance contributes to the cheapneſs of their ſhipping, as well as the timber of the countries adjacent to the Meuſe, Moſelle, and Rhine, which falls down theſe rivers to them with little expence of carriage. So it is not ſurpriſing there are more inhabitants in Holland than their lands are able to maintain, but this cannot be increaſed in infinitum; but theſe latter conſiderations have inſenſibly carried me ſomething from my ſubject.

The value of money, as well as of other commodities, ariſes from the quantity of, and demand for it. The quantity of ſilver, by the opening of the mines of Peru and Mexico being greater than gold, gave an extraordinary value to gold; and hence it was that in the 11th of king James I. the unity piece of gold was raiſed from 20 to 23 s. On the contrary, a few years ago the demand for ſilver was ſo great, that we were obliged to lower the value of gold; and, in all probability, in a little time we ſhall think a farther diminution abſolutely neceſſary. But it is not alone the quantity of gold and ſilver that leſſens the demand for them, but the circulation too; a great trade, making a greater demand for induſtry and commodities than money, leſſens it's value, and conſequently raiſes the price of the other two.

Trade and credit, as they are inſeparable in themſelves, ſo they are the parents of circulation: money without theſe would be but a dead treaſure in few people's hands, and conſequently the community little the better for it. France is to England as 8 to 3, their ſpecie perhaps proportionable, yet there is a greater ſhew of money in England than in France; but, if the circulation of France were equal to that of England, then ſhe would appear of courſe ſo much the richer.

For more matter on this ſubject, ſee the articles BANKING, BARTAR, CASH, CIRCULATION, COIN, GOLD, SILVER, BULLION, EXCHANGE.

MONIED INTEREST, or MONIED PROPERTY.

The chief ſubject of what is now meant by the monied intereſt in this kingdom, is the national debt, ſee DEBT [NATIONAL DEBT]; and it is called monied property, only in oppoſition to the landed, and becauſe of the facility of turning it into money; not that any body is weak enough to imagine, that there does exiſt, or that it is neceſſary there ſhould exiſt, money enough in the kingdom to anſwer what is due to the public creditors.

That we may give a juſt idea of this debt, we ſhall conſider, (1.) What the public debt is. (2.) To whom it is due. (3.) Whence came the money lent to the public. (4.) How far the public is affected by it. (5.) How and where that money was employed before it was lent the public. (6.) What has become of it ſince. (7.) What would be the conſequence of paying it off. And, laſtly, What will be the conſequence of increaſing it.

1. The public debt is a ſhare out of the profits and expences of every inhabitant of Great-Britain; which he is bound to pay, without receiving any benefit or advantage for it, 'till the public ſhall be rich and honeſt enough to pay out of it's ſavings no leſs than eighty millions ſterling.

Where a revenue conſiſts in land, the owner feels, that, at two ſhillings in the pound, he gives away one tenth of his income; but does not ſo eaſily perceive, that he muſt ſtill contribute out of the nine parts that remain: and a day-labourer is not ſenſible, that he gives a groat at leaſt towards the public debt, out of his hard earned ſhilling. He muſt pay for his ſhoes, his light his drink, his waſhing, &c. and, becauſe he keeps no account with the exciſeman, he never dreams that he contributes to his collections.

This tribute is ſqueezed out of the bowels of the people in the ſhape of taxes; and, beſides what is applied to the national debt, like the wretch that is caſt at law, they muſt pay for the expence of raiſing it, and muſt maintain a ſwarm of tax-gatherers; who, though they are, perhaps, as neceſſary as jack-catch, as an anonymous writer ſays, cannot fail to be looked upon as the inſtruments of oppreſſing the very country, which had a right to the benefit of their honeſt induſtry.

The public debt, then, is an abſolute alienation, with privilege of redemption, of a conſiderable part of the means of ſubſiſtence of every individual in Great-Britain; which he would have a right to poſſeſs and beſtow on himſelf and family, was it not for ſuch debt, and which he is now obliged to pay to another becauſe of that debt.

2. As to the ſecond point, one muſt diſtinguiſh between thoſe to whom the public debt is due at preſent, and thoſe to whom it was originally contracted.

King William's war having involved this nation in an expence unknown 'till then, every invention was exerted to find

find out new methods of raiſing money. After every tax that hiſtory or ſpeculation could ſuggeſt was impoſed on the people, it was ſo contrived, that the money raiſed came vaſtly ſhort of the demands for it; and the government had recourſe to anticipations, and delivered over the nation to the mercy of uſurers. Clerks, agents, brokers, money-ſcriveners, commiſſaries, Jews, and members of parliament, were allowed 30 or 40 per cent. for pretending to advance the public the very money they had already received, or juſt robbed it of.

In thoſe times, it was uſual to contract with the public to perform a certain ſervice, ſuppoſe for 30,000l. one third down, and the reſt payable at two different terms. The contractor, after receiving his 10,000l. down, either ſold his contract to great advantage, or perhaps performed the whole ſervice on credit. When the remaining payments became due, he, by another hand, advanced to the public, at 30 per cent. premium, the very money it had paid him a few months before. Thus, without being one ſhilling out of pocket, he contrived to make the public 10 or 15,000l. in debt to him: ſo abundant a harveſt drew reapers and gleaners from every quarter. Things were contracted and paid for that never were furniſhed. Falſe muſters were winked at by ſea and land. Every one aimed at his ſhare of the plunder: no man pretended to check another, and to eſtabliſh a precedent that might make againſt himſelf: the maxim was, To live, and let live; and the nation, like a town taken by ſtorm, was given up to plunder. It was at this time that the word PERQUISITE grew into vogue. Thoſe who did the real ſervice, were forced to be content with their wages; but ſecretaries, paymaſters, clerks, &c. had their perquiſites.

The firſt proprietors, then, of that ſhare of the profits of the induſtrious called public debt, were originally ſuch who took advantage of the public folly; and, by furniſhing them their own money at an extravagant premium, got annuities aſſigned them for it at 7 per cent. intereſt. Theſe underſtood their trade too well, to ſpare ready money to thoſe who had done real ſervice. Inſtead of money, all ſuch were obliged to receive debentures, which their neceſſities forced them to part with to uſurers at 50 or 60 per cent. diſcount.

As ſoon as they found themſelves poſſeſſed of theſe, they claimed all the merit and compaſſion due to the unhappy old ſoldiers, ſailors, and other wretches they had ſtarved out of them: and, inſtead of money, of which they knew they had left none unſqueezed out of the preſent generation, they were ſo very obliging, as to content themſelves with having poſterity delivered over to them in ſecurity for 7 per cent. intereſt, to be paid 'till the principal, which they never advanced, ſhould be refunded.

After the peace, theſe gentlemen had got too high, and the people of England too low, to admit of enquiries. Public credit grew a cant word, and the law being debarred from enquiring into their titles, their ſecurities were preferred to land, and found real purchaſers; who actually, and bona fide, paid a new premium for what had coſt the ſellers very little.

The money lent the public came from ourſelves, the very people whoſe induſtry it was employed to purchaſe, furniſhed the price that bought it.

The notion, that money was brought from abroad to purchaſe our taxes, is leſs true than imagined. Where could it come from? Not from Holland, France, Spain, or Portugal. Happy for us, the three firſt nations were drove to the ſame extremity, and were ſelling themſelves as faſt as we were, and the Portugueze had not then diſcovered the mines of Brazil. Vaſt fortunes have been made in England by foreigners, as well as natives; but it will be difficult to inſtance many conſiderable ones that have been imported. When the public funds were eſtabliſhed, the certainty of gain might tempt ſome foreigners to lay out their money here; and ſo much the worſe for us, ſince for every ſhilling they brought in, they were ſure to carry out two. The different nations in Europe have run in debt, or borrowed, as they term it, near FIVE HUNDRED MILLIONS STERLING, SINCE KING WILLIAM'S WAR. No body can be ſo unreaſonable as to imagine, that that money was lent them from abroad.

REMARKS on MONIED INTEREST.

Whoever has frequented the Groom-porter's, will be at no loſs to conceive, how a few money-lenders, with 200l. of borrowed money, muſt infallibly pick up all the money played for, and muſt, in time, get into the eſtates of every conſtant gameſter.

My lord duke A ſhall play againſt my lord B. They ſhall bring each 1000l. in their pockets. On Monday the run ſhall be againſt his grace: he loſes all his ready money: his money-lender C is at hand, to ſupply him with a rouleau of 50. The run continues; C has t'other and t'other rouleau at his ſervice. The luck turns; C receives back his 150l. with thanks, and three guineas due to his kindly ſuccour. On Tueſday, lord B comes to be in the ſame ſituation. He too has recourſe to his money-lender D. This traffic is repeated every day through the year. Nothing ſo equal as luck: on caſting up accounts, it will be found, that his grace and my lord are each 5 or 6000l. out of pocket, and that C and D have got it. His grace gets at laſt into ſo bad a run, that he is out 100 rouleaus to C; and finds good natured C, not only willing to accept of a mortgage on his grace's eſtate for the 5000l. borrowed, but ready to lend him 5000l. more on the ſame ſecurity. Thus his grace has loſt all his ready money, and mortgaged his eſtate for 10,000l. Has my lord B got it? No; he is in the ſame ſituation. But C and D have got all the others have loſt, though they have found no treaſure, diſcovered no philoſophers ſtone, nor imported a ſingle farthing from abroad.

We know there were at leaſt fourteen millions of ſpecie in England, when king William's war broke out. Moſt of that money muſt have been employed in trade, there having been then no more profitable way of diſpoſing of it. When the public demands took place, there was more to be got by ſupplying them; and of courſe every wiſe man would take his money out of trade, and carry it to the Treaſury, as the better market. There was at that time at leaſt 20 or 30 per cent. to be got fairly, by ſupplying the government; the money paid was ſure to return again in a few years, and, being lent again on new ſecurities, it can be no wonder, that ſo profitable a traffic has, from a moderate ſtock, produced even eighty millions in ſixty years.

In ſhort, the people, who had no conception that it was poſſible to grind above two millions a year out of them, were now taught to pay ſix, beſides the ſums annually borrowed; and thoſe who received that ſix millions, or rather thoſe with whom it ſtopped, brought it back again to the Treaſury, and it then became public debt. So far were we from receiving money from abroad, that it can, perhaps, be demonſtrated from the conſtant courſe of exchange, that the expence of beaten armies, ſubſidies, and, above all, the interruption of trade, occaſioned the ſending vaſt ſums out of the kingdom.

The public debt is attended with every dreadful conſequence that can accompany any national calamity, of which we ſhall hint only at the moſt obvious of ſuch as diſtinguiſh it. If it was payable only out of the rents of land, and of ſuch as live on their means, it might be pretended, that ſince the induſtrious farmer muſt pay his rent, it is the ſame thing to the nation, whether it is wholly poſſeſſed by the eſquire, or if one half of it is enjoyed by a ſtock-jobber. Even in that caſe, there would be a wide difference. But the rents of land are not in queſtion: our taxes are chiefly paid out of the conſumption of the induſtrious; and the farmer muſt pay his ſhare out of his own particular profits, independent of what the eſquire pays out of his eſtate.

A tax of 5 per cent. on any commodity, muſt raiſe the price of it above 8, [ſee the article DUTIES;] and, as our tradeſmen work under the diſadvantage of paying taxes for almoſt every thing they conſume, they cannot afford their labour ſo cheap as thoſe who pay conſiderably leſs, and of courſe muſt be underſold in the foreign market. In other words, if an Engliſhman conſumes to the value of 6d. a day, and muſt pay 3d. for the privilege of doing ſo, he cannot live ſo cheap as the foreigner, who enjoys that privilege for a penny.

We inhabit the moſt plentiful ſpot in Europe, our people are allowed to be naturally induſtrious, yet our poor want employment. We have not mouths at home to conſume our produce. Foreigners can afford to ſmuggle our wool at a vaſt expence, and to underſell us even in that manufactory. If we have ſtill ſome trade left, thanks to the provident care of our anceſtors, who ſettled our colonies, and to the ſingularity of our taſte, that can accommodate itſelf with Portugal wine, which has ſecured to us a part of the trade of that country; which, however, daily declines at preſent. See the article PORTUGAL.

To judge fairly of the bad effect of our taxes, let us ſuppoſe ourſelves releaſed from them, or let us ſuppoſe all the money paid to the ſtocks and ſinking fund given back in bounties to the manufacturers and exporters, and then let one imagine how many hands would be ſet to work at home, and whether we ſhould not underſell all the world abroad.

The public debt has, in a great degree, intailed immorality and idleneſs upon the people; and the civil magiſtrate, whoſe chief office ought to be to reſtrain vice, is forced to connive at it. The revenue cannot be ſupported without encouraging idleneſs and expence, and licenſing numberleſs public houſes; moſt of which are to be conſidered as ſo many academies, for the acquiring and propagating the whole ſcience of iniquity. It is from theſe academies that Newgate is peopled, and Tyburn ſupplied; but it is likewiſe from theſe, that a great part of the revenue ariſes. Pulpits may thunder againſt vice, and juries may hang criminals to eternity, while every means of corrupting the morals of the people is thrown in their way, it is in vain to look for reformation.

The public debt has opened the iniquitous traffic of ſtock-jobbing, and introduced a ſpirit of gaming amongſt all degrees of men. The attention of the merchant is too much taken off from ſolid trade; he engages in what he fancies the more lucrative buſineſs of Exchange-alley, and leaves export and import to ſuch as have patience to follow it.

The trade of the Alley, conſiſts too much in conſpiring to pick the pocket of every body not in the ſecret. Thoſe who are, can make ſtocks riſe and fall at pleaſure, and pocket the difference. A has 5000 l. to lay out. India ſtock is at 180. B transfers 100 l. to C. at 179. Next morning he transfers another 100 l. at 178. The price is ſet, and A buys 5000 l. at 178. In a week or two A wants to ſell. If the object is conſiderable, an article in the Hague Gazette is made to confirm, that the emperor of Monomotapa deſires to be comprehended in the alliance of Peterſburgh. C transfers his 200 l. back to B at 180; the market is ſettled again, and A ſells out at 180. Thus their induſtry brings 2 per cent. in a few weeks. But who do they get it from? From women, younger brothers, and all ſuch of the well-meaning people of England as will dabble in ſtocks, without being in the ſecret. It is from this ſcandalous commerce, that numbers of theſe meer money-jobbers have, in a few years, acquired millions among them; and, what is moſt provoking, they have the impudence to dub themſelves merchants, and ſome real merchants have the meanneſs to ſuffer them to aſſume that title.

One would imagine, that nothing but our neceſſities could make us wink at a practice ſo iniquitous and detrimental; yet there are ſome men abſurd enough to fancy, that we are extremely beholden to theſe jobbers, for condeſcending to ſet up their trade amongſt us.

The city of Briſtol, or Birmingham, might, with equal reaſon, think itſelf obliged to a ſett of ſharpers, who ſhould bring a ſum of money along with them, and ſet a Faro bank for all the citizens to pont at. Nor would it be more ridiculous in a country eſquire to think to improve his carp, by throwing in a parcel of pike amongſt them. We can only increaſe our people as we do our game, by diſcouraging poachers and deſtroying vermin.

There is an inconveniency attending the public debt, not inferior to any mentioned, which has eſcaped the notice of moſt people. The public debt has produced a difference of intereſts in this country, that we have lately ſuffered by, and, if not remedied, can have no end. It is the intereſt of the ſtockholders to involve the nation in war, becauſe they get by it: it is the intereſt of landed men and merchants to ſubmit to many evils, rather than engage in war, ſince they muſt bear the chief burden of it: and, however contemptible one may think the weight of the former, in compariſon of that of the latter, it was their ſuperior influence that involved the nation in the late frivolous war with Spain. The greater the debt, the greater the weight of the public creditors, and the louder their cry. And we may expect, that theſe worthy patriots will, on every proper occaſion, renew their endeavours to keep us in the thraldom.—Deplorably precarious muſt the ſituation be, where one ſett of men muſt be undone, even by a neceſſary war, and another, of perhaps equal influence, impoveriſhed by the beſt peace.

Amongſt the bad effects of the public debt, we muſt not omit the particular loſs the nation ſuffers by the ſhare of it belonging to forcigners reſiding abroad. If they poſſeſs 20 millions of it, there is a dead loſs to the kingdom of 600,000 l. a year. If England was obliged to pay a tribute of that amount to France, or any other foreign country, every body would pronounce that we could not hold it long without being undone: and yet that tribute ſtands on a footing at preſent ſtill more deſtructive to the nation, becauſe there is no probability of getting free from it, but by paying above 35 years purchaſe, and becauſe the foreign ſtockholders have a temptation to increaſe the tribute due to them, by applying their dividends to buy up more ſtock; of which, that we are to pay the dividends is CERTAIN: but the benefits we are to receive from letting their money remain with us is DOUBTFUL. Men not uſed to think of theſe ſubjects, talk of money like a vegetable, as if it were the nature of it to grow and increaſe. No doubt the particular man, who lends it out at intereſt, feels himſelf grow richer, and, perhaps, the perſons who borrow it may lay it out ſo as to bring in a return. But it muſt ſtop ſomewhere; and, conſidered in itſelf, it does not grow, but wears. More of it than what is ſufficient for the circulation and commerce of a nation is of no uſe, and brings no profit to the nation in general.

The fifth point to be enquired into is, how and where the money was employed before it was lent the public. It has already been explained, that the money ſuppoſed to be lent came chiefly out of the pockets of the very people who now pay intereſt for it: the public debt being an annuity out of the profits and conſumption of every individual, before it was eſtabliſhed, every body poſſeſſed and enjoyed all his gains. There was then no Exchange-Alley: thoſe who frequent it had no exiſtence; and, had there been no opportunity of exerciſing their genius that way, their neceſſities would probably have pointed out to them ſome other branches of induſtry, in which many of them might have been of uſe to the public, which they now prey upon. The ready money which circulates in the Alley, and, by being toſſed backwards and forwards, is found ſufficient, in ſuch hands, to draw into it all the wealth of the kingdom, was, and, without our debts, would be employed in trade, in improving and extending our colonies, in public works, for uſe as well as ornament, and might then draw in the wealth of other countries, where now it operates only on our own.

As to the ſixth article, if money was brought from abroad to ſupply our demands, ſo I admit, that none has gone out on that ſcore, further than ſo far as foreigners have taken advantage of our ſituation ſince that time, by buying in cheap, and ſelling out dear; for few of them ſhared in our general plunder: or, as our debt was contracted to ſupport foreign wars, and to pay foreign ſubſidies, a great part of the money laid out that way may have remained abroad. Our debt affects us not ſo much by carrying our money abroad, as by putting it out of our power to work our goods cheap enough to get money for them in the foreign market. What makes it likely that our ſpecie is greatly diminiſhed within theſe 60 years is, that ten parts out of eleven of all the ſilver in circulation is either of king William's coinage, or before it; but paper currency makes a little money to do the buſineſs of a great deal; and it is certain there remains ſpecie enough in the kingdom for all our occaſions.

It follows, from what has been ſaid, that, if the public debt was paid off, the profits of the manufacturer would be all his own. He would be exempted from paying at leaſt 40 per cent. out of his gains. It would be equal, in every reſpect, to a bounty to that amount on all our productions, and of three-pence a day to the day-labourer, and ſo in proportion. With that advantage, we ſhould be able to underſell our neighbours: our people would of courſe multiply: our poor would find employment: even the aged and diſabled might earn enough to live upon: new arts and manufactures would be introduced, and the old ones brought to perfection: our moſt barren lands would be cultivated, and the produce of the whole inſufficient to ſupply the demands of our people. See the article MANURE.

The ſtock-jobber, when paid off, would find employment for his money in trade and manufacture, and would find that turn to better account than their preying on the vitals of their country. He would then become an uſeful member of ſociety. Rents would riſe, and the country gentleman would be able to provide for his younger children. We ſhould be able to reſtore morality amongſt our people; and the immenſe increaſe of trade would furniſh employment for every induſtrious man. Our colonies would ſhare in the benefit; and many cauſes of jealouſy between them and their mother-country would vaniſh. We ſhould become formidable to our neighbours; for, beſides the increaſe of our naval power, in caſe of a juſt cauſe of war, we ſhould be able to advance much more money within the year than we have ever done by anticipation. Such of our blood-ſuckers as had no taſte for honeſt induſtry, would probably go with their millions, and prey on our enemies, to our great emolument, and their perdition.

It may probably be objected, by men of narrow conceptions, that there was a time when we owed no debt, and yet this country was never richer, nor had it more trade than at preſent. Let ſuch men recollect the ſtate of this nation 60 or 70 years before king William's war, with reſpect to numbers, trade, ſhipping, wealth, and manufacture; and let them compare it with our ſituation when that war broke out, and then let them give a reaſon why we have not increaſed in the ſame proportion ſince that period. Trade was then in it's infancy; our colonies were hardly eſtabliſhed; thoſe times had all the expence of them, and we all the profit; Ireland was then but little better than our ſettlements in America are now; we had no union with Scotland, and Portugal afforded but little money; each of theſe has opened a new ſource of wealth to us; and, with ſuch advantages, ought we not to have throve in the ſame proportion we did in the former period? Had it not been for the public debt, there can be no doubt but our improvements for the laſt 60 years muſt have ſurpaſſed thoſe of the 60 years preceding.

If our debt does not diminiſh it muſt increaſe; and, if it does, one may pronounce with certainty, that nothing can preſerve us but our neighbours being in the ſame unhappy ſituation, and that we ſhall only continue a great nation as long as they are ſo.

The ſtock-jobbers have the words PUBLIC FAITH and PUBLIC CREDIT conſtantly in their mouths; and want to eſtabliſh it as a maxim, that they are both engaged to ſupport their monopoly, at the expence of the whole body of the people. The advanced price of ſtocks is more a proof of the folly, than of the faith of the public; and, if people did not depend more on the firſt than the laſt, a redeemable annuity could never riſe above par. The exceſſive premiums are owing to an opinion, that we want either the means or inclination to pay off our debts; ſuch an opinion would not add to the credit of a private man; and how it ſhould increaſe that of the nation, is difficult to be comprehended by thoſe who do not clearly diſcern the conſequences of theſe things.

Some people tell us too, that paying off our debts is annihilating ſo much property. On the contrary, it is purchaſing at par, for the national benefit, what is ſuppoſed to be worth a great deal more; and the ſubject is not annihilated, but only transferred to the public from a private man, who might have employed it to the public detriment.

When the art of funding was firſt introduced, the common talk of mankind was, that the people of England muſt be undone. Some tell us, that the event has proved the vanity of that apprehenſion. The prediction has been verified, perhaps, in the ſtricteſt ſenſe. All that could be meant by the aſſertion was, that the then poſſeſſors, and their poſterity, muſt be undone, and their inheritance given away from them, and become the property of other men. It could never be their meaning, that the land would run away, or ceaſe to be occupied by ſome body. At preſent, that is, 60 years after the Revolution, one tenth of the land of England is not poſſeſſed by the poſterity or heirs of thoſe who poſſeſſed it at that time; and if the extermination (as it may be juſtly termed) is not univerſal, it is only becauſe there were a few overgrown eſtates, ſuch as the Devonſhire, Bedford, Curzon, &c. which were proof againſt the waſte of luxury and taxes. Suppoſe the Turks were to over-run England, it might certainly be affirmed with propriety, that, if we did not drive them out, England muſt be undone; and yet, if they ſhould prevail, the land would ſtill remain, would ſtill be occupied and cultivated, and poſſibly the trade of England would receive ſome advantages from the favour of other Mahometan nations, who are all great cuſtomers for the woollen, and moſt other manufactures: and it is more than probable, that a greater proportion of the property of the country would remain in the poſſeſſion of the original inhabitants 60 years after ſuch a conqueſt, than is now to be found in the poſterity of thoſe to whom it belonged at the Revolution. As the cauſe, I mean the public debt, ſtill ſubſiſts, the preſent poſſeſſors muſt not expect a more durable eſtabliſhment. Was the plague to rage in a city, and all the rich to periſh, the poor would get poſſeſſion of the houſes and effects; but, if the infection continued to prevail, they would ſoon make way for others in their turn.

Let no body imagine that the people of England will ſuffer things to come to extremity, without making ſome effort to relieve themſelves. If they have made no attempt of that ſort hitherto, it has only been from the hopes that their burden would ſoon be made lighter, and from the juſt confidence they have had in thoſe at the helm.

Remarks on the Monied Intereſt before the laſt War.

This is the ſtrain of reaſoning of many, in relation to the public debts of the nation, and particularly ſo in a late enquiry into the original and conſequences of the public debt, ſaid to be drawn up by a perſon of diſtinction. This piece being drawn up with too much ſeverity againſt the public creditors, we have ſtripped it of a great part of it's malignity, and yet have thought proper to retain ſo much of the ſubſtance thereof, as may give an idea, how obnoxious the monied intereſt is in the ſight of ſome.

Suppoſe, however, that all, and much more in the like ſtrain, might be true, with reſpect to the proprietors of the public ſtock; it can never be conſiſtent with the general intereſt of the nation, to annihilate at once, as that writer propoſes, the whole 80 millions of properties, which now belongs to the public creditors of the nation, This would be of infinitely worſe detriment to the public, than the Miſſiſſippi or South-Sea ſchemes were; and would for ever after diſable the nation from borrowing more money on the moſt preſſing exigency, by giving ſuch a blow to the public faith.

There is ſome uſe and advantage, notwithſtanding, to be made of this gentleman's ſuggeſtion; and that is the only reaſon for our taking notice of it: the public creditors may be hereby forwarned of what may poſſibly enter into the heads of ſome other people, as well as into that of the author of this piece; and therefore this ought ſo to alarm the public creditors, as to excite them to think of every meaſure to obtain the leſſening of the public debts, in a manner the leaſt dangerous and oppreſſive to them; for, if they continue to increaſe, and remain undiminiſhed, the taxes occaſioned thereby, upon the trade and navigation of the kingdom, may one day be thought to render their property ſo highly detrimental to the public intereſts, that men in power may take it into their heads to relieve the nation from the weight of it's taxes and incumbrances, by an abſolute annihilation of all the monied property in the kingdom, occaſioned by the funds. For, the writer before-mentioned ſtrongly excites to a conduct of this kind, when he ſays,

'That in a like extremity, when the clergy had engroſſed 'too large a ſhare of the property of the country, Henry 'VIII. was obliged, for the relief of the people, to ſeize 'on their temporalities; and had the approbation of every 'lover of his country. That the grievance was by no 'means ſo intolerable at that time as now; becauſe the 'clergy contented themſelves with poſſeſſions in land, without pretending to a ſhare in induſtry.

'That as to violation of laws and public faith, it is in vain 'to urge theſe in caſes of neceſſity. The firſt of all principles is ſelf-preſervation; nor could the ties of law and 'public faith be ſtronger in favour of ſtock-jobbers now, 'than of the clergy at the Reformation. That, as to public 'credit, we ſhould have no more occaſion for it; ſince the 'people, relieved from ſo heavy a burden, would, on an 'emergency, by ſubmitting to the former taxes, be better able 'to raiſe money within the year, than can now be brought in 'by anticipating. And the greateſt advantage of aboliſhing 'the debt would be, that it would ſecure us againſt running 'in debt for the future.

'It may be ſaid, continues this writer, in objection to this 'ſcheme, that it would be dangerous to drive ſo powerful 'and ſo rich a body of people, as the owners of eighty millions, to deſpair. True it is, they are powerful at preſent, and their cry is loud, becauſe they are poſſeſſed of 'eighty millions: but, when ſtripped of that, as would then 'be the caſe, they would be as inconſiderable, and as little 'liſtened to, as any other ſett of beggars. I do not ſay it 'would be wiſe or juſt in a prince to act this part. I only 'imagine it would be popular.'

How the public debts may be equitably and honourably diſcharged, without ever being obliged to come to ſuch extremities, as what this author propoſes; ſee our articles Credit, [Public Credit], Debts, [National Debt], Funds, Interest.

This gentleman's way of reaſoning may be made uſe of, ſome time or other, to reduce the intereſt of the public creditors, ſtill lower than it is: unleſs they co-operate with the public, not only to prevent the further increaſe of the public debts, but the gradual diminution of the greateſt part, if we cannot get rid of the whole of theſe we have; leſt the oppreſſive taxes occaſioned thereby, ſhould one day ſtir up a ſpirit in the nation, to make uſe of a Spunge inſtead of a Sinking-Fund.

Remarks on the Monied Intereſt ſince the laſt War, and the Peace of 1763.

The laſt war having increaſed our Public Debts, from about 80 Millions to upwards of 140 Millions, and multiplied Taxes in proportion thereto, the Monied Intereſt have in conſequence augmented their ſtock property in the public funds. Were the taxes of the kingdom mortgaged to ourſelves only, and the public debts contracted ſolely amongſt the ſubjects of this realm, the whole of the intereſt money annually paid for our debts, would be property of his majeſty's ſubjects, and would circulate amongſt ourſelves. Were our affairs ſo happily circumſtanced, it would prove an extraordinary alleviance of our weighty incumbrances; tho' was that the caſe, it would be no reduction of the weight, which our whole commerce and navigation at preſent ſuſtain: and if the circulation of the intereſt money in Great-Britain increaſed the ſpending money of the nation, and that increaſed our imports proportionably from foreign countries, the nation would be never the richer than it is, whilſt we pay intereſt to foreigners for a proportion of our debts due to them. For however faſhionable it may be for ſome people to magnify the increaſe of our trade, from the increaſe of the Revenue of Customs, this is no ſure criterion thereof; ſuch people deceive themſelves and others too, unleſs that they can demonſtrate the great increaſe of that branch of the revenue proceeds from the greater increaſe of our exports, rather than our imports. If, on the contrary, it ſhould appear that we expend more money in the purchaſe of foreign wares than we receive by the ſale of ours to foreigners, the kingdom grows annually poorer and poorer; and the higher the duties of imports ſwell, the greater confirmation it will be that we really do ſo.

Indeed, the advantages we receive from the article of freight, and the employment of ſhipping, will be ſome diminution of the evil, when our own ſhipping is engaged in our imports, purſuant to the act of navigation, and conſiſtent with all our laws made for the encouragement thereof. But provided our exports decreaſe, theſe advantages may not be an equivalent compenſation for our imports; we may ſtill buy more than we ſell upon the whole, and when what foreign goods are ſmuggled into the nation, are added to our legal imports that pay duties, our purchaſes are thereby ſtill augmented, and the domeſtic conſumption of our native commodities diminiſhed.

Theſe diſadvantages under which our trade labours, are moſt certainly owing to the exceſſive pitch to which our tax-incumbrances are arrived; for the heightening the price of the neceſſaries of life, and the labour of our induſtrious poor in general, occaſion ſuch a ſuperiority in the prices of our native commodities and manufactures in general; and while this continues to be the caſe of theſe kingdoms, our exports muſt diminiſh, while thoſe of our rival nations, who can afford their goods in general conſiderably cheaper than we can ours, will increaſe. Such are the effects of increaſing the public debts and taxes; and as ſome people, and thoſe no bad judges, are of opinion that foreigners have not ſo little as one quarter part of our national debts divided amongſt them, and that they do not drain off ſo little as a Million a year for intereſt money; this is a great drawback upon the national profits of our trade.

The only proviſion we have at preſent made by parliament for the diſcharge of the public debts, and the reduction of

our

our taxes, in that of the SINKING FUND. But as this fund, which, was to have been the redeemer of all others, is become mortgaged, and is now a collateral ſecurity for new contracted debts, ſince the year 1716; our hopes of the efficacious operation of that fund are blaſted, and that whole fund may be ſunk for intereſt of new debts, inſtead of ſinking the principal of the old, as was originally intended: ſo that this ſacred fund, which was deſigned to redeem others, ſtands in need of redemption itſelf, before the public can experience it's long wiſhed for effects.

In the year 1733, ſuch was the ſtate of public credit, that the national creditors dreaded nothing more than to be obliged to receive their money from the ſinking fund; intereſt was made to the adminiſtration by our monied corporations, which of them ſhould be paid the laſt. Of which the miniſtry took advantage, and applied 500,000 l. out of the ſinking fund: and this may be the caſe again, perhaps, ſhould we be in a condition to diſcharge TWO OR THREE MILLIONS a year of the public debts. So that if we may judge from paſt experience, we ought to think of more effectual means to reduce our taxes, and not to wait the ſlow and precarious operation of the ſinking fund. See INTEREST. That this is practicable, the author of this work is of opinion; and may be effected in leſs than half a dozen years, and that without any detriment to the public credit, without any alarm given to the public creditors, and with very great benefit to trade: and if his other avocations will admit of his turning his thoughts to a deſign of this nature, without perſonal injury to his private affairs, he may one day communicate himſelf upon this intereſting occaſion: otherwiſe he leaves thoſe things, to thoſe who are ſure of being well recompenſed for their application, the author of this performance never having been ſo; which will not be thought an encouragement to any one to concern himſelf about the public welfare, but to attend to his own.

Some Maxims relating to the Funds, and the Public Credit, by Sir JOHN BARNARD, Knt. publiſhed juſt before the Peace of AIX LA CHAPELLE.

I conceive that the prices of the funds do not in the leaſt depend on the quantity of them, either taken in the groſs, or any particular ſort of them; that if they were double to what they are now, it would neceſſarily follow, that the prices would be lower; nor yet, if they conſiſted but of half what they do now, would the price be from thence increaſed.

It is therefore the quantity brought to market, compared with the purchaſers, which riſes or falls the prices of the funds.

Thus, if the quantity be ſo ſold, exceeds the money to be laid out, the price may fall, until that fall produces purchaſers, who would not be ſuch at higher prices.

So, likewiſe, if the purchaſers exceed the quantities to be ſold, ſtocks muſt riſe, until that riſe produces ſellers, which before were not ſellers.

When the government have a neceſſity to create new funds, they muſt diſpoſe of them at ſuch prices as buyers may be found; and ſhould uſe ſuch methods in the ſale, as are moſt likely to invite the greateſt number of ſuch purchaſers as deſign to keep them.

When funds are ſold directly, by the government, to perſons who deſign to keep them, they are immediately out of the market, and affect the price no more than all that quantity of the public funds, which remains in the hands of perſons who never think of ſelling them.

When funds are ſold by the government to traffickers in ſtocks, who deſign to ſell them again, the market continues in agitation, until the funds, by degrees, become ſettled in the hands of buyers, who keep them.

Thoſe traffickers who buy to ſell again, will have more encouragement, than is neceſſary to be given to thoſe who buy with a deſign to keep: or elſe there would be no profit ariſing to them.

If, therefore, the government ſhould deal directly with perſons who buy to keep the funds, a good part at leaſt of that immenſe profit, which is now made by theſe traffickers, would remain to the government.

There muſt be found, at leaſt, buyers with an intention to keep; or elſe the traffickers could not get rid of what they buy.

Purchaſers, with a deſign to keep, would much more willingly buy of the government, at any certain price, than they would buy of the traffickers at ſuch price; becauſe they would have a reaſonable expectation, that it would be the loweſt price that year.

If timely notice were given every year, there would probably come in buyers, with a deſign to keep, ſufficient to take off all the funds created that year, provided they may come in freely at the original price.

If new-created funds were thus taken off every year, they would but very little affect the prices of funds at market.

One or two per cent. under the market-price, together with ſome eaſe in payment, may be ſufficient to induce buyers, with a deſign to keep, or take off all the funds to be created in a year.

It is not proper, that any of the payments ſhould be fixed too near the end of the year, becauſe it will interfere with the money to be raiſed the next year.

How many ſoever the payments may be, or whatever the times of payment, it is proper to allow a reaſonable diſcount to thoſe who will pay in any money before the times fixed; which diſcount may be ſaved, by not iſſuing of tallies on the land and malt.

It is more for the intereſt of the public, to have the money paid at ſuch times as beſt ſuit the purchaſers (which will be done, if a diſcount be allowed), than to have it remain to be paid at certain fixed times.

When the purchaſers are not allowed a diſcount, they are unwilling to pay their money long before the prefixed days; and ſo lay out their money in ſomething to bring intereſt in the mean time.

When, by this means, large ſums are to be paid at certain times, if any accident happens, which caſts a damp on public credit, people being under a neceſſity of bringing ſomething to market to raiſe the money; this contributes greatly to hurt public credit.

There will be always large ſums to be laid out in the funds, and more eſpecially when they are lower than they have been at former times; which ſums ariſe, in part, from the following cauſes:

Amongſt people who live on their income, whether by eſtates in land, or in the funds, or in mortgages, there will be many who are always ſaving part of their income, and want to lay it out.

People, who thrive in trade, are willing, as they can ſpare money, to lay it out in ſomething to ſupport them more at their eaſe.

As war neceſſarily contradicts trade, and conſequently ſo much money cannot be employed therein, as in times of peace, thoſe who have large eſtates in trade, muſt have money gradually coming in; which, when the funds are reaſonable, they may chooſe to lay out therein; and ſome, from this beginning, go on to draw all their money out of trade, to place it in the funds.

What is mentioned relating to people in England, holds the ſame with regard to people abroad; who, if the particular friends, with whom they correſpond here, can procure for them new-created funds, on the original prices at which the government ſells them, will give orders to thoſe friends to purchaſe for them ſuch funds.

The raiſing the rate of intereſt on new funds, occaſions the fall in price of the old funds; which is a great prejudice to thoſe who happen to be under a neceſſity of ſelling out.

It likewiſe raiſes the rate of intereſt between private perſons, and alſo lowers the value of land; ſo that the whole community ſuffers thereby.

No money ſhould be raiſed on the ſubjects, but what is abſolutely neceſſary for the public good.

As the neceſſary money cannot now be raiſed without borrowing, the higher rate the intereſt is at, the more muſt the people pay.

If a higher rate of intereſt ſhould ever be given to traffickers in ſtocks, than it might be raiſed at by open ſubſcription, the people will receive a double injury, both by paying more taxes than are neceſſary, and alſo by being deprived of their juſt right of purchaſing funds on the ſame terms with their neighbours.

The credit of the public depends much on the opinion of the people, and therefore great regard ſhould always be had to preſerve in the people a good opinion. Œconomy in management, and impartially in letting all perſons alike into the purchaſe of the funds, will be the beſt means to keep up a good opinion in the people.

All people love to have a liberty of being purchaſers at the original prices, whether they make uſe of it or not.

As all are partakers of the burden of new taxes, ſo none ought to be deprived of ſharing in whatever benefits the public may find it neceſſary to give, to raiſe money on them.

Nothing contributes more to the revolutions in the prices of ſtocks, than the methods of late uſed, of contracting, with a few perſons, for raiſing the ſupplies in a lump; and thoſe perſons having the ſharing it out as they pleaſe.

Thoſe revolutions, in the prices of ſtocks, make the proprietors uneaſy, and out of humour, to ſee their property bandied about, for particular perſons to get great eſtates.

This uneaſineſs begets a diſguſt in people to ſtocks: they ſee them yearly falling, and from thence apprehend greater falls; from whence many ſell their ſtocks.

Thoſe who are in a ſort of poſſeſſion of bargaining for new funds, at their own prices, whilſt they can depend on having a good bargain every year, can have no intereſt to keep up the prices of the funds, any longer than until they ſell good part of their bargain; and, as for the remainder, it may ſerve them to throw down the prices, againſt the time of a new bargain.

What cannot be done by barely ſelling out their ſtocks, they have other ways to bring about.

Let

Let the price at market be never ſo low, although it may be by their own management, whilſt they can make perſons believe the money cannot be raiſed without agreeing with them, they will be ſure to agree much under the market-price, and conſequently run little or no riſk of loſing, and have a ſtrong probability of exceſſive gains.

Some remaining part of what the traffickers purchaſe, being ſold out at proper times, to lower the prices of ſtocks, likewiſe gives them a pretence to ſay, that the bargain was not ſo good as it was taken to be.

If money be raiſed by a lottery, large enough to let in every one, or by ſubſcriptions open to every one, on the beſt terms for the public, all mankind will be on a level.

Thoſe perſons who keep their ſtocks, let the price be higher or lower, certainly act the moſt for the public good, and ought to receive the greateſt encouragement.

Thoſe dealers in ſtocks, who have large ſums of money in hand, have certainly acted againſt the public good, by ſelling out their property in the funds; and yet are often the perſons moſt favoured, and admitted to annual bargains.

The beſt way of ſupporting the prices of the funds will be, to let the people know, that for the future the money wanted ſhall be raiſed on the loweſt terms poſſible, with an equal liberty to all perſons to be purchaſers.

If this method be conſtantly practiſed, ſuch perſons who ſell their funds, in hopes to come in again cheaper, may find themſelves miſtaken.

This is certain, that the public ſelling new funds too cheap, tends to make all mankind have a worſe opinion of the funds in general, than they would otherwiſe have.

If a perſon who has goods to ſell, does not put a value on them himſelf, how can it be expected that others will value them?

Whenever the government ſhall have no occaſion to create new funds, the money which will neceſſarily come to market to buy ſtocks, will inevitably raiſe the prices of all, let the quantity in being be never ſo large.

Therefore, it muſt be cheaper for the government, at any time, in compliance with the neceſſity of the times, to give a higher intereſt redeemable, than an intereſt ſomething leſs with any part of ſuch intereſt irredeemable; becauſe, in the firſt caſe, they may reaſonably expect, in a very few years, to reduce the intereſt on a level with the other funds.

If any ſhould be of opinion, that giving a high intereſt for new funds will reduce the other funds in price, in proportion to the different rates of intereſt, I conceive it to be a great miſtake.

If there were different funds, at the rates of 3, 4, and 5 per cent. all irredeemable, they would generally ſell in exact proportion one to the other.

But, ſuppoſe the ſame funds all redeemable, they will never ſell in proportion one to the other; becauſe people will have in view the reduction of intereſt.

Suppoſe any quantity of new funds to be created, and ſold in any one year, it will not occaſion there being leſs money the next year, than if no ſuch funds had been created; becauſe as the government iſſues out all the money received, the ſame quantity of money will ſtill be in private perſons hands, as the year foregoing.

As the ſame quantity of money will be in being one year as the former, although it have ſhifted hands, the queſtion with the poſſeſſors of it will be, what is the beſt uſe that they can make of it? And probably there will be perſons enough diſpoſed to come into the purchaſe of funds, to take off any new-created quantity, if it be free for every one to purchaſe at the government's price.

It is a very great hardſhip on merchants, who have foreign correſpondents, when they cannot execute ſuch correſpondent's orders for new funds, on the ſame terms with their neighbours here, as by that means they are in danger of loſing their future commiſſions, even in other affairs.

If the intereſt of the nation, in it's public capacity, the intereſt of the creditors of the nation, and the intereſt of the individuals of the nation, are all promoted by open ſubſcriptions, it muſt appear very ſtrange, that the intereſt of a few perſons, who have been acting againſt all three, ſhould be preferred.

If the government ſhould think it neceſſary to give advantageous terms for raiſing of money, equity would require, that it ſhould be given to thoſe who ſuffer moſt thereby; and, conſequently, that the preſent proprietors of the funds ſhould have the pre-emption before thoſe who have ſold their funds, and thereby contribute to create that neceſſity.

If no-body ſold their property in the funds, but out of neceſſity, the prices would keep up very well, notwithſtanding the annual creating of new funds.

Thoſe perſons who ſell their property in the funds may be eaſily known, and whatever pretence they may make of zeal for the government, their actions ſpeak the contrary: and although it would not be right to hinder any perſon from ſelling their property in the funds, in a fair way; yet ſurely there is no reaſon to reward them for ſo doing, by giving them freſh funds, immoderately under the market-price.

I think thoſe perſons who were large ſubſcribers to the bargain, for raiſing the money for the year 1745, ſhould have made it appear, that they were in poſſeſſion of their ſubſcriptions, before they were admitted to be large ſubſcribers for the year 1746.

If perſons are admitted to ſubſcribe largely one year, when they are known, or might have been known, to have parted with the ſums ſubſcribed for the former year, what is this but encouraging them to go on with a traffick highly detrimental to the nation?

Whenever, by any means, there happens to be a run on the Bank, it occaſions many perſons, although well-affected, to join in the run, for fear of loſing their money; and gives an alarm to the Bank: and, if the Bank call on their ſubſcribers for circulation, it adds to the difficulties.

I am of opinion, that as the Bank is now conſtituted, it is ſcarce poſſible for them to be drained of their money: many of their notes are ſo diſperſed, that they cannot come in for payment for a good while; and men of ſenſe, and affection for the government, will always do what lies in their power to ſupport them: which, in ſome time, will put a ſtop to the run.

If the Bank find it neceſſary, they may give intereſt to thoſe who will bring in money voluntarily, to be paid at a fixed time: which method will not affect credit, like a call to the ſubſcribers; many of whom are not able to pay their money; or they may, at laſt, allow intereſt on their caſh-notes, which I have ſeen practiſed with ſucceſs.

But if, at worſt, the Bank ſhould be forced to ſtop payment, the inconvenience to the public would not be ſo much as ſome may imagine; becauſe the debt owing by the government, is a ſufficient ſecurity to their creditors, for the principal and intereſt, which, in that caſe, it be reaſonable to allow; and would give ſuch a currency to their notes, as few perſons would refuſe to take them in payment; which would, by degrees, reſtore their credit.

A proper quantity of exchequer-bills might be every year iſſued on the land and malt taxes, at a reaſonable intereſt, to be ſunk, in courſe, by the produce of the taxes on which they were iſſued.

The iſſuing ſuch exchequer-bills, would ſupply, in ſome degree, the want of money; and could never occaſion any run on the exchequer, not being payable on demand.

The inconvenience which aroſe, in former times, from iſſuing exchequer-bills, proceeded from the quantity being too large, and there not being a fund to ſink them in a reaſonable time.

People would be glad to take ſuch bills in payment; becauſe thereby they would be enabled to make intereſt of their running caſh.

Thoſe who contract with the government, would be glad to agree to have their payments in ſuch bills; which would keep navy and victualling bills from being at diſcount; and, conſequently, the government would buy their goods cheaper than when the contractors are at an uncertainty what they ſhall be paid in. See the articles MONIED INTEREST, DEBTS, [NATIONAL DEBTS,] CREDIT, [PUBLIC CREDIT,] FUNDS.

MONEMUGI, a kingdom in the ſouth of Africa, has Zanguebar on the eaſt, Monomotopa on the ſouth, Motamba and Makoko on the weſt, and Abyſſinia on the north, and partly to the eaſt; though it's boundaries that way cannot be exactly aſcertained. It is divided into the following parts, viz.

MUJACO borders on Congo weſtward, on Nubia northward, on Abyſſinia, and on Makoko ſouthward. That the extent of this monarchy is very great, appears by the diſtant countries it's confines extend to, and the ſovereign's great power, by his being in continual war with his neighbour the king of Makoko. The people of Congo travel hither for elephants teeth.

MAKOKO, otherwiſe called ANZICO. It's boundaries northward, eaſtward, and ſouthward, cannot be well aſcertained. The people here do not till the ground, have no property, nor any ſettled habitation; but, like the Arabs, they wander from place to place, and ſubſiſt by plunder. They traffic in the kingdom of Angola, whither they carry ſlaves from their own country; and from Nubia, which they exchange for ſalt, glaſs-beads, ſilk, knives, and other wares. See the article BARBARY, and my REMARKS particularly.

GINGIRO, a potent kingdom, lies between Narca, the moſt ſouthern kingdom of Abyſſinia, and Makoko, and Cambate; north and eaſt of the firſt of them, and weſt of the latter. The great river Zebee, that runs down to Makoko, almoſt invirons it. When the king here purchaſes any thing of foreign merchants, he pays them in ſlaves, and theſe are the ſons and daughters of any family, which he takes at pleaſure, without contradiction.

CAMBATE joins to this kingdom on the weſt; has Abyſſinia on the north; Alaba, or the country of the Galas, on the eaſt; and Makoko on the ſouth. The country pays ſome acknowlegements to the emperor of Abyſſinia, which is only voluntary.

ALABA, another large kingdom, ſtill to the eaſtward of Cambate, inhabited by a cruel people, called Galas, and reaching to the coaſt of Zanguebar.

MONEMUGI PROPER, ſo called, lies in the torrid zone, and about the equinoctial line ſouth of Makoko, weſt of Zanguebar, north of Monomotopa, and eaſt of Congo, and of the northern parts of Monomotapa. To aſcertain it's extent, is too difficult a taſk, being a country ſo little frequented. The country known, abounds with gold, ſilver, copper mines, and elephants. The natives clothe themſelves in ſilks and cottons, which they buy of ſtrangers, and wear collars of tranſparent amber-beads, brought them from Cambaya, which beads ſerve alſo inſtead of money; gold and ſilver being too common, and of little value among them.

Their monarch always endeavours to be at peace with the princes round about him, to keep an open trade with Quitoa, Melinda, and Mombaza, on the eaſt, and with Congo on the weſt, from all which parts the black merchants reſort thither for gold. The Portugueſe merchants report, that on the eaſt ſide of Monemugi there is a great lake full of ſmall iſlands, abounding with all ſorts of fowl and cattle, and inhabited by negroes They relate alſo, that on the main land eaſtward, they heard ſometimes the ringing of bells, and that one could obſerve buildings, very much like churches; and that from theſe parts came men of a brown and tawny complexion, who traded with thoſe iſlanders, and with the people of Monemugi.

This country of Monemugi affords alſo abundance of palm-wine, and oil, and ſuch great plenty of honey, that above half of it is loſt, the blacks not being able to conſume it. The air is generally very unwholſome, and exceſſively hot, which is the reaſon why no Chriſtians undertake to travel in this empire. De Liſle gives the diviſion of this country as follows: 1. The Maracates, the Meſſeguaries, the kingdom of the Buengas, the kingdom of Maſti, and that of Maravi.—But we are not acquainted with any particulars relating to theſe nations or kingdoms.

MONMOUTHSHIRE, in England, is bounded by part of Herefordſhire on the north, Glouceſterſhire on the eaſt, Glamorganſhire on the weſt, and is waſhed on the ſouth by the Severn, and is about 84 miles in circumference.

It's air is temperate and healthy, and the ſoil fruitful enough in general, producing as good wheat as any county in the kingdom, great quantities of which are ſhipped by the Briſtol merchants for Portugal, and other countries. Coals are ſo plentiful here, that a horſe-load coſts but two-pence at the pit's mouth. The principal manufacture of the county is flannels.

MONMOUTH, the ſhire town, is a populous, handſome, and well-built town. It's principal traffic is with the city of Briſtol, by means of the Wye.

CHEPSTOW is the port for all the towns that ſtand on the rivers Wye and Lug. Ships of good burthen may come up to it, and the tide comes in here with the ſame rage as at Briſtol, it riſing commonly 6 fathoms, or more, at the bridge.

ABERGAVENNY, on the river GAVENNY, is a handſome, well-built town, and drives a great trade in flannel.

PONTIPOLE, is a ſmall town, noted only for it's iron mills.

MONOMOTOPA, a country in Africa, has the maritime kingdom of Sofala on the eaſt, the river del Spiritu Santo on the ſouth, the mountains of Caffraria on the weſt, and the river Cauma on the north, which parts it from Monemugi.

The air of this country is very temperate, the land fertile in paſtures, and all the neceſſaries of life, being watered by ſeveral rivers; on the banks of which grow many fine trees, and ſugar-canes, without any culture: and yet this fine country is not peopled throughout.—The inhabitants are rich in black cattle, which they value more than gold. There are here no beaſts of burthen, but a vaſt number of elephants, as appears from the great quantity of ivory that is exported from this country.

There are here a great many gold mines; and the rivers that run through their veins, carry a great deal of gold duſt along with their ſtreams. The inhabitants dive to the bottom of the rivers and lakes, take up the ſand, and carry it on the banks to ſeparate the gold from it.

The negroes here, are tall, well-ſhaped, ſtrong and healthy. They are much more lively than the people of Mozambique and Melinda. They are lovers of war, which is the trade followed by all thoſe who do not apply themſelves to commerce.

This country is divided into 7 provinces, or petty kingdoms, vaſſals to the king. They are Monomotopa Proper, Quiteve, Manica, Inhambana, Inhemior, Sabia, and Sofala. The places where there is any thing of trade, are

MANICA, which has Quiteve on the north, Sabia on the eaſt, the river del Spiritu Santo on the ſouth, and Caffraria on the eaſt. The capital town is alſo called Manica, and to the ſouth of it are gold mines.

SOFALA kingdom has Sabia on the ſouth, Monomotopa Proper on the eaſt, the river Cauma on the north, and the gulph of Sofala, which is part of the channel of Mozambique, on the eaſt. From the mouth of the river of the Holy-Ghoſt, to cape Corientes, the ſoil is very even, barren, and deſert: but from that cape to the mouth of the river Cumena, the country is fruitful, and very populous. The coaſt is very low, and mariners diſcover their approach to it, not ſo much by their ſight as by their ſmell, it abounding with fragrant flowers. Here are elephants, lions, and other wild beaſts. The inhabitants aſſert, that their gold mines yield above 2 millions of metigals per annum, each amounting to 14 livres French money; that the ſhips from Zedein and Mecca, carry off above 2 millions a year in time of peace; and that the governor of Mozambique, whoſe office laſts but three years, has above 300,000 crowns revenue, without reckoning the ſoldiers pay, and the king of Portugal's tribute: from hence Moquet concludes this to be the Ophir, whither Solomon ſent ſhips every three years from Eziongeber to fetch gold; Eziongeber being thought to be Suez, a ſea port on the Red Sea. This conjecture is ſupported by ſeveral edifices, which ſeem to have been built by foreigners. Some think this to be confirmed by the authority of the Septuagint, who tranſlate the word Ophir (2 Kings ix. 28.) by the word Σοφειρα [Sophira]. And, ſince liquids are often put one for another, Sophira does not differ much from Sofala. Beſides, Thomas Lopez, in his India voyage, relates, that the inhabitants of this country boaſt that they have books which prove, that in the time of Solomon, the Iſraelites ſailed every third year towards theſe parts to fetch gold. The inhabitants of Quitoa, Mombaza, and Melinda, come to this country in little boats, called zambues, with ſtuffs of blue and white cottons, ſilk ſtuffs, yellow and red ambergris, which they exchange with the people here for gold and ivory, and there ſell them again to the ſubjects of Monomotopa, who give them gold in return, without weighing it. It is ſaid, that when the Sofaleſe ſee ſhips coming, they light up fires, to ſignify that they ſhall be welcome. They know how to make ſtuffs of white cotton, but cannot dye them; and when they would make party-coloured ſtuffs, they unravel the dyed cloths of Cambaya, and mix them with white thread

The capital city here, and the only one of note, is alſo called Sofala. It ſtands on a river of the ſame name, about 6 leagues from the ſea-coaſt. The Portugueſe are maſters of this town, and built a ſtrong fortreſs there, ever ſince the year 1500. Their chief trade here conſiſts in ambergris, gold, ſlaves, and ſilk ſtuffs. The Portugueſe likewiſe take care to have thoſe mines worked, which lie to the ſouth of the town.

REMARKS.

This is a ſpacious country, and little known to any but the Portugueſe; and they appear to be wiſer in relation to the conduct of their trade in Africa than any other of the European potentates, they having not contented themſelves with erecting a few forts and factories, but have ſettled themſelves upon the continent in great numbers, and brought the natives to clothe according to the European mode; which has created a conſiderable and profitable commerce to them. See the articles AFRICA, ENGLISH AFRICAN COMPANY, and PORTUGUESE AFRICAN TRADE.

MONOPOLIES are allowances of the king by grant, or otherwiſe, for the ſole dealing in any thing, by which others are reſtrained from any freedom they had before. Though a monopoly may be more truly defined a kind of commerce uſurped by few, and ſometimes but by one perſon, to his or their private gain, and to the detriment of others.

Thoſe uſed in this kingdom have been diſtinguiſhed by three claſſes; firſt, reaſonable, of trifles, as cards, or the like; unreaſonable, as of fleſh, fiſh, butter, or other things needful for man's ſuſtenance; indifferent, of velvets, ſilks, ſpices, and other delicacies indifferent to be uſed or not. But all monopolies are contrary to the ancient and fundamental laws of this realm, and againſt the freedom of trade, &c. Wherefore it hath been held, that the king's grant to any corporation for the ſole importing any merchandize, by our common law, is void.

Some are ſatisfied if it be by act of parliament; as when a ſociety of private merchants have a privilege, by that authority, to ſell or import certain commodities, and all others are excluded: but if by the king's prerogative, they take it to be a monopoly. Others would have all things at large in the courſe of trade, and no ſocieties for any places of trade; for, by way of partnerſhip, merchants might, ſay they, aſſociate to make any voyages, without any regard to our trading companies, ſome of which are of great antiquity. And others make a difference between companies dealing in a joint ſtock or apart; affirming the management of a joint ſtock to be within the compaſs of a monolopy; yet would be content to tolerate it for the employment outward, but for returns would have a particular diviſion of the goods they receive.

Judge Vaughan ſays, That, if the export or import of a commodity, or exerciſe of a trade, be prohibited only generally, by parliament, and no cauſe expreſſed, the king may grant a licence to one or more perſons to export or import, or exerciſe the trade: for, by ſuch general reſtraint, the end of the law is no more than to limit the over-numerous exporters, &c. in that kind, by obliging them to procure licences; which, therefore, ſhall not be accounted monopolies; the law implying

plying it, as well as if the prohibitory law had been, that no ſuch exportation, &c. ſhould be without the king's licence. Vaughan's Rep. 345.

Having given the ſubſtance of various opinions concerning what is monopoly, or not ſo, we ſhall now take particular notice of the great caſe of monopolies in the reign of Q. Elizabeth, as delivered by Sir Edward Coke. Queen Elizabeth intending that her ſubjects being fit for huſbandry, ſhould be exerciſed therein, and not in making playing-cards, by which card-playing was become more frequent, and eſpecially among ſervants, apprentices, and poor artificers; by her letters patents of the 13th of June, in the 30th year of her reign, granted to R. B. Eſq; full power, by himſelf, ſervants, &c. to provide and buy in any foreign parts, all ſuch playing-cards as he thought good, and to import and ſell them in this kingdom, and to enjoy the whole trade for 12 years.

On an action of the caſe brought by the patentee againſt one for importing and making cards, contrary to theſe letters patents, notwithſtanding the glorious preamble and pretence, it was reſolved that this grant was void: for it is a monopoly, and againſt the common law, and divers acts of parliament; for all trades which prevent idleneſs (the bane of the commonwealth) and exerciſe men and youth, for the maintenance of themſelves and their families, and for increaſe of their ſubſtance, to ſerve the queen when occaſion ſhall require, are profitable to the realm: and the ſole trade of any mechanic art, or any other monopoly, is not only a damage to thoſe who exerciſe the ſame, but to all other ſubjects, the end of them being the private gain of the patentees: and there are three inſeparable incidents to every monopoly, the price of the ſame commodity will be raiſed; it is not ſo good and ſaleable as it was before; and it tends to the impoveriſhment of divers artificers, and others.

And it is evident, by the act of 3 Edw. IV. cap. 4. that the importation of foreign cards was prohibited, at the grievous complaint of the poor card-makers, who could not live at their trades if ſuch cards ſhould be imported; and the ſaid act provides remedy for maintaining the trade, becauſe it maintained many families by their labour and induſtry; and the like proviſion is made in 1 Rich. III. cap. 12. and perſons may not be reſtrained from exerciſing any trade but by parliament. Now, when the wiſdom of the parliament has reſtrained, for public good, the importation of foreign manufactures, that the ſubjects may be employed therein; to grant the ſole importation of them to one for private gain, or to divers without limitation, is a monopoly againſt the common law: and, therefore, the licence to have the ſole importation and trade of cards, notwithſtanding the act 3 Ed. IV. is utterly againſt law. Adjudged Trin. 44 Eliz. 11. Co. Rep. 84, 85.

King Edward III. by letters patents, granted to one John Peeke the ſole importation of ſweet wines into London; which grant, by ſtat. 50 Ed. III. was declared void. And queen Elizabeth having granted to certain patentees the ſole coinage and tranſportation of all the tin in Cornwall and Devon, for 21 years, under a large yearly rent to be paid at the Exchequer, it was adjudged that this patent was a monopoly, anno 13 Jac. I.

In an action the plaintiff ſet forth, that, in the reign of Henry IV. there was a ſociety of merchant-adventurers in England, and queen Elizabeth did incorporate them by that name, with privilege to trade to Holland, Brabant, Flanders, &c. prohibiting all others not free; and that the defendant did trade there without their leave, and imported goods to their damage, &c. To which the defendant pleaded the ſtat. 15 Ed. III. That the ſeas ſhall be open to all merchants to paſs with their merchandize whither they pleaſe: the queſtion was here, whether the king could reſtrain his ſubjects from trading to particular places? This caſe was not determined; but the better opinion was, that ſuch a grant was void, it agreeing with lord Coke's definition of a monopoly: it is againſt the ſtat. of Ed. III. and expreſsly againſt the ſtatute 21 Jac. I. The caſe of the Eaſt-India company is not like this, becauſe that patent reſtrained the ſubject from trading with infidels, without leave; if it had been to reſtrain them from trading with Chriſtians, it had been void. 3 Mod. Rep. 126.

By ſtat. 21 Jac. I. cap. 3. all monopolies, grants, letters patents, &c. for the ſole buying, ſelling, and making of goods, and manufactures, ſhall be void: and perſons grieved by the putting them in uſe, to recover treble damages and double coſts, by action on the ſtatute: and perſons cauſing ſuch action to be ſtayed before judgment, by any order, warrant, &c. except of the court where depending; or, after judgment had, cauſing execution to be ſtayed, by means of ſuch order, &c. ſave only by a writ of error, incur a præmunire.

But this act extends not to grants confirmed by act of parliament, nor to any charter to any corporation, company, &c. nor to grants of new manufactures, made to the inventors by patents for 14 years, nor to any grant of privilege for printing, or making ſalt-petre for gun-powder, or for caſting ordnance, &c. and certain patents granted to divers perſons are excepted.

And patents heretofore made for 21 years, or under, to the inventors of any new manufactures, not contrary to law, or hurtful, by raiſing the price of commodities at home, are excepted.

All matters relating to monopolies, grants, &c ſhall be examined and determined by the common law of the realm; and the uſing or procuring any unlawful monopoly, is puniſhable by fine and impriſonment at common law. 3 Co. Inſt. 181.

It is held, that a new invention to do much work by an engine, is contrary to the ſtatute, as turning many men to idleneſs. [See the article LABOUR.] And, concerning inventors of new manufactures, &c. on this ſtatute it hath been determined, that they muſt be ſubſtantially NEW, and not barely an IMPROVEMENT of any old one, to be within the ſtatute. 3 Inſt. 184.

A grant of a monopoly may be to the firſt inventor, by the 21ſt of Jac. I. and, if the invention be new in England, a patent may be granted, though the thing was practiſed beyond ſea before; the act being intended to encourage new devices uſeful to the kingdom, whether acquired by experience and travel abroad, or by ſtudy at home. 2 Salk. 447.

A perſon had a grant by patent from king Charles II. for the ſole printing of blank writs and bonds, &c. for the term of 30 years; and one Dorrel, a ſtationer, having printed 500 blank bonds, an action was brought againſt him, who pleaded, That the company of ſtationers, for 40 years laſt paſt, had conſtantly printed them, and ſo made a general concluſion. It was argued, That the king hath a prerogative in printing, and may grant it excluſive to others; and that ſuch grants had been made ever ſince printing was invented, of which ſeveral inſtances were given. Now the ſtatute againſt monopolies, doth not reach this caſe, becauſe of the proviſo to exempt all grants of ſole printing; and the king's inherent prerogative herein, when exerted, binds up all who were at liberty before. To this was anſwered, That the king hath ſuch prerogative, but it muſt be in caſes where no others can claim a property in it. On conſidering printing as an art excluſive from the thing printed, this patent is not good; for, if a man invents a new art, and another learns it before he obtains a patent, if afterwards granted, it is void: and this conſidered in relation to the blank bonds printed, it is not a new invention, and therefore the patent is void; for, where the invention is not new, trade ſhall not be reſtrained. And ſole printing is a manufacture, an art the king cannot reſtrain; but, where it is of public concern, the prerogative may interpoſe.

The court of King's-Bench made a difference in this caſe, between things of a public uſe, and thoſe public in their nature; and the court inclined the patent was not good. 3 Mod. 75, 76, 78. 2 Nelſ. Abr. 899.

It is agreeable to our common law, and the fundamental laws of all nations, to grant inventors of uſeful things privileges for 21, 14, 11, or 7 years; and as to the time granted, the thing itſelf ſhould make the difference. But the general intention of all grants for manufactures, ſhould be to ſet people on work, to recompenſe the inventor of the art, and that things may, in ſome reſpect, be cheaper to the ſubjects.

Patents may be granted to reward a projector, and be no monopoly, though the public liberty may ſeem reſtrained by it, but rather a common diſtribution, whenever it brings a general good to the nation. The ſtatutes reſtraining from exerciſing divers crafts all who have not ſerved an apprenticeſhip to the art they would exerciſe, do it to no other end, but that thoſe arts might be brought to better perfection, and the things be good and ſerviceable.—Theſe are the chief principles of law in relation to monopolies.

REMARKS.

Under the article COMPANIES, we have ſhewn the origin of thoſe, which have related to our foreign trade; and, under the reſpective articles of ſuch of thoſe companies which are now in being, we have endeavoured, with all candour and impartiality, to ſtate the reaſonableneſs, or otherwiſe, of their being endowed with any ſort of excluſive privileges.—[See the article ASSIENTO] particular REMARKS.

In regard to the caſe of the Eaſt-India company, in particular, we have, in general, conſidered the conſtitution of that corporation; and, although we have urged the neceſſity of ſupporting that company, yet we have alſo ſhewed, that, if they do not trade to all places within their charter, where it may be done to the advantage of the nation, private people ſhould not be excluded from ſuch traffic: they ſhould, on the contrary, be encouraged therein to the utmoſt. See the articles EAST-INDIA COMPANY, and COMPANIES; ſee alſo the other particular companies that ſubſiſt.

It has been ſaid, if that trade were enlarged, it would increaſe ſuch a demand for woollen goods, for iron ware, and for every other branch of buſineſs in England, as would employ all the manufacturers, who are now ſtarving, and thereby relieve the poor, by making them no longer ſo.—This might be demonſtrated, by the many places that are not yet traded to by the Engliſh. The company trades in the Red Sea but to one port, that is, Mocha; but the Habazines empire, or that of Ethiopia, which lies on the weſt ſide of that ſea, is not attempted to be traded to, although it is inhabited by many

Chriſtians, and abounding with gold, myrrh, ſena, aloes, civet, and numbers of rich dyeing and medicinal drugs, and other commodities; and they have no iron nor woollen goods but what are carried to them over-land from Egypt or Turkey, and which is moſtly manufactured by the French, or at Damaſcus.

The company doth not trade to Siam, a rich and great kingdom; nor to Pegu, a kingdom that produces rubies, gum-lac, gum-dragon, and all the materials of the fine Indian varniſh: the inhabitants are very induſtrious, and great trade might be made there. Tonquin is alſo a kingdom full of induſtrious people; and the kingdom of Cochin-China would give vent to a great number of commodities. The kingdoms of Japan and Corea are amongſt the richeſt in the world; and with theſe the Eaſt-India company are ſaid to have no commerce; and yet they abound in raw ſilk, gold, ſilver, ſpice goods, tea, porcelaine, japan, &c. nor need the company ſtrive to gain acceſs, ſince they have more trade already than they can turn their hands to.

The many ſpice iſlands unpoſſeſſed by the Dutch, and Mindanao, and other iſlands near the Philippines, unpoſſeſſed by the Spaniards, are a glorious field for the Engliſh commerce; numbers of adventurers might make their fortunes by ſuch a trade, and hundreds of ſhips might be employed therein, to the great national emolument.—It is neceſſary for us to think of theſe things; for, if we do not, the Pruſſians, or others, will, the gain being ſo great; and the company cannot uſe their charter againſt foreigners, who are ſo ſaucy as not to obey an Engliſh act of parliament.—It has been further ſaid, upon this occaſion, That, if Scotland and Ireland had the liberty of trading to all parts of the globe, they, by the cheapneſs of their labour, and the number of their hardy and induſtrious people, among the former in particular, would under-trade foreigners, and open many markets, that are, at preſent, unthought of; and that this would increaſe the ſhipping and wealth of Great-Britain to an immenſe degree.

The attempts of the Scots nation before the Union, to open a trade to the Eaſt-Indies and America, particularly their ſettlement at Darien, were glorious; and the barbarous treatment they met with will ever be ignominious; for, had the Scots maintained the iſthmus of Darien, and a free paſſage between the North and South Seas, within a colony of their own, Britain might, by this time, have been ſo powerful in America, as would have prevented the French from breaking the treaty of Ryſwick, and, conſequently, have prevented thoſe wars which have been attended with ſo weighty an incumbrance on our whole trade. Theſe diſadvantages have been attributed to monopolizing companies; for, while the South Sea company ſubſiſted as a trading corporation, they had a monopoly, though, perhaps, not ſo nationally injurious as ſome others, if we conſider all the peculiar circumſtances thereof. See the articles ASSIENTO, and SOUTH-SEA COMPANY.

But if the Scots, as well as the Engliſh, are excluded by the court of Spain from trading directly to Spaniſh America, it has been doubted whether our own Eaſt-India company have it in their power to exclude any ſhip trading to Japan from Edinburgh and Glaſgow. It ſeems, that the company have never traded to Japan ſince their charter was confirmed by act of parliament; and, ſurely, if they thought it within their charter, they would have certainly attempted that trade, which is, perhaps, much more advantageous than any they now carry on. Certain it is, that trading to theſe countries would highly tend to the benefit of Scotland; and, therefore, it has been thought reaſonable to require an explanation of what parts of the globe the people of North Britain are debarred trading to, by charters granted before the Union, or by acts of parliament made before or ſince; or whether the ſubjects born and dwelling in North Britain and Ireland, are bound by any act, unleſs it ſhould mention thoſe countries particularly.

The ſubſtance of what has been further urged in this kingdom againſt MONOPOLIES in general.

Beſides the misfortunes ariſing from our taxes, we have ſome monopolies very deſtructive to a trading nation, and inconſiſtent with a free one, which encourage idleneſs, villainy, and extravagant demands for wages; whereby the many are deprived of their rights, without having committed any crime to forfeit them, and for the benefit of a few only: a country that ſuffers them cannot ſend it's goods ſo cheap to a foreign market as it's neighbours who ſhould not, for never yet was a monopolized trade extended to the degree of a free one; therefore any country abounding in monopolies muſt decline in trade.

To apply this to Britain.

The trade of exporting woollens, and ſome other ſorts of goods, with the trade to ſome particular countries given to companies, we monopolize to ourſelves, and, in our abundant wiſdom, pay all the charges of government; our fellow-ſubjects in Scotland pay but a trifle to the general ſupport; in Ireland and the plantations nothing at all; theſe trade under the protection of fleets that coſt them not a farthing: our land wars to maintain the ballance and liberties of Europe, at the riſque of our own, coſt them not a doit; all that we endeavour is, to ſtarve them without expence, and ourſelves with; for that is the caſe, we drive one part of our people out of trade by monopolies, and the other by taxes. We bleed ourſelves almoſt to death, and think to recruit our ſpirits by devouring three millions of ſtarved Iriſh and Americans, and, by exceſs of cunning, make the ruin general.

Excluſive companies prevent the increaſing the vent of our manufactures abroad, conſequently they ſtarve our poor, as will appear by the following reaſons:

By being all of them confined to London, the prices of the woollens they export are enhanced by long land-carriages up to town, with the additional charges of commiſſion, warehouſe-rent, porterage, &c. much to the prejudice of their ſale; and what materials of manufacture they import are diſperſed over many parts of the kingdom, by the like expenſive conveyance, to the great diſadvantage of the nation in general.

It is not the intereſt of the Eaſt India company to increaſe the quantities of the woollens they export, but rather to contract them (which we ſuppoſe was the reaſon for obliging them by their charter to export woollens to a certain value) for at all markets where there are any demands for goods, the ſmallneſs of the quantity naturally enhances the price; and, if the company can gain as much on 5000 cloths as on 10,000, is it not their intereſt to prefer the leſſer quantity, on account of the leſs diſburſement and riſque? Though it is plain the nation would loſe the ſale of one half of the manufactures capable of being vended; whereas private traders puſhing againſt one another, ſtudy to increaſe the vent of their goods, by ſelling at moderate profits, and making the quantities anſwer to themſelves and their country.

The large charges the Eaſt-India and South-Sea companies, when the latter traded, are forced to be at for the ſalaries of the directors, governors, ſupercargoes, &c. beſides what may ſlip through their fingers ſometimes, muſt make theſe companies neglect all trades that will not yield extraordinary profits to defray them; which trades private merchants would be glad of, and turn to good account for themſelves and their country, were they not debarred by excluſive charters. See a diſtinction, with regard to the South-Sea Company in particular, under the articles ASSIENTO [REMARKS], and SOUTH-SEA COMPANY.

Excluſive companies buying at home by directors, and ſelling abroad by ſervants, who may have an eye to their own or friends intereſt, and the foundation of all being the company's money, they cannot naturally be ſuppoſed to be ſo induſtrious, as thoſe who trade only on their own ſtocks; therefore companies can never extend trade like private dealers, but it muſt decay where interlopers are admitted, of which our late Royal African company was a ſtrong inſtance. What confirms the whole, is the prohibition of the Eaſt-India company againſt their ſervants carrying out cloth, which would be needleſs, did they not know that their ſervants can underſell them, for the company wants no money to ſupply all the cloth that can be vended with the uſual profit. In the year 1741, a ſeizure was made in one of the out-ports of a large quantity of cloth deſigned for India, belonging to one of the company's ſervants, when at the ſame time, by the decay of our woollen trade, the poor's rates were at 8 s. in the pound, in ſome of our clothing towns; from whence this abſurdity aroſe, that whilſt our clothiers were ſtarving, the exportation of cloth was thereby made a contraband trade.

It is impoſſible to make any enquiry into our companies, without taking notice of their vaſt villainies; which, as they have been made ſufficiently public, few can be ignorant of; therefore the bare mention of them is enough, ſuch as the fatal South-Sea ſcheme, that ruined thouſands of families.—See the articles ACTIONS, and BUBBLES.

We need not to mention former directors, receiving ſalaries from companies, and, though contrary to law, being notwithſtanding concerned in the Oſtend trade to India, whereby they were cutting the throats of their benefactors; the ſelling goods by falſe ſamples, and buying them for their private accounts; carrying on private trade contrary to treaty, and bribing officers to wink at them with the company's money, and charged to account by the genteel name of preſents, ſubjecting thereby the company's effects to ſeizures, and their country to perpetual jars. The rapaciouſneſs of governors abroad, who, by engroſſing goods, nay, even the neceſſaries of life, have oppreſſed the people by arbitrary prices, and drove away our trade. Supercargoes, cheating by falſe invoices. Captains, quitting or loſing ſhips, to defraud inſurers and bottomry-lenders: are not theſe things written in the books of their chronicles? But the greateſt miſchief of all is, that the honeſty of the people hath been corrupted, by having preſented to their eyes roguery lightly puniſhed, if not triumphant.

Theſe companies have prevented the increaſe of our navigation, by their excluſive charters, debarring us from a free trade to $\frac{3}{4}$ parts of the known world. The dominions of the Grand Seignior, in Europe, Aſia, and Africa, were, 'till lately, confined to the Turkey company. All South, and part of North America, from Vera Cruz to Carthagena, from Buenos Ayres round Cape Horn to California, that vaſt extent

tent of coaſt, were alſo, 'till lately, the portion of the South Sea company. Yet we have not found, that the nation is any thing the better for the annihilation of this latter monopoly; it is hoped, however, we ſhall in time, ſome how experience the benefit of it.

All the coaſts of Africa, Aſia, from the Cape of Good Hope to Japan, are the lot of the Eaſt-India company. And, what a ſmall number of ports did they all trade to, and what a trifling navigation did they all maintain? There is a greater quantity of ſhip tonnage employed in the trade of the free port of Leghorn only, than all theſe three companies ever employed in their monopolies to $\frac{3}{4}$ parts of the world; like the fable of the dog in the manger, not eating themſelves, but preventing thoſe who would. For more matter, having an affinity herewith, ſee the article PATENTS.

MONTFERRAT, a duchy in Italy, is bounded on the north by Savoy, on the eaſt by the Milaneſe, on the ſouth by the territory of Genoa, and on the weſt by Piedmont. It is computed to be 26 miles in length, and 48 in breadth, and was formerly divided into the Mantuan and Savoyard Montferrat. Both countries are very pleaſant and fertile, though hilly; and beſides the great plenty of all neceſſaries, afford vaſt quantities and variety of game. It abounds in ſilk, corn, wine, and oil, wherein it has a pretty conſiderable trade.

MONTGOMERYSHIRE, in Wales, is bounded on the eaſt with Shropſhire and Radnorſhire, on the ſouth with Cardiganſhire and Radnorſhire, with Merionethſhire on the weſt, and with Denbighſhire, and part of Merionethſhire and Shropſhire on the north. It is computed to be in length from eaſt to weſt 30 miles, in breadth from north to ſouth 25 miles, and it's circumference 94.

The air is ſharp and cold on it's mountains, but wholſome and pleaſant in the vallies. On the north and weſt ſides, where the former are moſt predominant, the ſoil is ſtony, and not very fruitful, except in the vallies between them, which are very pleaſant, and afford corn, and plenty of paſture; but the ſouth-ſouth-eaſt and north-eaſt parts, which are more level, are exceeding fruitful, eſpecially thoſe parts that lie on the banks of the Severn, and are ſometimes overflowed by it.

It's chief commodities are corn, cattle, horſes, fiſh, and fowl. It has been long remarkable for a peculiar breed of horſes, which are ſtill larger here as well as their black cattle, than in ſome of the neighbouring Welſh counties, and are much valued in England.

It's principal rivers are the Severn, the Tanat, and the Turgh.

MONTGOMERY TOWN ſtands in a healthy air, is large and handſome, but the buildings are generally very indifferent, except a few faſhionable houſes that belong to ſome conſiderable families.

LLANIDLOS lies near the head of the Severn, and it's pariſh, which is noted for mines of lead and copper, belongs to the dioceſe of Bangor: it has fairs in July and September.

MACHYNLETH, an ancient town in the dioceſe of St. Aſaph, and has fairs on June 27, July 25, Sept. 29. and Nov. 13.

LLAVELLING, or LHEN VYLLYN, a conſiderable town, and has a good market for cattle, coney-wool, and other proviſions, but ſtands low. It's fairs are in June, July, and September.

WELSHPOLE, a large well built corporate town, where is a noted manufacture of flannel. It has a fair in Auguſt.

Upon the whole, there is ſcarce a finer county in England, than theſe parts towards the Severn ſide.

MONTSERAT, one of the ſmalleſt of the Caribbee Iſlands, in the Atlantic Ocean in America, ſubject to England. See BRITISH AMERICA.

MORAVIA MARQUISATE, a principality of the kingdom of Bohemia, bounded by Sileſia and Poland on the north and eaſt, Auſtria and part of Hungary on the ſouth, and Bohemia on the weſt. The north and weſt parts are woody and mountainous, but the reſt is fair and champaign good ſoil, yielding much corn of all ſorts, with wine, both red and white, and abounding with ſpacious towns and villages.

The paſtures are filled with horſes, black cattle, ſheep, and goats; and the woods with hares, foxes, wolves, and beavers. It's rivers abound with trout, crayfiſh, barbels, eels, jack, perch, and many other ſorts of fiſh.

OLMUTZ, it's metropolis, is 20 miles weſt from the borders of Sileſia, 28 north-eaſt of Brin, 80 north of Vienna, 45 ſouth-weſt of Teſchen, and 94 ſouth of Breſlaw. It is a ſmall, but neat, well built, ſtrong, and populous city; and has a trade, by means of it's river Morawa, with Bohemia, Hungary, Poland, Sileſia, and Auſtria.

BRIN is a pretty large well built town, and is held by ſome to be the capital.

IGLAW, or GHILAWA, is a pretty large, ſtrong, well built, and populous town, on the borders of Bohemia. It's principal trade is in beer and coarſe woollen cloth, which they make and dreſs themſelves.

ZNAIM, or ZNOGMO, on the river Taya, not above 5 miles from the borders of Auſtria, has a pleaſant ſoil and wholeſome air; and being on the road from Prague to Vienna, brings a tolerable trade to it. There are many vineyards in the neighbourhood, which afford a pretty palatable wine.

MOROCCO and FEZ EMPIRE, in Africa, comprehending the kingdoms of Fez and Morocco, is bounded by the Mediterranean Sea on the north, by the river Fulvia, which divides it from Algiers on the eaſt, by Bilduligerid on the ſouth, and by the Atlantic Ocean on the weſt, being about 500 miles long and 200 broad. It is a fine country, conſiſting of mountains and vaſt extended plains, none of them unfruitful: of the mountains, thoſe of Atlas are the chief, extending from Algiers in the eaſt to the ocean in the weſt, which from them has obtained the name of the Atlantic Ocean. Their ſoil produces good wheat, rice, and barley, and would yield a great deal more, if well cultivated, but only the Jews plant the vine; the olive alſo thrives here, and yields excellent oil. They have alſo dates, figs, almonds, lemons, oranges, pomegranates, and a variety of other fruits; nor do they want flax or hemp; but wood, eſpecially timber, is ſcarce here. They have no ſhips of war, only ſome ſmall piratical veſſels, which they croud with men, and take great prizes ſometimes, eſpecially the Sallee rovers; but as for merchant-ſhips, or foreign trade, they carry on none on their own bottoms.

REMARKS.

No flouriſhing trade or improvements can be carried on under a government ſo deſpotic, oppreſſive, and rapacious. The land is judged capable of producing a hundred times more than the inhabitants can conſume, yielding three crops a year; yet, except within 3 leagues of a town, it has no proprietor; there is generally corn in the emperor's poſſeſſion underground to ſerve the whole country five years. They who have a little money, are afraid to let it out upon intereſt, leſt they ſhould be reputed wealthy, and conſequently become a prey; ſo they bury it with any furniture of value, nothing being ſeen in their houſes but a mat or two to lie on, and a few ordinary things. Their traffic is of a piece with their agriculture; beſides, the Moors having no immediate commerce with any foreign nation, nor any trading veſſels of their own, the navigation is by European ſhips, and the Jews are the chief traders and factors, and by their immenſe profits make themſelves amends for the exorbitant impoſt with which they are loaded.

The chief exports are tin, copper, wax, hides, wool, cordovans, honey, dates, raiſins, olives, almonds, indico, gum arabic, gum ſandric, elephants teeth, oſtrich feathers, and fine maſts. The exportation of corn is abſolutely prohibited, as contrary to Mahomet's precept, though it is encouraged at Algiers and Tunis.

The duties on goods exported, are on wax, per hundred weight, twenty-five ounces; old copper, twelve; red Morocco ſkins, per half dozen; one ditto other colours, two blanquilles. Hides tanned or raw, each two ditto; wool, dates, almonds, gums, ſoap, per quintal, three ounces, tallow ſix ounces; mats per bale; ſix goat ſkins in hair per bale; ſix calve ſkins dreſſed or raw, one blanquille; ſheep-ſkins per half dozen; two blanquilles are two-penny pieces, and four, when full weight, paſs for an ounce; but they are ſo thin, clipped, and cracked, and the people ſo fraudulent that a ſtranger ſhould provide himſelf with a pair of their ſcales, to weigh all he receives.

The moſt uſual imports are linens, cloths, iron in bars, hard ware, brimſtone, gunpowder, arms, and lead, which pay a duty of about ten per cent.

Their inland trade chiefly conſiſts of caravans, two of which ſet out every year from Fez to Mecca and Medina, viz. one every ſix months, carrying woollen manufactures, of which they make ſome exceeding fine and beautiful, indico, cochineal, ſkins, and oſtrich-feathers.

The Engliſh might put a ſtop to this trade from Mecca, by tranſporting ſilks from Turkey to Barbary by ſea; and the emperor would certainly countenance the ſcheme, on account of the ten per cent. cuſtom, on the importing theſe goods in European bottoms, and likewiſe as it would prevent ſo many people going to Mecca, where they often ſettle, accounting the Turks milder tyrants, and ſo of two evils prudently chuſing the leaſt.

They likewiſe ſend caravans to Guinea every year, conſiſting of many thouſand camels, which the difficulty of the paſſage through deſerts, without fodder, proviſion, or water, renders it neceſſary that every other camel be loaded with thoſe neceſſaries. They carry to Guinea, ſalt, cowries, woollen manufactures, ſilks and oil, which they exchange for gold-duſt, ivory, oſtrich-feathers, and negroes. Some Turks of Algiers and Tunis trade thither in ſilks, cottons, ſtriped ſtuffs, and fine faſhes, from the Levant, and grow rich, as their birth exempts them from the common exactions. The tyranny of the government is ſaid to be the motive of the Arabians continuing a wandering life, leſt by living in fixed habitations, they ſhould forfeit all property and liberty by the rapaciouſneſs of the officers.

The ſhips trading to the Morocco dominions, pay one barrel of gunpowder for entrance, with twelve for loading and anchorage, and twelve to the captain of the port; veſſels trading to and from Gibraltar, pay but half this duty, by indulgence

dulgence of Muley Iſhmael, who, though ſo ſavage that he could neither read nor write, had a particular kindneſs for the Engliſh, on account of their frankneſs and bravery. Engliſh and French conſulage is eight dollars. A French or Spaniſh veſſel likewiſe, pays three dollars to a fraternity of Spaniſh friars, who aſſiſt them in ſpiritual offices.

Their whole navy conſiſts of but three or four ſhips, mounting ſixteen or twenty ſmall guns, and a few row-boats; accordingly about thirty years ago, a ſingle Engliſh ſmall frigate, with an active commander, by taking ſome, and running others aſhore, ſtruck ſuch a terror, that, as is related of other formidable warriors, the Sallee women uſed to quiet their untoward children, by telling them Delgarno was coming for them: yet the Chriſtian powers, though the Barbary pirates are ſuch a detriment to their commerce, are kept from exerting themſelves with due force againſt theſe enemies, leſt their ſuppreſſion ſhould be an over-balancing advantage to any particular ſtate. It is a happineſs that all the Morocco dominions do not afford one tolerable harbour; that of Sallee, which is the beſt, being almoſt dry at low, and not twelve feet deep at high water, beſides a very inconvenient bar: better ports might be an inducement to their making a figure at ſea, and become a greater annoyance.

The policy in the Moors is, that they will trade with any ſhip (though of a ſtate at war with them) which comes to their ports. A convent of Spaniſh friars is likewiſe tolerated at Mequinez, for a yearly acknowledgement.

The emperor has a tenth of all corn, cattle, fruits, and produce of the ſoil; likewiſe the tenth of prizes, and all the captives. His whole revenue, ordinaries and extraordinaries, is computed at five hundred quintals of ſilver, each worth 385 pounds ſterling: If the revenue of a monarch can be ſtated, who holds not his ſubjects lives and fortunes by the tenure of unmeaning addreſſes, or the good-will of a parliament, but frequently confirms his abſolute prerogative, by the ruin and death of the moſt dignified perſons in his dominions.

Of the union of the Chriſtian powers, to extirpate theſe piratical ſtates.

In ſpeaking of Africa as it once was the ſeat of commerce for the whole world, we muſt look back as far as to the flouriſhing ſtate of the Carthaginian government, but it ſhall be as ſhort as can be deſired.

It is true, as has been obſerved by a well informed writer on this ſubject, that the Romans (like the Turks in our time) were no friends to trade; they carried on their war for glory; like mere ſoldiers, they fought to conquer, and conquered to plunder, not to plant and people the world: ſo far were they from encouraging or improving the commerce and wealth of the nations they ſubdued, that they overthrew and deſtroyed the greateſt trading cities in the world: ſuch as Corinth, Syracuſe, Carthage, and all the cities of Egypt and Africa: inſtead of encouraging trade and navigation, they murdered the merchants, burnt their ſhips, and carried away the people, which are the life and ſupport of manufacture and trade.

On the other hand, the Carthaginians, as they had the richeſt ſoil and a numerous people (for Africa was then infinitely populous) they improved the firſt, and employed the laſt, to the utmoſt: their people were as rich as they were numerous; they carried on trade to all the parts of the world, planted colonies, built cities abroad, and ſhips at home: and wherever they came, whether by conqueſt or by conſent, they planted the country not deſtroyed it, carried people to it, not away from it; and, in a word, made them rich, not plundered and ſtarved them. Carthage and Corinth at that time, were the two great emporiums of the world; this carried on all the commerce of the weſt, and that of the eaſt: Corinth managed the commerce of Aſia, Perſia, and India, and brought the wealth of the Eaſt-Indies, the ſpices, the ſilks, the callicoes, the gold, the diamonds, and, in a word, the whole Indian and Perſian trade in caravans; part from Ormus and the gulph of Perſia, to Baſſora and Bagdat by water, and thence by caravans to Aleppo and Scanderoon; and ſo by ſea to the gulph of Cenchræa and Corinth, another part of Trapezond in Armenia, and by the Euxine Sea through the ſtraights of Boſphorus and the Helleſpont, and through the Archipelago to the ſame gulph, and ſo to Corinth. Carthage, on the other hand, planted colonies, and extended their poſſeſſions upon the coaſt of Spain, as well within as without the Straights; built cities from New Carthage, now called Carthagena in Spain, to the Groyne, as well in the Mediterranean as in the ocean, and from Tangier, then a populous city of 100,000 inhabitants, to the Cape de Verde on the weſt ſide of Africa, and from thence into America itſelf; which, there is no room to doubt, was diſcovered, if not peopled, from Africa, by the indefatigable Carthaginians; and had never been loſt and forgotten to this part of the world, if the Romans, thoſe deſtroyers of commerce and navigation, had not ſo utterly ruined Carthage, not the city only, but the very nation, as not to leave them a name under heaven, and ſo of courſe cauſed all their remoteſt ſettlements to be abandoned, and, in conſequence, at laſt forgotten; but that, by the way, it requires, and, indeed, deſerves too long a digreſſion for this place.

Now, when theſe two cities of Corinth and Carthage fell, (for they were deſtroyed by the Romans within a year of one another) the trade of the whole world received a mortal wound; and, as thoſe cities never recovered, ſo the trade which was fixed among them, was divided and ſcattered, and, in effect, loſt, for it never fully recovered itſelf.

The colonies which the Carthaginians planted, ſunk and died away, and many of them lie in ruins to this day, eſpecially on the ſide of the ocean from the Straight's mouth to cape None; for, as the Carthaginians planted colonies for trade, the trade being loſt by the overthrow of the merchants in the mother-city Carthage, the new planted cities, and the ſea-ports, were ruined of courſe, and periſhed, as a child ſtarves when a nurſe is taken from it.

It is true, the city of Carthage was rebuilt, and recovered itſelf in ſome degree, under the government of the weſtern emperors; and eſpecially as thoſe emperors were Chriſtians, and were encouragers of the induſtry and application of their ſubjects: then, indeed, the trading genius revived very much, eſpecially in Africa; and the climate and ſoil of that country being particularly productive of many valuable things, and thoſe things adapted to trade, the African merchants carried on a very conſiderable buſineſs; navigation alſo being their peculiar talent, they traded by ſea to all the known parts of the world, but nothing like what they did before.

The principal branches of their commerce in thoſe times, as we gather from the hiſtories of the neighbouring countries, conſiſted, firſt, in exporting the growth of their country, and the manufactures of their people, juſt as it is with us in Britain: for the nature of commerce is ever and every-where the ſame. And, ſecondly, in importing again the product of other countries, either for their own conſumption, or for re-exportation to remoter parts, which had not the ſame product. Their own product conſiſted chiefly in corn and cattle, and among the laſt, chiefly horſes, of which they furniſhed great numbers to mount the Roman cavalry, for the Numidian horſe were then, as the barbs and jennets (which are the ſame) are now, famed for their beauty, ſwiftneſs, and fine ſhapes, through all the Roman empire.

But above all, their products the moſt valuable were their wax and copper, in both which they ſtill excel the whole world; alſo their corn, fruit, drugs, and rich gums, all which remain to them.

For manufactures, we do not, indeed, read much of their woollen manufactures: but the Carthaginians as well as the Egyptians (and both were Africans), are famed for the product of fine linen; and, it is to be ſuppoſed, the ſoil produced a very fine kind of flax, which, as the fund of that manufacture, they improved to great advantage, but that part is now loſt.

As to their importations, we are aſſured they fetched tin and lead from Great Britain, gold and wine from Spain, for Old Spain ever produced much gold; ſilks and fine Eaſt-India goods from Corinth and Alexandria; what trade they had with Gaul (France) we do not find, but the other was very conſiderable, and is ſufficient to our purpoſe. Thus ſtood their condition, flouriſhing in wealth and commerce, when the Romans, to the eternal infamy, not glory, of their very name, deſtroyed them all.

As by that the trade of the world received a mortal wound, ſo when it revived under the Roman and Grecian emperors, it was apparent all their recovery and increaſe, was owing to their commerce; that alone reſtored them, and enriched them; and they were, in Juſtinian's time, the moſt valuable branch of the weſtern empire, with reſpect to the taxes they paid, and the many regiments, or rather legions, they raiſed, for recruiting the Roman armies under Beliſarius, and other generals; and this continued long afterwards, even in the moſt declining times of the weſtern empire.

But this riſing wealth of Africa was too rich a bait for the times; the deluge of barbarous nations, which overthrew the Roman empire, broke in upon them alſo; and the Vandals over-running Spain, ſpread themſelves into Africa, waſted and over run the fruitful plains, and deſtroyed the populous cities; and, in a word, trade ſunk a ſecond time, under the unſupportable burden of war, the Vandals, over-running all, ruined and poſſeſſed the country.

As the Vandals came in over the bellies of the native inhabitants, ſo ſome ages after them, the Saracens, Arabians, and Mahometans, came in over the heads of the Vandals.

With theſe, not the old Africans only were rooted out; not only religion, but at laſt trade too, ſunk quite out of the country; for, as the followers of Mahomet are, wherever they come, like the Romans, the deſtroyers both of commerce and cultivation, ſo it was here.

Trade being thus, as it were, rooted out of Africa, the Moors ſpread themſelves, by a rapid and irreſiſtible torrent, over Spain and Portugal; and as for Africa, they have, by a ſtrong hand, kept poſſeſſion there ever ſince.

To apply this to our preſent purpoſe: Theſe Mahometans, as we have ſaid of the Turks, have very little inclination to trade; but, dwelling on the ſea-coaſt, and being a rapacious

and

and tyrannical people, void of induſtry or application, neglecting all culture and improvement, it made them thieves and robbers, as naturally as idleneſs makes beggars: they diſdained all induſtry and labour; but being trained to rapine and ſpoil, when they were no longer able to plunder and deſtroy the fruitful plains of Valentia, Granada, and Andaluſia, they fell to roving upon the ſea; they built ſhips, or rather ſeized them from others, and ravaged the coaſts, landing in the night, ſurprizing and carrying away the poor country people, out of their beds into ſlavery.

This was their firſt trade, and this naturally made pirates of them; for, not being content with mere landing and plundering the ſea-coaſt of Spain, they, by degrees, being grown powerful and rich, made bold and audacious by their ſucceſs, they armed their ſhips, and began to attack, firſt the Spaniards upon the high ſeas, and then all the chriſtian nations of Europe, wherever they could find them: thus this deteſtable practice of roving and robbing began.

What magnitude they are ſince that arrived to, what miſchiefs they have brought upon the trading part of the world, how powerful they are grown and how they are erected into ſtates and governments, nay into kingdoms, and, as they would be called, empires, (for the kings of Fez and Morocco call themſelves emperors) and how they are, to the diſgrace, even of all the chriſtian powers, treated with as ſuch, is matter of hiſtory, and we ſhall meddle no more with it here, than is neceſſary to our preſent occaſion.

The firſt chriſtian prince, who, reſenting the inſolence of theſe barbarians, and diſdaining to make peace with them, reſolved their deſtruction, was the emperor Charles V. He was moved with a generous compaſſion for the many thouſands of miſerable chriſtians, who were, at that time, kept among them in ſlavery: and, from a benevolent principle of ſetting the chriſtian world free from the terror of ſuch barbarians, he undertook ſingly, and without the aſſiſtance of any other nation, to fall upon them with all his power.

In this war, had he been joined by the French and Engliſh, and the Hanſe-Towns, (as for the Dutch, they were not then a nation) he might have cleared the country; at leaſt he might have cleared the ſea coaſts of the whole race, and have planted colonies of chriſtians in all the ports, for the encouragement of commerce, and for the ſafety of all the European nations.

But Francis the firſt, king of France, his mortal and conſtant enemy, envied him the glory of the greateſt and beſt enterprize that was ever undertaken in Europe; a thouſand times beyond all the cruiſadoes and expeditions to the Holy-Land, which coſt Europe a million of lives, an immenſe treaſure, during one hundred and twenty years, to no purpoſe. Though the emperor was aſſiſted by no one prince in Chriſtendom, the Pope excepted (and his artillery would not go far in battering ſtone-walls); yet he took the fortreſs of Goletta, and afterwards the city, and the whole kingdom of Tunis; and, had he kept the poſſeſſion, it might have proved a happy fore-runner of farther conqueſts; but miſcarrying in his attempt againſt Algier, and a terrible ſtorm falling upon his fleet, the farther attempt was laid aſide, and the kingdom of Tunis returned to it's former poſſeſſors, by which means their piracies are ſtill continued.

There ſeems to be a neceſſity, therefore, that all the powers of Europe, eſpecially the maritime powers, ſhould unanimouſly determine to free themſelves from the inſolence of theſe rovers; that ſo their ſubjects may be protected in their perſons and goods, from the hands of rapine and violence; their coaſts ſecured from inſults and deſcents, and their ſhips from capture on the ſea.

But this cannot be done effectually, but by rooting out theſe neſts of robbers on the coaſt of Africa, or at leaſt driving them from the poſſeſſion of any of the towns, ports, and harbours, ſo that they may have no more ſhips to appear upon the ſea.

The conqueſt, it has been apprehended, could not be attended with any great difficulty, if the Engliſh, Dutch, French, and Spaniards would unite to join their forces and fleets, and fall upon them in ſeparate bodies, and in ſeveral places at the ſame time.

The general benefit of commerce would immediately follow, by ſettling the government of the ſea-coaſt towns, in the hands and poſſeſſion of the ſeveral united powers; ſo that, every one ſhould poſſeſs the leaſt in proportion to the forces employed in the conqueſts of it. The conſequence of the ſucceſs would ſoon be ſenſibly felt by the intereſted parties. For, certain it is, that the coaſt of Africa, ſome few places excepted, is a fruitful rich country; and though by it's latitude it muſt be exceeding hot, and that (eſpecially on the eaſtermoſt parts of it) there are many deſerts and waſte places given up to ſalt and ſand, and fit only for the retreat of wild beaſts, &c. yet, even in that part, there are vallcys and plains interſperſed among the wildeſt deſerts, and which are fruitful, yield corn in abundance, and cattle, with ſeveral fruits and other productions, fitted not for the uſe of the inhabitants only, but for merchandize, and in quantities alſo ſufficient for both.

The general product of the country, and in which the chief wealth conſiſts, and upon which a trade with them might be ſettled, if the country was in the hands of chriſtians, is as follows; corn, ſalt, wool, horſes, wax, honey, coral, copper, ſkins of beaſts, drugs and gums, almonds, pomegranates, oſtrich feathers, lions and leopards, proviſions of ſundry kinds. If the quantity of all theſe is ſo conſiderable as we find it to be, even now, under the indolence and ſloth of the moſt barbarous people in the world; how may we ſuppoſe all thoſe valuable things to be increaſed in their quantity by the induſtry and application of the diligent Europeans, eſpecially the French, or Dutch, or Engliſh; all which nations joining in the conqueſt, we might reaſonably ſuppoſe, ſhould have their ſeveral and ſeparate allotments of territory upon the coaſt, and in the country adjacent.

We might alſo reaſonably ſuppoſe, that the Moors being, in the conſequence of ſuch a conqueſt, driven up farther into the country, (for we have not been propoſing the rooting them out as a nation, but only the ſupplanting or removing them from a ſituation, which they have juſtly forfeited by their depredations upon other nations) and being obliged to ſeek their ſubſiſtence by honeſt labour and application; we may reaſonably ſuppoſe, that even theſe may be taught to apply themſelves to the cultivation of the earth, by the neceſſity of their circumſtances, and be brought to increaſe the product, by their labour, for all thoſe chriſtian nations.

As the product of the country would thus be increaſed, and multitudes of people, encouraged by the advantages of the place, to go over and ſettle upon it, the manufactures and merchandizes of Europe would ſoon find a great additional conſumption, and the many new ports and harbours, where thoſe chriſtian nations might ſettle, would be ſo many new markets for the ſale of thoſe manufactures, where they had little or no ſale or conſumption before: and the finding out new markets for the ſale or vent of merchandize, where there were none for thoſe goods before, is the great principle whereon to found the general advancement of commerce.

It may be ſaid, indeed, that to vend our goods at new, or different ports only, may be no increaſe of commerce; or to ſend them to new and different places, becauſe they may ſtill be ſent from thence to the ſame people, and to the ſame nations as the laſt conſumers, who conſumed them before.

Thus ſending our Engliſh manufactures to Jamaica, to be ſold there by the ſloop-trade; that is, by clandeſtine commerce with the Spaniſh ſmugglers, or to the Spaniards of Carthagena, and the coaſt of Caraccas, is no new conſumption, though it be a new market; becauſe it is only ſelling to the ſame people, who would otherwiſe call for the ſame manufacture, and other goods from Old Spain, and they from England; ſo that it is as water iſſuing out of the ſame fountain, and running into the ſame gulph or pond, only by new channels.

Thus likewiſe the Eaſt-India company ſending Engliſh broad cloth to the gulph of Perſia, to be ſent from thence to Iſpahan, to Georgia, and other places in that country, to be ſold to the Perſians, and others, as the laſt conſumers, is only ſupplying the ſame people, who were ſupplied before, with the ſame goods from Aleppo and Scanderoon; ſo that it is only taking the trade from the Turkey company, and transferring it to the Eaſt-India company, which is no increaſe of commerce, the laſt conſumers being the ſame.

But this would not prove the caſe of the Barbary trade: it is true, we have ſome trade there now, and ſome places might, in ſome reſpects, be called the ſame markets: but, ſuppoſe theſe barbarians to be removed as above, from the populous cities and provinces of Algiers, Tunis, Tripoly, &c. and driven up the country, in order to ſuppreſs piracy and robbers; and ſuppoſe thoſe cities, &c. peopled with a new nation, or new nations made rich by commerce, and the country adjacent cultivated and peopled after the manner of Europe, and thoſe people living, cloathing, furniſhing their houſes and equipages, and feeding after the manner of Chriſtian nations, let it be anſwered, what kind of commerce would there be then? Would it not be twenty times what it is at preſent? Beſides, would not the ſucceſs hereof be delivering Europe from the depredations of powerful thieves, and their commerce and navigation from the rapine of a mercileſs crew, who are the ruin of thouſands of families, and in ſome ſenſe the reproach of Chriſtendom. The propoſal is great, but far from impracticable: it is worthy being undertaken by the princes and powers of Europe, and what would bring infinitely more glory to the Chriſtian name, than all their inteſtine wars among each other; which are the ſcandal of Europe, and the only thing that at firſt let in the Turks, and other barbarians among them. See ALGIERS, TUNIS, TRIPOLY.

MORTALITY [BILLS of MORTAITY.]

Under the articles ANNUITIES, LEASES, INTEREST, LIVES, we have conſidered the doctrine of annuities, according to the principles and computations of the learned Dr. Halley, De Moivre, Lee, &c. and others, who have treated the moſt judiciouſly on this ſubject. But, as the ingenious Mr. Simpſon ſince their time, has conſidered this matter in another light, we think it neceſſary to add his ſentiments alſo to what

we

we have already ſaid; all which together, will comprehend in miniature, the ſubſtance of what has been communicated upon this head.

The value of an annuity for life, ſays he, depends upon the intereſt which money bears, and the probability of the life continuing a longer or ſhorter time; the former of which is generally ſettled by law, but the latter muſt be determined from obſervation.

Of all that has been hitherto offered for eſtimating the probability of the duration of life, nothing ſeems deduced with greater judgment and exactneſs, than the tables publiſhed by Dr. Halley and Mr. Smart for this purpoſe; which nevertheleſs, are both liable to ſeveral objections.

The doctor's table, being grounded on obſervations at Breſlau, a place where the generality of people live to a greater age than at London, (as appears by comparing the bills of mortality here with thoſe obſervations) can be no juſt meaſure of the probability of life in this place; and as to that of Mr. Smart, though it is indeed free from this objection, and founded on a very large number of obſervations, yet the great and continual afflux of people from all parts up to town, renders the deductions from thoſe obſervations conſiderably different, in one part of life, from what they would otherwiſe be; and this Mr. Smart ſeems not, in his table, to have conſidered, or made any allowance for.

For theſe reaſons, though I had determined to depend on, and make uſe of, this laſt gentleman's obſervations, in the enſuing pages (as, undoubtedly, the beſt for the city of London and parts adjacent); yet have I deemed it neceſſary to make ſome alterations, in the table of the probability of life from thence derived.

In doing this, I have ſuppoſed the number of perſons coming to live in town after 25 years of age, to be inconſiderable, with reſpect to the whole number of inhabitants: and therefore the probabilities of life, for all ages above 25 years, the ſame as this author has made them; but they have increaſed the numbers of the living, correſponding to all ages below 25; ſo that they may, as near as poſſible, be in the ſame proportion one to another, as they would be, were they to be deduced from obſervations on the mortality of thoſe perſons only, that are born within the bills. Which was done, by comparing together the number of chriſtenings and burials, and obſerving, by help of Dr. Halley's table, the proportion which there is between the degrees of mortality at London and Breſlau, in the other parts of life, where the ages are greater than 25. I ſhall here ſubjoin the table, altered as above, then proceed immediately to the uſes thereof.

A TABLE, ſhewing the probabilities of LIFE, from obſervations.

Note, The numbers marked * are ſuppoſed to die off yearly, and are what, in the ſucceeding pages, are called the decrements of life.

No. of Ages perſons curr.	No. of Ages perſons curr.	No. of Ages perſons curr.	No. of Ages perſons curr.

Now, in order to ſhew the uſe of the foregoing table by an example, let it be required to find the probability, that a perſon of 36, lives 30 years longer, or attains to the age of 66 years; look in the table againſt 36 years and 66 years, and correſponding thereto, you will find the numbers 331 and 93 reſpectively; ſhewing, that out of 331 perſons living of 36 years of age, only 93 of them arrive to the age of 66: therefore, ſeeing the whole number of perſons living at the beginning of this term, is to the number remaining alive at the end of it, in the ratio of 331 to 93; the number of chances that a perſon of 36 years of age has to live 30 years longer, will be to the number of all the chances, that he has both to live beyond, and die within 30 years, in the ſame ratio of 331 to 93; and therefore $\frac{93}{424}$ is the meaſure of the probability required; the probability of the happening of any event, being always to be conſidered as the ratio of the chances which that event has to happen, to all the chances which it has both to happen and fail.

This being underſtood, ſuppoſe it were now required to find the value of an annuity of 100 l. for a life of 20 years of age, intereſt at 4 per cent.

Becauſe the preſent value of 100 l. due at the end of one year (diſcount being allowed) is 96,15, it is plain, that ſo much would be the value of the firſt year's rent, was the purchaſer ſure to receive it; but the probability of his living one year, appearing from the table to be only $\frac{455}{462}$, the aforeſaid ſum 96,15, in order to make a juſt deduction out of it, for the contingency of his dying before the end of one year, ought to be diminiſhed in the ratio of 462 to 455, or multiplied by $\frac{455}{462}$, which will reduce it to 94,70, equal to the true value of the firſt year's rent. After the ſame manner may the value of the ſecond year's rent be calculated; for, ſince the probability of receiving this rent, or living two years is $\frac{448}{462}$, let this be multiplied into 92,45, the preſent value of 100 l. to be received at the end of two years, and the product 89,65, will be the true value of the ſecond year's rent. And, by a like way of proceeding, the value of the 3d, 4th, 5th &c. years rents, to the utmoſt extent of life, may be determined; and the ſum of all theſe will be the required value of the annuity, which will be found to come out 1480 l. very near.

Here follow the practical folutions of feveral problems, depending on the foregoing tables.

Problem VIII.

To find the value of an annuity for an aſſigned life.

Solution.

Look out the given age in Tab. I. and againſt it, towards the right-hand, under the propoſed rate of intereſt, will ſtand the number of years purchaſe, which an annuity upon that life is worth.

Example.

Let the given age be 18 years, and the rate of intereſt 4 per cent. then looking againſt 18, under 4 per cent. I find 15.2, equal the number of years purchaſe required.

Problem IX.

To find the value of an annuity upon two aſſigned joint lives.

Solution.

Case I.

If the two lives be equal, ſee Tab. II. with the common age, and againſt it you will have the value required.

Case II.

If the given ages be unequal, but neither of them leſs than 25, nor greater than 50 years, take half the ſum of the two for a mean age, and proceed as in Caſe I. *

* This and the following ſolutions are ſo contrived, as to be always depended on to leſs than $\frac{1}{4}$ of a year's purchaſe.

Case III.

If one or both ages be without the limits above-mentioned, but ſo that the difference of the values correſponding to thoſe ages, be not more than $\frac{1}{3}$ of the leſſer; let $\frac{4}{10}$ of that difference be added to the ſaid leſſer value, and the ſum will be the value ſought.
Generally, be the difference of the values what it will, multiply it by $\frac{1}{2}$ the leſſer of the two values, dividing the product by the greater; then the quotient, added to the leſſer value, will give the true anſwer very near.

Example of Case I.

Let the two given ages be each 18, and intereſt at 5 per cent. then in Tab. II. againſt 18, under 5 per cent. is 10.5 years purchaſe.

Example of Case II.

In which the rate of intereſt is ſuppoſed as above, and one of the two ages 34, the other 48, therefore the half ſum of the age is 42, againſt which ſtands 7.1.

Example of Case III.

Where one age is ſuppoſed to be 15 years, the other 29; here againſt 15 years will be found 11.0, and againſt 29, 8.8, the difference of which two values is 2.2, and $\frac{4}{10}$ thereof, equal to 0.88; this therefore, added to 8.8, gives 9.68, or 9.7, for the anſwer.

Example of Case IV.

Let the rate of intereſt be 4 per cent. and one age 11 years, the other 68. The values correſponding to theſe ages, are 12.9 and 4.6, their difference is 8.3, which multiplied by 2.3, will be 19.09, this divided by 12.9, quotes 1.5, which therefore, added to 4.6, the leſſer value, gives 6.1, equal the value ſought.

Problem X.

To find the value of an annuity upon two lives, that is to continue as long as either of them is in being.

Solution.

Case I.

If the lives be equal, find the given age in Tab. III. and againſt it, under the propoſed rate of intereſt, will be the number of years purchaſe required.

Case II.

If both ages be between 25 and 50, take half their ſum for a mean age, and proceed as in Caſe I.

Case III.

If one or both ages be without the limits mentioned in the laſt caſe, but the difference of values correſponding to thoſe ages, as found in Tab. III. be not more than $\frac{1}{6}$ part of the leſſer, take half the ſum of thoſe values for the value required.
Generally, let the given ages be what they will, find the value of the two joint lives by Caſe IV. Prob. IX. which ſubtract from the ſum of the values of the two ſingle lives, and there will remain the required value of an annuity upon the longeſt life.

Example of Case I.

Wherein the two given ages are each ſuppoſed 50 years, and the rate of intereſt 4 per cent. Here againſt 50 years, in Tab. III. under 4 per cent. ſtands 13.3, ſhewing the number of years purchaſe which an annuity is worth for two ſuch lives.

Example of Case II.

Suppoſe one age 30 years, and the other 46, then the half ſum of the ages will be 38, anſwering to which, under 4 per cent. ſtands 15.3.

Example of Case III.

Let the two propoſed ages be 6 and 21 years; then againſt 6 years will be 19.7, and, againſt 21, 18.2, the half ſum whereof is 18.95, equal to the number of years purchaſe required.

Example of Case IV.

Let one age be 11 years, the other 68, and the rate of intereſt as in the preceding examples; then the value of the two joint lives, by Caſe IV. of the laſt problem, will be found 6.1, and the values of the ſingle lives, by Problem VIII. equal to 16.3, and 6.7, the ſum of which two, decreaſed by 6.1, is 16.9, equal to the value required.

Problem XI.

To find the value of an annuity upon three joint lives.

Solution.

Case I.

If all the lives be equal, find out the given age in Tab. IV. and againſt it, under the propoſed rate of intereſt, will be the number of years purchaſe required.

Case II.

If all the three ages be between 15 and 55 years, and the difference between the greateſt and leaſt of them not more than 15 years, take $\frac{1}{3}$ part of their ſum for the mean age, and proceed as in Caſe I.

Case III.

If one or more of the propoſed ages be without the limits mentioned in the laſt article, but the difference of the values anſwering to the greateſt and leaſt of them, not greater than half the leaſt; then to the ſum of the two greater values add twice the leaſt, and take $\frac{1}{4}$ of the ſum for a mean value required.
Generally, be the ages what they will, multiply the ſum of the three correſponding values by the ſquare of the leaſt of them, reſerving the product; multiply the two greater values into each other, and to the double of the product add the ſquare of the leſſer values; divide the reſerved product by this ſum, and ſubtract the quotient from twice the leſſer value; the reſult will be the value ſought.

Example of Case I.

Let each age be 35, and the rate of intereſt 3 per cent. then in Tab. IV. againſt 35, under 3 per cent. ſtands 7.6, which is the number of years purchaſe that an annuity is worth for the three joint lives.

Example of Case II.

Let the three given ages be 20, 25, and 33 years. Here $\frac{1}{3}$ of the ages will be 26, correſponding to which, under 3 per cent. ſtands 9.0.

Example of Case III.

Where the propoſed ages are 7, 15, and 33 years; againſt theſe ſtand 11.9, 11.2, and 7.9, therefore the ſum of the two greater values is here, 23.1; this added to twice the leſſer, gives 38.9, the $\frac{1}{4}$ of which, or 9.725, is the value ſought.

Example of Case IV.

Let the three ages be 13, 31 $\frac{1}{2}$, and 53 years, and intereſt 4 per cent. then the values anſwering to thoſe ages will be 10.5, 7.3, and 5.0; the ſum whereof is 22.8, which multiplied by 25, the ſquare of the leaſt of them, gives 570, to be reſerved. Again, the two greateſt values multiplied into each other, produce 76.65, the double of this added to 25, the ſquare of the leaſt, will be 178.3, by which dividing 570, the reſerved product,

product, there comes out 3.2; this subtracted from 10, the double of the leaſt value, leaves 6.8 for the value required.

Problem XII.

To find the value of an annuity upon the longeſt of three lives.

Solution.

Case I.

If the lives be all equal, ſeek the common age in Tab. V. and againſt it, under the propoſed rate of intereſt, will be the number of years purchaſe required.

Case II.

If none of the ages be leſs than 10, nor greater than 60 years, and the difference between the greateſt and leaſt of them not more than 15 years, to twice the ſum of the two leaſt add the greateſt, and take $\frac{1}{3}$ part of the ſum as a mean age.

Case III.

If the difference of the greateſt and leaſt values, found againſt the propoſed ages in Tab. V. be not more than $\frac{1}{4}$ of the leaſt, then, to twice the ſum of the two greateſt values, add the leaſt, taking $\frac{1}{3}$ part of the ſum for a mean value.

Generally, find the value anſwering to the greateſt of the given ages in Tab. III. and the values correſponding to all the three ſeveral ages in Tab. V. and let the difference of the two values, anſwering to the greateſt age, be taken and reſerved; let the ſquare of the greater of theſe two be divided by the product of the two other remaining values; multiply the ſquare of the quotient by the reſerved difference, then this laſt product, added to the value of an annuity for the two youngeſt lives, will be the value required.

Example of Case I.

Let the three ages be each 35 years, and intereſt 4 per cent. then in Tab. V. againſt 35, under 4 per cent. ſtands 17.3, for the number of years purchaſe required.

Example of Case II.

Let the propoſed ages be 16, 24, and 30 years, then will the mean age be 22 years, and the number of years purchaſe required 19 4.

Example of Case III.

Suppoſe the three ages to be 28, 35, and 44, then the three correſponding values will be 18.3, 17.3, and 16 0, and therefore twice the ſum of the two greater added to the leſſer, is 87.2, which divided by 5, quotes 17.44 for the anſwer.

Example of Case IV.

Let the given ages be 20, 36, and 60; and intereſt as in the preceding examples: here, the value found againſt 60 years in Tab. III. is 11.2, and thoſe againſt 20, 36, and 60, in Tab. V. 19 7, 17.2, and 12.7, reſpectively; wherefore, taking 11.2 from 12 7, we have 1.5 for the difference to be reſerved: now the ſquare of 12.7, divided by the product of 19.7, and 17.2 is 0.5, the ſquare of which, multiplied by 1.5, the reſerved difference gives 0.375; this added to 17.0, the value of an annuity for the two youngeſt lives (as determined by Caſe II. Prob. X.) will give 17.375, or 17.4, for the number of years purchaſe, which an annuity is worth upon all the three lives.

Remark.

That the reader may not entertain any ſcruple concerning the exactneſs of the methods of ſolution hitherto laid down, for eſtimating the values of annuities upon two or more unequal lives, I ſhall here, according to my promiſe, endeavour to make it appear, that thoſe ſolutions may be always depended on as very near the truth. In order to this it will be requiſite to reſume the two hypotheſes laid down in Corol. II. and IV. Prob. I. wherein the probabilities of life are ſuppoſed in a geometrieal and in an arithmetical progreſſion, and to compare the values of equal fictitious lives, computed according to thoſe hypotheſes, with the correſponding values in the tables, for real lives, computed from actual obſervations, and then to conſider from thence, how the values ought to differ in lives that are unequal. Accordingly, let the value of each of the equal lives, whether conſidered as real or fictitious, be ſuppoſed equal to any number of years purchaſe, as 7, 8, 9, 10, 11, 12, 13, 14, and 15 ſucceſſively; and let the rate of intereſt be at 4 per cent. then will the correſponding value of two equal joint lives be as in the following little table; whereof the firſt column expreſſes the value of each of the ſingle lives, and the ſecond, third, and fourth columns, the value of the joint lives, according to obſervations, and the two foreſaid hypotheſes reſpectively.

Value of one ſingle life.	Value of two joint lives, per Tab.	Value of two joint lives, per 1ſt hypot.	Value of two joint lives, per 2d hypot.
7	4.7	3.9	4.9
8	5.4	4.6	5.6
9	6.1	5.3	6.4
10	6.8	6.1	7.1
11	7.6	6.9	7.9
12	8.5	7.8	8.8
13	9.5	8.7	9.7
14	10.5	9.7	10.6
15	11.5	10.6	11.6

Now, by inſpecting this table, we may obſerve, firſt, that the value of the joint lives, according to the laſt of the two hypotheſes, is a ſmall matter greater than the value of the ſame lives, as deduced from real obſervations, but never by more than about $\frac{3}{10}$ of a year's purchaſe; and, ſecondly, that, on the other hand, the value of the joint lives, according to the firſt hypotheſis, is always leſs than the true value deduced from obſervations, and that at leaſt by $\frac{7}{10}$ of a year's purchaſe. Hence we may infer, that the probabilities of life, as given in the table of obſervations, do not come ſo near a geometrie progreſſion as to an arithmetic one (which, in ſome meaſure, appears from the table itſelf) and, conſequently, that the value of an annuity upon real lives, whether equal or unequal, will differ little from the value derived from the laſt hypotheſis, but ſomething more from the former. Let us, therefore, now ſee what the differences will be, in two unequal joint lives, by the general rule before given (in Prob. IX.) from whence we ſhall be enabled to judge of the exactneſs of that rule. What theſe differences are, may be ſeen by the following table, which exhibits the values of the joint lives, according to each of the three foreſaid ways; wherein the value computed by the rule, compared with thoſe derived from the hypotheſes, appears to agree ſo exactly, throughout the whole table, with what has been above obſerved, with reſpect to the true value, as to ſufficiently prove, that the rule itſelf muſt be very near the truth. But if this rule be near the truth, the two particular ones preceding it muſt be ſo too, being ſo contrived as to always bring out nearly the ſame value with the general one; but with this difference, that as the general one, for the moſt part, gives the anſwer a little too ſmall, the firſt of theſe always makes it a little too great, though neither of them ſcarce ever err by more than $\frac{1}{10}$ of a year's purchaſe.

Value of the two ſingle lives.		Value of the two joint lives, per rule.	Value of the two joint lives, per firſt hypoth.	Value of the two joint lives, per ſecond hypoth.
6 and	8	4.5	3.8	4.7
6	10	4.8	4.3	5.0
6	12	5.0	4.6	5.2
6	14	5.2	4.9	5.4
6	16	5.4	5.2	5.5
8	10	6 0	5.3	6.2
8	12	6.4	5.8	6.7
8	14	6.7	6.3	7.0
8	16	6 9	6.7	7.2
10	12	7.5	6.8	7.8
10	14	8.0	7.5	8.3
10	16	8.4	8.1	8.7
12	14	9.3	8.6	9.5
12	16	9.9	9.4	10.1
14	16	11.4	10.6	11.5

In the ſame manner it may be made to appear, that the other rules for three joint lives, and the longeſt of two or three lives, are likewiſe very near the truth; but I ſhall content myſelf here with giving one or two inſtances, in annuities upon three joint lives. Let there be three equal lives, and the value of an annuity upon each of them 14 years purchaſe, and intereſt at 4 per cent. then will the value of the joint lives, by Tab. IV. come out 8.3, but, by the two hypotheſes, 7.3, and 8.5, reſpectively. Again, let the lives be ſuppoſed very unequal, ſo as to be worth 6, 10, and 16 years purchaſe, then will the value of the joint lives be, by the general rule, 4.5, but, according to the hypotheſes, 3.84, and 4.63; which examples, agreeing ſo well with each other, and with what has been aboveſaid, tend greatly to evince the accuracy of the rules, or, at leaſt, to ſhew that they are conſiſtent with the table of obſervations. Simpſon's Annuities upon Lives.

MOSKITO COUNTRY, is ſituated in North America, between 85 and 88 degrees of weſt longitude, and between 13 and

13 and 15 degrees of north latitude; having the North Sea on the north and eaſt; Nicaragua on the ſouth; and Honduras on the weſt; and, indeed, the Spaniards eſteem it a part of the principality of Honduras, though they have no colonies in the Moſkito country. When the Spaniards firſt invaded this part of Mexico, they maſſacred the greateſt part of the natives, which gave thoſe that eſcaped into the inacceſſible part of the country an inſuperable averſion to them; and they have always appeared ready to join any Europeans that come upon their coaſts, againſt the Spaniards, and particularly the Engliſh, who frequently come hither, and the Moſkitonien being excellent marksmen, the Engliſh employ them in ſtriking the maratee fiſh, &c. and many of the Moſkito Indians come to Jamaica, and ſail with the Engliſh in their voyages.

REMARKS.

Theſe people are ſo ſituate between moraſſes and inacceſſible mountains, and a coaſt full of rocks and ſhoals, that no attempts againſt them by the Spaniards, whom they mortally hate, could ever ſucceed. Nevertheleſs they are a mild inoffenſive people, of great morality and virtue, and will never truſt a man who has once deceived them. They have ſo great a veneration towards the Engliſh, that they have ſpontaneouſly put themſelves and their lands under the protection and dominion of the crown of England. This was firſt done when the duke of Albemarle was governor of Jamaica, and the king of the Moſkitoes received a commiſſion from his grace, under the ſeal of that iſland; ſince which time, they have not only been ſteady in their alliance with the Engliſh, but warm in their affections, and very uſeful to them on many occaſions.

When their king dies, the next male heir goes to Jamaica, to certify that he is next in blood, and receives a commiſſion in form from the governor of Jamaica to be king of the Moſkitoes, 'till which he is not acknowleged as ſuch by his countrymen. So fond are theſe people of every thing that is Engliſh, that the common people are proud of every chriſtian or ſurname given them by our ſeamen, who honour their chief men with the titles of ſome of our nobility.

Quere, Might not ſome valuable ſettlements be made by the Engliſh among theſe people, that would produce logwood and other dyeing woods, and many valuable commodities beſides? See the article LOGWOOD.

MUNSTER, in Ireland. This province lies open to the Vergivian Sea on the ſouth and ſouth-weſt, and the Atlantic on the weſt; and is bounded on the eaſt and ſouth-eaſt with the Ocean and province of Leinſter; and, on the north, with the province of Connaught: it's circumference, including the great windings and turnings, is above 600 miles.

It enjoys a mild temperate air, has many excellent bays and havens, and rich towns, and the ſoil, in general, fruitful. It's commodities are cattle, wood, wool, and fiſh; of which laſt it abounds with all ſorts, eſpecially herrings and cod.

It is divided into the five counties following, viz.

I. WATERFORD county, which has Wexford on the eaſt; Cork on the weſt; the ocean on the ſouth; and the river Shure on the north, by which it is parted from Kilkenny and Tipperary. In ſome parts it is pleaſant and fruitful, but moſtly mountainous, and of a barren coarſe ſoil.

WATERFORD is as conveniently ſeated for trade as any port in the world; it has a good harbour, and ſhips of burthen come up cloſe to it's fine key, though it is a good diſtance from the ſea, Gallway contends with this city for priority, and claims the preference as to trade; though, as Waterford outdoes it in bulk and people, ſo it is thought it does in commerce; particularly Waterford drives a very great trade with England, which Gallway cannot have, by reaſon of it's ſituation.

DUNGARVAN ſtands upon a bay of it's own name, with a narrow tide haven, and a commodious road for ſhips; but it is a town of no conſequence, and of little buſineſs.

TALLAGH is a handſome flouriſhing town, in a fine fruitful vale, near the river Bride, which being navigable from hence to Youghal, renders this a place of good trade.

II. The county of CORK, has Waterford on the eaſt; Kerry on the weſt; Limeric on the north; and the Vergivian Ocean on the ſouth. It is partly woody and mountainous, and partly fenny, yet has many good towns, abounds in fine rivers and good harbours, is both rich and populous, and the inhabitants induſtrious. A copper mine was lately diſcovered near Cork, which is likely to turn to very good account.

The firſt conſiderable ſea port, next to Waterford, is YOUGHAL, or YOUGHIL, a place of good trade, at the mouth of the Broadwater. The convenience of the harbour, which has a good well-fenced key, and the fertility of the adjacent country, draws ſo many merchants hither, that the town is pretty populous and rich.

CORK is a fine, large, populous, and wealthy city, being thought the richeſt in Ireland except Dublin. The town ſtands up the river, about 15 miles from the ſea, where the mouth of the harbour is two miles broad. The great ſhips generally ride at a place called Paſſage, about ſix miles below the city; but ſmaller veſſels come quite up to the key. It is the chief port for merchants buſineſs in the kingdom; and there is more beef, butter, and tallow ſhipped off here, perhaps, than in all the other ports put together, as well for our own colonies as for France, and the butter for Flanders and Holland in particular. This occaſions a great reſort of ſhips always to this port, particularly thoſe bound to Jamaica, Barbadoes, and all the Caribbee Iſlands, which put in here to complete their lading.

KINSALE is a populous and rich town, in a fruitful ſoil, near the mouth of the river Bann, or Bandon, with a trade the moſt conſiderable of any on this ſide of the iſland, next to Cork. Many good ſhips belong to it, and a great quantity of proviſions is exported from hence to Flanders, Holland, France, and the Engliſh iſlands in the Weſt-Indies. It has an admirable harbour, and a good bay without it.

DOWNHAM's BAY, ſo called from a neighbouring village, is a large and commodious retreat for ſhips in a ſtorm, and lies on the north ſide of the Miſſen-Head.

III. The county of KERRY, has that of Cork on the ſouth and eaſt; Limeric on the north; and the Atlantic Ocean on the weſt.

TRAILEY is a thriving corporation, and the ſhire-town; it ſtands on a bay of the ſame name.

DINGLE has a good harbour, very convenient for trade; the bay near it is one of the largeſt in Ireland, and has ſeveral harbours.

MAIR, or KILMARE river, is a bay on the ſouth-eaſt corner of the county, which is a ſafe harbour for the greateſt ſhips.

KILLARNY is a thriving pretty market-town, near which is a conſiderable lead mine.

IV. The county of LIMERIC has Tipperary on the eaſt; Cork on the ſouth; part of Tipperary on the north; and Kerry on the weſt. It is fruitful in all ſorts of corn and rape, has a large breed of cattle, and is well inhabited, but has few remarkable towns.

The city of LIMERIC ſtands on the Shannon, which is navigable very near to it for ſhips of burthen, though it ſtands almoſt 50 miles within the point called Loupſhead. It is a rich and populous city. Though here are ſome merchants to whom belong ſhips, it is not ſo famous for it's wealth as it's ſtrength. The chief trade it uſed to drive was to France, but a pernicious one to the fair trader, viz. the carrying out wool, and bringing in wine and brandy by ſtealth.

V. The county of TIPPERARY is bounded on the weſt with that of Limeric; on the eaſt with Queen's county and Kilkenny; on the ſouth with thoſe of Cork and Waterford; and, on the north, with King's county. The ſouth part is fruitful, and well inhabited; the weſt is well watered, and both abound in good paſtures, and furniſhed with the greateſt and beſt flocks in Ireland; the north part is barren and mountainous.

CLONMELL is a rich and populous town, with a market of good reſort, on the river Shure.

MUSÆUM, originally ſignified a place in the palace of Alexandria, which took up a fourth part of the city; ſo called, as being deſtined to the Muſes, and the Sciences. Here were lodged, in colleges, a great number of learned men, who were of various ſects, and applied to different ſciences; and each college had a handſome revenue appropriated to it.

The Aſhmolean Muſæum, at Oxford, is a magnificent pile, erected at the expence of the univerſity, for the promotion of ſeveral parts of curious and uſeful knowlege.

The muſæum of the late Sir Hans Sloane, Bart. contains a great variety of the production of nature and art, and has been lately purchaſed by the public, for the benefit of the nation; and, as it may be rendered of no leſs general benefit to trade, than to the advancement of natural knowlege, and experimental philoſophy, our readers may not be diſpleaſed if we give a genuine account of

The NAMES and NUMBERS of the ſeveral things contained in the MUSÆUM of Sir HANS SLOANE, Bart.

The library, including about 347 volumes of drawings and illuminated books, 3516 volumes of manuſcripts, together with the books of prints, conſiſts of about 50,000 volumes.

Medals and coins, antient and modern, about	32,000
Antiquities, viz. urns, inſtruments, &c.	1,125
Seals, &c.	268
Camea's and intaglio's, &c. about	700
Precious ſtones, agates, jaſpers, &c.	2,256
Veſſels, &c. of agates, jaſpers, &c.	542
Cryſtals, ſparrs, &c.	1,864
Foſſils, flints, ſtones, &c.	1,275
Metals, mineral ores, &c.	2,725
Earths, ſands, ſalts, &c.	1,035
Bitumens, ſulphurs, ambers, ambergreeſe, &c.	399
Talcs, micæ, &c.	388
Teſtacea, or ſhells	5,843
Corals, ſponges, &c.	1,421
Echini, echinites, &c.	659
Aſteriæ, trochi, entrochi, &c.	241
Cruſtacea, or crabs, &c.	363
Stellæ marinæ, &c.	173

Fiſhes,

Fiſhes, and their parts - -	1,555
Birds, and their parts; eggs and neſts of different ſpecies, - - -	1,172
Vipers, ſerpents, &c. - - -	521
Quadrupedes, &c. - - -	1,886
Inſects - - - -	5,439
Humana, as calculi, anatomical preparations, &c.	756
Vegetables, as ſeeds, gums, woods, roots, &c.	12,506
Hortus ſiccus, or volumes of dried plants -	334
Miſcellaneous things, natural, &c.	2,098
Pictures and drawings, &c. framed - -	310
Mathematical inſtruments - - -	55

All the above particulars are entered and numbered, with ſhort accounts of them, and references of ſeveral writers who have heretofore wrote about them, in 38 volumes in folio, and eight in quarto.

Remarks.

Nature, and all her wonderful productions, having ever been looked upon by the wiſeſt and beſt men as the great book of God, it becomes a duty incumbent on mankind to read and ſtudy that book, which we are aſſured can never miſlead or deceive, if we are happy enough to underſtand it.

Natural hiſtory deſcribes numberleſs of the productions of nature, which the various parts of the known globe afford; and thoſe who have judiciouſly collected any variety of particulars in the foſſil, vegetable, and animal kingdoms, have contributed to render this divine book [the univerſal ſcripture of the Supreme Being] the more intelligible: and thoſe who have modeſtly ſtudied to underſtand the qualities and uſes of but few of theſe infinite productions, have conſpicuouſly diſcovered the digitus Dei in whatever exiſts throughout the whole creation: and ſuch ſearchers into the works of the Almighty, have not only contributed to give mankind in general more juſt and exalted ideas of the firſt cauſe, but have themſelves generally proved the moſt uſeful, the wiſeſt, and beſt of men, and their great example has influenced numbers to follow it.

So wonderfully numerous are the diſtinct particulars of univerſal nature, that I can hardly think we have yet made any great progreſs in her alphabet; and much leſs do we know, I am afraid, of her ſyllables and ſentences; for, 'till we well underſtand our chriſt-croſs-row, we ſhall not be able to read to any great purpoſe.

What I would be underſtood to mean by the alphabet of nature, is not only the numberleſs diſtinct ſpecificated matters of nature, but the real properties and qualities of ſubjects; for it is not the mere collection of the works of nature, that will afford juſt ideas of their inherent excellencies, and, therefore, we ſhall ever be at a loſs thoroughly to underſtand their uſefulneſs, unleſs we are equally aſſiduous to comprehend the properties of particulars, becauſe, without that, we ſhall always remain ignorant of their general uſes.

The little knowlege we have of this kind ſeems to be included under the two articles of agriculture and medicine; for in thoſe arts there may be ſome ſmall degree of certainty, upon ordinary occaſions; but, if any thing extraordinary happens, how are the wiſeſt baffled and confounded? The greateſt phyſicians confeſs their ignorance in the infallible cure of diſeaſes, the greateſt philoſophers own their inſufficiency to prevent a blight, and thereby preſerve nature's productions againſt natural inclemencies, &c.

If therefore, we could exhibit to one view, on the ſurface of the earth, all ſubterranean productions within her bowels; if we had before us all vegetable nature, from the hyſſop on the wall to the cedar of Lebanon; if the myriads of animals were collected together into one ark: if nature was thus ranged, as it were, in array before us, for contemplation, ſhould we not rather be loſt in aſtoniſhment, at the unſpeakable variety, than be able, by MERE INSPECTION, to judge rightly of the qualities of the ſimpleſt and moſt contemptible matter before us? We might, perhaps, by racking our brains for ages, make ſhift to give names in all languages to a few of thoſe wonders; but what advance would this be to the diſcovery of their general virtues and uſes throughout all nature? We are delighted with the ſight of a diamond of the firſt water and magnitude, and may uſe it as an external ornament; ſo we may be pleaſed with the appearance of gold, which too much captivates us all; but to look upon theſe things in a trafficable light only, and as they are ſubſervient to the mere grandeur of life, is highly undervaluing theſe objects of nature.

It is true, one principal uſe of theſe collections is, the conſideration of their being objects of traffic; but, if their natures and qualities were more ſtudied, as their uſes to mankind would multiply in proportion, the ſame objects would adminiſter an infinite greater variety in point of commerce.

But, notwithſtanding all thoſe collections that have hitherto been made, in all repoſitories both at home and abroad, we have grounds to believe that very much more matter, which has been yet unhandled, may ſtill be brought to light, even in the moſt civil and moſt peopled countries; whoſe underground treaſures have been accurately pried into, whoſe cities, iſlands, rivers, and provinces, have been deſcribed by the labour of geographers: it is not to be doubted, we conceive, but ſtill there may be an infinite number of creatures over our heads, round about us, and under our feet, in the large ſpace of the air, in the caverns of the earth, in the bowels of mountains, in the bottom of ſeas, and in the ſhades of foreſts, which have hitherto eſcaped all mortal ſenſes. In this the microſcope alone is enough to ſilence all oppoſers. Before that was invented, the chief help that was given to the eye by glaſſes was only to ſtrengthen the dim ſight of old age; but now, by the means of that excellent inſtrument, we have a far greater number of different kinds of things revealed to us than were contained in the viſible univerſe before; and even this is ſcarce yet brought to perfection.

As a trading nation, we cannot be too aſſiduous in ſearching after theſe productions of nature, which will afford objects of traffic in any ſhape, or materials for the improvement of the old, or the invention of new manufactures.—But the mere external form of things does not always ſignify to us what properties they may have, and in what variety of caſes they may be importantly, beautifully, and profitably applied.—There is no great matter, therefore, to be learned by theſe productions, by mere inſpection only; and the greateſt repoſitory would prove of little benefit to the community, if it is to be conſidered only as a raree ſhow, or for the virtuoſo to ramble over, and merely to repeat the names of, as if he was really knowing in all the qualities, uſes, and applications of theſe things in nature, which he affects to be ſo familiar with.—The natural hiſtorian, and the collector of nature's works, are very ſerviceable, as they bring the objects of creation to light, which otherwiſe might remain for ever hid from our view.—Wherefore the mere naturaliſt, who ſtudies nature no further than her outſide, is not the moſt uſeful philoſopher; ſuch an one would ſcarce be inſtrumental to the breeding of a lapidary or a ſmith, much leſs to the inventing of new manufactures or new arts, to the advantage or delight of mankind. A Bacon, a Boyle, a Boerhaave, would look upon the objects of nature with a far different eye to what the mere external naturaliſts do; they only burthen their memory with the names of things, and affect to be knowing in them; whereas the others would inform us of the qualities and beneficial applications thereof in all reſpects, and ſhew themſelves to be thoroughly knowing, while the others only pretended to be ſo. Such may dub themſelves with the titles of connoiſſeurs and virtuoſoes, and make great parade of their extraordinary knowlege; but when we enquire of what uſe they have been to ſociety, what valuable diſcoveries they have made in nature to benefit mankind, their talents to the community are far leſs ſerviceable than thoſe of the loweſt mechanic.

What I would infer from hence is, that thoſe repoſitories we have for the productions of nature are made a very mean and a ſcandalous uſe of, if they are maintained with great ſhew and expence, only for the amuſement of the uſeleſs and ſuperficial virtuoſo. However, we have great reaſon to believe that this will not be the caſe of the Sloanean Muſæum, lately purchaſed by the public, for the public uſe and advantage, it being under the direction and management of ſo many honourable perſons, and eſpecially many of thoſe of the Royal Society, who have given teſtimony of their talents to make uſeful and important experiments upon the works of nature, for the benefit, delight, and ornament of mankind.

Nor are the collections with regard to the works of art to be leſs attended to in a commercial ſtate, than thoſe of nature; for having all curious machines, &c. ranged with relation to every diſtinct mechanic and manufactural art, and proper admiſſion given to all artiſts, or improvers of art, they might, from narrowly inſpecting thoſe that had been invented, make either conſiderable improvements thereupon, or from thence derive ſuch notions as might enable them to diſcover new ones of divers kinds.—But, as we ſhall have occaſion to ſpeak more at large upon this point, under the article ROYAL SOCIETY, we refer the reader thither.

The PRACTICAL BUSINESS of the CUSTOM-HOUSE continued.

WITH reſpect to MALT, ſee the article CORN.

MALT imported from beyond ſea, forfeited, or the value, purſuant to the annual malt act.

The bounty is to be allowed after the rate of thirty quarters, and no more, for every twenty quarters of barley, or other corn or grain entered and made into malt, for exportation; as ſhall appear by certificate from the proper officer, with whom the corn or grain, intended to be made into malt for exportation, was entered. 3 Geo. II. cap. 7. §. 14, 15.

Relanded in Great-Britain is forfeited, with treble the value, beſides the penalty of the bond. 3 Geo. II. cap. 7. §. 15. and ſince continued yearly with the malt act.

WITH REGARD TO MARINERS.

MARINERS. No mariner, or perſon, ſerving on board any privateer, or trading veſſel, employed in any of the Britiſh ſugar colonies in America, or being on ſhore there, or at ſea in any of thoſe parts, ſhall be liable to be impreſſed by any officer belonging to a man of war (unleſs ſuch mariner ſhall have deſerted from ſuch ſhip of war) under the penalty of 50l. 29 Geo. II. cap. 30. §. 1.

Every maſter of a trading veſſel or privateer in thoſe parts, before he receives any mariners into his ſervice, is to make diligent enquiry, whether ſuch mariner hath deſerted from any of his majeſty's ſhips of war; any maſter receiving a mariner who hath deſerted, without reaſonable endeavouring to diſcover the ſame, to forfeit 50l. 29 Geo. II. cap. 30. §. 2.

Every maſter of ſuch trading veſſel or privateer, before departure from any port in the ſaid ſugar colonies, is to deliver to the chief officer of the cuſtoms an exact liſt of all his men, containing names, ages, and deſcription of perſons; neglect thereof, the maſter to forfeit 10l. for each man ſo omitted; the officer of the cuſtoms to return to the ſaid maſter an atteſted copy of ſuch liſt: on the death or alteration of any ſeaman, ſuch liſt to be immediately altered accordingly, and delivered to the naval officer, or chief officer of the cuſtoms in any port where the ſhip may arrive. All ſuch liſts to be produced, and ſhewn to the captains and other officers of his majeſty's navy. 29 Geo. II. cap. 30. §. 3, 4. For more matter hereon, ſee our article MARINERS.

OF MEDITERRANEAN PASSES at the Cuſtom-Houſe.

MEDITERRANEAN PASSES. Counterfeiting, altering, or eraſing them, or knowingly uttering or publiſhing ſuch counterfeited, altered, or eraſed, paſſes, is felony without benefit of clergy. 4 Geo. II. cap. 18. §. 1.

OF MERCHANTS AT THE CUSTOM-HOUSE.

MERCHANTS put out of their turns, without expreſs order or approbation of the ſuperior officers, penalty double coſts and damages. 13 and 14 Car. II. cap. 11. §. 34.

One of the bills of every entry inwards and outwards muſt, in order to prevent the colouring of ſtrangers goods, be ſubſcribed by the MERCHANT, his own ſervant, factor, or agent, with the mark, number, and contents of every parcel of ſuch goods, as are rated to pay by the piece or meaſure, and the weight of the whole parcel of ſuch goods as are rated to pay by the weight. 13 and 14 Car. II. c. 11. §. 10.

Cockets, or certificates outwards, to be in the MERCHANT's poſſeſſion, after he has paid the duty, till he ſhips his goods, and then to be delivered, with the marks and numbers to the ſearchers. See rule 25, at the end of letter A. See alſo latter end of letter G, and ditto of S, and ditto of P.

N.

NAPLES, a kingdom of Italy, and by far the largeſt ſtate there. It is bounded on the north ſide by the Adriatic Sea, on the ſouth by the Tuſcan, on the weſt by the Eccleſiaſtial State, and on the eaſt by the mouth of the Adriatic and the Mediterrancan.

The air, ſoil, &c. are extremely delightful and excellent in moſt places, and the country in general is very rich, fertile, and well watered with rivers and ſprings, which flow through it from both ſides of the Apennines; theſe rivers are, indeed, commonly ſo rapid, that they may rather be called torrents. The land produces excellent wines, eſpecially that emphatically called lachrymæ Chriſti. They have likewiſe in ſeveral parts, plenty of corn, oil, rice, and pretty good paſture; and the Neapolitan horſes are in no ſmall requeſt. Their almonds, olives, figs, citrons, oranges, granates, grapes, and other fruits, are very good, and in great plenty; and ſo is their flax, hemp, pulſe, aniſe, coriander, and other ſeeds. The air is, indeed, in ſome places, exceſſively hot, eſpecially on the ſouth ſide of the Apennines, where the mountains reflect the ſun's heat with ſuch vehemence, that it is hardly to be borne in the three or four hot months of the year, but the north ſide of them is quite temperate, healthy, and delightful. They are ſometimes annoyed with the locuſt.

The far greater part of the provinces into which this kingdom is divided, have an advantage peculiar to themſelves. For inſtance, the air of the hither principality, is ſo ſerene and healthy, that people live in it to a prodigious age; and the farther principality abounds in cattle more than any other, and all it's fruits are excellent. The Baſilicate is famed for it's fine ſaffron, honey, and wax; Calabria for it's plenty of good manna; and the hither, for corn, wines, and mulberries, and the farther for it's fine honey and beautiful horſes. Otranto is ſaid to produce as much oil, as would ſupply all Italy. Moliſe abounds with ſuch quantity of veniſon, that it ſells cheaper there than beef or mutton. The territories of Lavoro, Campania, and ſome others, are bleſſed with ſo rich a ſoil, and excellent temperature, that they produce the ſame flowers twice a year. The Abruzzo, eſpecially the hither, beſides being the cooleſt part of the kingdom, produces great quantity of corn, wines, oil, and ſaffron. The other three provinces not only come ſhort of all thoſe conveniences mentioned in the reſt, but have, moreover, ſome grievous diſadvantages peculiar to them: as in the Capatmate the ſoil is dry, ſandy, and in many places barren, and the climate unhealthy: in Apulia the heat is ſo exceſſive, and the people and cattle plagued with ſuch ſwarms of venomous flies, that it is ſcarce inhabitable. In the province of Bari the air is pretty temperate, but the people are greatly infeſted with ſcorpions, vipers, and ſerpents, eſpecially the tarantula, which renders their territory as uncomfortable as that of Apulia.

Of the COMMERCE of NAPLES and SICILY.

Naples, the capital of the kingdom of the ſame name, is a very conſiderable trading city, and the goodneſs of it's port draws thither a great quantity of foreign ſhipping: they are daily, under the preſent reign of Don Carlos, endeavouring to render the ſame more and more grand and magnificent: it's principal trade conſiſts in divers ſorts of ſilk ſtuffs, raw ſilk, knit ſilk ſtockings and waiſtcoats, ſuch whoſe clocks are of ſilver and gold, oils of various ſorts, ſulphur after the Calabrian manner, roſemary flowers, anniſeed and coriander ſeed, dried raiſins, raiſins of Corinth, figs and olives, tartar, ſoap, dried orange and citron peels, eſſences and quinteſſences of all kinds.

The weight of Naples is called rottolo, and is of two kinds, as that of Lucca, but of different weight.

100 rottoloes great weight, make a little more than 185 pounds $\frac{1}{2}$ at Paris and Amſterdam, and 100 rottoloes ſmall weight, make but 65 $\frac{3}{5}$ pounds in thoſe two cities; ſo that 100 pounds in Paris and Amſterdam, make but 54 rottoloes great weight, and 152 ſmall weight.

The canne is the meaſure for ſilk and woollen ſtuffs; the canne is 8 palms, 100 cannes or 800 palms make 310 ells of Amſterdam, and 30 cannes $\frac{1}{2}$, or 258 palms $\frac{1}{3}$ of Naples.

The palm at Amſterdam makes $\frac{3}{8}$ of an ell, and four lines French royal meaſure, and the canne three ells $\frac{1}{8}$ and ſix lines leſs, of the ſame meaſure.

Corn, and other grain, are ſold by the carro, of 36 tomoli, being 40 rottoloes great weight; one carro and a half, or 54 tomoli, make a laſt of Amſterdam.

They keep their accounts in ducats, tarins, and grains; the ducat is five tarins, and the tarin 20 grains: thus the ducat of the kingdom is 100 grains, and 12 piccioli the grain; there are alſo carlins, 10 of which make one ducat.

All bills of exchanges between Amſterdam and Naples are negociated by the way of Leghorn, Venice, or Genoa. The par of exchange with Genoa is 118 ducats per 100 piaſtres of eight rials, bank money, or four livres 10 ſols of Genoa, bank money, per ducat.

REMARKS.

A treaty of peace, commerce, and navigation, concluded at Conſtantinople the 7th of April, 1740, between the kingdoms of Naples and Sicily, and the Ottoman Porte, by Chevalier Finochietti, miniſter plenipotentiary of his Neapolitan majeſty to the Porte.

Art. I. All trade ſhall be free between the ſubjects of the contracting powers, and it ſhall be permitted to them to trade with the ſame liberty and privileges as all other allies in friendſhip; to ſell their merchandizes, repair damages ſuſtained by their ſhipping at ſea, or other accidents, and purchaſe proviſions, &c.

II. Our ſubjects and their ſhipping ſhall pay, in all the ports of the Ottoman empire, 3 per cent. at the cuſtom houſe, as well as the other duties paid by other powers; and the ſubjects and ſhips of the ſublime Porte ſhall, in our dominions, pay the ſame duties, and in the ſame manner, as thoſe of other powers do.

III. Our miniſter reſiding at the Porte ſhall be allowed to eſtabliſh conſuls in all the ports and maritime places of the Ottoman empire, and be granted all prerogatives and franchiſes due to his rank, and our conſuls interpreters, and thoſe dependent on them, ſhall have the ſame privileges that other nations enjoy.

IV. In caſe of the death of any merchant, or other of our ſubjects, in what place ſoever of the Ottoman empire, his effects ſhall not be confiſcated, nor ſhall any one ſeize or poſſeſs themſelves thereof; but the effects of the deceaſed ſhall be remitted to our miniſter or conſuls, to be diſpoſed of according to the will of the deceaſed; and, if he died inteſtate, to the partners of the deceaſed reſiding in the ſame place: and, if there be no conſuls or partners in the place, his effects ſhall be intruſted with the judge of the place commonly called the cadi, who ſhall afterwards remit the whole to ſuch perſon as our miniſter at the Porte ſhall appoint, and nothing ſhall be paid to the cadi but what is called the reſmi: the ſame ſhall be practiſed towards the trading ſubjects of the Ottoman empire.

V. If any diſpute, or law-ſuit, happens between our conſul and interpreters, and the ſum amounts to 4000 aſpers, the ſuit ſhall not be brought before any tribunal of the provinces, but be referred to the ſublime Porte. Merchants, and other of our ſubjects, or thoſe who ſhall be under our banner, who have any law-ſuits or controverſies with thoſe of the Ottoman Porte, be it on account of the ſale, purchaſe, or any other negociation of merchandizes, or for whatever other reaſon, ſhall be obliged to have recourſe to the judges: if none of their interpreters be preſent, the judges ſhall not receive the information, nor determine the affair; and, if the debts or ſecurities are not legally proved by authentic vouchers, the debtor ſhall not be moleſted. If any differences happen between our merchants, they ſhall be examined and determined by our conſuls and interpreters, according to our law and ordinary conſtitutions. And the like practice ſhall be followed towards the ſubjects and merchants of the Ottoman empire who may reſide in our dominions.

VI. The Ottoman Porte ſhall be allowed to eſtabliſh in our territories an attorney general, commonly called ſuch Lender,

for

for the ſecurity and protection of their trading ſubjects who ſhall reſide in our dominions, and he ſhall dwell at our capital of Meſſina.

VIII. Pilots, and others ſkilful in the art of navigation, being in our reſpective ports, ſhall give, as ſoon as required, all aid and aſſiſtance to ſhips that have ſuffered by a tempeſt; and the merchandizes, ſhipwrecks, and other effects, belonging to thoſe that have been caſt away, ſhall be intruſted to the moſt neighbouring conſuls, to be afterwards reſtored to the maſters of ſuch ſhips.

XIII. No perſons, merchandizes, or effects, belonging to our ſubjects, or thoſe under our banner and protection, ſhall be moleſted, unleſs they have been engaged with the corſairs, enemies of the Ottoman empire, or inliſted into their ſervice; but they ſhall be permitted to paſs freely with their effects. And, in caſe a ſhip provided with our licence, happens to be taken by a corſair of the Ottoman empire, the merchandizes, ſubjects, and effects ſhall be reſtored.

XV. If any of our ſubjects be catched in a contraband trade, they ſhall be uſed no worſe than the ſubjects of other nations are upon the like occaſions. Our merchants ſhall, in their way of traffic, make uſe of ſuch brokers as they think fit; and whoſoever forcibly interferes therein, ſhall be ſeverely puniſhed. Our ſhips ſailing to the ſcales of the Levant, or to the ports of the Dardanelles, ſhall not be ſearched otherwiſe than thoſe of other friendly powers.

XVI. Ships belonging to the Ottoman empire ſhall not be purſued or moleſted in the ſight of our coaſts; nor ſhall they purſue or moleſt thoſe in friendſhip with us.

XVII. The ſublime Porte ſhall ſtrictly forbid all her ſubjects, eſpecially thoſe of Dulcigno, Albany, or others, ſailing, from committing any hoſtilities againſt our ſhips or veſſels of any kind; which, on the contrary, ſhall be received as friends in all the ſcales and ports of the Levant; and thoſe nations ſhall be permitted to trade freely in our dominions.

The ſublime Porte ſhall communicate theſe articles to the regencies of Algiers, Tripoli, and Tunis, and they ſhall take all proper meaſures to regulate a free and unmoleſted commerce and navigation between our kingdoms; and there ſhall be ſent, as well on the part of the Porte as of ours, a miniſter, who ſhall jointly treat upon the plan of the preſent articles.

XVIII. It ſhall not be permitted, in time of war, to arm foreign veſſels in the reſpective ports of the contracting powers, nor any privateers to take out commiſſions to ſerve under the banner of the enemy. In caſe one of theſe veſſels are taken, the commander, as an example to others, ſhall be hanged at the maſt of his ſhip, which alſo ſhall be good prize, with all her effects, and the ſailors ſhall be enſlaved.

Neither the one or the other of the contracting potentates ſhall grant commiſſions but to their own ſubjects, or to thoſe who are ſettled in their ſtates.

XIX. Our miniſter and conſuls ſhall be allowed to demand the ordinary duty of conſulage on all the merchandizes which pay the duty of cuſtom, and which are imported under our banner, in the ſame manner as it is demanded on the part of other friendly powers; nor ſhall our ſubjects be hindered from loading merchandizes on board their ſhips, except, nevertheleſs, powder for cannon, arms, and other contraband goods.

XX. The ſale and purchaſe of merchandizes ſhall be carried on by our ſubjects, and thoſe who are under our protection, in the ſame manner as thoſe of other powers in friendſhip do. They ſhall not be obliged to uſe other monies than thoſe which are generally current, nor ſhall any duty but what is common be required on the exportation of monies.

XXI. Any ſhip loaded and ready to depart, ſhall not be detained on account of any intended law-ſuit, but the diſpute ſhall be determined without delay by the conſul.

Our ſubjects ſhall be treated in all caſes expreſſed, or otherwiſe, in this treaty, in the ſame manner as thoſe of all other nations in friendſhip with the Porte.

If we cannot prevent the veſſels of Malta, of the Pope, of the Genoeſe, and thoſe of the Inquiſition of Spain, with commiſſion from his Catholic majeſty, from ſailing in the Archipelago, we will give advice thereof to the Porte by writing, that they may take their meaſures in conformity. This article ſhall be inſerted in the treaty. See LEVANT TRADE.

Of SICILY in particular belonging to the kingdom of Naples.

SICILY, the largeſt of the Italian iſlands, is ſituate between 12 and 16 degrees of eaſt longitude, and between 37 and 39 degrees of north latitude, being about 170 miles long, and 100 broad. It lies in a warm, but pleaſant and healthful climate. It is ſeparated from Calabria in Italy only by the ſtraight or faro of Meſſina, which is not ſeven miles over in the narroweſt part; but from Meſſina on the coaſt of Sicily, to Reggio on the continent, which is the uſual paſſage, it may be 12 or 15 miles over. The country is divided into mountains and vallies, in which there are abundance of ſprings and rivulets, that make both hills and vallies exceeding fruitful, and which occaſioned it's being called the granary of Rome. The produce of the iſland is corn, wine, oil, ſilk, and excellent fruits, of which they export great quantities, but chiefly in foreign bottoms; their preſent monarch, of French extraction, applies himſelf with great diligence to increaſe their ſhipping and foreign commerce, and has opened a trade with Turkey, which they never had before, being, like the Spaniards, perpetual enemies to the Turkiſh empire.

Mount Ætna in this iſland is a vulcano, which, by it's fiery eruptions and earthquakes, has overturned ſeveral of their cities, particularly thoſe of Syracuſe and Catania, on the caſtern coaſt of the iſland. This mountain is ſo high, that it is ſurrounded with a circle of ſnow towards the top, great part of the year; but, advancing a little further, we come to the grand vulcano, from whence there iſſues flame and ſmoak. This is a baſon, or cavity, about ſix miles in circumference, the ſides whereof are incruſted with ſulphur, from whence there ſometimes iſſues a pure flame; and the noiſe of this burning pit is inconceivably dreadful. This hill is much larger than mount Veſuvius in Naples, viz. about 70 miles in circumference at the bottom; and the eruptions from it have been more frequent and more terrible than thoſe of Veſuvius. The kingdom of Naples, as well as this iſland, was anciently called Sicily; whereupon Don Carlos has revived the former name, and ſtiles himſelf king of the Two Sicilies.

MESSINA is the greateſt trading city in all Sicily; the great trade carried on there in ſilk, and the good ſituation of it's port for all ſhipping from the Levant, draws thither a great number of foreigners, which makes the trade flouriſh. There was no appearance of it's loſing it's reputation, when it paſſed under new dominion, by the treaty of Utrecht; and the manufactures that the duke of Savoy eſtabliſhed at Turin, and in ſeveral places of his ancient territories, excited the jealouſy of the workmen of Lyons and Tours, and was prejudicial to the ſale of their fineſt ſtuffs.

But the revolutions in Sicily, occaſioned by the Spaniards invaſion thereof in 1717, and which afterwards, by the ceſſion of the duke of Savoy, paſſed under the dominion of the houſe of Auſtria, drew the foreign trade to Sicily, which was yielded to him by the treaties of Utrecht and Raſtadt.

Sicily changed maſters again in the year 1735, in favour of Don Carlos, his preſent Neapolitan majeſty, the ſon of Philip. V. king of Spain; and the trade of this iſland has greatly flouriſhed under his ſovereignty.

The greateſt part of the ſilk manufacturers dwell in the ſuburbs of Meſſina, which ſpreads itſelf along the ſea coaſt, on the ſide of the faro; and there is a very ſpacious place, encompaſſed with workhouſes, for the organzine ſilk, which is a very eſtimable branch of that manufacture.

The Genoeſe, Florentines, and Lucaſians, are chiefly maſters of the whole ſilk trade of Meſſina, which draws foreigners there in great numbers.

Another diſadvantage to foreigners attending this commerce, is, that the Meſſinians are principally their own factors, and will not ſuffer, as is done at other places, ſtrangers to ſettle there for that purpoſe; there are, notwithſtanding, ſome French and Engliſh families, and thoſe of other nations, who have houſes of trade among them.

The trade in linens of all ſorts, both for apparel and the table, imported, is very extenſive, and carried on with great facility for credit, the Italians having firſt introduced the cuſtom of trading generally on credit, at two, three, or ſix months for their imports, but ſell their own goods for ready money.

The payments for ſilk, and other merchandizes, is commonly made in Spaniſh rials, brought from Spain, Genoa, and Leghorn.

When the merchants do not chuſe to riſque ſpecie by ſea, they may take bills of exchange for Meſſina and Palermo, where you may eaſily draw for the fair of Novi in Genoa, with little diſadvantage; you may likewiſe occaſionally remit from Lyons to Novi, with ſome profit.

The chief trade of the city of PALERMO conſiſts in ſilk and ſilk manufactories, crude ſulphur, tartar, and fine ſponges; a great quantity of wheat alſo comes from thence, and many other parts of Sicily; from whence Marſeilles, and the greateſt part of the cities of Italy ſupply themſelves.

There comes from hence likewiſe a great quantity of manna.

The rottolo is the weight of Palermo; it is of two ſorts, the ſmall and the great weight; 100 rottoloes great weight make 141 pounds $\frac{2}{3}$ of Paris and Amſterdam, and 100 rottoloes ſmall weight make only 65 pounds of the ſame cities.

The canne is their long meaſure. It is divided into 8 palms; they meaſure ſilks and cloths indifferently therewith, which is not very cuſtomary in Italy: 100 cannes of Palermo make 287 ells $\frac{3}{4}$ of Amſterdam, and 100 ells of Amſterdam make 33 cannes $\frac{9}{25}$ of Palermo.

There are three meaſures for grain of all kinds, the ſalme, the tomolo, and the mandilo; 16 tomoli make the ſalme, and 4 mandiloes the tomolo.

10 Salmes $\frac{1}{7}$
117 Tomoli $\frac{3}{7}$ } make the laſt of Amſterdam. Savary.
685 Mandiloes $\frac{1}{3}$

A new memoir upon the general trade of Sicily, from Savary.

Their accounts in Sicily are kept in ounces, tarins, and grains; an ounce is worth 30 tarins, and the tarin 20 grains: beſides, there

there is a crown conſiſting of 12 tarins, or two crowns and a half, which make an ounce.

Formerly, the ounce was imaginary, nevertheleſs, while the Germans were maſters of that kingdom, they coined both ſilver and gold money, and the gold coin is current under the preſent government.

There are two kinds of weight in Sicily, the great and ſmall weight, both of which are called cantarre: the cantarre is compoſed of 100 rottoloes; the great weight is of 33 ounces; each rottolo of the ſmall weight has but 30 ounces, which makes a difference of 10 per 100; they reckon 100 rottoloes or cantarres ſmall weight, to a little leſs than 200 pounds of Marſeilles weight.

There is beſides the pound, which is compoſed of 12 ounces; ſo that two ounces and a half, make one rottolo ſmall weight, or two pounds $\frac{3}{4}$ make the rottolo great weight.

Their merchandizes commonly are ſold by the rottolo, and very little by the pound, among which are ſilk and ſome fine drugs. Thoſe which are ſold by the great weight are all ſorts of ſalt fiſh, cheeſe, and fruits: there are nevertheleſs ſome little towns, where the ſmall weight only is uſed.

The following coins are current in Sicily, beſides thoſe of foreign countries, viz.

All Portugal money: alſo the Spaniſh piſtole is worth 45 tarins, or one ounce and a half; the old French piſtole, and that of Savoy, is worth one ounce and 14 tarins, or 44 tarins. The French piſtole d'or ſol, is worth one ounce 23 tarins, and 10 grains.

The Venetian ſequin rupee being full weight, is worth 26 tarins, according to the order of the king; nevertheleſs, there is always an agio more or leſs, as they are wanted, which never advances beyond 26 tarins and a half. The other Venetian ſequins are worth 26 tarins, for which there is very ſeldom an agio. They take ſometimes the Genoeſe ſequins for 24 tarins, though they make ſome difficulty.

The Florentinea nd Hungarian ſequins are alſo current there, and are worth 25 tarins; very few of the firſt are ſeen there, becauſe there is ſome loſs in their importation.

The genouines are worth 17 tarins, the ducaton 14 tarins 8 grains, the philippes 12 tarins 16 grains, the lenternines 12 tarins, the roſe piaſtres 11 tarins and a half, the ſevillanes 12 tarins.

All the coins are weighed, and they pay what they are deficient, viz. 7 grains for a piſtole that wants a grain, and ſo in proportion; obſerving, that if they are too light by 12 or 15 grains, they are not paſſable. It is the ſame for ſilver coins, and they pay a grain for every two grains deficiency, but they generally refuſe to take them when they are not full weight.

Of the Measures of Sicily.

Corn is meaſured by ſalmes, the ſame as barley, large and ſmall beans, peaſe, and ſmall nuts. There are two kinds of ſalmes, the general ſalme, and the great ſalme, which differ from one another $\frac{1}{6}$; ſo that one great ſalme makes 1 and $\frac{1}{6}$ of the general ſalme; nevertheleſs, when it is ſpoken of ſalmes principally for corn, it is always underſtood the general ſalme, and if of the great ſalme it is explained; all pulſe is ſold by great ſalmes. The general ſalme makes 1 and $\frac{3}{4}$, or 100 general ſalmes make 175 charge at Marſeilles.

Oil is meaſured by caſſis, which weigh commonly 12 rotolloes $\frac{1}{2}$ great weight, and 5 caſſis and $\frac{1}{2}$ make the millerolle of Marſeilles. There are ſome places where it is ſold by the cantarre, and prices are fixed in proportion.

Wine is meaſured by the ſalme, but there are ſalmes of different qualities; the ſalme of Meſſina holds 126 meaſures, which are called cartouches, and weigh from 22 to 24 ounces. That of Syracuſa differs $\frac{1}{8}$, ſo that 1 ſalme and $\frac{1}{8}$ of Syracuſe makes 1 ſalme of Meſſina. There are ſome other different ſalmes, nevertheleſs theſe two ſalmes are made uſe of, in caſe of exportation, which commonly is done from Maſcali, Melazzo, Syracuſe, or the Faro of Meſſina, which are the places where they load, and the meaſure is different only at Syracuſe.

All the cloths, ſilks, and linen, are meaſured by the canne of 8 pans, each pan making 10 inches and 2 lines: the French ell makes 4 pans and $\frac{1}{2}$, and 3 Holland ells make a little leſs than one canne of Sicily.

Remarks.

The balance in Italy is thought to concern the intereſts of Great-Britain; [ſee the article Mediterranean] to which we have hitherto ſhewn a juſt and laudable regard; and, indeed, diſtance in this reſpect is of little conſequence, more eſpecially to a maritime power. Our commerce in the Mediterranean and in the Levant, is of very high importance, and we cannot but be ſenſible, that whatever alterations have been felt in the Italian balance, have likewiſe affected thoſe branches of our commerce in a very ſenſible degree; ſo that whatever ſteps we have taken, either during the continuance of peace by negociation, or in time of war, by ſupporting the only prince in Italy, who declared for the common cauſe, and was true to his own intereſts, which were likewiſe ours, were right and juſt meaſures, and have no doubt left thoſe impreſſions, which we hope will never be effaced by any arts or intrigues whatever.

The injuries our merchants not long ſince ſuſtained, and the great inſult offered to the nation by the corſairs of Barbary, will not allow us to doubt, that it is our true intereſt to keep the Italian ſtates firmly united to us, that when occaſion requires, they may afford us all the conveniencies in their power towards chaſtizing theſe infidel ſtates, as our uſing rigorous meaſures in ſuch caſes, and ſending a powerful fleet occaſionally into the Mediterranean, will contribute not a little to make us reſpected by the Italian potentates, as well as to obtain juſtice from thoſe pyratical governments, which is a thing ſcarce to be expected from milder meaſures. See the article Morocco.

In the Spaniſh war, in the year 1742, the Neapolitans experienced the weight of the naval power of Great-Britain. The behaviour of France in protecting the Spaniſh fleet occaſioned us to take every advantage we were able. The king of Naples had then joined his father's troops with his forces, which amounted to 20,000 men, and they were, in every reſpect, in much better condition than thoſe of Spain. It was, therefore, of great importance at this time to oblige the king of Naples to adhere ſtrictly to that neutrality which he profeſſed. For this purpoſe, admiral Matthews diſpatched captain Martin, as commodore, with a ſquadron of ſhips, with bomb-veſſels, and tenders, to the bay of Naples, with a meſſage from his Britannic majeſty, importing, that his Sicilian and Neapolitan majeſty, having violated his neutrality by joining his forces with the declared enemies of Great-Britain, of the queen of Hungary, and the king of Sardinia, with whom his Britannic majeſty was in alliance, he, the commodore, was ſent to require the king of Sicily, not only to withdraw his troops from acting in conjunction with thoſe of Spain, but to promiſe, in writing, not to give them any further aſſiſtance in any reſpect; adding, that if his Sicilian majeſty ſhould delay giving the propoſed ſatisfaction, he had orders to bombard Naples.—But the court of Naples thought proper to comply with the ſpirited demands of the Britiſh court. For it is incredible, into what a conſternation our fleet threw the capital of that monarch. The hiſtory, perhaps, of no country can parallel the quickneſs, the deciſion, and the importance of this expedition, which was undertaken with ſo inconſiderable a force, againſt a powerful prince, ſitting in his capital, and ſurrounded by 300,000 ſubjects. It is an illuſtrious proof, how unavailing the pride of the fineſt city in the world, is againſt the very frown of a people that has the command of the ſea. See Naval Power, and Sea British.

NATIONAL ACCOUNTANTSHIP.

Under the articles Accountantship, Banking, Debtor and Creditor, Ledger, Mercantile Accountantship, I have endeavoured naturally to introduce the reader into this uſeful art, by repreſenting the ſame in variety of familiar lights, with a view to ſhew him how it was applicable to every kind of buſineſs, from the moſt diſtinguiſhed merchant and tradeſman, to the private gentleman and greateſt nobleman.

If what we have ſaid under the ſeveral heads enumerated be duly attended to, and thoroughly comprehended, no gentleman of diſtinction can be at a loſs to underſtand, what may further be ſaid, in relation to the beſt method of keeping the Accounts of the Nation, the ſureſt way of unravelling any accounts of this nature, and diſcerning every kind of miſapplication of the public money, and every deſigned miſconſtruction of acts of parliament, in order to alienate the national funds from the real deſign of their primitive eſtabliſhment, and thereby to occaſion ſuch alteration in thoſe funds, that has defeated, or may hereafter defeat any the moſt wiſe and upright intentions of the legiſlature to maintain the public credit, and honourably to diſcharge the public debts. Nothing can more apparently ſhew the neceſſity of ſomething of this kind, than the great debates for many years together, both within doors and without, during the adminiſtration of the late Right Hon. Sir Robert Walpole, afterwards lord Orford, more particularly in regard to the application of the Sinking Fund, to other purpoſes than the redemption of the principal money-debt; for, had the primitive ſenſe of the acts of parliament been immediately ſignificantly explained, in the adjuſtment, regulation, and ſtating the public accounts of the nation, there could not have been a poſſibility of miſtaking the original meaning of the acts of parliament; for ſuch is the ſupreme excellency of the art of accountantſhip, that if the Money Affairs of the kingdom are juſtly and faithfully ſtated in the Public Accounts, according to the true and ſolid principles of that art, I will preſume to ſay that no ſuch-like intemperate debates could ever happen, as then did, the natural and priſtine cauſe of the riſe and eſtabliſhment of any fund could never be miſtaken, and no party feuds and animoſities take place among our repreſentatives, in their deliberations upon the nature of the funds, and the uſes and application thereof at all times, and upon all occaſions. And how this may be done, I intend one day to ſhew, and to do myſelf the honour muſt humbly to ſubmit a New Scheme of National Accountantship, to the conſideration

ſideration of the honourable houſe of commons. For the preſent I ſhall only refer to the article REVENUE [PUBLIC REVENUE].

NAVAL AFFAIRS. Not only the preſervation of that ſhare of commerce we poſſeſs, but it's future advancement, depend on the good condition and the wiſe regulation of our naval affairs, and not only ſo, but the very being of Great-Britain as an independent empire and a free people, depend upon the conſtant ſuperiority of it's maritime power.—We ſhould be held inexcuſable, therefore, if in a work of this kind, we paſſed over an article of ſuch high concernment to the intereſts of commerce.

Whoever would be fully informed concerning the figure which England has made in all ages in maritime affairs, may find abundance of curious matter in Selden's Mare Clauſum, and from his time to ours, we may trace a ſeries of facts, in Lediard's or Burchet's Naval Hiſtories. I ſhall take notice of two remarkable periods of our ancient maritime ſtory, becauſe ſome uſeful obſervations may be made in comparing them, both with other nations and with ourſelves, in our preſent ſituations.

We are told that Edgar, king of this iſland, had four thouſand ſhips; by the terror of which he ſubdued Norway, Denmark, all the iſlands of the ocean, and the greateſt part of Ireland. Theſe inſtances of his power, are ſpecified in a record * cited by that great lawyer Sir Edward Coke, in the preface to his fourth Report. This monarch made a naval progreſs yearly round this iſland, and once took it in his head to cauſe eight conquered kings to row his barge on the river Dee. But it ſeems that ſome of his ſucceſſors have had ſuch miniſters, as either neglected to keep our fleets in repair, or were afraid to make uſe of them: for, at ſeveral periods of time, ſince the days of king Edgar, we find that this kingdom has been miſerably inſulted on the ſeas, and even ſucceſsfully invaded by other nations.

* Altitonantis Dei largiflua clementia, qui eſt rex regum & dominus dominantium, ego Edgarus Anglorum Baſileus, omniumque inſularum oceani quæ Britanniam circumjacent, cunctarumque nationem quæ infra eum includuntur. Imperator & dominus, gratias ego ipſi Deo omnipotenti regi meo, qui meum imperium ſic ampliavit & exaltavit ſuper regnum patrum meorum qui licet monarchiam totius Angliæ adepti ſunt a tempore Athelſtani, qui primus regum Anglorum omnes nationes, quæ Britanniam incolunt ſibi armis ſubegit nullus tamen eorum ultra fines imperium ſuum dilatare aggreſſus eſt, mihi tamen conceſſit propitia divinitas cum Anglorum imperio, omnia regna inſularum oceani cum ſuis ferociſſimis regibus uſque Norvegiam, maximamque partem Hiberniæ cum ſua nobiliſſima civitate de Dublina Anglorum regno ſubjugare. Pref. to 4th. Co. See alſo Rapin's Hiſtory of England, in the life of Edgar.

The Britiſh Neptune ſlept, or ſlumbered, moſt part of the time, from the reign of king Edgar, to that of queen Elizabeth: in her days he ſprung up with vigour, being rouzed by Spain, which was then the greateſt maritime power on earth. From queen Elizabeth to our time, our naval ſtrength has gradually increaſed, inſomuch that at this day, the Spaniſh fleets oppoſed to ours, would make a very contemptible figure on the ocean: we now have it in our power to lord it over the watery world. It may be worth our enquiry, to know how theſe fluctuations have happened in the dominion of the ſeas.

The taſks and courſe of life of ſeafaring men are not to be learned in an inſtant; their employment is a laborious and dextrous employment, to be acquired only by application and induſtry. Money will buy all naval ſtores except mariners, but unleſs a ſucceſſion of them be preſerved, no wealth will be able to purchaſe them. The ſureſt, the cheapeſt, we may juſtly ſay, the only profitable method of ſupporting ſuch a ſucceſſion, is to have perpetual occaſion for a multitude of ſeamen in a courſe of foreign traffic. It is indeed probable, that Edgar's amazing power at ſea was, for the moſt part, owing to his own great genius, attended with indefatigable endeavours in training up, and year by year augmenting the number of his mariners; for in thoſe days, England had no great ſhare of foreign commerce, people generally contenting themſelves with the produce and manufacture of their native country. This great prince muſt, therefore, have grievouſly oppreſſed his vaſſals to enable him to keep up ſo great an armament; and it is no wonder that it dwindled in ſucceeding reigns, becauſe it had not that ſolid aliment, trade, to nouriſh it.

The ſucceſs of the Spaniards in America, cauſed their ſhipping to increaſe beyond all their neighbours; they had occaſion in their beginning there, for great numbers of tranſports, to carry not only men, but alſo horſes and other cattle, and ſtores of every kind, to their new conqueſts. Add to which that Sicily, and a great part of Italy belonged to them at that time. The communication with theſe laſt-mentioned places was by ſea, ſo that they had a conſiderable part in the increaſe of the Spaniſh naval power. In this flouriſhing condition they continued for a great part of the long reigns of their Philip the IId, and of our Elizabeth. She had not a fleet able to give their armada battle: her ſhips, indeed, were light and nimble, the Spaniſh, though larger and more numerous, were unwieldy; therefore the lighter veſſels being in no danger of a chaſe, fought or ſtood off as they ſaw occaſion. But this advantage would not have been ſufficient, if Providence had not interpoſed a tempeſt for the protection of England.

The queen knew to what cauſes ſhe owed her danger and her deliverance, and became more attentive than ever to plant colonies in America. Death prevented her from executing her great deſigns; but ſome of her beſt and wiſeſt ſubjects, and moſt gallant ſeamen, had entered ſo deeply into the plan, and laid it ſo nearly to their hearts, that what ſhe had intended in the ſettlement of Virginia, was in a good meaſure effected in the reign of king James the Iſt, though the undertaking was a great † difficulty upon his timorous councils, becauſe the Spaniards, of whom he ſtood in ſervile awe, did not approve of it. But his ſhame, with much debate, barely got the better of his fears, and that mine of treaſure was opened to Great-Britain.

† See a Short Collection of the moſt remarkable paſſages from the original to the diſſolution of the Virginia company.

This, with what elſe has ſince been executed in favour of England, both on the continent and in the iſlands of that new world, has added ſuch a weight of maritime force to the natural ſtrength, which we owe to our ſituation, that we are able, by wiſe management, to give law to the ocean. Spain indeed, has greater countries and more ſubjects in America, than we have, and yet does not navigate in that trade a tenth part of the ſhipping that we do. By a lucky kind of poverty, our dominions there have no mines of gold or ſilver: we muſt be, and ought to be, contented to deal in rum, ſugar, rice, tobacco, horſes, beef, corn, fiſh, lumber, and other commodities that require great ſtowage; the perpetual carriages of theſe, employ above 100,000 tons of ſhipping. The value of 5000 l. in theſe wares loads a veſſel, which in the Spaniſh trade would be freighted homeward with half a million of pounds ſterling.

Thus has the Almighty placed the true riches of this earth on the ſurface of it, our ſugars, rice, and tobacco, &c. are more real and permanent wealth, than their richeſt minerals. They are wealth, which create a power to defend our poſſeſſion of them: and, without a ſufficient force to defend that, the poſſeſſion of all wealth is precarious. Should not Great-Britain, therefore, be ever attentive to the true intereſt of our American plantations? Will not ſuch meaſures prove an eternal increaſe to the tonnage of Britiſh ſhipping? See BRITISH AMERICA.

The Dutch were eſteemed all the laſt century, the only match for England on the ſeas; but, as a great part of their ſtrength was merely artificial, it ſubſides like the vivacity of a wretch, who has raiſed his ſpirits with a doſe of opium. Commerce, and that wealth and power which attend it, may be either abſolutely in the power of a ſtate or empire, conſidered in and by itſelf, without regard to it's neighbours, which we call natural wealth, power and commerce; or they may depend upon treaties with other ſtates, or be owing to their connivance, which, pro tempore, amount to a tacit agreement: theſe latter ſpecies may be called technical wealth, &c. Such was the fiſhery of the Dutch, which they enjoyed by the inactivity of ſome of our Engliſh kings: and this muſt decline of courſe, if we vigorouſly ſupport our fiſheries of every ſort, becauſe of our ſuperior treaſures of this kind on the banks of Newfoundland and on our own coaſts. Another branch of their artificial ſtrength was, that by the indolence of all nations, they were for a time the carriers of the univerſe: but the world is grown wiſer, other nations begin to work for themſelves; and the Netherlands will ſadly find, that this temporary fund of ſtrength muſt alſo fail them. Their only natural foreign wealth and ſtrength is their Eaſt-India trade; part of this is truly their own, becauſe the land that produces ſpice is in their poſſeſſion: but when the two former branches ſhall be cut off, they will find that poſſeſſion every day more and more precarious.

Thus the Britiſh empire has a natural wealth in itſelf, and in it's dependent members, but it has alſo for many years paſt, enjoyed an adventitious, or artificial traffic. We have been employed by all the world in the woollen manufacture, but other nations have begun of late to clothe themſelves and their neighbours too. It is a fond fancy in us to imagine, that there are no fleecy ſheep in the world but our own, or that the reſt of mankind will not learn the myſtery of working in wool.

We feel this trade decreaſing daily, and yet there are thoſe among us, who would argue againſt demonſtration. But when they hope, by any laws of Great-Britain to hinder foreign nations from falling into the woollen manufacture, they may as well ſolicit an act of parliament to prevent their graſs to grow, and to intercept their ſun-ſhine. We will conſider one objection before I leave this point, becauſe ſome imagine that we are ſecure in this trade, againſt the endeavours of all foreigners: ſay they, we make better goods than can be made with any foreign wool, unleſs it be mixed with

ours.

ours. Be it ſo. But then, does our great wealth and income by that trade conſiſt only in our fineſt goods? Have not the Engliſh merchants complained, that Ireland has undersold us in coarſe goods at Liſbon; that becauſe their wares are coarſe, they can be afforded cheaper, therefore they have a ready market, while ours, that are finer, but dearer, may rot in the warehouſe? What ſays our Ruſſia Company? Has not Pruſſia ſupplanted us in the clothing of the Muſcovite army? Who can be ignorant of the extenſiveneſs of the woollen manufactories of France, if they conſult what I have ſaid, under the article FRANCE? We have ſent armed ſloops to check the Iriſh, but who will reſtrain the French, Germans, and Pruſſians? The multitude don't much value the fineneſs of their garments, they only deſire to be warm; it is the cloathing of the millions that produces miillions of money, and this is what other countries will certainly have their ſhare in.

Is not this a time to caſt our eyes upon our natural wealth, and to augment it as faſt as poſſible? If Muſcovy ſupplies it's own woollen goods, or is ſupplied by any other foreigner, it ought to make us reſolve to bring our naval ſtores from North America; if Spain and Italy refuſe our drapery, we may reject their ſilks, their raiſins, oil, wine, olives, and divers other merchandizes, and be ſupplied from Carolina and Georgia, with proper management.

We have been credibly informed that a gentleman, not long ſince deceaſed in this kingdom, was the firſt perſon who made pitch in America; the people whom he converſed with then, looked on this experiment as a chimera, but it proved ſo real, as to reduce that commodity above one half in it's value.

France has not the ſame advantage as Great-Britain, in it's ſituation for maritime affairs: that country is extended wide within land, and has not the benefit of being penetrated by many deep creeks, or navigable rivers; on half it's borders it is bounded with the continent, and the good harbours of France are but few, compared with the numbers of ours. See BRITAIN [GREAT-BRITAIN]. Theſe reaſons of our capacity for conſtant ſuperiority over them in maritime affairs in general, ſerved to prevent their increaſing in North America as faſt as we did; and there is another ſpecial reaſon, viz. we have had the navigation of North America in us, by the larger traffic of our early ſettlements, and even of the French ſugar-colonies, which we ſupply in a great meaſure, with lumber, horſes, and proviſions, though this trade may not be ſo nationally beneficial as ſome are wont to think. We have five ſouls on the continent for one of theirs; their principal ſettlement is in a climate too cold, and not very fruitful; and yet they contrive all imaginable methods of augmenting their numbers: they intermarry with the natives, and convert them; and the French king ſupplies 2000 perſons yearly with money to enable them to go thither, without being afraid that he ſhall drain his country of people.

It is eaſy to demonſtrate, that we can afford to ſend people abroad better than France and Spain. They have in each of thoſe kingdoms more than 100,000 cloiſtered females, not permitted to propagate their ſpecies; and the number of males in a ſtate of celibacy is ſtill abundantly greater, as it comprehends their ſecular and regular clergy, and a conſiderable part of their great armies, who reſolve againſt marriage, becauſe of the uncomfortable proſpects they have with regard to their progeny.

It may be ſaid indeed, that though theſe do not marry, yet many of them get children; but it muſt be admitted, that the uſual fate of that kind of propagation is, to be deſtroyed ſecretly, either before or after the birth; and the former of theſe crimes frequently procures barrenneſs in the women. We have entered into the conſideration of the loſs by the celibacy of their males, that nobody may imagine the computation of their deficiencies ſhould be made upon their cloiſtered females only.

And yet let us take a ſhort view of their loſſes upon that calculation, allowing a monk, or a prieſt, for an huſband to each immured woman. The moſt exact rules in this kind of arithmetic are as follow:

Firſt, the people who go on in an ordinary courſe of propagation and mortality, and are not viſited with ſome extraordinary deſtructive calamity, grow double in their number in 100 years.

Secondly, thirty-three years are a ſufficient allowance for a generation, or three generations to 100 years. Now,

Since the Reformation, we will ſay, about 200 years are elapſed, at which time celibacy was aboliſhed in England.

Therefore, in that time, France has loſt more than five generations of it's inhabitants, at the rate of 200,000 in each generation, beſides the accumulated numbers of cent. per cent. for each hundred years, which loſs muſt be reckoned upon the ſecond century, as intereſt upon intereſt; ſo that the 200,000 individual perſons who were under the vow in France, 180 years ago, will, 20 years hence, be a negative upon their numbers to the value of 800,000 people.

They who underſtand a little arithmetic, may divert themſelves by computing the amount of all the parts of this loſs of people in the five generations.

My aim, from what has been ſaid, is to rectify the notions of ſome of my countrymen, upon an affair ſo important as our commerce; to point out the differences between a natural and an artificial trade; to inſtance them in our neighbours compared with ourſelves; to ſhew the induſtry of the French to rival us in America; in ſpite of their geography and their religion; and to inculcate that our ſtrength depends on our SHIPPING, and our ſhipping on our wide extended colonies, which have neither gold nor ſilver, and, for that very reaſon, confirm us the more powerfully in the dominion of the ſeas.

It is an obſervation worthy the ſerious attention of every Engliſhman, that empire has always followed trade, travelling, as it were, from one part of the world to another, as commerce has ſhifted it's ſtation; and, in all countries, ſtill growing or declining in power in proportion as traffic has been encouraged or diſregarded.

Cicero ad Attic. ſays, Qui mare teneat eum neceſſe rerum potiri. This is the opinion of a very great man, who had been at the head of affairs in a moſt powerful ſtate, above 1700 years ago and the practice of all great princes who have lived ſince that time, and have ever deſigned either to extend their dominions, or to render themſelves conſiderable to their neighbours, fully proves the obſervation to be true.

The Romans (who aſpired to nothing leſs than univerſal empire) while their conqueſts were confined within the narrow bounds of Italy, were ſo much prejudiced with the notion of a landed intereſt, that, as Livy relates, they thought it ſcandalous for a man of faſhion to exerciſe any merchandize: and in conſequence of that prepoſſeſſion, they were not in a capacity to make any figure by ſea, an element little practiſed by them, and leſs underſtood. But this notion laſted only 'till they had an opportunity to look more abroad into the world; then experience taught them, as they came to quarrel with the Carthaginians (who at that time, were the great trading people) that commerce was neceſſary to eſtabliſh their empire; and that not only their conqueſts were at an end, but the poſſeſſion of the territories they had conquered were precarious, unleſs they could acquire and ſecure to themſelves the dominion of the ſea.

If the dominion of the ſea is abſolutely neceſſary to a people who aim at empire, of how much greater moment is it to a nation whoſe grandeur, whoſe wealth, whoſe very being depends upon COMMERCE and NAVIGATION? It is with the higheſt reaſon, therefore, that we ought to look upon every wrong done to our trading ſubjects, and on every attempt towards eſtabliſhing a NEW MARITIME power in Europe, as the moſt fatal, and, therefore, the moſt unpardonable injury to a nation, whoſe glory conſiſts in being miſtreſs of the ſea, and whoſe ſtrength lies in trade.

The nations recorded in hiſtory to have been at any time poſſeſſed of the empire of the ſea, have always eſteemed a neighbouring prince's offering to ſet up a naval power, by building more ſhips of war than were requiſite to ſecure the trade of his ſubjects from piracies, &c. to be as juſt a foundation of political jealouſy, as the raiſing of new forts upon his frontiers, or the levying of a formidable army in a time of profound peace: and, therefore, they have always taken meaſures either to prevent ſuch attempts, or to deſtroy them in their birth. This was the practice of the Romans: and this has been the policy of his majeſty's royal predeceſſors, the kings of England.

The Romans, as ſoon as they had acquired the ſovereignty of the ſea, (which they thought not dearly purchaſed with the loſs of above 700 ſhips) immediately entered upon meaſures to preſerve ſo valuable an acquiſition. They grew watchful over their new dominions, and were ſoon alarmed by the ſmalleſt umbrages, from any power that did but ſeem to interfere with them in naval affairs. It was from theſe political conſiderations, that they would not admit the Carthaginians to fit out any fleets, and that they forbid Antiochus (at that time the greateſt king in the eaſt) to build more than 12 ſhips of war. See the articles AUSTRIAN NETHERLANDS, and OSTEND EAST-INDIA COMPANY.

It is not an empty title which the kings of England have always taken to themſelves, of being ſupreme lords and governors of the ocean ſurrounding the Britiſh ſhore, but a right which they have conſtantly maintained at the expence of numerous fleets. In that famous accord made between our great king Edward I. and Philip the Fair of France, it appears, that the French king was by him called to an account for piracies committed by his ſubjects within the Britiſh ſeas: and, by that memorable ordinance made at Haſtings, in the reign of King John of England, the honour of the flag (ever claimed by the Engliſh) is decreed to take place univerſally, not barely as a civility, but as a right to be paid (cum debita reverentia) with due deference.

There is no occaſion for troubling my readers with a detail of examples to the preſent purpoſe, ſince nothing is more known in our Engliſh hiſtory, than that our kings have ever been jealous of their neighbours making uſe of any pretext to increaſe their naval ſtrength; and have accordingly judged it of the greateſt importance to fruſtrate ſuch deſigns though at the

riſque

riſque of a war: for what leſs did our immortal queen Elizabeth riſque, when ſhe ſent to the French king, to prohibit his building any more ſhips of war than what he then had, without her leave firſt obtained. This was an inſtance of wiſdom and reſolution worthy a princeſs who claimed the ſovereignty of the ſea.

Maritime trade, and in wholeſale, has nothing in itſelf but what is honourable. Antiquity furniſhes us with illuſtrious teſtimonies in favour of thoſe who practiſed it. Solomon, king of Iſrael, according to ſcripture hiſtory, carried on a great trade abroad. Solon, that great legiſlator of Athens *, who was of one of the nobleſt families in that flouriſhing republic, being, by the father's ſide, deſcended from Codrus, the laſt king of Athens †, in order to repair the decays of fortune, into which his family was fallen, by the exceſſive liberality of his father, choſe rather to carry on trade, than to take money from rich perſons, who offered him large ſums, and promiſed never to allow him to be in want.

* He lived 598 years before Chriſt.
† Plutarch's life of Solon.

Now at that time, ſays Plutarch *, after Heſiod, no handicraft was ſhameful; no art nor trade made any diſtinction between men. Merchandize eſpecially was honourable, becauſe it opens a communication with barbarous nations, affords the means of making friendſhip and alliance with kings, and leads to the knowledge of an infinite deal of things, which would be unknown without it. There have been merchants founders of great cities; as Proteus, who founded Marſeilles, after having gained the friendſhip and eſteem of the Gauls who lived upon the banks of the Rhône. We are told alſo, that the wiſe Thales and Hippocrates, the mathematicians, applied themſelves to commeree, and that Plato defrayed the charges of his journey into Egypt, by ſelling oil in that country.

* M. Dacier's tranſlation.

Cato the cenſor *, that Roman Demoſthenes, a man of ſuch rigid and delicate ſentiments of virtue and honour, thought it not below him to aequire an eſtate by commerce: wholeſale trade, he ſaid, depended chiefly upon the mind, whereas trade in retail gave only employment to the hands. As all the acts of the mind are noble, the laws, which have neglected the diſtinction and illuſtration of trade in retail, for certain moral reaſons, have honoured and diſtinguiſhed wholeſale trade.

* Plutarch's life of Cato; he lived 196 years before Chriſt.

As a proof that commerce had nothing in it baſe and derogatory among the Romans, the emperor Pertinax exerciſed it the greateſt part of his life, and even after he was emperor. Caracalla *, in the cruel maſſaere he cauſed to be made at Alexandria, had great regard to the body of merchants, who were very numerous in that city: in giving orders to all foreigners to remove from it, he excepted the merchants, and allowed them to ſtay there at liberty. Alexander Severus, from a view to make trade flouriſh in Rome, and to bring in merchants thither, granted them large immunities. Maximinus himſelf carried on trade with the Goths, &c.

* Hiſtory of the Commerce and Navigation of the Ancients, by M. Huet, cap. 57. no. 9, 11, 12, and 13.

We have given occaſionally a multitude of other examples, throughout the courſe of this work, which ſhew us that great men have thought it no diſparagement to them to acquire great eſtates by trading: ſuch examples are common among the Greeks and Romans; theſe people had as delicate notions of honour as we. The Venetians, in order to train up the ſons of their nobility in the knowledge of the navy, oblige the merchant ſhips that ſail into foreign countries to take always two of them, whom the captain is obliged to maintain at his table, without being bound to any work, but only to take notice how the ſhip is wrought, and what obſervations are made by the pilots.

In fine, trade was ſo honourable among the Ancients, that the emperors granted it a particular protection. They honoured the cities that ſignalized themſelves in commerce, or in building ſhips, or that were famous for ſome conſiderable ſea-port. Theſe cities cauſed their medals to be ſtamped either with a ſhip, or with a prow, or ſometimes with a Neptune and his trident, or with a dolphin. Such were the medals of Tyre * and Sidon, of Byzantium, of Leucate, Chelidonium, Syracuſe, &c. Hiſtory of the Commerce and Navigation of the Ancients, chap. xlvi. no. 15. p. 273.

* The Scripture, Ezek. xxvii. furniſhes us with a glorious teſtimony of the riches and maritime forces of the city of Tyre, which the prophet extols, as well as her ſailors, her ſhipping, her great trade, &c. But this might be the old Tyre; the new city far ſurpaſſed it, according to the late M. Huet, in his Hiſtory of the Commeree and Navigation of the Aneients, chap. viii. no. 4. p. 33. Aceording to Herodotus, the Tyrians came from the Lydians.

REMARKS.

How the French regard their maritime affairs.

'France, as well as the Roman empire, ſays Monſ. Dutot, has maritime and trading towns that deſerve medals, and are undoubtedly of conſequenee to be honoured and protected, becauſe they have ſignalized themſelves in trade, and by building of ſhips. Nay, ſhe has ſome that has done more; and, though they have neither lands nor manufacture, have found a way to carry on navigation. They are accuſtomed to hazards; their ſhips have braved the dangers of the main; they have grown formidable to their neighbours, by harraſſing them continually, and by weakening them to ſuch a degree, that thoſe enemies, in revenge of their loſſes, ſwore the deſtruction of one of thoſe cities; and, for that effect, invented that formidable machine, ſo celebrated, which was to reduce it into aſhes. What wonders have been done by the courageous inhabitants of that city, equally diſtinguiſhed in it's warlike and trading capacity, in defiance to all the efforts of the enemies to the crown? Bound to ſome rocks, they had found a way to render it inacceſſible on all ſides; to build fortreſſes, which ſecure their port; in a word, to make the rocks a prodigy of art, and an eternal monument of a genius for war, matched with a genius for trade. How many excellent ſea captains have been produced in that city, and ſome others like it, which cultivate trade! How many ſhips have they built and fitted out! What noble ſailors! What excellent artiſts! How many young combatants have they trained up *! And then how much gold and ſilver have they brought into the kingdom! Their ſhips happily arriving from the South Sea in 1709, brought home gold and ſilver bullion to the amount of thirty millions, which was a ſupply to the ſtate of ſo much the more importance, as thoſe cities lent the king fifteen millions in a very preſſing exigence. This is what we are told by the miniſter of the finances himſelf, in the 13th page of his Memoirs. What ſpoils of the enemy have thoſe trading towns brought home, ruining the commerce of our neighbours, and ſecuring our own! Shall the nobility then [hear the Frenchman, Britons!] moſt of whom live idly in their caſtles, be thought more ſerviceable to the ſtate, more brave, more warlike, than thoſe heroic citizens? How would the republics of Greece and Rome have heaped honours and rewards upon citizens ſo worthy of that name!

* I ſhall take leave to remark here, that ſeveral of the privateers and ſeamen whom the city of St. Malo made uſe of during the courſe of queen Anne's wars, were Normans. Among them who manned their ſhips, and diſtinguiſhed themſelves in fight, there were many from that province: at this day ſeveral Maloine families are natives thereof.

The maritime forces of the Romans contributed not a little to their great power. Aecordingly we ſee in the Digeſts, ſome laws which inform us how much they applied themſelves to ſea affairs in certain conjunctures, even during the heat of their wars. The exemptions from all municipal charges, which they granted to the citizens to invite them to build ſhips and cultivate trade, are invincible proofs of their having been perfectly ſenſible, that maritime force and commerce were neceſſary to the preſervation and advancement of their power.

Cardinal Richlieu, who had ſo extenſive views for aggrandizing the ſtate, found no way more effectual to promote the power of the king, and the riches of the nation, than to improve navigation and trade; and, indeed, there is no other that can bring us in gold and ſilver. That great ſtateſman ſhews us very well the neceſſity and uſefulneſs of a power by ſea *. According to him, trade has a neceſſary dependance upon that maritime power.

* The Politieal Teſtament, chap. 9. ſect 5. l. 6.

After having ſhewn the advantages which the Engliſh would have over us, if our weakneſs by ſea ſhould cut us off from all means of attempting any thing to their prejudice, our author cites, by way of example, the inſult offered by that proud nation [obſerve monſieur again] to the duke of Sully, ſent by Henry IV. into England, in quality of ambaſſador extraordinary; and he counſels Lewis XIII. to put himſelf in ſuch a poſture, that he may not ſuffer the like again. He ſhews all the advantages of a powerful navy; he proves the uſefulneſs of it and of trade, by the example of the Dutch, who owe their power only to their navy and their trade. It was in the time of his miniſtry, that Lewis XIII. made that glorious ſtatute of February 1, 1629; where, in order to induce the ſubjects to carry on ſea-trade, he declared by the 452d article, That the gentlemen, who ſhould apply themſelves to that commerce in their own perſons, or by ſubſtitution of others, ſhould DEROGATE NOTHING FROM THEIR NOBILITY, &c.

It was upon theſe ſame principles that the great Colbert, that faithful miniſter, protected arts and manufactures. Here were at that time in France a great many factors and commiſſioners from foreign traders, and very few merchants. He

looked

looked upon ſocieties or companies * as the moſt proper means to engage the French to carry on trade by themſelves: and, as among all the examples of commerce that are extant in the ſeveral parts of the world, there is none richer nor more conſiderable than that of the Eaſt-Indies; he diſcovered thereby the importance of navigation and of long voyages; he obſerved that thoſe voyages not only were indications of the power of a ſtate, but alſo an infallible means of introducing plenty into it. He was of opinion, therefore, that it ſuited with the glory of the king, and the intereſts of his people, to undertake that trade, which Henry IV. and Lewis XIII. could not carry to it's perfection. He determined the king to form the ſame deſign in 1664, and to ſpare nothing for the accompliſhment of ſo great a work, which might be ranked among the moſt famous tranſactions of the reign of Lewis le Grand. He formed the Eaſt-India company, he protected it with all his power, aſſiſted it with his money, and took upon himſelf the heavieſt charges of the execution, though he would have no ſhare in the profits of the ſucceſs. You will even find in father Charlevoix, the jeſuit's Hiſtory of Japan, that knowing the Japaneſe received in their ports only Dutch ſhips, and would traffic neither with the Spaniards nor the Portugueze, upon account of their profeſſing the Catholic religion, whereby they became odious to them, this miniſter propoſed that the emperor of Japan ſhould be told, that the king of France had a great many ſubjects who followed the religion of the Dutch; and that if he thought fit, the king would ſend ſhips to him manned by none but thoſe of that religion †. This is called thinking like a miniſter. The project, however, did not ſucceed, by reaſon of the prejudice of the Japaneſe government, which is terribly apprehenſive of ſtrangers, having got intelligence of what paſſed in the Eaſt and Weſt-Indies.

* This is the firſt ſtep by which all maritime nations cut out their branches of foreign trade; and it is the beſt way for all new branches to be firſt eſtabliſhed, becauſe companies will hazard what private men will not.

† See Obſervations upon modern writings, Tom. X. p. 305.

In this manner did that great miniſter encourage traders to apply themſelves to maritime commerce, and to build ſhips proper for long voyages. That company was not the only one he formed; he eſtabliſhed one for the Weſt-Indies, for the trade in the Levant, and for that in the North Seas. He laid out himſelf for the improvement of the old manufactures, and eſtabliſhed new ones; in fine, he gave powerful protection to trade, arts, and manufactures, which he juſtly conſidered as the moſt effectual means to increaſe the power of the king, and the riches of the kingdom. And, indeed, to ſay it over again, there is no other way that can bring us in gold and ſilver.

M. Colbert had the ſatisfaction to ſee, that his pains and endeavours were not fruitleſs, he left trade in a flouriſhing ſtate: but after him, the face of things very much changed, commerce was ruined, and all the expences he had laid out for the eſtabliſhment of the Eaſt-India company, and what were laid out ſince his time by his ſucceſſors, who were no longer ſufficient to make that trade advantageous.

Navigation, which is the ſoul of commerce, procures always a vaſt profit to the ſtate. The building of ſhips, their victualling and ſtores, conſiderable articles of expence, which, being laid out within the ſtate, furniſh ſeveral inhabitants with the means of living and enriching themſelves. It employs all the inhabitants of the ſea-coaſts, who can hardly be uſeful in any other way; and, for want of this navigation, are in a manner neceſſitated to ſerve in foreign countries; this is what happened, whenever we gave over ſea trade. By loſing them we ſuſtain a double loſs; our coaſts become deſolate, our navigation languiſhes, and that of our foreign neighbours increaſes at our expence. Prohibitions againſt SAILORS going out of the kingdom are uſeleſs: they are born only for ſailing, the ſea is their element; if we do not employ them that way ourſelves, no prohibitions will prevent their going elſewhere to ſeek for employment.

But we are told, the maintenance of a powerful navy coſts the ſtate immenſe ſums of money, which it is unable to ſupport.

To remove this prejudice, we muſt ſhew by an accurate and well calculated detail, what was the monthly expence of the French navy in 1681, the moſt flouriſhing one that France ever had. Here is an exact ſummary thereof below *.

This navy, as we know, was as ſplendid and magnificent as it was powerful. It conſiſted of 115 ſhips, of the firſt, ſecond, third, fourth, and fifth rates, of 24 ſmall frigates, 8 fire-ſhips, 10 barca longas, and 22 pinks, making in all 179 ſhips; conſiſting of 7080 pieces of cannon, 1028 major officers, 7955 marine officers, 20,618 mariners, 10,904 ſoldiers, the whole crews being 39,477 (the 1028 major officers not included).

* The SUMMARY.

Rate of the ſhips.	No.	Guns.	Maj. officers.	Marine offic.	Sailors.	Soldiers.	The whole crews.	Pay per month.	Victualling per month.	Coſt of the equipment per month.
1ſt Rate - - -	12	1080	108	1232	4132	2486	7850	118,086l.	65,483l. 10s.	183,569l. 10s.
2d Rate - - -	21	1518	189	1719	4470	2661	8850	142,776 10s.	74,782 10s.	217,559
3d Rate - - -	36	1928	251	2350	6142	3008	11,500	188,329	98,105	286,434
4th Rate - - -	26	1088	156	1167	2713	1570	5450	93,942	46,758 15s.	140,700 15s
5th Rate - - -	20	608	119	681	1427	682	2790	55,091	24,356	79,447
Totals -	115	6222	823	7149	18,884	10,407	36,440	598,224 10s.	309,485 15s.	907,719 5s.
Small frigates - -	24	400	125	446	937	497	1880	42,397 15s.	16,721 5s.	59,119
Fire-ſhips - -	8	74	16	80	160		240	6064	2130	8194
Barca longas - -	10	43	20	90	190		280	6204	2475	8679
Pinks - - -	22	341	44	190	447		637	14,253	5838	20,091
Totals -	179	7080	1028	7955	20,618	10,904	39,477	667,143 5s.	336,650	1,003,793 5s.
Gallies - - -	30					3010	3010	72,322 15s.	26,930	99,252 15s.
The whole navy thereof coſt							42,987	739,466	363,580	1,103,046

Whoſe monthly pay when they were equipped, amounted to the ſum of -	667,143	00	00	
And the victuals per month coſt - - - - -				336,650 00 00
Which makes the ſum of - - - - -				1,003,793 00 00
The 30 gallies, all of them likewiſe armed, whoſe whole crew were 5600 ſlaves, 2400 ſailors of one claſs, 935 of another *, and 3010 ſoldiers, coſt for their pay and victualling - - - - - - -	99,252	15	00	208,220 10 00
Pay and victualling extraordinary - - - - - -	108.967	15	00	
The expence of that whole navy armed and equipped, would therefore coſt per month the ſum of - - - - - -				1,212,013 10 00
Suppoſing the whole to be equipped for ſix months of the year, a thing which never happens every year, that formidable navy would coſt - -				7,272,081 00 00

* Mariners de rang and mariners de rambades, names taken from the parts of the galley to which we have nothing correſpondent in Engliſh.

Had all things riſen in proportion to the ſpecie in France, ſays our author, we might ſay that this expence at preſent would amount to 12,933,920 livres; becauſe 7,272,081 livres of that time, are exactly equal to 12,933,920 livres of the preſent. But all things have not riſen in proportion to the ſpecie: the ſalaries or pay of the ſea-officers, are much the ſame as they were in 1681; a ſeaman of the firſt claſs has no more than 15 livres per month; thoſe of the ſecond 13 livres 10 ſols, and ſo of the reſt. Proviſions are not dearer at this day than they were. This being the caſe, the pay and victualling of 39,477 men, who were in the aforeſaid 179 ſhips (not including 1028 major officers) and of the 10,985 men, who were in the above-mentioned gallies, making 50,462 men, which amount, as we have ſeen, to 7,272,081 livres of that time, would hardly coſt more at this day. The additional expence, if it can be called one, will only reſpect the conſtruction and equipment of the ſhips and gallies, which we don't comprehend in this calculation, and which, to a mere trifle, might be made up by the ſaving of thoſe years, when only a part, or at leaſt not the whole, of that navy is armed,

armed, for the whole navy is not armed or equipped every year; when at ſea, it is there for ordinary only ſix months of the year; or when it is not, or but a part of it, the expence is not ſo high; what is ſhort of it amounts to a good deal, and at the long-run, perhaps, more than compenſates the charges of the conſtruction, rigging, and arming of thoſe ſhips.

Another CALCULATION.

It is agreed among thoſe who know what the conſtruction and equipment of ſhips is, that a man of war of 60 guns, equipped and victualled for a year, pay, &c. coſts 600,000 livres.

	Livres.
Now the pay and victualling for a crew of 500 men for one year, and the pay of the major officers, amount to 160,000 livres, at leaſt they exceed 159,000 livres - -	160,000
This ſum ſubtracted from the 600,000 livres above, the remainder 440,000 livres is for the conſtruction, the equipment, guns, &c. of the ſhip. And the common duration of a ſhip is 20 years, we muſt therefore reckon for every year only - - - -	22,000
A ſhip of 60 guns, compleatly equipped in war, coſts therefore per annum at moſt but - -	182,000
Conſequently 100 ſhips of that kind would coſt 18,200,000 livres per annum: but ſuch a navy is at ſea at moſt but ſix months of the year. A man of war of that kind, is able to carry proviſions for 500 ſeamen, only five or ſix months at moſt. Now the pay and proviſions of that ſhip for ſix months amount only to - - - - -	80,000
The conſtruction and rigging as above -	22,000
It would therefore be only - -	102,000

And for 100 ſhips, 10,200,000 livres per ann. ſuppoſing the whole to he equipped ſix months of the year, which never happens every year; thus we may ſay, that a navy of 100 ſhips of 60 guns, would not coſt ten millions, communibus annis, all things included; an expence not to be laid in the balance with the honour and advantage, which would accrue from thence to the nation.

In 1681, the expence of 7,272,081 livres, was not more than France was able to bear; the king, however, at that time, had only 116,873,476 livres of revenue *. He enjoys now at leaſt 200 millions: therefore, you will ſay, he is better able to ſupport that expence, than he was in 1681. That is true if we look only to the tale of pieces, which is at preſent more than it was then by 83,126,524 livres: but, if we conſider that theſe livres are not the ſame, we ſhall find our error.

* See Chap. II. art. 5.

	Marks.
For the 116,873,476 livres in 1681, at 28 livres the mark of ſilver, made to Lewis XIV. a yearly ſum of - -	4,174,052 5/7
And the 200 millions of livres which Lewis XV. enjoys at preſent, conſiſt of livres, whereof 49 l. 16 s. go to the mark; conſequently his preſent majeſty receives only the ſum of - - -	4,116,466
Therefore Lewis XV. receives the yearly ſum of 7,865,825 livres leſs than Lewis XIV. received, amounting to - -	57,586 5/7

Lewis XV. is therefore really leſs rich with his larger tale of 200,000,000, than Lewis XIV. was with his ſmaller one of 116,000,000, though the people are not thereby more eaſed, abſtracting from the price of commodities which has riſen. This is a very plain proof, that the riſe of the numerical value of money has been diſadvantageous to the king and people as debtors. But this does not hinder France from being able to furniſh out the expences of a powerful navy; it will be eaſy for her, if ſhe has a mind, even without burdening the people with new taxes, to find 8, 10, and 12,000,000 a year, if they be neceſſary for the maintenance of that navy. This expence is the more neceſſary to France, as ſhe never will be powerful, reſpected, nor feared by her neighbours, 'till ſhe is miſtreſs of the ſea. All the forces ſhe may or can have by land, will never produce the ſame effect. An army of 20,000 men upon that liquid plain, would procure to her more honour and profit than 200,000 men by land.

The Ancients knew, that their power and riches abſolutely depended upon maritime forces. They were no leſs perſuaded than Themiſtocles had been, and than Pompey was afterwards, of the truth of this great maxim, He who is maſter of the ſea, is maſter of all *.

* Hiſtory of the Commerce and Navigation of the Ancients, chap. xvi. No. 14. And the French Mercury, Tom. III. p. 226.

The anſwer given by the oracle of Delphi to the Athenians, to fortify their city with wooden walls, to defend themſelves againſt the invaſion of Xerxes, is an advice which all conquerors have taken to themſelves, and which Lewis XIV. made uſe of ſo ſucceſsfully, that his power by ſea was become formidable to the Engliſh, Dutch, and Spaniſh, as that of his grandfather was weak and contemptible; witneſs the affront offered by king James to the duke of Sully, which we have mentioned above.

* Notes of Amelot de la Houſſaye, p. 238. of the ſecond volume of cardinal d'Oſſat's Letters.

The indiſpenbſile neceſſity France lies under to maintain a powerful navy, is alſo fully confirmed by a diſcourſe upon that ſubject, delivered by an old ſervant of the crown, quoted in the 13th tome of the French Mercury, p. 209, & ſeq. By the letter of cardinal d'Oſſat of the 16th of October 1596, to M. de Villeroy, miniſter and ſecretary of ſtate *; by the counſel which Antony Perez gave to Henry IV. and by that which cardinal Richlieu gave to Lewis XIII. as we ſee it in the 9th chapter of the ſecond part of his Political Teſtament, ſect. 5. Now, if in order to be more powerful by land, we muſt be ſtronger by ſea, and if the prince who is the maſter of the ſea is infallibly umpire of his neighbours, there is no room for demurring: whatever expence a powerful fleet may coſt, we ought to lay it out preferably to other things which are leſs important, ſince the intereſt and grandeur of the king, the good of his people, and the ſecurity of the ſtate require it. France may have 100,000 ſeafaring people, the ſoldiers of the navy not included. It is her intereſt to employ and maintain theſe ſeamen, they are uſeful and valuable ſubjects to their country. I ſhall here give a particular account of all thoſe who were through the ſeveral coaſts, and in all the diſtricts of the kingdom, according to the reviews of them which were taken by the commiſſaries in the month of January 1713, amounting to 92,450 men, viz.

* It is the 84th in that collection of letters publiſhed in 5 volumes in 12mo, with notes, by Amelot de la Houſſaye, p. 237, & ſeq. of the 2d tome.

Sea-officers.	Captains, maſters	5585	16,610
	For working the ſhip	3225

Ship boys ditto			10,920
Invalids ditto			12,366
Total of all the ſeafaring people in all the diſtricts of the kingdom.			99,450

* They receive no more pay at this day. Proviſions, or grain in general, is not dearer now than in 1681. Thus the additional expence cannot fall upon the pay and victualling, it can only reſpect the building and rigging of the ſhips.

Now the major officers, ſuch as lieutenant-generals of naval armies, commodores, captains, lieutenants, enſigns, &c. of ſhips, are not included in this calculation; thus we have more than a HUNDRED THOUSAND SEAMEN, without reckoning the ſoldiers and the gardes marines *.

* Theſe are gentlemen diſtributed through the ſeveral ſeaports, to be inſtructed at the king's expence in the knowledge of navigation, and whatever belongs to it, who ſerve as volunteers, out of this body the ſea-officers are generally choſen. Is it not very ſurpriſing to hear people ſay, that the French cannot man a fleet equal to that of Great-Britain?

The land-forces coſt much more than this powerful navy, and they are neither capable of bringing us ſo much honour nor profit; they can neither make the French flag be reſpected nor feared ſo far; they are no ſort of protection to our foreign trade, which is the only means of aggrandizing and enriching the ſtate. All the forces we can have by land, will never free us from ſubjection to maritime powers, nor put us in a condition to humble the pride of thoſe haughty iſlanders, who believe and call themſelves the kings of the ſea. [Obſerve how Britons are here treated!] This we are only to look for from a powerful navy, able to diſpute that empire with them, and to oblige them to pay the firſt honour to the FRENCH FLAG; an honour which is due to it by a juſt claim, as we ſhall endeavour to make appear. Attend, Britons, again!

Cæſar, in his Commentaries, ſpeaks of the northern Gauls *,

* Theſe are at this day the inhabitants of Normandy and of the Low-Countries. They have always been famous for navigation. See Thuanus's Hiſtory.
According to the geographical ſtate of Normandy by Maſſeville, Tom. II. p. 688. we owe to the Normans.
The diſcovery of Guinea, found out by the inhabitants of Dieppe in 1364.

The

The conqueſt of the Canaries, by John de Bethencourt, lord de Grainville in the county of Caux, in 1420, and not in 1348, as the author of the Hiſtory of Navigation alledges, Tom. I. p. 69. In 1479, the privateers of that province took from the enemy 80 ſhips loaded with corn and herrings. The Hiſtory of Normandy by Maſſeville, Tom. IV. p. 318.

The diſcovery of the third continent of the world, known under the name of Terra Auſtralis, made in 1504, by Capt. Gouneville of Liſieux.

The diſcovery of Canada, made anno 1508, by Thomas Aubert of Dieppe.

According to Mezeray, Tom. II. p. 665 of his large Hiſtory, Guillemot's edition, the people of Dieppe have always had the glory of the ſea among the French; and anno 1556, with 19 ſhips they beat 22 Flemiſh, larger and better provided in artillery and fireworks, they carried ſeveral of them to Dieppe. He adds, that the Normans had more men, thatthe Dutch were wont to fight with cannon-ſhot, and the Normans with ſhort arms and by boarding. Thuanus gives the ſame account of them. And it was by order of king Henry II. that they ſet out and attacked that fleet. Geographical State of Normandy by Maſſeville, Tom. I. p. 142.

According to the Hiſtory of Navigation, Tom. II. p. 19 chap. IV. Nambue, a cadet, of a good family in Normandy, and captain of a king's ſhip, was the firſt of all the Europeans, who projected the deſign, with ſucceſs, of forming a colony in the American iſlands, anno 1625.

And, in fine, the diſcovery of Louiſiana, made in the year 1676 or 1680, by La Salle Cavalier of Rouen.

We might place at the head of the atchievements of the Normans, their conqueſt of England, anno 1066, and that of the kingdoms of Naples and Sicily, made anno 1070, by the lords of Houteville, of the dioceſe of Coutances.

as thoſe who underſtood commerce and navigation, the beſt of any who were then known, without even excepting thoſe of Marſeilles. He highly extols the dexterity of their pilots; he glories in having tranſmitted to the Romans the manner of building ſhips, and of navigating, as practiſed by the northern Gauls. Vegetius has written upon their naval diſcipline. Sidonius ſpeaks to the advantage of their mariners; he makes them as expert as the pilots of other nations; he ſays, they know how to obey, as they know how to command. At that time the Engliſh knew nothing of navigation; Cæſar ſays, they had only little canoes of ozier for their fiſheries, and for navigating along their coaſts.

It is very much to the honour of our nation, that ancient hiſtorians find there the oldeſt and the moſt expert ſailors. Ought not this to put it beyond debate that the firſt honour is due to the French flag?

At that time, commerce was not looked uponas derogatory to the nobility; it was, on the contrary, the original and ſupport thereof. The Gauls made no diſtinction in the affair of commerce and navigation; the nobles, as well as the plebeians, traded equally. The trading people, far from being excluded from offices and employments, were, on the contrary, inveſted with them, as having greater ability and experience than others; for, as commerce and navigation inrich perſons, ſo they make them, alſo, more capable than others of MANAGING AFFAIRS, and, conſequently, fitter for poſts and offices *.

* Father Lamy, in his Diſſertations upon the Sciences, ſays, There are none who reaſon in general with ſo much good ſenſe and juſtneſs, as a merchant does with reſpect to the affairs of commerce. The reflections and calculations which he is continually obliged to make, accuſtom him to think. See our article MERCANTILE COLLEGE. And quere, Whether ſuch a courſe as I have there humbly propoſed, would not accompliſh perſons of diſtinction for the greateſt poſts of truſt and honour in the ſtate, better than the ordinary ſcholaſtic method of education? And whether being a few years converſant with real traffic, would not prove the moſt uſeful college for ſuch men of public buſineſs?

But the wars with which the Gauls were harraſſed for ſeveral ages, having too much diſtinguiſhed from others thoſe who bore arms, by their ſervices and poſts, as by the riches which they acquired by the ſpoils of the enemy; and theſe having given over commerce, to devote themſelves ſolely to arms, commerce remained only with the populace. A diſtinction ſo rivetted by long uſe, that, whatever laws the kings have made to engage thoſe whom we call the nobles, to cultivate maritime and wholeſale trade, by making it compatible with the privilege of their birth, they have always preferred to an honourable commerce, a dull inactive life of IGNOMINIOUS POVERTY, deſpiſing the examples of the Ancients, of the Engliſh, the Dutch, the Genoeſe, &c. who, conſidering commerce in a quite other light than we, live in a happy plenty.

It is navigation and commerce that renders Great-Britain ſo rich, ſo powerful, and have enabled that iſland to counterbalance all the powers of Europe; and yet that country is not equal in extent to the half of France.

It is alſo navigation and commerce that makes Holland ſo powerful, though it's dominion extends only over ſeven little provinces, which produce not the twentieth part of what is neceſſary to the inhabitants; and yet they put to ſea a prodigious number of ſhips, and maintain conſiderable armies by land; which has made that ſmall country, as it were, the general treaſury of all the nations which their policy has found a way to unite againſt us; and who, without the aſſiſtance of money from Holland, would not be long of breaking their union *.

* That nation has at all times artfully improved every occaſion that offered in favour of their commerce, and remarkably the intereſt that we had in 1678 to diſunite her from her allies. This unhappy circumſtance determined the king to grant her a renewal of old treaties, and to allow her to explain them as ſhe pleaſed; which ſhe joyfully accepted, and, in conſequence thereof, the treaty of Nimeguen was agreed to, April 10, 1678.

After having ſaid, in the ſixth article of that treaty, that the ſubjects on either ſide ſhould enjoy a full and intire liberty of commerce in Europe, in all the bounds of each other's dominions, the Dutch added to the former ones that we find in the ſeventh article: this article is of ſo much importance and advantage to them, that they have again extended it in the treaty of commerce made at Utrecht, April 11, 1713. This particular regard which the Dutch ſhew to this article, lets us ſee that they hold for almoſt nothing the reſt of the treaty, provided we put in execution this article, which is as favourable to them as it is contrary to the intereſt of our commerce: for this article they made no ſcruple to withdraw from their allies at Nimeguen, and to be the firſt who ſigned the treaty of Ryſwick.

By means of this article, the Dutch enjoy the fertility of our country, and all the advantages of the French ſubjects: they make a very advantageous uſe of it, to the prejudice of the natural ſubjects, and without contributing in any thing to the ſupport of the ſtate. Beſides the advantages which this article procures them, they take from the king even the liberty of granting any particular favour to his own ſubjects, unleſs, at the ſame time, he gratifies with it the Dutch merchants: and, by the ninth article, we, in a manner, renounce the Levant trade in favour of the Dutch, who are become the maſters of it. The Dutch are not ignorant, that, upon the remonſtrances and complaints of the ſubjects, the ſovereign, who owes them juſtice preferably to foreigners, is always in the right to make what regulations he thinks proper for the good of the ſtate. To conclude, this article included in the treaty of Utrecht, was limited to 25 years, and conſequently it expired April 11, 1738.

Genoa, that formerly magnificent city, has but a ſmall compaſs of dominion; would ſhe ever have been in a condition to ſupport ſo many wars, were it not for the riches that commerce and navigation procured her? In what vaſt expence has ſhe been engaged for many ages, to reſiſt the Venetians, and other people in Italy, to whom her proſperity gave umbrage? How many ſeditions at home amongſt her inhabitants? How many tumults and commotions excited by thoſe famous names of Guelphs and Gibelines? How much muſt all theſe have coſt her? What vaſt expence has ſhe been put to by the rebellion of Corſica for theſe many years paſt? That article alone, we are aſſured, amounts to upwards of 30 millions: ſhe is ſtill flouriſhing after all, and abounds with every thing: in the mean time, ſhe has no other reſource but from commerce.

There are numbers of other examples we might cite; but theſe I take to be ſufficient to ſhew us, that France would reap vaſt advantages from commerce and navigation, if the taſte for commerce could be further promoted in France *. What noble families would then be raiſed!

* The erection of the India company is a pretty ſure means to engage the French to carry on our commerce, and to give them a taſte for it; this is a bleſſing to the ſtate. The maritime trade, which it carries on with ſucceſs enough, ſets us at liberty from the ſervile tribute we paid to our neighbours before it's erection, to be ſupplied with things we wanted: they took advantage of our ſupineneſs, to inrich themſelves at our expence.

At all times, the Engliſh and Dutch have endeavoured to get us to demoliſh any conſiderable ſea-ports we have had in the channel. Theſe ports give umbrage to them, and extremely incommode their commerce. But their continual oppoſition is an invincible proof, that it would be beneficial to our commerce and navigation to have at leaſt one ſecure retreat for our ſhips, towards the middle of that bay. Cardinal d'Oſſat was ſenſible how neceſſary this was; for, in his 90th letter, dated December 18, 1596, he ſays to M. de Villeroy, to whom he writes, That it is of very great importance to us, that we have men of war in that ſtraight. Now, we can have no ſhips there without a port for their retreat; I have always heard it ſaid, that, with a little expence, we might make an excellent one at La Hogue, in Lower Normandy. This is the place in the world moſt proper for raiſing an important fortreſs, either for commerce or for ſhips. It would hold a great many of them; there they would lie in ſecurity, and ſheltered from every dangerous wind, by making a mole of about 2 or 300 toiſes, of the great or ſmall redoubt of Morſalines, towards the port of La Hogue, leaving, at the foot of that fort, a convenient entrance for the port, and by digging the bay which the mole would incloſe.

We might even cauſe the port to be cleanſed by the river Saire, which is but about the diſtance of ſix or ſeven toiſes from

from it, and which might eaſily be turned into it. That port would then be very conſiderable, and well ſituated; it has an admirable road; and all who are acquainted with the affairs of the navy, and with navigation, agree, that we ought to labour at it, and improve the advantages of that place, notwithſtanding the oppoſition of our neighbours; for, the more they ſet themſelves in oppoſition to it, the more ought we to be ſenſible that it tends to our advantage. We ought by no means to be afraid of them; this would be to do them too much honour: in a word, there it is we muſt have a port. The late marſhal de Vauban was of this mind; he has, as I am told, laid down the whole plan and ſcheme of this work. The low jealouſy of other ſea-ports towns has oppoſed it; perhaps the intereſt of the ſtate, and of commerce in general, has not been ſufficiently conſulted, which ought always to prevail over private motives; but private intereſt has always numbers of advocates, and the general intereſt has but few.

To make peace, in order to procure to ourſelves all the advantages of an extenſive commerce, is to make war upon our enemies. Let us have no more to do, therefore, with thoſe victories that are gained by ruinous means; let glory ſleep and be at reſt. It is in the heart of our plains that induſtry ſhall open to us eaſy paths to greater conqueſts. May propitious heaven preſerve to us a prince whoſe wiſdom meaſures his glory by the happineſs of his people, and a worthy miniſter, who ſeconds his views with ſo much zeal and extenſive diſcernment. France, ſuperior by the advantages of her commerce, ſhall make neighbouring ſtates know, that ſhe is as capable of raiſing her power by peace as by war.'

REMARKS on NAVAL AFFAIRS before the laſt war.

We have now ſeen what has been urged in France *, to ſpirit up that notion to uſe every endeavour to augment their maritime proweſs; and we have no little reaſon to fear that they will one day arrive at ſo great a height therein, as may give them the ſuperior dominion over the ſeas, which they have ſo long ſtruggled for. Our author inſiſts, that every power ought to bow down to the French flag, and that this is a right and an homage due by all the powers upon earth to the fleets of this Grand Monarch. Many, too many, I am ſenſible, will laugh at this, and treat it as the mere gaſconade of a Frenchman; others, who are really acquainted with the extent of the maritime commerce of the kingdom, the number of ſeamen they can raiſe for the equipment of their fleets, and the daily increaſe of their royal navy, by the almoſt conſtant purchaſe and building of ſhips abroad and at home, will not think ſo meanly as ſome are wont to do, who ought to know better of the naval ſtrength of this neighbour kingdom. Before the laſt war, was it not ſanguinely propagated by ſome, that the French had no trade, none that ought to give Great-Britain the leaſt umbrage? Has not experience taught us the contrary? Some will yet ſay, that France has no ſeamen to man a fleet any thing formidable, nor any ſhips fit to look the Britiſh navy in the face. I am afraid theſe people talk without book.—Under this head we can only touch the outlines, as it were, of a matter of this concernment; we ſhall reſume the ſubject hereafter, under the articles SAILORS, SEA DOMINION, and SHIPPING, where we ſhall endeavour to give an authentic account of the French marine, and of the whole conſtitution of their naval affairs, leaving others to make compariſons. The author is the laſt perſon in the kingdom who would wantonly ſpread groundleſs alarms; he has taken ſome pains to inform himſelf, not only of the commercial policy of this nation, but of the foundation now laid to raiſe it's maritime power to a pitch that may ſome time make Britain tremble, however omnipotent ſhe may think herſelf by ſea at preſent.—The conſequence hereof, I cannot help owning, as a friend to the liberties of mankind, appear to me with an aſpect I ſhould not chuſe to deſcribe at preſent.—It is my buſineſs to ſtate what is repreſented to me for facts, before the public; if the danger is at greater diſtance than we can preſume to foreſee, none will blame our vigilance, and honeſt zeal for the public intereſts, who really wiſh well to the trade and liberties of theſe kingdoms.—Do we not ſee the greateſt part of Chriſtendom enſlaved by eccleſiaſtical, civil, and military tyranny? Have we not long enough experienced the refractory politics of the court of Spain? What cardinal point has the nation gained of Spain, from the treaty of Hanover to that of Aix la Chapelle, to make us any compenſation for the numerous millions they have occaſioned us to ſpend, and for the thouſands and ten thouſands of lives they have obliged us to ſacrifice? Rather than act with cordiality and juſtice towards Great-Britain, in conſideration of what ſhe has as well borne from her, as done for her, are not depredations ſtill made on our merchants? And we wiſh that ſhe may not appear ready to join with the firſt power that may draw the ſword againſt us, inſtead of doing us right in point of our trade and navigation? Glad ſhall we be if theſe apprehenſions prove groundleſs. We, however, think it our duty not to conceal them, but modeſtly ſubmit them to others.

* See Reflexions Politiques ſur les Finances & Commerce de France.

Under the article BRITISH AMERICA, we have ſet forth the claims and encroachments of the French in the new world.—We have experienced, by our recent accounts from North-America, that our fears on that occaſion have not been chimerical; and what will be our fate in relation to the negociations touching the adjuſtment of limits upon the continent, as well as in regard to our iſland colonies, we do not yet ſeem to be ſatisfied.—Under the articles FRANCE, FRENCH AMERICA, and divers other parts of this work, we have repreſented from facts indiſputable, the nature and extent of the French commerce and navigation, and what ſtrides they have actually made to univerſal empire: we have done the like under the chief provinces of Spain, and ſhewn, that, inſtead of doing right to the trade of theſe kingdoms, ſhe is only ſtudying to advance her own, and that ſhe is abſolutely changing her ſyſtem, from a paſſive to active commerce, and increaſing her maritime ſtrength; all which forebodes ſtill greater and greater evils to this nation in particular.—In regard likewiſe to the barrier of the Dutch, we have repreſented, under the article HOLLAND, how importantly neceſſary it is to ſecure, without delay, a good BARRIER to the States General.—Their marine, we well know, is far from being in a reſpectable condition: ſo that if France and Spain ſhould unite their naval forces againſt us, we muſt ſtand, as it were, alone; we can have no timely and effectual aid by ſea from our natural allies, and very little by land, if their barrier continues unſettled 'till a freſh war breaks out; their councils ſeem ſome how perplexed and diſtracted, by machinations that are apparent to every man who will vouchſafe to open his eyes.—In a word, we wiſh the affairs of a certain nation may not be ſo conducted as they are, with a view chiefly to throw duſt in the eyes of another nation, that ſhe may be lulled into a lethargy, or diverted from the purſuit of her own ſafety and preſervation, 'till the PROPER TIME may come for the great blow to be ſtruck, by the ſecret increaſe of a maritime force, that may prove formidable to all Europe.—Hitherto, all other means have failed them; their military alone they find will not effectually anſwer their reſtleſs intentions; nothing will humble the haughty iſlanders but a ſuperior naval force, and that they ſeem determined, at all events, to have, and therefore have been, imperceptibly, at it were, augmenting the ſame, ever ſince the late peace, by purchaſing Engliſh ſhips, building others both at home and abroad, and filling their magazines with naval ſtores.—Theſe things have been doing, and are daily doing; but that we ſhould not clearly diſcern their doings; that this nation ſhould, as much as poſſible, be kept in ignorance of thoſe meaſures, and our ſight eclipſed from ſeeing the gradual riſe of their naval power, we wiſh that pretended, inſtead of real ſchemes of diſtraction, may not have been hatched and kept alive 'till they think the happy criſis is come.—We wiſh theſe conjectures may prove viſionary; but is it not right rather to be upon the Qui vive than otherwiſe? In our negociations ſince the peace, have we met with that cordiality and diſpoſition neceſſary to adjuſt and terminate theſe miſunderſtandings between the two crowns? On the contrary, have we not juſt cauſe to ſuſpect that they mean nothing leſs than to ſettle thoſe points amicably?

Upon the whole, Great-Britain ſhould ſeem, as ſhe is at preſent circumſtanced, to have nothing to truſt to but the increaſe of her naval power; and, if we take the proper meaſures to ſupply ourſelves with NAVAL STORES of every kind, the money we ſpend on this occaſion will ſpring from ourſelves, and circulate among ourſelves, and thereby our very NAVAL EXPENCES may be made inſtrumental to the increaſe of the riches of the nation, while they are augmenting it's NAVAL POWER.

However paradoxical this, at firſt ſight, may appear, it is nevertheleſs true: for, if our naval ſtores are all raiſed within ourſelves and our plantations, will they not all ſpring from our own lands, and the labour of our own people? And are not the produce of our lands, and the arts and labour of our people, the great ſource of all our treaſures? Suppoſe, in order to maintain the Britiſh navy in a ſtate of ſuperiority, requiſite to encounter every danger wherewith we might be ſurprized, the nation was to be at an extraordinary expence of half a million a year, for ten years together; if we took no article whatever which concern our naval affairs from foreign nations, this would be half a million a year clear and abſolute gain to the nation, and ſuch a real increaſe of her treaſures; for if our own lands were ſo cultivated as to produce every ſpecies of timber neceſſary for the occaſion, as well as we have all proviſions within ourſelves; and if we could provide ourſelves with all pitch, tar, turpentine, and hemp for cordage and ſail-cloth; if we could alſo ſupply ourſelves amply with iron of all kinds, proper for the purpoſe, and every other individual article, from the ſhipwright and grazier, even to the very ſhip chandler; would not every one intereſted in the ſupply be gainers, in proportion to the additional national expence, from the landed gentleman to the very caulker and rigger by ſuch increaſe of naval ſtrength? And, while the nation actually poſſeſſed an increaſe in her quantity of ſhipping, equivalent to the additional expence incurred, we do not ſee how the nation could be any greater loſer by ſuch extra-expence, than what may be allowed for wear and tear, &c. becauſe

the

the whole is the additional produce of our lands, our own labour, and our own arts.

If, indeed, by our contracts for naval ſtores, the nation is impoſed upon, and made to pay 50, or cent. per cent. more for them than they are intrinſically worth; in ſuch caſe, the loſs to the nation is ſo much more than the article of mere wear and tear, as the nation is actually defrauded of.—Now, if this be the true ſtate of the matter, we have no reaſon to apprehend that ſuch an additional expence incurred, and paid within the year, could ever prove injurious to the nation, unleſs the taxes for that purpoſe were ſo laid, as to prove a clog and incumbrance upon our trade; for if thereby the price of our labour, arts, and manufactures, was increaſed in proportion to the yearly incurred national expence, then the nation might loſe in the vent of it's commodities at foreign markets, more than it gained by the augmentation of it's royal navy.—This, among numerous other reaſons given throughout our work, ſhould ſeem to ſhew, that the preſent conſtitution of the public revenue is as little calculated to promote the increaſe of our naval, as of our commercial power; and, therefore, that it may one day become neceſſary to think of ſo gradually changing the preſent ſyſtem of the revenue, that it's neceſſary plight and condition may ever go hand-in-hand with the advancement of our trading intereſt, as well as the increaſe and ſplendor of our royal marine.—This is what all wiſe and honeſt men, who are true friends to their country, wiſh to ſee happily accompliſhed; and this is one great point that we ſhall moſt ſincerely endeavour to promote, with due ſubmiſſion to the judgment of the public.

Certain it is, that the ſurprizing ſucceſs of the French in navigation (to which, but in our fathers days, they were almoſt abſolute ſtrangers) is, in our opinion, principally owing to the excellent laws and ordinances which have been eſtabliſhed, within little more than half this century, in that kingdom, for the regulation of all maritime affairs; in which their ſummary and eaſy method of proceeding has been found to be very beneficial to all that have had occaſion to be concerned in it: for the government finding that the only means to have a powerful navy, was to encourage trade and navigation amongſt private perſons, nothing was omitted that could, in any manner, tend to the advancement of commerce.

And, indeed, if we conſider the prodigious increaſe of the naval ſtrength of France within theſe 70 years laſt paſt, we are obliged to acknowledge, that they have been very induſtrious in promoting trade; and if, likewiſe, we examine the meaſures they have uſed, we ſhall find them to be ſuch as ſeldom, if ever, miſſed of the deſired ſucceſs, becauſe particular care has been taken to remove every impediment that might obſtruct the progreſs and improvement of their navigation, and the good execution of whatever ordinances they made for that purpoſe.

We can hardly ſuppoſe that any man of ſenſe can take amiſs what we ſay here to the advantage of the naval laws and conſtitutions of France, as if we hereby ſeemed to have leſs reſpect than we ought to have for thoſe of England. Though the French be enemies to us, we ſhould not be ſo much enemies to ourſelves, as to reject the uſe of good laws, merely becauſe they are in force amongſt them, or have been deviſed by them. Whatever our practice may be, I can aſſure you, that they are nevertheleſs taken with good laws that are enacted in bad governments; and they have, in their affairs of trade, conſulted all the laws and ſtatutes in force in every part of Europe, and, by retrenching what therein was ſuperfluous or inconvenient, and ſupplying what was deficient, with proper regulations for every ſubject, they have certainly compiled the moſt complete ſyſtem of laws for trade and navigation that ever Europe ſaw. Nor would it in the leaſt derogate from our honour to follow their example in many things worthy of imitation, ſince all the world acknowledges the reaſonableneſs of that uſeful maxim,

Fas eſt & ab hoſte doceri.

The French are now ſo thoroughly convinced of the folly of their forefathers, in deſpiſing and neglecting commerce, that, at the beginning of queen Anne's war, an edict was publiſhed, tolerating gentlemen to trade by wholeſale, either in the mercantile, or any other way, which, 'till then, was never heard of in France: on the contrary, if a gentleman only married a merchant's daughter, he derogated from his quality, of which they were ſo ridiculouſly jealous, that neither merit nor money could induce them to marry below their own condition: but, by the above-mentioned edict, traffic is made conſiſtent with nobility; which has had as ſucceſsful effects as that nation could deſire.

Nor is there, at preſent, a ſhorter way for a man to make his fortunes in France, than by projecting any thing that may tend to the benefit of commerce. The famous Colbert was indeed raiſed to the poſt of ſur-intendant of the finances, by the character that cardinal Mazarine gives of his extraordinary talents for that employment; but his capacity in advancing the intereſt of the kingdom, by the improvement of commerce and navigation, rendered him a man ſo neceſſary at court, that the king neither undertook, nor ſuffered others to undertake, any thing conſiderable of that nature, without his advice and approbation. He was the principal contriver of the excellent regulations for exchange and commerce in France: and, in a word, being acknowledged by all to be a competent judge of all ſuch matters, a perfect deference was ever had to his opinion about every thing that had any relation to trade.

However, that accompliſhed miniſter being ſenſible, that (conſidering the other great affairs of ſtate, with which the manifold dignities he deſervedly poſſeſſed at court neceſſarily obliged him to be taken up) he could not apply himſelf ſo much as he deſired to the improvement of the national traffic, which was his darling ſtudy; yet he ſo highly encouraged the induſtry of other fit perſons, and ſo favourably received every propoſition made for it's advancement, that the hopes of preferment ſetting people's brains a working, the naval and mercantile polity of France was ſoon reduced into ſuch a ſyſtem, that could not fail to render it flouriſhing and proſperous almoſt all the world over.

Amongſt other methods that have been taken for the proſperity of navigation, and the increaſe of navigators, ſchools are erected in ſeveral places of the kingdom, in which all perſons that will repair thither, are taught the theoretical part of ſailing, and all things belonging thereto, by the moſt accompliſhed mathematicians that the kingdom can afford, who have very HANDSOME SALARIES FROM THE GOVERNMENT FOR THAT SERVICE, which they muſt perform gratis to all that deſire to be inſtructed: and, what is more, ſo very deſirous are they of providing themſelves with able and ſkilful ſeamen, that, upon the humble requeſt of any young man deſirous to learn navigation, and wanting means to ſubſiſt without ſome other buſineſs, during the time that muſt be employed in that ſtudy, A COMPETENT SUBSISTENCE IS ALLOWED HIM BY THE GOVERNMENT; ſo that inſtead of paying for the knowledge he acquires in ſuch a uſeful art, by which he procures a certain livelihood for his life-time, he is paid for his trouble in learning a profeſſion which may eaſily enable him to ſubſiſt handſomely, and frequently to make his fortune. Thence it is that France is very well provided with a great number of able and ſufficient PILOTS, GUNNERS, MASTERS, &c. and all other ſea officers, both for the ſervice of the king and the merchants; and whether we conſider the ſtrength of the French navy, the number of their merchant ſhips and mariners, or the ſtate of their foreign plantations, the extraordinary effects of the means they have uſed to encourage navigation will be obvious.

Upon the whole; from an impartial ſurvey of the commercial and naval affairs of this kingdom, one of the greateſt cauſes to which we may juſtly attribute all the advantages of the French in trade, is the wiſdom of their mercantile and naval laws; whereby all perſons have been encouraged to engage their money in trade, and ſo have extraordinarily improved both their own and the public treaſure.

REMARKS on NAVAL AFFAIRS ſince the laſt WAR, and the DEFINITIVE TREATY of 1763.

By our ſucceſſes during the laſt war, and the new acquiſitions obtained by the peace, both from France and Spain on the American continent, and likewiſe of the NEUTRAL ISLANDS, that are annexed to the crown of theſe kingdoms; we may rationally enough hope for an increaſe of our mercantile ſhipping, by the general increaſe of our North American commerce, as well as that of the iſlands of the GRENADOES, ST. VINCENT, TOBAGO, and DOMINICA: and whether that of France may not decreaſe in proportion as our trade and navigation ſhall augment, in conſequence of the loſſes they have ſuſtained in America, is a matter that nearly concerns us. For if it does not, and France ſhall keep up and preſerve the ſame degree of general trade and mercantile navigation, and thereby uphold as great a degree of royal naval power as they poſſeſſed before the laſt war, we have obtained no advantage over them; on the contrary, by entailing on ourſelves, ſo great an increaſe of PUBLIC DEBTS and TAXES as the laſt war has coſt us, we have ſo loaded and encumbered our whole commerce, while that of France has not been ſo to the like degree; though it is to be feared, the GREATER CHEAPNESS OF FRENCH COMMODITIES, and the GREATER DEARNESS OF ENGLISH ONES, will enable France to increaſe their foreign trade in proportion as ours ſhall diminiſh.

To prevent which effectually, it is to be wiſhed that our rulers will embrace every poſſible meaſure that can be ſuggeſted to give IMMEDIATE RELIEF to our trade, by exonerating the ſame from as much of the burthen of taxes, as can be deviſed, and found practicable. For if that is not done, and without delay too, France will ſoon gain more by dint of COMMERCE, than they have loſt by the war; foreign nations giving thoſe the preference in their dealings, who can afford to ſell their commodities the cheapeſt; and the immenſity of our preſent debts and taxes rendering Engliſh commodities ſo much dearer than thoſe of France, whoſe expences during the laſt war bore no proportion to thoſe of Great-Britain, their wares in general muſt neceſſarily be

ſo much cheaper compared with ours, that foreigners will not be able to purchaſe ours, and therefore muſt be obliged to have thoſe of our commercial competitors: the conſequence muſt inevitably prove the loſs of all our trade with foreign nations; and what then will avail all our plantation improvements, be they e'er ſo much extended? If they are enlarged to a degree to enrich and aggrandize the continent of America, may not this in the end ruin the mother-kingdoms? Will not ſuch riches in America, enable the Americans to manufacture every material they ſhall be able to produce? If they do, will not their greater cheapneſs of commodities be as detrimental to this nation as that of France? That this injurious effect alſo, may not follow from our new acquiſitions, too much care cannot be taken to prevent thoſe colonies turning to any ſort of manufactures that ſhall at all interfere with thoſe of Great-Britain and Ireland; every improvement that muſt be ſuffered to be made on the continent of America, muſt be reſtrained to the MATERIALS FOR MANUFACTURES, and thoſe ſuch only that the three kingdoms are not able to afford themſelves, and that we are under the neceſſity of importing from foreign nations: and even with regard to this point, it muſt be conſidered, that unleſs we will take ſome proportion of the produce of foreign nations, they will ceaſe to take any of ours, and there will be an end of our reciprocal commercial connections.—It muſt not be forgot neither, that if we diminiſh greatly in our importations of foreign commodities, our public revenue, the REVENUE OF CUSTOMS, will immediately feel the effects of it, and what will become of the PUBLIC CREDIT? And as we ſhall decline in our imports from foreign nations, as we may increaſe in them from our own American plantations, and ſtill keep up the ſame DUTIES OF CUSTOMS on the one, as we have done on the other, this may prove a great diſcouragement to our improvements on the American continent.—Theſe things are not ſuggeſted to intimidate us from attempting every wiſe improvement that can and ought to be made in America; theſe obſervations are made, with no other intent than to manifeſt, that the moſt conſummate wiſdom is at this time requiſite in the conduct of our commercial intereſt, conſiſtent with thoſe of every other kind.

NAVAL STORES comprehend all thoſe particulars which are made uſe of, not only in the royal navy, but likewiſe in every other kind of navigation: as timber and iron for ſhipbuilding, alſo pitch and tar, hemp, cordage, ſail-cloth, gunpowder, ordnance, and fire-arms of every ſort; alſo all ſhipchandlery wares, &c.

REMARKS.

The principal ſupport of this nation, and the preſervation of it's commerce and liberties, depending upon the conſtant reſpectable plight of it's mercantile, as well as royal marine, nothing can be more deſirable than for the nation to be in a condition to furniſh and ſupply itſelf amply and cheaply with every kind of naval ſtores; for, if we could once be happy enough to effectuate this, even the public by ſuch like national debts, provided they remained in the hands of the ſubjects of Great-Britain, and no intereſt money for the ſame was carried out of the kingdom, could ſuſtain no greater detriment thereby, than what aroſe from the weight of ſuch intereſt-money lying, by way of taxation, upon our commerce.

It is well known, that we formerly received our ſupply of pitch and tar from Sweden: but the Swediſh merchants, knowing that the beſt tar and pitch was made in their country, thought they had an opportunity given them to engroſs it to themſelves, and to ſend it abroad in their own ſhipping, and ſell it to their neighbours at their own prices. In order thereunto, they formed a tar-company, who engroſſed the whole; and ſeveral ſevere laws were enacted, that no makers ſhould ſell to any but them, and that no ſhips, either foreign or their own, ſhould load any but for their account, and by their order.

This monopoly gave great uneaſineſs to our merchants, who thought it a hardſhip to be debarred bringing home what pitch and tar they had occaſion for in their own ſhipping; for loſing that navigation, was putting a number of ſhips out of employment, and, conſequently, paying our neighbours for work whilſt our people were unemployed.

They made ſeveral complaints, but to no purpoſe, 'till the year 1703, a war being then declared with France, and, conſequently, a royal navy to be fitted out.

Upon examination it was found, that there was not then pitch and tar enough for an immediate ſupply.

Hereupon ſeveral letters were wrote to Dr. Robinſon, afterwards biſhop of London, then queen Anne's envoy at the court of Sweden, upon that occaſion: to which the doctor returned an anſwer from Warſaw, the 4th of Auguſt, 1703, to Sir Charles Hedges, then ſecretary of ſtate. This letter was copied out, and given to ſeveral merchants, that they might ſee how much it was in the power of the king of Sweden either to forward the fitting out the royal navy of England, or to keep it in harbour.

That we may judge from FACTS what has been our caſe, I have tranſcribed the letter.

SIR,

'I juſt now received your honour's letter, of July the 6th, with orders that I ſhould earneſtly preſs the king of Sweden to give ſuch directions about the delivery of pitch and tar, as that her majeſty may know what ſhe has to truſt to therein. Upon this ſubject I humbly take leave to repeat what I have formerly writ your honour, that, on the $\frac{17}{28}$th of March laſt, I tranſmitted to the king of Sweden her majeſty's letter about this buſineſs, and ſent it, with a large deduction, to count Piper; whereupon, on the 20th of March, his majeſty writ to the college of commerce at Stockholm, that they ſhould give all due aſſiſtance to the Engliſh factors employed to buy up that commodity for her majeſty's ſervice; that for ready money they ſhould be ſupplied as well with what was wanting for the two former years, as what was deſired for this: which letter I ſent to Stockholm, where it was in due time received.

Not long after, count Piper told me, The directors of the tar trade had repreſented it to the king as a great grievance, that they ſhould be obliged to deliver at Stockholm any pitch or tar for the uſe of the Engliſh navy, for that they could to much more advantage carry it thither, and ſell it themſelves.

I preſſed the count very earneſtly, that at leaſt the king's letter, which was already ſent, might be complied with for this year, and that, if the like was deſired for the future, we ſhould give them time for deliberation, whether they thought fit to gratify the queen therein or not.

I had hopes this fair requeſt would not have met with any difficulty; but have lately heard from Mr. Jackſon, it has been wholly rejected, and that the directors of the tar trade have declared they will export to England, and elſewhere, all their pitch and tar for their own accounts, and that her majeſty's navy ſhall be ſupplied at the market-price fixed. This I take to be all her majeſty has to truſt to on that ſide; and my humble opinion is, no relief from hence can much mend the matter.

For as it can hardly be expected any new order from the king of Sweden (if procured, which is uncertain) can arrive at Stockholm 'till ſome time in September; ſo it is not ſure it will then be obeyed more than hitherto, eſpecially conſidering that, by that time, the tranſportation of pitch and tar from Finland to Stockholm will be almoſt over, and the directors will have to ſay, that they have not the quantity deſired.

It would alſo fall into a hazardous winter voyage, and, in all human appearance, not anſwer her majeſty's occaſions; wherefore I am much in pain what reſolutions to take.

To repeat her majeſty's requeſt to no purpoſe, and where there may be a tolerable pretence for not complying with it, ſeems to me to be very improper; and I humbly hope your honour will be of that mind.

Mr. Jackſon writes me, in his letter of July 1, That a good ſum was then offered to facilitate the matter, but he had no hope it would ſucceed; I alſo believe it will not, the count Wrede being ſo little inclined to contribute, in any caſe, to a good intelligence between England and Sweden, and none elſe having any authority in thoſe matters: and, therefore, if theſe endeavours alſo fail, I cannot perceive her majeſty can, with any certainty, be ſupplied otherwiſe than either by buying pitch and tar of thoſe directors, at ſuch a price as they will ſell it at in England, or by ſeizing what they ſend, whether found by ſea or in port, and taking it at a reaſonable price. The king of Sweden did the ſame laſt year by lead bound for Dantzick; and our merchants there write me, they apprehend it may be ſo this year alſo.

The reclaimers, not inſiſting upon the advantage they might have had by carrying their lead to Dantzick, offered it at the ſame price the admiralty of Sweden paid for the laſt lead they bought; but, inſtead of that, were obliged to let fall one ſixth, and without any compoſition for the bringing up and detention of their ſhips. Againſt this may be objected, That thereby the preſent occaſion may be ſerved, but the uncertainty become greater for the future.

To this I can only anſwer, That the Swedes muſt always, by themſelves or others, ſhip out their pitch and tar; and we ſhall, therefore, hereafter be at ſo much certainty as now. Beſides, as thoſe directors have for many years monopolized and reſerved to themſelves the tranſportation of all pitch and tar that goes to Holland; ſo I judge they intend to do in regard to England alſo, which, if ſo, would fall hard both on our traders in that commodity, and on our ſhipping employed hitherto in a good proportion to fetch it: beſide that the price in England would be what the monopolizers pleaſed.

Theſe inconveniencies will, I hope, be conſidered, and remedied one way or other. I am alſo of opinion, that, if the war with Muſcovy be of any long continuance, and inroads be made into Finland, as moſt probably will, Sweden will not have ſuch quantities of pitch and tar to ſend abroad as the occaſions of Europe require. Courland furniſhed ſome formerly; but, while the Swedes are maſters there, none can be expected thence.

It is but very little, and not good, that Norway yields; and I ſuppoſe there is but very little certainty it can be had from Muſcovy.

What difficulties there are in making and bringing it from New England, I am not acquainted with, but take it for granted, England had better give one third more from thence, than have it at ſuch uncertainties, and in ſo precarious a manner, from other countries, &c.'—The end of Dr. Robinſon's letter to Sir Charles Hedges, ſecretary of ſtate, the 4th of Auguſt, 1703.

Further REMARKS before the laſt WAR.

The Swedes were ſo fond of their new monopoly of pitch and tar, that an Engliſh ſhip had not been there for ſix or ſeven years: and that, when ſome of our merchants reſiding there made application to the tar-company for a loading of pitch and tar upon an Engliſh bottom, offering them their own price in ready money, no intereſt could prevail, unleſs the captain would give ſecurity not to carry the ſaid loading to London, Liſbon, or any other port where the company had a factory.

The people of England ſoon took the alarm; the merchants made ſtrong application for making theſe commodities in our plantations, and therefore that matter was brought before the parliament, who gave encouragement for importing pitch and tar from our plantations, which ſoon produced very great quantities from thence; they ſo much increaſed therein, that we received twice as much as the nation could conſume, and were thereby enabled to export great quantities to the Straights, Spain, Portugal, Holland, Bremen, and Hamburgh.

The bounty given by the government, amounted to a large ſum yearly; but what we re-exported and ſold to our neighbours, made the kingdom amends for that diſburſement; and it brought down the price ſo low, that both pitch and tar have been ſold with us for one third part of the price we once paid for Swediſh pitch and tar: and, if this way of ſupplying ourſelves from our own plantations had not been fallen upon, nobody knows how high the Swedes might have raiſed their price upon us, beſides the uncertainty of having them at any price.

What was feared ſoon came to paſs, a war in the Baltic was begun, great numbers of our ſhips were ſeized on frivolous pretences, and carried into Swediſh ports, and condemned as prize, to the unſpeakable damage of the merchants of this kingdom.

The lords commiſſioners of trade being ſenſible of the great advantage of ſupplying ourſelves with pitch and tar from our own plantations, ſent to the merchants to give them an account what other naval ſtores might be produced and brought from thence.

Their lordſhips were informed, that if encouragement were given, and the people put in a proper way to begin, all other ſorts of naval ſtores, as well as pitch and tar, might be brought from thence; that the Swedes had laid a new duty on iron of near 25 per cent. and that the interruption of our trade in the Baltic had greatly diſtreſſed our iron manufactures for want of iron to carry on their buſineſs: and farther, that the Danes had raiſed their boards from eight or nine dollars, to eighteen dollars per hundred: that undertakings of this nature (as in the caſe of pitch and tar) would at leaſt lower the prices, and leſſen the imports of Daniſh and Swediſh commodities, which then drew from us a moſt prodigious ſum of money. And laſtly, it was manifeſt, that unleſs we imported about 20,000 tons of foreign iron per ann. our manufactories could not be compleatly carried on.

For, in the two years before the war began in the Baltic, viz. 1714 and 1715 (in which years we had a free trade with Sweden) above 40,000 tons of iron were imported; and, though in the two following years above 23,000 tons was imported, yet that being ſhort of a ſufficient ſupply, it created terrible complaints among the manufacturers.

Now 20,000 tons of iron, at 12l. per ton, comes to 240,000l. and the boards and timber we received at their advanced price, came to 200,000l. more; and, if they found we could not otherwiſe be ſupplied, they would raiſe the price on us.

Beſides all this, it was further urged, that the Danes and Swedes had uſually the navigation of all their own boards and timber, &c. in their own ſhipping; which employment qualified them to breed up ſeamen, and conſequently upon any irruption, to fit out ſhips for war and privateers to annoy our trade; and, if ſo great an advantage as bringing the ſaid commodities from our plantations could be brought to paſs, it would augment our navigation to the plantations to more than double what it then was, and not only be an additional employment to our ſhip-builders, and all others concerned thercin, as well as to our ſailors and ſeamen, but increaſe the conſumption of our proviſions, and other neceſſaries for victualling and fitting out the ſaid ſhips; and that as our navigation increaſed, that of Sweden and Denmark muſt of courſe decline, and our new ſupply of ſeamen prove a proportionate additional ſtrength to the naval force of this kingdom, which ſailors will be ready on all occaſions to man out our fleets.

That in the navigation we then carried on to our plantations, it often happened that the crops of tobacco and ſugar, &c. fell ſhort, ſo that many of the ſhips were forced to come home dead freighted, and ſome lie a whole ſeaſon for the next crop, which (if encouragement was given for bringing timber and naval ſtores from our plantations) would, upon ſuch diſappointments, be ſure of a loading.

Theſe accounts were received with great ſatisfaction by their lordſhips; and the merchants, to promote ſo good a work, waited on the miniſtry at the board of trade, who heard and thoroughly examined what the merchants had to offer.

After their lordſhips had been attended at a great many meetings, and received full ſatisfaction, that it would be greatly for the advantage of this nation, to be ſupplied with naval ſtores from our own plantations, and very much enlarge the exportation of our woollen and other manufactories to theſe plantations, a motion was made for bringing a bill into the houſe; which was accordingly agreed to, and paſſed the commons with a clauſe, That no perſon or perſons within the ſaid plantations, or any of them, ſhall manufacture any iron wares, of any kind whatſoever, out of any ſows, pigs, or bars whatſoever, under the penalty of

one part to ſuch perſon or perſons as ſhall ſeize or ſue for the ſame, to be recovered in any of his majeſty's courts of record at Weſtminſter, or court of Exchequer in Scotland, courts of admiralty, or other courts of record in the plantations, &c. the proof to lie on the poſſeſſor. By this clauſe, no ſmith in the plantations might make ſo much as a bolt, or ſpike, or nail.

This clauſe muſt, indeed, have put the colonies into a moſt miſerable condition, the ſmith being above all other trades abſolutely neceſſary for carrying on all other employments: among the reſt, that of ſhip-building had by it been utterly deſtroyed, though by this article they make a great part of their returns to England for purchaſing our manufactures.

And there was another clauſe added in the houſe of lords, That from and after the 25th of December 1719, no forge going by water, or other work whatſoever, ſhall be erected or kept up in any of the ſaid Britiſh plantations, for the making, working, or converting any ſows, pigs, or caſt iron, into bar or rod iron, upon pain, that if any perſon from thenceforth erect or keep up, or cauſe to be erected or kept up, any ſuch forge, or other work, for the uſe or purpoſe aforeſaid, ſuch perſon ſo offending, being thereof lawfully convict in any of his majeſty's courts of record at Weſtminſter, or in the court of Exchequer in Scotland, or in the court of admiralty, or other court of record held in ſuch plantation, where the offence ſhall be committed, at the pleaſure of the informer, ſhall, for ſuch his or her firſt offence, ſuffer ſix months impriſonment without bail or mainprize, and for every other ſuch offence ſhall ſuffer ſix months impriſonment without bail or mainprize; and all governors or commanders in chief of the ſaid plantations, and every of them, now and for the time being, are hereby ſtrictly required not to ſuffer ſuch forge, or other work to be erected, or kept up, in any of the ſaid plantations within their reſpective governments, contrary to the true intent and meaning hereof; and, if any of the ſaid governors or commanders in chief, ſhall willingly or wittingly offend or be negligent in doing his duty herein, upon complaint and proof made thereof before his majeſty, his heirs and ſucceſſors, or ſuch as ſhall be by him or them thereunto authorized and appointed, by the oath of two or more credible witneſſes, the ſaid governor, or commander in chief, ſo neglecting or offending, ſhall be removed from his government.

This ſecond clauſe muſt have ruined all thoſe iron works in the colonies, to the great loſs of the proprietors of them, and given the French a much fairer handle to tempt them into their ſettlements which join to ours, than the ſcarcity of iron gave them to entice away our artificers.

Which being duly conſidered, thoſe perſons that were ſolicitous for the benefit of the public, deſired the bill ſhould be dropped that ſeſſion, that the members of both houſes might have time fully to inform themſelves of the advantages thereof.

Thoſe gentlemen who chiefly oppoſed this undertaking, were concerned in iron works, who, on the before-mentioned interruption of the trade with Sweden, raiſed their iron to an extraordinary price: they did all they could to obſtruct the bill; they reported, it would hinder the exportation of wrought iron to the plantations, that it was only a trick of ſome ſtock-jobbers, and that it was carried on by ſome perſons that had a grant from the crown of ſome part of Nova Scotia, &c.

All which were groundleſs inſinuations; for there never was a deſign of making a ſtock of it, nor were any ſtock-jobbers ever concerned in the ſoliciting it, much leſs did any perſon concerned whatſoever, think of a grant from the crown; neither was Nova Scotia the place intended for carrying on the aforeſaid buſineſs, or thought to be proper for the ſaid undertaking.

But, as the people of New England, New York, Penſylvania, Carolina, &c. were under great neceſſities for Engliſh manufactures, and an incapacity of providing commodities to pay for them, preventing the Engliſh merchants from ſend-

ing

ing them thoſe large quantities that might be a ſufficient ſupply; and, as inevitable neceſſity put them upon manufacturing for themſelves, therefore this NEW EMPLOYMENT OF PROVIDING NAVAL STORES, WAS PROPOSED TO TAKE THEM OFF THE MANUFACTURES THAT INTERFERED WITH OUR OWN.

At length, however, the wiſdom of parliament judged it expedient to grant a bounty on pitch and tar, which we ſhall ſee hereafter.—This was but a ſmall advance to ſupply ourſelves with naval ſtores in general.

Hemp and flax are ſo uſeful in navigation and trade, that we cannot poſſibly do without them; the firſt for cordage of all ſorts, the latter for making ſail-cloth, as well as for the linen manufactures that are carried on in this kingdom; and the late Czar of Muſcovy being ſenſible we muſt have our ſupply of hemp, &c. from him, did, as the Swedes by their pitch and tar, make a monopoly of it in a manner; and the Ruſſians had their own price for it, in ready money or bills of exchange, and the reſt in ſuch goods as they thought fit.

Upon which it was urged by thoſe who underſtood the public intereſts, (1.) That the neceſſity we were under for thoſe commodities, ought to put us upon all imaginable care and ſtudy how to provide them, leſt we ſhould happen to be under the ſame neceſſity for them, that we were in the year 1703 for pitch and tar, when the government of Sweden, as obſerved, abſolutely refuſed to let us have them for our ready money, otherwiſe than in their own ſhipping from their tar-company here at their own price, and only in ſuch quantities as they thought fit. Upon that diſappointment, the government, by allowing a conſiderable encouragement for carrying on the manufactures of pitch and tar, had ſufficient quantities from our own plantations; and it is greatly to be deſired, the like encouragement was given for raiſing hemp and flax; for ſince we have plantations where hemp and flax and all ſorts of naval ſtores may be raiſed, with ſo many and ſo great advantages to this kingdom, it would be unaccountable to leave us dependent and at an uncertainty for them, and to be ſupplied only by a prince that will be paid for them juſt as he pleaſes. (2.) That it is very well known, our land in general is too dear for raiſing hemp and flax, and what is grown here (though it is tough and makes ſtrong linen) neither dreſſes ſo kindly, nor whitens ſo well as that which grows in warmer climates. In Ruſſia the beſt hemp and flax grow in the ſouthermoſt parts of the kingdom, where the ſummer is hot, and the air clear, and yet the flax is not accounted ſo good as that which grows in Egypt or Italy.

Egypt has always been eſteemed for it's linen, and now ſupplies Leghorn with quantities, and the coaſt of Syria, Aſia Minor, Smyrna, Conſtantinople, and other great cities, have a ſupply of hemp and flax from thence.

All our colonies (which run twelve or fourteen hundred miles in length, and all the way border upon the ſea) have very hot ſummers, the ſouthermoſt parts of them lie near the ſame latitude with Egypt, and the north part much about the ſame with Ancona, or Bologna in Italy, where excellent hemp and flax grow, therefore we have the greateſt proſpect to receive mighty ſupplies of hemp and flax from them. Part of the land in the colonies is very rich, and of ſo ſmall value, that there will be opportunity of breaking up freſh as often as there is occaſion to change the ground; which, if laid down, will recover itſelf again without the charge of manuring, as we do here, to the very great damage of our ploughing lands. Nothing impoveriſhes land more than hemp and flax, and though it is manured, that alone will not do ſo well, for the land ought to be changed after three or four crops, and generally the fineſt and fatteſt pieces are converted to that uſe.

Thoſe great conveniencies of having land ſo very cheap, and ſo fine a climate, which we know produces excellent hemp and flax, ſo commodiouſly ſituated along the ſea-coaſt, with ſuch numbers of large rivers running up the country to the moſt inland ſettlements, where proviſions may be raiſed at ſo ſmall a charge, and where work may be done by the labour of ſlaves, almoſt as cheap as it is in India, give ground to hope, that we may manufacture linen here cheaper than any part of Europe can import them upon us; and the colonies be as profitable to us, by raiſing rough materials to carry on the linen manufacture, as the Suſſex and other downs are for ſupplying wool for that manufacture, the profits of which we have valued ourſelves ſo much upon, that we have ſet the reſt of Europe to be our competitors therein.

However, a great deal of the value we ſet upon it proceeds from miſtake, we think abundantly more of it than it really is; the foreign linen and Flanders lace, linen yarn, and naval ſtores imported into this kingdom, being ſuppoſed to amount to more than the exports of all our woollens. The manufacture of linen in Britanny, and other parts of France, forty years ago, was thought to be better to them than the woollen to us; for it was generally allowed we took above a million a year from them, and Portugal, Spain, and the Spaniſh Weſt-Indies, twice that value, beſides what other countries took.

Indeed, they have in ſome meaſure loſt their trade with us; we now receive little from thence, but what comes by ſtealth, or under the denomination of Swiſs linen through Alſatia, their cambrics excepted, of which I have elſewhere taken notice. And now the emperor of Germany's hereditary countries, and other parts of the empire, have gained the ſupplying of us, which has made them very rich and powerful. Now, as the woollen manufacture, eſpecially the coarſe part, has ſpread itſelf of late into ſeveral parts of the kingdom, which has exceeded the demand, and cauſed great ſtocks to lie by, if thoſe rough materials of hemp and flax were prepared in our plantations, the people in North-Britain and Ireland, &c. would ſoon find the advantage of falling upon and advancing that manufacture; the laborious and coarſe part being performed abroad, the reſt would invite not only the poor and neceſſitous, but people of better circumſtances to employ their time in it.

If theſe propoſitions are heartily put in practice, we may hope, that by providing the aforeſaid rough materials, we ſhould have the delightful proſpect of ſeeing trade flouriſh; for, as the ſilk and linen manufactures, where brought to perfection, are altogether as profitable to thoſe nations, as the woollen now is to us; and as we increaſe in our linen manufactures, thoſe of Sileſia, and all the emperor's hereditary countries, from whence we take ſuch quantities, muſt abate of courſe; their people will alſo reſort to us, and help to carry them on; for it has always been obſerved, where new manufactures are ſet up, and take away part from another country, the manufacturers will likewiſe remove: this was the caſe of the Flemings, when queen Elizabeth gave ſuch great encouragement to have the woollen manufacture removed hither; and ours when we had that inundation of China and India wrought ſilks, our weavers went to Holland, Flanders, France, &c. and ſeveral ſtreets in Spitalfields were almoſt deſolate; and when thoſe ſilks were prohibited, the manufacturers returned again.

It has been computed, that the Ruſſians export to England and all other parts, in hemp and flax, above the value of a million a year. If hemp and flax be ſo valuable a product for merchandize with them, there ſeems to be much greater proſpect of enriching ourſelves, by raiſing them in our plantations.

1. Becauſe they will not be ſubject to any land-carriage, but ſhipped immediately from the place of growth.

2. Becauſe land is much cheaper in our plantations than in the ſouth parts of Ruſſia.

3. The climate being equal with that in Egypt and Italy, is ſuppoſed to produce hemp and flax preferable to theirs.

Sir Joſiah Child ſays, That in the plantations of ſugar and tobacco, every white man there employs four perſons at home; he means, we ſuppoſe, in providing clothes, part of their food, and all ſorts of utenſils for carrying on their buſineſs. If ſugar and tobacco employ ſuch a number of hands at home, certainly every perſon employed in the plantations in raiſing and dreſſing hemp and flax, muſt, by his labour there, return more than twice the advantage that can be produced by ſugar and tobacco; for they are manufactured in the plantations, the refining the ſugar, and cutting tobacco, with the little quantity that is rolled, excepted; whereas flax and hemp are materials for employing all idle hands, and of conſequence the poor's rate will ſoon be abated, and the nation will find in a little time what they ſave yearly thereby, will be more than ſufficient to encourage the people to begin that employment.

We mention part of the poor's rate, becauſe they muſt be maintained by our lands, if employment is not provided for them; and abundance are thrown upon the pariſhes for want of work, others make that a pretext for their begging from place to place: but, where workhouſes have been built, though materials for employing the poor are ſcarce, yet ſome public-ſpirited men have there maintained them for half the expence they were at before thoſe workhouſes were erected. [See the article POOR.]

This ſhews what good œconomy can do, and the happineſs it is to thoſe places, which have ſuch gentlemen to direct and aſſiſt them. We may obſerve here, that together with the produce of hemp and flax, ſilk may be raiſed by the ſame hands, [ſee the article SILK,] and not interfere the one with another; for, after the ſowing of hemp and flax, the mulberry-leaves come to be in perfection for feeding the ſilk-worms; and the ſilk-harveſt (as it is called) is over before hemp and flax are ripe: thus the perſons employed in the ſilk may turn their hands to that of hemp and flax, the breaking and dreſſing of which, may be work for them all the reſt of the year. The ſtocks and utenſils to be employed in them, will coſt but a ſmall matter. If ſuch a public ſpirit prevailed now for promoting the general intereſt of the nation, as did in our nobility and gentry upon the firſt ſettling of our plantations, I am perſuaded, that we may raiſe ſufficient quantities of rough materials for carrying on all our home manufactures.

And, if once we come to be amply ſupplied with hemp and flax by the aforeſaid methods, every place will be filled with flax-dreſſers, and the overſeers of the poor of every pariſh, where the wool-ſpinning trade is not carried on, may very eaſily come at hemp and flax, which they will find as profitable to them, as the woollen is to the other; and the more

diſtinct

diſtinct the employment is, the better, for many inconveniencies have attended one manufacture interfering with another; beſide, there will be an intercourſe of trade created, by one part of the kingdom ſupplying the other with their diſtinct manufactures; this will give full employment to the whole kingdom, and an univerſal chearfulneſs to every body: for the poor are never happier, nor their minds eaſier, than when they have full employment; and when they are employed, riches are diffuſed over the nation.

It has been a common opinion, that we have above a million of people in the three nations deſtitute of work; but, if thoſe rough materials ſhould come to be raiſed in our plantations, there need not be one idle perſon. Suppoſe that one million of people were put upon manufacturing thoſe rough materials, and each perſon earned but 1 d. a day, and allowing but 300 working days in a year, it would amount to 1,250,000 l. Now, as we have already ſaid, the importation of foreign linen, Flanders lace, and naval ſtores in general, amount to more than all our woollens exported; it is aſtoniſhing that ſo wiſe a nation as this, does not take care to regulate thoſe matters effectually, and have the greateſt part of thoſe linens made in the three kingdoms. See the article LINEN. All other nations of Europe are ſo wiſe, as to make linen enough for their own uſe, Portugal, Spain, and what is imported into Italy, excepted; and, if the government does not take care to put thoſe poor people into proper regulations and employments, they muſt continue in miſery and want.

Setting up the making of pitch and tar in our plantations, was very advantageous; there was, indeed, very great encouragement given to begin that undertaking, which had it's deſired end, and vaſt quantities of pitch and tar were imported; and it is hoped the proper encouragement will be given for every other kind of naval ſtores, that the Swedes and Ruſſians, &c. may not retain ſo conſiderable a ſhare of the importation of that commodity upon us.

Our plantations in America abound with vaſt quantities of timber, and the navigation from New England, Nova Scotia, or Newfoundland, is not more tedious, nor at a greater diſtance from us than the bottom of the Bothnic gulph, or Peterſburgh: but thoſe places have been long in trade, and having a conſtant demand from us for that commodity, they always have great ſtocks of timber ready ſquared, and boards lying ready to load a ſhip of five or ſix hundred tons in ten or twelve days; but hitherto we have never had ſtocks lying ready in our plantations, nor due encouragement for building large bulky ſhips, ſuch as are uſed by the Danes and Swedes, who ſail with a few hands, and at a ſmall charge. What timber we have had hitherto come directly to England, has been rather put on board to fill up, when tobacco or other merchandize has not been to be had; and therefore, no care has hitherto been taken to make a regular trade, which may deſerve further conſideration. See the article TIMBER.

They have iron-ſtone all along the Continent, from the ſouthermoſt parts of Carolina, to the northermoſt part of New England, in great plenty; ſome of it, upon trial, has made extraordinary good tough iron, and very good ſteel.

No part of the world abounds more with prodigious quantities of wood, nor has more rivers and ſtreams than that part of the Continent. There is ſo much wood, that the great charge of the planter is to clear the ground.

And, as no one undertaking conſumes ſo much wood as plenty of iron works, if they were erected, the land would be cleared of the wood, the air purified, the ground made fit for hemp and flax, and the beſt timber might be preſerved for bringing home.

In charcoaling the wood, there will be a very good opportunity of drawing pitch and tar out of the pine-trees; and no wood, according to the beſt obſervation, makes better charcoal for iron works: and all this without any other charge, than providing fuel for the iron works; ſuch a dependency have theſe operations one upon another.

And, as there are ſo many circumſtances that attend the making iron in our own plantations, if due and effectual encouragement be given *, it may be brought to a very great perfection, and ſuch quantities made, as to exceed in value any other product of our plantations.

* It is but within theſe few years that they have had any encouragement for the making of pig and ſow iron, which is extended to pig.

Iron is a commodity of univerſal uſe, ſtaple, and certain in all parts of the known world; conſequently as much to be valued as ſilver or gold; a commodity that will be carried every-where as ballaſt, at little or no charge.

And, whereas the Dutch do ſupply Portugal, the Straights, and Turkey, with great quantities, if we could be ſo happy as to have a full ſupply from our own plantations, either by adventurers from hence, who would lay out their eſtates in erecting iron works, or in exchange for the woollen or other manufactures, which we export to thoſe places; we ſhould not only ballaſt our ſhips with iron, but export great quantities, not only all over the Straights and Turkey, but even to India and Africa, and ſoon become maſters of a good part of the trade.

And, as we were once dependent on the Swedes for pitch and tar, we muſt remain ſo ſtill to them for iron, as we muſt to Norway and to them for boards and timber, and to Muſcovy for hemp, unleſs ſome effectual care is taken to relieve us from ſuch a dependency: it may one day prove highly dangerous, as it heretofore has done, to depend upon any power whatever, for any eſſential branch of our naval ſtores.

Further REMARKS on the benefits we may reap from North America, by the DEFINITIVE TREATY of 1763.

That our plantations are really able to furniſh a ſufficient quantity of hemp, flax, tar, pitch, turpentine, fir, timber, deal-boards, maſts, yards, pipes, and hogſhead-ſtaves, fully to ſupply the whole demand of Great-Britain and Ireland, has been taken for granted by many; ſo as that we ſhould ſuffer no ſcarcity, or want of thoſe goods, though we ſhould abſolutely prohibit their importation from any other place, after they become once well eſtabliſhed, in regard to NAVAL STORES in general.

By being able to furniſh ourſelves, muſt be underſtood thus; for we muſt not ſpeak more for them, than our plantations do for themſelves; and it is neceſſary to be very exact and explicit, in what we call the firſt principles: we would not be underſtood to mean, that, at preſent, they have hands enough to fell and cut out the quantities of timber, &c. draw and extract the tar and turpentine, ſplit out the ſtaves, &c. raiſe the hemp, and make the iron neceſſary for our ample ſupply; for that may ſtill be a difficulty for want of hands, but that this is not invincible, ſee the articles PEOPLE and POOR; but we mean that the country and the woods, have a ſufficient quantity of all theſe; that they are not to be planted, or waited for 'till grown; they have a boundleſs extent of woods, as well on the hills as on the plains, unexhauſted, and, indeed, unexhauſtible; which are ſufficient for all our demands, and much more.

Likewiſe we do not ſay or inſiſt, that they do now produce or plant a ſufficient quantity of hemp and flax to ſupply our demand; but that they have land enough, ſufficient in ſtrength of ſoil, and ſufficient in quantity, and which, by cutting down the woods, would daily increaſe: this we think is undoubted.

The countries where this ſupply of timber and naval ſtores would be produced, are, in a word, the whole Engliſh part of the continent of North America, viz. New England, New York, Eaſt and Weſt Jerſey, Penſylvania, and all the country, whether poſſeſſed or no, upon the great river of Delawar, as far as that river is navigable.

All the colonies of Virginia and Maryland, to the bottom of the bay of Cheſeapeake, all the colonies of North and South Carolina, and all the rivers thereof; in which laſt colony alone, they tell us, there is as much fir timber growing, as in all the kingdom of Norway.

Likewiſe it is to be added, that, mutatis mutandis, the coin and value of payment conſidered, they will be able to furniſh all theſe things as cheap as the eaſt country and Norway trade does furniſh them.

Theſe things granted, the propoſal for amply ſupplying ourſelves with naval ſtores, has been reduced to a narrow compaſs; for it has been urged, that all the difference then between England (the market) and our colonies, the producers of theſe goods, lies in the price of the freight, occaſioned by the diſtance of the place, and length of the voyage; how to bring this to a par, is the whole of the enquiry: and this is to be done by the ſeveral methods following.

N. B. Bounties and payments of dead money to the importer for encouragement, has been rejected by ſome, as being a mere charge upon the nation, though not upon the particular buyer of the goods, and is not by any means to be called a leſſening the diſparity, only it removes the burthen from private hands to the public, which is not ſufficient; and ſhould it extend to all the importations, would be a burden too heavy to bear, even for the whole nation.

The only weight, therefore, we would lay, ſay the propoſers, on the public, and even that but for a while, is to take off the duties entirely from all thoſe ſpecies of goods (not to repeat them) and prohibit the importation from other places; and not this laſt part neither, 'till the colonies were fully entered into the trade.

Then for the freight; we are to ſuppoſe, that the freight of all theſe articles, from the eaſt and north ſeas, ſtands now at a medium of forty to fifty ſhillings per ton, call it more or leſs: and ſuppoſe the freight of the ſame goods from the colonies ſhould then ſtand at a medium of ſix to eight pounds per ton, ſo that the freight would be three times as much one way as the other: it is true, this is a very conſiderable article, and eſpecially conſidering them likewiſe to be all bulky goods. But two articles will immediately contribute towards, if not be a full equivalent to, this exceſs of freight.

Firſt, Taking off the duty upon importation here, which being very high, ſuppoſe it for argument ſake to be 20 per cent.

may fairly be calculated at one half of the difference, and muſt be found by the importer in the price of his goods at market.

Secondly, Laying an impoſt, ſuppoſe it to be about ten per cent. upon all the importations of Engliſh goods into thoſe colonies, and this, we conceive, will be equal to the other half: the money ſo raiſed to be paid to the commanders of the ſhips, in ſuch proportions as ſhall be adjudged by the public, and upon ſo much tonnage only, as is loaden upon them of ſuch particular goods.

The colonies will never complain of ſuch a duty, becauſe it is in a manner paid to themſelves, and is but taking the money out of one pocket, and putting it into the other; the growth of their country will be exported (indeed the waſte growth, for they burn a great part,) their own people will be employed, and will be prodigiouſly increaſed, and theſe two are of the laſt importance to them; that give them but an aſſurance of theſe, they may give you aſſurance, that in a few years they will be the greateſt, and moſt proſperous colonies in the world.

I acknowledge, I deſpiſe (with the utmoſt contempt of their ignorance) the ſuggeſtions of thoſe times, when this glorious ſcheme of New England's proſperity was laid aſide ſome years ago, from a pretended jealouſy of thoſe colonies growing too powerful, and making themſelves independent; inſinuating, becauſe they were independent in a religious profeſſion, they wanted to be ſo in government; whereas firſt, the very thought, beſides a worſe principle it began in, viz. of party malice, was to the laſt degree weak and fooliſh; ſince it is evident, the proſperity, and, indeed, the very being and ſubſiſtence of New England in matters of trade, conſiſts in, and depends wholly upon their union with, and ſubjection to Great-Britain, as the principal growth of their country, which is the only article that ſupports their commerce, is taken off but by the Engliſh, and the ſame of the reſt: for example,

The proviſions of North America are the mere growth of the country, ſuch as flour or meal in barrels, peaſe, malt, rice, and tobacco; beef and pork, pickled and barrelled; ſheep and horſes alive; beer in caſks and in bottles; white fiſh ſalted and dried, and ſalmon barrelled; beſides lumber, for building and repairing as well houſes as ſhips, and ſhips and ſloops ready built and finiſhed.

Theſe all are the product of the country, and the labour of the people in the colonies of New England, New York, the two Jerſeys, Penſylvania, Virginia, and Carolina; without this export, thoſe colonies would periſh. It is true, the iſlands would ſtarve for want of the proviſions too, at leaſt at firſt: but, on the Continent, if the iſlands did not take off their product, the lands, which they have been at a vaſt expence to cure, and clear, and plant, would lie uſeleſs and uncultivated; the ſwine, which the woods feed for them by thouſands, would over-run them with their multitude, and be worſe to them, in time, than the bears and the wolves; their plantations would produce more of every thing than their mouths could devour, or than they could find markets to vend them at; their timber would ſtand, indeed, where it was, for no body would fell it to have it, and they may ſet their woods on fire, as they did formerly, to clear the land of them.

In a word, this being their caſe, their intereſt ties them to England, though their duty ſhould not; and, to ſeparate from England, would be to be undone.

Then carry the ſame argument on to the purpoſed commerce, for timber, naval ſtores, &c. this would ſtill bind them the faſter to their dependance on England, for no nation in Europe could give them the ſame encouragement. We need not enlarge upon this article here, it is evident to all that underſtand trade.

Let us then return to the propoſal: having thus ſtated the equivalent, by which the government may be reimburſed what they ſhall be out of pocket for the complete trial, it remains only to give a brief account of the advantages of ſuch a commerce: take them in a few ſhort heads.

I. Inſtead of the trade for deals and timber, tar, maſts, &c. which we carry on now with Norway, almoſt all for ready money, and which carries out more ſilver in ſpecie, nay, in our very coin, crowns and half-crowns, than the Eaſt-India company itſelf, however little notice has been taken of it: we ſay, inſtead of this diſadvantageous trade, we ſhould then receive all the ſame goods in exchange for our own manufactures, and they would be purchaſed of, and produced by the labour of our own people, the induſtrious planters, ſubjects to the government of his majeſty of Great-Britain.

II. Inſtead of having at leaſt two-thirds of theſe goods brought over in foreign bottoms, Danes and Swedes, and the ſhips navigated by foreign ſeamen, to whom we pay dead freight in the like ready money, and which they carry away in ſpecie, as before intimated, it would be wholly brought to us in our own ſhips, New England built, and navigated wholly by our own ſeamen.

III. Inſtead of a very few Engliſh ſhips, which now uſe the Norway trade, this new commerce would at leaſt employ a thouſand ſail of ſhips every year, and all the year, and moſt of them ſhips of burden: ſo that, beſides the benefit of building, repairing, and fitting out ſo many ſhips, it would be a new nurſery of ſeamen to us, having always 15 to 20,0000 ſeamen employed therein.

IV. The colonies would be increaſed in people beyond expreſſing; and, conſequently, not only the conſumption of proviſions would be increaſed there, which is, as ſaid before, the grand fund of their proſperity, but the conſumption of manufactures, and all European exportations to them, would be increaſed in proportion.

By the calculations which have been made, it is ſuppoſed that not leſs than 100,000 men would be employed in the woods, in cutting and felling timber, deals, maſts, yards, &c. in the managing and planting of hemp and flax; in the extracting and drawing off the tar; and in preparing all the articles mentioned, to be fetched from thence on account of this trade; and beſides the building ſhips among them, an article ſo conſiderable, as well deſerves to be handled by itſelf.

V. It would effectually furniſh thoſe colonies with returns for England, which they are now greatly diſtreſſed for, in order to pay the balance of their trade with England; the quantity of our manufactures which they take off, infinitely exceeds what they have of their own growth to ſend us in return: whereas, in caſe of ſuch a trade for the produce of their country, they would be at about a par with us, and we ſhould always be able to call for as much goods from them as would pay ourſelves.

VI. By this means they would receive ſilver in great quantities from Jamaica, and the other iſlands, for all that trade would be clear gain to them; and that ſilver alſo would remain with them, which now it cannot do, the bulk of it being ſnatched up for returns to England in ſpecie, though it be ſometimes to their great diſadvantage; ſo that, in conſequence of this commerce, there would be a circulation of current money in the colonies on the Continent, a thing they have too long been ſtrangers to.

It would take up a volume by itſelf to lay open all the glorious ſchemes of improvement in trade which would be the conſequence of ſuch a buſineſs, and particularly THE INCREASE OF OUR MANUFACTURES HERE, BY THE DEMAND OF GOODS FROM THENCE, when THE NUMBERS OF PEOPLE IN THOSE COLONIES SHOULD BE THUS INCREASED: let any one calculate that is able to judge of theſe things by what it is already, what it muſt neceſſarily be on an increaſe of people: let them compute the exportations to the colonies on the continent at preſent; let them conſider thoſe exportations to be as they really are, one intire improvement, derived from mere nothing, or next to nothing, in the LAST HUNDRED YEARS, for then it was all an embryo, and ſome of them were not in being as to trade, viz. New York and the Jerſeys, conquered but in 1666 from the Dutch, Penſylvania not above 70 years growth, Carolina and Georgia leſs.

Let them tell us, or but gueſs at for us, what a glorious trade to England it would be to have thoſe colonies increaſed with A MILLION OF PEOPLE, TO BE CLOATHED, FURNISHED, AND SUPPLIED WITH ALL THEIR NEEDFUL THINGS, food excepted, only from us; and tied down for ever to us, by that immortal, indiſſoluble band of trade, their intereſt, which wiſely regulated, need never injure, but unſpeakably benefit that of the mother-kingdom.

Let them conſider, that all thoſe people muſt fetch from Great-Britain only, their cloaths, woollen, linen, cotton, and ſilk; all their haberdaſhery; all their manufactures of hard ware, wrought iron, braſs, &c. all their heavy ware, ſuch as caſt iron and braſs, guns, mortars, ſhot, ſhells, pots, cauldrons, bells, battery, &c. all their clock-work, watch-work, even ſo much as their toys and trinkets; all their houſe-furniture, kitchen-furniture, glaſs-ware, upholſtery-ware, tin-ware; in a word, almoſt every thing we make, and every thing we import: it would be endleſs to repeat it.

How prepoſterous muſt thoſe notions be, and how oddly muſt they think, if they can be ſaid to think at all, who ſuggeſt miſchief from the increaſe of our colonies! Do any other nations act thus? Do even the Spaniards think their empires of Mexico and Peru, Chili and St. Martha, too many and too great, though a hundred times as large as thoſe we are naming, and though they drain even Spain itſelf of people? Were the French jealous of the number of their people in the vaſt countries of Canada and Louiſiana before they loſt them? Did they not, and do they not ſtudy, by all means poſſible, to increaſe them, and to extend their plantations? See the articles BRITISH AMERICA and FRENCH AMERICA. Might we not with wiſe management have people enough to ſpare? Do we not increaſe 'till we are ready to eat up one another, we mean in trade? And can we not ſpare enough of the unprofitable part of our people, thoſe who are rather ſaid to ſtarve among us than to live? who, if they were well ſettled there, would be induſtrious, thrive, and grow rich; and it is by the induſtrious that trade is ſupported, and wealth increaſed.

Let us no more amuſe ourſelves, and raiſe the vapours with our phlegmatic thoughts about every little German incroachment on our manufactures, and the prohibitions of a few petty princes in the North; here we can raiſe a conſumption

of our manufactures, ſuperior to all the obſtruction they can give us; here our manufactures will never be prohibited; here the demand for ever will be increaſing with the people; it is like a mill built by the lord of the manor, it grinds for all his tenants, and is kept going by his own ſtream; ſo that on one hand, it can never want work, and, on the other, can never want water.

We have no room to ſay more, though we ſcarce know when to leave off. We will conclude with obſerving, in a few words, that here is the greateſt opening for a very great advancement of our trade, and the eaſieſt to put in practice, that ever was propoſed, or perhaps can be propoſed to this nation; and, 'till we enter heartily and vigorouſly into it, in it's full latitude, we ought never to complain of the decay of our trade, or of the want of a vent for our manufactures.

As the increaſe of commerce and people in our colonies is, in conſequence of our property in them, an increaſe and improvement of our trade in England, and, in particular, an increaſe of the conſumption of our manufactures; ſo it is a natural inference, and evident to demonſtration, that an increaſe of colonies muſt have the ſame effect, PROVIDED, I MEAN, THAT OUR COLONIES ARE DULY REGULATED IN SUBSERVIENCY TO THEIR MOTHER-KINGDOM, BUT NOT OTHERWISE.

We may, therefore, lay it down as a fundamental maxim, that additional colonies, where the people may plant and ſettle to their advantage, is a viſible improvement to our national trade.

Employment of our people, or, as we call them, our poor, is the great ſupport of our VERY BEING AS A NATION; without it, the poor will eat us up, the pariſh-rates will devour not the produce of our land only, but the land itſelf; and the church-wardens will call upon you for 20s. in the pound for your beggars.

This employing of the poor is the effect of OUR MANUFACTURES; but, as our manufactures employ the poor, ſo trade carries off THE MANUFACTURES, or elſe they would ſoon over-run the conſumption, and come to a full ſtop: THE MANUFACTURES SUPPORT THE POOR, FOREIGN COMMERCE SUPPORTS THE MANUFACTURES, AND PLANTING COLONIES SUPPORTS THE COMMERCE.

Here you diſpoſe of your increaſing numbers of poor; they go there poor, and come back rich; there they plant, trade, thrive, and increaſe, even your tranſported felons, ſent to Virginia inſtead of Tyburn; thouſands of them, if we are not miſinformed, have, by turning their hands to induſtry and improvement, and, which is beſt of all, to honeſty, become rich ſubſtantial planters and merchants, ſettled large families, and been famous in the country; nay, we have ſeen many of them made magiſtrates, officers of militia, captains of good ſhips, and maſters of good eſtates.

This way, therefore, we may diſpoſe of the growing numbers of our poor to an inexpreſſible advantage, as well to a public as a private one: it is a private advantage, as it is really a benefit to the poor that go freely and voluntary. We would not be thought to inſinuate the tranſportation of the poor; that would be ſending them away becauſe they are poor; but thoſe who being deſtitute of employment here, that are willing to ſeek it abroad, would have a viſible advantage, and would ſoon give encouragement to others to follow them, and thouſands of ſuch families would raiſe themſelves there by their induſtry, and grow rich; for, WHERE WAGES ARE HIGH, AND PROVISIONS LOW, as is the caſe there, the labourer muſt be idle, or extravagant, or thrive, and grow rich; and the conſequence of the diligent labouring man there is always this, that, from a MEER LABOURER, HE BECOMES A PLANTER, and ſettles his family upon the land he gains, and ſo grows rich of courſe.

The advantage of the public we have ſpoken of, though but briefly: we ſhall only add here, that, beſides the increaſe of commerce and people, it neceſſarily makes an increaſe of ſeamen; all this growing commerce, to and from our colonies, muſt be carried on by ſea; all the commerce they can have there, one colony with another, muſt be the ſame: the firſt by large ſhips of force, the laſt by ſloops, ketches, and ſmall ſhips. The increaſe of the people increaſes the trade; the increaſe of the trade increaſes the number of ſhips, and the increaſe of ſhips calls for an increaſe of ſeamen: thus your ſtrength, as well as wealth, grows with your colonies, the climax is very agreeable in proſpect.

Whence that the advancement of our eſtabliſhed colonies, and ſettlement of new ones muſt prove highly beneficial; which is, without queſtion, extending the commerce; it is enlarging the field of action; it calls in more hands to aſſiſt in the public proſperity; it employs profitably the unprofitable numbers of your poor, and lays a foundation of more extended trade, INDEPENDENT OF ALL OTHER NATIONS; WHICH IS NOW BECOME A PRINCIPLE OF POLICY TO BE THE MORE STEADILY PURSUED, AS OTHER NATIONS ARE DAILY ATTEMPTING TO INJURE OUR TRADE, BY SETTING UP ARTS AND MANUFACTURES FOR THEMSELVES, AND PROHIBITING THE IMPORTATION OF OURS.

The PREMIUMS, or BOUNTY, that have been granted by parliament on NAVAL STORES imported.

I. From the Britiſh plantations in America.

By 3 and 4 Ann. cap. 10. §. 1, 8. firſt granted from 1 Jan. 1705, to 1 Jan. 1714.
By 12 Ann. cap. 9. §. 1. thence continued to 1 Jan. 1725.
By 8 Geo. I. cap. 12. §. 1: hemp only further continued to 1 Jan. 1741.
2 Geo. II. cap. 35. §. 3, 18. granted from 29 September 1729, to 29 September 1742.
13 Geo. II. cap. 28. §. 1. thence continued (as to maſts, yards, and bowſprits, tar, pitch, and turpentine) to 25 December 1750; and from thence to the end of the then next ſeſſion of parliament.

During the aforeſaid terms of years, the ſeveral ſorts of naval ſtores hereafter mentioned, imported directly from any of the Britiſh plantations in America, in any ſhip that may lawfully trade, manned as by law is required, are to enjoy the following bounty, viz.

	l.	s.	d.
Hemp, water-rotted, bright and clean, the ton containing 20 hundred weight - -	6	0	0
Maſts, yards, and bowſprits, the ton, allowing 40 feet to each ton, girt-meaſure, according to the cuſtomary way of meaſuring round bodies - - - - -	1	0	0
Tar, Clean, good, merchantable, well-conditioned, clear of droſs or water, and fit in every reſpect for making of cordage, the ton, containing 8 barrels, and each barrel to gauge 31 ½ gallons, to be well hooped and fitted up - - -	2	4	0
Tar, Clean, good, merchantable, well-conditioned, clear of droſs or water, and fit in every reſpect for making of cordage, made from trees prepared according to the directions hereafter mentioned, the ton, containing 8 barrels, and each barrel to gauge 31 ½ gallons, to be well hooped and fitted up on the exportation thereof	4	0	0
Pitch, clean, good, merchantable, and well conditioned, not mixed with dirt or droſs, the ton, containing 20 groſs hundreds nett pitch, to be brought in 8 barrels of equal ſize -	1	0	0
Turpentine, clean, good, and merchantable, clear of droſs and water, the ton, containing 20 groſs hundreds nett turpentine, to be brought in 8 barrels of equal ſize. - -	1	10	0

Which premiums are to be paid by the commiſſioners of the navy, by bills to be made out for the ſame, and delivered to the importers within 20 days after the diſcharge, or unlading of the ſhip, in order to be paid in courſe, upon certificates of the reſpective chief officers of the cuſtoms where imported; to whom a certificate has been produced, under the hands and ſeals of the governor, lieutenant-governor, or collector of his majeſty's cuſtoms, and naval officers, or any two of them, reſiding within any of his majeſty's ſaid plantations, teſtifying, that, before the departure of the ſhip, the perſon lading the ſame had made oath before them, That the ſaid ſtores were truly and bonâ fide, of the growth and produce of his majeſty's ſaid plantations; and, with reſpect to the high bounty on tar, expreſſing, That it has appeared to them, the perſons ſo certifying, by the oath of the owner, or maker of the tar, which certificate was granted, that the tar therein mentioned was made from green trees prepared for that purpoſe, after the following manner: that is to ſay, that, when ſuch trees were fit to bark, the bark thereof was ſtripped eight feet, or thereabouts, up from the root of each tree, a ſlip of the bark of about four inches in breadth having been left on one ſide of each tree; and that each tree, after having been ſo barked, had ſtood during one year at the leaſt, and was not before cut down for the making of tar; and that the ſaid tar was made without mixture of any other tar therewith: as likewiſe, upon oath to be made by the maſter of the ſhip, at the port of importation in Great-Britain, That the ſame were ſhipped within ſome of his majeſty's plantations in America, and that he knows, or believes, that the ſaid ſtores were the produce of the ſaid plantations. 3 and 4 Ann. cap. 10. §. 1, 2. 12 Ann. cap. 9. §. 2. 8 Geo. I. cap. 12. §. 1, 4. 2 Geo. II. cap. 35. §. 4, 12.

But the aforeſaid certificates of the chief officers of the cuſtoms are not to be made out for the premiums on pitch, until the ſame be freed from dirt or droſs; nor for any tar that is not fitting to be uſed for making of cordage, and ſhall not be freed from droſs and water; and unleſs ſuch pitch and tar be clean, good, merchantable, and well conditioned. 5 Geo. I. cap. 11. § 16. 2 Geo. II. cap. 35. §. 11.

And the ſaid officers of the cuſtoms, before they make out ſuch certificates, are to examine the pitch, by opening the heads of the barrels, ſawing of the ſtaves in the middle, and breaking

ing the barrels, or by ſuch other means as they ſhall think proper, to diſcover whether the ſaid pitch is good and merchantable, not mixed with dirt or droſs; and alſo to examine and ſearch the ſaid tar, to diſcover whether the ſame is clean, good, merchantable, well conditioned, and clear of droſs or water, and fit for making of cordage. 5 Geo. I. cap. 11. §. 17. 2 Geo. II. cap. 35. §. 11.

II. From North Britain, or Scotland.

By 12 Ann. cap. 9. §. 2. firſt granted from September 1713, to 1 January 1725.
By 8 Geo. I. cap. 12. §. 1. hemp only further continued to 1 January 1741.
By 2 Geo. II. cap. 35. §. 13. granted from 29 September 1729, to 29 September 1742.
By 13 Geo. II. cap. 28. §. 1. thence continued (as to maſts, yards, and bowſprits) to 25 December 1750, and from thence to the end of the then next ſeſſion of parliament.
During the aforeſaid terms of years, the naval ſtores hereafter mentioned, imported from North Britain into South Britain, in any ſhip built in Great-Britain, are to enjoy the following bounty, viz.

	l.	s.	d.
Hemp, water rotted, bright and clean, the ton containing 20 hundred weight - - - - -	6	0	0
Trees of 12 inches diameter and upwards, fit for maſts, yards, or bowſprits, regularly converted, and turned at leaſt into eight ſquares, ſound, freſh, and in good and merchantable condition, the ton, allowing 40 feet to each ton, girt meaſure, according to the cuſtomary way of meaſuring round bodies - - - - - -	1	0	0

Which premiums are to be paid by the commiſſioners of the navy, by bills to be made out for the ſame, and delivered to the importers within twenty days after the diſcharge or unlading of the ſhip, in order to be paid in courſe; upon certificates of the reſpective chief officers of the cuſtoms where imported; to whom a certificate has been produced, under the hands and ſeals of the comptroller and collector of the cuſtoms, and the naval officer, or any two of them, reſiding at the port or ports of exportation in North Britain, teſtifying, That before the departure of the ſhip, the perſons concerned or employed in cutting down the aforeſaid trees, or any two of them, had made affidavit in writing, before ſuch comptroller and collector, and naval officer, or any of them, that ſuch trees were truly and bonâ fide, of the growth and produce of North Britain; and ſpecifying in the ſaid affidavit, the particular number, quantity, and quality of the trees, together with the time when they were cut down, the names of the proprietors, and the places where the ſame did grow; as likewiſe, upon oath to be made by the maſter of the ſhip, at the port of importation in South Britain, that the ſame were truly laden in North Britain, and that he knows or believes, that the ſaid trees were of the growth of North Britain. 12 Ann. cap. 9. §. 2. 2 Geo. II. cap. 35. §. 13.
Perſons counterfeiting, or making falſe affidavits, or certificates, of the growth of the trees or hemp, in order to obtain the premium, are to ſuffer as for wilful and corrupt perjury, and to forfeit 100l. 12 Ann. cap. 9. §. 4. 2 Geo. II. cap. 35. §. 14.
Comptrollers, collectors, or naval officers, making falſe certificates, are to forfeit their office and 50l. to be impriſoned a year without bail, to ſuffer ſuch corporal puniſhment as the court of Exchequer ſhall think fit, and to be incapable of ſerving again in the cuſtoms. 13 & 14 Car. II. cap. 11. §. 8. 12 Ann cap. 9. §. 4. 2 Geo. II. cap. 35. §. 14.
Maſters or owners of ſhips knowingly importing foreign trees fit for maſts, &c. as of the product of North Britain, in order to obtain the bounty, are to forfeit 100l. together with the ſhip and furniture. 12 Ann. cap. 9. §. 5. 2 Geo. II. cap. 35. §. 15.

From the Britiſh plantations and Scotland.

Upon the landing of the aforeſaid ſtores and trees, the preemption or refuſal muſt be offered and tendered to the commiſſioners of the navy; and, if within twenty days after ſuch tender, they ſhall not contract for the ſame, the importers may otherwiſe diſpoſe of them. 3 & 4 Ann. cap. 10. §. 4. 12 Ann. cap. 9. §. 3. 8 Geo. I. cap. 12. §. 3. 2 Geo. II. cap. 35. §. 6, 13.
No fee, gratuity, or reward, may be demanded or taken by the officers of the cuſtoms, for the examining, viewing, or delivering any of the aforeſaid naval ſtores, or for making or ſigning certificates, in order to receive the premium; upon forfeiture of office and 100l. and to be rendered incapable of ſerving his majeſty. 5. Geo. I. cap. 11. §. 18. 2 Geo. II. cap. 35. §. 11.
And, if any of the aforeſaid naval ſtores (except hemp) or trees, ſhall be again exported, the exporter muſt, before entry thereof, produce to the collector, &c. of the cuſtoms, at the port of exportation, a receipt from the treaſurer of the navy, or his caſhier, ſubſcribed by his comptroller, or his chief clerk, ſignifying that the full amount of the aforeſaid premium had been repaid to him; on failure whereof, ſuch ſtores may not be exported: and, if ſuch ſtores are fraudulently exported without repayment of the premium, they are forfeited, and double the value. 2 Geo. II. cap. 35. §. 7, 9, 16.
And if, upon the exportation of the aforeſaid ſtores, doubts ſhall ariſe concerning the growth, product, or manufacture, the onus probandi ſhall lie on the owner or claimer thereof, 2 Geo. II. cap. 35. §. 10, 16.
By an act of the 24th of Geo. II. entitled, An act to continue ſeveral laws therein mentioned, &c. there is the following clauſe for continuing the like encouragement on the importation of naval ſtores, from the year 1750 to 1757. This act is further continued to 1764.
During the late war, an act paſſed in the year 1745, to allow the purchaſe for his majeſty's uſe, of naval ſtores brought into this kingdom on board neutral ſhips, by any of his majeſty's ſhips, and to allow ſuch ſtores to be landed and entered during the continuance of the wars with France and Spain, or either of them. See the end of this letter N, for the BUSINESS OF THE CUSTOMS, &c.

NAVARRE, is a kingdom in Spain, divided from France on the north by the Pyrenees, which alſo cut it into two parts, diſtinguiſhed into Upper and Lower; the former, much the larger, and on the Spaniſh ſide, is the kingdom we ſhall particularly ſpeak of; the other, beyond theſe mountains, by much the ſmaller, and belonging to France, is bounded by the territory of Labeur on the north; by the Pyrenees, which divide it from Spaniſh Navarre, on the ſouth-weſt; and by the principality of Bearn in Gaſcony on the eaſt; and is about 30 miles long, and 15 broad, and one of the barreneſt provinces in France.
Spaniſh Navarre borders upon Biſcay and Old Caſtile on the weſt; on Caſtile and Arragon on the ſouth; and eaſtward upon Arragon. It's length is about 90 miles from north to ſouth, and about 80 in breadth, from eaſt to weſt. It is divided into five diſtricts, viz. Pampelona, Tudela, Eſtela, Olite, and Longueſſa, which are parted by prodigious high and uncouth mountains, yet yielding good corn and grain, wine, oil, honey, fruit and herbs, and affording plenty of food and paſture for their cattle, beſides an infinite number of fowl, both wild and tame. The mountains produce, alſo, metals and minerals, and had formerly ſeveral rich ſilver and gold mines, though, at preſent, they are either neglected or exhauſted.

NAVIGATION.

Of the practical art thereof, in relation to ſhip-ſailing.

What a complete treatiſe of that art ought to contain, according to Sir William Petty.

1. What arithmetic, in whole numbers and fractions, as alſo in decimals and logarithms, is neceſſary for the ſame; and what books are beſt for teaching ſo much thereof. 2. What vulgar, practical, mechanical geometry, performable by the ſcale and compaſs, is ſufficient. 3. What trigonometry, right-lined and ſpherical, will ſuffice. 4. How many ſtars are to be known. 5. What inſtruments are beſt for uſe at ſea, with the conſtruction of them, and the manner of uſing them. 6. The whole ſkill of the magnet, as to the directive virtues thereof, and all the accidents that may befal it. 7. The hydrography of the globe of the earth, the perſpective of the coaſts, and the deſcription of the under-water-bottom of the ſea. 8. The knowledge of winds and meteors, ſo far as the ſame is attainable. 9. The hiſtory and ſkill of all ſorts of fiſhings. 10. The art of medicine and ſurgery peculiar for the ſea. 11. The common laws of the admiralty, and juriſdiction of the ſea. 12. The ſeveral victuallings and cloathings fit for ſeamen. 13. The whole ſcience of ebbing and flowing, as alſo of currents and eddies at ſea. 14. Dromometry, and the meaſures of a ſhip's motions at ſea. 15. The building of ſhips of all ſorts, with the ſeveral riggings and ſails for each ſpecies, and the uſe of all the parts and motions of a ſhip. 16. Naval œconomy, according to the ſeveral voyages and countries. 17. The art of conning, rowing, ſailing, of all the ſeveral ſorts of veſſels. 18. The gunnery, fire-works, and other armatures peculiar to ſea and to ſea fights. 19. The art of loading and unloading the chief commodities to the beſt advantage. 20. The art of weighing up ſunk ſhips and goods, as alſo of diving for ſunk goods in deep water. 21. The general philoſophy of the motion and figures of the air, the ſea, and of ſeaſons; of timber, iron, hemp, brimſtone, tallow, &c. and of their ſeveral uſes in naval affairs. 22. An account of five or ſix of the beſt navies of Europe, with that of the arſenals, magazines, yards, docks, &c. 23. An account of all the ſhipping able to croſs the ſeas belonging to each kingdom and ſtate of Europe. 24. An account of all the chief commercial parts of the world, with mention of what commodities are originally carried from, and ultimately to, any of them. 25. An account of the chief ſea-fights, and all other naval expeditions and exploits, relating to war, trade, or diſcovery, which have happened in this laſt century. 26. Of the moſt advantageous uſe of teleſcopes for

ſeveral purpoſes at ſea. 27. Of the ſeveral depths of the ſea, and heights of the atmoſphere. 28. The art of making ſea-water freſh and potable, and fit for all uſes in food and phyſic at ſea.

Remarks.

I am not acquainted with any book written upon the ſubject of navigation according to this extenſive plan propoſed by Sir William Petty. The beſt book that has fell in my way upon this ſubject, is that lately wrote by the judicious Mr J. Robertſon, F. R. S. the mathematical maſter at Chriſt's Hoſpital, London; to which we refer the reader, after giving an extract therefrom upon one of the moſt material parts relating to practical navigation.

Of a ſhip's reckoning, in regard to the art of conducting of ſhips from one part of the world to another.

A ſhip's reckoning is that account whereby, at any time, it may be known where the ſhip is; and on what courſe or courſes ſhe is to ſteer to gain her port.

Dead-reckoning, is that account deduced from the occurrences wrote on the log-board.

The log-board is a painted black board, whereon is wrote in chalk whatever is thought worthy of note from day to day; and, for a proper diſpoſition of ſuch notes, the board is divided into five columns: the left hand one contains 24 hours, from the noon of one day to the noon of the next; in the ſecond and third columns are the knots and fathoms the ſhip is found to run per hour, ſet againſt the hours when the log was hove; the fourth column contains the courſes the ſhip ſteers; and in the fifth, or right-hand column, is wrote the winds; the alteration of the ſails, the buſineſs doing aboard, and what other remarks the officer of the watch thinks proper to inſert: for it ſhould be obſerved, that it is uſual to divide a ſhip's company into two parts, called the ſtarboard and larboard watches, who alternately do the duty of the ſhip, for four hours and four hours.

The log-book is a book ruled like the log-board, in order to contain the daily copies of the remarks wrote on the log-board; which is the only authentic record of the ſhip's tranſactions; and theſe are, by the perſons who keep journals, tranſcribed every day at noon into their log-books, from whence they make the neceſſary deductions relative to the ſhip's place.

But, as the ſhip's motion is liable to be diſturbed from a variety of cauſes, ſuch as continual deflection from the courſe ſet, by the ſhip's playing to the right and left round her center of gravity, and the unequal care of the helmſmen; the diſtance being faulty, on account of tumbling ſeas, rolling with or againſt the ſhip; the unſteadineſs of the wind, unknown currents, ſudden ſtorms, and many other impediments, which ſeem impoſſible to be ſurmounted; conſequently her place, according to the dead-reckoning, may be juſtly doubted; and, therefore, mariners try every day to find the latitude their ſhip is in, by obſervations on the ſun or ſtars; and, if the latitude obtained by obſervation, and that found by the dead-reckoning, agree, it is preſumed the ſhip's place is well determined; but, if they diſagree, the account of Longitude must be corrected *; and, for the latitude, that found by obſervation is always to be depended on.

* The lateſt method, and the ſimpleſt, that has ever been propoſed for this purpoſe, is that lately communicated by the Rev. Mr. Richard Locke; the certainty or uncertainty of which, if I am rightly informed, is now trying experimentally. See the articles Commanders of Ships and Longitude, where what Mr. Locke has hitherto offered to the public is given at large: and, if it ſhould prove true in practice, will certainly render the whole practical art of navigation extremely eaſy and ſecure, and bids fair, according to ſome, for the real diſcovery of that great deſideratum, the Longitude at Sea: but the certainty hereof being doubted by ſome mathematicians, the matter muſt be left to repeated and infallible experience, where we leave it.

Various methods of correcting the reckoning or longitude.

Conſider whether the difference may not have been occaſioned by a current, and, if it is poſſible, try it (by the method deſcribed below *) or make ſuch an eſtimate of it's ſetting and drift as may be judged reaſonable; then with the ſetting and drift, as a courſe and diſtance, find the difference of latitude and difference of longitude, with which increaſe or diminiſh the dead-reckoning; and if the latitude, thus corrected, agrees with the latitude by obſervation, then the longitude thus corrected may be ſafely taken as true, and ſo the ſhip's place determined.

* Of ſailing in currents.

A Current, or Tide, is a progreſſive motion of the water, cauſing all floating bodies to move that way towards which the ſtream is directed.

The ſetting of a tide or current, is that point of the compaſs towards which the waters run; and the drift of a current is the rate it runs per hour.

The ſetting and drift of the moſt remarkable tides and currents are pretty well known; but, in unknown currents, the uſual way to find the ſetting and drift is thus:

Let three or four men take a boat a little way from the ſhip, and by a rope faſtened to the boat's ſtern, let down a heavy iron pot, or loaded kettle, into the ſea, to the depth of 80 or 100 fathoms, where it can be, whereby the boat will ride almoſt as ſteady as at anchor: then heave the log, and the number of knots run out in half a minute will give the miles which the current runs per hour; and the bearing of the log ſhews the ſetting of the current.

Exam. Suppoſe a ſhip, in 24 hours, finds, by her dead-reckoning, ſhe has made 96 miles of diff. latitude north, and 38 miles of departure weſt; but, by obſervation, finds her difference of latitude is 112, and on trial finds a current, which, in 24 hours, make 16 miles of diff. latitude north, and 10 miles of departure eaſt: required the ſhip's departure?

Diff. lat. by account 96 m. N.	Depart. by acc. 38 m. W.
Diff. lat. by current 16 m. N.	Depart. by curr. 10 m. E.
True diff. lat. - 112 m. N.	True departure 28 m. W.

Here the dead-reckoning, corrected by the current, gives the diff. latitude 112 miles, which is the ſame as found by obſervation; therefore the departure, 28, is taken as the true one.

The error in the dead-reckoning is uſually attributed to unknown currents; for, by various cauſes yet undetermined, there are many counter-motions of the water in the open ſeas, as well as thoſe obſerved near the ſhores, where the motions may be tolerably well accounted for. Some of the obſerved currents in the great ſeas may, perhaps, be owing to the tide's following the moon, and to the libratory motion the waters may have thereby; and the unſettled ſetting and drift of theſe currents may poſſibly depend on the change in the moon's declination: however, it is well known from obſervations, that the trade-winds occaſion a conſiderable current within their limits, particularly within the torrid zone, where the motion is perpetually towards the weſt, at the rate of about eight or ten miles a day: but, at the extremities of the trade winds, or near the latitudes of 30 degrees north and ſouth, it is likely that the currents are compounded of the ſaid weſtern motion, and of one towards the equator: therefore all ſhips ſailing within theſe limits ſhould allow a courſe each day for this current.

If, when all currents have been allowed for, there ſhould ſtill be a difference between the obſerved latitude, and that given by account, then a further correction muſt be made.

The buſineſs of correcting a ſea-reckoning is a very precarious operation, and, at beſt, is little more than gueſſing; for, by ought that appears, the ſhip may be either to the eaſtward or weſtward of the point wherein the reckoning places her, and the mariner not be able to pronounce with certainty whether; however, the following methods are uſually taken: if the difference of latitude is much more than the departure, or the direct courſe has been within three points of the meridian, then it is moſt likely the error is in the diſtance.

And if the departure is much greater than the difference of latitude, or the direct courſe is within three points of the parallel, or more than five points from the meridian, the error may be aſcribed to the courſe.

But, if the courſes are in general near the middle of the quadrant, the other may be either in the courſe, or in the diſtance, or in both.

For, to cauſe an alteration in the difference of latitude, the firſt of theſe caſes requires a greater error in the courſe than can well be ſuppoſed to have been committed; in the ſecond caſe, the diſtances muſt be ſo faulty as would ſcarce eſcape obſervation; and, in the laſt, it is often doubtful whether to attribute the error to the courſe or diſtance, but is as uſually corrected in both.

Firſt method.

When, by the dead-reckoning, the difference of latitude is more than once and a half the departure: or, which is the ſame, when the courſe is leſs than three points: to the difference of latitude, and the departure by account, find the courſe. With this courſe, and the difference of latitude by obſervation, find a new departure. With the new departure, and the co-middle latitude, find the difference of longitude.

Exam. Yeſterday noon we were in latitude 39° 18′ north, and, by an obſervation, are this day noon in latitude 37° 48′ north; our dead-reckoning gives 106 miles of ſouthing, and 64 miles of eaſting: required the ſhip's true difference of longitude?

By the traverſe table.

The difference of latitude 106, and the departure 64, gives the courſe 2 $\frac{3}{4}$ points. The courſe 2 $\frac{3}{4}$ points, and the difference of latitude by obſervation 90, gives a departure of 54. The co-middle latitude 51° 27′, and true departure 54, gives the difference of longitude 69.

Second method.

When, by the dead-reckoning, the departure is more than once and a half the difference of latitude, or the courſe is more than five points.

With the difference of latitude and departure by account, find the diſtance. With this diſtance, and the difference of latitude by obſervation, find the true departure. With the co-middle latitude and true departure, find the difference of longitude.

Exam. Yeſterday noon we were in latitude 48° 52′ north, and were to day noon in latitude 50° 18′ north; our dead-reckoning ſhews we have made 68 miles of northing, and 112 miles of weſting: required the true difference of longitude the ſhip has made?

By the traverſe table.

The difference of latitude 68, and departure 112, gives 132 for the diſtance. The diſtance 132, and difference of latitude by obſervation 86, gives the true departure 100. The co-middle latitude 40° 25′, and true departure 100, gives 155 miles for difference of longitude.

Third method.

When the difference of latitude and departure by account are nearly equal, or the direct courſe has been between three and five points of the meridian.

To the difference of latitude and departure by account, find the diſtance. With this diſtance and difference of latitude by obſervation, find another departure. Take the half ſum of the two departures for the true one. With the co-middle latitude and true departure find the difference of longitude.

Exam. Theſe laſt 24 hours we have made 84 miles of northing, and 76 of eaſting; we were yeſterday noon in latitude 52° 40′ north, and are this noon in latitude 54° 22′ north: what difference of longitude has the ſhip made?

By the traverſe table.

To the difference of latitude 84, and departure 76, the diſtance is 113 miles. With the diſtance 113, and difference of latitude by obſervation 102, find a departure 47,7. The ſum of the two departures 76 and 47,7 is 123,7, it's half is 61,8. To the co-middle latitude 36° 29′, and true departure 61,8, the difference of longitude is 103.

The difficulty of finding the longitude at ſea has inclined many perſons to attempt the ſolution of this moſt uſeful problem: ſome with no other view than the great advantage which the art of navigation would derive from their labours; others, and by much the greateſt numbers, who have exhibited their thoughts on this ſubject, were viſionary whimſical men, only lured by the hopes of the appointed reward: but Dr. Halley having collected a great multitude of obſervations made on the variation of the needle in many parts of the world, he, by the help of the latitude and longitude of the places of thoſe obſervations, was enabled to draw on a mercator chart certain lines, ſhewing the variation of the compaſs in all thoſe places over which they paſſed at the time he publiſhed, in the year 1700; and, conſequently, the longitude of any of thoſe places could be found by the chart, having it's latitude, and the variation of the needle in that place given.

Fourth method.

To find the longitude at ſea by the variation chart.

Find the variation of the compaſs, for which ſee art. 1076, in Mr. Robertſon's tract. Draw a parallel of latitude on the chart, through the latitude found by obſervation; and the point where it cuts the curved line, whoſe variation is the ſame with that obſerved, will be the ſhip's place.

Exam. A ſhip finds, by a good obſervation, that ſhe is in the latitude of 18° 20′ north, and that the variation of the compaſs is 4° weſt: required the ſhip's place?

Take from the graduated meridian the diſtance between the equator and the latitude of 18° 20′ north; lay a ruler along the equator, and ſlide one point of the compaſſes along it's edge, 'till the other point cuts the curve of 4° weſt variation, and the interſection gives the ſhip's place, whoſe longitude will be found to be about 27° 10′ weſt from London.

There are two conſiderable inconveniencies which attend this method.

Firſt, That, wherever the variation lines run eaſt or weſt, or nearly ſo, this way of finding the longitude becomes imperfect: but, among all the trading parts of the world, this imperfection is at preſent found chiefly on the weſt coaſts of Europe, between the latitudes of 45° and 53°; on the eaſtern ſhores of North America, and in ſome parts of the Weſtern Ocean and Hudſon's Bay, lying between the ſaid ſhores; therefore, for the other parts of the world, a variation chart may be eſteemed as of the greateſt uſe.

But the variation curves, even where they run eaſt and weſt, may be ſometimes applied to good uſe in correcting the latitude, when meridian obſervations cannot be had, as it frequently happens on the northern coaſts of America, in the Weſtern Ocean, and about Newfoundland: for, if the variation can be obtained correctly, then the caſt and weſt curve, anſwering to that variation on the chart, will ſhew the latitude.

Secondly, As the deflection of the magnetical meridian from the true one is ſubject to continual alteration, therefore a chart, to which the variation lines are fitted for any year, muſt in time become uſeleſs, unleſs new lines, ſhewing the ſtate of the variation at that time, be drawn on that chart: but, as the change in the variation is very ſlow, therefore new variation charts being publiſhed every 10 or 12 years, will anſwer the purpoſe wanted.

In the year 1746, Mr. William Mountaine, F. R. S. and Mr. James Dodſon, fitted the variation lines to Dr. Halley's chart, for the year 1744. As theſe gentlemen had collected ſeveral thouſands of obſervations to work upon, they were enabled to perſom this buſineſs with great correctneſs; inſomuch that, wherever their chart has been uſed, it was found of very great importance, even to the ſaving a ſhip in the Indian Ocean; and it is much to be wiſhed they were in more general uſe.

Fifth method.

To find the longitude from celeſtial obſervations.

The difference of longitude between two places may be determined by knowing the difference between the times that any remarkable appearance in the heavens is ſeen in thoſe places *.

* The difference of longitude between two places is eſtimated by the difference of time, allowing an hour to every 15 degrees of longitude, and one minute of time for every 15 min. of a degr. or a degr. for every 4 min. of time.
Example. Having at 6 h. 48. p. m. obſerved at ſea a certain appearance in the heavens, which I knew was ſeen the ſame inſtant at 3 h. 25 m. p. m. in London: required the different longitude between the places of obſervation.

From	6 h.	48 m.	3 h. =	45 degr.
Take	3	35	13 m. =	3 15′
Leaves	3	13 = diff. time.	Sum	48 15 = diff. lon.

And, becauſe the hour of appearance at London was leaſt, therefore I knew myſelf to be at the eaſtward of London.

For, as theſe appearances conſiſt in the appulſes, that is, the approaches of the heavenly bodies to one another, or their paſſage by one another; and theſe appulſes when they happen, are ſeen at the ſame inſtant of abſolute time to all parts of the earth where they are viſible: therefore, by knowing the relative times of the day when ſuch appearances are ſeen in two diſtant places, the difference between thoſe times is known, and conſequently the difference of longitude between thoſe places.

There are every year publiſhed ſeveral almanacks, or ephemeres, wherein are noted the eclipſes of the ſun and moon, the times of the planets riſing, ſetting, and ſouthing; the eclipſes of Jupiter's ſatellites, and the times when other celeſtial appearances may be ſeen at the places for which thoſe ephemeres are calculated: now a mariner having one of theſe almanacks, if he obſerves at what time any of theſe appearances happen in any part of the world he may be then in, will readily know his longitude.

Among the ſatellites of Jupiter, one or more is eclipſed almoſt every night; for they diſappear either in going behind Jupiter, or in paſſing before him; and the inſtants of ſuch immerſions and emerſions may be ſeen by a refracting teleſcope of about 8 or 9 feet long, or by a reflecting one of about 9 inches focal length. The reflecting teleſcope is much more commodious at ſea, on account of it's ſhortneſs; but the metals are very ſubject to be tarniſhed by the moiſt air.

To determine the longitude of any place from celeſtial obſervations, it is neceſſary that the time of the day be well known in that place where the obſervation is made; and among the various methods propoſed for this purpoſe, none ſeems more fit to be practiſed at ſea, than the method by equal altitudes; for no regular deductions can be made, without knowing the preciſe time of noon. Now, as clocks and watches undergo conſiderable alterations from the motion of a ſhip and the change of the climate, they ought to be carefully examined, and their gain or loſs per day aſcertained, whenever they are to be uſed in the correcting of the longitude; and this need not be done very often, only at ſuch times when the ſhip may be ſuppoſed through ſtorms or bad weather, to be conſiderably out in her dead-reckoning.

At ſuch times, the ſhip lying by, let the ſun's altitude be taken at any time in the forenoon, ſet down that time and altitude: in the afternoon, watch for the ſun's having the ſame altitude exactly, and note down that time; then the half ſum of theſe two times, is the time ſhewn by the clock or watch when it was noon in that place.

As it is poſſible that an altitude, equal to one taken on the eaſtern ſide of the meridian, cannot be obſerved on the weſtern ſide by the interpoſition of clouds, it is therefore beſt to take ſeveral in the forenoon, or on the eaſt ſide, in order to have the greater probability of ſecuring a correſponding altitude on the weſtern ſide, or afternoon; and, if ſeveral obſervations

vations of equal altitudes can be made on both ſides of the meridian, it will be beſt to take the mean time correſponding to each pair of equal altitudes; and if the means all agree, it is an evident ſign that the obſervations were well made: but ſhould they diſagree half a minute or ſo, then it is beſt to add together all the times of noon, and divide the ſum by the number of times, and the quotient may be taken for the true time of noon in that place, as ſhewn by the clock or watch.

In the taking of theſe equal altitudes of the ſun, it will be moſt convenient to have them at a diſtance from one another not exceeding 4 or 5 hours; becauſe then there will be no occaſion to correct the latter altitude, by the alteration in declination during that time.

The true time of noon being obtained, then the time that any planet, or other celeſtial body paſſes the meridian, may be thus known: on the evening following, let one or more altitudes of the planet be taken, which ſet down with their reſpective times; and on the next morning, note down the times when that planet has the ſame altitudes: the half ſum of theſe two times, will be the time when the obſerved planet paſſed the meridian of that place; and, if ſeveral obſervations have been taken, find the mean of them, as before for the ſun: but, if the planet obſerved be the moon, whoſe declination may be conſiderably altered between the times of the obſervations, then let a proportional part of her daily variation in declination be added to, or ſubtracted from, the time found for her paſſing the meridian, according as the moon is receding from, or approaching to, the elevated pole. And, if there is reaſon to ſuſpect that the clock or watch gains or loſes every day, let the times of two equal altitudes of the ſun be taken next day, and the noon thereby determined: then the difference between the times of noon both days, as ſhewn by the clock or watch, will be it's daily variation; and the time of the planet's paſſing the meridian, muſt be increaſed or diminiſhed by a proportional part of that variation.

Now, by having a table or an ephemeris, containing the times when the moon paſſes the meridian of a certain place, and by having from obſervation the time when ſhe paſſes the meridian of any other place, the difference between the longitudes of thoſe two places may be thus found:

Seek in the ephemeris for the time of her ſouthing on the given day, and that of the following day, and take their difference; alſo take the difference between the times of the tabular ſouthing and the obſerved one, on the ſame day; then ſay:

As the daily difference is to the obſerved difference, ſo is 360 degrees to the difference of longitude ſought.

For, as the whole difference ariſes in a day, or by the running through 360 degrees, conſequently any part of that difference will require a proportional part of 360 degrees.

Example. Suppoſe at ſea, the moon was obſerved to paſs the meridian on the 18th day of June 1753, at 57 minutes after one in the morning: required the longitude of that place?

At London the moon paſſes the meridian on the 18th of June, at 1 hour 47 minutes, and on the 19th day, at 2 hours 31 minutes, the difference is 44 minutes; and the obſerved time is 10 minutes later than at London.

Then as 44 min.: 10 min.:: 360°: $\left(\frac{3600}{44} =\right)$ 81 degr. 49 min. Which ſhews that place to be 81 deg. 49 min. to the weſt of the meridian of London.

As the tables of the moon's motions are not yet arrived at the wiſhed-for accuracy, conſequently the times of her paſſing the meridian of any place, as ſhewn by an ephemeris, are not ſo true as they might be, and therefore the difference of longitude found by the time of the moon's ſouthing, may err about 2 degrees; and ſhould the time of her paſſing the meridian be ill obſerved: the error may be much greater: it has therefore been propoſed to keep an account of longitude by a time-keeper, or kind of clock, that ſhould always ſhew the true time under the meridian of ſome one place; conſequently, was the time of the day found in any other place, compared with the time then ſhewn by ſuch a clock, the difference of longitude between thoſe places would be determined: but the difficulties attending the conſtruction of ſuch an inſtrument, have been hitherto found too great to be overcome. Indeed, the ingenious Mr. Harriſon has removed ſome of, if not all, the capital obſtructions; and his judicious friends ſuſpect he will entirely perfect his moſt elaborate machine: he has received ſome gratuities from the public, for the advances he has already made towards the ſolution of this intricate problem of the longitude; and it is wiſhed he may merit the whole reward allotted by the government for the diſcovery of this ſo much deſired acquiſition in navigation.

Upon the whole, it appears that there are many means by which a ſhip's place may be found at ſea, nearly exact enough for navigating her to places whoſe longitudes are almoſt as incorrectly known as the ſhip's place; and, was the method of finding the longitude at ſea correctly known, the ſhips muſt then keep as good a look-out for land as they do now, and alſo keep their account of dead-reckoning: therefore, would ſeamen put in practice all the precepts that are given them for this purpoſe, they might proceed on their reſpective voyages, and (which is ſuſpected now to be the caſe) have very little concern about the perfecting the diſcovery of the longitude.

Of a Sea-Journal.

A ſea journal is a book, wherein is truly entered the moſt remarkable daily occurrences relating to the ſhip during her voyage outward and homeward. There are various ways of keeping ſea journals, according to the different notions of mariners concerning what articles are to be entered.

Some writers direct the keeping ſuch a kind of journal, which is only an abſtract of each day's tranſactions, ſpecifying the weather, what ſhips or lands were ſeen, accidents on board, the latitude, longitude, meridional diſtance, courſe and run: theſe particulars are to be drawn from the ſhip's log book, or that kept by the perſon himſelf, for moſt good mariners keep private log-books.

Other authors recommend the keeping but of one account, including the log-book and all the work of each day, with the deductions drawn therefrom: this method is uſed in Mr. Robertſon's treatiſe, on account of repreſenting to the beginner the whole of each day's work: but when he is well verſed in this method, he may abridge what part of it he pleaſes: although it is conceived that a journal neatly kept, with all the particulars of the work commodiouſly ranged, would give more ſatisfaction to thoſe who might have occaſion afterwards to inſpect it, than a journal containing the heads only, and all the intermediate parts ſuppreſſed.

The method choſe by Mr. Robertſon to introduce the young mariner into this moſt capital part of navigation, is, by ſhewing him firſt how to work a few ſeparate days works independent one of the other, and then to proceed to a continued journal of ſeveral ſucceſſive days works; for the doing of which, it was judged neceſſary to premiſe the following obſervations.

I. That the day is ſuppoſed to begin at noon, and the day's work relates to the tranſactions done in the time between the noon of one day and the noon of the following day.

II. If there is an obſervation for an amplitude or an azimuth, let that amplitude or azimuth be worked as ſhewn between art. 1070 and 1076, in Mr. Robertſon's treatiſe, and then find the variation as ſhewn at art. 1077 in the ſame tract; taking care in theſe operations, that the declination of the day be fitted to the proper time and longitude, as ſhewn art. 964, 965, in the ſame author.

III. Correct each courſe by the variation thus found, as at art. 1078, alſo correct theſe corrected courſes by the proper allowance for lee-way, as ſhewn at art. 1080, 1081.

IV. Write theſe corrected courſes in a traverſe table, ſum up the knots and fathoms belonging to theſe hours the ſhip kept on the ſame courſe, and write the ſeveral ſums as diſtances in the traverſe table againſt their reſpective courſe.

V. Complete the traverſe table as by art. 695, find the preſent latitude and longitude, as ſhewn in art. 786, 787, of Mr. Robertſon, and the examples, in art. 1128, & ſeq. and then will the ſhip's place be obtained by dead-reckoning. See Mr. Robertſon's treatiſe, entitled the Elements of Navigation: containing the Theory and Practice, with all the neceſſary Tables. To which is added, A treatiſe of Marine Fortification. For the Uſe of the Royal Mathematical School at Chriſt's Hoſpital, and the Gentlemen of the Navy.

Remarks.

That the reader, who is deſirous of underſtanding the art of navigation, either to the perfection of the theory to which it has hitherto been brought, or only to underſtand the ſame in a mere practical light, without concerning himſelf with the mathematical elements whereupon the art is grounded, we recommend him to the above-mentioned excellent treatiſe, in the commendation of which too much cannot be ſaid. But, as the learned author has himſelf given a juſt idea of his own performance in few words, we cannot give it it's due recommendation in a better manner, than introducing his own

Advertisement.

As it may be expected that four kinds of readers will look into this book, it was thought convenient to point out to ſome of them, the places where they may meet with what they more particularly want.

Firſt, Thoſe who have made a proficiency in the mathematics, will, it is likely, examine in what manner the ſubjects are here treated, and whether any thing new is contained therein: it is conceived, that ſuch readers will find ſome things which may recompence them for their trouble, in almoſt every one of the books.

Secondly, Thoſe learners who are deſirous of being inſtructed in the art of navigation in a ſcientific manner, and would chuſe to ſee the reaſon of the ſeveral ſteps they muſt take to acquire it: to ſuch perſons, it is recommended that they read the whole book in the order they find it. Or, if the learner is very young, he may omit the fourth book 'till after he is maſter

maſter of the fifth and ſixth. Adult perſons, and thoſe under the direction of a maſter, may, if they pleaſe, read the eighth book immediately after the fifth, and read the ſixth, ſeventh, and ninth books in ſucceſſion.

Thirdly, That claſs of readers, which, with too much truth may be ſaid, comprehend moſt of our mariners, who want to learn both the elements and the art itſelf by rote, and never trouble themſelves about the reaſon of the rules they work by: as there ever will be many readers of this kind, they may be well accommodated in this work; thus, if they are not already acquainted with arithmetic and geography, let them read the five firſt rules of arithmetic, to page 20; thence proceed to the definitions and problems in geometry, from page 42 to 55. In the book of trigonometry, read pages 83, 84, 85, 86, 92, 93, and from 98 to 108: the whole of book V. In book VI. he may read to page 267, and as much more as he pleaſes. In book VII. let him read the ſections III, IV, V, VI. from page 368 to page 407. In book VIII. he may read ſection III. and as many problems in the Vth and VIth ſections as he can, and let him read the whole of the ninth book.

Fourthly, That ſet of readers who will not be at the pains of learning any thing more than how to do the practice of a day's work, ſuch may herein meet with the practice almoſt independent of other knowledge. Let ſuch perſons make themſelves acquainted with ſection VIII. of book V. and the uſe of the table at page 200; then learn the uſe of the traverſe table at the end of book VI. which he will find exemplified between pages 243 and 274; alſo he muſt learn the uſe of the table of meridional parts at page 423: after which he may proceed to book IX. where he will find ample inſtructions in all the particulars which enter into a day's work. But, as with this ſcanty knowledge of things he will not clearly ſee every part of book IX, he may omit the articles 1059, 1091, 1106, and the XIth and XIIth ſections.

NAVIGATION.

Some of the principal LAWS that have been enacted, relating to the trading NAVIGATION of ENGLAND.

According to the common right of mankind, the navigation through the world, is no leſs free and open to every one, than the air; and hence it proceeds, that paſſage by ſea to and from all Chriſtian countries, is and hath been ſo indifferently permitted to all nations, not being profeſſed enemies: and none can be prohibited to ſail in the main ſea, unleſs in places where the waters are as royalties, which the Venetians claim in ſome of their territories and juriſdictions, and other princes and ſtates by preſcription. Lex Mercat. Malines, 124, 130.

If a ſhip bound for Venice do enter into the river of Liſbon, and there deliver goods or merchandizes, and afterwards entering into the ſtraits of the Mediterranean Sea, be driven by contrary winds to ſome other place or iſland in the ſaid ſeas, and after that make her diſcharge at Venice, all this time of the voyage is conſidered as one navigation, and the maſter of the ſhip hath committed no fault, if he departed from the firſt port at the time limited. Ibid. 124.

As to ſhips in general, there have been many ſtatutes made for increaſing and preſerving them, and improving the navigation of this kingdom: by 5 Rich. II. c. 3. it was enacted, That none of the king's ſubjects ſhould bring in or carry out any merchandize, but in Engliſh ſhips, on pain to forfeit all merchandize otherwiſe conveyed, or the value thereof. But 6 Rich. II. c. 8. ordains, That the ſtatute before-mentioned ſhall only take place where able ſhips of the king's allegiance may be found, otherwiſe the merchants may hire other ſhips, notwithſtanding that ſtatute.

By 4 Hen. VII. c. 10. No Gaſcoign or Guiene wine, &c. ſhall be imported into this realm but in Engliſh veſſels, on pain of forfeiture: and none ſhall freight any merchandize in any ſtranger's ſhip, if he may have ſufficient freight in the ſame port, in a denizen's ſhip, under the penalty of forfeiting all merchandize not thus ſhipped, to be divided between the king and the ſeizer. This act ſhall not extend to any ſhip having merchandize on board, that is forced by tempeſt into any port of this kingdom, ſo as the owner thereof make no ſale of the merchandizes here, except only for neceſſary victuals, or repairing of the ſhip and tackle.

The ſtat. 32 Hen. VIII. c. 14. ordains, That Gaſcoign or Guiene wines, or Thouloufe woad, may be brought into this kingdom in any other ſhips, as well as Engliſh, notwithſtanding the act of 4 Hen. VII. And by this ſtatute, a rate was ordained of what ſhould be paid for the freight or portage of the ſeveral ſorts of merchandizes, in ſhips from the port of London to other places, and from thence to London.

By 1 Eliz. c. 13. If any owner of any merchandize, ſhall in the time of peace, embark or unload any part thereof (maſts, pitch, tar, and corn only excepted) out of or into any ſhip, other than an Engliſh bottom, he ſhall pay cuſtom as an alien: and no Engliſhman ſhall croſs the ſea in any hoy, &c. with any goods or merchandize, on pain to forfeit the ſame, to be divided between the king and the proſecutor. But merchants, at their ſeveral ſhippings of cloth out of the Thames twice in the year, may embark merchandize in a ſtranger's ſhip, ſo long as there are not Engliſh ſhips enough and convenient to convey ſuch merchandize into Flanders, Holland, Zealand, or Brabant, &c.

By the act of navigation, 12 Car. II. c. 18. it is enacted, That no goods ſhall be imported into, or exported out of, any territories belonging, or which may hereafter belong, to his majeſty, his heirs and ſucceſſors, in Aſia, Africa, or America, in any other ſhips but ſuch only as belong to the people of England, or Ireland, Wales, or town of Berwick upon Tweed, and whereof the maſter and three fourths of the mariners are Engliſh, on pain to forfeit all the goods and commodities, and the ſhip or veſſel with all its furniture; one third part whereof to the king, another third to the governor of the country where ſuch default ſhall be, if ſeized there, otherwiſe that third alſo to the king, and the other third to him that will ſeize or ſue for the ſame. And commanders at ſea, having commiſſion from the king, are to bring in as prize, ſhips offending contrary hereunto; and in ſuch caſe of condemnation, one moiety ſhall be to the uſe of ſuch commanders and their companies, and the other moiety to the king.

No goods of the growth or manufacture of any countries belonging to Muſcovy, or of the produce of the Turkiſh empire, ſhall be imported into England, Ireland, Wales, or town of Berwick, in any ſhip or veſſel, not Engliſh built, or not belonging to the people of ſome of them, and navigated as aforeſaid; except veſſels of the built of that place of which the goods are, or of ſuch port where they can only be, or uſually are ſhipped, the maſter and three fourths of the mariners being of the ſaid country, on pain of forfeiting the ſhip and goods, to be divided and diſpoſed as abovementioned: and all wines of the growth of France or Germany, and divers goods and merchandize from Spain, Portugal, Ruſſia, &c. which ſhall be imported into the places aforeſaid, in any other ſhip than what doth belong to England, Ireland, &c. and are navigated as aforeſaid, ſhall be deemed aliens goods, and pay accordingly. Stat. ibid.

And no foreign built veſſel ſhall paſs as a ſhip belonging to England, Ireland, Wales, &c. 'till the owner makes appear to the chief officers of the cuſtoms, in the port next to the place of his abode, that he is not an alien, and take an oath that it was bonâ fide bought of ſuch perſons, expreſſing the ſum given, and the time and place, when and where, &c. and that no foreigner hath a ſhare therein. Alſo none ſhall load in any bottom, whereof ſtrangers are owners, part owners, or maſter, and of which three fourths of the mariners at leaſt are not Engliſh, any goods whatſoever from one port or creek of England, Ireland, Wales, Guernſey, Jerſey, or town of Berwick, to another port of the ſame, on pain to forfeit ſuch goods and veſſel. Ibid.

The 22 and 23 Car. II. c. 11. ordains, That where any goods ſhall be laden on board any Engliſh ſhip of the burthen of 200 tons or upwards, and mounted with ſixteen guns or more, if the maſter yields up ſuch ſhip or goods to any Turkiſh veſſel, or any pirate, without fighting, upon proof thereof in the admiralty, he ſhall be incapable of taking charge of any Engliſh veſſel, &c. And maſters of Engliſh ſhips, though not of that burthen, nor mounted as aforeſaid, that ſhall yield to a Turkiſh ſhip or pirate (not having at leaſt double number of guns) without fighting, ſhall be liable to the penalties of this act: if any inferior officers or mariners of a ſhip, ſhall refuſe to fight when commanded, or utter words to diſcourage others, they ſhall loſe all their wages due, and be impriſoned, not exceeding ſix months, &c. and mariners laying violent hands on their commanders to hinder them from fighting in defence of their ſhips, ſhall ſuffer death as felons.

When any Engliſh ſhip ſhall have been defended by fight, and brought to her port, in which fighting any of her men have been wounded, the judge of the admiralty, or his ſurrogate, &c. where the ſhip ſhall arrive, upon the petition of the maſter and ſeamen, may call ſo many as he ſhall be informed to be adventurers or owners, and by adviſing with them, levy upon the reſpective owners ſuch ſums as himſelf and the major part of them then preſent ſhall judge reaſonable, not exceeding two per cent. of the ſhip and goods; which money ſhall be diſtributed among the maſter, officers, and ſeamen, or the widows and children of the ſlain, according to the direction of the judge, with the approbation of three or more of the owners or adventurers. Ibid.

By the 5th and 6th W. and M. c. 24. Every perſon that ſhall within ſuch a time, build, or cauſe to be built, any ſhips of three decks, containing 450 tons, and mounted with 32 pieces of ordnance, having ammunition, &c. proportionable, ſhall, for the firſt three voyages which the ſaid ſhips ſhall make to any foreign parts, receive one tenth part of the cuſtoms called the ſubſidy of tonnage and poundage, payable for merchandizes exported and imported in ſuch ſhips: but if, after the end of the three firſt voyages, any of the ſhips ſo built, ſhall be altered or put into another form of building, whereby they ſhall become leſs defenſible than they were at firſt, then they ſhall be forfeited and loſt.

By 2 Ann. c. 9. During the war with France, owners of ſhips might navigate with maſters, and one half of the mariners Engliſh, as if the maſter and three fourths of the men

had been ſo: alſo by 3 and 4 Ann. c. 13. any ſhips might be navigated by foreign ſeamen; and foreigners ſerving on board any Engliſh ſhip for two years, were to be deemed natural-born ſubjects, &c.

By 4 Geo. I. c. 12. and 11 Geo. I. c. 29. If any captain, maſter, officer, or mariner, belonging to any ſhip or veſſel, ſhall wilfully caſt away, burn, or deſtroy the ſhip to which he belongeth, or in any wiſe direct or procure the ſame to be done, with intent to prejudice a perſon that ſhall have underwritten any policy of inſurance thereon, or any merchant who ſhall load goods therein, or any owner of ſuch ſhip or veſſel, the perſons offending being lawfully convicted thereof, ſhall be adjudged guilty of felony without benefit of clergy. See the article ASSURANCE.

The 5th of Geo. II. c. 20. enacts, That no commander of any ſhip outward bound ſhall receive on board any gunpowder, either as merchandize, or ſtore for the voyage (except for his majeſty's ſervice) before ſuch ſhip ſhall be at Blackwall in the river Thames; and all maſters of ſhips coming into the river, ſhall put on ſhore all powder, either before the arrival of their ſhips at the ſaid place, or within 24 hours after they came to an anchor there, upon pain of forfeiting 5 l. for every 50 pounds weight of gunpowder found on board, and in the like proportion for a leſs quantity. And no guns ſhall be kept loaded with ſhot in merchant-ſhips between London-bridge and Blackwall, or fired before the riſing, or after the ſetting of the ſun, under the penalty of 5 l. and for every gun ſo fired 10 s. And if any pitch, tar, roſin, or other combuſtible matter, ſhall be heated or melted by fire in any ſhips, every perſon ſo offending, ſhall for every offence forfeit 5 l. And the ſhips are liable to ſearch by an elder brother, appointed by the maſter, wardens, and aſſiſtants of the Trinity-houſe at Deptford.

And, in caſe any ſhip ſhall be laid up or moored in the mouth; or any other part of St Saviour's dock (except ſhips as ſhall be loading or delivering their cargoes, and others not exceeding two at one time, that ſhall lie at Shipwright Yard at the north-weſt corner of the ſaid dock, during the time they ſhall be repairing) the maſter of every ſuch ſhip ſhall forfeit 20 s. for every day the ſame ſhall continue to be laid up and moored, to be recovered and levied as the other penalties inflicted by this act, before two juſtices of peace, ſubject to appeal to the quarter ſeſſions.

By 6 Geo. II. c. 29. Maſters of ſhips lying in the river Thames, having occaſion for ballaſt, ſhall pay 12 d. per ton colliers, other ſhips 15 d. and foreign ſhips 19 d. to the corporation of the Trinity houſe at Deptford, who ſhall pay ballaſt-men 9 d. a ton for raiſing and carrying it, &c. And ſuch ballaſt-men delivering more or leſs ballaſt than mentioned in tickets, or without order, ſhall forfeit 2 s. 6 d. per ton. Alſo working in lighters not marked and allowed, or counterfeiting any gauge-mark, they ſhall forfeit 10 l. leviable by two juſtices of peace, by diſtreſs, &c. And it ſhall be lawful for any maſter of a ſhip to appoint two perſons, whereof his mate to be one, to go on board any lighter bringing ballaſt to ſuch ſhip, to inſpect the marks thereof; and every ballaſt-man ſhall immediately before the delivery of ballaſt to any ſhip, trim ſuch lighter, ſo as to make the ſame ſwim at equal marks, at the ſtem and ſtern, and pump all the water out, &c. And the maſter, wardens, and aſſiſtants of the Trinity-houſe, are to make good to the maſter the quantity or value of ballaſt which ſhall be found deficient, or forfeit 50 l. one moiety to the poor, and the other to the perſon ſuing for the ſame.

The 7th of Geo. II. c. 15. ordains, That no owners of any ſhip ſhall be liable to anſwer any loſs by reaſon of embezzlement, by the maſter or mariners, of any goods or merchandize which ſhall be ſhipped on board, or for any act done by them without the privity or knowledge of ſuch owners, further than the value of the ſhip, and amount of the freight during the voyage, where ſuch embezzlement, or other malverſation of the maſter or mariners, ſhall be committed: and if ſeveral perſons ſhall ſuffer damage by the means aforeſaid, and the value of the ſhip, &c. ſhall not be ſufficient to make compenſation, then the freighters ſhall receive ſatisfaction in average, in proportion to their reſpective loſſes, to be aſcertained on a bill in equity exhibited for a diſcovery thereof, and of the value of ſuch ſhip and freight, &c.

But nothing in this act ſhall diſcharge any remedy, which any perſon may have againſt the maſter and mariners, in reſpect of any embezzlement. See the articles SHIPPING, SEA LAWS, MARINE TREATIES, OLERON'S LAW, RHODIAN LAWS. FREIGHT, ASSURANCES, and particularly the BUSINESS OF THE CUSTOMS, at the end of every letter.

A MEMOIR that may be neceſſary to be referred to occaſionally.

The caſe of Britiſh merchants, owners of ſhips, and others, relative to the employment and increaſe of BRITISH SHIPPING AND BRITISH NAVIGATORS.

The ſpirit and tendency of all the laws which have been made in relation to the navigation of theſe kingdoms, clearly ſhew, that the principal view and aim of the legiſlature, has ever been to increaſe and encourage BRITISH SHIPPING AND BRITISH NAVIGATORS.

That nevertheleſs, THE FREIGHTS between theſe kingdoms and ſeveral countries in Europe, have been almoſt wholly engroſſed by FOREIGN SHIPS, becauſe foreigners will always give the preference to ſhips of their own country; and thoſe who are merchants or factors reſiding here, having connections, or perhaps engagements, with ſome of their countrymen at home, who are owners of ſhipping, always have employed their OWN SHIPS BEFORE OURS, not only when the prices of both were the ſame, but even in ſome inſtances, when Britiſh ſhips have been offered to load at a CHEAPER RATE THAN FOREIGNERS WOULD AGREE TO. From which it may be inferred, that the prices paid for freighting ſhips with thoſe goods, are a ſufficient encouragement for our owners, and that ſuch freighting voyages would be ſought after by them. Nor is it to be apprehended, that the exportation of merchandize can be leſſened, by confining it in ſome meaſure to BRITISH VESSELS, becauſe few or none of thoſe foreign owners are the freighters, but merchants (who are unconcerned in ſhipping) are the real proprietors of theſe cargoes.

And the neceſſity of contriving ſome means for maintaining our wonted ſuperiority, as a MARITIME POWER, appears the more evident at this juncture, when an univerſal ſpirit and uncommon ardour for IMPROVING TRADE, NAVIGATION, and NAVAL STRENGTH, PREVAILS THROUGHOUT EUROPE; which is manifeſted, by the various nations thereo purchaſing ſhips from us, and by the great number of hands employed in building new ſhips of their own; and it may not be improper to obſerve, that their own built ſhips are allowed different degrees of remiſſion from DUTIES AND CUSTOMS ON THEIR CARGOES, IN PROPORTION TO THE NEWNESS OF THE VESSEL, 'till they have been occupied ſixteen years. And ſuch like bounties and encouragements, may in time ENABLE FOREIGNERS TO OUTVY US IN SHIPPING; for, in proportion as the number of their ſhips and ſailors increaſe, ours muſt become unemployed, and conſequently diminiſh. And, indeed, had it not been for the NAVIGATION ACTS, our merchants ſhipping would, at this time, have been very inconſiderable.

That the increaſe of our ſailors is not the only advantage that depends upon the increaſe of our ſhipping; for our ſhipwrights, caulkers, and ſailcloth-makers, would meet with full employment and encouragement at home, and have no occaſion to ſeek their bread in foreign countries; and, in general, all trades depending upon the building and employment of ſhipping be proportionably benefitted, to the great augmentation of the inland revenues, and advantage of the landed intereſt, which always riſes and falls with the increaſe and decay of trade. Beſides, a greater importation of pitch, tar, hemp, timber, and other commodities uſed in building and equipping ſhips would be promoted, which muſt increaſe his majeſty's cuſtoms. Whereas none of theſe advantages accrue FROM FOREIGNERS, who never REFIT OR VICTUAL THEIR SHIPPING HERE, but in caſes of abſolute neceſſity.

That our knowledge and acquaintance with the navigation in foreign ſeas and on foreign coaſts (ſome of which for want of experience we are unacquainted with) will conſequently be improved in proportion to the greater DIVERSITY OF OUR VOYAGES; by which means ſeamen may be trained up capable of navigating ſhips of war in thoſe, at preſent unfrequented, ſeas and coaſts; which may in ſome meaſure countervail the advantage foreigners have, in being ſo generally acquainted with ours.

That bounties and debentures, in the original inſtitution of them, were calculated for the benefit of trade in general; and under that general head, muſt certainly be included the ſhipping and navigation of theſe kingdoms, which ought therefore to have the benefit and advantages ariſing from ſuch encouragements, and which they undoubtedly will, by limiting and confining the exportation of goods, on which bounties and debentures are given, TO BRITISH SHIPS AND VESSELS. And when any government thinks proper to grant an encouragement to the exportation of ſome particular ſpecies of goods, it is but reaſonable that the advantages reſulting from it ſhould be enjoyed by it's own ſubjects only, and not by foreigners.

The frauds committed upon the revenue, by the relanding of BOUNTY AND DEBENTURE GOODS, would be more eaſily detected, if Britiſh veſſels were obliged upon their return home to produce vouchers of the DELIVERY OF THEIR CARGOES, or be puniſhed for fraud or neglect; whereas foreigners, that never return to a Britiſh port, may practiſe THESE FRAUDS UPON THE REVENUE with impunity.

That the liberty allowed to foreigners to export OUR BOUNTY AND DEBENTURE GOODS, with other SORTS OF MERCHANDIZE by way of back freight, and the profit ariſing from it, is manifeſtly the encouragement and inducement to them to load ſo conſiderably in theſe kingdoms; whereas were that liberty (as to bounty and debenture goods) allowed to Britiſh ſhips only, we might ourſelves enjoy the great profit which they now draw from us, and at the ſame time the manufactures and goods of this country, on which there are NO

BOUNTIES OR DRAWBACKS, might continue to be exported on FOREIGN BOTTOMS. Nor will theſe reaſons be invalidated by objecting, that a Britiſh ſhip would with difficulty, or perhaps not at all, get a back freight from the port to which ſhe might carry our bounty and debenture goods; becauſe it has been found by experience, that a veſſel, after ſhe has once undergone the expence of her firſt out-fit, might even go in ballaſt to another port for a back freight, with ſufficient profit; as in the caſe of many of our CORN SHIPS, whoſe cargoes being landed in the Mediterranean, or other places, they proceed thence to Britiſh America in ballaſt, in order to procure a lading home. Another advantage ariſing from the increaſe of our ſhipping, which would be occaſioned by this limitation is, that our diſcharged ſeamen and marines will meet with immediate employment, and a more EXTENSIVE PLAN BE LAID FOR THE TRAINING UP OF SEAMEN FOR THE BENEFIT OF THE PUBLIC IN CASE OF EMERGENCY. Benefits which, without ſuch a limitation, will naturally reſult to foreigners, to the proportionable diminution of the navigation and ſecurity of theſe kingdoms.

That the EXPORTATION OF PROVISIONS FROM IRELAND HATH been almoſt ENTIRELY ENGROSSED BY FOREIGNERS in foreign bottoms, whereas were that trade to be confined to BRITISH SHIPS ONLY, it would tend manifeſtly to the employment and increaſe of Britiſh ſhipping; nor would the exportation of proviſions from thence at all be leſſened, becauſe foreigners cannot be ſo well ſupplied from any other country: neither would this be any impediment to foreigners, for few of them take in proviſions at Ireland on voyages to their plantations or ſettlements, but ſend ſhips to Ireland merely to carry proviſions to their own European ports, and there victual out their veſſels for their voyages and ſettlements; which freight would employ a conſiderable number of OUR OWN SHIPPING. And ſhould it be objected, that thoſe limitations in time of war may be a diſadvantage to trade, yet this objection may eaſily be obviated, by veſting a power in the crown to diſpenſe with, alter, or enlarge the limitation during ſuch war; and perhaps too it may be objected, that ſuch a limitation may be of dangerous conſequence to the trade and commerce of theſe kingdoms: but this limitation is not to be conſidered as a general prohibition, for it is propoſed to extend no further than the exportation of SOME PARTICULAR GOODS, on which BOUNTIES AND DEBENTURES HAVE BEEN GRANTED BY PARLIAMENT, and to IRISH PROVISIONS, and would leave the navigation in other reſpects as free and open as ever to foreign ſhips, for the exportation of all other goods and manufactures.

That freights will not be enhanced by theſe limitations, ſince the number of veſſels at preſent unemployed, and numbers of others which would be built in conſequence of this encouragement, would always be ſufficient to export thoſe kinds of goods, upon as eaſy or eaſier terms than they are at preſent exported by foreigners, who frequently come here in ballaſt, in order to export bounty or debenture goods, and of that ſpecies with which of neceſſity they muſt provide themſelves from hence, as being only to be had of us.

Should it be alledged, that the profit of freightage is the only inducement foreigners have to take ſome kinds of goods from it, yet inducements of ſo pernicious a conſequence ſhould be avoided, as this trade tends ſo manifeſtly to increaſe THEIR SHIPPING, and of courſe their NAVAL POWER, whereby they may ſoon become our equals, and compel us to increaſe OUR MARITIME FORCE, though for no other uſe than to PREVENT THEIR SUPERIORITY, even when we are (from our natural reſource) leſs able to ſupport or bear the expence of ſuch an increaſe.

That importations into theſe kingdoms will be more conſiderable in Britiſh veſſels, which by theſe means may afford to freight back upon eaſier terms than foreigners, without any diminution of foreign commerce, ſince FOREIGN COMMODITIES are imported into theſe kingdoms without any regard to the veſſel that brings them, but merely for the benefit ariſing from our markets.

That confining the exportation of CORN TO BRITISH SHIPPING, has been productive of no loſs or inconveniency to us, but on the contrary many good effects have been experienced from it, by the number of our ſhipping, which has been, and is employed therein; whence it may be reaſonably concluded, that a GENERAL LIMITATION OF BOUNTY AND DEBENTURE GOODS TO BRITISH SHIPPING, will be of a ſtill further and proportionable advantage to theſe kingdoms.

And experience has ſhewn, that ſeamen employed in the European navigation have ever enjoyed a greater degree of health, and better conſtitutions, than thoſe employed in the Eaſt-India, Weſt-India, American, or African trades, which have been fatal to a great number of young, ſtout, and valuable ſeamen; and the devaſtation occaſioned by the mortality of ſeamen in thoſe climates, has been ſupplied only by the nurſeries of ſeamen in Europe; and, as thoſe diſtant countries import and ſend hither merchandize entitled to a drawback on exportation, our European navigation ſhould be employed in ſuch exportation; otherwiſe we have no equivalent relative to our navigators, for ſupplying the trade of India, Africa, and America, with ſuch numbers of ſeamen.

That the moſt valuable ſeamen for the ſervice of the public in the navy, are thoſe bred up in the MERCANTILE EMPLOY, who are no expence to the nation, but a conſiderable benefit; becauſe by their labour they maintain themſelves and enrich their employers, and alſo ſerve as a natural reſource for the defence and protection of this iſland. It is not quite certain how many ſhips are employed by this nation, but it is generally believed, that the number belonging to England trading over ſea, is about 2000 ſail great and ſmall, amounting in the whole to about 170,000 tons; and the coaſting veſſels in England may conſiſt of about the like number, and contain about 150,000 tons: and, by the liſt annexed is ſhewn, to what foreign countries or ſtates the ſhips therein mentioned belong, together with the number of their voyages, their names, and the tonnage of each foreign ſhip employed in bringing goods to England, in one year before the war in 1741, one year during the war, and one after the peace of AIX LA CHAPELLE: which liſt is brought to a head, and ſhews the total of thoſe particulars, and alſo the tonnage of the repeated voyages, added to that of the firſt voyage. It likewiſe aſcertains the whole foreign tonnage of each year, the voyages and tonnage that have increaſed ſince the war, by being compared with the year before the war, and an average made on the three years; by which may be formed a calculation of the ſhips belonging to England, with the foreign ſhips really employed in carrying freights for England.

The average of the burthen of foreign ſhips is 86,094 tons annually employed by England (excluſive of thoſe carrying proviſions from Ireland); and the tonnage of Britiſh ſhips belonging to England in the foreign and coaſting trade is 320,000 tons, which, if actually employed, does not amount to four times the quantity of foreign tonnage: and hence a calculation may be formed of the natural GROWING STRENGTH OF OUR NEIGHBOURING MARITIME POWERS, ſo far as particularly relates to their trade carried on WITH ENGLAND.

Upon the whole, therefore, it will ſurely appear, that, by limiting the exportation of BOUNTY AND DEBENTURE GOODS TO BRITISH SHIPPING ONLY, no prejudice will ariſe to the trade and commerce of theſe kingdoms; but on the contrary, the happieſt and moſt deſirable effects will reſult from it, in the greater encouragement which will be neceſſarily given to artificers in general, to our manufactures of Britiſh ſail-cloth, to all trades depending upon the building and employment of ſhipping; and by it the ſkill and experience of our ſeamen will become more extenſive, and even univerſal IN THE NAVIGATION OF FOREIGN SEAS, and a leſs encouragement will be given to foreigners to INCREASE THEIR SHIPPING: and thereby alſo the revenues of the crown from inland-duties and cuſtoms will be more conſiderably improved, and frauds in the latter more eaſily detected, and the landed intereſt in general will partake of theſe benefits ariſing from it; and (which is of the utmoſt importance to the nation) a foundation will be laid, not only FOR THE INCREASE AND EMPLOY OF BRITISH SHIPPING, but alſo of BRITISH NAVIGATORS, trained up and made able and ſkilful for the ſervice of the public in all emergencies; from whence the neceſſity of an act of parliament, as a foundation for producing theſe beneficial conſequences, is very apparent.

An ACCOUNT of all the Foreign Shipping which have entered in at the ſeveral Ports of England, ſet forth in Columns, under the Title of the Nation or State to which they belong, for two ſeveral Years, ending at Chriſtmas 1743 and 1747, and one Year ending at Lady-Day 1749; which is one Year before the French War, one Year in the War, and one Year ſince the War.

NEGROLAND. See AFRICA, ENGLISH AFRICAN COMPANY, ANTILLES ISLANDS.

NETHERLANDS, [The UNITED NETHERLANDS,] or the UNITED PROVINCES of the NETHERLANDS.

Previouſly to the peruſal of this article, the reader is deſired to conſult what we have ſaid under AUSTRIAN NETHERLANDS, FLANDERS, and HOLLAND.

The United Netherlands conſiſt of the ſeveral provinces of Holland, Zeland, Friezland, Groningen, Overyſſel, Gelderland, with Zutphen, and Utrecht, and are bounded by the German Sea on the north and weſt, by the circle of Weſtphalia in Germany on the eaſt, and by Flanders, Brabant, and the dukedom of Cleves on the ſouth, lying between 3 degrees 20 min. and 7 degr. 30 min. eaſt long. and between 51, 35 min. and 52 degrees 40 min. north lat. and are about 50 miles long, and much the ſame in breadth; including the Zuyder Sea, which takes up a conſiderable ſpace within theſe limits. This is a level country, and cut through with numerous canals, which form numerous ſmall iſlands, ſubject to be overflowed by inundations of ſea and land floods, which are kept out, at a great expence, by the means of dykes. As a part of the country has been loſt by inundations, ſo much more has been gained by damming out the ſea. Sir William Temple ſays, that the ſea may one day have it's own again. The air of this country is very bad, by reaſon of abounding with ſo great a degree of humidity. As to the ſoil of the provinces which lies near the ſea, particularly on the weſt coaſt of Holland; their meadow and paſture is moſt of it under water in winter, which, in ſummer, is either dried up, or the water thrown out with wind-mills, and leaves a fat ſlime, which makes the ſoil very fruitful, whereon they fatten the lean cattle they purchaſe in the north, and make prodigious quantities of butter and cheeſe; but the country does not produce corn enough for their ſubſiſtence: yet they have as great plenty of it as any nation in Europe, and likewiſe of the produce of every country; theſe provinces containing magazines of every thing the earth produces, that is trafficable. But in regard to their trade, we ſhall begin with their

FISHERIES. See our general article FISHERIES, and HERRING-FISHERY, and HOLLAND. Emanuel Van Meteren, the Dutch hiſtorian, informs us, that in 1610, there went from Holland 1500 buſſes upon the herring-fiſhery. The author of Batavia Illuſtrata tells us, that one year with another, the number of theſe buſſes does not exceed 800; but thoſe are from 30 to 50 tons, whereas in Van Meteren's time, they were only from 20 to 30 tons: ſo that though the number of veſſels that may be now employed be not ſo great, yet this is more than made up in their ſize: there is a greater quantity of fiſh taken at preſent, more hands than ever employed, and a proportionable conſumption

conſumption of every thing that depends on their fiſhery. The importance of the herring-fiſhery will appear very great to any one that conſiders how many different parts of commerce it gives motion to, and how great a number of people depend on each of them. There are here two ſeaſons of the herring-fiſhery; the firſt continues for a month or five weeks, on the coaſt of Scotland, from the latter end of June to the latter end of July; the ſecond holds from the middle of September to the latter end of November, on the coaſt of England, about Yarmouth and Leoſtoff.

The inland fiſhery of the Dutch is alſo of no little conſequence to them. Their lakes and rivers afford all kinds of freſh-water fiſh; and thoſe proper to the ſea, are taken on every part of their coaſt, with which their markets are plentifully ſupplied: what is more than competent for home conſumption, is pickled, and added to their cod and herrings for exportation.

What the trade of the United Netherlands was, in the time of Sir William, we have in his account thereof; which, with remarks ſuitable to it's preſent ſtate, will give the reader a good idea of it's preſent compared with it's former condition, will alſo ſhew the difference, and point out the cauſe.

'Tis evident, ſays Sir William, to thoſe who have read the moſt, and travelled fartheſt, that no country can be found, either in this preſent age, or upon record of any ſtory, where ſo vaſt a trade has been managed, as in the narrow compaſs of the four maritime provinces of this commonwealth; nay, it is generally eſteemed, that they have more ſhipping belongs to them, than there does to all the reſt of Europe. Yet they have no native commodities towards the building or rigging of the ſmalleſt veſſel; their flax, hemp, pitch, wood, and iron, coming all from abroad, as wool does for cloathing their men, and corn for feeding them.

Nor do I know any thing properly of their own growth, that is conſiderable, either for their own neceſſary uſe, or for traffic with their neighbours, beſides butter, cheeſe, and earthen wares. For havens, they have not any good upon their whole coaſt: the beſt are Helvoetſluys, which has no trade at all; and Flushing, which has little, in compariſon of other towns in Holland: but Amſterdam, that triumphs in the ſpoils of Liſbon and Antwerp, (which before ingroſſed the greateſt trade of Europe and the Indies) ſeems to be the moſt incommodious haven they have, being ſeated upon ſo ſhallow waters, that ordinary ſhips cannot come up to it without the advantage of tides, nor great ones without unlading.

The entrance of the Texel, and paſſage over the Zuyderſea, is more dangerous than a voyage from thence to Spain, lying all in blind and narrow channels; ſo that it eaſily appears, that 'tis not an haven that draws trade, but trade that fills an haven, and brings it in vogue. Nor has Holland grown rich by any native commodities, but by force of induſtry; by improvement and manufacture of all foreign growth; by being the general magazine of Europe, and furniſhing all parts with whatever the market wants or invites; and by their ſeamen being, as they have properly been called, the common carriers of the world *.

* The Dutch have loſt a very conſiderable part of this beneficial traffic ſince the peace of Utrecht.

Since the ground of trade cannot be derived from havens, or native commodities, (as may well be concluded from the ſurvey of Holland, which has the leaſt and the worſt; and of Ireland, which has the moſt and the beſt of both) it were not amiſs to conſider, from what other ſource it may be more naturally and certainly derived: for if we talk of induſtry, we are ſtill as much to ſeek, what it is that makes people induſtrious in one country, and idle in another.

I conceive the true original and grounds of trade to be, great multitudes of people crowded into a ſmall compaſs of land, whereby all things neceſſary to life become dear, and all men who have poſſeſſions, are induced to parſimony; but thoſe who have none, are forced to induſtry and labour, or elſe to want. Bodies that are vigorous, fall to labour; ſuch as are not, ſupply that defect by ſome ſort of inventions or ingenuity. Theſe cuſtoms ariſe firſt from neceſſity, but increaſe by imitation, and grow in time to be habitual in a country; and wherever they are ſo, if it lies upon the ſea, they naturally break out into trade, both becauſe whatever they want of their own, that is neceſſary to ſo many men's lives, muſt be ſupplied from abroad; and becauſe, by the multitude of people, and ſmallneſs of country, land grows ſo dear, that the improvement of money, that way, is inconſiderable, and ſo turns to ſea, where the greatneſs of the profit makes amends for the venture.

This cannot be better illuſtrated, than by it's contrary, which appears no where more than in Ireland; where, by the largeneſs and plenty of the food, and ſcarcity of people, all things neceſſary to life are ſo cheap, that an induſtrious man, by two day's labour, may gain enough to feed him the reſt of the week; which I take to be a very plain ground of the lazineſs attributed to the people: for men naturally prefer eaſe before labour, and will not take pains, if they can live idle. Though when, by neceſſity, they have been inured to it, they cannot leave it, being grown a cuſtom neceſſary to their health, and to their very entertainment: nor, perhaps, is the change harder, from conſtant eaſe to labour, than from conſtant labour to eaſe.

This account of the original of trade agrees with the experience of all ages, and with the conſtitutions of all places, where it has moſt flouriſhed in the world; as Tyre, Carthage, Athens, Syracuſe, Agrigentum, Rhodes, Venice, Holland, and will be ſo obvious to every man, that knows and conſiders the ſituation, the extent, and the nature of all thoſe countries, that it will need no enlargement upon the compariſons.

By theſe examples, which are all of commonwealths, and by the decay or diſſolution of trade in the ſix firſt, when they came to be conquered, or ſubjected to arbitrary dominions, it might be concluded, that there is ſomething in that form of government proper and natural to trade, in a more peculiar manner. But the height it arrived to at Bruges and Antwerp, under their princes, for four or five deſcents of the houſe of Burgundy, and two of Auſtria, ſhews it may thrive under good princes and legal monarchies, as well as under free ſtates.

Under arbitrary and tyrannical power, it muſt of neceſſity decay and diſſolve, becauſe this empties a country of people, whereas the others fill it; this extinguiſhes induſtry, whilſt men are in doubt of enjoying themſelves with what they get, or leaving it to their children; the others encourage it, by ſecuring men of both; one fills a country with ſoldiers, and the other with merchants, who were never known yet to live well together, becauſe they cannot truſt one another. And as trade cannot live without mutual truſt among private men, ſo it cannot grow or thrive, to any great degree, without a confidence both of public and private ſafety, and conſequently a truſt in the government, from an opinion of it's ſtrength, wiſdom, and juſtice; which muſt be grounded either upon the perſonal virtues and qualities of a prince, or elſe upon the conſtitutions and orders of a ſtate.

It appears to every man's eye, who hath travelled Holland, and obſerved the number and vicinity of their great and populous towns and villages, with the prodigious improvement of almoſt every ſpot of ground in the country, and the great multitudes conſtantly employed in their ſhipping abroad, and their boats at home, that no other known country in the world, of the ſame extent, holds any proportion with this in numbers of people; and if that be the great foundation of trade, the beſt account that can be given of theirs, will be by conſidering the cauſes and accidents that have ſerved to force or invite ſo vaſt a confluence of people into their country. In the firſt rank may be placed the civil wars, calamities, perſecutions, oppreſſions, or diſcontents, that have been ſo fatal to moſt of their neighbours, for ſome time before, as well as ſince their ſtate began.

The perſecutions for matter of religion, in Germany, under Charles V. in France, under Henry II. and in England, under queen Mary, forced great numbers of people out of all thoſe countries, to ſhelter themſelves in the ſeveral towns of the ſeventeen provinces, where the antient liberties of the country, and privileges of the cities, had been inviolate under ſo long a ſucceſſion of princes, and gave protection to theſe oppreſſed ſtrangers, who filled their cities both with people and trade, and raiſed Antwerp to ſuch an height and renown, as continued 'till the duke of Alva's arrival in the Low-Countries.

The fright of this man, and the orders he brought, and arms to execute them, began to ſcatter the flock of people that for ſome time had been neſted there; ſo as, in a very few months, above a hundred thouſand families removed out of the country.

But when the ſeven provinces united, and began to defend themſelves with ſucceſs, under the conduct of the prince of Orange, and the countenance of England and France, and the perſecutions for religion began to grow ſharp in the Spaniſh provinces, all the profeſſors of the reformed religion, and haters of the Spaniſh dominions, retired into the ſtrong cities of this commonwealth, and gave the ſame date to the growth of trade there, and the decay of it at Antwerp.

The long civil wars, as firſt of France, then of Germany, and laſtly of England, ſerved to increaſe the ſwarm in this country, not only by ſuch as were perſecuted at home, but great numbers of peaceable men, who came here to ſeek for quiet in their lives, and ſafety in their poſſeſſions or trades; like thoſe birds that, upon the approach of a rough winter-ſeaſon, leave the countries where they were born and bred, fly away to ſome kinder and ſofter climate, and never return 'till the froſts are paſt, and the winds are laid at home.

The invitation theſe people had, to fix rather in Holland, than in many better countries, ſeem to have been, at firſt, the great ſtrength of their towns; which, by their maritime ſituation, and the low flatneſs of their country, can, with their ſluices, overflow all the ground about them, at ſuch diſtances, as to become inacceſſible to any land forces. And this natural ſtrength has been improved, eſpecially at Amſterdam,

Amſterdam, by all the art and expence that could any ways contribute towards the defence of the place.

Next was the conſtitution of their government; by which neither the States-General, nor the prince, have any power to invade any man's perſon or property within the precincts of their cities. Nor could it be feared, that the ſenate of any town ſhould conſpire to any ſuch violence; nor if they did, could they poſſibly execute it, having no ſoldiers in their pay, and the burghers only being employed in the defence of their towns, and execution of all civil juſtice among them.

Theſe circumſtances give ſo great a credit to the bank of Amſterdam; and that was another invitation for people to come and lodge here, what part of their money they could tranſport, and knew no way of ſecuring at home. Nor did thoſe people only lodge monies here, who came over into the country, but many more who never left their own: though they provided for a retreat againſt a ſtorm, and thought no place ſo ſecure as this, nor from whence they might ſo eaſily draw their money into any parts of the world.

Another circumſtance was, the general liberty and caſe, not only in point of conſcience, but all others that ſerve to the commodiouſneſs and quiet of life; every man following his own way, minding his own buſineſs, and little enquiring into other men's; which, I ſuppoſe, happened by ſo great a concourſe of people of ſeveral nations, different religions and cuſtoms, as left nothing ſtrange or new, and, by the general humour, bent all upon induſtry; whereas, curioſity is only proper to idle men.

Beſides, it has ever been the great principle of their ſtate, running through all their provinces and cities, even with emulation, to make their country the common refuge of all miſerable men, from whoſe protection, hardly any alliances, treaties, or intereſts, have ever been able to divert or remove them. So as, during the great dependance this ſtate had upon France, in the time of Henry IV. all the perſons diſgraced at that court, or baniſhed that country, made this their common retreat; nor could the ſtate ever be prevailed with, by any inſtances of the rench ambaſſador, to refuſe them the uſe and liberty of common life and air, under the protection of their government.

This firmneſs in the ſtate has been one of the circumſtances that has invited ſo many unhappy men out of all their neighbourhood, and, indeed, from moſt parts of Europe, to ſhelter themſelves from the blows of juſtice, or of fortune.

Nor, indeed, does any country ſeem ſo proper to be made uſe of upon ſuch occaſions, not only in reſpect of ſafety, but as a place that holds ſo conſtant and eaſy correſpondencies with all parts of the world, and whither any man may draw whatever money he has at his diſpoſal in any other place; where neither riches expoſe men to danger, nor poverty to contempt; but, on the contrary, where parſimony is honourable, whether it be neceſſary or no; and he that is forced, by his fortune, to live low, may here alone live in faſhion, and upon equal terms (in appearance abroad) with the chiefeſt of their miniſters, and richeſt of their merchants: nor is it eaſily imagined, how great an effect this conſtitution among them may, in courſe of time, have had upon the increaſe both of their people and their trade.

As the two firſt invitations of people into this country, were the ſtrength of their towns, and nature of their government, ſo two others have grown with the courſe of time, and progreſs of their riches and power. One is the reputation of their government, ariſing from the obſervation of the ſucceſs of their arms, the prudence of their negociations, the ſteadineſs of their councils, the conſtancy of their peace and quiet at home, and the conſideration they hereby arrived at among the princes and ſtates of Chriſtendom. From all theſe, men grew to a general opinion of the wiſdom and conduct of their ſtate, and of it's being eſtabliſhed upon foundations that could not be ſhaken by any common accidents, nor conſequently in danger of any great or ſudden revolutions; and this is a mighty inducement to induſtrious people to come and inhabit a country, who ſeek not only ſafety, under laws, from juſtice and oppreſſions, but likewiſe, under the ſtrength and good conduct of a ſtate, from the violence of foreign invaſions, or of civil commotions.

The other is, the great beauty of their country (forced in time, and by the improvements of induſtry, in ſpite of nature) which draws every day ſuch numbers of curious and idle perſons to ſee their provinces, though not to inhabit them. And, indeed, their country is a much better miſtreſs than a wife, and where few perſons, who were well at home, would be content to live; but where none, that have time and money to ſpare, would not for once be willing to travel; and as England ſhews, in the beauty of the country, what nature can arrive at, ſo does Holland, in the number, greatneſs, and beauty of their towns, whatever art can bring to paſs. But theſe, and many other matters of ſpeculation among them, filling the obſervations of all common travellers, ſhall make no part of mine, whoſe deſign is rather to diſcover the cauſes of their trade and riches, than to relate the effects.

Yet it may be noted hereupon, as a piece of wiſdom in any kingdom or ſtate, by the magnificence of courts, or of public ſtructures; by encouraging beauty in private building, and the adornment of towns with pleaſant and regular plantations of trees; by the celebration of ſome noble feſtivals or ſolemnities; by the inſtitution of ſome great marts or fairs; and by the contrivance of any extraordinary and renowned ſpectacles, to invite and occaſion, as much and as often as can be, the concourſe of buſy or idle people from the neighbouring or remoter nations, whoſe very paſſage and intercourſe is a great increaſe of wealth and of trade; and a ſecret incentive of people to inhabit a country, where men may meet with equal advantages, and more entertainments of life, than in other places. Such were the Olympicks and other games among the Grecians; ſuch the triumphs, trophies, and ſecular plays of old Rome, as well as the ſpectacles exhibited afterwards by the emperors, with ſuch ſtupendous effects of art and expence, for courting or entertaining the people; ſuch the wiles of New Rome; the juſts and tournaments formerly uſed in moſt of the courts of Chriſtendom; the feſtivals of the more celebrated orders of knighthood; and, in particular towns, the carnivals and fairs; the kirmiſtres, which run through all the cities of the Netherlands, and, in ſome of them, with a great deal of pageantry as well as traffic, being equal baits of pleaſure and of gain.

Having thus diſcovered, what has laid the great foundation of their trade, by the multitude of the people which has planted and habituated induſtry among them, and, by that, all ſorts of manufacture; as well as parſimony, and thereby general wealth: I ſhall enumerate, very briefly, ſome other circumſtances that ſeem, next to theſe, the chief advancers and encouragers of trade in their country.

Low intereſt, and dearneſs of land, are effects of the multitude of people, and cauſe of ſo much money to lie ready for all projects, by which gain may be expected, as the cutting of canals, making bridges and cauſeys, levelling downs, and draining marſhes, beſides all NEW ESSAYS at FOREIGN TRADE, which are propoſed with any probability of advantage.

The uſe of their banks, which ſecures money, and makes all payments eaſy, and trade quick.

The ſale by regiſtry, which were introduced here and in Flanders, in the time of Charles V. and makes all purchaſes ſafe.

The ſeverity of juſtice, not only againſt all thefts, but all cheats and counterfeits of any public bills (which is capital among them), and even againſt all common beggars, who are diſpoſed of either into workhouſes, or hoſpitals, as they are able or unable to labour. See the article POOR.

The convoys of merchant-fleets into all parts, even in time of peace, but eſpecially into the Straights; which give their trade ſecurity againſt many unexpected accidents, and their nation credit abroad, and breeds up ſeamen for their ſhips of war.

The lowneſs of their cuſtoms, and eaſineſs of paying them, which, with the freedom of their ports, invite both ſtrangers and natives to bring commodities hither; not only as to a market, but as to a magazine, where they lodge 'till they are invited abroad to other and better markets.

Order and exactneſs in managing their trade, which brings their commodities in credit abroad. This was firſt introduced by ſevere laws and penalties, but is ſince grown into cuſtom. Thus there have been above thirty ſeveral placarts about the manner of curing, pickling, and barrelling herrings. Thus all arms, made at Utrecht, are forfeited, if ſold without mark, or marked without trial. And I obſerved in their India-Houſe, that all the pieces of ſcarlet, which are ſent in great quantities to thoſe parts, are marked with the Engliſh arms, and inſcriptions in Engliſh; by which they maintain the credit gained to that commodity, by our former trade to parts, where it is now loſt or decayed.

The government managed either by men that trade, or whoſe families have riſen by it, or who have themſelves ſome intereſt going in other men's traffic, or who are born and bred in towns, the ſoul and being whereof conſiſts wholly in trade, which makes ſure of all favour, that from time to time grows neceſſary, and can be given the government.

The cuſtom of every town's affecting ſome particular commerce or ſtaple, valuing itſelf thereupon, and ſo improving it to the greateſt height: as Fluſhing, by that of the Weſt-Indies; Middleburgh, of French wines; Terveer, by the Scotch ſtaple; Dort, by the Engliſh ſtaple and Rheniſh wines; Leyden, by the manufactures of all ſorts of ſtuffs, ſilk, hair, gold and ſilver; Haerlem, by linen, mixt ſtuffs, and flowers; Delft, by beer and Dutch porcelain; Surdam, by the built of ſhips; Enchuyſen and Mazlandſluys, by herring-fiſhing; Friezland, by the Greenland trade, and Amſterdam, by that of the Eaſt-Indies, Spain, and the Straights.

The great application of the whole province to the fiſhing-trade, upon the coaſts of England and Scotland, which employ an incredible number of ſhips and ſeamen, and ſupplies moſt of the ſouthern parts of Europe with a rich and neceſſary commodity. See the articles FISHERIES, and HERRING-FISHERY.

The laſt I ſhall mention, is, the mighty advance they have made towards engroſſing the whole commerce of the Eaſt-Indies. [See the article DUTCH EAST-INDIA COMPANY] by their ſucceſſes againſt the Portugueze, and by their many wars and victories againſt the natives, whereby they have forced them to treaties of commerce, excluſive to all other nations, and to the admiſſion of forts to be built upon ſtreights and paſſes, that command the entrances into the traffic of ſuch places. This has been atchieved by the multitude of their people and mariners, that has been able to furniſh every year ſo many great ſhips for ſuch voyages, and to ſupply the loſs of ſo many lives, as the changes of climate have coſt, before they learnt the method of living in them: by the vaſtneſs of the ſtock that has been turned wholly to that trade, and by the conduct and application of the Eaſt India company, who have managed it like a commonwealth rather than a trade, and thereby raiſed a ſtate in the Indies; governed, indeed, by the orders of the company, but otherwiſe appearing to thoſe nations like a ſovereign ſtate, making war and peace with their greateſt kings, and able to bring to ſea forty or fifty men of war, and thirty thouſand men at land, by the modeſteſt computations. The ſtock of this trade, beſides what it turns to in France, Spain, Italy, the Straights, and Germany, makes them ſo great maſters in the trade of the northern parts of Europe, as Muſcovy, Poland, Pomerania, and all the Baltic; where the ſpices, that are an Indian drug, and European luxury, command all the commodities of thoſe countries, which are ſo neceſſary to life, as their corn; and to navigation, as hemp, pitch, maſts, planks, and iron.

Thus the trade of this country is diſcovered to be no effects of common contrivances, of natural diſpoſitions or ſituation, or of trivial accidents; but of a great concurrence of circumſtances, a long courſe of time, force of orders and method, which never before met in the world to ſuch a degree, or with ſo prodigious a ſucceſs; and, perhaps, never will again. Having grown (to ſum up all) from the ſituation of their country, extended upon the ſea, divided by two ſuch rivers as the Rhine and the Maes, with the vicinity of the Ems, Weſer, and Elbe; from the confluence of people out of Flanders, England, France, and Germany, invited by the ſtrength of their towns, and by the conſtitutions and credit of their government; by the liberty of conſcience, and ſecurity of life and goods (ſubjected only to conſtant laws): from general induſtry and parſimony, occaſioned by the multitude of people, and ſmallneſs of country; from cheapneſs and eaſineſs of carriage, by convenience of canals; from low intereſt, and dearneſs of land, which turn money to trade; the inſtitution of banks; ſale by regiſtry; care of convoys; ſmallneſs of cuſtoms; freedom of ports; order in trade; intereſt of perſons in the government; particular traffic, affected to particular places; application to the fiſhery; and acquiſitions in the Eaſt Indies.

It is no conſtant rule, that trade makes riches; for there may be a trade that impoveriſhes a nation: as it is not going often to market, that enriches the countryman; but, on the contrary, if, every time he comes there, he buys to a greater value than he ſells, he grows the poorer the oftener he goes: but the only and certain ſcale of riches, ariſing from trade in a nation, is the proportion of what is exported for the conſumption of others, to what is imported for their own.

The true ground of this proportion lies in the general induſtry and parſimony of a people, or in the contrary of both. Induſtry increaſes the native commodity, either in the product of the ſoil, or the manufactures of the country, which raiſes the ſtock for exportation. Parſimony leſſens the conſumption of their own, as well as of foreign commodities; and not only abates the importation by the laſt, but increaſes the exportation by the firſt; for, of all native commodities, the leſs is conſumed in a country, the more is exported abroad; there being no commodity, but, at one price or other, will find a market, which they will be maſters of, WHO CAN AFFORD IT CHEAPEST: ſuch are always the moſt induſtrious and parſimonious people; who can thrive by prices, upon which the lazy and expenſive cannot live.

The vulgar miſtake, that IMPORTATION OF FOREIGN WARES, IF PURCHASED ABROAD WITH NATIVE COMMODITIES, AND NOT WITH MONEY, DOES NOT MAKE A NATION POORER, is but what every man, that gives himſelf leiſure to think, muſt immediately rectify, by finding out, that, upon the end of an account between a nation, and all they deal with abroad, whatever the EXPORTATION WANTS IN VALUE, to balance that of the IMPORTATION, muſt of neceſſity be made up with READY MONEY. By this we find out the foundation of the riches of Holland, as of their trade by the circumſtances already rehearſed: for never any country TRADED SO MUCH, AND CONSUMED SO LITTLE. THEY BUY INFINITELY, BUT IT IS TO SELL AGAIN, EITHER UPON IMPROVEMENT OF THE COMMODITY, OR AT A BETTER MARKET. They are the great maſters of the Indian ſpices, and of the Perſian ſilks; but wear plain woollen, and feed upon their own fiſh and roots. Nay, they ſell the fineſt of their OWN CLOTH to France, and buy coarſe out of England for their OWN WEAR. They ſend abroad the beſt of their own butter, into all parts, and buy the cheapeſt out of Ireland, or the north of England, for their own uſe. In ſhort, they furniſh infinite luxury, which they never practiſe; and traffic in pleaſures, which they never taſte.

The gentlemen and officers of the army change their cloaths and their modes like their neighbours. But among the whole body of the CIVIL MAGISTRATES, the MERCHANTS, the RICH TRADERS, AND CITIZENS IN GENERAL, the faſhions continue ſtill the ſame; and others as conſtant among the ſeamen and boors: ſo that men LEAVE OFF THEIR CLOATHS, only becauſe they are worn out, and not becauſe they ARE OUT OF FASHION.

Their great foreign conſumption is French wine and brandy; but that may be allowed them, as the only reward they enjoy of all their pains, and as that alone which makes them rich and happy in their voluntary poverty, who would otherwiſe ſeem poor and wretched in their real wealth. Beſides, what they ſpend in wine, they ſave in corn to make other drinks, which is brought from foreign parts. And, upon a preſſure of their affairs, we ſee now for two years together, they have denied themſelves even this comfort, among all their ſorrows, and made up in paſſive fortitude, whatever they have wanted in the active.

Thus it happens, that much going conſtantly out, either in commodity, or in the labour of ſeafaring men; and little coming in to be conſumed at home, the reſt returns in coin, and fills the country to that degree, that more ſilver is ſeen in Holland, among the common hands and purſes, than braſs either in Spain or in France; though one be ſo rich in the beſt native commodities, and the other drain all the treaſures of the Weſt-Indies.

By this account of their trade and riches, it will appear, that ſome of our maxims are not ſo certain, as they are current, in our common politics. As firſt, that example and encouragement of exceſs and luxury, if employed in the conſumption of native commodities, is of advantage to trade: it may be ſo to that which impoveriſhes, but it is not to that which enriches a country; and is, indeed, leſs prejudicial, if it lie in native than in foreign wares. But the cuſtom or humour of luxury and expence, cannot ſtop at certain bounds; what begins in native, will proceed in foreign commodities: and though the example ariſe among idle perſons, yet the imitation will run into all degrees, even of thoſe men by whoſe induſtry the nation ſubſiſts. And beſides, the more of our own we ſpend, the leſs we ſhall have to ſend abroad; and ſo it will come to paſs, that while we drive a vaſt trade, yet, by buying much more than we ſell, we ſhall come to be poor: whereas, when we drove a very ſmall traffic abroad, yet, by ſelling ſo much more than we bought, we were very rich in proportion to our neighbours.

This appeared in Edward the IIId's time, when we maintained ſo mighty wars in France, and carried our victorious arms into the heart of Spain: whereas, in the 28th year of that king's reign, the value and cuſtom of all our exported commodities amounted to two hundred and ninety-four thouſand, one hundred and eighty-four pounds, ſeventeen ſhillings and two pence. And that of imported, but to thirty-eight thouſand, nine hundred and ſeventy pounds, three ſhillings and ſix pence. So as there muſt have entered that year into the kingdom in coin, or bullion (or elſe have grown a debt to the nation), two hundred and fifty-five thouſand, two hundred and fourteen pounds, thirteen ſhillings and eight-pence. And yet we then carried out our wools unwrought, and bought in a great part of our cloaths from Flanders.

Another common maxim is, that if, by any foreign invaſion or ſervitude, the ſtate, and conſequently the trade, of Holland, ſhould be ruined, the laſt would of courſe fall to our ſhare in England. Which is no conſequence: for it would certainly break into ſeveral pieces, and ſhift, either to us, to Flanders, to the Hanſe Towns, or any other parts, according as the moſt of thoſe circumſtances ſhould any where concur to invite it (and the likeneſs to ſuch) as appear to have formerly drawn it into Holland, by ſo mighty a confluence of people, and ſo general a vein of induſtry and parſimony among them. And whoever pretends to equal their growth in trade and riches, by other ways than ſuch as are already enumerated, will prove, I doubt, either to deceive, or to be deceived.

A third is, that if that ſtate were reduced to great extremities, ſo as to become a province to ſome greater power, THEY WOULD CHUSE OUR SUBJECTION RATHER THAN ANY OTHER; or thoſe, at leaſt, that are the maritime, and the richeſt of the provinces. But it will be more reaſonably concluded, from what Sir William has ſaid in his former diſcourſes on this ſtate, that though they may be divided by abſolute conqueſts, they will never divide themſelves by conſent, but all fall one way; and, by common agreement, make the beſt terms they can for their country, as a PROVINCE, if not as a STATE: and before they come to ſuch an extremity, they will firſt ſeek to be admitted, as a Belgic circle, in the empire (which they were of old) and thereby receive the protection of that mighty body, which (as far as great and ſmaller things may be compared) ſeems the moſt like their own ſtate in it's main conſtitutions, but eſpecially in the freedom or ſo-

vereignty

vereignty of the imperial cities. And this I have often heard their miniſters ſpeak of, as their laſt refuge, in caſe of being threatned by too ſtrong and fatal a conjuncture.

And, if this ſhould happen, the trade of the provinces would rather be preſerved or increaſed, than any way broken or deſtroyed by ſuch an alteration of their ſtate, becauſe the liberties of the country would continue what they are, and the ſecurity would be greater than now it is.

The laſt I will mention is of another vein: that if the prince of Orange were made ſovereign of their country, though by foreign arms, he would be a great prince, becauſe this now appears to be ſo great a ſtate. Whereas, on the contrary, thoſe provinces would ſoon become a very mean country. For ſuch a power muſt be maintained by force, as it would be acquired, and as, indeed, all abſolute dominion muſt be in thoſe provinces. This would raiſe general diſcontents, and thoſe perpetual ſeditions among the towns, which would change the order of the country, and anger the property of private men, and ſhake the credit and ſafety of the government: whenever this ſhould happen, the people would ſcatter, induſtry would faint, banks would diſſolve, and trade would decay to ſuch a degree, as probably, in courſe of time, the very digues would be no longer maintained, by the defences of a weak people againſt ſo furious an invader; but the ſea would break in upon their land, and leave their chiefeſt cities to be fiſher-towns, as they were of old.

Without any ſuch great revolutions, I am of opinion, that trade has, for ſome years ago paſt it's meridian, and begun ſenſibly to decay among them: whereof there ſeems to be ſeveral cauſes, as firſt, the general application that ſo many other nations have made to it, within theſe two or three and twenty years. For, ſince the peace of Munſter, which reſtored the quiet of Chriſtendom in 1648, not only Sweden and Denmark, but France and England, have more particularly than ever before, buſied the thoughts and councils of their ſeveral governments, as well as the humours of their people, about the matters of trade.

Nor has this happened without good degrees of ſucceſs; though kingdoms of ſuch extent, that have other and nobler foundations of greatneſs, cannot raiſe trade to ſuch a pitch as this little ſtate, which had no other to build upon; no more than a man, who has a fair and plentiful eſtate, can fall to labour and induſtry, like one that has nothing elſe to truſt to for the ſupport of his life. But, however, all theſe nations have come, of late, to ſhare largely with them; and there ſeem to be grown too many traders for trade in the world, ſo as they can hardly live one by another. As in a great populous village, the firſt grocer or mercer that ſets up among them grows preſently rich, having all their cuſtom, 'till another, encouraged by his ſucceſs, comes to ſet up by him, and ſhare in his gains; at length ſo many fall to the trade, that nothing is got by it; and ſome muſt give over, or all muſt break *.

* This would be juſt, if the world did not afford a perpetual increaſe of traffic.

Not many ages paſt, Venice and Florence poſſeſſed all the trade of Europe; the laſt by their manufactures, the firſt by their ſhipping: and the whole trade of Perſia and the Indies, whoſe commodities were brought (thoſe by land, and thoſe by the Arabian Sea) to Egypt, from whence they were fetched by the Venetian fleets, and diſperſed into moſt of the parts of Europe: and in thoſe times, we find the whole trade of England, was driven by Venetians, Florentines, and Lombards. The Eaſterlings, who were the inhabitants of the Hanſe-Towns, as Dantzic, Lubec, Hamburgh, and others upon the coaſt, fell next into trade, and managed all that of theſe northern parts for many years, and brought it firſt down to Bruges, and from thence to Antwerp. The firſt navigations of the Portugueze to the Eaſt-Indies, broke the greateſt of the Venetian trade and drew it to Liſbon: and the revolt of the Netherlands, that of Antwerp to Holland. But in all this time, the other and greater nations of Europe concerned themſelves little in it; their trade was war; their councils and enterprizes were buſied in the quarrels of the Holy Land, or in thoſe between the popes and the emperors (both of the ſame forge, engaging all Chriſtian princes, and ending in the greatneſs of the Eccleſiaſtical State throughout Chriſtendom): ſometimes, in the mighty wars between England and France, between France and Spain: the more general between Chriſtians and Turks; or more particular quarrels, between leſſer and neighbouring princes. In ſhort, the kingdoms and principalities were in the world, like the noblemen and gentlemen in a country; the free ſtates and cities, like the merchants and traders: theſe at firſt deſpiſed by the others, the other ſerved and revered by them; 'till, by the various courſe of events in the world, ſome of theſe came to grow rich and powerful by induſtry and parſimony; and ſome of the others, poor by war and by luxury: which made the traders begin to take upon them, and carry it like gentlemen, and the gentlemen begin to take a fancy of falling to trade.

By this ſhort account it will appear no wonder, either that particular places grew ſo rich and ſo mighty, while they alone enjoyed almoſt the general trade of the world; nor why not only the trade in Holland, but the advantage of it in general, ſhould ſeem to be leſſened by ſo many that ſhare it.

Another cauſe of it's decay in that ſtate may be, that, by the mighty progreſs of their Eaſt-India company, the commodities of that country are grown more than theſe parts of the world can take off; and conſequently, the rates of them muſt needs be leſſened, while the charge is increaſed by the great wars, the armies, and forts, neceſſary to maintain or extend the acquiſitions of that company in the Indies. For, inſtead of five or ſix Eaſt-India ſhips, which uſed to make the fleet of the year, they are now riſen to eighteen or twenty (I think two and twenty came in one year to the United Provinces). This is the reaſon why the particular perſons of that company in Holland make not ſo great advantage of the ſame ſtock, as thoſe of ours do in England; though their company be very much richer, and drives a far greater trade than ours, which is exhauſted by no charge of armies, or forts, or ſhips of war: and this is the reaſon, that the Dutch are forced to keep ſo long and ſo much of thoſe commodities in their magazines here, and to bring them out, only as the markets call for them, or are able to take off; and why they bring ſo much leſs from the Indies, than they were able to do, if there were vent enough here: as I remember, one of their ſeamen newly landed out of their Eaſt-India fleet, in the year 1669, upon diſcourſe in a boat between Delft and Leyden, ſaid, he had ſeen, before he came away, three heaps of nutmegs burnt at a time, each of which was more than a ſmall church could hold, which he pointed at in a village that was in ſight.

Another cauſe may be the great cheapneſs of corn, which has been for theſe dozen years or more, general in all theſe parts of Europe, and which has a very great influence upon the trade of Holland. For a great vent of Indian commodities (at leaſt the ſpices which are the groſs of them) uſed to be made into the northern parts of Europe, in exchange for corn, while it was taken off at good rates by the markets of Flanders, England, France, Spain, or Italy; in all which countries it has of late years gone ſo low, as to diſcourage the import of ſo great quantities, as uſed to come from Poland and Pruſſia, and other parts of the north. Now, the leſs value thoſe nations receive for corn, the leſs they are able to give for ſpice, which is a great loſs to the Dutch on both ſides, leſſening the vent of their Indian ware in the northern, and the traffic of corn in the ſouthern parts.

The cauſe of this great cheapneſs of corn ſeems to be, not ſo much a courſe of plentiful and ſeaſonable years, as the general peace that has been in Europe ſince the year 1659 or 60; by which ſo many men and ſo much land have been turned to huſbandry, that were before employed in the wars, or lay waſted by them in all the frontier provinces of France and Spain, as well as throughout Germany, before the peace of Munſter; and in England, during the actions or conſequences of a civil war: and plenty grows not to a height, but by the ſucceſſion of ſeveral peaceful as well as ſeaſonable years.

The laſt cauſe I will mention, is the mighty enlargement of the city of Amſterdam, by that which is called the New Town; the extent whereof is ſo ſpacious, and the buildings of ſo much greater beauty and coſt than the old, that it muſt have employed a vaſt proportion of that ſtock, which in this city was before wholly turned to trade. Beſides, there ſeems to have been growing on for theſe later years, a greater vie of luxury and expence among many of the merchants of that town, than was ever formerly known: which was obſerved and complained of, as well as the enlargement of their city, by ſome of the wiſeſt of their miniſters, while I reſided among them, who deſigned ſome regulations by ſumptuary laws; as knowing the very foundations of their trade would ſoon be undermined, if the habitual induſtry, parſimony, and ſimplicity of their people came to be over-run by luxury, idleneſs, and exceſs. However it happened, I found it agreed by all the moſt diligent and circumſpect enquiries I could make, that in the years 1669 and 70, there was hardly any foreign trade among them, beſides that of the Indies, by which the traders made the returns of their money without loſs; and none, by which the common gain was above two or three in the hundred. So, as it ſeems to be with trade, as with the ſea (it's element) that has a certain pitch above which it never riſes in the higheſt tides, and begins to ebb, as ſoon as ever it ceaſes to flow; and ever loſes ground in one place, proportionable to what it gains in another.

REMARKS before the laſt WAR.

There is nothing clearer, than that it is the true intereſt of this republic to live in perfect harmony with Great-Britain, inaſmuch as both countries have continually reaped the greateſt advantages, when this union has ſubſiſted; and have both felt the bad effects of being ſet at variance, and employing their maritime forces againſt each other, through the intrigues of their common enemies. It is, indeed, true, that each of theſe powers have an equal intereſt in commerce; but

but while they live upon good terms, and conſult their reſpective intereſts only, they can, without any difficulty, regulate the views of their ſubjects, ſo as to prevent their claſhing with each other; and for the common benefit of both, which in the preſent ſituation of things is far eaſier than in former times; and of greater conſequence than ever, conſidering the new ſchemes that are every day formed, and forming in different parts of Europe, with a tendency equally prejudicial to the trade of both.

Under the articles FLANDERS and HOLLAND, we have in our obſervations thereon ſhewn the neceſſity, the abſolute and indiſpenſible neceſſity in Great-Britain, to contribute all in her power to ſupport and maintain a good barrier for the preſervation of the Netherlands againſt the dominion of France: to inforce which principle ſtill the more ſenſibly, we have alſo under the article FRANCE, ſhewn the extraordinary encroachments of that nation in point of territory ſince the time of Monſ. Colbert, as well as the ſurprizing increaſe of their commerce and navigation from that period.—And, as the barrier of the Dutch ſtill remains unſettled, it ſtill remains neceſſary to corroborate what we have urged under the heads before-mentioned.—This we ſhall do from the authentic tranſactions of the parliament of England.

The ſenſe of the commons upon this occaſion, can no way be better ſeen, than from their own journals, and therefore I ſhall give the reader a ſhort abſtract of them.

In the beginning of 1677, the commons did directly, and in very preſſing terms, repreſent to the king, that the minds of his people were very much diſquieted with the dangers ariſing from the manifeſt growth and power of the French king; eſpecially by the acquiſitions made, and like to be made by him, in the Spaniſh Netherlands: in preſervation and ſecurity whereof, ſay they, we humbly conceive the intereſt of your majeſty, and the ſafety of your people, are highly concerned; and therefore we moſt humbly beſeech your majeſty to take the ſame into your royal care, and to ſtrengthen yourſelf with ſuch ſtricter alliances, as may ſecure your majeſty's kingdoms, and preſerve the ſaid Spaniſh Netherlands, and thereby quiet the minds of your majeſty's people.

And when the lords, who concurred with the commons in this addreſs, would have had partieular mention likewiſe made of Sicily, it being of great importance to our trade, that Sicily be not in the hands of the French king; the commons diſagreed to it for this reaſon, becauſe, 'the ſpecial mentioning of Sicily, would ſeem to put leſs weight upon the preſervation of the Spaniſh Netherlands; the conſervation of which they conceive to be of much more moment to his majeſty's kingdoms, than that of Sicily. For though it may be of great importance to our trade, that Sicily be not in the hands of the French king, yet the ſafety of his majeſty's kingdoms is not ſo immediately endangered thereby, and therefore it ought not to be equally inſiſted on.'

The king agreed with his parliament, in owning the great importance the conſervation of Flanders was of to England; but the reſt of his anſwer, which ſhewed his averſion to enter into a war for it's defence, was ſo little ſatisfactory, that a motion was immediately made for a ſecond addreſs to his majeſty, to enter into a ſtrict and ſpeedy alliance with the confederates; and, in purſuance of this motion, the houſe did about a fortnight after (March 30) in a ſecond addreſs implore his majeſty, 'that he would be pleaſed to take timely care to prevent thoſe dangers that may ariſe to theſe kingdoms by the great power of the French king, and the progreſs he daily makes in the Netherlands and other places; and that he would not defer the entering into ſuch alliances as may obtain thoſe ends, promiſing fully to aſſiſt his majeſty if he ſhould be engaged in a war in purſuance of ſuch alliances.'

Within three days after the king's anſwer to this addreſs, April 13, the houſe made a third addreſs, to aſſure his majeſty, that 'they would with moſt chearful hearts proceed both then and at all other times, to furniſh his majeſty with ſuch large ſupplies upon this occaſion (to preſerve the Netherlands and check the growth of France) as might enable him, by God's aſſiſtance, to maintain the alliances they had adviſed, againſt all oppoſition whatſoever.'

This addreſs, upon the king's anſwer to it, was immediately followed by a fourth, April 16, aſſuring his majeſty of their duty and affection; and that he might not only depend upon the ſupply he deſired, but upon all ſuch aſſiſtances as the poſture of his affairs ſhould require: 'in confidence whereof, ſay the commons, we hope your majeſty will be encouraged in the mean time to ſpeak and act ſuch things as your majeſty ſhall judge neceſſary, for attaining thoſe great ends we have formerly repreſented to your majeſty.'

Theſe repeated addreſſes from ſo loyal a houſe of commons, ſufficiently ſhew how much the nation was alarmed, upon the dangers to which they ſaw the Netherlands expoſed.

The commons were ſo bent upon this point, as a matter of the laſt conſequence, that they would take no denial: which made the court reſolve upon adjourning them for five weeks. But what paſſed in this interval, did not make the commons alter their ſentiments, or leſs earneſt in the purſuit of them. When they met again, May the 21ſt, they fell into very warm debates, and reſolved to advance ſtill one ſtep farther in a matter of ſo great concern; which was, to addreſs his majeſty to enter into a league offenſive and defenſive with the States, and to make other fit alliances againſt the growth and power of France, and for the preſervation of the Spaniſh Netherlands: and in this addreſs they tell his majeſty, how highly ſenſible they are of the neceſſity of ſupporting, as well as making, the alliances deſired in their former addreſſes; 'which we ſtill conceive, ſay they, ſo important to the ſafety of your majeſty and your kingdoms, that we can't, without unfaithfulneſs to your majeſty, and thoſe we repreſent, omit upon all occaſions humbly to beſeech your majeſty, as we now do, to enter into a league offenſive and defenſive with the States, &c.' And that no time might be loſt in doing this, they give his majeſty this reaſon among others, the great danger and charge which muſt neceſſarily fall upon your majeſty's kingdoms, if, through want of timely encouragement and aſſiſtance, the States, or any other conſiderable part of the confederates, ſhould make a peace with the French king (the prevention whereof hitherto, ſay they, muſt be acknowledged to be a ſingular effect of God's goodneſs to us); which if it ſhould happen, your majeſty would afterwards be neceſſitated with fewer, perhaps with no alliances, to withſtand the power of the French king, which has ſo long and ſo ſucceſsfully contended with ſo many and potent enemies; and whilſt he continues his overbalancing greatneſs, muſt always be dangerous to his neighbours; ſince he would be able to oppreſs any one confederate, before the reſt could get together, and be in ſo good a poſture of offending him as they are now, being jointly engaged in a war; and if he ſhould be ſo ſucceſsful as to make a peace, or diſunite the preſent confederation againſt him, it is much to be feared, whether it would be poſſible ever to reunite it. At leaſt it would be a work of ſo much time and difficulty, as would leave your majeſty's kingdoms expoſed to much miſery and danger. Having thus diſcharged our duty in laying before your majeſty the dangers threatening your majeſty and your kingdoms, and the only remedy we can think of for preventing it, and quieting the minds of your people; we moſt humbly beſeech your majeſty to take ſuch reſolutions, as may not leave it in the power of any neighbouring prince, to rob your people of that happineſs they enjoy under your majeſty's gracious government. Then they oblige themſelves not only by their promiſes with great unanimity renewed in a full houſe, but by the zeal and deſires of thoſe they repreſent, and by the intereſt of all their ſafeties, moſt chearfully to give his majeſty ſpeedy and plentiful ſupplies.

This earneſt and importunate addreſs, which was preſented May the 26th, expreſſed not only the ſenſe of a very full houſe, but indeed of the whole nation; which gave it ſo much weight, that the court ſaw they ſhould be forced to comply with it, unleſs they betook themſelves to the laſt refuge in ſuch caſes, and immediately put an end to the ſeſſion. The parliament, therefore, was accordingly diſmiſſed, and not ſuffered to ſit again 'till the end of January 1677-8. But, though the court could interrupt the ſitting of the parliament as they pleaſed, it was not poſſible to change their ſentiments; and they no ſooner met again, but they reſumed their former debates with more earneſtneſs, if poſſible, than before. For as that long interval, in which they had not been ſuffered to have an opportunity of interpoſing their councils with his majeſty, had given the French ſo much farther leiſure to finiſh their deſigns upon the Netherlands; the nation was ſo much the more alarmed, and in a new addreſs Jan. 31, they 'humbly deſire his majeſty, with the higheſt zeal for his honour, and the ſafety of his people, not to admit of any treaty of peace, whereby the French king ſhall be left in poſſeſſion of any larger dominions and territories, or of any greater power than what he retained by the Pyrenean treaty; leſs than which, they conceive, can't ſecure his majeſty's kingdoms, and the reſt of Europe, from the growth and power of the ſaid king, but that he alone may be able to diſturb the peace thereof whenſoever he is inclined to attempt it.—And they farther deſire, 'that in all treaties in order to the obtaining that end, his majeſty would be pleaſed to provide, that none of the parties that ſhall join with him in making war for that purpoſe, may lay down their arms or depart from their alliances, until the ſaid king be reduced, at leaſt, to the ſaid treaty.'

The commons had reaſon to hope for a compliance with this addreſs; the king having in his ſpeech acquainted them, that he 'had made, according to their deſire, ſuch alliances with Holland, as were neceſſary for the preſervation of Flanders; that ſince a good peace could not be had by fair means, it ſhould not be his fault if it were not obtained by force of arms; that if he be ſupported by them, he will not be weary 'till Chriſtendom be reſtored to ſuch a peace, as it ſhall not be in the power of any prince alone to diſturb.

But, whatever influenced the councils of the court, this addreſs met with no better reception than their laſt. They had been then told, that 'what they did was an invaſion of the prerogative;' and now they were told, not only the ſame thing, but, what is more ſurprizing, that 'the king having aſked

aſked the advice of both houſes, can't act upon any that does not come jointly from both.' The commons, however, not rebuked with his treatment, perſevered; immediately voted a good ſupply, and upon March 14th reſolved to addreſs his majeſty, 'That to quiet the minds of his ſubjects, and encourage the confederates, he would be pleaſed immediately to proclaim and enter into an actual war againſt the French king, promiſing conſtantly to ſtand by and aſſiſt his majeſty with plentiful ſupplies:' to which addreſs they deſired the concurrence of the lords; but, before it could be entirely obtained, they were adjourned to the middle of April, and from thence to the 29th; when the lord chancellor acquainted them in the king's name, 'That the States, whom he had long found weary of the war,' (and, indeed, had made ſo, for they were quite diſcouraged from expecting help from England, when they ſaw the zeal and ſpirit of the nation entirely defeated and eluded by the court) 'were making haſte to get out of it, and were entered upon conſiderations of accepting ſuch a peace as France had thought fit to offer, though it be without his majeſty's conſent or privity; a peace as ill for themſelves and the reſt of Chriſtendom, as their enemies could wiſh.' And in this difficult conjuncture the king deſires their advice (when it is too late) and reſolves to purſue it now; though their giving it before in time, when it would have been of the greateſt conſequence, was made a high crime. It is not my buſineſs to expoſe the inſincerity of the court in this whole affair: they who would ſee this, need only read Sir William Temple's Letters and Memoirs; a perſon of undoubted reputation and authority, and who was in thoſe times his majeſty's ambaſſador in the Low-Countries.

But I cannot but obſerve from theſe words, what a character the king gives of that peace that was a little after concluded at Nimeugen; and what made that peace ſo ill a one, was the leaving ſo much of Flanders in the poſſeſſion of France, and the remainder ſo much expoſed by a weak and inſecure barrier.

But to proceed: the commons, who were willing to hope, that if the court were ſincere, things might be yet retrieved, came, May 4, to two reſolutions, which they laid before the king, without ſtaying to put them into the uſual form of addreſs, by reaſon of the importance of the affair, and the exigency of the time. In the firſt, they 'declared the league made with the States to procure a peace between the two crowns upon certain terms therein ſpecified, not to be purſuant to their addreſſes, nor conſiſtent with the good and ſafety of the kingdom:' and yet by theſe terms (had France been obliged to accept them) Tournay, Condé, and Valenciennes, were to be reſtored, together with the dukedom of Lorrain. The other reſolution was, to deſire his majeſty 'forthwith to enter into the confederacy for the vigorous carrying on of the preſent war; and, particularly, that effectual endeavours might be uſed for continuing the States in the confederacy; and that no peace might be made with France, without general conſent firſt had.' And, upon the king's refuſing to give any anſwer 'till he had the concurrent advice of both houſes, they immediately reſolved to addreſs his majeſty to give a ſpeedy anſwer to their laſt addreſs, and to remove thoſe counſellors who adviſed the anſwers to their former addreſſes of the 26th of May and 31ſt of January, or either of them; 'by which anſwers, they ſay, his majeſty's good ſubjects had been infinitely diſcouraged, and the ſtate of his affairs reduced to a moſt deplorable condition:' they mean the progreſs of the French in Flanders, and the great jealouſy and uneaſineſs that gave the nation. And, notwithſtanding the king told them May 23, that things were driving violently on towards a peace, yet ſtill, to prevent ſo much of Flanders remaining in the hands of France, they reſolved, if his majeſty would then enter into a war againſt the French king, they were, and always would be, ready to aſſiſt him. But theſe and all the other efforts the commons could make, could not force the court into right meaſures, or prevent an ill peace; and ſerved only to vindicate themſelves to poſterity, from having any hand in it; and this I preſume it will be allowed they have done.

It is impoſſible to read this ſhort account of the proceedings of the commons, and not obſerve of how very great importance they thought the ſaving of Flanders was, to the ſafety and ſecurity of this nation. This was ſo plainly the known and certain intereſt of England, that all the arts the court could uſe, could not divert them from purſuing this point. This was the firſt parliament that was choſen after the Reſtoration, which continued ſitting above 17 years; and cannot be ſuſpected either of not having a true regard for the prerogative, or a due deference for the ſentiments of the court. But the intereſt and ſafety of their country was ſo much concerned in the preſervation of Flanders, that this conſideration carried them into theſe meaſures in oppoſition to the miniſtry, in which they ſteadily and unalterably perſevered; and the nation was entirely with them; the point they preſſed againſt the court, having apparently no other foundation, than their hearty zeal and concern for it's true intereſt. And the king himſelf thought fit, when it was too late, to expreſs at leaſt the ſame concern they did, and to concur in the ſame ſentiments; as appears from his ſpeech to them not long after, in which he opens his heart freely to them, and tells them he was, 'reſolved to ſave Flanders, either by a war or a peace, as the greateſt FOREIGN INTEREST of this nation.'

The nature and importance of a good barrier to the Netherlands, will be beſt judged of from the barrier treaty itſelf, of which at preſent we ſhould by no means loſe ſight.

The BARRIER TREATY between her majeſty queen Anne and the States-General.

Her majeſty the queen of Great-Britain, and the lords the States-General of the United Provinces, having conſidered how much it concerns the quiet and ſecurity of their kingdoms and ſtates, and the public tranquillity, to maintain and to ſecure on one ſide the ſucceſſion to the CROWN OF GREAT-BRITAIN, in ſuch manner as it is now eſtabliſhed by the laws of the kingdom; and, on the other ſide, that the ſaid States-General of the United Provinces ſhould have a ſtrong and SUFFICIENT BARRIER * againſt France and others, who would ſurprize or attack them: and her majeſty and the ſaid States-General, apprehending, with juſt reaſon, the troubles and miſchiefs which might happen, with reſpect to this ſucceſſion, if at any time there ſhould be any perſon or any power who ſhould call it in queſtion; and, if the countries and ſtates of the ſaid lords the States-General, were not ſecured by ſuch a barrier: † for theſe ſaid reaſons, her majeſty the queen of Great-Britain, though in the vigour of her age, and enjoying perfect health (which God preſerve to her many

* [Againſt France and others.] Theſe words [and others] ought not, it was ſaid, by thoſe who did not like it, to have been added in the treaty, the deſign of the treaty being to ſecure the barrier of the States againſt France only. That the firſt and chief deſign of a treaty for the barrier, was to ſecure it againſt France, I readily allow becauſe the firſt and chief danger is from thence; but if it is the intereſt of England that it ſhould be ſecured at all, it is certainly the intereſt of England that it ſhould be ſecured againſt others as well as France. If the barrier be loſt for want of ſuch ſecurity, whoever the invaders be, England as well as Holland loſes the protection it gives them againſt France; and therefore it is our intereſt, as well as theirs, that it ſhou'd be ſecured on all ſides, and expoſed to the leaſt danger poſſible.

And, ſince the States oblige themſelves to aſſiſt in maintaining the Proteſtant ſucceſſion, not only againſt France, but againſt all others that ſhall attempt to diſturb it; there is the ſame reaſon her majeſty ſhould give as full a guaranty to the States, for ſecuring their barrier againſt all that ſhall attack it. The intereſt of both is reciprocal, and therefore the engagement ought to be ſo too. Nor can any inconvenience ariſe, from making the guaranty general againſt all invaders; becauſe the obligations of mutual aſſiſtance, cannot by this treaty take place on any other occaſion, but then only, when her majeſty or the States ſhall be attacked on account of the ſucceſſion or barrier. And therefore if the barrier be not attacked, though the States be invaded in any other part, her majeſty is not engaged hereby. It will be pretended, perhaps, that there is no reaſon to apprehend any danger from any power beſides France: but firſt, that is not true; for France, by her intrigues, has formerly engaged ſome princes of the empire in a war againſt the Dutch, and may do ſo again. But if it were true that nothing was to be apprehended from any other power than France, it is neceſſary the treaty ſhould be made general, if it were only to guard againſt the mean and pitiful evaſions that crown is always ready to make uſe of to carry on her ambitious deſigns. Of which it will be ſufficient to give one memorable inſtance, which is to the preſent purpoſe. In the year 1701, when the French forces had ſeized the whole Spaniſh Low-Countries, and had by lines and forts entirely cooped up the States on that ſide; not content with this, to cut off the States from all communication with the empire, France ſent, in concert with the elector of Cologn, a great body of troops into moſt of the ſtrong towns belonging to that elector, and yet at the ſame time declared they would obſerve the peace and treaty of Ryſwick, and therefore theſe troops were called auxiliary troops of the circle of Burgundy. Where now is the difference whether the king of France attack the Dutch in his own name, or whether his troops do it under the name of any body elſe? The troops are the ſame, and the danger all one. If this treaty therefore were not made general againſt all invaders, ſuch an evaſion might defeat the intention of it even againſt France itſelf. Thus much for the reaſon of this addition; and that the reader may be further ſatisfied, he need only have recourſe to the 16th article, by which the defence of the ſucceſſion and the barrier, is left general and unlimited.

† The reaſon why theſe words [and the aboveſaid queen, &c. duly reflecting upon the advantage which France has always made uſe of, &c. for want of neceſſary and reaſonable preliminaries being well eſtabliſhed among the allies] were left out in the treaty, will appear by obſerving, that the counter-project then made was formed before the preliminary treaty in 1709, whereas this of the barrier was not made 'till after it; and therefore this clauſe was properly left out, the intention of it having been fully anſwered and complied with in the preliminary treaty, ſigned by the Queen, the Emperor, and the States.

years), out of her uſual prudence and piety, has thought fit to enter, with the lords the States-General of the United Provinces, into a particular alliance and confederacy; the principal end and only aim of which, ſhall be the public quiet and tranquillity; and to prevent, by meaſures taken in time, all the events which might one day excite new wars. With this view it is, that her Britiſh majeſty has given her full power, for agreeing upon certain articles of a treaty, additional to the treaties and alliances that ſhe already has with the lords the States-General of the United Provinces, to her ambaſſador extraordinary and plenipotentiary, Charles viſcount Townſhend, baron of Lynn Regis, privy counſellor of her Britiſh majeſty, captain of her ſaid majeſty's yeomen of the guard, and her lieutenant in the county of Norfolk: and the lords the States-General of the United Provinces, to the Sieurs John de Welderen, lord of Valbrugh, great bailiff of the Lower Retuwe, of the body of the nobility of the province of Guelder; Frederic baron of Reede, lord of Lier, St. Anthony and Tirſec, of the order of the nobility of the province of Holland and Weſt Friezland; Anthony Heinſius, counſellor penſionary of the province of Holland and Weſt Friezland, keeper of the great ſeal, and ſuperintendant of the fiefs of the ſame province; Cornelius Van Gheet, lord of Spanbrock, Bulokeſtein, &c. Gideon Hocuſt, canon of the church of St. Peter at Utrecht, and counſellor elect in the ſtates of the province of Utrecht; Heſſel Van Sminia, ſecretary of the chamber of accounts of the province of Friezland; Erneſt Itterſum, lord of Oſterhof, of the body of the nobility of the province of Overyſſel; and Wicher Wichers, ſenator of the city of Groninguen; all deputies to the aſſembly of the ſaid lord the States-General, on the part reſpectively, of the provinces of Guelder, Holland and Weſt Friezland, Zealand, Utrecht, Friezland, Overyſſel, and of Groninguen and Ommelands; who, by virtue of their full powers, have agreed upon the following articles.

ARTICLE I.

The treaties of peace, friendſhip, alliance, and confederacy, between her Britiſh majeſty and the States-General of the United Provinces, ſhall be approved and confirmed by the preſent treaty, and ſhall remain in their former force and vigour, as if they were inſerted in it word for word.

ARTICLE II.

The ſucceſſion to the crown of England having been ſettled by an act of parliament paſſed the twelfth year of the reign of his late majeſty king William III. the title of which is, An act for the further limitation of the crown, and better ſecuring the rights and liberties of the ſubject: and lately, in the ſixth year of the reign of her preſent majeſty, this ſucceſſion having been again eſtabliſhed and confirmed by another act made for the greater ſecurity of her majeſty's perſon and government, and the ſucceſſion to the crown of Great-Britain, &c. in the line of the moſt ſerene houſe of Hanover, and in the perſon of the princeſs Sophia, and of her heirs, ſucceſſors, and deſcendants, male and female, already born or to be born. And, though no power has any right to oppoſe the laws made upon this ſubject by the crown and parliament of Great-Britain; if it ſhould happen nevertheleſs, that under any pretence, or by any cauſe whatever, any perſon, or any power or ſtate ſhould pretend to diſpute the eſtabliſhment which the parliament has made of the ſaid ſucceſſion in the moſt ſerene houſe of Hanover, to oppoſe the ſaid ſucceſſion, to aid or favour thoſe who ſhall oppoſe it, whether directly or indirectly, by open war, or by fomenting ſeditions and conſpiracies againſt her or him to whom the crown of Great-Britain ſhall deſcend according to the acts aforeſaid; the States General of the United Provinces, engage and promiſe to aſſiſt and maintain, in the ſaid ſucceſſion, her or him to whom it ſhall belong by virtue of the ſaid acts of parliament, to aid them in taking poſſeſſion, if they be not then in poſſeſſion, and to oppoſe thoſe who would diſturb them in the taking ſuch poſſeſſion of the ſaid ſucceſſion.

ARTICLE III.

Her ſaid majeſty and the States-General, in conſequence of the fifth article of the alliance concluded between the emperor, the late king of Great-Britain, and the lords the States-General, the 7th of September 1701, ſhall employ all their forces to recover the reſt of the Spaniſh Low-Countries.

ARTICLE IV.

And further, they ſhall endeavour to conquer as many other towns and forts as they can, in order to their being a barrier and ſecurity to the ſaid lords the States.

ARTICLE V.

And whereas, according to the ninth article of the ſaid alliance, it is to be agreed amongſt other matters, how and in what manner the States ſhall be ſecured by means of this barrier, the queen of Great-Britain ſhall uſe her endeavours to procure, that in the treaty of peace it may be agreed, that all the Spaniſh Low-Countries, and what elſe ſhall be found neceſſary, whether of conquered or unconquered places, ſhall ſerve as a barrier to the States.

ARTICLE VI.

That to this end their high-mightineſſes ſhall have the liberty to put and keep garriſon, to change, augment, and diminiſh it as they ſhall judge proper, in the places following: namely, Newport, Furnes, with the fort of Knocke, Ypres, Menin, the town and citadel of Liſle, Tournay and it's citadel, Condé, Valenciennes, and the places which ſhall from henceforward be conquered from France. Maubeuge, Charleroy, Namur and it's citadel, Liere, Hali to fortify, the ports of Perli, Philippe, Damme, the caſtle of Gand, and Dendermonde; the fort of St. Donas being joined to the fortifications of the Sluice, and being entirely incorporated with it, ſhall remain and be yielded in property to the States. The fort of Rodenhuyſen on this ſide Gand ſhall be demoliſhed.

ARTICLE VII.

The ſaid States Generals may, in caſe of an apparent attack, or war, put as many troops as they ſhall think neceſſary in all the towns, places, and forts, in the Spaniſh Low-Countries, where the reaſon of war ſhall require it.

ARTICLE VIII.

They may likewiſe ſend into the towns, forts and places, where they ſhall have their garriſons, without any hinderance, and without paying any duties; proviſions, ammunitions, arms and artillery, materials for the fortifications, and all that ſhall be found convenient and neceſſary for the ſaid garriſons and fortifications.

ARTICLE IX.

The ſaid States-General ſhall alſo have liberty to appoint in the towns, forts, and places of their barrier, mentioned in the foregoing ſixth article, where they ſhall have their garriſons, ſuch governors and commandants, majors and other officers, as they ſhall think proper; who ſhall not be ſubject to any other orders, whatſoever they may be, or from whomſoever they may come, relating to the ſecurity and military government of the ſaid places, but only to thoſe of their high-mightineſſes (excluſively of all others); ſtill preſerving the rights and privileges, as well eccleſiaſtical as political, of king Charles the IIId.

ARTICLE X.

That beſides, the ſaid States ſhall have liberty to fortify the ſaid towns, places, and forts which belong to them, and repair the fortifications of them, in ſuch manner as they ſhall judge neceſſary, and further to do whatever ſhall be uſeful for their defence.

ARTICLE XI.

It is agreed, That the States-General ſhall have all the revenues of the towns, places, juriſdictions, and their dependencies, which they ſhall have for their barrier from France, which were not in the poſſeſſions of the crown of Spain, at the time of the death of the late king Charles the IId; and beſides, a million of livres ſhall be ſettled for the payment of one hundred thouſand crowns every three months, out of the cleareſt revenues of the Spaniſh Low-Countries, which the ſaid king was then in poſſeſſion of; both which are for maintaining the garriſons of the States, and for ſupplying the fortifications, as alſo the magazines, and other neceſſary expences, in the towns and places above-mentioned. And that the ſaid revenues may be ſufficient to ſupport theſe expences, endeavours ſhall be uſed for enlarging the dependencies and juriſdictions aforeſaid, as much as poſſible; and particularly for including with the juriſdictions of Ypres, that of Caſſel, and the foreſt of Nieſſe; and with the juriſdiction of Liſle, the juriſdiction of Douay, both having been joined before the preſent war.

ARTICLE XII.

That no town, fort, place, or country of the Spaniſh Low-Countries, ſhall be granted, transferred, or given, or deſcend to the crown of France, or any one of the line of France, neither by virtue of any gift, ſale, exchange, marriage, agreement, inheritance, ſucceſſion by will, or through want of will, from no title whatſoever, nor in any other manner whatever, nor be put into the power or under the authority of the moſt Chriſtian king, or any of the line of France.

ARTICLE XIII.

And whereas the ſaid States-General, in conſequence of the ninth article of the ſaid alliance, are to make a convention or treaty with king Charles the IIId, for putting the States in a condition of ſafety, by means of the ſaid barrier, the queen of Great-Britain will do what depends upon her, that all the foregoing particulars, relating to the barrier of the States, may be inſerted in the aforeſaid treaty or convention; and that her ſaid majeſty will continue her good offices, 'till the above-mentioned convention between the States and the ſaid king Charles the IIId, be concluded, agreeable to what is before-mentioned, and that her majeſty will be guarantee of the ſaid treaty or convention.

ARTICLE XIV.

And, that the ſaid States may enjoy from hence forward, as much as poſſible, a barrier for the Spaniſh Low Countries, they ſhall be permitted to put their garriſons in the towns already taken, and which may hereafter be ſo, before the peace be concluded and ratified. And, in the mean time, the ſaid king Charles the IIId, ſhall not be allowed to enter into poſſeſſion of the ſaid Spaniſh Low-Countries, neither entirely

nor

nor in part; and during that time the queen ſhall aſſiſt their high-mightineſſes to maintain them in the enjoyment of the revenues, and to find the million of livres a year above-mentioned.

ARTICLE XV.

And whereas their high-mightineſſes have ſtipulated by the treaty of Munſter, in the fourteenth artiele, That the river Sehelde, as alſo the canal of Sas, Swyn, and other mouths of the ſea bordering thereupon, ſhould be kept ſhut on the ſide of the States.

And in the fifteenth artiele, That the ſhips and commodities going in and coming out of the harbours of Flanders, ſhall be and remain charged with all ſueh impoſts and other duties, as are raiſed upon commodities going and coming along the Sehelde, and the other canals above-mentioned:

The queen of Great-Britain promiſes and engages, That their high-mightineſſes ſhall never be diſturbed in their right and poſſeſſion, in that reſpect, neither directly nor indirectly; as alſo that the commerce ſhall not, in prejudiee of the ſaid treaty, be made more eaſy by the ſea ports, than by the rivers, eanals, and mouth of the ſea, on the ſides of the States of the United Provinces, neither directly or indirectly:

And whereas by the 16th and 17th artieles of the ſame treaty of Munſter, his majeſty the king of Spain, is obliged to treat the ſubjects of their high-mightineſſes as favourably as the ſubjects of Great Britain and the Hanſe-Towns, who were then the people the moſt favourably treated; her Britannic majeſty and their high mightineſſes promiſe likewiſe, to take care that the ſubjects of Great-Britain, and of their high-mightineſſes, ſhall be treated in the Spaniſh Low-Countries, as well as in all Spain, the kingdoms and ſtates belonging to it, equally, and as well the one as the other, as favourably as the people the moſt favoured.

ARTICLE XVI.

The ſaid Queen and States-General oblige themſelves to furniſh, by ſea and land, the ſuccours and aſſiſtance neceſſary to maintain, by force, her ſaid majeſty in the quiet poſſeſſion of her kingdoms, and the moſt ſerene houſe of Hanover in the ſaid ſueceſſion, in the manner it is ſettled by the acts of parliament before-mentioned, and to maintain the ſaid States-General in the poſſeſſion of the ſaid barrier.

ARTICLE XVII.

After the ratification of this treaty, a partieular convention ſhall be made of the conditions by whieh the ſaid queen, and the ſaid lord the States-General, will engage themſelves to furniſh the ſuccours which ſhall be thought neceſſary, as well by ſea as by land.

ARTICLE XVIII.

If her Britiſh majeſty, or the States-General of the United Provinces, be attacked by any body whatſoever, by reaſon of this convention, they ſhall mutually aſſiſt one another with all their forces, and beeome guarantees of the execution of the ſaid convention.

ARTICLE XIX.

There ſhall be invited and admitted into the preſent treaty, as ſoon as poſſible, all the kings, princes, and ſtates who ſhall be willing to enter into the ſame; partieularly his Imperial majeſty, the kings of Spain and Pruſſia, and the elector of Hanover. And her Britiſh majeſty, and the States-General of the United Provinces, and eaeh of them in particular, ſhall be permitted to require and invite thoſe whom they ſhall think fit to require and invite to enter into this treaty, and to be guarantees of it's execution.

ARTICLE XX.

And, as time has ſhewn the omiſſion whieh was made in the treaty ſigned at Ryſwick in the year 1697, between England and France, in reſpect of the right of the ſucceſſion of England, in the perſon of her majeſty the queen of Great-Britain now reigning, and that, for want of having ſettled in that treaty this indiſputable right of her majeſty, France refuſed to acknowledge her for queen of Great-Britain, after the death of the late king William the Third, of glorious memory: her majeſty the queen of Great-Britain, and the lords the States-General of the United Provinees, do agree and engage themſelves likewiſe, not to enter into any negociation or treaty of peace with France, before the title of her majeſty to the crown of Great-Britain, as alſo the right of ſucceſſion of the moſt ſerene houſe of Hanover to the aforeſaid crown, in the manner it is ſettled and eſtabliſhed by the before-mentioned acts of parliament, be fully acknowledged as a preliminary by France, and that France has promiſed, at the ſame time, to remove out of it's dominions the perſon who pretends to be king of Great-Britain; and that no negociation nor formal diſcuſſion of the articles of the ſaid treaty of peace ſhall be entered into, but jointly, and at the ſame time, with the ſaid queen, or with her miniſters.

ARTICLE XXI.

Her Britiſh majeſty, and the lords the States-General of the United Provinces, ſhall ratify and confirm all that is contained in the prefent treaty, within the ſpace of four weeks, to be reckoned from the day of the ſigning. In teſtimony whereof, the under-written ambaſſador extraordinary and plenipotentiary of her Britiſh majeſty, and the deputies of the lords the States-General, have ſigned this preſent treaty, and have affixed their ſeals thereunto.

At the Hague, the 29th of October, in the year 1709.

The ſeparate article.

As in the preliminary articles ſigned here at the Hague the 28th of May, 1709, by the plenipotentiares of his Imperial majeſty, of her majeſty the queen of Great-Britain, and of the lords the States-General of the United Provinces, it is ſtipulated, amongſt other things, that the lords the States-General ſhall have, with intire property and ſovereignty, the Upper Quarter of Guelder, according to the 52d artiele of the treaty of Munſter, of the year 1648; as alſo that the garrifons which are or hereafter ſhall be on the part of the lords the States-General in the town of Huy, the eitadel of Liege, and in the town of Bonne, ſhall remain there 'till it ſhall be otherwiſe agreed upon with his Imperial majeſty and the empire. And as the barrier whieh is this day agreed upon in the prineipal treaty, for the mutual guaranty between her Britiſh majeſty and the lords the States-General, cannot give to the United Provinces the ſafety for whieh it is eſtabliſhed, unleſs it be well ſecured from one end to the other, and that the eommunieation of it be well joined together; for which the Upper Quarter of Guelder, and the garriſons in the citadel of Liege, Huy, and Bonne, are abſolutely neeeſſary: experience having thrice ſhewn, that Franee having a deſign to attaek the United Provinces, has made uſe of the places above-mentioned, in order to come at them, and to penetrate into the ſaid provinces. That further, in reſpect to the equivalent for which the Upper Quarter of Guelder is to be yielded to the United Provinees, aeeording to the 52d artiele of the treaty of Munſter above-mentioned, his majeſty king Charles III. will be mueh more gratified and advantaged in other places, than that equivalent can avail. So that, to the end the lords the States-General may have the Upper Quarter of Guelder, with intire property and ſovereignty, and that the ſaid Upper Quarter of Guelder may be yielded in this manner to the ſaid lords the States General, in the convention or the treaty that they are to make with his majeſty king Charles III. aecording to the 13th artiele of the treaty concluded this day; as alſo that their garriſons in the citadel of Liege, in that of Huy, and in Bonne, may remain there, until it be otherwiſe agreed upon with his Imperial majeſty and the empire. Her majeſty the queen of Great-Britain engages herſelf, and promiſes by this ſeparate article, which ſhall have the ſame force as if it was inſerted in the principal treaty, to make the ſame efforts for all this as ſhe has engaged herſelf to make, for their obtaining the barrier in the Spaniſh Low-Countries. In teſtimony whereof, the under written ambaſſador extraordinary and plenipotentiary of her Britiſh majeſty, and deputies of the lords the States-General, have ſigned the preſent ſeparate article, and have affixed their ſeals thereunto.

At the Hague the 29th of Octobcr, 1709.

The ſecond ſeparate article.

As the lords the States General have repreſented, that in Flanders the limits between Spaniſh Flanders and that of the States, are ſettled in ſuch a manner as that the land belonging to the States is extremely narrow there; ſo that, in ſome places, the territory of Spaniſh Flanders extends itſelf to the fortifications, and under the cannon of the places, towns, and forts of the States, whieh occaſions many inconvenieneies, as has been ſeen by an example a little hefore the beginning of the preſent war, when a fort was deſigned to have been built under the cannon of the Sas Van Gand, under pretenee that it was upon the territory of Spain. And as it is neceſſary for avoiding theſe and other ſorts of inconveniencies, that the land of the States upon the confines of Flanders ſhould be enlarged, and that the places, towns, and forts ſhould, by that means, be better covered; her Britiſh majeſty entering into the juſt motives of the ſaid lords the States General in this reſpect, promiſes and engages herſelf, by this ſeparate artiele, that, in the convention that the ſaid lords the States-General are to make with his majeſty king Charles III. ſhe will ſo aſſiſt them as that it may be agreed, that, by the ceſſion to the ſaid lords the States-General of the property of an extent of land neeeſſary to obviate ſuch-like and other inconveniencies, their limits in Flanders ſhall be enlarged more conveniently for their ſecurity, and thoſe of the Spaniſh Flanders removed

moved farther from their towns, places, and forts, to the end that theſe may not be ſo expoſed any more. In teſtimony whereof, the under-written ambaſſador extraordinary, and plenipotentiary of her Britiſh majeſty, and deputies of the lords the States-General, have ſigned the preſent ſeparate article, and have affixed their ſeals thereunto. At the Hague, the 29th of October, 1709.

REMARKS, on this article of NETHERLANDS, ſince the laſt WAR, and the DEFINITIVE TREATY of 1763.

In the late war from 1740 to 1748, the Dutch loſt their chief barrier; and although the States-General remained neuter, and looked on with indifference, while an unnatural rebellion was carried on in this kingdom in favour of a popiſh pretender to the Britiſh crown; yet when the peace of Aix la Chapelle was concluded, Great Britain gave up the capital conqueſt of CAPE BRETON made that war from France, to the end that the States General of the United Provinces, might be put again in full and peaceable poſſeſſion, ſuch as they enjoyed before that war, of the towns of Bergen-op-Zoom, and Maeſtricht, and of all they poſſeſſed before the war in Dutch Flanders, Brabant, Holland, and elſewhere. And the towns and places in the Low Countries, the ſovereignty of which belonged to the empreſs queen of Hungary and Bohemia, wherein their High Mightineſſes have the right of garriſon, were evacuated by France to the troops of the republic at the ſame time. VIth article of the TREATY of AIX LA CHAPELLE made in the year 1748.—Thus Great-Britain expended THREESCORE MILLIONS of money, and thereby run THIRTY MILLIONS more in debt during that war, and entailed proportionable TAXES upon her trade in general, without receiving any advantage by that war, not ſo much as ſecuring to herſelf the RIGHT OF NAVIGATION TO AND FROM HER OWN COLONIES, without being SEARCHED BY THE SPANIARDS, nor ſecuring her RIGHT TO THE LOGWOOD, which were the poinrs for which we entered into that war with Spain.—In this manner have theſe kingdoms increaſed their PUBLIC DEBTS and TAXES, and made themſelves TRIBUTARIES TO FOREIGN CREDITORS!

In the laſt war likewiſe, the Dutch acted a part to the advantage of our enemies, by carrying on and protecting their trade for them, while they did all the injury they well could to that of Great-Britain during that war: ſo that during the two laſt great wars, we have been deprived of the alliance of the Dutch, while they have reaped the full advantage of a neutrality; and we have trebled our NATIONAL DEBTS AND TAXES ſince the peace of Utrecht, and have thereby reduced our whole commerce and navigation almoſt to a ſtate of ruin and deſtruction, unleſs we preſerve them by means of the laſt DEFINITIVE TREATY of 1763, and now in time of peace, reduce thoſe IMMENSE TAXES with which the nation is loaded. If this eſſential point is not accompliſhed, and that too without delay, our ENGLISH COMMODITIES will continue ſo EXCESSIVELY DEAR, that foreigners will not be able to purchaſe them, while thoſe of France will be EXCESSIVELY CHEAP, in compariſon thereto, that thoſe of the latter will find their way into every nation in the world, and ours continue a drug upon our hands. By theſe means, France will gain THE DOMINION IN UNIVERSAL TRADE, though we have gained it in territory, and thus the nation muſt at length be undone. See our laſt REMARKS on our article NAVAL AFFAIRS, FLANDERS, HOLLAND, DUTIES, LABOUR.

NEUFCHATTEL and VALLENGIN COUNTIES, are bounded by the biſhopric of Baſil on the north; by the lake of Neufchattel on the eaſt; by the canton of Berne on the ſouth; and by the Franche Comté in France on the weſt; being about 40 miles long, and 20 broad, ſubject to the ſame prince, and form together one little ſtate; for they are a free independent people, though they have a prince at their head. No laws are made but by the three eſtates; no taxes raiſed, or magiſtrates appointed, but by the ſtates. The whole country is of the reformed religion, except two Roman Catholic villages. Upon the death of the dutcheſs of Nemours, ſovereign of Neufchattel, anno 1707, there were many competitors, but the ſtates made choice of the king of Pruſſia to ſucceed her, who derived his title from the houſe of Orange and Châlons. The country produces ſome good wine, but is for the moſt part a maintainous barren ſoil.

NEUTRAL ISLANDS in AMERICA. See LEEWARD ISLANDS.

NEW CASTILLE. See CASTILLE.

NEVIS,
NEW ENGLAND,
NEW JERSEY,
NEW YORK,
} See BRITISH AMERICA.

NEWFOUNDLAND, an iſland in the Atlantic ocean in America, between 55 and 61 degrees of weſt longitude, and between 47 and 52 degrees of north latitude, and ſeparated from New Britain, or Eſkimaux, by the narrow ſtraight of Belleiſle on the north, bounded by the ocean on the eaſt and ſouth, and by the bay of St. Lawrence on the weſt, lying about 40 miles north eaſt of CAPE BRETON, now belonging to Great-Britain. See AMERICA for the treaty of 1763. This iſland is of a triangular form, 350 miles in length from north to ſouth, and 200 miles in breadth at the baſe, from eaſt to weſt, where broadeſt.

The ſeas adjacent to Newfoundland produce an infinite ſtore of WHITE FISH, which the Engliſh and French catch upon the banks or ſands, ſo called, overagainſt the iſland. They bring them on ſhore to cure and prepare for market, and ſo ſell them to other merchants, who come in other ſhips to buy the fiſh, and carry them to the Straights, to Spain, and Italy, as alſo to Portugal. The French are allowed by the treaty of Utrecht to cure their fiſh on ſome parts of the iſland: and by the laſt treaty of 1763, they have acceded to them the ſmall iſlands of Miquelon and St. Pierre, for the ſhelter of their Newfoundland fiſhermen, on expreſs condition that they are not to erect any fortifications at either of theſe ſmall iſlands, nor to keep above 50 men there for the police. The property and ſovereignty of the whole iſland of Newfoundland belongs to the Britiſh government.

The cod fiſhery here is very great. See our article COD FISH. The quantity of ſalmon alſo is very great here, and the fiſh large and good. Theſe fiſheries occaſion ſeveral buildings for the cure of the fiſh, and as well of dwelling-houſes as warehouſes and fiſh-houſes, on the banks of the creeks and rivers, where the fiſheries are erected; and they have their ſeveral boundaries in theſe rivers made out by ſhips and wears, for aſcertaining the property of the places reſpectively, as alſo for the more eaſy taking the fiſh.

Theſe buildings increaſing, were not the cold ſo exceſſively ſevere, and the country itſelf ſo inhoſpitable and barren, that it diſcourages the people from planting, would certainly cauſe towns or villages to be built in thoſe places, and would bring numbers of people to ſettle there, rather than go back to England every winter, and return again every ſpring; which is, beſides the hazard of the ſea, exceeding chargeable and troubleſome to the fiſhermen themſelves.

But it cannot be avoided, unleſs numbers of people reſolved to ſettle together, and to aſſiſt one another as a company, as was the caſe in the firſt planting the colonies New England and Virginia, and other places; where, 'till a ſufficient quantity of land was cured and planted, the people could not ſubſiſt themſelves without conſtant ſupplies from Europe, both of men, cattle, and proviſions.

The Britiſh fiſheries at Newfoundland is chiefly carried on by the merchants in the weſt of England, of Pool, Weymouth, Lime, Southampton, and other parts there.

N. B. Thoſe who go to the banks to fiſh, that is, to catch and cure, are called fiſh-boats, and Newfoundland ſhips; or, in the ſeamens language, Newfoundland men, or bankers: but thoſe veſſels ſent by the merchants to buy fiſh, and carry it off from thence to Spain, Italy, &c. as above-mentioned, are diſtinguiſhed by ſack-men, and the voyage is called going FOR A SACK: and when a maſter of a ſhip ſays he is bound for Newfoundland, or for the banks, 'tis cuſtomary to aſk him, What, do you go to fiſh, or go for a ſack? that is to ſay, to catch fiſh, or to buy.

REMARKS ſince the laſt War, and Treaty of Peace of 1763.

In the late petition of the merchants and traders concerned in the Britiſh Newfoundland trade, to the honourable the houſe of commons, it was repreſented that there were employed in the fiſheries 1500 fiſhing boats, which remain at Newfoundland, above 150 banking veſſels of the larger ſize for catching the fiſh, and 300 ſail of other mercantile ſhipping generally employed, in carrying the fiſh and the oil produced therefrom to foreign markets and to the Britiſh plantations, and in bringing home the returns from thence, either in the produce of foreign countries, or of that of our American colonies, or directly carrying the produce of our plantations, purſuant to acts of parliament made to tolerate the ſame directly to foreign markets.—That theſe ſeveral branches of trade connectively conſidered, did not employ fewer than 20,000 of his majeſty's ſubjects in every office relative to this capital fiſhery.—That ſo wiſely had the legiſlature regulated this branch of the Britiſh navigation, as to render it a conſtant nurſery for the increaſe of ſeamen, the ſame breeding at leaſt between 5 and 6000 freſh ſeamen annually. For that by the acts of parliament made in the 10th and 11th years of the reign of king William III. it is enacted, That maſters of ſhips bound to Newfoundland, ſhall carry at leaſt one freſh landman in five; in bye fiſhing boats and veſſels, the maſters ſhall carry at leaſt two freſh men in ſix; that is, one who has never been at ſea before, and one who has made no more than one voyage: and the ſaid maſters of ſhips and fiſhing veſſels are obliged to make oath thereof accordingly before the collector of the port, who is to give them a certificate of their compliance with the ſaid acts of

parliament; which ſhew how conſiderable a maritime nurſery for Britiſh ſeamen theſe fiſheries have proved to theſe kingdoms.—That upon the whole, there was not fewer than 16,000 perſons employed in the catching, the curing, the ſorting, and packing of the fiſh, in ſuch a merchantable manner as to preſerve the credit and reputation of this fiſhery throughout Europe and America; and that the ſaid 16,000 perſons by means hereof, became thorough bred ſeamen; and that the ſhipping employed as bankers, or the larger ſized fiſhing veſſels on the banks of Newfoundland, together with the ſhipping alſo employed in carrying the fiſh and oil to market, and bringing the returns, do not employ leſs than 4000 ſeamen more.—That the Britiſh merchants and traders, who provide ſo large a number of fiſhing veſſels, and other ſhipping, to tranſport the fiſh to the Streights and Italy, Spain and Portugal, and to the Britiſh plantations in general, and who are at the expence of maintaining ſo many thouſand of his majeſty's ſubjects, erecting ſtages, flukes, wharfs, warehouſes, and dwelling houſes for the reſidence of the inhabitants on the iſland, who purchaſe all manner of utenſils, and ſalt for curing the fiſh, and hire artiſts experienced in the beſt methods of curing, ſorting and packing them to the beſt advantage, muſt neceſſarily occaſion a conſiderable capital ſtock to be engaged in this trade at Newfoundland.—That this commerce gave daily bread to a large body of the inhabitants in, or neighbouring upon the chief towns in the weſt of England, from whence this trade is principally carried on: as ſhip-carpenters, ſmiths, ſail and canvas-makers, caulkers, block-makers, rope-makers, line and twine-makers, net-makers, tunnel-makers, pump-makers, compaſs-makers, baſket-makers, fiſh-hook-makers, butchers, brewers, bakers, ironmongers and nailors, ſhoemakers, hatters, and all concerned in the clothing way, both in linen, woollen, and hoſiery, and numerous other kinds of tradeſmen and mechanics, whoſe chief ſubſiſtence depends on the towns of Pool, Dartmouth, Topſham, Tinmouth, Briſtol, and all along the coaſts of Devonſhire and Dorſetſhire, from Southampton to the land's end; alſo in the iſlands of Guernſey and Jerſey, and the iſle of Wight, where there reſide many merchants and traders, who are intereſted in this trade.

The whole of this petition, which was ſigned by many hundreds of the merchants and traders in the weſt of England therein concerned, manifeſts the importance of this trade to the nation in general.

By the treaty of peace concluded at Paris the 10th day of February 1763, the 5th article delares, that 'the ſubjects of France ſhall have the liberty of fiſhing and drying on a part of the coaſts of the iſland of Newfoundland, ſuch as is ſpecified in the 13th article of the treaty of Utrecht; which article is renewed and confirmed by the preſent treaty (except what relates to the iſland of CAPE BRETON, as well as to the other iſlands and coaſts in the mouth and gulph of St. Lawrence;) and his Britannic majeſty conſents to leave to the ſubjects of the moſt Chriſtian king, the liberty of fiſhing in the gulph of St. Lawrence, on condition that the ſubjects of France do not exerciſe the ſaid fiſhery, but at the diſtance of three leagues from all the coaſts belonging to Great-Britain, as well thoſe of the continent, as thoſe of the iſlands ſituated in the ſaid gulph of St. Lawrence. And as to what relates to the fiſhery on the coaſt of the iſland of CAPE BRETON, out of the ſaid gulph, the ſubjects of the moſt Chriſtian king ſhall not be permitted to exerciſe the ſaid fiſhery, but at the diſtance of fifteen leagues from the coaſt of the iſland of CAPE BRETON; and the fiſhery on the coaſts of NOVA SCOTIA or ACADIA, and every where elſe out of the ſaid gulph, ſhall remain on the foot of former treaties.'

By the 6th article of the ſaid treaty, 'the king of Great-Britain cedes the iſlands of St. Pierre and Miquelon, in full right, to his moſt Chriſtian majeſty, to ſerve as a ſhelter to the French fiſhermen; and his ſaid moſt Chriſtian majeſty engages not to fortify the ſaid iſlands, to erect no buildings upon them, but merely for the convenience of the fiſhery, and to keep upon them a guard of fifty men only for the police.'

By the 18th article of the ſaid treaty, 'his Catholic majeſty deſiſts, as well for himſelf as for his ſucceſſors, from all pretenſions which he may have formed, in favour of the Guipuſcoans, and other his ſubjects, to the right of fiſhing in the neighbourhood of the iſland of Newfoundland.'" See FISHERIES, COD FISHERY.

NEWS-PAPERS are too well known to need deſcription. They are become ſo numerous in Great-Britain, and her plantations, as to afford employment to many, to be inſtrumental in the conſumption of large quantities of paper, and tend, by the ſtamp and advertiſement-duties thereon, to the benefit of the public revenue.

REMARKS.

On the uſe of NEWS-PAPERS.

The curioſity of mankind, to know what paſſes in the world, naturally leads them to the peruſal of theſe papers; and the more authentic the accounts given, the greater reputation has ſuch news-papers. Beſides the gratifying a laudable curioſity, theſe papers frequently convey the materials of obtaining a good knowledge of men and things, even in their mere narratives of the ordinary occurrences, and thereby furniſh numbers, eſpecially among the buſy world, with conſtant topics of converſation; wherein they would often be at great loſs to bear a ſhare, were it not for theſe diaries of public intelligence: and, indeed, they frequently afford notable ſubjects for engaging amuſement, as well as exerciſe of the underſtanding; for they ſometimes contain extraordinary phænomena of nature, and ſuch occurrences that draw the attention, even of the philoſopher, ſtatefman, and divine. The political contents of theſe papers, as they reſpect the tranſactions and negociations of foreign ſtates as well as our own, are not wholly uſeleſs to thoſe who have diſcernment to make proper advantage of them, and more eſpecially ſo, when FACTS are offered to public conſideration. And that the people have a right to be informed of whatever nearly concerns the intereſt and honour of the nation, ſhould ſeem to be inferred, from the eſtabliſhment of the paper called the Gazette, which is publiſhed by authority.

Moſt nations, at preſent, turning themſelves to the advancement of their commerce and navigation, it becomes neceſſary that the people of Great-Britain ſhould be well informed of the meaſures which they ſhall, from time to time, take upon theſe occaſions, our intereſt, as a commercial ſtate, being ſo nearly, and ſo importantly concerned: for if the people of England are kept in ignorance of the progreſs which her competitors make in trade, how can they keep pace with them? How can they guard againſt the greateſt evils that may thereby attend various branches of their traffic? If the miſchief take root before they are apprized of it, it may be too late to apply to the legiſlature for requiſite encouragement to counteract their rivals, or prevent the ill effects ſpreading to a degree they might for want of timely information. The trade of the nation may be as much injured for want of this, as the wiſeſt meaſures of an able miniſter defeated for want of ſeaſonable intelligence.

The neceſſity and reaſonableneſs hereof, will hardly be doubted by any; but the queſtion is, how we are to come at ſuch preſervative information? We cannot have more convenient channels to convey ſuch intelligence through the kingdom, than news-papers; but to come at that which is authentic, and can be ſafely depended on, is more to be deſired, I am afraid, than expected. Yet the difficulty to obtain ſuch, will ſoon vaniſh, if we put in execution the proper means; on which I ſhall give my humble opinion.

The thorough knowledge of trade is no ſuch light and trivial matter, as too many are wont to think; which we conceive is ſufficiently demonſtrated throughout the courſe of this work; it requires ſome talents as well as application, to be well grounded in theſe ſtudies. And who ſhall be able to give the people of Great-Britain a juſt and right ſtate of the trade of foreign countries, but thoſe who underſtand it? Perſons who do not, are diſqualified to repreſent matters of this nature in their true view, ſo as to anſwer intereſting deſigns towards their country: the mere dead narrative of a political meaſure will not always fully convey the conſequences, detrimental to us, that may attend it. Matters of trade are greatly involved in circumſtance, and of a very complicated nature; and to repreſent them comprehenſively, they ſhould be diſplayed in every aſpect and relation; otherwiſe the omiſſion of a ſingle circumſtance may miſguide a whole nation.

Thoſe who repreſent his majeſty at foreign courts in the ſupreme capacity, are not, we are afraid, always the beſt accompliſhed to tranſmit the true ſtate of affairs of this nature to their own country. They generally move in a ſphere too diſtant from the converſe of traders, and think it beneath them, either to aſſociate with mercantile people, or think once ſeriouſly of the ſubject of commerce; which they eſteem as much below them, as they do the traders practically concerned therein.

The miniſters who bid the faireſt to communicate uſeful intelligence of this kind, are thoſe who act in the capacity of conſuls; for they generally not only act in the capacity of merchants, but likewiſe in a judicial capacity, and have daily opportunities of experiencing what advantages in trade competitors may have over us in foreign nations: and the experienced merchants, with a tolerable ſhare of letters, ſhould ſeem to be the beſt qualified to anſwer theſe deſirable national purpoſes. See our articles CONSUL and CHAMBER OF COMMERCE, and MERCHANT'S COURT, or COURT MERCHANT.

That many of theſe gentlemen are duly accompliſhed to give the nation the beſt information of this kind, if they had encouraging appointments, I know from my own experience; having held a correſpondence with ſeveral of them for theſe twenty years paſt, as I do at preſent. Nor can I but think, as before intimated in my REMARKS on the article CONSUL, that the office of conſulſhip is the beſt preparative to accompliſhment for the ambaſſador, where our commercial intereſts are to be taken care of. The ſecretaryſhip to an

ambaſſy is, at preſent, eſteemed the principal qualification of experience, requiſite as introductory to the ambaſſadorſhip. But if the ambaſſador knows nothing of trade himſelf, the ſecretary will find little of that kind in his diſpatches from whence he can derive any uſeful knowledge. We think no men ſo well qualified for an admiral or a general, as thoſe who have run through the channel of inferior offices; nor can any one make an able miniſter of ſtate, without having paſſed through all the proper requiſites to his information, and his experience in public buſineſs.

That ſome one ſhould reſide in foreign nations, who can give proper accounts of the ſtate of trade, will hardly be gainſaid by any; nor ſhould thoſe accounts be ſecreted from the people, will be affirmed, we believe, by few. How then are they to be communicated to the public? As this ſhould be done by authority, that the nation may not be miſled, nothing can be a more proper channel of conveyance than the Gazette. But when have we any thing of this nature contained therein? Whether this would not prove one of the moſt important uſes of a news paper, is ſubmitted to thoſe who may think proper to take notice of it.

The uſefulneſs of theſe vehicles of intelligence is in nothing more obvious, than by the advertiſements contained therein, which relate to general trade, and ſhipping, and other conveniencies of the public buſineſs. It is not many years ſince it was thought mean and diſreputable, in any tradeſman of worth and credit, to advertiſe the ſale of his commodities in a public news paper; but as theſe apprehenſions were founded only on cuſtom, and not on reaſon, it is become now faſhionable for very eminent tradeſmen to puhliſh their buſineſs, and the peculiar goods wherein they may deal, in the news-papers, by way of advertiſement: nor do I ſee what diſgrace there can be in this. For do not the great trading corporations apprize the public of their ſales, in the public news-papers? Do not the monied companies find it the eaſieſt, the moſt effectual, and the leaſt expenſive way to inform the proprietors of the public funds of their tranſactions by this channel? Nay, do we not, by this means, receive all our intelligence from the ſeveral great offices in the ſtate, belonging to the public revenue? Is not even ſuch intelligence as the government itſelf thinks proper to communicate to the people, done by the Gazette, a news-paper publiſhed by authority? In a word, advertiſements in theſe papers ſeem, on the general, to be of no leſs utility to the public, in the concerns of real buſineſs, to the trading and buſy world, than the common news is to the meer ſaunterer and goſſip; the former furniſhes matter of profit to ſome, the latter matter of amuſement and chit-chat to others.

Beſides theſe uſes, there is another in theſe papers, which ſhould by no means be paſſed over in ſilence. We mean the eſſays that are, from time to time, communicated to the public therein. And the articles of news ſeem to be a natural decoy to draw great numbers to the reading of thoſe ſhort diſſertations, who, perhaps, ſcarce read any thing elſe; and who, indeed, was it not for our news-writers, might happen to forget to read at all; whereby our churches might be much thinner than they are, when ſome thouſands of the people ſhould be quite ignorant of the diſcipline of their common-prayer-book. So that, in this ſenſe, our news-writers are of advantage to the cauſe of religion; and truly it muſt be acknowledged, that, for many years paſt, the public have had many excellent though conciſe lectures wrote to them in news-papers upon the ſubject of moral virtue, religion, and the conduct of life in every capacity. And numbers are induced, over their coffee, to throw their eyes, for a few minutes, on a ſhort eſſay, wrote with wit and vivacity, who ſcarce read any thing elſe in the twelve-month. We need not intimate the advantages that the public in general has received from our eſſay-writers in this ſhape; the mere mention of the Tatler, Guardian, Spectators, and numerous other very judicious and excellent performances ſince, ſufficiently prove it.

Nor have we derived leſs benefit, in the general, from occaſional writings in this mode, upon government and the adminiſtration of public affairs. The Freeholder, Cato's Letters, and many other admirable pieces, in defence of liberty and public virtue, leave this no matter of doubt. The privilege of writing and ſpeaking his ſentiment, on matters of religion and the affairs of government, is eſteemed by the Briton the great palladium of liberty, although that glorious privilege may be ſometimes ſhamefully abuſed, and proſtituted to the moſt ignominious purpoſes. This is only the abuſe of the moſt invaluable right, and the law is open to puniſh libellous offenders when they merit it; and this, together with the privilege of the preſs, being allowed to antagoniſts, are the only antidotes that can ever be adminiſtered to check the poiſon, conſiſtent with the enjoyment of public liberty; for when once any adminiſtration in this kingdom, endeavours to ſuppreſs by violence, what they cannot do by law, there is an end of all our liberties, and we may as well be governed by French arrêts, edicts, and lettres de cachet, and the inquiſition, as by ſuch miniſterial tyranny, which ſtrikes at the root of all that is dear to us.

Of the Abuſes of NEWS-PAPERS, with reſpect to public affairs.

It is not to be admired that in the ordinary way of collecting news, there ſhould be frequently committed ſome miſtakes, from miſinformation; and what of this kind is perſonal and injurious to any man's reputation, is puniſhable by law; and the expence, as it ought, falls upon the proprietors of the paper, unleſs the printer is circumſpect enough to be indemnified for the defamation he is induced to publiſh: but nothing tends more to the ruin of a paper, than it's being the vehicle of ſcandal.

The forging of falſe news, in relation to public affairs, by fictitious paragraphs of news formed abroad, and tranſlated from the foreign papers, or by pretended accounts of things tranſmitted in private letters, and put into our news-papers, is another abuſe of a very enormous nature; for if this political lying be practiſed to make the people believe, that our foreign affairs are in a better ſituation than they really are; this public deceit can have no good conſequences, but may prove highly detrimental; becauſe it may poſſibly miſguide ſome of our repreſentatives, who might be inſtrumental, by their counſel in parliament, or otherwiſe, to ſet our affairs with other nations to rights, when they happen not to be ſo. But while they are kept in the dark by deluſion, and amuſed from day to day, and year to year, with ſuch accounts from foreign courts, which the event proves to be groſsly fallacious, theſe mean temporary expedients can only more and more embarraſs the nation, inſtead of extricate it from any difficulties under which it may labour.

We would not be underſtood to ſuggeſt that it is always neceſſary, the public ſhould know the great arcana of ſtate; this might be attended with ſtill greater evils than deluding the people with lies and forgeries; for ſuch openneſs of conduct might, and certainly often would, give other nations an opportunity to defeat the beſt laid deſigns for the honour and intereſt of the kingdom. Wherefore, at critical conjunctures, it may be more for the public intereſt, to let the people know nothing, than to be amuſed and deceived by falſe appearances. For in this nation, where the proprietors of our public funds poſſeſs ſo large a ſhare of the national wealth, the ſtocks are, at certain times, ſuddenly affected with almoſt every puff of news; and if they are raiſed by artifice, this proves injurious to all but thoſe who are in the ſecret, who make their advantage by the deluſion of the reſt. See the articles STOCK-JOBBING, and BUBBLES, and ACTIONS. However, making things better than they are, is not ſo detrimental to the public, as making them worſe than they really are. For,

If, by the artifices of malevolent men, ſuch news ſhall be coined, and pretended to be authentically tranſmitted to them from foreign courts, as may diſtract our affairs, and occaſion the nation to loſe all our weight at foreign courts; if this ſhould be the caſe at any extraordinary criſis of the public affairs, ſuch conduct, practiſed by men of weight and influence with the people, may be attended with very dangerous conſequences; it may clog and impede our negociations, augment the public expence, and give other nations advantages over us, that may prove highly derogatory to the honour, and unſpeakably detrimental to the commerce and navigation of the kingdom.

That the public intereſts have, on certain occaſions, greatly ſuffered by ſuch like practices, I am afraid there is too much reaſon to believe; and eſpecially during the period of the adminiſtration of the late right honourable Sir Robert Walpole, afterwards lord Orford. During that time no miniſter ever met with a more violent oppoſition, both from within doors and without. Whether there was ſufficient cauſe for ſuch conduct towards that gentleman, I ſhall not take upon me here to determine; certain it is, that his adverſaries have been charged extremely home with the forgery of a ſeries of FALSE NEWS, with regard to our foreign affairs, which they publiſhed in their paper called the Craftſman; and they have been charged alſo with making this FALSE NEWS the chief pretext and foundation of the greateſt part of all their political diſſertations, to inflame the paſſions of the people, and to hunt down that able miniſter.

The tract wherein the gentlemen in the oppoſition at this time, were charged with ſuch conduct in their public news-paper before-mentioned, is intitled the D'ANVERIAN HISTORY * of the affairs of Europe, for the memorable year 1731, &c. As the author takes into conſideration, the principal articles of what he calls the forged news contained in the Craftſman for a whole year together, we muſt refer the reader to the pamphlet itſelf, we not having room to do juſtice to the performance in that reſpect. However, as there is one paſſage therein, which I think is quite new, and ſeems to have a tendency as well to preſerve the liberty of the preſs, as to detect thoſe who ſhall, at any time hereafter, abuſe that invaluable privilege againſt future adminiſtrations; it may,

* If I am rightly informed, the writer of this piece was the late Mr. Lyons, the author of the Infallibility of Human Judgment, &c. The D'anverian Hiſtory was printed for J. Roberts, London, 1732.

perhaps,

perhaps, prove very acceptable to many to meet with it in this work; for it is as much every honeſt man's duty to protect and vindicate able and upright miniſters of ſtate, as to expoſe and worry down, by the power of the liberty of the preſs, thoſe who deſerve the contrary character.

The author, after charging the writers of the Craftſman with a long ſeries of falſhoods, obſerves as follows, viz.

'This is what paſſes among the greater part of the common 'people, for the ſtate of our affairs, and the tranſactions of 'the government. This is the D'anverian way of proving 'miniſters of ſtate weak and wicked! this is the uſe theſe 'good patriots have made of the liberty of the preſs! 'and thus have they put it in the utmoſt hazard of being 'loſt; for ſome thouſands of thoſe deluded people have votes 'for members of parliament, and with this account of the 'conduct and actions of the king and miniſtry, do they deſign 'to ſend them into the field of election, in order to diſtreſs 'the government, either by chuſing ſuch repreſentatives as 'may repreſent the paſſions and emotions they have worked 'the electors up to, or to inflame them into immediate tu-'mults and inſurrections; and that this cannot be prevented, 'they hope, by any way but ſuppreſſing the Craftſman, and 'conſequently all others, who ſhall write on government 'affairs.

'Thus is this eſtimable liberty of the preſs come to it's 'criſis, if not to a period; and this dangerous attack is made 'upon it by theſe treacherous patriots, who make a noiſe 'with the word Liberty, while they are tricking and betray-'ing us out of that valuable branch of it, which conduces ſo 'much to the ſecurity and defence of the reſt. For, in 'their popular news-paper, they have brought it to this, 'either they will impoſe ſuch things of their own invention 'for the tranſactions of the king and miniſtry, as may bring 'them into contempt with the people; or they will force 'them to reſtrain the liberty of the preſs, and then they have 'it done more effectually.

'And what more exquiſite joy can theſe envious patriots 'feel after ſeveral years vain attempts, than to have it in 'their power to ſay, this king, parliament, and miniſtry, 'have made ſuch an infringement on liberty; for thus do 'they make it difficult to carry on any political affairs abroad, 'or civil at home, under ſuch bold inſults and interruptions 'as they work people up to, and, indeed, boaſt they have 'worked them up to; and this is the laſt deſperate effort of 'perſons raging with diſappointed malice.'

After this the author comes to his expedient.

'But, I think, they may be yet once more diſappointed; 'for there is one remedy, or an expedient at leaſt untried, 'which may, perhaps, preſerve to us this liberty of the preſs, 'and yet prevent their miſchievous proceedings. We have 'an office called a Gazetteer, in the ſecretary of ſtate's 'office, whoſe buſineſs we expect ſhould be to tranſmit 'things of this nature to the people; and he, or one in his 'office, may be appointed, or at leaſt permitted, to obſerve 'theſe abuſes in intelligence, and take the ſame method to 'prevent the people from being impoſed on, and the go-'vernment from being miſrepreſented, as all others do, from 'noblemen down to the meaneſt mechanic, who do them-'ſelves juſtice in the ſame news-paper, in which they find 'themſelves wronged by ſhort advertiſements upon the 'facts.

'For example, we find the Craftſman of Dec. 11, 1731, 'which we laſt examined, inſinuates, by way of reproach, 'that the new works of Dunkirk were not demoliſhed: 'durſt he have had the thought of affirming ſuch a thing a 'year and a quarter after this demolition, if he knew the 'Gazetteer would have ſent either that letter of Dec. 11, '1730, or that of Feb. 26 following, and half a guinea 'with it, or whatever ſhould be the price of an advertiſe-'ment of that length, and obliged him to publiſh it: and 'let it be conſidered what effect this muſt have had on his 'long railing political letters, as well as on his falſe news: 'and here is no occaſion for one word of introduction or ar-'gument, only the bare narrative inſerted and publiſhed 'from any other diſintereſted news-paper. I ſhall here take 'the liberty to ſhew, that this is not only a proper and na-'tural way, but it is the way which muſt be taken, or 'ſomething worſe will, under another adminiſtration; that 'is, a total ſuppreſſion of any news-paper but what the 'court ſhall think proper. For, though this miniſtry have 'ſtruggled through buſineſs (not without great difficulty) in 'ſpite of theſe interruptions; having a reputation eſtabliſhed 'by many years, and a ſeries of ſucceſs, very much owing 'to the ſtedfaſtneſs and uniformity of his late and preſent 'majeſty; yet another miniſtry, who cannot at firſt have 'theſe advantages, will never venture on any material and 'doubtful affairs in difficult times, with the power in their 'avowed enemies hands of engroſſing near all the intelli-'gence; and with this D'anverian precedent, of the uſe 'which may be made of it: and miniſters of ſtate never 'want enemies, and thoſe too of the moſt turbulent and 'daring ſpirit, nor do the common people inclination, to 'hear and credit every ill thing which can be ſaid of them; 'the miſchief is therefore arrived to that height and danger, 'that a remedy muſt be ſpeedily had, and that the methods 'hitherto taken are none we ſhall ſoon ſee.

'1. The proſecuting the offender, as Mr. Francklin, the 'printer of the Craftſman, lately was, brings no remedy 'nor removal of the grievance, rather increaſes it, as ap-'pears by his printing more in number, after his trial, than 'a little before; for his paper has got the aſcendency of at-'tention, and he ſecurely perſiſts in it, that he is unjuſtly 'dealt by, as in the laſt we examined of Dec. 11, where he 'juſtifies his news, and complains to the people, that he is 'prohibited from giving them ſuch foreign intelligence as he 'conceives they ought to have; and if he had not ſome 'thouſands who credit this, ſo many thouſands of his journal 'would not continue to be ſold. Therefore, to make ſuch 'proſecution have it's due effect, the generality of the people 'are to be convinced that the indictment is juſt; that is, 'that ſuch libel is falſe, malicious, and ſcandalous, the falſity 'muſt appear to them; but whilſt he commands very near 'all the intelligence they have, how can they ſee the falſity? 'And out of theſe deceived people the jury is choſen. But 'if, in May laſt, after it had been perceived that he had ſe-'veral weeks omitted to inſert the treaty of Vienna, (for I 'would have given him ſome time, on purpoſe to have ex-'poſed him the more) the heads of it had been publiſhed for 'him in his own paper; where he would have found vin-'dicators of this Hague letter, for which he was proſecuted, 'and the other vile accounts of things, which then would 'have appeared to be falſe in fact, though he continued to 'juſtify it by them? Whereas, for want of this, nine tenths 'of the people do not know to this day, but that he was 'proſecuted only for ſome bold and indecent reflections and 'freedoms, taken with the king and miniſtry, on certain ne-'gociations and treaties, little imagining that it was for 'FORGING and INVENTING treaties and negociations.

'2. Theſe proſecutions do not put a ſtop to their proceed-'ings. Miſt and Wolf, the preſent principal proprietors of 'Fog's journal, are fled their country; yet their journal is 'ſtill carried on, and as virulently as ever, and it's gain is 'rather outdone than rivalled by the proſecution, than inter-'rupted or reduced by any Craftſman, of the proprietors: 'it may now, indeed, bring in not above four or five hun-'dred pounds a year, inſtead of eighteen hundred, or more, 'which it once did: but it is a ſcandal-ſhop, ready to re-'ceive and vend ſedition in, and will never be laid down 'while there is an enemy to the Britiſh conſtitution capable 'of writing ſcandal in Engliſh; and ſuch a comfortable 'livelihood is produced by it, though the preſent proprietors 'and writers may die, or be removed. So that we have at 'preſent theſe two principal weekly papers (for there are 'others of leſſer note who find a gain in it) whoſe profeſſed 'courſe, and openly avowed intention, is to bring the go-'vernment into contempt; and what uſe any foreign nation, 'whoſe intereſt and deſign it is to be our enemies, and em-'barraſs our affairs, by dividing us among ourſelves, may 'make of them, I have already obſerved, page 67.

'3. The taking them up by the meſſengers, and binding 'them over for three terms, has contributed more than any 'other thing to make the paper popular, and increaſe it's 'gain; and this coſts them, at moſt, but four guineas: and 'this piece of journal-craft has been often practiſed, pur-'poſely; when the paper has ſeemed a little dull, and ſunk 'in number, then get ſomething wrote which may provoke 'a ſecretary of ſtate to ſend the king's meſſengers for the 'printer or publiſher, it makes a new noiſe, and revives 'again. Another piece of this art and myſtery of journal-'craft, is to procure an anſwer; if it is by ſome eminent or 'popular hand, it does excellently well for the proprietors; 'for then, perhaps, a new edition of the journal (wrote 'againſt) is printed, and as many ſold as at firſt; beſides, 'that the writer is, by this means, thrown into a thread of 'argumentation, which makes his writing eaſy, and, by the 'additional gain, more pleaſant too. Not that I would be 'underſtood that theſe anſwers and arguments have not been 'of great uſe; for ſome have been convinced by them: be-'ſides, that they are ſure to furniſh friends of the govern-'ment with proper materials for defending it; but to think 'of convincing theſe patriots out of their malice, or the 'writers and proprietors out of 1600 or 1800 l. per annum, 'is a jeſt.

'Here has been now one proſecution againſt him, I admit a 'chargeable one too, on which he is fined 100 l. and a year's 'impriſonment, which (by the way) is in the King's-Bench, 'where he has the liberty of the rules; I ſay, all this charge-'able proſecution cannot amount to above a quarter of a 'year's gain of the paper. I have no occaſion to enter into 'the progreſs of an exact calculation, except it was diſputed, 'it is ſufficient to allow, in a round computation, 10,000 'in number weekly, and three farthings per paper clear pro-'fit; but their uſual number was not leſs than 12,000, or '13,000 for a long time, even 'till ſince May 22, 1731; 'when, in a courſe of diſputation with the author of the 'Free Briton, and others, his patrons were detected in ſo 'many falſities in facts, as well in his journals as other pam-'phlets, that his paper loſt a great deal of it's credit, ſinking

'in

'in a ſhort time near 4000 in number; that is, from 13,000 'to leſs than 9000: about the time of his trial, it roſe a 'little again; but, notwithſtanding this proſecution, the 'paper is ſtill carried on in it's utmoſt malignancy, thus pro-'fitable, and thus popular, being read by no leſs than four 'hundred thouſand of the good people of Great-Britain, al-'lowing no more than 40 readers to a paper.

'4. Theſe proſecutions are no remedy for his omiſſions; 'and this miſchievous artifice ſeems hitherto to be unob-'ſerved: he has worked his readers up to an opinion, that 'his paper contains a much more perfect account of the 'ſtate of the nation, both at home and abroad, than any 'other; beſides ſcandalizing moſt with being partial and 'miniſterial papers: and this is generally credited, becauſe 'it is wrote under the patronage of gentlemen of diſtinction, 'whoſe underſtandings they cannot doubt, and whoſe for-'tunes ſet them above writing for gain; which is indeed 'true: but the people are not aware that the gentlemen 'trouble themſelves very little with putting things in form, 'though they may often furniſh materials and protection to 'the writer. But the courſe of the paper is performed by 'an hireling, who does it for gain and a livelihood; and it 'is he we mean, when we mention the ſecretary or the au-'thor: and if this author will not inſert ſome things, who 'can force him? And by what law is he puniſhable? Thus 'he thinks it not proper to tell his readers of a negociation at 'Moſcow, where the differences relating to trade are ad-'juſted, nor of the utter abolition of the Oſtend Eaſt-India 'trade,—nor of the diſcharging the Heſſian troops,—nor 'the Spaniards breaking and impriſoning their governors in 'the Weſt-Indies, for encouraging the depredations of the 'guarda coſtas,—nor of the care which has been taken to 'make Gibraltar invincible and inacceſſible, and abundance 'of ſuch things which he, as proprietor of his paper, may 'omit without breach of any law; and what remedy have 'we for this, but writing them in his own paper for him? 'But then, what would Mr. D'anvers do for ſubjects for his 'fine harangues and declamations, and what a deal of his 'excellent wit and ſatire ſhould we be deprived of?

'5. This method can be of no uſe to a weak and corrupt 'adminiſtration; for, if real evil and fooliſh things are tranſ-'acted, there is no concealing them, while the bold ſpirited 'anti miniſterial writer has his liberty of relating and com-'menting upon them, which by this means may be pre-'ſerved, and even further indulged and protected, and there 'is no fear of wanting ſuch: for bad miniſters, as well as 'good, have their oppoſers. However, for the better pre-'ſerving this liberty, the government's intelligencer may be 'reſtrained not to take up more than half a column; or, 'ſuppoſe a column at moſt, which is a twelfth part of one of 'theſe journals; and if he paid for the ſpace he occupied, 'as other advertiſers do, here can be no treſpaſs on the pro-'prietor's room for writing, nor invaſion of his property; 'and I never yet ſaw a caſe which would take up above half 'this room, nor can I perceive there would be occaſion for 'this ten times in a year: for the expectation of ſuch a 'contradiction would be almoſt a ſufficient check upon theſe 'forgers of falſe news.

'Some object to me, that they would refuſe ſuch advertiſement, 'and laugh at ſuch an offer; and really, I am of the objector's 'opinion, if it is in their power to refuſe it, and ſhould con-'tinue long ſo; any enemy of our conſtitution would laugh 'to ſee us ſo fond of liberty in the nation, and proſtitute it to 'the caprice of every angry malecontent, who ſhall attempt to 'deſtroy the government, which is the defence of it, by di-'viding us amongſt ourſelves, and againſt it, whilſt we not 'only ſtand idly by and ſee this, but encourage theſe incendi-'aries and traitors to it, by permitting them to get ſuch ample 'revenues as a thouſand or two thouſand pounds ſterling per 'ann. for doing it, and we to have neither ingenuity nor au-'thority to prevent the miſchief. This would, indeed, make 'ſuch an one laugh, but other laugh than this I can't ſee. 'Suppoſe, for example, he had been deſired to have publiſhed 'an extract of the declaration done at Seville, June 6, 1731, '(which ſee in it's proper place) and money had been ſent to 'have paid for the room it would occupy, as for an advertiſe-'ment, there is no doubt but he would have refuſed it if he 'could, for it would have confuted more than half the papers 'he wrote for two years: but in what manner would he have 'laughed at this? And in what manner, or for what reaſons, 'would he have told his readers he refuſed this?

'He would alſo moſt certainly have refuſed to publiſh a pre-'ſentment of the Craftſman and Fog's Journal, and other li-'bels, by the grand jury of Middleſex, on July 7, 1731. 'But I ſhould, nevertheleſs, think it highly neceſſary, that his 'readers, and in his own paper too, ſhould (as well as other 'articles of London news) ſee ſome ſuch extract of it as 'follows.

'Complaining of that preſumptuous and unprecedented li-'cence, which has been aſſumed by ſome ſtate-incendiaries for 'a few years paſt, of inflaming by falſe, ſeditious, and ſcan-'dalous libels, the minds of the common people with pre-'tended grievances, and alarming them with imaginary dan-'gers;—from whence ſuch miſchiefs may flow, as may be of 'pernicious conſequence to this nation and people, by fixing 'in foreign powers an opinion that we are divided among our-'ſelves, which may give grounds to extravagant demands in 'negociations on their parts, and thereby occaſion an increaſe 'or continuance of our taxes, in order to ſecure our own 'rights, and preſerve his majeſty's honour*.' See the D'an-verian Hiſtory, from whence this is quoted.

* See more reaſons for thus advertiſing, as well as examples of it, in a pamphlet by the ſame author, price 6d. entitled. Liberty and Craftſman, publiſhed in December, 1730.

The principal LAWS relating to NEWS-PAPERS and PAMPHLETS.

I. Stat. Weſtm. 1. 3 Edw. I. cap. 34. None ſhall publiſh or counterfeit any falſe news, whereby diſcord or ſlander may grow between the king and his people, or the great men of this realm. And he that ſo does, ſhall be kept in priſon, until he hath brought him forth into the court which did ſpeak the ſame.

II. Stat. 2 Rich. II. ſtat. 1. cap. 5. Of counterfeiters of falſe news of prelates, dukes, earls, barons, and other nobles and great men of the realm, and alſo of the chancellor, treaſurer, clerk of the privy-ſeal, ſteward of the king's houſes, juſtices of the one bench or of the other, and other great officers of the realm; it is defended that none contrive or tell any falſe things of prelates, lords, and others aforeſaid, whereof diſcord or ſlander might riſe within the realm; and he that doth the ſame ſhall be impriſoned, 'till he have brought him forth that did ſpeak the ſame.

III. Stat. 12 Rich. II. cap. 11. When any ſuch mentioned in the ſtatute Weſtm. 1. cap. 34. and 2 Rich. II. cap. 5. is taken and impriſoned, and cannot bring him forth that did ſpeak the ſame, he ſhall be puniſhed by the advice of the council.

By ſtat. 10 Ann. cap. 19. All papers called pamphlets, ſhall for every half ſheet pay a halfpenny; if larger than a half ſheet a penny, and if larger than a whole ſheet, and not ſix ſheets in octavo, or in a leſs page, or not exceeding twelve ſheets in quarto, or twenty ſheets in folio, 2s. ſterling for every ſheet of paper in one printed copy; and for every advertiſement in the London Gazette, or other printed paper made weekly public, one ſhilling. And they are to be ſtamped accordingly.

Offences in printing, ſelling, or expoſing to ſale, any pamphlet, &c. againſt this act, may be heard and determined by two or more juſtices within their juriſdiction. At any time within three months after the offence, upon complaint made, they may ſummon the offender and witneſs, and may examine them on oath; or for not appearing, upon proof of notice given, may proceed, though the offender doth not appear and give judgment. And, if convicted either upon view of the juſtice, or upon ſuch information, may iſſue warrants to levy the penalty of 10l. on the goods of the offender by diſtreſs and ſale, if not redeemed within ſix days: and if ſuch diſtreſs cannot be had, may commit him 'till the penalty is paid. Thoſe who are grieved may appeal to the next quarter-ſeſſions, who may examine witneſſes upon oath, and finally determine, and may then iſſue warrants to levy the penalty.

The penalty may be mitigated by the juſtices, but then the officers and informers muſt be allowed their reaſonable coſts and charges over and above the ſaid mitigation, and ſo as the mitigation muſt not be leſs than a fourth part of the fine over and above the ſaid coſt and charges.

Perſons ſued for putting the act in execution, may plead the general iſſue, and give this act and any ſpecial matter in evidence, and if he recover ſhall have treble coſts.

Printing a pamphlet above one ſheet, publiſhed within the weekly bills of mortality, and not carrying it within ſix days to the head office for ſtamping; and if printed elſewhere, and not brought to the head collector of the ſtamp duties within fourteen days, the printer and publiſher ſhall loſe the profit of the copy of ſuch pamphlet for which the duty is not paid, and ſhall forfeit 20l. with full coſts.

If the printer's or publiſher's name is not printed thereon, the penalty is likewiſe 20l.

One moiety of theſe penalties is to the crown, the other to the informer. But ſome news-writers taking advantage of the paragraph in the act 10 Ann. cap. 19. wherein for all pamphlets larger than one whole ſheet, and not exceeding twenty ſheets in folio 2s. for every ſheet of paper in one printed copy, and no more, was to be paid, contrived their news-papers ſo as they took up one whole ſheet, and one half ſheet, and no more; by which means they for many years paid only 3s. for each whole impreſſion of their news-papers. Which being taken notice of in parliament, a clauſe was inſerted in a ſtatute made 11 Geo. I. whereby all journals, mercuries, and news-papers, printed on one ſheet and half a ſheet of paper, ſhall not for the future be deemed or taken as pamphlets, to be entered and pay only 3s. for each impreſſion thereof; but there ſhall be paid for every ſheet of paper on which any journal, mercury, or other news-papers whatſoever ſhall be printed, a duty of one penny, and for every half ſheet thereof one half-penny, during the term

mentioned in the act 10 Ann. cap. 19. to be levied in the same manner, and subject to the same penalties, &c. as in the said act of 10 Ann. cap. 19. or any other act relating to those duties is contained.

Since this another act of parliament has taken place, laying an additional duty on news-papers; and yet there appears no less propensity after news than before, and the number of news-papers have increased, as well as that of advertisements in general. See ADVERTISE.

NEW SPAIN, see MEXICO.

NICARAGUA, see MEXICO.

NICOBAR ISLANDS, situate in the Indian ocean in Asia north of the island of Sumatra, at the entrance of the bay of Bengal; 300 miles west of the further peninsula of India, between 92 and 94 degrees of east longitude, and between 7 and 10 degrees of north latitude, the largest of these islands, which gives name to the rest, and lies farthest south, is 40 miles long and 15 broad. This country is almost covered with wood, and produces no corn, but they have a fruit which they boil, and serves them instead of bread; they have also cacao-nuts, plantains, and other tropical fruits, on which they live with the fish they take, but seem to slight flesh, though they have hogs and poultry enough, with which they supply the ships which touch here: and yet these people, as well as their neighbours of the Andeman islands, were reported to be cannibals, when the Europeans first visited them. The natives, in return for the provisions they furnish ships with, take iron, tobacco, and linen, and don't seem to have any commerce with the nations of the adjacent continent.

NIGRITIA, see AFRICA.

NITRE, or SALT-PETRE. It is probable, that the nitre of the ancients, was either the Egyptian natron, or a salt, found in the earth in a gray compact mass, or else the natural borax, or the salt which is drawn from the water of the river Nile, and many other rivers. And it may be, that all these salts are divers kinds of their nitre, but the nitre of the moderns is nothing else but salt-petre, and this is that of which we shall speak.

Nitre is an acid salt impregnated with abundance of spirits out of the air, which render it volatile; it is taken from among the stones and earth of old ruined buildings. Some of it is likewise to be found in cellars, and several other moist places, because the air doth condense it in those places, and easily unites it with the stones.

Nitre is also sometimes made by the urine of animals, falling upon stones and earths. Nay, some have thought, that all salt-petre comes from that cause, whereas we see every day, that some of it is taken out of places, where there never came any urine at all. There is also found in dry weather in hot countries natural salt-petre, against the walls and rocks in small crystals, which are separated by sweeping softly those places with a broom; this is preferable to the ordinary salt-petre for the making of gunpowder, it must be chosen neat in crystals, easily taking fire upon kindled coals.

A good and well esteemed salt-petre is imported from the East-Indies, principally for gunpowder; it is said, that the same is found in great quantities near Pegu, and that it is observed to elevate from certain barren lands in white crystals, as near one another as the grass, so that one may easily gather and purify the same, which is like to our purified salt-petre.

The great and violent flame which happens so soon as salt-petre is flung upon the coals, and the red vapours which it yields when reduced into a spirit, have caused the chemists generally to believe that this salt is inflammable, and consequently fully loaded with sulphur, because sulphur is the only principle that flames; but, if they had suspended their judgments herein, until they got more experience on this subject, they would not only have known that salt-petre is not at all inflammable in it's nature, but they would even have doubted whether or no any sulphur does enter into the natural composition of this salt; for, if salt-petre were inflammable of itself, like sulphur, it would burn where there is no sulphur, for example, in a crucible heated red-hot in a fire; but it will never flame therein, use what quantity of it you please, and let the fire be ever so great. It is true, indeed, if you throw salt-petre upon kindled coals, it makes a great flame, but this is only through the sulphureous fuliginosities of the coals, which are violently raised and rarified by the volatile nature of nitre.

As for any sulphur that is thought to be contained in salt-petre, it can't be demonstrated by any operation whatever; for the red vapours that come from it are no more inflammable than the nitre, when they are not mixed with some sulphuereous matter; and it is far from probable, that this salt contains no sulphur, if we consider it's cleanness, transparency, acidity, and cooling quality, which have no manner of affinity with the effects of sulphur, which are commonly to make a body opake, to take off acidity, and to heat.

Of the purification of salt-petre.

To purify salt-petre, is to deprive it of part of it's fixt salt, and of a little bituminous earth which it contains.

Dissolve ten or twelve pounds of salt-petre, in a sufficient quantity of water; let the dissolution settle, and filtrate it; then evaporate it in a glass or earthen vessel, to the diminution of half, or until there begins to appear a little skin upon it; then remove your vessel into a cool place, stirring it as little as may be, and leave it there 'till the morrow, you'll find crystals which you must separate from the liquor; evaporate this liquor again to a skin, and set the vessels in a cool place to get new crystals, repeat the evaporations and crystallizations, until you have drawn all your salt-petre.

Note, That in the last crystallizations, you'll have a salt altogether like unto sea salt, or sal gemme, keep it apart, it may serve to season meat with.

The first crystals are the pure salt-petre.

You may, if you please, dissolve and purify salt-petre several other times in water, observing every time what I said before, for to render it more white, and purify it from it's sea-salt.

Salt-petre purified is a great aperitive, it cools the body by fixing the humours that are in too much motion, and drives them by urine. It is given in fevers, in gonorrhœas, and many other diseases; the dose is from ten grains to a drachm in broth, or some appropriate liquor.

REMARKS.

The first purification that is given to salt-petre is this: the stones and earths that contain it are grosly powdered: they are boiled in a great deal of water, to dissolve the salt-petre: the dissolution is filtrated, and then poured upon ashes, to make a lixivium; after it hath been poured upon the ashes several times, it is evaporated and crystallized.

If instead of pouring the dissolution of salt-petre upon ashes, one is content to let it evaporate upon the fire in a cauldron or other vessel, 'till it adheres to the skimmer, which must be soaked in it, and 'till it appears in the consistence of oil of a yellowish or brown colour, it will be a greasy and thick liquor, which the artists call mother of salt-petre, or water of the sea.

The salt of the ashes which mixes with the salt-petre augments it's fixed part, for notwithstanding the salt is alkali, yet it changes nature, because it's pores have been filled by the acid of the salt petre. This nitre salt, drawn by this first purification, is called common salt-petre; the last salt taken thence must not be mixed with the first, because it is almost fixed, and not so good: if one distils the same in the manner as salt, an acid spirit will be drawn thence, which is a species of aqua regia, or a dissolvent of gold.

The earth from whence one has drawn the salt-petre being exposed to the air, and stirred from time to time, impregnates again with the same species of salt.

The long crystals which we see in salt-petre come from it's volatile part, for that which crystallizes itself last, is fixed like sea-salt, and retains the figure thereof.

The salt-petre, though never so well refined, always contains a salt like to mineral salt, or sea salt, but in less quantity.

When salt-petre is boiled a long time in water, and over a great fire, some part of the spirit evaporates, and there remains at last nothing but a salt like unto sea salt, or sal gemme, which serves to prove that salt-petre is only a sal gemme, fuller of spirits than the other.

When you would crystallize a salt, you must dissolve it in a convenient proportion of water; for if there should be too much, the salt would be weakened too much, and not able to coagulate; and if, on the contrary, there should be too little, the crystals would be confused. Therefore, to make them fair, you must take your vessel off the fire, when you perceive a little skin upon the liquor, which is a mark to shew, that there remains a little less liquor than is convenient to keep all the salt dissolved, and thus when it comes to be set in a cool place, it will not fail to fix.

Acid salts, and among them the volatile, do crystallize in much less time than others.

In purifying a great quantity of salt-petre, put it into one or more great and tinned cauldrons, and pour upon it a necessary quantity of common water to dissolve it, put fire underneath, and when the salt is melted and the liquor begins to boil, take off with a skimmer the first scum, which is called the dirt of salt-petre; continue to boil this liquor softly, 'till it has acquired more consistence; afterwards put in a little white vitriol or allum in powder to clarify it, and there will appear at the superficies a black scum, which will thicken; this must be separated by little and little with a skimmer, as exactly as possible: when the liquor is cleared of this scum, pour it boiling with great ladles or otherwise, into another high and strait vessel, which is to be covered with a piece of cloth, to preserve it's heat for some time, and hinder it's cooling too soon; and it must not be stirred in an hour and half or two hours; during which time it precipitates to the bottom of the vessel yellow dregs like lees, and the liquor becomes clear and good; which is afterwards separated from these dregs, whilst it is yet somewhat warm, pouring the same by inclination into earthen bowls or basons. These vessels are to be covered with a cloth, and the liquor is not to be stirred in a day or two, 'till the salt-petre is congealed in great, fine,

clear, white, and tranſparent cryſtals, which are ordinarily of a ſix angular form; afterwards theſe cryſtals are taken out of the bowls, and are put into a tub pierced at the bottom, where they are drained: this is the refined ſalt-petre.

Let the remaining liquor evaporate upon the fire about one half, and then let it cool, and there will be formed cryſtals not quite ſo fine as the firſt; the ſame proceeding is continued 'till all the ſalt-petre is taken away, but the laſt cryſtals, which are in a little quantity, muſt be ſet apart, becauſe they contain much fixed ſalts.

The ſame refined ſalt-petre is purified a ſecond time, not only to ſeparate from it ſome ſmall portion of filth, which, perhaps, ſticks there, but alſo to clear it of it's fixed part, then it will not ſo eaſily be ſubject to run with moiſture.

The ſalt petre muſt be choſen well refined, in long, neat, and tranſparent cryſtals, cooling the tongue when applied to it, and much flaming when thrown upon burning coals.

Salt-petre cools the body, by reaſon that being an acid it depreſſes the humours, which by their too great motion did hurt the body, and ſo precipitates them by urine; for the volatile ſalts and ſulphurs that all bodies are full of, are eaſily fixed and quieted by acids.

Of the ſpirit of nitre.

Spirit of nitre is a liquor very acid and corroſive, drawn from ſalt-petre.

Powder and mix well together two pounds of fine ſalt-petre, and ſix pounds of potter's-earth dried; put this mixture into a large retort, either of earth or glaſs luted, ſet it in a cloſe reverberatory furnace; ſet to it a great capacious baſon, or receiver, and give a very little fire to it for four or five hours, to make all the phlegm come forth, which will diſtil out drop by drop. When you perceive there will diſtil no more, throw the phlegm away that is found in the receiver, and having refitted it, lute the junctures, and increaſing the fire by little and little to the ſecond degree, there will come forth ſpirits, which will fill the receiver with white clouds; then keep the fire two hours in the ſame degree, after that increaſe it to the greateſt violence you can give it, and ſo the vapours will come red; continue the greateſt fire 'till there come no more, the operation will be ended in about fourteen hours. When the veſſels are cold, unlute the junctures, and pour your ſpirit of nitre into an earthen bottle, which you muſt ſtop with wax.

Spirit of nitre is uſed for the diſſolution of metals, it is a good aqua fortis [ſee AQUA FORTIS]; and the corroſive virtue of other waters of this nature, doth chiefly proceed from the nitre that enters into their compoſition.

REMARKS.

You might, as ſome do, mix four parts of potter's-earth with one part of nitre, when you would draw it's ſpirit; but you will ſucceed better, and with leſs difficulty, by obſerving the preceding directions; for the earth does here ſerve only as an intermedium to ſeparate the parts of this ſalt, to the end that the fire operating more eaſily upon it, may draw it's ſpirits; and therefore it is a very needleſs buſineſs, to uſe more of the earth than is neceſſary towards this effect. Beſides, this over great quantity of earth may ſerve to weaken the ſpirits, and by taking up too much room, may hinder the drawing ſuch quantity, as otherwiſe you would with the ſame retort.

The phlegm is thrown away, becauſe it only ſerves to weaken the ſpirit. The white vapours proceed from the volatile part of the ſalt-petre, and are a weaker ſort of ſpirit; but the red ones proceed from the fixed part, and are the ſtrongeſt ſpirit: for which reaſon, the fire is made ſo very violent towards the latter end. Of all ſalts, nitre is the only one that yields red vapours.

When you uſe here the beſt ſalt-petre, there remains nothing in the retort but only earth.

On boiling ſeveral times in water a good while the earth that remained after the diſtillation of the ſpirit of nitre, and after evaporating of the filtrated decoction, you will find no ſalt at bottom. But ſometimes a little vitriol, in the ſame manner as in ſeveral claycy grounds.

It has likewiſe been obſerved, that out of two pounds of purified nitre, a pound and fourteen ounces of liquor, in phlegm and ſpirit, may be drawn.

A third part of the retort, wherein the operation is performed muſt remain empty, and the receiver muſt be very large; for otherwiſe theſe ſpirits coming haſtily forth, would break all to-pieces for room to move in.

NIVERNOIS, or NEVERS, a province in France, bounded on the eaſt by Burgundy; on the ſouth by Bourbonnois; on the weſt by Berry; on the north by Gâtinois. It is pretty fertile in wine, corn, and fruit: there are alſo many woods, and mines of iron. It is watered by ſeveral rivers, three of which are navigable, namely the Loire, the Allier, and the Yonne. It's extent is about 17 leagues, from north to ſouth, and about 12 from eaſt to weſt. The only place where there is any conſiderable trade is at

NEVERS, the capital city, ſituate on the river Loire, near it's confluence with the Allier and the rivulet of Nierre. This city is famous on account of the great quantities of glaſs white iron, and fine earthen ware manufactured here.

NORFOLK, in England, has Suffolk on the ſouth; Cambridgeſhire on the weſt; is waſhed by the German Ocean on the eaſt and north, and is in circumference about 140 miles. The air is of various temperatures in the ſeveral parts of it, and has a greater variety of ſoil than is, perhaps, in any other county; but even it's worſt, namely the fens, marſhlands, and ſandy heaths, are exceeding profitable.

The chief rivers of this county are the Yare, Thyrn, Waveney, Ouſe, and Bure, all abounding with fiſh, the laſt of which is noted for excellent perch. There is a great herring-fiſhery on the coaſt, which begins in September, and brings great trade and treaſure to Yarmouth: mackarel are alſo caught here in the ſpring in vaſt quantities; ſo that here are every year two great markets for herrings and mackarel.

Woollen and worſted ſtuffs, with ſtockings, are their chief manufacture; and they are in moſt places ſo diligent in nouriſhing and increaſing their ſtocks of bees, that honey in theſe parts is very plentiful. Jet and ambergreaſe are ſometimes found on it's coaſt.

NORWICH city ſtands near the conflux of the Winſher and Yare, which is navigable from hence to Yarmouth, 30 miles by water. The inhabitants are wealthy, and the city populous, having a great trade itſelf, and adds not a little to that of Yarmouth, by the vaſt cargoes of coal, wine, fiſh, oil, and all other heavy goods, which it has from thence by the Yare. It's manufactures are, generally ſpeaking, ſent to London, though they export conſiderable quantities alſo to Holland, Germany, Sweden, Norway, and other parts of the Baltic and Northern Seas. They conſiſt in great variety of worſted ſtuffs, as ſays, bays, ſerges, ſhalloons, &c. in which they carry on a vaſt trade; and are lately come to weave druggets, crapes, and other curious ſtuffs: of all which it is ſaid, this city vends to the value of no leſs than 100,000l. a year. All hands are daily employed, and even children earn their bread in this manufacture. Eight wardens of the worſted-weavers, four out of the city, and four out of the neighbouring country, are annually choſe, and ſworn to take care that there be no frauds in ſpinning, weaving, or dyeing the ſaid ſtuffs. Here is another company of woollen manufacturers, called the Ruſſia company. The weavers here employ all the country round in ſpinning yarn for them, of which they uſe many thouſand packs from other counties, even as far as Yorkſhire and Weſtmoreland. A calculation was lately made, from the number of looms then at work in this city only, that there were not leſs than 120,000 people employed, in and about the town, thoſe who ſpin the yarn included. There is a ſtocking manufacture alſo here, which has been computed at 60,000l. a year.

GREAT YARMOUTH is a large, well-built, populous town, much increaſed of late years in buildings, ſhipping, and people, and greatly ſuperior to Norwich in ſituation, traffic, and wealth; it's great commerce to France, Holland, and the North and Eaſt Seas, and, above all, it's herring-fiſhery, make it the greateſt town of trade on all the eaſt coaſt of England, except Hull; for, beſides all it's other trade, it has the whole herring fiſhery, where, including the little town of Leoſtoff, 50,000 barrels, which ſome magnify to 40,000 laſts, containing no leſs than 40,000,000 of red herrings, are generally cured in a year. Theſe are moſtly exported by the merchants of Yarmouth, the reſt by thoſe of London, to Italy, Spain, and Portugal. During the fiſhing-ſeaſon, all veſſels that come for that purpoſe from any part of England, as great numbers do from the coaſts of Kent and Suſſex, Scarborough, Whitby, &c. are allowed to catch, bring in, and ſell their fiſh, free of all toll or tax, as the freemen of Yarmouth are.

They have alſo a fiſhing-trade to the North Seas, for white-fiſh, called the North Sea cod, and a conſiderable trade to Norway and the Baltic, for deals, oak, pitch, tar, hemp, flax, canvaſs, ſail-cloth, and all manner of naval ſtores, which they conſume, for the moſt part, in their own port, where they build a great number of ſhips every year.

LYNN is ſeated at the mouth of the Ouſe, where it falls into the ſea, little after it has received ſeveral leſſer rivers, which gives it a navigation for trade into the very heart of the kingdom, almoſt as high as Northampton; by which means it commands the trade of ſeveral inland counties, which it ſupplies, eſpecially with coals and wine, this being the greateſt port of importation for thoſe articles of any place on all the eaſtern coaſt of England, from London to Berwick. In return for this, Lynn receives back all the corn which thoſe counties produce, and therefore is, next to Hull, the greateſt port for the exportation of that commodity. The merchants of Lynn have the fame of a great correſpondence, and of carrying on a conſiderable foreign trade, eſpecially to Holland, Norway, and the Baltic, and alſo to Portugal and Spain. The harbour is ſafe when ſhips are entered into it, but difficult to come at, by reaſon of the many flats and ſhoals in the paſſage.

CROMER, on the coaſt, is a pretty large town, chiefly inhabited and frequented by fiſhermen, eſpecially for lobſters, which are caught here in great quantities, and carried to Norwich, and ſometimes alſo to London.

WORSTED is remarkable for the invention and twiſting of that ſort of woollen-yarn and thread which is from this place ſo called, as cambrics and callicoes take their names from the towns where they were firſt made. Here is alſo a manufacture of worſted ſtuffs and ſtockings, both knit and wove.

ST FAITH's, a village between Norwich and Cromer, is noted for a fair of lean cattle, ſcarce to be equalled in the kingdom, they being brought hither in great droves out of the north of England and Scotland, and ſold to the Norfolk graziers.

CLAY has a harbour for ſhips, on the ſame coaſt as Cromer, and large ſalt-works, where very good ſalt is made, and ſent all over the country, and ſometimes to Holland and the Baltic.

MARHAM and WELLS are two towns on the ſame coaſt, in each of which there is a very conſiderable trade carried on with Holland for corn, which this part of the county is very full of, beſides the great trade drove hither from Holland in return.

WIMONDHAM, or WINDHAM, is a little town, whoſe inhabitants, both old and young, are generally employed in making ſpiggots and faucets, ſpindles, ſpoons, and the like ſort of wooden ware.

Peculiar laws relating to Norwich and Norwich ſtuffs.

By 13 and 14 Car. II. cap. 5. in Norwich, and the county of Norfolk, there muſt be 12 wardens and 30 aſſiſtants choſe, who, within 14 days after notice thereof, muſt take an oath before the mayor faithfully to diſcharge their office. If they refuſe, or die within the year, the maſter weavers may chooſe others. Raym. 192.

Half of the wardens are to be choſen on Whitſun-Monday, by the greater part of the maſter-weavers in the city: half of the aſſiſtants on the ſame day, by the greater part of the weavers of the county.

Seven of the wardens and aſſiſtants may meet when they pleaſe, or as often as deſired by the aſſiſtants. Fourteen days before they intend to meet, the wardens of the city muſt give notice to thoſe in the county when they intend to meet, by ſetting ſuch notice upon the door of their ſealing-hall.

Two of them may ſearch in the public places for ſale, and ſeize defective yarns, and, within 20 days afterwards, bring them to a trial by jury, who may impoſe fines on the yarn not exceeding half the value, to the uſe of the poor of the trade. By laws being made and confirmed by the mayor and two juſtices of the city, and three of the county (quorum unus) muſt be publiſhed four times in a year, at four aſſemblies for trade, and may impoſe fines not exceeding 10 s. for every offence.

Any one diſturbing them, convicted by oath of one witneſs, or by his own confeſſion, before the mayor, or a juſtice of peace of the city or county, forfeits 40 s.

At their four aſſemblies for trade, they are to account before the mayor and one juſtice of the city, and two of the county, for what fines and forfeitures they have received, and what they have expended about the trade, and what remains, by the ſaid mayor and juſtices to be divided as they ſhall direct, between the poor of the trade of the city and county.

The jury muſt conſiſt of 12 artificers, half of the city, and half of the county, and muſt be empannelled by precept from the mayor or deputy; and, if any being ſummoned, refuſe to appear, forfeits 5 s. to the poor of the trade.

All ſtuffs in which there is wool, muſt be under the regulation of wardens and aſſiſtants, and muſt be brought to Weavers-Hall in Norwich, before they are expoſed to ſale; and, if found good, then ſealed; if defective, they muſt be tried by a jury, &c. who may ſet fines not exceeding half the value of the ſtuffs, for the uſe of the poor of the trade, and detain them 'till paid, and ſell them, if not paid within 40 days after trial.

They in whoſe poſſeſſion unſealed ſtuffs ſhall be found, forfeit 40 s. per piece, and the maker or ſeller 4 s. for ſelling them unſealed, to the uſe of the poor of the trade.

If wardens ſeal ſtuffs which ſhall be found defective by jury, ſuch jury may ſet fines on the wardens of 40 s. for every ſtuff, but wardens ſhall have double damages for unjuſt vexation.

Perſons convicted before the mayor, or a juſtice of the city or county, by confeſſion, or oath of two witneſſes, of counterfeiting the ſeal, or ſealing therewith, or removing the ſeal from one piece to another, forfeit 20 l. Every one muſt have his proper mark upon every piece made by him, or forfeit 3 s. per piece to the poor of the trade.

The forfeitures are to be levied by diſtreſs, &c. by warrant from the mayor or juſtice, or by action of debt, indictment, or information. All yarns and worſted muſt be reeled on a reel of a yard about, and every reel-ſtuff muſt have fourteen lees.

By ſtat. 9 Geo. I. cap. 9. it is enacted, That all manufacturers, or makers of ſtuffs made of wool, or in which there is any mixture of wool, and all makers of worſted into yarn, who are not journeymen or ſervants for hire, maſter-weavers and maſter woolcombers, and all perſons dealing or employing ſervants and journeymen in any ſuch manufactures, or having any intereſt, ſhare, or partnerſhip therein, living in Norwich, ſhall be made free, and admitted freemen of that city, on their requeſt to be made at any aſſembly of the corporation of the ſaid city, paying not exceeding 5 l. for ſuch admiſſion and freedom; and all perſons to be made free ſhall take the uſual oaths, or, being Quakers, ſhall take the ſolemn affirmation.

If any perſon (except ſervants and apprentices during their ſervice) who is any ſuch manufacturer or dealer, &c. preſume to exerciſe any of the ſaid manufactures, or be otherwiſe intereſted therein, not being made free, and being convicted thereof on a proſecution commenced within ſix months after the fact committed, he ſhall forfeit 10 l. for every calendar month he ſhall exerciſe any of the ſaid manufactures, or be concerned therein, next after the third quarterly aſſembly of the ſaid corporation, to be recovered by action of debt, &c. brought by the chamberlain, for the uſe of the mayor, ſheriffs, citizens, and commonalty of the city, in any court of record at Weſtminſter.

NORMANDY, in France. This province, or duchy, is bounded on the north by the Britiſh Channel; on the weſt by part of the ſame, and by Britanny; on the ſouth by Maine, Perche, and Beauce; and on the eaſt by the Iſle of France and Picardy: it's whole circuit being of about 240 leagues, the greateſt part of which is on the ſea-coaſt. This country abounds in paſtures, and is extremely fruitful in corn, flax, and ſeveral kinds of fruit; and has alſo mines of iron, and ſome of copper, and other metals. They have a conſiderable trade in corn, timber, coals, hay, cattle, and herbs proper for dyeing, as madder, woad, &c.

ROUEN, the capital of the province, is ſituated on the north bank of the river Seine, in which the tide flows ſo high, that ſhips of above 200 tons can come to the key here. The trade carried on in the city and diſtrict is very conſiderable and extenſive: it conſiſts in woollen and linen cloths, leather, hats, paper, and a great many other merchandizes. The woollen manufactures, which employ many thouſand workmen, are very advantageous to the province; but, as they are here chiefly ſold within the kingdom, are only ſo far profitable to the nation in general as they prevent the money being ſent abroad. But the linen manufactures of many ſorts, which are exported into Spain, are extremely ſo, becauſe the returns are generally made in caſh.

ELBEUF, a large and populous borough on the river Seine, famous for the manufactory of cloths ſet up here in 1667.

DIEPPE is a noted ſea-port on the ſhore of the Britiſh Sea, at the mouth of the river Betune. The town is reaſonably large, and inhabited by ſeafaring men, reckoned ſkilful in their profeſſion; mechanics that make curious works in ivory; and merchants who drive a conſiderable trade to foreign parts, eſpecially Newfoundland in America. The chief trade here conſiſts in herrings, with which they ſupply Paris, and the province of Normandy: they alſo fiſh for whitings, mackarel, and oyſters. There is alſo a manufactory where they make tobacco rolls, which employs daily ſome hundreds of hands.

HAVRE DE GRACE is a ſtrong ſea-port, at the mouth of the Seine, and a place of good trade, ſeveral merchants inhabiting here who trade to Newfoundland, and other places.

CAUDEBEC is a pretty well peopled town. A ſmall river runs through it, divided into ſeveral canals, on which ſtand divers mills of great uſe to the tanners and leather-dreſſers here: among other manufactures, they make here a kind of hats, which are very much eſteemed on account of their reſiſting the rain.

FESCAMP is ſituated on a little river, eight leagues from Havre, and 12 from Dieppe. Their trade conſiſts in woollen cloths, ſerges, linens, laces, hats, and tanned leather. They alſo ſend ſome ſhips to Newfoundland, and a few barks to the herring-fiſhery.

EU, on the banks of the river Breſle, has a pretty good trade, by means of their manufactures of ſerges, and other woollen ſtuffs, linens, and laces.

ST. VALERY is a large ſea-port town, on the coaſt of the Britiſh Channel. They make here alſo linens and woollen ſtuffs, and ſend ſome veſſels to the herring and cod-fiſheries.

AUMALE is ſeated near the river Breſle. The ſerges made here are very much eſteemed: they make alſo a coarſe ſort of woollen ſtuff, called frocks, for the uſe of the common people.

LISIEUX is a fair and large city. Several manufactures of linnen and woollen ſtuffs afford the inhabitants a competent livelihood.

HONFLEUR, at the mouth of the Seine, has above 60 ſhips belonging to it that trade to Newfoundland and the French colonies in America. They make here alſo a great many laces.

BAYEUX is an ancient city, on the river Aure. They had ſet up here manufactures of cloths, ſerges, and ſtockings, which ſucceeded extremely well; but the high taxes the merchants were forced to pay, obliged them not only to abandon theſe manufactures, but alſo to leave the city, and to ſettle elſewhere.

CAEN is a large and well-built city, and a place of good trade, veſſels of burthen coming up to the bridge.

VIER is a neat city, on a river of the ſame name, with a conſiderable trade, conſiſting chiefly in drapery goods manufactured here: they have alſo paper-mills.

COUTANCES is a pretty large and populous city. There is here a large ſuburb, inhabited by a great number of tradeſmen, particularly tanners and dyers.

The chief trade of GRANVILLE, a good ſea port town, conſiſts in ſalt-cod, which they fiſh and cure on the coaſt of Newfoundland, and oyſters and other fiſh, which they catch on the neighbouring coaſt.

CARENTAN has ſome trade, becauſe veſſels of a pretty large ſize can come up here at high water.

CHERBURG is a ſmall port, but pretty good, admitting veſſels of 300 tons: they build here ſome merchant ſhips.

ALENÇON, on the river Sarte, in a fruitful plain, is a fair and large city, and chief place of a generality *, which is not leſs conſiderable than the two others of the ſame province, with regard both to the variety and importance of it's trade.

* Beſides the geographical diviſion of France into provinces, there is, for the better adminiſtration of the king's finances, another diviſion of the kingdom into what they call generalities, of which there are 24, according to Monſ. Furetiere, in each of which there is an office of the treaſuries of France, with a receiver-general of the finances, and an intendant of juſtice, or commiſſary.

The manufactory of the linens which are called cloth of Alençon, becauſe they are wove in that city and in it's neighbourhood, is ſtill conſiderable, though the flouriſhing condition in which it was formerly, has ſuffered great alterations by the long wars, and the want of hemp, which was either bought up for the ſea-ſervice, or which the huſbandmen ceaſe to ſow their lands with, to put corn in it's ſtead.

The brionnes, another ſort of linen very much eſteemed, though ſomewhat dear, are made at Bernay, at Liſieux, and at Brionne, from which laſt place they have got their name.

In the whole election, or diſtrict, of this laſt town, as alſo at Ponteau de Mer and Bernay, they make a great many linens of flax, which are ſold under the name of blancards.

The linens of which the warp is of hemp, and the woof of flax, and which they call cretonnes, are manufactured at Liſieux.

At Domfront, Vienentiers, and in their neighbourhood, they make none but coarſe linens, which they ſell before they are blanched; they are ſometimes called canvaſs, but improperly, the true canvaſs being much coarſer and more ordinary.

Of all thoſe linens, the fineſt, ſtrongeſt, and whiteſt are ſent to Paris; the cleareſt are deſigned for Rouen, whence they are exported to Cadiz, to be ſent from thence into Spaniſh America; and the coarſeſt are kept for the uſe of the country.

The manufactory of French point, which, in the generality of Alençon, they call velom (velin), becauſe of the velom or parchment on which it is wrought, have alſo been affected by the long wars of the reign of Lewis XIV; it is, however, ſtill kept up with ſome reputation at Alençon, and in it's neighbourhood, the magnificence, or the luxury, of the French being ſufficient to ſupport it, even in time of war; but it flouriſhes chiefly in time of peace, by the great quantity of thoſe points that is exported into foreign countries.

There is alſo a great deal of drapery and woollen ſtuffs manufactured in the generality of Alençon, as the reader will ſee in the ſeveral articles of the moſt conſiderable towns within this diviſion.

The woollen ſtuffs called a frock by the French, which ſerve for dreſſing the common people, are made at Liſieux, Bernay, Orbee, and in the villages of Fervaques and Tardonet, whence they are ſent into the provinces of Perche, Maine, and Poictou.

Beſides the wool of the country which is uſed in thoſe ſeveral manufactories, the weavers get a great deal alſo from the neighbouring provinces. They make in this generality, one year with another, 50 or 52,000 pieces of woollen ſtuffs, of which there above 15,000 marked or ſtamped every year at the fair of Guibray only.

The pins made at Laigle and at Conches, the iron, ſteel, copper, and braſs wares made in the laſt-mentioned town, the tanneries of Argenton, Vomontiers, Conches, and Verneuil, the manufactory of wooden ſhoes, the large timber, boards, and ſmall timber, conveyed to the ſea by the rivers Drac and Tonques; the fattening of fowl, of which they ſend vaſt quantities to Paris, as alſo of butter and eggs, and the ſalt-petre of the election of Argenton, are pretty conſiderable branches of the trade which is carried on in the generality of Alençon. But there are two other branches of commerce which procure greater profits ſtill to this part of Normandy; theſe are the manufactories of glaſs, and the iron-forges.

As for the manufacturing of glaſs, it is eſteemed a noble profeſſion, none but gentlemen having the liberty to keep glaſs-houſes: they may be intereſted in this manufacture without derogating from their nobility.

The chief glaſs-houſes in this generality are, that of Nonant, in the foreſt of Exmes, that of Fortiſſambert, in the foreſt of Montpinſon, and the two which have been ſet up in the little diſtrict of Thimerais.

In the two former of theſe glaſs-houſes they make cryſtal glaſs, with the ſtone called by them chambourin, and fern-glaſs: in the two laſt they make hardly any but fern-glaſs, and a few cryſtal works.

As for the forges, the moſt conſiderable are at Chanſegray, Varennes, Carouges, Rannes, Conches, and Bonneville; this laſt, though it has been ſet up only ſince the beginning of the eighteenth century, equals, if it does not ſurpaſs the old ones, with regard to the good quality of it's iron, and of the works made there.

The neighbourhood of Domfront, and the little country of Houlme, are the places where the mines abound moſt, and from which they take the greateſt quantity of mineral matter for the keeping up of thoſe forges.

We ought alſo to reckon as a pretty conſiderable branch of the commerce of this generality, the great number of horſes which they feed in the paſtures of the country of Auge, and which are ſold at the fairs of Caen and Guibray: nor ought we to omit the fattening of cattle, which is afterwards ſent to Paris, or to the markets of Seaux, Roan, Neubourg, and the other chief cities of Normandy. We ſpeak of the horſes of this province in other places.

The manufactories of the city of Alençon, are of ſtrong ſerges, $\frac{2}{3}$ of a French ell wide, of ſtamines $\frac{1}{2}$ an ell wide, of crapes of the ſame breadth; but they make not much above 100 pieces of all theſe ſtuffs together per annum. They have nevertheleſs a pretty conſiderable trade in ſmall woollen ſtuffs, as druggets, tiretaines, and ſtamines of ſeveral ſtuffs: but theſe are wove in other places, and there are marked or ſtamped above 800 of them, one year with another, at the hall or office of Alençon.

We have already mentioned the manufactory of French point; we ſhall only add here, that moſt of the women in this city work at it, beſides a great many more, who are diſperſed in the neighbouring villages: ſo that above 800 perſons are employed in that manufactory, which affords a trade of above 50,000 livres per annum. Moſt of this point is ſold at Paris, whence they ſend part of it to the chief cities of the kingdom, and into foreign countries.

The manufactory of linens, which from this city are called linens of Alençon, is ſtill pretty conſiderable there, though much leſs than it was before the Proteſtants of France were forced to leave their native country; there being a great many of them among the weavers, and among the merchants who dealt in thoſe linens. They reckon, however, that the produce of this trade amounts ſtill to above 60,000 livres yearly, and this manufactory employs above 400 workmen in the city only, beſides thoſe of the country pariſhes. Moſt of theſe linens are ſent to Paris.

The tanneries of Alençon are pretty much eſteemed; they are of the number of thoſe, whoſe leather, according to the regulations, is to be ſent to Paris.

There are three conſiderable fairs kept at Alençon: the one on Candlemas day, the ſecond the firſt Monday in Lent, and the third at Midlent. The markets are kept three times a week, namely, every Monday, Thurſday, and Saturday.

TALAISE is a ſmall town, ſituate on the little river Ante. They make here and in the adjacent villages, light woollen ſtuffs, fine linen cloths, laces, and other works, for which they have a pretty good trade, and the neighbouring lands produce plenty of corn.

ARGENTON is ſituate on the banks of the river Orne. The trade of this city conſiſts chiefly in corn, linen cloths, hats, and tanned leather.

EVREUX is ſeated in a very fruitful plain near the river Eure. It is a very ancient city. The inhabitants trade in cloth, ſerges, and other woollen ſtuffs; they alſo make here linen cloth, and ſell a great deal of corn.

BEAUMONT LE ROGER, is a borough where they make woollen ſtuffs and linen cloth. This town is ſeparated only by a ſtone bridge over the Rille, from a large borough called Vielle, in which they bleach a vaſt quantity of linen.

VERNEUIL on the river Aure, trades chiefly in drapery wares, buttons, and corn.

VERNON, on the Seine, is a place of trade, which conſiſts chiefly in corn, wine, linen cloths, and woollen blankets.

NORTHAMPTONSHIRE is an inland county, ſituate in the centre of the kingdom of England, and bounded on the ſouth by Buckinghamſhire, on the weſt by Warwickſhire and Oxfordſhire, on the north by Leiceſter, Rutland, and Lincolnſhire, and on the eaſt by the counties of Bedford, Huntingdon, and Cambridge; and is in circumference about 120 miles.

The air is exceeding pleaſant and wholſome, and the ſoil very fruitful, both in tillage and paſturage, and abounds with ſheep and other cattle, wool, pigeons, and ſalt-petre. It's manufactures are ſerges, tammies, ſhalloons, boots, and ſhoes.

PETERBOROUGH, reckoned the leaſt city in the kingdom, ſtands on the river Nen, which is navigable to it by barges, in which they import coals, corn, &c. and export to the amount of 6000 quarters of malt in ſome years, beſides many other goods; but eſpecially of the woollen manufacture, either of cloth or ſtockings, in which the poor are conſtantly employed.

NORTHAMPTON, the county-town, ſtands at the conflux of the Nen, and another rivulet. The horſe-market here is thought to exceed any other of the kind in England, being reckoned the center of all in the kingdom, both for ſaddle and harneſs. It's moſt famous manufacture is ſhoes, of which great quantities are ſent beyond ſea; and next to that ſtockings. It is the deareſt town in England for fuel, where, 'till the river Nen be made navigable, which is now undertaken to Peterborough, no coals can come by water, and little wood grows on the land.

WELLINGBOROUGH, on the ſame river, is a large populous trading town; the greateſt trade it carries on is in corn, for which it's market is riſen on the decay of that of Higham-Ferrers. Nevertheleſs, here is alſo a manufacture of lace, ſo conſiderable, that it is ſaid to return 50 l. a week into the town, one with another, and therefore may be reckoned the ſecond town in the county.

TOWCESTER is a handſome populous town. The inhabitants here, of all ages, are employed in lace, and a manufacture of ſilk.

KETTERING is alſo a handſome town of good trade, pleaſantly ſituate by the river that runs into the Nen. Near 2000 hands are ſaid to be employed here in the manufacture of ſerges, ſhalloons, and tammies, eſpecially ſhalloons.

NORTH CAROLINA. Under the article BRITISH AMERICA, we have given a ſuccinct account of the commerce of the colonies in America belonging to theſe kingdoms; and have, among the reſt, taken notice of North Carolina; but it ſeems, from the information I have ſince received from ſome honourable perſons, well acquainted with that province, that the account I have given thereof, is imperfect, and therefore I have here taken the firſt natural opportunity that has offered, to ſupply that deficiency from the authentic materials which I have had the honour to receive for that purpoſe through the hands of the ATTORNEY GENERAL of that province.

This province, ſays my intelligence, is divided into 21 counties, all of them being large and extenſive; and they are ſettling very faſt by the outſellers of the other colonies, whoſe vicinity to the Indians in the French intereſt, rendered their ſituation very precarious and dangerous. By an accurate computation made in the year 1751, the white inhabitants then amounted to 35,000 at leaſt; but the negroes did not exceed 5000.

There are ſix principal thriving towns in it, which are rightly named and placed in our map of North America. See the MAP at the end of the firſt volume. In the northern and ſouthern parts of the province, the ſoil is different, the former being a rich mould, and the latter moſtly ſandy; which makes their produce different likewiſe. The commerce of the ſouthern diſtrict conſiſts chiefly in pitch, tar, turpentine, and lumber; and lately they have attempted to make indigo, and raiſe rice with good ſucceſs.

Their only port is Cape Fear, which is a very ſafe and ſhort navigation; and will eaſily admit veſſels of 500 tons. Upon this river are the two towns of Brunſwick and Wilmington ſituated; the firſt containing about 50, and the other about 100 houſes. In both theſe are very good wharfs, and ſafe lying for ſhipping.

Nearly in the center of the province is Newbern, the metropolis, ſituated on Neuſe river; which, being lately made the ſeat of government, is a very proſperous place, and conſiſts of 200 houſes at leaſt; their commodities are the ſame as at Cape Fear; but their navigation is not near ſo good: to remedy which, there is a propoſal now in agitation for cutting a canal, between 2 and 3 miles, in order to make a water communication with Port Beaufort, which will not only admit veſſels of very large burthen, but is ſituated ſo near to the ocean, that, in an hour's time, veſſels of any burthen may be cleared out to ſea.

The commerce of the northern diſtrict conſiſts chiefly of tobacco, beef, and pork, which they ſalt and ſend to the Weſt-Indies; alſo Indian corn, very good Engliſh grain, ſome lumber, and naval ſtores; and here likewiſe are raiſed hemp and flax, which will ſoon become a conſiderable article of their trade.

Their port, though at a good diſtance, is an excellent one, called Ocacock; but between this and them there is ſhallow water, where there are always lying convenient veſſels for lightening ſuch ſhips as draw too great a depth of water. This port ſerves for the three towns of Newbern, Bath Town, and Edenton. Bath is ſituated on Pantico river, and the neareſt to the ocean of the three; has an agreeable aſpect from the river, and has ſome good houſes in it. But the moſt beautiful ſituation of all, is that of Edenton, or Albemarle Sound. In this town the general aſſembly of the province, and courts of juſtice were formerly held; and at this time it is the great rendezvous of the Virginia merchants, who find their account in carrying on a very large trade with the northern parts of this province.

The trade of this diſtrict to England, is chiefly in the hands of ſome Liverpool merchants, who ſupply them with negroes and European goods, in exchange for their commodities. The timber is ſo plentiful and good, and there are ſo many convenient ſtreams, that the building of veſſels muſt turn to good account, and doubtleſs will be attempted by and by. Some ſamples of excellent ſilk have been ſent home from this place; but for this, as well as other profitable articles, there is wanting a public purſe, or fund, to enable particular perſons to ſupport the expence and hazards of their firſt eſſays; without which, it will be the work of after-ages to make it a particular branch of their trade.

The government of this province is conſtituted after the true model of that of England, and conſiſts of his majeſty's governor, the council, and the repreſentatives of the ſeveral counties and towns. The chief juſtice, attorney general, ſecretary, and other officers are appointed from home, and have their reſpective ſalaries out of his majeſty's royal revenue of quit-rents.

By the following liſt, we ſhall perceive how conſiderable a place of trade this is at preſent; and, from the particular kinds of produce, may be judged what it muſt ſoon be. As few years ago, it was almoſt ſcandalous to be known to be of this country. It was the jeſt and ſcorn of the other colonies, but is now a growing rival, and become an object of their envy and jealouſy.

An account of the number of ſhips and veſſels entering inwards, and clearing outwards in the ſeveral ports of North Carolina, for the years 1750 and 1751.

A true liſt. Ben. WHEATLEY, Naval-Officer.

REMARKS before the laſt WAR.

The attentive reader will obſerve, that, throughout the courſe of this work, after the repreſentation of the ſtate of trade, we have ſhewed the danger our colonies on the continent of America are in, from the near neighbourhood of the French, and from their encroachments upon the Britiſh rights there, and the American Indians in alliance with them: we have likewiſe ſhewed the inſecure and precarious ſtate of our iſland colonies, provided the pretenſions of the French upon St. Lucia, St. Vincent, and Tobago, ſhould be complied with by the crown of Great-Britain. What we have urged upon theſe important and intereſting points, may be found under the following articles, viz. BRITISH AMERICA, CANADA or NEW FRANCE, COLONIES, FRENCH AMERICA, LOUISIANA, MISSISSIPPI, PLANTATIONS. And ſtill further to evince the real political ſyſtem, that the court of France has ſteadily purſued, from the time of Monſ. Colbert to the preſent day, ſee the articles FRANCE, FLANDERS, NAVAL AFFAIRS, and alſo the article MAP.

And whether the preſent ſyſtem of the court of Spain, towards that of Great-Britain in particular, does not perfectly coincide with that of France in theſe reſpects, whereof we have treated under the ſeveral preceding heads, may be judged by conſulting the following articles, BISCAY, CASTILLE, CATALONIA, FLORIDA, LOGWOOD, MEXICO, MEDITERRANEAN, SPAIN, SOUTH SEA COMPANY, WEST-INDIES. And if it ſhall be found, upon due attention given to our plain and faithful repreſentations, that theſe two courts ſeem, at leaſt, to act in concert, in order to DISTRESS AND RUIN, IF IT BE IN THEIR POWER, THE WHOLE BRITISH COMMERCE AND NAVIGATION IN AMERICA, it is certainly needful that we ſhould be upon our guard, and take the alarm. Some miſtaken people may, perhaps, ſuſpect me of a deſign to plead for a war, under pretence of aſſerting the BRITISH RIGHTS. But I moſt ſolemnly proteſt a thought of that nature is ſo contrary to my intentions, and ſo foreign to my inclinations, that I heartily and ſincerely wiſh, if conſiſtent with our honour, intereſt, and ſafety, we may ever avoid one. Nor can any one, who has done me the honour (as numbers of the greateſt perſonages in this, and other kingdoms have done) to peruſe, with candour and impartiality, what I have humbly ſubmitted to the public conſideration, have the leaſt reaſon to entertain any ſuch ſuſpicion of my intentions: on the contrary, we might ſhew, not only from a variety of palpable inſtances, but from the general tenor of the work, that nothing more remote ever entered into our thoughts. We have endeavoured to ſhew the folly and infatuation of going to war, 'till every other meaſure in our power is tried to avoid one. We have ſhewed that we have never yet got any thing by wars, but a LOAD OF DEBTS AND TAXES; for the honourable

nourable redemption of which we have ever pleaded; but this cannot be done in a time of war.—It is true we have diſplayed the policy of France, in relation to their acquiſitions, and the foundation laid for the increaſe of their commerce and maritime power, in a light wherein they never before appeared in this nation. Can any one uncandidly judge this to be done with a view to quarrel with that kingdom? We have laid open their commercial policy, with intent to point out what therein may deſerve our imitation; as well as to put the nation upon it's GUARD AGAINST THE CONSEQUENCES, which muſt inevitably attend ſuch wiſe and profound meaſures as that kingdom has taken for the proſperity of their trade, and the riſe of ſuch a NAVAL POWER, as may one day make this nation tremble.

In this light the policy of the French appears to me, from entering very minutely, as occaſion offered, into their conduct, in regard to theſe capital points: and, indeed, to talk about that, or any other ſtate in general, as we have hitherto always been wont to do, is to deceive ourſelves; and, therefore, the more particular and diſtinct our knowledge is of the COMMERCIAL POLICY OF OTHER NATIONS, the leſs ſhall we be ever liable to be miſled and impoſed on in our public conduct towards them. But nothing of this kind, perhaps, could have been ſo effectually done, as in a work of this nature, and that conducted upon the plan whereupon I have endeavoured to execute it; becauſe one part of the work explains, illuſtrates, and confirms the truth of the other, though conſidered in various and different lights; than which, nothing of this kind can admit of a greater degree of probability, if not of certainty.

That we have no intention to embroil the nation, either with France or Spain, &c. the reader is deſired to turn to our articles DUTCH WEST-INDIA COMPANY, LOGWOOD, and MEXICO, and he will meet with an expedient, under the article LOGWOOD, humbly ſubmitted to conſideration, to reconcile thoſe miſunderſtandings amicably, that we have ſo many years had with the court of Spain; and time will ſhew, whether our ſuſpicions are ill-grounded. In relation alſo to France, we have only ſpoken plain truths, with great decency and moderation, and as often with great honour to the wiſdom of that kingdom, as with contempt of their inſincere conduct towards Great-Britain and other nations on certain occaſions. See our article PLANTATIONS, relative to the perfidy of France, for above this century paſt.

We have judged neceſſary to mention theſe things here, leſt what we are about further to urge againſt the conduct of the French in North America, ſhould be miſconſtrued. For what we have foreſeen for ſome years ſince, in regard to the inſecurity of our colonies on the continent of America, ſeems to draw towards the fulfilment; which appears from the following authentic ſpeech of the honourable Robert Dinwiddie, Eſq; his majeſty's lieutenant-governor, and commander in chief of the colony of Virginia, to the general aſſembly of the ſaid colony, on the 14th of February, 1754. And, as North Carolina is a near neighbourhood to Virginia, and this is a very recent occurrence, and confirms our ſuſpicions, with reſpect to the candour and uprightneſs of French meaſures, we judge it uſeful to introduce the ſame under this head; and we ſhall give the ſpeech at large, as it has been tranſmitted to England from Virginia.

Gentlemen of the council, Mr. Speaker, and gentlemen of the houſe of burgeſſes.

'Nothing leſs than a very important concern, could have induced me to call you together again, after ſo ſhort a receſs; but the dignity of the crown of Great-Britain, the welfare of all the colonies on this continent, and more eſpecially of this dominion, engage me to have your advice and aſſiſtance, in an affair of the greateſt conſequence.

Major Waſhington, who was ſent by me to the commandant of the French forces on the river Ohio, being returned, informs me he found that officer at a fort they had erected on a creek running into the Ohio, and that they were then preparing all neceſſaries for building another fort on that river; that they had two hundred and twenty canoes made, and many more rough hewed to be made, in order to tranſport, early this ſpring, a great number of regular forces, not leſs than fifteen hundred men, with their Indians in friendſhip with them, down the river Ohio, in order to build many more fortreſſes on it; and that they propoſed Loggs town to be the chief place of their rendezvous.

Major Waſhington further reports, that he aſked why they had ſeized the goods of the traders, and ſent their perſons priſoners to Canada; to which the commandant anſwered, "that his orders from their general, the governor of Canada, were, not to permit any Engliſh ſubjects to trade on the waters of the Ohio, but to ſeize their goods and ſend them priſoners to Quebec." He alſo aſked the reaſon of taking Mr. Frazier's houſe from him, which he had built and lived in upwards of twelve years? He ſaid, "that man was lucky that he had made his eſcape, or he would have ſent him priſoner to Canada."

Theſe tranſactions are entirely inconſiſtent with the treaties, ſubſiſting between the two crowns, and contrary to my inſtructions from his majeſty, whereby I am directed to prevent any foreign power, ſettling or building any fortreſſes on his majeſty's lands.

Add to the aforeſaid unjuſtifiable inſults of the French, the cruel and barbarous murder, in cool blood, of a whole family in this dominion, man, wife, and five children, no longer ago than laſt month; and very lately a poor man on the ſouth branch of Patowmack, robbed of his ſon. Theſe depredations were ſaid to be done by the French Indians; but if I be rightly informed, ſome of the French ſubjects always go with the Indians on theſe incurſions, and are both privy to, and inſtigators of, their robberies and murders.

How compaſſionable muſt then be the diſtreſsful ſituation of that poor unhappy family; ſurrounded by a crowd of miſcreants, dreadfully running on to perpetrate the moſt ſavage barbarities, inexorable to the parent's intreaties, inſenſible to the cries of the tender infant, baſely determined to deſtroy, without provocation, thoſe who could not reſiſt their violence. Think you ſee the infant torn from the unavailing ſtruggles of the diſtracted mother, the daughters raviſhed before the eyes of their wretched parents; and then, with cruelty and inſult, butchered and ſcalped. Suppoſe the horrid ſcene compleated, and the whole family, man, wife, and children (as they were) murdered and ſcalped by theſe relentleſs ſavages, and then torn in pieces, and in part devoured by wild beaſts, for whom they were left a prey by their more brutal enemies.

But how muſt your indignation riſe when you extend your view to the abettors of theſe villainies! Such are the people whoſe neighbourhood you muſt now prevent, or with the moſt probable expectation think to ſee, in the boſom of your country, theſe evils, that you as yet have only the melancholy tidings of from your frontiers.

Conſider the bloody villains, thieviſhly lurking about a man's plantation, and where they dare not attack like men, baſely, like vermin, ſtealing and carrying away the helpleſs infant, that happened to wander, though but a little diſtance from his father's threſhold.

I aſſure you, gentlemen, theſe inſults on our ſovereign's protection, and barbarities on our fellow-ſubjects, make deep impreſſions upon my heart; and I doubt not, as you muſt hear them with horror and reſentment, but you will enable me, by a full and ſufficient ſupply, to exert the moſt vigorous efforts to ſecure the rights and aſſert the honour and dignity of our ſovereign; to drive away theſe cruel and treacherous invaders of your properties, and deſtroyers of your families, and thereby to gratify my warmeſt wiſhes in eſtabliſhing the ſecurity and proſperity of Virginia, on the moſt ſolid and permanent foundation.

I muſt earneſtly recommend to you his majeſty's commands, for a proper ſupply, the immediate neceſſity whereof, at this time, I deſire you will ſeriouſly conſider, and by a ready and effectual compliance, recommend yourſelves and the country to his royal favour.

This is your part, gentlemen.—What I could, before your meeting, I have done, for the public; and by the advice of the council I have arrayed ſome part of the militia, which I have ordered up to the Ohio with all poſſible expedition, to build a fort there, at the forks of Monongahela. And as his majeſty's gracious preſent of thirty pieces of cannon, eighty barrels of powder, and other ordnance ſtores ſuitable are arrived, I have ſent ten of the cannon, and a proportion of ammunition to Alexandria, to be from thence tranſported as ſoon as poſſible to the Ohio.

I have wrote to the neighbouring colonies for their aid and aſſiſtance, which I have good reaſon to expect; but I muſt obſerve to you, that their eyes are fixed on your proceedings, and I hope you will engage them, by a laudable example, to contribute ſufficiently for the common cauſe.

The late occaſion having ſuggeſted to me ſome defect in the "act for making proviſion againſt invaſions and inſurrections," I think proper to obſerve to you, that the pay is very unequally proportioned, being too high for the ſoldier, and too low for the officer; and there is no proviſion made for a doctor, a commiſſary of ſtores, and ſeveral other requiſites.—I think it would be better to pay the militia in money than tobacco, by which there may be a ſaving to the country, and the men better ſatisfied.

Gentlemen of the council, and gentlemen of the houſe of burgeſſes.

I look upon the ſafety and welfare of Virginia to depend on your counſels and determinations, at this critical juncture, which, therefore, ought to be uninterrupted by any avocations from prejudice, or unſeaſonable diviſions, at all times the bane of public conſultations, but which, at preſent, would be particularly fatal; and I doubt not, when you ſeriouſly conſider the importance of what is laid before you, you will find duty, honour, and your own preſervations, all united, to engage you to exert your efforts equal to the occaſion.

The ſeaſon for entering upon action being ſo near at hand, your ſeſſion can be but ſhort; and I deſire to conclude with an earneſt exhortation to concord and expedition, leſt if we be divided, or ſlow in deliberation, our enemies may ſeize the time we loſe, and render any future efforts ineffectual.

And

And in all meaſures for his majeſty's ſervice, and the good of this colony, you will have my ready and zealous concurrence.'

February 16, 1754.

To the honourable Robert Dinwiddie, Eſq; his majeſty's lieutenant-governor, and commander in chief of the colony of Virginia.

The humble addreſs of the council.

SIR,

'We his majeſty's faithful and loyal ſubjects, the council of Virginia, now met in general aſſembly, beg leave to return your honour our hearty thanks, for your kind ſpeech at the opening of this ſeſſion.

We cannot forbear to expreſs our juſt indignation at the unwarrantable encroachments, and hoſtile proceedings, of the French; and, at the ſame time, to teſtify our approbation of the prudent ſteps already taken by your honour, for the defence and ſecurity of the colony.

Our ardent zeal for the ſupport of his majeſty's crown and dignity, and our tender regard for the welfare and proſperity of our country, will incline us, by a chearful concurrence with the houſe of burgeſſes, to exert our moſt vigorous efforts to ſupport and effectuate your honour's proceedings, in what we agree to be the common cauſe of all the Britiſh colonies upon the continent, and more eſpecially of this dominion: and we aſſure your honour, that in all our conſultations, we will proceed with that harmony and diſpatch that the importance of the ſubject, and advanced ſeaſon require.

We cannot conclude without our earneſt prayers, that your honour's conſtant labours may be crowned with their deſerved ſucceſs; and our warmeſt wiſhes, that our country may long continue to flouriſh under your honour's adminiſtration; from whence we may with reaſon hope to ſee her ſecurity and proſperity eſtabliſhed, on the moſt ſolid and permanent foundation.'

To which his honour was pleaſed to return the following anſwer:

Gentlemen of the council,

'I return you my ſincere thanks for your kind addreſs, and do aſſure you it gives me great pleaſure, that the ſteps I have taken in the preſent ſituation of our affairs meet with your approbation.

Your ardent zeal for his majeſty's crown and dignity, and your regard for the proſperity and welfare of our country, with your intentions of concurring with the houſe of burgeſſes, to exert the moſt vigorous efforts for ſupporting me in my proceedings againſt the enemy, call for my moſt unfeigned thanks.

And I have not the leaſt doubt of your proceeding with harmony, diſpatch, and reſolution, on the preſent emergency.—I am much obliged for your prayers for ſucceſs to my endeavours, which I aſſure you ſhall always be with a view for the welfare and proſperity of this dominion; and I hope, by our conduct, that our enemies will ſee we are not diſunited, but cloſely connected in defence of our rights and liberties.'

Virginia, ſſ.

By the Hon. Robert Dinwiddie, Eſq; his majeſty's lieutenant-governor, and commander in chief of this dominion.

A proclamation for encouraging men to enliſt in his majeſty's ſervice, for the defence and ſecurity of this colony.

Whereas it is determined that a fort be immediately built on the river Ohio, at the fork of Monongahela, to oppoſe any further encroachments or hoſtile attempts of the French, and the Indians in their intereſt, and for the ſecurity and protection of his majeſty's ſubjects in this colony: and, as it is abſolutely neceſſary that a ſufficient force ſhould be raiſed to erect and ſupport the ſame, for an encouragement to all who ſhall voluntarily enter into the ſaid ſervice, I do hereby notify and promiſe, by and with the advice and conſent of his majeſty's council of this colony, that over and above their pay, two hundred thouſand acres of his majeſty the king of Great-Britain's lands, on the eaſt ſide of the river Ohio, within this dominion (one hundred thouſand acres whereof to be contiguous to the ſaid fort, and the other hundred thouſand acres to be on or near the river Ohio) ſhall be laid off and granted to ſuch perſons, who by their voluntary engagement, and good behaviour in the ſaid ſervice, ſhall deſerve the ſame. And I further promiſe, that the ſaid lands ſhall be divided amongſt them, immediately after the performance of the ſaid ſervice, in a proportion due to their reſpective merit, as ſhall be repreſented to me by the officers, and held and enjoyed by them, without paying any rights, and alſo free from the payment of quit rents, for the term of fifteen years. And I do appoint this proclamation to be read and publiſhed at the court houſes, churches, and chapels, in each county within this colony, and that the ſheriffs take care the ſame be done accordingly.

Given at the council chamber in Williamſburg, on the 19th day of February, in the 27th year of his majeſty's reign, anno dom. 1754.

ROBERT DINWIDDIE.

GOD ſave the KING.

That we may judge of the intended meaſures of the French in relation to our North American colonies, it is confidently ſaid, that by letters lately received from Virginia, brought over by the ſhip Seahorſe, Capt. Jump, we are informed, that the French have erected FIVE FORTS, and garriſoned them with 1500 regular troops, on the part of the Britiſh territory at the back of Virginia, which is neareſt to Quebec, contrary to treaties. It is imagined that this breach of faith will be attended with very ſerious conſequences.

REMARKS on NORTH CAROLINA ſince the laſt WAR, and the DEFINITIVE TREATY of 1763.

This work was firſt began ſoon after thet reaty of AIX LA CHAPELLE; and having pretty vigilantly attended to the conduct of the court of France from that time, towards GREAT-BRITAIN, we thought it our duty to give a faithful repreſentation thereof, from time to time, as we proceeded herein, to the end, that where our COMMERCIAL INTEREST was likely to be concerned, the nation might be duly apprized and alarmed, when that intereſt was in imminent danger. Our conduct in this reſpect, was regarded by many, and commended as becomingly zealous; others put a leſs favourable conſtruction upon it, and declared our apprehenſions of a freſh war with France, ſo ſoon as we did, after the peace in 1748, were chimerical and viſionary, and that our labours were rather of the incendiary kind than otherwiſe: all which have proved miſtakes on our cenſurers ſides; yet we have not a little ſuffered in our private affairs by our honeſt declaration of bold truths, all which the event has proved to be true, ſo far as they related to the injurious intentions of France towards our North American colonies.

I had alſo, ſo far as the ſame regarded our commercial ſpeculations for the benefit and advantage of theſe kingdoms, attended to the conduct of the court of Spain, and from thence likewiſe prejudged, that court would join France ſooner or later, after the commencement of the French war; which was condemned by ſome as a premature ſuggeſtion, though verified by the event: nay, ſo minutely had we obſerved the conduct of the Spaniſh court, that we apprehended they would revive the claim of the Guipuſcoans to a ſhare in the Newfoundland fiſheries, which came to paſs accordingly, and by the xviiith article of the DEFINITIVE TREATY of 1763, his Catholic majeſty deſiſts, as well for himſelf as his ſucceſſors, from all pretenſions which he may have formed, in favour of the Guipuſcoans, and other his ſubjects, to the right of fiſhing in the neighbourhood of the ISLAND OF NEWFOUNDLAND.

Theſe things are not intimated, to induce our readers to entertain any extraordinary opinion of our foreſight: they are noticed only to excuſe ourſelves in the eye of thoſe, who judged once unfavourably of our occaſional obſervations; and who, on that very account, have done us unſpeakable perſonal injury, for which they can never make us a compenſation were they diſpoſed ſo to do: but this we never expect. We ſtill live, and perhaps, we may preſage ſome other things, that may not be leſs diſagreeable to thoſe who regard their own intereſt, and their own ambition in preference to that of the public good and proſperity: and if events ſhould hereafter happen to turn out as we apprehend they will, we can only attribute it to our honeſt impartiality in repreſenting things as they appear to us, from the evidence of FACTS and EXPERIENCE. See our article MEXICO, FLORIDA, INDIAN AFFAIRS, and others to which from thence we refer.

NORTHUMBERLAND in England, is a maritime county bounded on the ſouth by the biſhoprick of Durham, on the north by Scotland, on the weſt by Cumberland, and part of Scotland, and on the eaſt ſide it is waſhed by the German Ocean, and is about 150 miles in circumference. The air is in general pleaſant and healthy; as for the ſoil it is various, being very fruitful on the ſea-coaſt if well manured and cultivated. The weſt parts are indeed mountainous, but afford good paſture for ſheep.

It abounds more with coal, eſpecially about Newcaſtle, than any other county in England. It is almoſt impoſſible to expreſs the vaſt trade brought into this county by the exportation of coals to all parts, inſomuch that London alone, before there was half the number of brewers and diſtillers that there is now, was ſaid to conſume 600,000 chaldrons in a year.

It's chief rivers are the Tyne and Tweed, which laſt ſo abounds with ſalmon, that the fiſhermen often take great numbers of them at one draught.

NEWCASTLE, the county town, ſtands on the north bank of the river Tyne.

By the ſale of it's coal to other parts of England, and other merchandize, it is become the great emporium of the north parts

parts of England, and a good part of Scotland, and is the faireſt and largeſt town of the north next to York. Ships of any reaſonable burthen load and unload at it's key. But the coal-ſhips generally load below, between the town and Shields, or at Shields, which is ſeven miles diſtant, the coals being carried to them in large lighters called keels, of which ſo many are employed, that the keelmen are reckoned above 6000. The town is extremely populous and very wealthy, and is ſaid to have the greateſt public revenue in it's own right, as a corporation, of any town in England, it being computed at no leſs than 8000 l. a year.

This place is famous for grind-ſtones, much better than thoſe that uſed to come from Spain, which are of too ſoft a grit, and therefore not ſo uſeful for many purpoſes. There is ſuch a demand for them, that ſcarce a ſhip ſtirs from this port without them. Beſides many glaſs-houſes, a conſiderable manufacture has been lately ſet up here, of hard ware and wrought iron, after the manner of that at Sheffield.

MORPETH, on the river Wentſbeck, has a good market on Saturday for corn, cattle, and all neceſſary proviſions; but that on Wedneſdays is the greateſt in England for live cattle, except Smithfield.

BERWICK, at the mouth of the Tweed, is the laſt town in the north of England, a county and town of itſelf, and though ſituate on the north ſide of the river, is included in Northumberland. It is a large well built populous town. Here is a noble ſalmon-fiſhery as fine as any in Britain, they being the fiſh that are carried by land on horſes to Shields, to be cured, pickled, and ſent to London, where they are cried for Newcaſtle ſalmon. Here is alſo a conſiderable manufacture of fine ſtockings. The harbour is but mean, neither is there any good riding in the offing near the bar, for the ſhore is ſteep and rocky.

NORTH SHIELDS, is a populous town at the mouth of the Tyne, chiefly inhabited by ſailors and maſters of ſhips, as ſuch port-towns generally are. The river here forms a little bay, which is a deep ſafe road for the colliers, of which 400 ſail are ſometimes lying here laden.

NORWAY, is bounded on the ſouth by the entrance into the Baltic, called Schager-Rack, or Categate, on the weſt and north by the Northern Ocean, and on the eaſt it is divided from Sweden by a long ridge of mountains, called at different parts by different names; but they are commonly by hiſtorians ſtiled the Dofrine Mountains.

This country lies between the 5th and 31ſt degrees of longitude eaſt of London, and between the 57th and 71 30 of north latitude, ſo that it extends about 5 degrees and a half beyond the polar circle: and the longeſt day in the moſt northern parts, is above two months. It's length, all along the coaſt, from Wardhus in the north-eaſt, to the Naze in the mouth of the Baltic, is about 1080 miles; but it's breadth is unequal, being about 180 miles in ſome places, and not near ſo much in others. It's ſituation, chiefly in the moſt northern part of the temperate zone, and partly in the frigid zone, renders the air extremely cold, and the ſoil barren. It produces little or no corn, which is imported thither from other countries to Berghen, the only town which has the privilege to diſtribute it into the reſt of the kingdom.

The moſt ſouthern parts, indeed, produce ſome wheat; but the reſt of the country is ſandy and gravelly, and has nothing but rocks, woods, and mountains; ſo that it's wealth conſiſts chiefly in the vaſt foreſts and mighty fir-trees, whoſe uſefulneſs in building, makes the merchants of England, Holland, and other nations, flock thither to purchaſe them. The earth has mines of iron, copper, and ſome ſilver, which, with pitch, tar, and fiſh, whereof great quantities are taken on the coaſt, are the commodities of this country. In the vallies they have a good breed of black cattle, and of ſmall horſes, very ſwift, and capable of fatigue.

Norway is divided into four governments, or preſectorſhips, which are thoſe of Aggerus, Berghen, Drontheim, and Wardhus; beſides that of Bahus, which is ſubject to Sweden, and the ſeveral iſlands depending on Norway.

The province of AGGERUS is the ſouth-eaſt part of Norway, and is ſituated between the province of Berghen on the weſt, from which it is ſeparated by vaſt mountains, Dalcarlia and Bahus which belong to Sweden on the eaſt, the mouth of the Baltic, called the Categate on the ſouth, and the province of Drontheim on the north. It's extent from ſouth to north is about 300 miles, and from eaſt to weſt in the ſouth part about 120; but it grows narrower northward, 'till it ends in a point. The land is mountainous and woody, but the vallies are tolerably fruitful, being watered by many lakes and rivulets, which paſs through the country, and fall into the Baltic: it is divided into ſix particular governments, viz. Agdeſinden, Hallingdal, Hammer, Hannemark, Rommerritkir, and Tellemack. There are ſeveral ſea-ports, particularly Fleckeſen, where the fiſhing-trade affords a pretty conſiderable income.

CHRISTIANA, the chief city of this province, ſeated at the bottom of a narrow bay, and is 30 miles diſtant from the Baltic, and about 110 from Schagen cape in Jutland, to the north. This is a place of good trade for fir-timber, pitch, &c. Great quantity of mackarel is caught here, and much pearl; of which Henricus Arnoldi, a Dane, gives the following account. Their ſhells are like thoſe of muſcles, but larger, and the fiſh like an oyſter, which produces a great cluſter of eggs, like thoſe of cray-fiſh, ſome white and ſome black. Theſe eggs when ripe are caſt out, and grow like the ſhell, from whence they came: but ſometimes it happens, that one or two of thoſe eggs ſtick faſt to the ſide of the matrix, and are voided with the reſt; which being fed by the fiſh, in time they grow into pearls of different ſizes, and imprint a mark, both in the fiſh and in the ſhell, of the ſame figure with themſelves.

FREDERICKSHALL ſtands on the Categate, at the mouth of the river Glammen, which Mr. Voltaire calls Liſtendall, which riſes in the Dofrine mountains, in the province of Drontheim, and having paſſed through that of Aggerus, falls here into the ſea, and by the conveniency thereof affords this city a pretty good trade. It is about 50 miles diſtant from the town of Aggerus towards the ſouth-eaſt, and is very well fortified and of ſuch importance, that it is reckoned the key of this kingdom.

SALTZBERG is a ſmall town on the river Drammon, which falls into the bay of Chriſtiana, from which city it is about 15 miles diſtant to the north. It has a pretty conſiderable trade from the neighbouring copper and iron mines.

SKEEN, or SCHEEN, a few miles from Tonſberg, ſtands on the Categate; both theſe towns are places of good trade, by means of the above-mentioned mines. A ſilver one was diſcovered in the neighbourhood under the reign of Chriſtian IV. but it appears it is no rich one, ſince it is not worked at preſent.

BERGHEN province, takes up the moſt ſoutherly, and almoſt the whole weſterly part of Norway, and is ſurrounded by the ſea on the ſouth, ſouth-weſt, weſt, and north.

The chief towns of trade here are as follow:

1. BERGHEN, an ancient and famous ſea-port, ſtands on a crooked bay called Jelleſiord, into which veſſels enter by a narrow ſtraight named Carmeſundt, which is bordered on each ſide with high rocks for ſeveral miles together. This town is 137 miles diſtant from Chriſtiana, to the north-weſt. The bay here is ſo deep, that veſſels of above four hundred tons can enter it, and come to load and unload before the merchants warehouſes.

The inhabitants are partly natives of this country, and partly Germans and Danes, whom the conveniency of this town for trade has drawn thither, this being the principal mart and magazine for ſeveral merchandizes; divers ſorts of fine furrs, vaſt quantities of hides, tallow, fir timber, &c. being brought hither from the neighbouring provinces, and ſhipped off to foreign parts. The inhabitants drive alſo a conſiderable trade in ſtock fiſh, which are taken on theſe coaſts and in the lakes in January, and dried in the open air.

The privileges granted by the king of Denmark to ſtrangers make them flock to this town, and import thither thoſe neceſſaries of life which the country does not produce; as wheat, rye, biſcuits, beer, wine, brandy, &c. which they exchange for the merchandizes above-mentioned. There is at Berghen a factory called the cloiſter, in which a community of merchants live, who are ſtiled monks, though they wear no particular habit, and have nothing in common with monks, except that they are not married.

STANANGER, the chief town of the diſtrict of the ſame name, ſtands in the bay called Buckenfiord, which is very ſpacious, and full of ſmall iſlands, and is 180 miles diſtant from Berghen to the ſouth, and 100 from Chriſtiana to the weſt. The harbour is very large and ſafe, and it would have a greater trade than it has, were it not for the neighbourhood of Berghen.

DRONTHEIM is the largeſt government of Norway, it lies along the coaſt of the North Sea, being about 500 miles in length, from ſouth to north. It has the North Sea on the weſt, the government of Wardhus on the north, that of Berghen on the ſouth, and on the eaſt it is ſeparated from Sweden by a long ridge of mountains. It extends from the 61ſt to the 69th degree of latitude: it's greateſt breadth from eaſt to weſt, is not above 120 miles, and in many places it is much leſs. The country is mountainous, woody, cold, and barren; ſo that though it be large, the towns are not very conſiderable. This whole country is very thinly peopled, and not cultivated but along the ſea ſhore, 'till within 25 or 30 miles from it.

The moſt conſiderable towns here are as follow:

DRONTHEIM, formerly the capital of Norway, is ſeated on the coaſt of the Northern Ocean, on a little gulph at the mouth of the river Nidar, from whence it was anciently called Nideoſia. It is about 220 miles diſtant from Berghen to the north-eaſt. It has a harbour pretty well frequented by ſmall veſſels, though very incommodious for large ones, the enterance being obſtructed by rocks. This town has a pretty conſiderable trade, conſiſting in ſmall maſts and fir deals. They alſo ſhip off here a large quantity of copper, the mines of which are eighteen or twenty miles diſtant from this town, near the village of Steckby. At the diſtance of ſix miles from thoſe mines, there is a ſilver one belonging to the king. The other merchandizes exported from thence are, iron, tar,

furrs, aſhes, goat-ſkins, &c. and they import in exchange, ſpices, wine, brandy, vinegar, cheeſe, tobacco, coarſe cloths, and a great many old rixdollars. The country round about is very barren; and even wood is ſo ſcarce, that a little beyond the town, the people are obliged to uſe fiſh-bones for fuel, and for ſeveral utenſils.

LEERSTRAND is about 10 miles diſtant from Drontheim to the ſouth.

STRONDEN lies on the river Nider, 40 miles above Drontheim towards the ſouth-eaſt.

SCOERDALE is about 20 miles diſtant from Drontheim to the north-weſt, on the other ſide of the ſame bay.

OPDAL lies at the bottom of a narrow bay, 40 miles from the ocean, and about 65 from Drontheim to the ſouth.

ROMSDAEL, or ROMSDALEN, ſtands on the bottom of another bay, 40 miles from Opdal to the weſt, and 70 from Drontheim to the ſouth-weſt.

SOLENDAEL ſtands on another bay, about 30 miles from Romſdael to the ſouth-weſt.

Theſe are all places of ſome trade.

Between the iſlands of Sallere and Vero, is the famous gulph or whirlpool called MAELSTROM, in lat. about 68 degrees, ſaid to be 40,000 geometrical paces in circumference. Seamen call it the Navel of the ſea, Umbilicus maris. Several authors give the following deſcription of it: it is, ſay they, fatal to ſhips that come too nigh in the time of flood, when the ſea, for two leagues round, forms ſuch a terrible vortex, that it ſwallows up every thing that comes near it; and during the ſix hours of ebb, it throws out the water with ſuch violence, that the heavieſt bodies cannot ſink if thrown into it, but are caſt back again by the impetuous ſtreams. Veſſels ſwallowed up by this whirlpool are caſt up again ſhattered to-pieces, being daſhed againſt the rocks within it. Between the ebb and the flood there is an interval, during which ſhips can ſafely ſail over it, the water being then ſtill, but, during the ebb and flood the water makes, they ſay, a prodigious noiſe. Francis Neri, an Italian, who travelled into Norway, obſerves, that there is no whirlpool here, but only a rapid current, which makes a great noiſe during the ſix hours of flood, which noiſe is occaſioned by the water's daſhing againſt ſeveral ſmall iſlands, or rocks, which repel the ſtreams now to the ſouth and then to the north, ſo that they ſeem to whirl about. During the ebb the water is ſo ſtill, that ſmall boats can croſs from one iſland to another without any danger. This account is more rational, and more agreeable to truth, than the poetical relations given us by ſeveral travellers, and particularly by the German author of the Curioſus Antiquarius, who give us a moſt frightful deſcription of this pretended whirlpool.

WARDHUS is bounded on the north and weſt by the ocean, on the eaſt by Muſcovite Lapland, and on the ſouth-weſt by the government of Drontheim. It's extent from eaſt to weſt is about 310 miles, and 200 from ſouth to north, that is to ſay, to the north cape, including the iſlands. It is divided into two parts: the weſtern and maritime is called Finmark, and the eaſt and ſouthern Norvegian, or Daniſh Lapland. It being the moſt northern part of Norway, we cannot expect here much produce of the earth, or plenty of people, and conſequently no cities or conſiderable towns that make any figure in hiſtory.

WARDHUS, ſituated in an iſland called Ward, from whence this province has it's name. It is the ſeat of the governor, and is, properly, nothing but a caſtle, with a ſtreet or ſmall town of cottages, inhabited by fiſhermen. The iſland lies on the north-eaſt point of Norway, near the borders of Muſcovite Lapland, and is ſmall, being but 14 or 15 miles in circumference. It is about 3 or 4 miles diſtant from the continent. The caſtle is ſo old that it falls to ruin, and has no manner of fortifications, though it was built to protect the fiſhermens huts, of which there are great numbers along the coaſt. The inhabitants of this and the neighbouring iſlands, live upon dried ſtock-fiſh, and have neither bread nor beer but what is brought them from other parts by the Engliſh and Dutch ſhips, that come this way for fiſh.

BAHUS, though yielded to the Swedes in 1658, by the treaty of Roſchild, is yet reckoned a part of Norway, for which reaſon we think it proper to give an account of it in this place. It is the moſt ſouthern province of Norway, and is a narrow track of land, lying on the coaſt of the Schager-Rack, or Categate, about 90 miles in length from ſouth to north. It has Weſt Gothland on the ſouth, Dalia on the eaſt, the government of Aggerus on the north, and the Categate on the weſt. It's breadth is not proportionable to it's length, being in ſome parts but ten miles broad, and in none above 25. The country is fruitful enough, but a great part of it is taken up by large lakes. It is divided into two parts, Iſland and Wickliden.

The chief places are,

MAELSTRAND, or MARSTRAND, the capital of Wickſiden, is a ſtrong town built on a rock, is a kind of peninſula, about 10 miles below Bahus; it is a place of great trade for herrings, and other ſea fiſh.

There are a great number of iſlands beſides thoſe we have already mentioned, along the coaſt of Norway, but they are not conſiderable enough to deſerve a particular account. See DENMARK.

Trade between ENGLAND, NORWAY, and DENMARK.

Norway and Denmark take from England guineas, crown pieces, and bullion, a little tobacco, and a few coarſe woollens of ſmall value.

England imports from Norway, &c. vaſt quantities of deal-boards, timber, ſpars, and iron. We pay them a very great balance, and their rebuilding great ſhips of burthen, deſtroyed in the war between them and Sweden, has again pretty well re-eſtabliſhed them in the navigation and freight of their timber, and greatly increaſed their balance upon this nation. See NAVAL STORES, and DENMARK.

REMARKS before the laſt WAR.

Frederic IV. king of Denmark, was always inclined to promote the welfare and trade of his ſubjects, and took care of every thing that might contribute to their benefit; but, towards the end of his life, it was thought he liſtened too much to projectors, who induced him to enter upon ſchemes which were not always attended with the conſequences he expected from them. He died, however, at the age of 60, greatly regretted, on the 2d of October, 1730.

His ſon, the late king Chriſtian VI. aſcended the throne of his anceſtors with univerſal reputation. He had, in his father's life-time, been very attentive to the concerns of the Eaſt-India company, and had been, in a great meaſure, the ſupport of it, which induced the people to hope that a particular regard for trade would be the principal view of his reign; and ſo indeed it proved.

At his acceſſion to the government he made many changes, but all of them in ſuch a manner as to give great ſatisfaction to his ſubjects, who were particularly pleaſed with his aboliſhing a farm that had been eſtabliſhed in his father's time, for vending wine, brandy, ſalt, and tobacco, which was very burthenſome to the ſubject, however advantageous to the prince. Such as were intereſted in the farm offered to advance larger ſums if it might be continued; but the king anſwered, It brought in but TOO MUCH, ſince his ſubjects complained of the EXACTIONS which it occaſioned.

He ſoon after erected a COUNCIL OF TRADE, whoſe buſineſs is to examine all propoſals that are made for extending it, in order to give ſuch encouragement as may be neceſſary for carrying them into execution. He likewiſe ſent for workmen out of Holland, and other countries, at his own expence, to eſtabliſh manufactures in Denmark, and took every other ſtep for their encouragement that his people could either deſire or expect. Amongſt others, he erected a ROYAL BANK, which has been attended with many advantageous conſequences; was always careful to keep his fleet and army in a proper condition to render him reſpected by his neighbours; and, to prevent the expence occaſioned thereby from becoming burthenſome to his people, he from time to time alſo made treaties of ſubſidy with foreign powers, which brought in large ſums, without expoſing him to the neceſſity of taking any ſhare in the quarrels either in the North or Germany.

His ſon, Frederic V. the preſent poſſeſſor of the throne, ſucceeded to it July 26, 1746, in the 23d year of his age; he eſpouſed, about three years before, the princeſs Louiſa of Great-Britain, by whom he has an heir apparent, born January 18, 1749. Upon his firſt taking the reins of government into his hands, he thought fit to make a few alterations, very judicious in themſelves, and acceptable to his ſubjects. He has ſteadily purſued his father's maxims, in maintaining peace, improving the trade, and encouraging the induſtry of his ſubjects. His application to buſineſs, joined to a conſtant and well-regulated œconomy, has enabled him not only to live within the bounds of his revenue, but to make very conſiderable ſavings. In this, however, he has conducted himſelf as a wiſe and good prince, or rather in ſuch a manner as to become a model to thoſe of his own rank, who generally aſpire to ſo ſublime a character; for he has demonſtrated that this did not ariſe from avarice, or a natural nearneſs of temper, but from a noble and true royal principle of doing whatever might contribute to the public good: for in thoſe provinces of his dominions that have ſuffered by inevitable calamities, ſuch as the mortality among their cattle, and the inclemency of ſeaſons, he has remitted even his juſt rights. He has expended very conſiderable ſums for encouraging and promoting NEW MANUFACTURES, and he has diſcharged a large debt due from the crown.

This, though in itſelf very extraordinary, conſidering the ſum, and the ſhort time he has reigned, has been attended with a circumſtance too ſingular to be omitted. The creditors of the crown, as ſoon as they were informed of his majeſty's deſign, endeavoured to prevent it, by humbly repreſenting, that, if he was diſpleaſed at the largeneſs of their intereſt, they were content to accept of 4, inſtead of 5 per cent. which had been hitherto paid them; but his Daniſh majeſty anſwered, That having the money in his coffers, where it could be of no ſervice to the public, he

choſe to diſcharge their obligations; but that he would take it as a favour done to himſelf if they would lend the money he now paid them, at a low intereſt, to his ſubjects, which might enable them to extend their COMMERCE, and improve the NEW MANUFACTURES.

It is incredible to what a degree his own and his father's peaceable and prudent adminiſtrations, have contributed to the benefit of the countries belonging to the crown of Denmark, and how much the face of affairs is changed within ſo ſhort a time. NEW PORTS have been opened, which has been owing to the opening NEW CHANNELS OF TRADE; the ſhipping of the Danes has been more than doubled, and the revenues of the crown have increaſed in the ſame proportion within that ſmall ſpace. The court is ſplendid without profuſion, the king rich without oppreſſion, the miniſters attentive to the duties of their reſpective ſtations, not only from the example of their maſter, but from the ſenſe they have that a contrary behaviour would infalliibly draw upon them immediate diſgrace. Adored at home, and reſpected abroad, the king is only attentive to preſerve and promote the happineſs of his ſubjects, in which he places his own.

The laws of this country have been deſervedly in reputation, as lying within a very narrow compaſs, a moderate quarto containing them all; and the adminiſtration of juſtice is ſo well looked after, that ſuits of law in this country are but few, and thoſe very ſpeedily determined. The king makes and repeals laws, as to him appears neceſſary for the good of his ſubjects; but the crown has always uſed this power with much moderation and diſcretion: ſo that, as Denmark may be truly ſaid to be the only legal abſolute government in Europe, perhaps in the world, the people have had leſs reaſon to regret the change made by themſelves than could well have been expected; and, if their monarchs copy after the example of their preſent king, the Danes will feel fewer evils from the want of liberty, than in other nations are produced by the abuſe of it.

The kingdom of Norway, which remains united to that of Denmark, is of great conſequence; and, under the laſt and preſent reign, there have been great improvements made in it's trade, and the inhabitants have been uſed with more indulgence than formerly. The ſame thing may be ſaid in regard to Iceland, and other iſlands belonging to the crown of Denmark, which have been of late years put in all reſpects into a much better condition than they were; ſo that their commodities come to a better market, their manufactures are in a much better flouriſhing condition, and the number of their inhabitants, towns, and ſhipping, is continually increaſing; whereby, in the ſpace of another century, if no wars break out, or unforeſeen confuſions happen, the Danes will become quite another people, and their monarchs make a greater figure than they have for ſome ages paſt *.

* We have in this month of October 1764, an account from Copenhagen, that upwards of 1400 perſons were daily employed in the Daniſh royal woollen manufactory; that they produced laſt year 66 pieces of good cloth; and in other woollen fabrics there are, in the whole, about 4000 men at work. There are likewiſe 16 ſilk fabrics, where 938 perſons are at work; of the ſaid 16 the royal is the largeſt, there being 105 looms, which employ 335 perſons.

REMARKS on NORWAY ſince the laſt WAR, and the DEFINITIVE TREATY of 1763.

The balance of trade between England, Norway, and Denmark, being reckoned at leaſt to the diſfavour of this nation 300,000 l. per ann. it is to be hoped now, that no meaſures will be left unpractiſed to furniſh ourſelves from North America, with every ſpecies of TIMBER that continent will produce, either requiſite for HOUSE-BUILDING in England, or for SHIP BUILDING; and thereby ſave that balance, we have ſo long paid to Denmark for Norway timber. Moſt certainly we may; and the building of large bulky ſhips for that purpoſe, will prove an additional valuable nurſery for our ſeamen, and enable us the better to keep and preſerve, and make proper advantage of our new acquiſitions on the American continent.

It is allowed by thoſe that knew the plantations, that the moſt proper places in the colonies for ſupplying the royal Britiſh navy, are the provinces of Main, New Hampſhire, and the Maſſachuſets in New-England. Therefore, if thoſe three provinces were entirely appropriated to that uſe, the other parts of our extended colonies would ſufficiently ſupply not only Great-Britain and Ireland, but even Portugal and Spain, with the ſame quantities that they now uſe, or may uſe, perhaps, to the end of time, provided we admit and encourage young trees to grow, after we have cut down the old; which will take us up centuries to do.

It may be obſerved, that the little quantity of land that is acceſſible in that mountainous rocky country of Norway, has ſupplied not only Great-Britain and Ireland, Spain, Portugal, France, and Flanders, with timber, but even Holland itſelf with piles for their dykes, ſea-walls, and foundations for houſes, which are thought to be more than are growing upon all the acceſſible ground of Norway. The greateſt part of Europe is ſupplied with pipe, hogſhead and barrel ſtaves from Germany, and the Dutch with oak timber for building their ſhips, and manufacturing into clapboard and wainſcot by their ſaw-mills, with which they not only ſupply this nation, but ſeveral other parts of Europe; and yet the Germans are ſo far from apprehending any danger of not being ſupplied with the increaſing growth of their oak timber, that they would eſteem it a particular happineſs to have their people employed in cutting it down, and hauling it to places of navigation. The foreſt of mount Libanus, which is but a ſmall tract of land, the wooded part of it not ſo big as Yorkſhire, has ſupplied amazing quantities of timber. Solomon, in his time, employed a great number of hewers of wood for building the temple. The Tyrians, Sidonians, and all that coaſt, were ſupplied with timber from thence for their BUILDINGS and SHIPPING; and hiſtory tells us, that Alexander the Great was ſupplied with timber from thence, for carrying on his bank from the main land to the iſland of Tyre; and all ſucceeding ages have been conſtantly cutting down the timber, and yet, it is ſaid, there is as good there as ever.

If thoſe places have furniſhed Europe and Aſia with ſuch vaſt quantities for ſo many ages, and the timber cut down conſtantly ſupplied with a growth of new, what may not be expected from ſo large, ſo immenſely large a tract of ground, ſo well repleniſhed with trees and navigable rivers as our plantations are? Theſe inſtances are given to obviate the miſtakes ſome gentlemen are under, who think our foreſts in America can be hurt by cutting down our timber.

Some have made it a doubt, whether it is prudent in us to let Portugal, Spain, or the Streights, have boards and timber from our plantations; alledging, that if they are ſupplied, they may build merchantmen and ſhips of war, and may, in time, interrupt our trade and navigation; forgetting, we muſt ſuppoſe, that the Dutch will ſupply them with as much German oak as they want.

The Spaniards themſelves have great quantities of extraordinary oak, and fine large pine-trees fit for maſts, eſpecially in Arragon and Catalonia, near the Ebro and Segra; but ſuch is their indolent temper, that if they can purchaſe what they want with money, they care not to ſtretch out a hand to help themſelves; and it might not be good policy in us, to ſtir them up to a neceſſity of becoming induſtrious.

The value of timber among ourſelves has given gentlemen that notion, becauſe it fetches a great price in this iſland, it muſt conſequently be valuable all over the world. But if they were in America, and there beheld the great labour of the planters to clear the ground of the wood, and the vaſt number of fine timber trees that are hauled together and burnt, before it can be fit for any uſe, they would certainly think it abundance of prudence to have it cut up into boards and other uſes, and tranſport to Portugal and Spain what we could not diſpenſe with amongſt ourſelves in Great-Britain, and the money remitted to England; for there is no merchandize more profitable to the nation than timber, being the moſt bulky, and conſequently employing the greateſt number of SHIPS and SAILORS, with a very ſmall part of the NATIONAL STOCK, which is ſufficient to give it all imaginable encouragement.

This merchandize is what has bred the king of Denmark ſo many ſailors, and enabled him to fit out a ROYAL NAVY, and his ſubjects of NORWAY to build ſo great a number of BULKY SHIPS, by which they have enriched themſelves to a much greater degree than the farmers of the fertile country of Poland have done by their corn. If this TIMBER TRADE has been ſo advantageous to them, why may it not be rendered ſo likewiſe to England, by means of her vaſt colonies now on the American continent? We have for the moſt part the ſame markets; we ſhall thereby have opportunities exceedingly to enlarge and extend our navigation; and the wages of a ſailor very much exceed thoſe of a ploughman, labourer, or manufacturer; their food and cloathing are from ourſelves; and if they carry a loading of timber from the plantations to Spain, Portugal, or the Streights, &c. and RETURN TO ENGLAND, not only the merchant's profit, but the profit of the owners of the ſhip, and the ſailors wages, would be all brought home, and ſpent here.

The advantage a TIMBER TRADE would be to us between our plantations and the Streights, &c. would be conſiderable. We cannot ſee but a thouſand acres of TIMBER GROUND in America, may be made more beneficial to England than a thouſand acres of CORN LAND within ourſelves. Let us ſuppoſe a thouſand acres of corn land may produce thirty crops of corn in fifty years; and that every crop may yield in Holland, being our moſt certain market for corn, 4000 l for every year of the ſaid thirty years, which is 120,000 l.

We will ſuppoſe, that twenty acres of WOOD-LAND in America may afford timber enough to load four ſhips of five hundred tons each, and their cargoes carried to Spain or Portugal, &c. and each ſold for 900 l. each. Theſe thirty-ſix hundred pounds are all produced by the manufacture and labour of our own poor, and national ſtock in this ſhipping

Theſe

Theſe 1000 acres, ſuppoſe it would take fifty years in cutting, and fifty crops, at three thouſand ſix hundred pounds per crop, is one hundred and eighty thouſand pounds.—We have allowed double the quantity of land neceſſary to produce four ſhips loading of timber. It is very well known there is ſuch a propenſity in the land of America to run into wood, that when it has been tilled ſo long, that it would bear nothing, yet it has, within the ſpace of thirty years, been loaded with a vaſt number of trees, many of them above a yard and a half in girt, ſix feet from the ground. Timber grows there ſo very quick, as we are informed, that they are at their full growth in a few years. The clearing the lands in America, in places the moſt advantageous to navigation, would not only be thoroughly beneficial to theſe kingdoms, &c. and ſave us the balance which we now pay to Denmark, but would bring us in a very conſiderable one in our favour: and not only ſo, it would tend to lay the country open in time, and put the Indians more in our power, there appearing an abſolutely neceſſity to do this to bring them into ſubjection, if no amicable means will avail to that purpoſe. This, with our navigation on the river St. Lawrence, the Ohio, the Miſſiſſippi, and in the bay of Mexico, will enable us to collect vaſt quantities of timber, and produce us the like of pitch and tar, and the under-wood make charcoal for our iron furnaces there. All which together muſt be of no inconſiderable emolument to Great-Britain, and will prove inſtrumental with the raiſing other materials for manufactures in England, to give conſtant employment to all the inhabitants we can people our new and old acquiſitions with, and thereby keep and preſerve them in a due and reaſonable ſtate of dependence and ſubſerviency to their mother kingdom.

NOTARY PUBLIC, is a perſon, uſually a ſcrivener, who takes notes, or makes a ſhort draught of contracts, obligations, or other writings and inſtruments. Stat. 27 Ed. III. cap. 1. At preſent we call him a notary public who publicly atteſts deeds or writings, to make them authentic in another country, but principally in buſineſs relating to merchants: they make proteſts of foreign bills of exchange, &c. [ſee BILLS of EXCHANGE;] and noting a bill, is the notary's going as a witneſs, to take notice of a merchant's refuſal to accept or pay the ſame.

REMARKS.

The learned civilian Domat obſerves, That a diſtinction between a voluntary and a contentious juriſdiction, obliges us to take notice of a particular kind of officers, whoſe functions are of a very great and very frequent uſe, and who have a kind of voluntary juriſdiction, without any ſhare of the contentious juriſdiction, which are the public notaries: for the function of notaries imply two characters of a voluntary juriſdiction: the firſt conſiſts in this, that their preſence and their ſignature ſerves as a proof of the truth of the acts which are ſped in their preſence; and that whereas in the writings, which are called private, that is to ſay, which are ſigned only by the parties, their ſignatures being unknown in courts of juſtice, it is neceſſary to verify them, if they are called in queſtion; the ſignatures of notaries, who are public officers, carry along with them the proof of the truth of the acts which they ſign; and the ſecond of theſe characters conſiſts in this, that the acts which contain ſome obligation of one party towards another, being ſigned by a notary public, give a right of mortgage on the eſtate of the perſon who is bound, which a private bond or obligation, ſigned only by the party, would not give: and ſince it is in France the authority of juſtice that gives the mortgage, it is by virtue of a kind of juriſdiction that notaries have this function, that a mortgage is acquired by the means of their ſignature; and it is becauſe of this voluntary juriſdiction, that, in ſome of the provinces of France, it is uſual for the notaries to inſert in the acts ſped in their preſence, that thoſe who are parties to them have duly ſubmitted themſelves, and are condemned to perform what they promiſe: by which words they intend to ſignify this voluntary juriſdiction, to which the contracting parties ſubmit themſelves *.

* The function of notaries, in France, implies this kind of juriſdiction, which is ſignified by the royal ſeal, of which they are the depoſitaries for ſealing the acts: and this ſeal is preſuppoſed in the acts which are not ſealed.

Il n'eſt rien de plus beau qu'n Notaire honnête homme,
Mais dans ce corps on a vû de tout tems
Se gliſſer des fripons parmi d'honnêtes gens.
Bour. Eſope. Richelet.

NOTTINGHAMSHIRE in England, has Lincolnſhire on the eaſt, Leiceſterſhire on the ſouth, Derbyſhire on the weſt, and Yorkſhire on the north; and is in compaſs 110 miles. It enjoys as healthy, mild, and pleaſant an air, as any part of England. It is well watered with rivers, the chief of which are the Trent and the Idle. The ſoil is various, the eaſt ſide being very fruitful both in corn and paſture; but the weſt is generally woody, in ſome places producing nothing but coal, and ſome lead. The chief commodities are cattle, corn, malt, wool, coal, wood, liquorice, cheeſe, butter, leather, and tallow. The chief manufactures are ſtockings, glaſs, and earthen wares; and it is noted for ſtrong ale.

NOTTINGHAM, which gives name to the ſhire, and a town and county of itſelf, is reckoned one of the neateſt in England, and has as good a trade as moſt inland towns. It ſtands on the river Trent, which has at a great expence been made navigable to it by barges. Glaſs and earthen wares are made here; but it's chief manufacture is weaving frame-ſtockings: the beſt malt is made here of any town in theſe parts.

EAST RETFORD is an ancient borough, in the midſt of a large plantation of hops, in which, and in barley, it drives a great trade, though not ſo conſiderable as formerly, becauſe Worksop has got much of it away.

NEWARK UPON TRENT is a handſome well-built town, of pretty good trade in corn, cattle, wool, &c.

MANSFIELD is a large populous town, in the foreſt of Sherwood, which drives a great trade in malt, and has a market well ſtocked with corn, cattle, and other marketable goods.

WORKSOP is a ſmall town, near the head of the river Ryton, with a market noted for plenty of liquorice and malt.

NOVA ZEMBLA, or NEW LAND, which the Dutch call the iſland of VEYGATS, is ſituated in the North or Frozen Ocean, between 50 and 80 deg. of eaſt long. and near the north pole; ſeparated from the province of Samoieda, in Ruſſia, by a narrow ſtreight called the Streights of Veygats. Whether it be an iſland, or part of ſome great continent, is uncertain, no ſhips having ever paſſed to the northward of it, though many attempts have been made to find out a north-eaſt paſſage to China that way. The Dutch, indeed, paſſed the Streights of Veygats, ſouth of Nova Zembla, and wintered on the eaſt ſide of it, anno 1596, but did not find it practicable to ſail further, for the fields of ice they met with. There are no conſtant inhabitants here; but the Samoieds and Oſtiacs climb over the mountains of ice in the ſtreights, when they are frozen over, and hunt elks and rein-deer here, at proper ſeaſons.

NOVOGOROD, in Ruſſia. This duchy is ſituate on the eaſt of Pleſkow, and the lake of Ladoga on the north; on the eaſt the duchy of Belozeca, and Twere; and the province of Rzeva on the ſouth.

It is called Novogorod Veliki, or Superior, to diſtinguiſh it from the Inferior, or Nizi Novogorod. It's extent from eaſt to weſt, on the ſouthern part, is computed to extend near 250 miles, but grows more and more narrow towards the north. It's chief produce is corn, flax, hemp, wax, honey, and leather; in all which it drove a conſiderable traffic, when it was governed by it's own princes, though, even then, it was very often obſtructed by it's wars with Muſcovy; but, ſince it is become under it's ſubjection, it is much decayed of it's flouriſhing condition.

The city of NOVOGOROD VELIKI, capital of this province, called by the French NEUGARD, and by the Dutch NEW GARTEN, ſtands on the Wolohova, and is a large and conſiderable place, very populous, and well fortified.

NOYONNOIS, a province in France, was formerly a part of Picardy, but under the government of the Iſle of France, and is bounded on the north by Vermandois, part of which belongs to the election of Noyon; on the eaſt by Laconois; on the ſouth by Soiſſonnois; and on the weſt by the bailiwick of Roye in Picardy. There are here but two cities of any note, viz.

NOYON, ſituate on the declivity of a hill, of an eaſy deſcent, on the rivulet Vorſe, which, at a quarter of a league's diſtance, falls into the Oiſe. It is ſeven leagues diſtant from Soiſſons to the north-weſt, five from Laon to the weſt, and 16 from Paris to the north. It is a pretty large city, containing about 4500 inhabitants, and is well ſituated for inland trade, which conſiſts here in wheat and oats, which they ſend to Paris; they have alſo manufactories of linen cloths, lawns, and tanned leather.

CHAUNY is ſituated on the river Oiſe, near the borders of the Iſle of France, three leagues diſtant from Noyon to the eaſt, and ſomething leſs from La Fere to the ſouth. It is a royal city, and the ſeat of a caſtleward.

NUBIA, the kingdom of, in Africa, is bounded on the north by Upper Egypt; on the eaſt by the Red Sea; on the ſouth by Ethiopia, from which it is ſeparated partly by the Nile, and partly by a long ridge of mountains, and the deſert of Gorham; and on the weſt it is bounded by the kingdom of Goaga.

This country, though under ſo hot a climate, being wholly within the torrid zone, is yet in many places, eſpecially on each ſide of the Nile, very fruitful, the inhabitants being much given to agriculture, and producing ſome fine fruits, plenty of corn, and ſugar-canes; but of this laſt they ſeem not to know the uſe rightly, ſo that it bears little or no value, either among the natives or foreigners.

The chief commodities this country affords, are gold in great quantity, and very fine muſk, ivory, ſanders, and other medicinal woods.

DONGALA, the metropolis of the kingdom, is ſaid to be very populous, and to contain about 10,000 houſes, but moſt of them meanly built, of wood and mud only. The inhabitants, however, are rich, and drive a conſiderable commerce with

their own commodities, more eſpecially ſanders and muſk, for arms, linen cloth, and other wares.

SENNAR, another large city, ſaid to contain 100,000 ſouls, ſtands on the weſtern bank of the Nile, about 250 miles ſouth of Dongala. They trade in gold, muſk, elephants teeth, and other commodities, for which they receive in exchange ſpices, ſilks, cottons, and other merchandizes from India; for they make no uſe of money in all their commerce, though they have variety of coins among them. See AFRICA.

NUTMEG. The nutmeg is an aromatic nut, the kernel of a fruit, of the ſize of a green walnut.

The nutmeg is of two ſorts, the male, or long nutmeg, and the female, or common nutmeg.

The tree that bears the nutmeg is of the bigneſs of the peach-tree, and the leaves have a very near reſemblance to thoſe of the ſame tree, except that they are ſhorter and narrower; after which comes the fruit.

This tree, according to Mr. Tavernier, is not planted, but grows by means of certain birds, or fowls, which ſwallow the nutmegs whole, and throw them out again, without having digeſted them; and the nutmeg being then covered with a viſcous and gluey matter, and being caſt upon the ground, takes root, and produces a tree, which it would not have done if ſet in the manner of others.

The nutmeg is likewiſe a commodity which none but the Dutch are maſters of, becauſe it grows no where but in the iſles of Nero, Lentour, Poulcay, Roſgain, Poleron, Granaping, and Dame iſland, in the great iſland of Banda in Aſia.

It is remarkable, that ſo little a quantity of land ſhould furniſh all the world with nutmegs; but it is not hard to be believed, when one conſiders that theſe iſles are ſo ſtocked with nutmeg-trees that it is almoſt incredible; and beſides, they lie in ſo good a climate, that the trees are always loaden with flowers and fruit, and they have three crops a year, viz. in April, Auguſt, and December; but that of April is much more valued than thoſe which are got in Auguſt or December; and the climate is ſo temperate, that the men live to a hundred and twenty years of age, and have nothing to do but eat, drink, and ſleep, and walk about, while the women employ themſelves in ſeparating the outer fruit from the nutmeg, drying the mace, and breaking the ſhells wherein is the nutmeg, being the chief commodity of the country, and almoſt all they live by.

The nutmegs we ſell are nothing but the kernels of the fruit, which are covered with a hard, thin, and blackiſh ſhell; without this ſhell there is found a covering, which is thin and reddiſh, of a ſweet ſmell, and aromatic taſte, and is what we call mace, but vulgarly, and improperly, the nutmeg flower. After the mace, there is a green pulpy fruit, that is of no uſe. From this it is to be obſerved, that the nutmeg has three wrappings, or coverings, viz. the ſhell, the mace, and the pulpy fruit, and not barely two, as a late author has obſerved; and the thing is ſo evident, that, if any perſon will give himſelf the trouble to cut a preſerved nutmeg in two, he will find the three parts which I have been ſpeaking of above.

The trees which bare the female, or common nutmegs, grow not but in cultivated, or improved lands; but thoſe which produce the long nutmegs grow in woods and foreſts, which makes the Dutch call them wild nutmegs; but they are little uſed, becauſe they are almoſt without taſte or ſmell, and void of any virtue; and for this reaſon they are ſeldom brought hither.

As to the common nutmegs, we ought to chuſe ſuch as are heavy, firm, hard, and of a full plumpneſs, of a light grey, whoſe inſide is finely marbled, and reddiſh, and ſuch as are of a fat oily body, which are the ſigns of their newneſs, and which, being grated, afford a ſweet flavour, and, put into the mouth, yield a warm, piquant, aromatic taſte. As to the little hole that is met with ſo very common in nutmegs, it is a vulgar error to believe that that makes them loſe their virtue, for there is no nutmeg without it, as may be ſeen when the thin rind is raiſed.

The uſe of the nutmeg is ſo well known, it would be needleſs to ſay any thing of it; we ſhall only add, that it is valued in medicine, and being beat up with ſugar, there is a powder made of it, which is admirable, taken in warm white wine, for curing of catarrhs and rheums, that proceed from cold cauſes; and this is called the Duke's Powder. The uſual quantity is to put two ounces of nutmegs to a pound of ſugar, and ſome add cinnamon.

The inhabitants of the iſle of Banda make a confection of the green nutmegs, which is brought to us by the way of Holland, ſometimes with ſyrup, and ſometimes without. Theſe are one of the beſt preſerves we have, being very proper to ſtrengthen and invigorate the ſtomach, and to reſtore a natural heat to age; but their chief uſe is to carry to ſea, particularly by the inhabitants of the northern parts, where they are much eſteemed, the people there being great lovers of theſe ſorts of warm ſweet-meats.

As to the oil of nutmegs by expreſſion, that which is brought us frequently from Holland is no better than freſh butter; for which reaſon the apothecaries ought to make it themſelves, rather than buy it at ſuch a cheap rate, when it is good for nothing. The true oil of nutmegs ought to be of a thick conſiſtence, of a golden yellow, a ſweet aromatic ſmell, and a warm poignant taſte.

The manner of making this oil is ſo eaſy, and hath been ſo long know to every artiſt, that it would be ſuperfluous, at this time of day, to pretend to teach it; only this may be obſerved, that, when it is expreſſed, it will be liquid and clear; but, when cold, it coagulates, and becomes yellowiſh, of a ſolid conſiſtency, and that it will yield a double quantity of oil this way, from the ſame weight of any other ſpice, fruit, or ſeed whatever.

There is likewiſe another oil, made by diſtillation, which is a white clear oil, very fragrant, and has double the ſtrength and virtue of the former; and whatever the nutmeg has ſingly in itſelf, is hereby highly exalted; ſo that four or five drops is a doſe, in any proper vehicle, wherein it becomes cephalic, neurotic, ſtomachic, cordial, hepatic, uterine, and alexipharmic; it is good againſt all cold diſeaſes of the head, nerves, womb, &c. expels wind, and cures griping of the guts.

The mace that grows round the nutmeg has all the ſame virtues; diſperſes wind, helps concoction, cures ſtinking breaths, ſtrengthens the child in the womb, ſtops fluxes and vomiting: it is of thinner parts than the nutmeg, and, therefore, more piercing. The oils by expreſſion and diſtillation are made the ſame way as thoſe of nutmegs. Chuſe ſuch as have the largeſt blades, the higheſt and freſheſt colour, and the cleaneſt you can get.

As to the bark of the trunk, and the branches of the nutmeg-tree, it is ſo little uſed, that it is not worth ſpeaking of, and is ſeldom brought hither, by reaſon of it's great likeneſs to the white coſtus, both in figure and taſte. Some ſell coſtus for the nutmeg-bark, but of this beware.

The PRACTICAL BUSINESS of the CUSTOM-HOUSE continued.

With regard to NATURALIZATION.

NATURALIZATION by act of parliament—Proviſion muſt be expreſly made in the bill exhibited for that purpoſe, that the perſons therein mentioned, ſhall not be thereby enabled to be of the privy-council, or members of either houſe of parliament, or to take any offices or places of truſt, or to have any grants of lands, tenements, or hereditaments from the crown. 1 Geo. I. c. 4. § 2.

Aliens, or perſons not born within his majeſty's allegiance, or naturalized, or made free denizens, may not be merchants or factors in the plantations, upon forfeiture of all their goods and chattles; $\frac{1}{3}$ to the king, $\frac{1}{3}$ to the governor, and $\frac{1}{3}$ to the informer. 12 Car. II. cap. 15. § 2.

With regard to NAVAL STORES.

NAVAL STORES imported from the Britiſh plantations and Scotland, for the premium and regulations, ſee NAVAL STORES.

NAVAL STORES if afterwards exported, the ſaid premium muſt be repaid,

———Imported from Ruſſia—A true account thereof to be laid before both houſes of parliament every ſeſſion, by the commiſſioners of the cuſtoms, under their hands. 10 and 11 W. III. c. 6. § 4.

With regard to the NEWFOUNDLAND TRADE.

NEWFOUNDLAND TRADE, free to all his Britiſh ſubjects. 10 and 11 W. III. c. 25. § 1.

———Maſters of ſhips bound thither, to carry at leaſt one freſh man in five; of by-boats, to carry at leaſt two freſh man in ſix; that is, one that has made no more than one voyage, and one that never has been at ſea before; and are to make oath accordingly before the collector of the port, who is to give them a certificate thereof. 10 and 11 W. III. c. 25. § 9, 10.

O.

OAK

OAK

OAK. The oak is a tree, known to all the world, as well becauſe of it's durableneſs, as for the different uſes made of it. This tree is the emblem of virtue, ſtrength, firmneſs, and duration, and was therefore, by the Ancients, dedicated to Jupiter. Some pretend that this tree is a mortal enemy to the olive and the walnut-tree; ſo that neither of them can live near it.

The firſt thing, and the moſt conſiderable we have from the oak, is the miſſeltoe, which is an excreſcence that is found growing to the ſaid tree: this production appears extraordinary, in that the oaks do not produce the miſſeltoe in all places: there are few that I know of, in this reſpect, like thoſe that are met with betwixt Rome and Loretto; eſpecially near a little village named Foligni, about the midway. This excreſcence reſembles the branch of trees, and is of a ſolid, heavy ſubſtance, of a greeniſh brown outwardly, and of a yellowiſh white within.

The branches are hard and compact, and bear ſeveral little ſprigs which intermingle with each other, and from whence ariſe a great many longiſh, thick leaves, that are ſemicircular, of a pale green; the berries are white, reſembling our little white currants; and theſe berries contain a viſcous humour, which the Ancients uſed to make glue with. The miſſeltoe continues always green, during the time it remains upon the tree; chuſe the largeſt, heavieſt, and beſt fed; you may know, if it be true, by the deep colour within, but the ſureſt way is to ſee that ſome part of the oak hangs to it. They attribute a great many virtues to the miſſeltoe of the oak, and the Ancients revered it, and held it ſacred, as well as the tree itſelf. Julius Cæſar and Pliny ſay, that the Druids aſſembled themſelves under theſe trees to perform their devotion; theſe Druids inhabited the countries we now call Villa de Dreux, near Chartres, whence it is evident, that there have been oaks which bore miſſeltoe in France.

This miſſeltoe, taken inwardly, is eſteemed an excellent remedy againſt the palſy, apoplexy, falling ſickneſs, and worms: it is alſo an ingredient, in many compoſitions, for external uſes, as ointments, plaſters, &c. as a reſolvent. The berries are acrid and bitter, and their juice is good to ripen abſceſſes, and haſten their ſuppuration.

Miſſeltoe is alſo the baſis of the pulvis ad guttetam.

It is found growing upon many other trees, as well as the oak; but it's virtues are ſuppoſed not to be ſo great when it is taken from any other tree.

All the parts of the oak contain a great deal of oil and eſſential ſalt; the bark and leaves are aſtringent and reſolvent, good in the gout, ſciatica and rheumatiſms, uſed in fomentations, and taken inwardly in decoctions to ſtop diarrhœas and hæmorrhages.

The ſecond thing we have from the oak, is a little plant we call polypody of the oak, which is like what we have from walls: this ſort of plant grows from places where the branches of the oak are forked, by means of ſome ſmall earth that lights there, and the water which drops upon it: it grows likewiſe upon the ſtump of the ſaid tree. We rarely uſe this polypody, becauſe it is not ſo proper, ſince that is much better which grows upon old walls; which is the ſort that is ſold about Paris. Chuſe the root ſuch as is new, plump, dry, brittle, of a reddiſh tawny colour on the outſide, and greeniſh within, ſweet and ſugar-like, inclining ſomething to a liquoriſh taſte.

Quercus vulgaris, the common oak, is a thick, ſtrait, durable tree, ſpreading it's branches wide; the trunk is covered with a thick ruggid bark; the leaves are large, longiſh, and broad, deep flaſhed or indented, hanging upon ſhort ſtalks; the flowers are in long ſhells or huſks, compoſed of little threads hanging upon one another by a fine fiber or ſtring; theſe huſks leave no fruit behind them, the fruit growing in other parts, which are the acorns, that are about the ſize of the olive, of an oval, or cylindrical figure, contained in a hard grey cup, called in Latin, cupula ſeu calix; this acorn is covered with a hard rind, that is ſmooth and ſhining; green at firſt, but yellowiſh as it grows riper: within this rind we meet with a ſort of kernel, or hard fleſhy ſeed, compoſed of two lobes. The acorns hang upon the tree by long or ſhort ſlender ſtalks, and their taſte is aſtringent.

All the parts in the oak contain in them a good deal of oil and eſſential ſalt: the acorn, called in Latin, glans quercina, is likewiſe employed in medicine. Chuſe ſuch as are large and plump, ſeparated from the rind, and dried gently; but take care of worms, to which they are ſubject; let them be reduced to powder before uſing: they are aſtringent, and proper to appeaſe wind cholicks, and the fluxes of women newly delivered.

Polypodium, or common polypody, hath a root, taking a very ſlight and ſuperficial hold of the earth; it is pithy and brittle, about the third part of an inch thick; within it is of a pale green colour, but outwardly a little reddiſh, and covered over with fine thin ſcales, when it is freſh and green; but being dry, it becomes of a more red colour: it is knotty, or full of round knobs, and adorned with ſeveral ſmall filaments like hairs: it's pith is ſweetiſh, with ſomewhat of a ſharp, auſtere, or ſtyptic taſte. The leaves ſpring out of the knots, or hollow knobs of the roots; they are ſingle, about nine inches in length, and parted into ſeveral jaggs or ſcallops, cut cloſe into the ribs; they are ſharp pointed, of a light green colour; it bears no flowers, but there ariſe ſeveral ſmall knobs, like bliſters, upon the lower or under part of the uppermoſt jaggs of the leaves, ranked in a double order; they are round, and about the ſixth part of an inch thick, conſiſting of a fine duſt, that is firſt a little yellowiſh, and turns of a bright golden colour; every grain of this duſt is a ſort of ſmall ſeed-veſſel, being of a round figure, and membranous, which, when ripe, breaks into two equal parts, and pours forth ſeveral ſeeds, ſo ſmall that they can ſcarcely be deſcerned by the naked eye.

Polypody grows upon rocks, old walls, and ancient decayed trees; but that which grows upon old oaks is reckoned the beſt; upon which account, polypody of the oak is commonly preſcribed, and is ranked among the purging medicines: yet Dodonæus denies it's cathartic quality; neither ought we to diſſemble the matter, for the decoction of it ſcarcely moves the belly, but the powder of it does ſomething, being given from one dram to two drams.

This root contains a great deal of oil, and no ſmall quantity of an acid phlegm; but this is, as it were, ſuffocated by the oil, which is the cauſe that it produces no alteration of colour on blue paper, when it is dipped in the infuſion of it. There is likewiſe a large quantity of earth extracted from polypody, by a chemical reſolution. It is from the earth that it's ſtyptic and brackiſh taſte proceeds. The roots are very properly adminiſtred in all diſtempers proceeding from a ſaltiſh diſpoſition of the blood: ſuch as the ſcurvy, rickets, and hypochondriac paſſions; they alſo help to abate an inveterate cough, when it is attended with a ſaltiſh ſpittle. They are preſcribed in potions and apozems.

Take of polypody of the oak, two ounces; ſalt of prunella, one dram; infuſe them in a quart of warm water; ſtrain it: to be taken by cupfuls or ſpoonfuls, as an apozem. Or take polypody of the oak, one ounce and a half; elecampane-roots, three ounces; infuſe them all night in a quart of warm water: in the ſtrained liquor add two ounces of Calabrian manna; mix and make a ptiſan to be drank. Take of the decoction of polypody-roots, ſix ounces, in which infuſe two drams of ſena leaves; in the ſtrained liquor diſſolve the electuary of diacarthanum, three drams; mix and make a purging potion. Polypody-roots are uſed in the catholic-electuary, the lenitive-electuary, the confection of hamech, the panchymagog extract of Hartman, Quercetan's pills of tartar, and in the hiera of coloquintinda.

The oak, whoſe bark, &c. are uſed in medicine, is the quercus vulgaris, Ger. 1156. Quercus latifolia, Park. 1086. The miſſeltoe is the viſcus quercus & aliarum arborum, J. B. 1. 89. Viſcum vulgare, Park. 1392.

And the polypody is the polypodium vulgare, C. B. Park. &c.

It is to be obſerved, that both theſe are much more frequently found on other trees, than on the oak.

The other ſpecies of the oak, mentioned in the catalogues of officinal trees, are,

1. The phagus, ſive eſculus, Park. 1387. J. B. 1, 2, 74, the eſculent, or ſweet oak, the acorn of which is eatable, not being ſo bitter as thoſe of the reſt.

2. The Cerrus Aldrov. Dendr. 253. Cerris majore glande, Ger. 1162. Quercus calyce echinato, glande majore, C. B. Pin. 420. The bitter oak. And,

3. The robur tertia Cluſii, J. B. 1, 2, 76. Robur ſive galla major altera, Ger. Em. 1314. The gall oak.

The common oak grows naturally in many kingdoms; the eſculus is found in Greece and Dalmatia, the cerrus in Italy, and the laſt in Smyrna and other places. Pomet.

REMARKS.

There are five ſorts of oak in England; but we ſhall only recommend two kinds of them to be planted for timber. The beſt is the upright-oak, which grows more erect than any other; the other is the large ſpreading oak. We have many inſtances of theſe kinds, that have attained to ſuch prodigious greatneſs of ſtature, that the timber alone of one tree has been ſold for upwards of 50l. The oak doth not only afford us the utmoſt ſerviceable timber for naval architecture, but alſo for other building. It's bark is uſeful to tanners, and the oak is therefore cut down about April, when it's bark will peel. The acorns are excellent food for hogs. This tree delights in moiſt ground of a good deph, and will proſper in the coldeſt clay, and, as Mr Evelyn ſays, in gravel alſo.

Some oaks having been ſown in hedge-rows, have, in the ſpace of 30 years, borne a ſtem of a foot diameter. There have been ſome ſeedling oaks, of 20 years growth, of near that ſubſtance, which have never been removed from the place where they were ſown; and every plantation of oaks ſhould be ſet with acorns, on the very ſpot where they are to remain, and we ſhould be careful to chuſe our acorns from thriving, vigorous trees. The diſtance between them ought to be about 33 feet, and the ſpace between the oaks ſhould be interſown for underwood.

The oak is an eſtimable tree or plant, in a proper ſituation, for the benefit of poſterity. There is no part in huſbandry which men commonly more fail in, neglect and have cauſe to repent of, than that they did not begin planting betimes. And indeed, ſuch perſons who have been deaf to demonſtration at the firſt poſſeſſion of their eſtates, and are afterwards convinced of the vaſt advantages to be reaped by an early plantation, either from the experience of their neighbours or themſelves, muſt have a pungent retroſpect upon this occaſion.

Every man is naturally willing to enjoy the profits of the works, as we may ſay, of his own hands; and he, therefore, who begins at 50 to be ſenſible that he has loſt many a fair thouſand, by neglect of improving his eſtate between 20 and that age, is to himſelf indeed a loſer, but a warning to others to avoid that folly. See the articles EARTH, HUSBANDRY, MANURE, NORWAY, BRITISH AMERICA, MISSISSIPPI, INDIAN AFFAIRS.

OATHS. [CUSTOM-HOUSE OATHS, AND OTHER REVENUE OATHS.]

I. Of the Oaths taken by the Officers of the Cuſtoms.

The COMPTROLLER.

* Who, as well as the cuſtomers, were to be choſen from amongſt the beſt and moſt ſufficient men, and not to be made for affection or reward, or upon any ſollicitation, but upon deſert; and were to ſit with the cuſtomers, and in all things to cheque and imitate their tranſactions: and, as the cuſtomers were wont to write their accounts in rolls, the comptrollers were to keep counter-rolls; which counter-rolls, or accounts, they were to deliver into the exchequer yearly, upon oath. And now there are collectors appointed, to receive and account for the king's duties; they are likewiſe to cheque all their tranſactions, by examining and ſigning all accounts, diſpatches, &c. and by keeping the like books of accounts: and they are to be privy to all orders of the commiſſioners, and to be conſulted with, in the whole management and buſineſs of their reſpective poſts, and to join with the collectors in all their proceedings.

* 12 Rich. II. cap. 2. § 1.

And for the due and faithful diſcharge and execution of their duties, theſe comptrollers were, at their admiſſion, to take the following oath, viz.

'Ye ſhall ſwear, That well and truly ye ſhall ſerve the king, in the office of comptroller of the king's cuſtoms and ſubſidies, in the place of cuſtomer; and truly ye ſhall enter all the goods and things cuſtomable, the which ſhall come to the ſaid port, or ſhall paſs from the ſame: and that ye ſhall no gift take for to do your office, nor for any thing that may fall in diſadvantage of the king; nor any merchandize, nor any other thing cuſtomable, ye ſhall not ſuffer to paſs out of the ſaid port, without cuſtom due be paid: and ye ſhall do the office yourſelf, and dwell thereupon in your proper perſon, without making any ſubſtitute or deputy under you: and ye ſhall write the rolls with your own hands; and the king's profit ye ſhall wait and do, inaſmuch as ye may, after your knowledge and power: as God you help and his ſaints.'

Some rules, in regard to Oaths in particular, that are to be obſerved by the officers of the cuſtoms in general.

1. * That no perſons are to be employed in the buſineſs of the cuſtoms, 'till they had given ſecurity, and have taken their corporal oaths in the following form, viz.

Deputation dated the ——, ſurities, D. E. —— of —— E. F. —— of —— penalty——l. juravit apud —— die —— corum nobis. B. C.—Collector. C. D.—Comptroller.

'I, A. B. (his employment) do ſwear to be true and faithful in the execution and diſcharge (to the beſt of my knowlege and power) of the truſt committed to my charge and inſpection, in the ſervice of his majeſty's cuſtoms; and that I will not take or receive any reward or gratuity, directly or indirectly, other than my ſalary, or what is or ſhall be allowed me from the crown, or the regular fees eſtabliſhed by law, for any ſervice done, or to be done, in the execution of my employment, upon any account whatſoever. So help me God.'

A. B.

* 13 and 14 Car. II. cap. 2 § 33. 4 and 5 W. and M. cap. 5. § 25. But note, this act does not direct who ſhall adminiſter this oath.

Which oath is to be adminiſtered by the principal officers of every out-port, or any two of them, and to be entered or regiſtered in a book to be kept in the cuſtom-houſe for that purpoſe: and if the ſecurity be given at the port, the bond muſt be returned to the commiſſioners, and the ſufficiency of the ſureties, with their places of abode, certified to the examiner of ſecurities.

2. * That all perſons employed in the cuſtoms, in any out-port, muſt, at their admiſſions, likewiſe take the aforeſaid oath, before two juſtices of the peace, in the county, town, or place where their employments ſhall be, upon forfeiture of their employments, for refuſal or neglect: and the ſaid juſtices muſt certify the taking of this oath, to the next general quarter-ſeſſions.

* 6 and 7 W. and M. cap. 1. § 5, 6.

And when any officer, having taken theſe oaths, is thereupon to be admitted, the collector and comptroller are to deliver him his deputation or commiſſion, taking a receipt for the ſame, in a book to be kept for that purpoſe, and alſo at the foot of the copy of his inſtructions annexed to his bond, which are to be tranſmitted together to the commiſſioners.

The CUSTOMERS.

* Who were to be choſen from amongſt the beſt and moſt ſufficient men to be found, to the lord treaſurer's eſtimation, and not for affection or reward, nor upon any ſollicitation, but upon deſert: and by the king's letters patent, under the great ſeal of England, were appointed collectors of the great and petty cuſtoms, as alſo of the ſubſidy of tonnage and poundage: which office they were not to have † for life, or term of years, but only during the king's pleaſure; and if their patents were made to the contrary, they were to be void.

* 12 Rich. II. cap. 2. § 1.
† 14 Rich. II. cap. 10. § 1. 17 Rich. II. cap. 5. § 1.
1 Hen. IV. cap. 13. § 1. 31 Hen. IV. cap. 5. § 1.

And for the due and faithful diſcharge and execution of their duties, theſe cuſtomers were, at their admiſſion, to take the following oath, viz.

'Ye ſhall ſwear, That ye ſhall make continual abiding in the port ——, and ſhall overſee the charge of wool, leather, and wool-fells, and all other merchandizes and things cuſtomable, and the number of ſacks in the ſaid port; and, in asmuch as in you is, ye ſhall not ſuffer that the king have hurt or loſs there; and that true account thereof ye ſhall yield; and of the iſſues of the ſaid cuſtoms, truly ye ſhall anſwer, without fauxim or fraud, to be done in any point: as God you help, and his ſaints.'

* They were, upon ten days notice given them in writing, by the king, or ſix of his privy-counſellers, to declare what money due to the king, was in their hands, and to make ready and full payments, upon forfeiture of office; and † they were to ſwear to their accounts in the exchequer.

* 7 Edw. VI. cap. 1. § 13.
† 4 Hen. IV. cap. 13. § 1.

But now there are particular officers appointed, by the name of collectors, who receive the king's cuſtoms, ſubſidies, &c. and account for them to the comptroller-general; ſo that

cuſtomers

cuſtomers have only the accounts to keep, which they ſtill deliver into the Exchequer, yearly upon oath.

II. The SEARCHERS or FINDERS.

* Who were to be choſen as the cuſtomers were, and were appointed for their aſſiſtance in the buſineſs of the cuſtoms, without doors, to ſee that no goods were imported or exported without due payment of duty; and not being allowed any ſalary, were to take the moiety of all forfeitures and ſeizures for their pains: and they were to keep entries of all cockets, &c. paſſed to them from the cuſtomers, and likewiſe of their own ſeizures, and were to account yearly for the truth of their tranſactions.

* 12 Rich. II. cap. 2. § 1.

And, for the due and faithful diſcharge and execution of their duties, theſe ſearchers were, at their admiſſion, to take the following oath, viz.

'Ye ſhall ſwear, that ye ſhall ſerve the king well and truly in the office of the ſearchership in the port of ————, and do the king's profits in all things that belongeth to you to do, by way of your office: and well and truly ye ſhall make due ſearch of all the ſhips and veſſels coming in or paſſing out of the ſaid port, and truly anſwer the king of all that ſhall belong unto him in your ſaid office, without fraud or maligne, after your wit and power: as God help you, and his ſaints.'

REMARKS.

Under the article AFFIDAVIT, we have conſidered the ill conſequences which, is greatly to be feared, may attend the multiplicity of oaths that are required to be taken in this nation by traders, in relation to the public revenue. If the conſtitution of the public revenue was ſuch, that no oaths need be required to be taken but by the officers concerned in the collection, it might prove far leſs injurious to the public, by removing the motive to perjury; which is grown to ſuch a pitch among us, that all wiſe and good men lament it as one of the greateſt evils that can attend the community.

This conſideration alone is inducement ſufficient, methinks, to point out the neceſſity of ſo CHANGING THE SYSTEM OF THE PUCLIC REVENUE, that there might be no occaſion for any oath to be taken in regard thereunto, except by the officers concerned in it, and not even by them. How this might be happily effectuated may be eaſily inferred from what has been urged relative to the revenue throughout this work. In the interim, we ſhall only make ſome ſhort obſervations on oaths in general, while the revenue continues in it's preſent ſtate and conſtitution.

As the impoſition of an oath was always eſteemed to be the greateſt tie and obligation that could be contrived, for the diſcovery of the truth of any fact; and the uſual confirmation of all oaths, being in the moſt ſolemn manner to call upon, and appeal to, the almighty God, who knows the ſecrets of all hearts, to judge of, and be a witneſs to, the truth thereof, and to beg his help, upon no other terms, than that what is there aſſerted be true, and in teſtimony thereof kiſſing his holy goſpel: I ſhould think that none but the moſt profligate, or the moſt ignorant of mankind, would be ſo hardy as to diſhonour God's name, by thus taking it in vain, which muſt either ſuppoſe that he knows not whether we ſpeak true or falſe, or elſe, that he will countenance our ſolemn lies and perjuries.

And, with reſpect to the perſons thus affirming the truth of any fact or thing upon oath, it muſt be conſidered, that if he knows that there is not perfect truth in that he ſwears, he is guilty of wilful and downright perjury; as he alſo is, if he ſwears to the poſitive truth of that whereof he is wholly ignorant, nay, or only doubtful; for, though the ſame ſhould be true, yet ſuch ſwearing is but at a venture, to what might as well be falſe. And, as all perſons making oath to the truth of any thing, are ſuppoſed to perfectly know the whole affair, and to have carefully informed and ſatisfied themſelves in every particular circumſtance, which may occaſion the leaſt doubt; it is not only very ſilly, but very wicked, to ſooth themſelves with the poor evaſion, that the fact or caſe might be ſo for OUGHT THEY KNOW, becauſe they KNOW NOTHING OF THE MATTER. And of this abominable nature, is that ſhameful excuſe for thoſe perjuries, which it is to be feared, are but too frequently committed at the cuſtom-houſe, viz. That it is but a CUSTOM-HOUSE OATH; as if God, who is omnipreſent, did not ſee, and was not equally offended at profaning his name there, as at any other place whatſoever: but let theſe offenders remember the puniſhment, which is denounced againſt them in the third commandment. Since, therefore, oaths are of ſuch a ſacred and ſolemn nature, they ought to be adminiſtered with all imaginable reverence, and not ſlightly and with indifference; but, after having interrogated the perſon concerning every particular circumſtance, and being ſatisfied that he underſtands the nature of an oath, and does not offer to ſwear ignorantly or raſhly, and not having any reaſon to doubt his ſincerity, the whole oath ſhould be maturely, deliberately, diſtinctly, and reverently rehearſed to him.

And, as the multipjicity of oaths in the buſineſs of the revenue, particularly in the cuſtoms, does, it is to be feared, in a great meaſure, leſſen that awe and juſt regard that ought to be paid to ſuch ſolemn and ſacred ties; it is much to be wiſhed, that fewer oaths were neceſſary; and therefore we would recommend, that any ſuperfluous oaths ſhould not by any means be exacted; but only ſuch as are either expreſsly enjoined by the letter of the law, or are abſolutely neceſſary for the diſcovering or aſcertaining any thing for the ſervice of the revenue, which cannot be obtained by any other means.

As to the perſons to which the oaths are to be adminiſtered, it muſt be carefully obſerved, that they who offer to ſwear, are the proper perſonsin the eye of the law; and where the laws have not particularly directed, that they be ſuch perſons as are the moſt proper, according to the nature of the caſe, as being either principally concerned, or the moſt knowing in the whole affair; provided they are not boys, or ſuch ignorant perſons as are not capable of underſtanding the nature and conſequence of an oath.

Beſides the oaths before-mentioned, there are likewiſe promiſſory or obligatory oaths, particularly in the report of a ſhip outwards, concerning the not relanding of goods intitled to a drawback, bounty, &c. the breach of which is not leſs criminal, than of any other oath; and, if the maſter at the time of making ſuch oath, has no real intention to make it good, or whether he then has or not, if he afterwards breaks the ſame, he certainly muſt be deemed guilty of perjury.

And laſtly, as to the oaths in general, it muſt be remembered, that they are always to be taken according to the common and ufual interpretation of the words, and in the ſame ſenſe that they are known to be deſigned, and not with any private reſerve or evaſion. See OFFICERS of the CUSTOMS.

OFFICERS of the CUSTOMS. The officers principally employed in the management of the cuſtoms in an out-port, were originally no more than three, viz. a cuſtomer, a ſearcher, a comptroller.

I. The CUSTOMERS,

* Who were to be choſen from amongſt the beſt and moſt ſufficient men to be found, to the lord treaſurer's eſtimation, and not for affection or reward, nor upon any ſollicitation, but upon DESERT: and, by the king's letters patent under the great ſeal of England, were appointed collectors of the great and petty cuſtoms, as alſo of the ſubſidy of tonnage and poundage.

* 12 Rich. II. cap. 2. § 1.

Which office they were not to have *for life, or term of years, but only during the king's pleaſure; and, if their patents were made to the contrary, they were to be void.

* 14 Rich. II. cap. 10. § 1. 17 Rich. II. cap. 5. § 1.
1 Hen. IV. cap. 13. § 1. 31 Hen. VI. cap 5. § 1.

And, for the due and faithful execution of their duties, theſe cuſtomers were, at their admiſſion, to take the following oath, viz.

'Ye ſhall ſwear, That ye ſhall make continual abiding in the port of ————, and ſhall overſee the charge of wool, leather, and wool-fells, and all other merchandizes and things cuſtomable, and the number of ſacks in the ſaid port; and in as much as in you is, ye ſhall not ſuffer that the king have hurt or loſs there; and that true account thereof ye ſhall yield; and of the iſſues of the ſaid cuſtoms, truly ye ſhall anſwer, without fauxim or fraud, to be done in any point: as God you help, and his ſaints.'

* They were upon ten days notice given them in writing, by the king, or ſix of his privy-counſellors, to declare what money due to the king was in their hands, and to make ready and full payment, upon forfeiture of office; and †they were to ſwear to their accounts in the Exchequer.

* 7 Edw. VI. cap. 1. § 13. † 4 Hen. IV. cap. 20. § 1.

But now there are particular officers appointed, by the name of collectors, who receive the king's cuſtoms, ſubſidies, &c. and account for them to the comptroller-general; ſo that cuſtomers have only the accounts to keep, which they ſtill deliver into the Exchequer yearly upon oath.

And theſe cuſtomers * were to be reſident upon their office, without making deputies, and to be ſworn to do the ſame, and not to be abſent by three weeks at the moſt, unleſs otherwiſe in the king's ſervice of record, upon loſs of office, impriſonment, and forfeiture of 100l. to the king: but now † the cuſtomers of every head-port, muſt have one able and ſufficient deputy or ſervant at the leaſt, to reſide at all members and creeks, appointed by commiſſions out of the court of Exchequer, for the entering, clearing, paſſing, &c. of ſhips and merchandizes.

* 1 Hen. IV. cap 13. § 1. 4 Hen. IV. cap. 20. § 1.
13 Hen. IV. cap. 5. § 1.
† 1 Eliz. cap. 11. § 8. 13 and 14 Car. II cap. 11. § 14.

In

In ſome of the out-ports, there is a cuſtomer inwards and another outwards, but in moſt ports the ſame perſon is cuſtomer both inwards and outwards; and theſe cuſtomers are ſcarce ever known to act themſelves, unleſs where they are collectors likewiſe; but in the ſmaller ports do uſually appoint the collectors to be their deputies, and in the larger ports they have diſtinct deputies; to whom they are obliged to allow at leaſt 20 l. per ann. or elſe to relinquiſh to them the whole fees.

For the principal other regulations concerning cuſtomers, ſee the buſineſs of the cuſtom-houſe in general throughout the work.

II. The Searchers or Finders,

* Were originally to be choſen in the manner of the cuſtomers, and were appointed for their aſſiſtance in the buſineſs of the cuſtoms without doors, to ſee that no goods were imported or exported without payment of duty; and not being allowed any ſalary, were to take the moiety of all forfeitures and ſeizures for their pains: they were alſo to keep entries of all cockets, &c. paſſed to them from the cuſtomers, and likewiſe of their own ſeizures, and were to account yearly for the truth of their tranſactions.

* 12 Rich. II. cap. 2. § 1.

And, for the faithful execution of their duty, theſe ſearchers were, at their admiſſion, to take the following oath:

'Ye ſhall ſwear, that ye ſhall ſerve the king well and truly in the office of the ſearcherſhip in the port of ————, and do the king's profits in all things that belongeth to you to do, by way of your office; and well and truly ye ſhall make due ſearch of all the ſhips and veſſels coming in or paſſing out of the ſaid port; and truly anſwer the king of all that ſhall belong unto him in your ſaid office, without fraud or maligne, after your wit and power: as God help you, and his ſaints.'

* They were to be ſworn not to let their offices to farm, nor to appoint deputies, but to be reſident thereon themſelves, and not be abſent by three weeks at the moſt, unleſs otherwiſe in the king's ſervice of record, upon loſs of office, impriſonment, and forfeiture of 100 l. But now † the ſearchers of every head port, muſt have one able and ſufficient deputy or ſervant at the leaſt, to reſide at all members and creeks, appointed by commiſſions out of the court of Exchequer, for the paſſing, ſhipping, clearing, &c. of ſhips and merchandizes: and it is the practice for the ſearchers likewiſe to appoint deputies at the principal ports, ſcarce any of them acting themſelves; and theſe deputies in the ſmaller ports are often the ſame perſons that are appointed land-waiters, but in the larger ports it is uſual to have diſtinct deputies to whom they are obliged to allow at leaſt 20 l. or elſe to relinquiſh to them the whole fees.

* 4 Hen. IV. cap. 20. § 1. 4 Hen. IV. cap. 21. § 1. 13 Hen. IV. cap. 5. § 1.
† 1 Eliz. cap. 11. § 8. 13 and 14 Car. II. cap. 11. § 14.

Though the buſineſs of a ſearcher ſeems originally to have been not only to attend at the ſhipping of goods deſigned to be exported to foreign parts, but likewiſe at the landing of goods imported from foreign parts, and alſo at the ſhipping and landing of goods coaſtwiſe; yet now there being particular officers appointed by the names of land-waiters for the landing, examining, and delivering of all foreign goods imported, and coaſt-waiters for the examining, landing, and ſhipping of goods, brought and carried coaſtwiſe; the ſearchers are only concerned in the examining and ſhipping of goods deſigned to be exported to foreign parts, and even in that part of the buſineſs, the land-waiters are moſtly joined with them.

For other regulations relating to this officer, ſee the buſineſs of the cuſtom-houſe throughout the whole work.

III. The Comptrollers,

* Were originally, as well as the cuſtomers, to be choſen from amongſt the beſt and moſt ſufficient men, and not to be made for affection or reward, or upon any ſollicitation, but upon Desert; and were to ſit with the cuſtomers, and in all things to cheque and imitate their tranſactions: and, as the cuſtomers were wont to write their accounts in rolls, the comptrollers were to keep counter-rolls; which counter-rolls or accounts, they were to deliver into the Exchequer yearly, upon oath. And now there are collectors appointed to receive an account for the king's duties, they are likewiſe to cheque all their tranſactions, by examining and ſigning all accounts, diſpatches, &c. and by keeping the like books of accounts: and they are to be privy to all orders of the commiſſioners, and to be conſulted with, in the whole management and buſineſs of their reſpective ports, and to join with the collectors in all their proceedings.

* 12 Rich. II. cap. 2. § 1.

And, for the faithful execution of their duty, theſe comptrollers were, at their admiſſion, to take the following oath, viz.

'Ye ſhall ſwear, that well and truly ye ſhall ſerve the king in the office of comptroller of the king's cuſtoms and ſubſidies, in the place of cuſtomer; and truly ye ſhall enter all the goods and things cuſtomable, the which ſhall come to the ſaid port, or ſhall paſs from the ſame: and that ye ſhall no gift take for to do your office, nor for any thing that may fall in diſadvantage to the king; nor any merchandize, nor any other thing cuſtomable, ye ſhall not ſuffer to paſs out of the ſaid port, without cuſtom due be paid: and ye ſhall do the office yourſelf, and dwell thereupon in your proper perſon, without making any ſubſtitute or deputy under you: and ye ſhall write the rolls with your own hands; and the king's profit ye ſhall wait and do, inaſmuch as ye may, after your knowledge and power: as God you help, and his ſaints.'

* They were to be ſworn as above, to be continually reſident upon their offices, without making deputies, and not to be abſent by three weeks at the moſt, unleſs otherwiſe in the king's ſervice of record, upon loſs of office, impriſonment, and forfeiture of 100 l. to the king: but now the † comptrollers of every head-port muſt have one able and ſufficient deputy or ſervant at the leaſt, to reſide at all members and creeks, appointed by commiſſions out of the court of Exchequer, for the entering, paſſing, clearing, &c. of ſhips and merchandize: and it is the practice of the comptrollers likewiſe, to appoint deputies at the principal ports, ſcarce any of them acting themſelves; and theſe deputies in the ſmaller ports, are often the collector's clerks, but in the larger ports it is uſual to appoint diſtinct deputies; to whom they are obliged to allow at leaſt 20 l. per ann. or elſe to relinquiſh to them the whole fees.

* 1 Hen. IV. cap. 13. § 1. 4 Hen. IV. cap. 20. § 1. 13 Hen IV. cap. 5. § 1.
† 1 Eliz. cap. 11. § 8. 13 and 14 Car. II. cap. 11. § 14.

And the perſons who officiate as comptrollers are, by the honourable the commiſſioners of the cuſtoms, appointed comptrollers of the duties on coals, culm, and cinders, brought coaſtwiſe, for which they are allowed poundage.

For other regulations relating to this officer, ſee the general buſineſs of the cuſtoms throughout this work.

Having thus given a ſhort account of the officers, which, by the old laws, ſeem to have been originally entruſted with the management of the cuſtoms, I ſhall now proceed to treat of the ſeveral officers, which, by the great increaſe of buſineſs, have ſince been found neceſſary to be added, and are now actually employed in that revenue: the principal whereof are,

I. The Collectors.

Though the cuſtomers were originally the collectors of his Majeſty's cuſtoms, &c. and are ſtill ſo ſtiled in their patents, yet of later years, there have been new and diſtinct officers appointed for that purpoſe, by the titles of Collectors, who are entitled the officers of the commiſſioners of the cuſtoms; by whoſe deputation they act, and under whom they have, at their reſpective ports, the whole management and direction of levying and collecting his Majeſty's cuſtoms, and other duties on goods and merchandizes imported and exported, and of the duties on coals, culm, and cinders, brought coaſtwiſe; and alſo the direction of all the other officers employed in that revenue, deputed by the ſaid commiſſioners: and are alſo, by the ſame authority, impowered to inſpect the behaviour of the patent-officers, or their deputies, that in caſe of any miſbehaviour, they may repreſent the ſame to the ſaid commiſſioners.

II. The Surveyors,

Are a kind of inſpectors and ſupervifors of the whole buſineſs of the cuſtoms without doors, as well by land as by water; though in the larger ports there are ſeparate officers appointed by the names of Tide-ſurveyors, to execute that duty by water: but in all ports they are to attend, at the ſhipping and landing of goods, as well to and from foreign parts, as coaſtwiſe, to ſee that the proper officers regularly diſcharge their reſpective duties, and to adjuſt the tares of goods, &c. and they are likewiſe to examine and jerque the land-waiter's books [ſee the article Jerque]: and though they are not required to ſend up quarterly accounts of the imports and exports, as the collectors, cuſtomers, and comptrollers do; yet they are to compare the original warrants granted for the landing of all goods imported, and copies of all cockets granted for the ſhipping of all goods exported, with the collector's quarter-books which they ſend up, and to atteſt under their hands, that the true qualities and quantities of all the goods, landed and ſhipped off during that quarter, are truly entered therein.

III. The Land-Waiters,

Are to attend at the landing of all goods imported from foreign parts, and take an account thereof, in order that his Majeſty's full duties may be paid for the ſame: and in ſome ports they alſo execute the office of a coaſt-waiter.

They are likewiſe ſtiled Searchers, and are to attend with the patent-ſearchers, in the execution of all cockets for the ſhipping

ſhipping of goods to be exported to foreign parts: and in all caſes where drawbacks or bounties are to be paid on the exportation of any goods, they as well as the patent-ſearchers, are to certify to the ſhipping thereof on the DEBENTURES. See the article DEBENTURES.

For inſtructions in the method of examining and delivering of foreign goods imported, ſee the buſineſs of the cuſtoms throughout this work.

IV. The COAST-WAITERS,

At their reſpective ports, are to attend at the landing and ſhipping of all goods coming from, or going to any other port within Great-Britain, to take an account thereof, and ſee that they exactly agree in quality and quantity, with the ſufferances granted for the landing or ſhipping; ſo that under the colour of bringing or ſending one ſort of goods coaſtwiſe, any other ſorts may not be fraudulently imported or exported, to the prejudice of his Majeſty's revenue.

V. The TIDE-SURVEYORS,

Are at all times, when his Majeſty's ſervice requires it, to attend the ſame by water, to viſit all ſhips from foreign parts, upon their arrival into port, in order to put tide-waiters on board, and to rummage for prohibited goods, or goods concealed, and are frequently to call upon the ſaid ſhips, to ſee that the tide-waiters are on board, and do keep their watch; and when it is ſignified to them that the ſhip is wholly diſcharged, they are to go on board and rummage the ſame, and if they do not find any goods on board, they are to take off the tide-waiters.

They are likewiſe to place tide-waiters on board outward-bound ſhips, whereon there have been laden any goods intitled to a drawback or bounty, to prevent the ſame from being relanded; and are frequently to viſit the ſaid ſhips, to ſee that the officers on board do their duty: and, when the ſaid ſhips have been regularly cleared in the cuſtom-houſe by the collector, &c. and are ready to ſail, they are to diſcharge the tide-waiters.

VI. The TIDE-WAITERS, or TIDESMEN,

Are to be placed by the tide-ſurveyors on board all ſhips laden with goods from foreign parts, to prevent the fraudulent landing or conveying of them away without payment of his Majeſty's duties, which is to be ſignified to them by a note under the land-waiter's hands: and, when they have received ſuch note, order, or warrant, from the land-waiters, for permitting any goods to be unladen, they are to take an account of the marks, numbers, and outward package, in a book to be given them for that purpoſe: but they may ſend all ſmall parcels of goods liable to be run, to the king's warehouſe, for ſecurity of the duties, without any order, having firſt entered them in the ſaid books. And during the time that they are on board, they are to prevent wines from being filled up, or the package of any goods opened, and endeavour to diſcover all goods concealed, as likewiſe any bulk tobacco, or any other prohibited goods, and to ſeize the ſame.

They are likewiſe to be placed on board outward-bound ſhips, whereon there have been laden any goods intitled to a drawback or bounty upon exportation, to prevent the fraudulent relanding: and during the time they continue on board, they are to take care that the packages of any goods be not altered.

VII. The BOATMEN or WATERMEN,

In ſome ports, are appointed only to row and give their attendance in the tide-ſurveyor's boats; but in moſt ports they likewiſe, when occaſion requires, officiate as tide-waiters, by watching on board ſhips, &c.

VIII. The COAL-METERS,

Are to attend at the delivery of all ſhips coming coaſtwiſe with coals, culm, or cinders, to mete, meaſure, or weigh the ſame, and to take account of the full quantities delivered, in order that his Majeſty's duties may be fully paid.

IX. The RIDING OFFICERS,

Are appointed to reſide at, or near ſome particular places on the ſea-coaſts, and have certain diſtricts allotted them; ſome part whereof they are to viſit daily, in order to diſcover any veſſels hovering on the coaſts, with a deſign to land or take on board any prohibited or uncuſtomed goods, which they muſt by all means endeavour to prevent; and in caſe of the fraudulent landing or ſhipping of any goods, to ſeize the ſame, with the veſſels, boats, &c.

They are to enter each day's tranſactions and proceedings, with their motions from place to place, in a proper book to be kept for that purpoſe; from whence at the end of each month, two journals are to be tranſcribed, and ſent or delivered to the collector; one whereof to be preſerved in the office, and the other to be tranſmitted to the commiſſioners, in order to be examined by the perſons appointed for that purpoſe.

But, before theſe journals are thus tranſmitted, the collector is, on the back thereof, to make his obſervations how far the officers have performed their duty. And, as there will be no neceſſity to mention theſe officers hereafter but occaſionally, we ſhall here add the forms of their books and journals, which muſt be as follow:

Port of Southampton. | Diſtrict. From A—— to B—— | Journal of B. C. officer at D———, for the month of

Day of the month.	When travelling.			When attending.		Wind and weather.	Tranſactions and obſervations, viz.
	Place from whence, and hour of the day when ſet out.	Places arrived at, and hour when.	Diſtance of the place.	Place where attended.	From and to what time attended, and when returned.		What officers met, and where; what informations of goods run, or intended to be run, and what methods taken to prevent the ſame, what ſeizures made; what ſhips obſerved on the coaſt, and which way they ſail, and what notice of ſuch ſhips given to the next officer; what ſignals obſerved from the commander of the ſmack; and alſo whatever happens in the day, evening, or night, that may be fit for the commiſſioners knowlege.

X. The SURVEYORS, WAITERS, and SEARCHERS,

Are appointed to reſide at creeks, to execute the offices of ſurveyors, tide-ſurveyors, land-waiters, coaſt-waiters, and ſearchers, in the ſame manner as thoſe diſtinct officers are to execute the ſame at the principal and member-ports: and they are likewiſe to perform the duties of riding officers, and to keep journals of their daily actions and proceedings, with their motions from place to place; to be delivered to the collectors, in order to be by them tranſmitted to the commiſſioners.

XI. The MASTERS of SMACKS,

Are appointed to command veſſels to cruize on the coaſts of Great-Britain, and are diligently to attend on board, and to keep their veſſels in conſtant motion within their reſpective diſtricts, or ſtations, unleſs in caſes of neceſſity, or purſuit of ſuſpected veſſels: and, in cruizing, they are to ſpeak with all ſhips or veſſels which they ſhall meet at ſea; and, if they have any reaſon to ſuſpect they have goods on board deſigned to be ſmuggled, they are diligently to watch their motions, and keep them company 'till they are clear of the coaſt within their reſpective diſtricts, in order to prevent the fraudulent landing any ſuch goods.

And they are likewiſe to endeavour to prevent the exportation of ſuch goods as are prohibited to be exported out of this kingdom; and, in caſe they diſcover any ſuch goods to have been ſhipped, or ſhipping for foreign parts, they are to ſeize the ſame, with the veſſels, &c. For the due navigation of each of theſe veſſels, there are likewiſe appointed a mate, and a ſufficient number of mariners, who are to be under the direction of the ſaid maſters.

And, for the victualling of theſe veſſels, the commanders are allowed nine-pence per diem for themſelves and each mariner; whereof notice is to be affixed on the maſt, that, if good and ſufficient proviſions are not provided by the commanders, the mariners may complain to the collector and comptroller.

Theſe maſters and their mates, are to keep journals of their daily tranſactions, with their motions from place to place, to be delivered monthly to the collectors of their reſpective ports, in order to be tranſmitted to the commiſſioners.

And, by way of diſtinction, all ſmacks, yachts, or veſſels employed in the ſervice of the cuſtoms, are to wear a jack and enſign, with the ſeal of office thereon, the mark in the enſign being twice as large as that in the jack; but not to wear a pendant.

The aforementioned officers are thoſe which are chiefly concerned in the execution of the cuſtom laws, &c. in an outport; for as to the more inferior, ſuch as weighers, watchmen, &c. their very titles beſpeak their employments, ſo that they need no definition; and though, in ſome ports, they are executed by diſtinct perſons, yet in many, eſpecially the ſmaller, the tide-waiters and boatmen officiate.

REMARKS.

The foregoing is only a ſhort general account of the nature of the employments of the ſeveral officers of the cuſtoms; but, for the methods of executing their reſpective employments, we muſt refer to the ſeveral branches of the buſineſs of the cuſtoms, where they are occaſionally treated of. And as what has been ſaid relates only to the reſpective employments of the officers, we ſhall next give an account of what other regulations they are ſubject to; the which are likewiſe to be obſerved by all other officers of the cuſtoms in general.

RULES to be obſerved by the OFFICERS of the CUSTOMS in general.

I. * That no perſons are to be employed in the buſineſs of the cuſtoms till they have given ſecurity, and have taken their corporal oaths in the following form, viz,

* 13 and 14 Car. II. cap. 11. § 33. 4 and 5 Will. and Mar. cap. 5. § 25. But note, this act does not direct who ſhall adminiſter this oath.

Deputation dated the ---------
Sureties,
D. E. ----- of -----
E. F. ----- of -----
Penalty -----l.
Juravit apud -------
die ----- coram nobis
B. C.----Collector,
C. D.---Comptroller.

'I A. B. [his employment] do ſwear to be true and faithful in the execution and diſcharge (to the beſt of my knowlege and power) of the truſt committed to my charge and inſpection, in the ſervice of his Majeſty's cuſtoms; and that I will not take or receive any reward or gratuity, directly or indirectly, other than my ſalary, or what is or ſhall be allowed me from the crown, or the regular fees eſtabliſhed by law, for any ſervice done, or to be done, in the execution of my employment, upon any account whatſoever. So help me God.'

A. B.

Which oath is adminiſtered by the principal officers of every out-port, or any two of them, and entered or regiſtered in a book to be kept in the cuſtom-houſe for that purpoſe: and, if the ſecurity be given at the port, the bond muſt be returned to the commiſſioners, and the ſufficiency of the ſureties, with their places of abode, certified to the examiner of ſecurities.

II. * That all perſons employed in the cuſtoms in any outport, muſt, at their admiſſion, likewiſe take the aforeſaid oath, before two juſtices of the peace in the county, town, or place where their employment ſhall be, upon forfeiture of their employments, for refuſal or neglect; and the ſaid juſtices muſt certify the taking of this oath, to the next general quarter-ſeſſions.

* 6 and 7 Will. and Mar. cap. 1. § 5, 6.

And when any officer, having taken theſe oaths, is thereupon to be admitted, the collector and comptroller are to deliver him his deputation, or commiſſion, taking a receipt for the ſame, in a book to be kept for that purpoſe, and alſo at the foot thereof the copy of his inſtructions, annexed to his bond, which are to be tranſmitted together to the commiſſioners.

III. That his Majeſty's revenue may not ſuffer by the officers abſenting themſelves from their reſpective duties, it muſt be obſerved, that they may not preſume ſo to do without particular leave: and, therefore, when any officer's private affairs, &c. require their abſence, the collector may, upon their application, give them leave for any time not exceeding a week; and, if that is not ſufficient, the commiſſioners muſt be applied to for longer time. But, notwithſtanding ſuch leave to be abſent for longer time than a week, two-third parts of their ſalaries muſt be deducted, and applied to the fund for paying penſions to ſuperannuated officers: and if any officers are abſent for longer time than for what they had leave, they are to forfeit two days pay for each day ſo abſent, to be applied to the ſaid ſuperannuation fund; upon refuſal or neglect whereof, their ſalaries to be ſtopped.

And if an eſtabliſhed officer officiates for any other eſtabliſhed officer abſent by leave, the officer ſo officiating is not to have an additional allowance, unleſs put to any extraordinary charges: but, if an extraordinary man officiates, he is to be paid by incidents.

For the due regulations of ſuch eſtabliſhed officer's abſence, a book muſt be kept after the following manner:

Leave to be abſent from duty, requeſted by eſtabliſhed officers.

5th of January.

I deſire leave to be abſent from my duty for ſix days, for the recovery of my health - - - - -

Granted—B. C. Collector,
A. B. Surveyor.

8th of January.

I deſire leave to be abſent from my duty for ſix days, on my own private affairs - - - - -

Granted—B. C. Collector,
C. D. Landwaiter.

Leave further continued for ten days, by commiſſioners letter of the 13th of January.

An Account of the abſence of eſtabliſhed officers in the month of———

Officers names.	Titles of office.	When abſented.	When returned.	Time of abſence.	Occaſion of abſence.
A. B.	Surveyor	5th Jan.	11 Jan.	6 days	Recovery of health
C. D.	Land-waiter	8th Jan.	24 Jan.	16 days	Private affairs

And from this ſide of the book is to be tranſcribed an account in the ſame form, in order to be tranſmitted to the commiſſioners of the cuſtoms, the next poſt after the end of each month, with the monthly abſtracts.

And, with regard to mariners employed on board any veſſels in the ſervice of the cuſtoms, it muſt be obſerved, that they may not be abſent above three days, except in caſe of ſickneſs; and that, in all caſes of abſence, the commanders and mates are to give a certificate of the occaſion, to the collector and comptroller.

IV. That a proviſion may be made for the maintenance of ſuch officers of the cuſtoms as have behaved well, and through age or infirmities are become ſuperannuated, or by ſome accident rendered incapable of the ſervice, a deduction of ſixpence in the pound muſt be made quarterly, out of the ſalaries and day's pay of all ſuch eſtabliſhed officers of the outports, whoſe ſalaries do not exceed 60l. per annum, and whoſe taxes are repaid by the crown, except collectors and their clerks, and patent officers, or their deputies, who have no ſalaries on the eſtabliſhment: but no officer is to be intitled to this allowance who has any other means of ſubſiſtence from the government, or otherwiſe, or is capable of getting ſubſiſtence any other way.

And to the ſame uſe is likewiſe to be applied the two-third parts of the ſalaries of the abſent officers, and the money deducted out of the officers ſalaries, by way of mulct for miſdemeanors: upon neglect or refuſal of the payment whereof, their ſalaries are to be ſtopped.

Which deductions are to be made by the collector, upon payment of the reſpective officers ſalaries, and to be preſerved in the king's cheſt, under the joint care of the collector and comptroller, and accounted for in each month's abſtract: and the collector is to keep a ſeparate account of the money collected on the ſuperannuation-fund, and remit the ſame immediately after the end of each quarter, to Mr -------, the preſent receiver; of which remittance the comptroller is to ſend a duplicate to -------, Eſq; the comptroller-general, in order that he may cheque the ſaid ------, and comptrol the accounts. The form of the account of the collector of this fund muſt be as follows:

An account of the deduction of ſix-pence in the pound, out of the ſalaries and day-pay of the eſtabliſhed officers, and mulcts on all officers of this port, for the quarter ending at Lady-Day, being towards the maintenance of ſuperannuated officers.

OIL.

Of the nature and quality of OIL in general.

What the chemiſts call oil, or ſulphur, is not a ſimple ſubſtance, but a body compounded of fire, water, earth, and ſalt; but we chuſe to ſay ſomething of it here, as it is moſt commonly ſeparated intire in the operations of chemiſtry, and is with ſome difficulty reſolvible into it's component principles.

It may be defined to be a fluid, viſcid, inflammable, tranſparent body, without taſte or ſmell (though by mixing it differently with ſalts, theſe ſenſible qualities are produced) compounded of fire, water, earth, and ſalt, and it may be conceived to conſiſt of many flakes, or flocculi, each of which is again made up of very ſmall flexible filaments, formed of the four principles beforementioned, by fermentation, as well in the bowels of the earth, as in the bodies of vegetables and animals: thus an aromatic plant growing in water, will, by diſtillation, yield an oil, which could never have been obtained from the water in which it ſtood; and all oils may by art be reſolved into water, earth, and ſalt. From theſe filaments, variouſly concerted, ariſe the flakes already mentioned, which are of different thickneſſes, and in the pores thereof is lodged the element of fire, which alſo runs in rivulets thro' their interſtices.

Upon theſe depend the ſpecific levity, inflammability, and fluidity of oil; but as, notwithſtanding the inteſtine motion cauſed by the element of fire, the flocculi ſtill adhere, in ſome meaſure, together, this fluid muſt be more viſcid than any other.

From what has been ſaid concerning the nature of alkaline ſalts, and the figure and ſtructure of the oily flocculi, it is eaſy to conceive why all alkilies diſſolve ſulphurs; for, ſince the alkaline particles are ſpherical and prickly, they cannot enter the interſtices of the flocculi without carrying away ſome of them from the reſt, and thus by degrees thoroughly diſſolving them.

But the denſe, rigid, and pointed moleculæ of acids being forced into theſe interſtices, increaſe the denſity, and ſtrengthen the texture of the flocculi; and, from the diverſity of theſe, and of the acid ſpicula mixed with them, ariſe the different kinds of ſulphurs. Sulphurs formed in the earth

of

of fire, acid ſalt, water, and a very fine earth, are termed bitumens.

Thus bitumens diſſolved in a large quantity of water, form the mineral oils, or petrolea.

But, if they are mixed with earth and ſalt, the ſolid bitumens are produced, differing from one another in degrees of purity, according to the quantity or groſſneſs of the earth, or different degrees of mixture. Thus foſſile coals, jet, amber, and the common bitumenous, and bitumeno earths are produced.

If there be but a ſmall quantity of earth, and much acid ſalt, the common mineral ſulphur, or brimſtone, is formed.

If the mineral original bitumen is joined to a fuſible earth, capable of vitrification, it communicates to it a metallic form, that is, the ſound, brightneſs, ſoftneſs, ductility, malleability, and all the other ſenſible qualities of metals.

This origin of mineral bitumens may be confirmed by many experiments. If a mixture of equal parts of oil of vitriol and oil of turpentine be digeſted together for a conſiderable time in a very gentle heat, and afterwards diſtilled in a retort, there will come over firſt a yellowiſh liquor, reſembling petroleum both in ſmell and conſiſtence.

What remains in the retort is at firſt a ſoft bitumen, and afterwards turns into a hard black maſs, eaſily inflammable, and, when burnt, ſmelling exactly like foſſile coal. But, if the diſtillation be continued, a white acid liquor will next be obtained, which, by ſtanding, lets fall a grey powder, which is true common brimſtone, a yellow ſubſtance of the like nature adhering likewiſe to the neck of the retort; what is left behind being a black, ſhining, light ſubſtance, diſpoſed in thin diſgregated ſtrata, like talc, in which, by the help of the load-ſtone, iron may be diſcovered.

Thus, therefore, all thoſe bitumens may be artificially produced; and the analyſis of the natural ones further confirm the manner of their formation.

Thus the chemiſts have ſhewn that metals are nothing but bitumenous ſubſtances, which have undergone a long digeſtion; for, by depriving them of their ſulphur, they are reduced to aſhes, and then to glaſs.

This is eaſily ſeen in the imperfect metals.

For, if any of them be expoſed to a long heat, and eſpecially to the rays of the ſun collected by a large burning glaſs, the ſulphureous principle flies off, and only a calx, or aſhes, will be left behind, which in a more vehement degree of fire, are preſently vitrified; and, by reſtoring the ſulphur, this glaſs may again be reduced to metal.

The inflammable ſubſtances in animals and vegetables conſiſt of a different combination of the principle of ſulphur and acid ſalt; for the oil or ſulphur in theſe is formed by a ſmall portion of earth, joined to the elementary fire, acid ſalt and water; this oil, when joined to an acid ſalt, produces gums; when joined to a fine acid, and a new acceſſion of fiery particles, it produces eſſential oils and inflammable ſpirits; but, if the acids are more groſs, by reaſon of a large quantity of earth joined to them, it forms reſins, as we learn from the artificial compoſition of all theſe ſubſtances: by mixing ſpirit of wine with volatile ſpirit of urine, we obtain a mucilaginous concretion, or thin gum. Oil of olives, and ſalt of tartar, melted together, make a kind of ſoap, or thick gum; and, if ſpirit of wine be digeſted for a long time, with oil of vitriol, and then diſtilled, an inflammable oil is obtained, reſembling, in ſmell and other qualities, the eſſential oils of plants, a true reſin being left behind in the retort.

In animals, the ſame oleaginous principle forms the fat, and other glutinous or gelatenous ſubſtances, theſe laſt being compoſed of an acid volatile ſalt and oil, as appears from their analyſis; but fat is made of the ſame oil and acid ſalt; for, if oil of olives and ſpirit of nitre be mixed together and digeſted, a ſubſtance will be formed, in every thing reſembling the fat of animals.

Sulphurous ſubſtances found in bodies are either fixed or volatile.

The fixed ſulphurs are either ſolid, ſuch as fat, reſin, or the bitumens; or fluid, as oils.

Volatile ſulphurs are ſuch as fly off with a ſmall degree of fire, and have an appearance compounded of that of oil and water. Such are inflammable ſpirits, obtained from the flowers and fruits of plants.

OIL, [OLIVE OIL,] in general, is an unctuous inflammable matter, extracted from natural bodies. It is ſometimes applied to the juices which naturally exudate from plants and trees, as balm, &c. but is more ſtrictly applied to thoſe juices drawn by expreſſion * from fruits, grain, or ſeeds, as olive-oil, nut-oil, &c. There are no little variety of oils, whoſe properties, and manner of expreſſion, are different. Oil of olives being the moſt univerſal, and that chiefly uſed in medicine, food, and manufactures, we ſhall give an account of the method of preparation of the olives.—There are inferior, which are uſed in manufacture, not food and operations; ſorts, that are prepared in the ſecond and third medicine.

* Expreſſed oils are ſuch as are procured by bodies only by preſſing; as olive, almond oils, and the like.

REMARKS.

Quere. As we are under the neceſſity of taking large quantities of olive-oil from other countries, may it not be worth while to endeavour to produce the olive in ſome of our own plantations? Does not this deſerve to be ſeriouſly thought of?

According to Columella, the beginning of December, for the moſt part, is the middle ſeaſon for gathering of olives, and making oil; for, before this time, the bitter oil, which is called ſummer oil, is made; and, about this month, they preſs the green oil; then afterwards the ripe oil: but it is not for the intereſt of a maſter of a family to make bitter oil, becauſe the olives yield but very little of it, except the berry fall to the ground by tempeſtuous weather, and it be neceſſary to gather it up, leſt it be eaten up and deſtroyed by tame cattle or wild beaſts. But it is of very great advantage to him to make of the green ſort, becauſe the olives both yield enough of it, and by it's price it almoſt doubles the income of the owner: but, if the olive-yards are very large, it is neceſſary that ſome part of them be reſerved for ripe fruit.

A loft to carry the olives into is very neceſſary.

Nevertheleſs, becauſe ſometimes the immoderate multitude of berries overcomes the labour of them that attend the preſs, and are more than they can manage, there muſt be a ſtore-room in the upper part of the houſe, where the fruits may be put: and this loft ought to be like a granary, and to have as many ſmall binns, or diſtinct partitions, as the quantity of olives ſhall require, that ſo the gathering of each day may be but apart, and laid up by itſelf.

The floor, or bottom of theſe ſmall partitions, muſt be paved with ſtones, or tiles, and made ſo ſloping, that all the moiſture may run quickly out of them, by gutters or pipes; for the lees are very hurtful to the oil, which, if they remain in the berry, corrupt and ſpoil the taſte of the oil. Therefore, when you have built the partitions with judgement, place upon the floor ſmall boards, half a foot diſtant from each other, and lay reeds upon them, that are carefully and cloſely woven, ſo that they may not let ſo much as a berry paſs through, and be able to ſupport the weight of the olives. But hard by all theſe ſmall partitions, in that part where the lees run out of them, under the very pipes, the floor muſt be concave, after the manner of little trenches; or there muſt be a hollow ſtone, wherein may ſtand whatever liquor ſhall flow out of them, and from whence it may be drawn.

Moreover, you muſt have fats, or barrels, ready prepared within doors, which may receive the lees of every kind of olives apart by themſelves, whether they be ſuch as flow from the olives pure, without any mixture, or ſuch alſo as have received ſalt; for both of them are fit for many uſes.

But mills are more uſeful than the preſs, for the making of oil; and the preſs than the canalis, and the ſolea *. The mills are very eaſily managed; for, according to the bigneſs of the berries, the mill ſtones may be either lowered or raiſed, that ſo the kernel, which ſpoils the taſte of the oil, may not be broken: moreover, the preſs diſpatches more work, and more eaſily, than the ſolea and canalis. There is alſo a machine, like an erect threſhing inſtrument, which is called a beetle; and that does the work not incommodiouſly, except that it is frequently ſpoiled, and out of order; and, if you throw a little too many berries into it, you ſtop it. Nevertheleſs, the aforeſaid machines are made uſe of according to the ſtate and condition, and cuſtom of the countries: but that of mills, as alſo of the turning-preſs, is the beſt. I thought it neceſſary to premiſe theſe things, before I diſcourſed of making the oil.

* Columella mentions ſeveral machines, wherewith the oil was ſqueezed ont of the olive-berries; but gives no particular deſcription of any of them, ſo that it is not eaſy to form any diſtinct idea of them. Cato, indeed, in his 22d chapter, gives a particular diſcription of the trapetum; but it is not very intelligible, perhaps becauſe of the incorrectneſs of the text; and learned men differ in their opinions about it. Varro ſays, that the trapeta were oil-mills made of hard rough ſtones; and Columella ſeems to make the mola and the trapetum two diſtinct things: perhaps by the laſt he means a preſs for ſqueezing the olives, which had it's name from the turning of the ſcrews. We have no account at all, that I can find, of the canalis and ſolea: nor is it any great ſatisfaction to be told by antiquarians, that they were certain machines, uſed by the Antients for making oil, ſince they give us no account of their ſtructure.

Now we muſt come to the thing itſelf, although we have omitted many things; which, as before the vintage, ſo, before the gathering of the olives, and making the oil, muſt be all ready prepared; ſuch as plenty of wood, which muſt be brought home a long time before, that ſo, when the thing is wanted, the labourers may not be called away from their buſineſs: ladders alſo, ſmall baſkets, and ſowers baſkets of ten modii and three modii each, wherein the berries, which are gathered off the trees, are received; frails, hempen and Spaniſh

niſh-broom ropes, iron ladles, wherewith the oil is emptied from one veſſel to another; covers or lids, wherewith the oil-veſſels are covered; ſponges, greater and ſmaller; pitchers, in which the oil is carried out; cane or reed mats, into which the olives are gathered. All theſe ought to be in great number, becauſe they periſh with the uſing, and become fewer; of which, if any one thing be wanting when there is occaſion to uſe it, the work is at a ſtand.

As ſoon as the berries ſhall begin to be of different colours, and ſome of them are already black, yet more of them white, the olive muſt be gathered by hand, when the weather is fair, and ſifted and cleanſed upon mats or reeds ſpread under them: then, after they are cleanſed, they muſt be preſently carried to the place where the preſſes ſtand, and ſhut up intire in new frails, and put under the preſſes, that they may be ſqueezed as little a while as may be. Afterwards, when their thin rinds are opened, they ought to be ſoftened, by adding two ſextarii of whole ſalt to each modius of olives; and the maſs of bruiſed olives ought to be ſqueezed out, either in oblong ſquare boards, if it be the cuſtom of the country, or in new frails at leaſt: then that which ſhall firſt flow from the preſs into a round fat (for that is better than a ſquare leaden veſſel, or a receiver made of ſtone or brick with two diviſions in it) let the leader empty it preſently, and pour it into great earthen pans prepared for this uſe.

But, in the oil-cellar, let there be three rows of pans, that one of them may receive the oil of the firſt note, that is, of the firſt preſſing; the ſecond, that of the ſecond; and the third row, that of the third: for it is of great importance not to mix that of the ſecond, much leſs that of the third preſſing, with that of the firſt; becauſe that is of a much better taſte which flows from the olives with leaſt force of the preſs, as if it dropped from them of it's own accord. When, therefore, the oil has ſtood a little in the firſt pans, the lader ought to ſtrain and empty it into the ſecond, and then into the next, 'till he comes to the laſt; for the oftener it is ventilated, and worked, as it were, by emptying it from one veſſel into another, the clearer it becomes, and the more it is freed from it's dregs. But it will be ſufficient to place thirty large pans in each row, except the olive-yards be very large, and require a greater number.

But if, with the colds, the oil ſhall be congealed with the lees, you muſt, in that caſe, certainly uſe a little more toaſted ſalt; that thing reſolves and looſens the oil, and ſeparates it from every thing that may hurt or corrupt it. Nor is there any reaſon to fear, that the oil will become ſalt or brackiſh; for whatever quantity of ſalt you ſhall put to it, yet the oil does not receive the taſte of it. But even thus, the oil uſually does not diſſolve, when greater colds than ordinary come on ſuddenly; therefore they toaſt nitre, and bruiſe it, and ſprinkle it upon the oil, and mix it with it: this liquifies the lees. There are ſome, though very careful oilmen, who do not put the berry under the preſs whole, without breaking it, becauſe they think that ſome part of the oil is loſt by ſo doing; for, when the berry receives the weight of the preſs, the lees alone are not preſſed out of it, but they attract ſomething of the fatneſs of the oil with themſelves.

But I have this direction to give upon the whole, that neither ſmoak nor ſoot be admitted into the place where the oil preſs ſtands, or into the oil-cellar, as long as the green oil is making there; for both theſe are very prejudicial to this affair, and the ſkilfulleſt oilmen ſcarcely ſuffer their work to be done at the light of one ſingle lamp: wherefore, both the place where the oil-preſs ſtands, and the oil-cellar, muſt be ſituated towards that quarter of the heavens which is moſt ſheltered from cold winds, becauſe the heat of the fire is not at all required. Moreover, the barrels and jars, into which the oil is put, muſt not only be carefully cleanſed, and put in order, at the time when the neceſſity of beſtowing the fruit forces to do it; but, when they are emptied by the merchant, care ought to be taken, that if any dregs or lees have fallen to the bottom of the veſſels, they be immediately cleaned out, and waſhed with a lee of aſhes, not very hot, leſt the veſſels throw off and loſe their wax; and let it be done once and again: then let them be gently rubbed with the hand, with lukewarm water, and often rinſed, and ſo let all the moiſture be dried up with a ſponge.

There are ſome who diſſolve porters clay in water, like liquid dregs, and, after they have waſhed the veſſels, daub them on the inſide with this ſort of gruel, as you may call it, and ſuffer it to dry upon them: afterwards, when they have occaſion to uſe them, they rinſe them with pure water. Some waſh the veſſels thoroughly all over with lees of oil firſt; then they waſh them with water, and dry them: afterwards they examine whether the barrels want new wax; for the Antients ſaid, that it was neceſſary to wax them almoſt every ſixth year, at the time of making the oil, which I do not underſtand how it can be done: for, as new veſſels, if they be heated, eaſily receive the melted wax, ſo I cannot believe, that ſuch as are old will bear waxing, becauſe of the juice of the oil; which very waxing, nevertheleſs, the huſbandmen of our times, have wholly laid aſide, and have been of opinion, that it was better to waſh the new barrels all over with liquid gum, and to ſuffumigate them with white wax when they are dried, that they may not loſe their good colour, and tarniſh: and they judge that this fumigation ought to be done, as often as either the new or old veſſels are cured and ſeaſoned, and prepared for the new oil. Many, when they have daubed their new barrels or jars with groſs fat gum, are ſatisfied with one gumming for ever: and, indeed, a veſſel which has once imbibed the oil, does not admit of a ſecond gumming; for the fatneſs of the oil refuſes any ſuch matter as that of gum is.

After the month of December, about the beginning of January, the olive-berry muſt be gathered in the ſame manner as above, and the oil preſently preſſed out of it; for if it be laid up in a loft, it quickly grows hot; for, with the water-rains, it breeds a greater quantity of lees, which are very hurtful to oil. Therefore you muſt beware of making oil for eating of this kind of berry, which may, by this one way, be avoided; if, as ſoon as the berry is brought out of the field, it be ground, and put into the preſs, and the oil preſſed out of it, and managed as we have ſaid above. All huſbandmen, for the moſt part have believed, that if the berry be laid up within the houſe, the oil will grow in the loft; which is as falſe, as that corn of any ſort grows in the threſhing-floor: and this falſhood that antient author, Porcius Cato, refutes thus; for he ſays, that the olive grows wrinkled in the loft, and becomes ſmaller: for which reaſon, when the huſbandman has laid up ſuch a quantity in the houſe, as is ſufficient for one making; and, after many days, has a mind to grind it, having forgotten the firſt quantity that he had brought in, he ſupplies out of another heap, which he had in like manner placed apart by itſelf, as much as is wanting to each quantity; and by this one making, the berry that has reſted for ſome time, ſeems to yield more oil than that which is freſh and newly gathered, whereas he has taken a greater quantity of olives to it. Yet, ſuppoſe that were exceeding true, nevertheleſs there is more money raiſed by the price of green freſh oil, than by the great quantity of that which is bad: which thing Cato alſo ſaid. And thus, indeed, whatever addition of weight or meaſure is made to the oil, if you would compute the quantity of berries, added to that which you reckon to one making, you would think it not an increaſe and advantage, but a real loſs: wherefore we ought not to heſitate to grind the olives, and put them under the preſs, as ſoon as poſſible after we have gathered them.

Nor am I ignorant that a ſecondary oil, for common eating, muſt alſo be made; for when the olive, which is gnawed by the little worms, falls off the tree; or has, by ſtorms and rains fallen into the dirt, they have recourſe to warm water for a remedy; and the caldron ought to be made hot, that the dirty berries may be waſhed. But this muſt not be done with exceeding hot water, but with that which is moderately warm, that the taſte of the oil may become the more agreeable; for if the agreeable taſte be boiled out of it, it attracts the taſte of the little worms, and of any other ſorts of naſtineſs whatſoever: but when the olive has been thoroughly waſhed, the other things ought to be done as directed above. But the pureſt and beſt oil, and that of the ſecondary ſort for common uſe, muſt not be preſſed in the ſame frails; for old frails ought to be ſet a-part for ſuch olives as fall off the trees of their own accord; and thoſe that are new, for the oil of the firſt note; and when they have ſerved for preſſing out the oil of every particular making, they ought always to be preſently waſhed, twice or thrice, in exceeding hot water: then, if there be any brook, or running water, they muſt be ſunk in it, by having ſtones put into them, that they may be preſſed down and detained by the weight thereof; or, if there be no river, they ought to be ſoaked in a lake or pond, of the pureſt water you can find, and afterwards beaten with rods, that the dirt and dregs may fall off them, and then they muſt be waſhed a ſecond time and dried.

OIL OF SWEET ALMONDS, drawn without fire, is prepared various ways. Some peel them before pounding, others pound without peeling. Some ſteep them in lukewarm water, others in balneo mariæ; ſome only bruiſe them, others beat them to a paſte. There are a great variety of different ways to prepare this oil.

The beſt method is eſteemed this: pound your almonds dry and new in mortars, paſs them through a coarſe ſieve, lay them in a hair-cloth, and put them under the preſs between two plates of ſteel; preſs them gently, and when all the unctuous part is expreſſed, you will have a ſweet oil without ſediment, which is ſcarce avoidable by any of the other methods.

TRAIN OIL, is that generally procured from the blubber of the whale, by boiling. There is ſome alſo drawn off the livers of the cod at Newfoundland, which livers are thrown up in heaps when the cod is cured; and from thence is drawn all the oil which comes from that part of America.

GALLIPOLI OIL, is that ſort which we import from Naples, in large quantities for the uſe of our woollen manufactories.

OLDENBURG, a county of Germany, in the circle of Weſtphalia; bounded by the German ſea on the north, by the duchy of Bremen on the eaſt, by Oſnabrug on the ſouth, and by Embden, or Eaſt Frieſland, on the weſt; being 50 miles long and 20 broad, conſiſting chiefly of bogs and marſhes,

marſhes, where they breed a ſmall ſort of cattle leſs than the Welſh. The inhabitants are wretched poor, living in dirt houſes, and ſubject to Denmark.

OLERON, weſt longitude 1. 20, latitude 46, an iſland of France, near the coaſt of Poitou, and territories of Aunis, ſituated 14 miles ſouth-weſt of Rochelle, being about 15 miles long and 6 broad, and containing 10,000 people. The ancient inhabitants of this iſland, had ſuch a reputation for their ſkill in navigation, that their rules became a model for other maritime powers to make their laws by, in relation to ſea affairs; and theſe were called the laws of Oleron.

The ſoil of this iſland produces plenty of corn and wine, and they make a great deal of ſalt of the ſea-water. There is a light-houſe on this iſland, for direction of ſhips.

OLERON LAWS, of NAVIGATION and COMMERCE.

An abſtract of the naval laws of Oleron, inſtituted by Richard I. king of England, in his return from the Holy Land, in the end of the eleventh century, for the better regulation of merchants, owners and maſters of ſhips and mariners, and all ſeafaring perſons in maritime affairs. To which is added, ſome obſervations upon them, taken from ſeveral authors.

ARTICLE I.

When ſeveral joint owners make a man maſter of a ſhip or veſſel, and the ſhip or veſſel departing from her own port, arrives at Bourdeaux, Rouen, or any other ſuch place, and is there freighted to ſail for Scotland, or ſome other foreign country; the maſter, in ſuch caſe, may not ſell or diſpoſe of that ſhip or veſſel, without a ſpecial procuration from the owners: but, in caſe he wants money for the victualling, or other neceſſary proviſions of the ſaid veſſel, he may, for that end, with the advice of his mariners, pawn or pledge part of the tackle or furniture of a ſhip. [See HYPOTHECATION.]

OBSERVATION.

The title of maſter is ſo honourable, and the command of a ſhip of ſuch importance, that great care has been taken by all maritime nations, that none may be employed but honeſt and experienced men. By an ordinance of the admiralty in France, A. D. 1584, every maſter of a ſhip, before he took upon him that truſt, was to be examined, whether he was fit for it. The Spaniſh naval laws require the ſame thing; el maeſtre de la nave, para ſerlo, ha de ſer marinero y examinado. Cidula real del anno 1576. Impreſſa con las de India quarto toms. The ordinances and regulations of the Hans Towns do not only demand experience and capacity, but honeſty and good manners. And none was to be admitted into the ſervice of any citizen aboard his ſhip, without a certificate of his qualifications, as to his honeſty and capacity. See their book of ordinances, book 6. art. 1.

Although the government of the ſhip is intruſted, he cannot ſell the ſhip itſelf, nor any of her tackle or furniture, without the order or conſent of the owners. However, in caſe of neceſſity, when he is in a far country, he may pawn or pledge her tackle for proviſions; and if that will not do, he may borrow money on the ſhip's bottom, though not without the conſent of his officers and ſeamen. According to the ordinances of Wiſbuy, art. 13 and 15, and Philip II. king of Spain's ordinances in the year 1563, art. 12. Thoſe of the Hans Towns forbid a maſter of a ſhip, notwithſtanding he is part owner, not only to ſell, but to do any thing, even to buy tackle or victuals, without acquainting the other owners of it, unleſs it be in a ſtrange country, and in a caſe of neceſſity, well and lawfully atteſted, art. 3, 4, 5, & ſeq.

By the ordinances and cuſtoms of the ſea it appears, that formerly it was not thought ſafe to intruſt a maſter of a ſhip with the veſſel and cargo, unleſs he was a freeman of that city, and part owner of the ſhip; and if he was part owner, when he had betrayed or abuſed his truſt, the other owners might turn him out of the ſhip, paying him what his part of her came to, at the ſame price he gave for it, according to the ordinances of the Hans Towns, art. 14. And if he pretended he had ſold his part to another perſon, for more than it was worth, the other owners might have it appraiſed, and take it to themſelves, paying him what it was valued at by ſuch appraiſement, art. 53.

The maſter commonly took care of every thing belonging to the ſhip, from the poop to the main-maſt: he was obliged to underſtand the art of piloting and navigation, that he might know how to controul the pilot, and mind how he ſteers the ſhip, y ſi el maeſtre no fuere piloto es obligado a uevar un marinere dieſtro en la navigacion, 'tel que, pueda regir la nave a falla de piloto, according to the ordinances of Spain. The mate's command reached from the ſtern to the mizen-maſt, the latter included. It will not be thought improper by the curious to mention here the ſeveral officers of a ſhip, either men of war or merchantmen, as they were diſtinguiſhed abroad, a century ago.

In royal navies, the firſt officer was the admiral; then the vice-admiral; then the captain-major, or chief of a ſquadron. In every man of war, the firſt officer was the captain, the ſecond the pilot, who enjoyed that place in honour of the ſcience he profeſſed and practiſed; next to him was the maſter, who had the charge of the tackle and furniture, and then the captain and lieutenant of the ſoldiers. In a merchant-man, the firſt officer was the maſter, the ſecond the pilot, the third the mate, the fourth the factor or ſupercargo; then his aſſiſtant, accomptants, the ſurgeons, the ſteward, four corporals, the cook, the gunner, the cockſwain; the gunner and cockſwain uſed to work before the maſt, as well as the reſt of the ſhip's crew, but their wages were more.

There is a great deal of difference between the order of precedency on board of ſhips now, and what was formerly: for the captain and lieutenant of the ſoldiers would think it very hard to give place to the pilot and maſter of a ſhip; and the factor or ſupercargo will as difficultly be perſuaded to own the maſter of a veſſel's ſuperiority, except in what relates to the navigating the ſhip.

ARTICLE II.

If a ſhip or other veſſel be in port, waiting for weather and a wind to depart, the maſter ought, when that comes, before his departure, to conſult his company, and ſay to them; gentlemen, what think you of this wind? If any of them ſee that it is not ſettled, and adviſe him to ſtay 'till it is; and others, on the contrary, would have him make uſe of it as fair; he ought to follow the major part: If he does otherwiſe, and the veſſel happens to miſcarry, he ſhall be obliged to make good the ſame, according to the value upon a juſt appraiſement.

OBSERVATION.

It is a maxim, or a general ſea-law, that a maſter of a ſhip ſhall never ſail out of a port, never weigh or drop anchor, cut maſts or cable, or, indeed, do any thing of conſequence, let him be in whatever danger may happen, without the advice of the major part of his company, and the merchants, if there are any aboard: he muſt call all together to conſult. Wiſbuy, art. 14. See WISBUY LAWS.

ARTICLE III.

If any veſſel, through misfortune, happens to be caſt away, in whatſoever place it be, the mariners ſhall be obliged to uſe their beſt endeavours for ſaving as much of the ſhip and lading as poſſibly they can: and if they preſerve part thereof, the maſter ſhall allow them a reaſonable conſideration to carry them home to their own country; and in caſe they ſave enough to enable the maſter to do this, he may lawfully pledge, to ſome honeſt perſons, ſuch part thereof, as may be ſufficient for that occaſion. But if they have not endeavoured to ſave as aforeſaid, then the maſter ſhall not be bound to provide for them in any thing, but ought to keep them in ſafe cuſtody, until he knows the pleaſure of the owners; in which he may act as becomes a prudent maſter; for if he does otherwiſe, he ſhall be obliged to make ſatisfaction.

OBSERVATION.

The ſhip's crew are obliged to do all that lies in their power to ſave things from ſhipwreck, and gather up what they ſave, on pain of loſing their wages; and thoſe that hinder or diſſuade them from it, ſhall be ſeverely puniſhed. This law is very well explained by an ordinance of king Philip II. of Spain, in the year 1563. By which it is ordained, that the ſeamen ſhall be bound to ſave as much as they can from ſhipwreck; and, in ſuch caſe, the maſter is bound to pay them their wages, and to give them a further reward for their labour out of the goods: but if the ſeamen refuſe to do their endeavour to ſave the goods, they ſhall neither have pay nor reward. Hans Towns, ord. art. 44. Wiſbuy, art. 15.

ARTICLE IV.

If a veſſel departing with her lading from Bourdeaux, or any other place, happens in the courſe of her voyage to be rendered unfit to proceed therein, and the mariners ſave as much of the lading as poſſibly they can; if the merchants require the goods of the maſter, he may deliver them if he pleaſes, they paying the freight in proportion to the part of the voyage that is performed, and the coſts of the ſalvage: but if the maſter can readily repair his veſſel, he may do it; or, if he pleaſes, he may freight another ſhip to perform his voyage. And if he has promiſed the people who helped him to ſave the ſhip, the third, or the half part of the goods ſaved, for the danger they ran, the judicatures of the country ſhould conſider the pains and trouble they have been at, and reward them accordingly, without any regard to the promiſes made them by the parties concerned in the time of their diſtreſs.

OBSERVATION.

This law does not relate to an entire loſs, but only to ſalvage, or rather not to ſhipwreck, but to the diſabling of a ſhip, ſo that ſhe cannot proceed in her voyage without refitting. In which caſe, the merchants may have their goods again, paying the freight, in proportion to the way the ſhip made. If the merchant has not money to pay the freight, and the maſter will not credit, the latter may take his goods in payment at the market price. Wiſbuy, art. 33. The emperor Charles the fifth's ordinance, art. 40.

If the maſter can, in a little time, refit his veſſel, and render her fit to continue her voyage; that is, if he can do it in three days time at the moſt, according to the Hans Town laws; or if he will himſelf take freight for the merchandize

aboard

aboard another ſhip bound for the ſame port to which he was bound, he may do it; and, if the accident did not happen by any fault of his, the freight ſhall be paid him, by the Rhodian laws. Numb. 42. ſecundo & ultimo tomo juris Græco-Romani in fine. Wiſbuy, art. 16, 37, and 55. King Philip II. of Spain's ordinance, under the head of averages, art. 30.

As for the charges of ſalvage, there are very great allowances made to the ſalvers, Lege Rhod. Secundo tomo juris Græco-Romani, num. 45 & 47. Harmenopolus in promptuario juris, lib. 2. tit. 6. By this law there was adjudged to the divers and ſalvers, the half, the third, or the tenth of the things ſaved, and that according to the depth of the water out of which they were fiſhed, fifteen, eight, or one fathom; as alſo a tenth part for ſalvage on the coaſt, and the fifth to him that ſaving himſelf, carries and ſaves ſomething with him. The promiſes that are extorted in danger upon this account, ought always to be regulated according to juſtice, with reaſon and proportion, without keeping to the expreſſions of ſuch promiſes; for this there are ſeveral laws in France, and an inſtance of it is thus recorded. A gentleman named La Mothe, embarked at St Machaire with two horſes in a boat, going for Bourdeaux; as they were in their paſſage, one of the horſes grew furious and leaped overboard. La Mothe held him by the bridle, the horſe ſplaſhed the water up in his face, and the gentleman pulling his handkerchief out of his pocket to wipe it off, at the ſame time pulled out a purſe that had thirty piſtoles in it, which fell into the water. The boatmen came, and La Mothe deſired them to take notice of the place, by obſerving the trees and buildings that were near it, and when the tide was out, to ſeek after the purſe; promiſing if they found it, to give them a piſtole for their pains. The boatmen excuſed themſelves; nevertheleſs, when they had put La Mothe and his horſes aſhore, they went to look for the piſtoles when it was low water, and one of them found them where they were dropped. His companions demanded their ſhare of them, but he who had the good fortune to find the purſe would not let them have any of the gold, and there was a law-ſuit about dividing it, before the judge of St Machaire. Monſ. La Mothe hearing of it, came thither, and put in his claim to the purſe and piſtoles, but the judge gave it againſt him. He then appealed to the ſeneſchal of Guyenne's court, but with no better ſucceſs; at laſt he appealed to the parliament of Bourdeaux, and that court decreed, he ſhould have his piſtoles, but ſhould pay 60 livres to the boatmen for their pains and trouble.

ARTICLE V.

If a veſſel departing from one port, laden or empty, arrives at another, the mariners ſhall not leave the ſhip without the maſter's conſent: if they do, and by that means ſhe happens to be loſt or damnified, they ſhall be anſwerable for the damage; but if the veſſel be moored, and lying at anchor, with a ſufficient number of men aboard to keep the decks and lading, they may go without the maſter's conſent, if they come back in good time, otherwiſe they ſhall be liable to make ſatisfaction, if they have wherewithal.

OBSERVATION.

In regard to this article relating to ſeamen, it will not be unacceptable to the reader to obſerve, what other cuſtoms and ordinances we have met with concerning them.

Mariners are obliged to look carefully after every thing that relates to the preſervation of the ſhip and goods, Wiſbuy art. 47. For which reaſon, they ought not to go aſhore and leave the veſſel, without the maſter's or mate's permiſſion: if they do, they are bound to anſwer to all the damages that happen to the ſhip or merchandize in their abſence. Wiſbuy, art. 17. The emperor Charles the Vths ordinance in the year 1552, art. 9 and 10. Conformable to the Rhodian law, ſecundo tomo juris Græco-Romani, num. 20. The regulations of the Hanſe-Towns, art. 40, ordain, That if any ſeaman goes aſhore without licence, and if in his abſence the ſhip happens to be loſt for want of hands, the ſeaman thus abſent ſhall be apprehended, and kept a year in priſon on bread and water; and, if any one ſhould be killed or drowned in his abſence, and that be the cauſe of it, he ſhall be corporally puniſhed. The ſame ordinances condemn thoſe mariners that lie out of their ſhip all night, to pay all the damage that ſhall happen while they are abſent. Thoſe of the Hanſe-Towns, art. 22 and 23. add impriſonment. Some laws forbid them to undreſs themſelves, and the Hanſe-Towns, art. 32. to lie with their wives aboard. The reaſon is, that they may always be ready to aſſiſt their fellows in the diſcharge of their duty, in the preſervation of the ſhip and goods. The obligation of the mariner to the maſter, begins as ſoon as he is hired and terms are agreed, and ends when the voyage is finiſhed and they are returned. The obligation of the mariner to the merchant is from the beginning of his charge, and the mariner is obliged to ſtow and unſtow the goods according as the place they are in is commodious or not, to keep them from damnifying, and promote or hinder the ſhip's trimming; and if by their refuſing to do ſo, the merchandize is damnified or ſpoiled, they are bound to make the damage good. Wiſbuy, art. 48. Philip II. art. 19. By the laws of Wiſbuy, they are alſo bound to unlade ſome goods with the ſhovel, and ſome to hand aſhore, for which they are to have no extraordinary allowance; but for letting things up or down, they are by the ſame laws to be allowed ſomething extraordinary, that is, above their wages. The laws are very ſevere againſt thoſe ſeamen, that run away from ſhips after they are hired. In men of war deſertion is puniſhed with death: in merchantmen, by the Hanſeatique laws, or thoſe of the Hanſe-Towns, they are to be marked in the face with a red-hot iron, that they may be known, and be infamous as long as they live. If the mariner runs away before the voyage, when he is taken he ought to refund half as much as the maſter was to have paid him for the whole voyage. If he hires himſelf to two maſters, the firſt may demand him; and by the Hanſeatiques, art. 1. is not bound to pay him any wages. Proviſion is made for ſuch ſeamen as run away, only becauſe the maſter has uſed him ill. By the ſame laws, if any maſter entices away a mariner hired before by another, the laſt maſter ſhall forfeit to the firſt 25 livres, and the mariner half the wages he was to have had of the maſter that ſo enticed him.

That maſter who knowingly hires a mariner who was hired before, ſhall pay double the wages he was to pay the mariner, and the latter be bound to follow and ſerve the firſt maſter. However, a mariner may demand, and ought to have his diſcharge, either before or during the voyage, for theſe four reaſons; in caſe he is made maſter or mate of another ſhip; if he marries, and then he is obliged to refund what he has received; if he made any proviſo in his bargain for quitting the ſhip; if the voyage is finiſhed, the ſhip diſarmed, unloaded and light, the ſails, tackle, and furniture, taken away and ſecured. See the laws of Wiſbuy, art. 54 and 63. If the maſter gives a mariner his diſcharge, without any lawful cauſe, and for his pleaſure only; in caſe he does it before the voyage, and while the ſhip is in port, he ought to pay half as much as he was to give him for the whole voyage; but if he diſcharges him after the ſhip is ſailed, he ought to pay him all his wages. Wiſbuy, art. 3.

By the Hanſeatiques, the maſter is to pay a third of the wages only, and not to bring it to his owner's account. He is obliged alſo to pay him not only all his wages, if he diſcharges him in his voyage, but to defray the charges of his return. If after a bargain is made between the maſter and mariner, if the voyage happens to be hindered by war or pirates, or any other lawful account, the mariner, according to king Philip's laws, art. 9. ſhall have a quarter part of the wages that were promiſed him for the voyage, and the maſter by a French law ſhall have half the freight.

A maſter may turn off a mariner if he finds he is ignorant in maritime affairs, and incapable to perform the voyage, particularly a pilot, to whom in ſuch caſes, he is not bound to pay any wages, and at his return may have him puniſhed for his raſhneſs, according to king Philip's and the Hanſeatique laws.

If it happens, that the maſter finds out the pilot or mariner's ignorance when he cannot diſcharge them, they ſhall be obliged at their return to refund all the money he had advanced to them, and pay the maſter beſides, half what he had promiſed: but if the pilot declares at firſt he is dubious, and cannot depend on his knowlege, that he is out of the way, and does not very well underſtand his buſineſs; if it is when he is outward-bound, he ſhall be paid half what was promiſed him, if homeward-bound, all.

If the maſter finds that any officer or ſeaman aboard his ſhip has any infectious diſtemper that is dangerous, he may put him aſhore at the firſt place he comes to, without paying him any thing, but then he muſt prove it by two or three witneſſes. He may alſo turn away any thieving mariner, or any quarrelſome or factious fellow; but as to the latter, he ſhould have a little patience, to ſee if he can be brought to reaſon. By the Hanſeatiques, art. 29. and the laws of Wiſbuy, art. 25.

ARTICLE VI.

If any of the mariners hired by the maſter of any veſſel, go out of the ſhip without his leave, and get themſelves drunk, and thereby there happens contempt to their maſter, debates, or fighting and quarrelling among themſelves, whereby ſome happen to be wounded: in this caſe, the maſter ſhall not be obliged to get them cured, or in any thing to provide for them, but may turn them and their accomplices out of the ſhip; and if they make words of it, they are bound to pay the maſter beſides: but if by the maſter's orders and commands, any of the ſhip's company be in the ſervice of the ſhip, and thereby happen to be wounded or otherwiſe hurt, in that caſe they ſhall be cured and provided for at the coſts and charges of the ſaid ſhip.

OBSERVATION.

By the laws of Wiſbuy, art. 18. Thoſe mariners that are mutinous and quarrelſome, are obliged to refund all they have received, and pay beſides what the maſter is forced to give to others whom he hires in their places above the wages he was to give them.

The laws of Charles V. art. 28. & ſeq. ordain certain puniſhments, according to the heinouſneſs of the offences and crimes committed by ſeamen. If the mariners are wounded,

or

or any wife hurt in ſerving the maſter of the ſhip, they ſhall be cured, taken care of, and indemnified at the charge of the ſhip. Wiſbuy, art. 18. Hanſeatiques, art. 39. Charles V, art. 27 and 28. Philip II. art. 16. If the mariners are taken by corſairs in his and his ſhip's ſervice, the maſter is bound to redeem them, and beſides that, to pay them their wages during their captivity, as much as if they had all that time been in his ſervice. This law is in the Conſulat. chap. 182. If in defending himſelf, or fighting againſt an enemy or corſairs, a mariner is maimed or diſabled, to ſerve on board a ſhip for the reſt of his life, beſides the charge of his cure, he ſhall be maintained as long as he lives at the coſt of the ſhip and cargo, according to the Hanſeatiques, art. 35. An inſtance of this follows:

In the year 1621, Giles Eſteben, a citizen and merchant of Bourdeaux, loaded a veſſel of 36 tons with wine for Calais, and gave the charge of the cargo to one Fiton his ſervant. The veſſel ſet ſail, and when ſhe was at ſea met with a Turkiſh rover. The corſair came up with her and took her, but did not meddle with the veſſel or the wine, either becauſe the alcoran forbids the Mahometans to drink or deal in wine, or becauſe he held intelligence with the maſter of the veſſel, who was a Scotchman; for he did him nor his crew any manner of hurt, but took away Finton, and ſold him in Barbary for a ſlave. He remained there four years and a half in great miſery and poverty; at laſt he was redeemed by alms in the year 1625, and paid for his ranſom 780 livres.

Fiton returning to Bourdeaux, found that his maſter Eſteben was dead; however, he entered an action in an inferior court againſt the widow for his wages, as well for the time he was detained in ſlavery, as for that before his captivity, as alſo for the reimburſement of his ranſom money, his loſſes and intereſt. The widow removed the ſuit to the higher courts, and from thence it came before the parliament, who decreed, that the widow ſhould pay Fenton 1000 livres in full for his wages, redemption, expences, loſs and intereſt.

ARTICLE VII.

If it happens that ſickneſs ſeizes on any one of the mariners while in the ſervice of the ſhip, the maſter ought to ſet him on ſhore, to provide lodging and candle-light for him, and alſo to ſpare him one of the ſhip's-boys, or hire a woman to attend him, and likewiſe to afford him ſuch diet as is uſual in the ſhip; that is to ſay, ſo much as he had on ſhip-board in his health, and nothing more, unleſs it pleaſe the maſter to allow it him, if he will have better diet, the maſter ſhall not be bound to provide it for him, unleſs it be at the mariner's own coſt and charges; and if the veſſel be ready for her departure, ſhe ought not to ſtay for the ſaid ſick party: but if he recover, he ought to have his full wages, deducting only ſuch charges as the maſter has been at for him. And if he dies, his wife or next a-kin ſhall have them.

OBSERVATION.

The 19th article of the laws of Wiſbuy, the 45th of the Hanſeatiques, the 27th of Charles V. and the 16th of Philip II. which he compiled for the Low-Countries, were all founded upon this law of Oleron, in what relates to a ſick mariner, and agree exactly with it, both if he recovers his health, or dies in the voyage. The Spaniards have another cuſtom in the Weſt-India voyages: for in caſe a mariner falls ſick, he muſt ſubſtitute another in his place, otherwiſe he loſes all his wages for the time in which he could not work. By the Hanſeatiques, art. 45.

If a mariner is detained aſhore by ſickneſs, the voyage ought not to be retarded on his account. By Charles the Vth's ordinances, if the mariner dies as he is outward-bound, his wife and heirs ſhall receive half his pay: if, as he is homeward-bound, they ſhall have all, deducting the charge of his funeral if there has been any.

In ſhips of war, the cuſtom in ſome places has been more favourable to ſailors; for we find in a treatiſe written by Francis Pyrard de Laval, intitled, Avis pour aller aux Indies Orientales, That if a man died the firſt day of the voyage, his heirs were to be paid as much as if he had compleated it.

ARTICLE VIII.

If a veſſel be laden to ſail from Bourdeaux to Caen, or any other place, and it happens that a ſtorm overtakes her at ſea, ſo violent, that ſhe cannot eſcape without caſting ſome of the cargo overboard for lighting the veſſel, and preſerving the reſt of the lading, as well as the veſſel itſelf, then the maſter ought to ſay, Gentlemen, we muſt throw part of the goods overboard; and if there are no merchants to anſwer him, or if thoſe that are there approve of what he ſays by their ſilence, then the maſter may do as he thinks fit; and if the merchants are not pleaſed with his throwing over any part of the merchandize and forbid him, yet the maſter ought not to forbear caſting out ſo many of the goods as he ſhall ſee to be for the common good and ſafety; he and the third part of his mariners making oath on the holy evangeliſts, when they arrive at their port of diſcharge, that he did it only for the preſervation of the veſſel, and the reſt of the lading that remains yet in her. And the wines, or other goods, that were caſt overboard, ought to be valued, according to the juſt value of the other goods that arrive in ſafety: and when theſe ſhall be ſold, the price or value thereof ought to be divided livre à livre among the merchants.

The maſter may compute the damage his veſſel has ſuſtained, or reckon the freight of the goods thrown overboard at his own choice. If the maſter does not make it appear that he and his men did the part of able ſeamen, then neither he nor they ſhall have any thing. The mariners alſo ought to have one ton free, and another divided by caſt of the dice, according as it ſhall happen, and the merchants in this caſe may lawfully put the maſter to his oath.

OBSERVATION.

Of two evils, to chuſe the leaſt is the law of nature as well as of nations; and when a ſhip is in danger of periſhing, the lives of the ſeamen, and the ſafety of the reſt of the cargo, make the throwing part of it overboard the leaſt evil: but that the maſter's ignorance or fear might not hurry him to do any thing to the detriment of the merchant, without good grounds for it, he muſt conſult the merchants, paſſengers, or mariners aboard his ſhip, and, according as the neceſſity of it appears to them, to throw the goods overboard. This he is warranted to do by the Rhodian law. Secundo tomo juris Græco-Romani, num. 9. and by 20th, 21ſt, and 38th articles of that of Wiſbuy. The 20th and 38th articles provide alſo, That if the merchants alone are againſt the propoſition of throwing the merchandize overboard, and the reſt, who have their lives and goods alſo to loſe conſent to it, the maſter and third part of the ſeamen purging themſelves as ſoon as they come aſhore by oath, that neceſſity forced them to do it, and that otherwiſe they could not have been ſaved, may do it, and ſhall then be juſtified for what they did.

The maſter is not obliged, when he comes to this extremity, to throw his own goods overboard firſt. The cuſtom of the Levant is, the paſſenger or merchant firſt flings out ſomething of his own. Philip the IId's ordinances, under the title of Averages, require, That the ſhip's utenſils ſhould be firſt thrown overboard; ſuch as old cables, fire-wood, anchors, and guns, which weigh heavy, and are not of the greateſt ſervice; then the cheſts belonging to the ſhip's crew, as being of the leaſt value. All thoſe things which are thrown overboard come into an average, except thoſe that belong to the ſovereign. See AVERAGE.

By the 38th article of the laws of Wiſbuy, the clerk of the ſhip ought to regiſter all the goods that are thrown overboard; and if there is no clerk aboard, it is convenient for the mariners to make atteſtation of them at the firſt port they come to.

By the Rhodian laws, the goods that are damaged by the ſtorm come into an Average. By the ſame laws, if the maſter by overloading his ſhip, is the occaſion of the goods being thrown overboard, he ſhall make good the damage. The laws of Wiſbuy, art. 46. except in this caſe thoſe goods, which were ſo laden with the conſent of the merchant. See RHODIAN LAWS, and WISBUY LAWS.

If the maſter has let out more freight than he has ſtowage for, he muſt not therefore overload his own ſhip, but by the Conſulate is bound to find freight for them in another. If the merchants, paſſengers, or mariners, have any plate or other precious goods in their cheſts or cabinets, they ought to inform the maſter and clerk of it, otherwiſe their cheſts will not be liable to any average, for any thing more than what is known to be within them.

Perſons never are reckoned in an average, but all ſorts of goods whatſoever. Victuals belonging to the ſhip are exempted from the laws for throwing goods overboard, and privileged from paying contributions in averages. Seamens wages are not liable to averages. By the Hanſeatiques, art. 28. theſe wages ought to be paid by three payments, a third part before the ſhip goes out of the port, a third part when ſhe's unladen, and a third part at her return.

By the Rhodian law, the ſailors ought to have a ton freight free from contributions in average, when goods are thrown overboard. To explain this it will be neceſſary to obſerve, that ſailors were uſed to hire themſelves out for a voyage for ſeveral conſiderations: ſome had a certain ſum of money for the whole voyage, or ſo much a month, or ſo much a day; others hired themſelves for ſuch a proportion of the freight, or a liberty to load ſo much goods aboard, or let out ſo much freight to others: but the moſt common way, and the beſt of hiring themſelves, was for part in wages, and part in freight, either for themſelves or to let out. Thoſe ſeamen who had wages only, contributed nothing to the average for goods thrown overboard. Thoſe who had goods contributed, unleſs thoſe goods were bought with their wages, and they had only one ton exempted. The merchants who hired their freight of them, had the ſame privilege by it as themſelves.

Having had occaſion to make mention of livre à livre, an explanation of it will not be unacceptable to the reader. The civilians conſidered every thing as an whole; as for example, an inheritance compoſed of ſeveral parts, makes together one whole or maſs, of whatever importance it may be, great or ſmall, as if the whole of this inheritance made one livre, one pound, as hereditatis. This pound divided into twelve equal parts, is named ounces. The merchants and maſters of ſhips, in caſe of averages for goods thrown overboard or damnified

damnified in ſtorms, have the ſame view; that is, they conſider the ſhip and cargo together as one pound, and the goods loſt or damnified as another; ſo that he who had a tenth in the pound of the cargo, a fifteenth or any other ſhare, muſt carry a tenth, a fifteenth or any other ſhare to the pound of the avarage; and this proportion of one pound to another, is what is called by the French naval laws, livre à livre, pound to pound.

ARTICLE IX.

If it happen, that by reaſon of much foul weather the maſter is like to be conſtrained to cut his maſts, he ought firſt to call the merchants, if there be any aboard the ſhip, and ſuch as have goods and merchandize in the veſſel, and to conſult them, ſaying, Sirs, It is requiſite to cut down the maſts to ſave the ſhip and lading, it being in this caſe my duty. And frequently they alſo cut their mooring cables, leaving behind them their cables and anchors to ſave the ſhip and her lading. All which things are reckoned and computed livre by livre, as the goods are that were caſt overboard. And when the veſſel arrives in ſafety at her port of diſcharge, the merchants ought to pay the maſter their ſhares or proportions without delay, or ſell or pawn the goods, and employ the money he raiſes to ſatisfy by it the ſame, before the ſaid goods be unladen out of the ſaid ſhip: but if he lets them go, and there happens controverſies and debates touching the premiſes, if the maſter obſerves colluſion therein, he ought not to ſuffer, but is to have his complete freight, as well for what goods were thrown overboard, as for what he brought home.

OBSERVATION.

No merchant is obliged to pay average for goods thrown overboard, unleſs the maſter can prove he did it for the ſafety of his own and his mens lives, and the preſervation of the ſhip and the reſt of her cargo. What loſs happens by accidents, breaking the maſts, or burning the ſails, or pirates taking part of the goods, ſhall not come into the common average. By the Rhodian laws, every merchant ſhall bear his own loſs, and the maſter ſhall do the ſame. See alſo the 12th article of the laws of Wiſbuy. Averages are by that to be paid for damages done within the ſhip, and not for thoſe without; therefore the maſter and mariners are obliged to purge themſelves by oath, how the damage came, in the firſt court of admiralty they come to, and that it was done in very great neceſſity.

Indeed, if pirates take the ſhip and cargo entire, and both are redeemed for a ſum of money, the average for that ſhall be common, and all the concerned ſhall pay contribution. If the merchants and paſſengers aboard the ſhip, deſire the maſter to put into any port out of his way for fear of pirates, and in going out of that port he loſes anchors or cables, thoſe who deſired him to put in there ſhall pay for them, and the ſhip ought not to pay any thing towards that loſs.

After a general ſhipwreck, there is no average or common contribution, but ſave who ſave can, as is vulgarly ſaid on this occaſion. If any goods that were thrown overboard in a ſtorm, to lighten the ſhip, happen to be recovered, the owner of them ought to reſtore what he had recovered for damages by average to thoſe that paid him, deducting for the loſs he may be at by his merchandizes being damnified. The Rhodian law enjoins this.

ARTICLE X.

The maſter of a ſhip, when he lets her out to freight to the merchants, ought to ſhew them his cordage, ropes and ſlings, with which the goods are to be hoiſted aboard or aſhore: and if they find they need mending, he ought to mend them; for if a pipe, hogſhead, or other veſſel, ſhould happen, by default of ſuch cordage, or ſlings, to be ſpoiled or loſt, the maſter and mariners ought to make ſatisfaction for the ſame to the merchants. So alſo if the ropes or ſlings break, the maſter not ſhewing them before-hand to the merchants, he is obliged to make good the damage: but if the merchants ſay the cordage, ropes, or ſlings, are good and ſufficient, and notwithſtanding it happens that they break, in caſe that they ought to divide the damage between them; that is to ſay, the merchant to whom ſuch goods belong, and the ſaid maſter with his mariners.

OBSERVATION.

By the 12th article of the laws of Wiſbuy, and the 7th of king Philip's, The maſter when he lets his ſhip out to freight, is bound to ſhew her to the merchant or their agents. The conſulate requires the ſame, and that the maſter ſhould let the merchants viſit not only the ropes, but all the ſhip above decks and below, that they may ſee what is wanting, and have it mended; and if it is not mended, and the merchandize is damnified, the maſter ſhall make good the loſs. The 49th article of the laws of Wiſbuy, enjoins the mariners to give the maſter notice of the faults and defects in the cordage; otherwiſe they ſhall be reſponſible for all accidents that may happen: and if after ſuch notice given, the maſter does not take care to have them mended, he ſhall anſwer the damage out of his own pocket.

The Rhodian laws, ſecundo tomo juris Græco-Romani, num. 11. wills and ordains, That the merchant who loads a ſhip, ſhall inform himſelf exactly of every thing, diligenter interrogare debent mercatores qui prius in ea navi navigaverunt. The law ſays, he ſhould enquire of thoſe that have ſailed in her before; but that is of little uſe, except as to her ſailing, for ſhips grow daily more and more out of repair, and ſhould be always viewed by the perſon that is going to be concerned in them, without truſting to the information of others.

ARTICLE XI.

If a veſſel being laden at Bourdeaux with wines, or other goods, hoiſts ſail to carry them to ſome other port, and the maſter does not do his duty as he ought, nor the mariners handle their ſails, and it happens that ill weather overtakes them at ſea, ſo that the main-yard ſhakes or ſtrikes out the head of one of the pipes or hogſheads of wine, this veſſel being ſafely arrived at her port of diſcharge, if the merchant alledges, that by reaſon of the main-yard his wine was loſt, and the maſter denies it, in this caſe the maſter and his mariners ought to make oath (whether it be four or ſix of them, ſuch as the merchant hath no exception againſt) that the wine periſhed not by the main-yard, nor through any default of theirs, as the merchants charge them, they ought then to be acquitted thereof; but if they refuſe to make oath to the effect aforeſaid, they ſhall be obliged to make ſatisfaction for the ſame, becauſe they ought to have ordered their ſails aright before they departed from the port, where they took in their lading.

OBSERVATION.

This article is explained by the 23d of the laws of Wiſbuy, which ordains, That if the cargo is ill ſtowed and the ſhip ill trimmed, and the mariners do not manage their ſails rightly, and any damage happens by it to the ſhip or goods, they ſhall be reſponſible for the damages as far as they have wherewithal to do it. There were formerly in ſeveral ports of Guyenne certain officers called arrameurs, or ſtowers, who were maſter carpenters by profeſſion, and were paid by the merchants, who loaded the ſhip. Their buſineſs was to diſpoſe right and ſtow cloſely all goods in caſks, bales, boxes, bundles, or otherwiſe; to ballance both ſides, to fill up the vacant ſpaces, and manage every thing to the beſt advantage.

It was not but that the greateſt part of the ſhip's crew underſtood this as well as theſe ſtowers, but they would not meddle with it, nor undertake it, to avoid falling under the merchant's diſpleaſure, or being accountable for any ill accident that might happen by that means. There were alſo ſacquiers, who were very ancient officers, as may be ſeen in the 14th book of the Theodoſian Code, Unica de ſaccariis portus Romæ, lib. 14. Their buſineſs was to load and unload veſſels laden with ſalt, corn, or fiſh, to prevent the ſhip's crew defrauding the merchant by falſe tale, or cheating him of his merchandize otherwiſe.

ARTICLE XII.

A maſter having hired his mariners, ought to keep the peace betwixt them, and to be as their judge at ſea; ſo that if there be any any of them that give another the lie, whilſt they have wine and bread on the table, he ought to pay four deniers; and if the maſter himſelf gives any the lie, he ought to pay eight deniers; and if any of the mariners impudently contradict the maſter, he alſo ought to pay eight deniers; and if the maſter ſtrikes any of the mariners, he ought to bear with the ſtroke, be it with the fiſt or open hand; but if the maſter ſtrikes him more than one blow, the mariner may defend himſelf: and if the ſaid mariner doth firſt aſſault the maſter, he ought to pay five ſols, or loſe his hand.

OBSERVATION.

This law reſtrains the correction of the maſter to one blow with his fiſt, which the mariner ought to bear, and no more. The Conſulate, chap. 16. explains how far the mariner is bound to ſuffer the maſter's aſſaulting him, in theſe terms; the mariner is obliged to obey the maſter, though he ſhould call him ill names, and is enraged againſt him, he ought to keep out of his ſight, or hide himſelf in the prow of the ſhip; if the maſter follows him he ought to fly to ſome other place from him; and if he ſtill follows him, then the mariner may ſtand upon his defence, demanding witneſſes how he was purſued by the maſter, for the maſter ought not to paſs into the prow after him.

The 24th article of the laws of Wiſbuy puniſhes the giving the lie. The ſame article is very ſevere againſt the mariner that ſtrikes the maſter. The mariner that ſtrikes, or lifts up arms againſt his maſter, was to loſe half his hand in a very painful way. If the mariner has committed a crime too great for the maſter's authority to puniſh, then the maſter and his officers ought to ſeize the criminal, put him in irons, and bring him to juſtice at his return.

ARTICLE XIII.

If a difference happens between the maſter of a ſhip and one of his mariners, the maſter ought to deny him his meſs thrice,

before he turn him out of the ſhip, or diſcharge him thereof; but if the ſaid mariner offer in the preſence of the reſt of the mariners to make the maſter ſatisfaction, and the maſter be reſolved to accept of no ſatisfaction from him, but to put him out of the ſhip, in ſuch caſe the ſaid mariner may follow the ſaid veſſel to her port of diſcharge, and ought to have as good hire or wages, as if he had come in the ſhip, or as if he had made ſatisfaction for his fault in the ſight and preſence of the ſhip's company; and if the maſter take not another mariner into the ſhip in his ſtead, as able as the other, and the ſhip or lading happens thereby to be through any miſfortune damnified, the maſter ſhall be obliged to make good the ſame if he hath wherewithal.

OBSERVATION.

To deny him his meſs is in the original, Oſtar la touaille, an old Gaſcon phraſe, which ſignifies to deny him the table-cloths or victuals for three meals, by which is underſtood a day and a half. The Wiſbuy law, art. 25. provides for the maſter's making ſatisfaction for the damages that may happen through the want of the mariner he turns off. And the Hanſeatiques, art. 27, require the maſter not to give the ſeamen any cauſe to mutiny; not to provoke them, call them names, wrong them, nor keep any thing from them that is theirs, but to uſe them well, and pay them honeſtly what is their due. Some French laws ordain, That no mariner ſhould be admitted under 18 years, nor above 50. The choice of the crew is entirely in the maſter; the reaſon is, that he ought to be himſelf very well aſſured of his ſeamens ability, and not to take it upon truſt by report of others.

ARTICLE XIV.

If a veſſel being moored lying at anchor, be ſtruck or grappled with another veſſel under ſail that is not very well ſteered, whereby the veſſel at anchor is prejudiced, as alſo wines, or other merchandize in each of the ſaid ſhips damnified. In this caſe the whole damage ſhall be in common, and be equally divided and apprized half by half; and the maſter and mariners of the veſſel that ſtruck or grappled with the other, ſhall be bound to ſwear on the holy evangeliſts, that they did it not willingly or wilfully. The reaſon why this judgment was firſt given, being that an old decayed veſſel might not purpoſely be put in the way of a better, which will the rather be prevented when they know that the damage muſt be divided.

OBSERVATION.

This law agrees exactly with the 26th, 50th, 67th, and 70th, articles of the ordinances of Wiſbuy. The dividing the loſs in halves is, to prevent any cheat; for an old veſſel that is worth little or nothing, might elſe be put in a new one's way: and if ſhe runs againſt her, more damage be pretended than the old ſhip might fairly be valued at.

ARTICLE XV.

Suppoſe two or more veſſels in a harbour where there is but little water, ſo that the anchor of one of the veſſels lies dry, the maſter of the other veſſel ought in that caſe, to ſay unto him whoſe anchor lies dry, Maſter, take up your anchor, for it is too nigh us, and may do us a prejudice: if neither the ſaid maſter nor his mariners will take up the ſaid anchor accordingly, then may that other maſter and his mariners (who might be otherwiſe thereby damnified) take up the ſaid anchor and let it down at a further diſtance from them; and if the others oppoſe or withſtand the taking up of their anchor, and there afterwards happens damage thereby, they ſhall be bound to give full ſatisfaction for the ſame; but if they put out a buoy or anchor-mark, and the anchor does any damage, the maſter and mariners to whom it belongs are not bound to make it good; if they do not, they are; for all maſters and mariners ought to faſten ſuch buoys or anchor-mark, and ſuch cables to their anchors, as may plainly appear and be ſeen at full ſea.

OBSERVATION.

The 28th and 51ſt articles of the ordinances of Wiſbuy, require maſters to put out buoys, to warn others where their anchors lie, on pain of making ſatisfaction for whatever damage may happen for want of them: for anchors hid under water may do a great deal of miſchief at ebb and low water. If any maſter ſpies them, and they lie near him, he may remove them, and prevent any damage coming to his ſhip. Harmenopolus in promptuario titulo de rebus nauticis, licet in diſcrimen adductis, qui ſe aliter explicare non poſſunt, altrius navis anchoras ſalutis ſuæ cauſa præcidere. The buoys that are made uſe of, are either empty barrels, or pieces of the trunk of a tree, or any other light wood, with baſkets that ſwim on the top of the water, and ſhew where the anchors lie.

ARTICLE XVI.

When a ſhip arrives with her lading at Bourdeaux or elſewhere, the maſter is bound to ſay to his company, when ſhe is ready to load again, Gentlemen, will you freight your own ſhare yourſelves, or be allowed for it in proportion with the ſhip's general freight: the mariners are bound to anſwer one or the other. If they take as the freight of the ſhip ſhall happen, they ſhall have proportionably as the ſhip hath; and, if they will freight by themſelves, they ought to freight ſo as the ſhip be not impeded or hindered thereby: and, if it ſo happen, that they cannot let out their freight, or get goods themſelves, when he has tendered them their ſhare and ſtowage, the maſter is blameleſs; and if they will there lade a ton of water, inſtead of ſo much wine, they may: and, in caſe there ſhould happen at ſea an ejection, or caſting of goods overboard, the caſe ſhall be the ſame for a ton of water as for a ton of wine, or other goods, livre by livre. If they let out their proportion of freight to merchants, what freedom and immunity the ſaid mariners have, the ſaid merchants ſhall alſo have.

OBSERVATION.

This article has ſome relation to the 8th, which treats of mariners wages, and their freight aboard. The 30th article of the laws of Wiſbuy is founded upon it. By the ſeamens immunity is meant, the privilege of being the laſt to be thrown overboard in a ſtorm, and having a ton free from all average. The mariners freight ſhould be firſt full, for the maſter is not obliged to ſtay for them when his cargo is all aboard.

The reaſons given by our author, why, in caſe of throwing overboard, the mariners ton of water ſhall come in equally in the average, livre à livre, for a ton of wine, are, a mariner may make what uſe he pleaſes of his ſtowage, becauſe he takes it as part of his pay: beſides, in ſuch caſe, the water he has aboard lightens the ſhip as much as if it was wine; and the mariner, by throwing over his water, which by his privilege he may refuſe to do, not only helps to ſave the ſhip and cargo, but to ſave the latter the more entire: for, if any thing the merchant had aboard of more value than wine, ſtood before his ton of water, it muſt have gone firſt, and his throwing his water overboard being ſo much for the common intereſt of the ſhip and cargo, he is allowed to come in upon an average, as if it had been a ton of wine. How far this law of Oleron prevails in our maritime courts now, the civilians muſt determine; but, by the common law of England, a ton of water would never be rated livre à livre, pound by pound, with a ton of wine.

ARTICLE XVII.

The mariners of Britany ought to have but one meal a day from the kitchen, becauſe they have beverage going and coming; but thoſe of Normandy are to have two meals a day, becauſe they have only water at the ſhip's allowance; and, when the ſhip arrives in a wine country, there the maſter ſhall procure them wine to drink.

OBSERVATION.

The cuſtom of giving every man a certain allowance is very ancient; and, to prevent jealouſies, complaints, and diſorders, that allowance is ſettled at ſo much a head, and exactly delivered out to all alike. As to the allowance of wine and meals by this article, the 29th of the ordinances of Wiſbuy agrees with it. In thoſe voyages where wine is to be had, the maſter is bound to provide it for the mariners, and then they ſhall have but one meal a day: but, when they drink water only, they ſhall have two meals, Charles V. and Philip IId's laws ordain, That the maſter ſhall order the mariners to have three certain meals a day; and, if they would have more meat, they ſhall only have what was laſt at their meals, unleſs upon extraordinary occaſions. By the 52d article of the Hanſeatiques, the maſter of German ſhips bound for France and Spain are not to provide victuals for their mariners when they are outward bound; but, when they are homeward bound, if the ſhip is let out to freight and loaden, the maſters are obliged to maintain their mariners; if they return light and empty, they are not obliged. The Portugueze, in their Eaſt-India voyages, maintain both mariners and ſoldiers outward-bound, and allow each a pound and a half of biſcuit, three pints of wine, and three pints of water a day, and 31 pounds of ſalt fiſh a month, ſome dry fiſh, garlick and onions: but, in their homeward-bound voyages, they have only biſcuits and water to the Cape of Good Hope, and, after that, they live every man on his own proviſion.

Facilis deſcenſus ad Indos:
Sed revocare gradum, veteremque evadere ad orbem,
Hoc opus, hic labor eſt.

In caſes of neceſſity, when proviſions fall ſhort, thoſe that have victuals aboard ought to communicate to thoſe that have not, by the Rhodian law.

ARTICLE XVIII.

When a veſſel is unladen, and the mariners demand their freight, ſome of them having neither bed, cheſt, nor trunk aboard, the maſter may lawfully retain part of their wages, 'till they have brought back the ſhip to the port from whence ſhe came, unleſs they give good ſecurity to ſerve out the whole voyage.

OBSERVATION.

The 31ſt article of the ordinances of Wiſbuy agrees exactly with this. The ſeamens wages are not regularly due, 'till after their work is intirely done, or the time they hired themſelves for expired, except there are any private agreements to the contrary. The 28th article of the Hanſeatiques ordains, that their wages ſhould be paid at three ſeveral payments; one third when they ſet ſail upon a voyage, one third when they arrive at their port of diſcharge, and the other third when the ſhip is returned home.

ARTICLE XIX.

If the maſter hires the mariners in the town to which the veſſel belongs, either for ſo much a day, week, or month, or for ſuch ſhare of the freight, and it happens that the ſhip cannot procure freight in thoſe parts where ſhe is arrived, but muſt ſail further to obtain it: in ſuch caſe, thoſe that were hired for a ſhare of the freight ought to follow the maſter, and ſuch as are at wages ought to have their wages advanced courſe by courſe, that is, in proportion to the length of the voyage, in what it was longer than they agreed for, becauſe he hired them to one certain place; and, if they go not ſo far as that place for which the contract was made, yet they ought to have the whole promiſed hire, as if they had gone thither; but they ought likewiſe to bring back the veſſel to the place from whence ſhe at firſt departed.

OBSERVATION.

This article is explained by the 8th and 16th, and what is ſaid upon them. The 32d of the laws of Wiſbuy, the 12th and 13th of Charles V, and the 24th of the Hanſeatiques, are to the ſame purpoſe. By the 9th article of Philip IId's laws, if the voyage is broken off by wars, pirates, or the command of the ſovereign, the ſeamen ought to have a quarter part of the wages they agreed to have if they had compleated it. In the year 1626, about October, all the Engliſh ſhips that were then in the river of Bourdeaux were ſtopped, by order of Monſieur de Luxemburgh, governor of Blaye. Several of theſe ſhips were laden with wine, and ſome with other merchandize. They were forced to return to Bourdeaux and unload; after which the maſters demanded the whole freight of the merchants who had freighted them, by virtue of the law Colonus §. novem conduxit. D. locati, inaſmuch as it was not their faults that they did not make their voyage, and carry the goods to their intended port: the freight was then 15 or 16 livres a ton: the admiralty-court adjudged them a quarter part of it: they appealed to the ſovereign court, who, after two hearings, ſet aſide their appeal.

ARTICLE XX.

When a veſſel arrives at Bourdeaux, or any other place, two of the mariners at a time may go a-ſhore, and take with them one meal of ſuch victuals as are in the ſhip therein cut and provided, as alſo bread proportionably, as much as they eat at once, but no drink: and they ought very ſpeedily, and in ſeaſon, to return to their veſſel, that thereby the maſter may not loſe his tide; for if ſo, and damage comes thereby, they are bound to make ſatisfaction; or, if any of their company be hurt for want of their help, they ate to be at ſuch charge for his recovery as one of his fellow mariners, or the maſter, with thoſe of his table, ſhall judge convenient.

OBSERVATION.

The reaſon of this law ceaſes now for Bourdeaux, for which place it was originally intended: for the river is ſo full of eating houſes and taverns on both ſides, that it is not likely ſailors will carry any of their ſalt proviſions on ſhore, when they can get freſh.

ARTICLE XXI.

If a maſter freight his ſhip to a merchant, and ſet him a certain time within which he ſhall lade his veſſel, that ſhe may be ready to depart at the time appointed, and he lade it not within the time, but keep the maſter and mariners for the ſpace of eight days, or a fortnight, or more, beyond the time agreed on, whereby the maſter loſes the opportunity of a fair wind to depart: the ſaid merchant, in this caſe, ſhall be obliged to make the maſter ſatisfaction for ſuch delay, the fourth part whereof is to go among the mariners, and the other three-fourths to the maſter, becauſe he finds them their proviſion.

OBSERVATION.

The 34th article of the ordinances of Wiſbuy, and the 39th of the emperor Charles V, are intirely agreeable to this law. By the laws of the Hanſeatiques, and Philip IId's, the merchant is obliged to pay the whole freight, if he does not load the ſhip in 15 days after the time agreed upon; and, by the Theodoſian Code de Navicullariis, when a veſſel arrives in a port loaden, the merchant to whom the cargo belongs muſt unload in 10 days; but in our times, on account of holy-days and Sundays, the common time for unloading a ſhip is 15 days; but that ſhould not hinder the paying the freight, which ought to be cleared in eight days, whether the ſhip be diſcharged or not. The maſter for his pay cannot detain the merchandize aboard; but, when they are in the boat or lighter, he may ſtop them 'till he is ſatisfied.

ARTICLE XXII.

When a merchant freights a veſſel at his own charge, and ſets her to ſea, and the ſaid veſſel enters into an harbour, where ſhe is wind-bound, ſo that ſhe ſtays 'till her monies be all ſpent, the maſter, in that caſe, ought ſpeedily to write home to his own country for money, but ought not to loſe his voyage on that account; for, if ſo, he ſhall be obliged to make good to the merchant all damages that ſhall enſue.
But the maſter may take part of the wines, or other merchants goods, and diſpoſe thereof for his preſent neceſſities: and, when the ſaid veſſel ſhall be arrived at her port of diſcharge, the ſaid wines that the maſter hath ſo diſpoſed of, ought to be valued and appraiſed at the ſame rate as the other wines ſhall be commonly ſold for, and accordingly be accounted for to the merchant: and the maſter ought to have the freight of ſuch wines as he hath ſo taken and diſpoſed of for the uſe and reaſon aforeſaid.

OBSERVATION.

The 35th and 69th articles of the laws of Wiſbuy are to the ſame purport as this; but, by the 68th article of thoſe laws, if the ſhip happens afterwards to be caſt away, the maſter ſhall pay the merchant for the wines, or other goods he ſold in a caſe of neceſſity, without pretending to deduct any thing for the freight. The Hanſeatiques forbid any maſter to borrow any money on any other ſecurity but the ſhip's bottom, that, if ſhe ſhould be loſt, the debt might be paid; nor do they allow him, when he is at home, to borrow any thing on her bottom, or otherwiſe, without acquainting the owners with it. By the 45th article of the laws of Wiſbuy, the ſhip is bound to the merchant whoſe goods the maſter has ſold in this manner, to make him ſatisfaction, though ſhe ſhould be herſelf ſold, and have other owners.

ARTICLE XXIII.

If a pilot undertakes the conduct of a veſſel, to bring her to St Malo, or any other port, and fail of his duty therein, ſo as the veſſel miſcarry by reaſon of his ignoronce in what he undertook, and the merchants ſuſtain damage thereby, he ſhall be obliged to make full ſatisfaction for the ſame, if he hath wherewithal; and, if not, loſe his head.

ARTICLE XXIV.

And if the maſter, or any of his mariners, or any one of the merchants, cut off his head, they ſhall not be bound to anſwer for it; but, before they do it, they muſt be ſure he had not wherewith to make ſatisfaction.

OBSERVATIONS on the two foregoing articles.

The original calls theſe pilots lockmen; for, when thoſe laws were written, there were officers aboard all ſhips, called pilots, who went the whole voyage, whereas the lockmen were like our pilots, mariners hired at every river, to guide the ſhip; for, dwelling on the place, the lockman was ſuppoſed to know the ſhore better than the ſhip's pilot, who perhaps was never there before; for which reaſon he commonly required the maſter to have a lockman, to avoid rocks, ſhelves, ſhoals, and ſands, which he muſt be well acquainted with by long uſing the river. That of Roan is very dangerous on this account, and there are ſworn pilots every two leagues, to guide ſhips up the Seine: they are very neceſſary all over Britany. The 44th and 59th articles of the ordinances of Wiſbuy oblige the maſter to take a new pilot, if his own and the ſhip's crew demand one of him. The maſter finds him maintenance, and the merchant pays him, by the 60th article of the ordinances of Wiſbuy. The loſs of the pilot's head,

head, if through his ignorance or negligence the ſhip is loſt, is taken from the Conſulate, chap. 250, and anſwers to that known maxim in the law, Qui non habet in ære, luet in corpore.

ARTICLE XXV.

If a ſhip, or other veſſel, arriving at any place, and making in towards a port or harbour, ſet out her flag, or give any other ſign to have a pilot come aboard, or a boat to tow her into harbour, the wind or tide being contrary, and contract be made for piloting the ſaid veſſel into the ſaid harbour accordingly, but, becauſe of an unreaſonable and accurſed cuſtom in ſome places, that the third or fourth part of the ſhips that are loſt ſhall accrue to the lord of the place where ſuch ſad caſualties happen, as alſo the like proportion to the ſalvers, and only the remainder to the maſter, merchant, and mariners: the perſons contracting for the pilotage of the ſaid veſſel, in order to ingratiate themſelves with their lords, and to gain to themſelves a part of the ſhip and lading, do, like faithleſs and treacherous villains, ſometimes even willingly, and out of deſign to ruin ſhips and goods, guide and bring her upon the rocks, and then feigning to aid, help, and aſſiſt the now-diſtreſſed mariners, are the firſt in diſmembering and pulling the ſhip to pieces, purloining and carrying away the lading thereof, contrary to all reaſon and good conſcience: and afterwards, that they may be the more welcome to their lord, do with all ſpeed poſt to his houſe with the ſad narrative of this unhappy diſaſter; whereupon the ſaid lord, with his retinue, appearing at the place, takes his ſhare; the ſalvers theirs; and what remains the merchants and mariners may have. But ſeeing this is contrary to the law of God, our edict and determination is, that, notwithſtanding any law or cuſtom to the contrary, it is ſaid and ordained, The ſaid lord of that place, ſalvers, and all others that take away any of the ſaid goods, ſhall be accurſed and excommunicated, and puniſhed as robbers and thieves, as formerly hath been declared: but all falſe and treacherous pilots ſhall be condemned to ſuffer a moſt rigorous and unmerciful death, and high gibbets ſhall be erected for them in the ſame place, or as nigh as conveniently may be, where they ſo guided and brought any ſhip or veſſel to ruin as aforeſaid, and thereon theſe accurſed pilots are with ignominy and much ſhame to end their days: which ſaid gibbets are to abide and remain to ſucceeding ages on that place, as a viſible caution to other ſhips that ſhall afterwards ſail thereby.

ARTICLE XXVI.

If the lord of any place be ſo barbarous as not only to permit ſuch inhuman people, but alſo to maintain and aſſiſt them in ſuch villanies, that he may have a ſhare in ſuch wrecks, the ſaid lord ſhall be apprehended, and all his goods confiſcated and ſold, in order to make reſtitution to ſuch as of right it appertaineth, and himſelf to be faſtened to a poſt, or ſtake, in the midſt of his own manſion houſe, which being fired at the four corners, all ſhall be burned together, the walls thereof ſhall be demoliſhed, the ſtones pulled down, and the place converted into a market-place for the ſale only of hogs and ſwine to all poſterity.

Observations on the two foregoing articles.

Theſe two laws were made upon account of that inhuman droit de bris ſur les naufrages, the right of lords of coaſts to ſhipwrecks; by which thoſe miſerable wretches who were caſt away, their very perſons, and the goods that were ſaved, were confiſcated for the prince who was lord of the coaſt. In the barbarous times men uſed to put this law in practice, eſpecially the Gauls, who took all ſtrangers for their enemies, and not only robbed them of their goods, but of their lives, ſacrificing them to their falſe gods. From which bloody cuſtom Hercules brought them off, according to Diodorus Siculus, lib. v. Hiſt. cap. 2. Pomponius Mela, lib. iii. de ſitu orbis, cap. 2. The Romans, though they were covetous to exceſs, and greedy after other mens goods, never approved of this cruelty, but condemned and abrogated the uſe of it to the utmoſt of their power, toto titulo de incendio, ruina & naufragio. Et de naufragiis, libro undecimo. Codicis, leg. 1. & leg. 9. But the empire degenerating in it's decadency, when ſo many barbarous nations poured in upon it out of Scythia and Scandinavia, and tore it to pieces, this wicked droit de bris ſur les naufrages was renewed, particularly on the coaſts of Gaul, called Littus Saxonicum, on account of the frequent invaſions of the Saxons there. Sidonius Appollinaris, lib. viii. epiſt. 6. & carmine ſeptimo. Afterwards the Normans being by chance thrown upon that coaſt, were immediately diſpatched by the inhabitants; and, in courſe of time, this pretended right inſinuated itſelf, and prevailed not only againſt enemies and invaders, but againſt any perſons that were ſhipwrecked. Quicquid evadebat ex naufragiis totum ſibi fiſcus lege patriæ vindicabat, paſſoſque naufragium miſerabilius violentia principis ſpoliabat quam procella, as ſays Hildebertus Turonenſis archiepiſc. epiſt. 32 & 65.

At laſt the counts and dukes of Armoreck, Bretagne, and Gaul, were obliged by civility, and the requeſt of the neighbouring people of Bourdeaux and Rochelle, to change this barbarous cuſtom of ſlavery and confiſcation into a tax for all ſuch as procured licences from them; of which licences there were three ſorts, bref de ſauvette, bref de conduite, and bref de victualle: the two firſt were to ſave them, in caſe of ſhipwreck, from the old forfeitures to the lord, and exempt them from the cruel droit de bris. The third was for liberty to buy proviſions in Bretagne. The dukes of Bretagne eſtabliſhed an office and officers for giving out theſe licences, as at Rochelle and other places. The droit de bris was alſo practiſed in Guienne, Saintonge, Artois, and Poictou, but much more civilly and humanely than it was uſed in Bretagne; for the lords of the coaſts took only a third or a quarter part, according to the ſeveral cuſtoms; the ſalvers as much, and the reſt was reſtored to the poor wretches that were ſhipwrecked, and their perſons were free.

This barbarity is aboliſhed in England, Italy, Germany, Spain, and France, unleſs it be practiſed againſt the enemies of the ſtate, infidels, or pirates: but the Spaniards obſerve this cuſtom beyond the Line againſt all but natural Spaniards. This droit de bris, which was not, however, ſo cruelly executed in Guienne as in Bretagne, was ſolemnly abrogated by Henry III. king of England, and duke of Aquitaine and Guienne: his edict to this purpoſe is regiſtered and preſerved among the rolls at Bourdeaux.

As to that part of theſe laws requiring traiterous pilots ro be hanged on the ſhore, in ſome eminent place, to be a warning to all mariners, Andronicus, emperor of Greece, who reigned about the year 1150, ordered the ſame, or the like puniſhment, for ſuch as made ſpoil of wrecks, as Nicetas reports, in the ſecond book of his Annals. The lord Verulam, in his Hiſtory of Henry VII. writes, that it was heretofore the cuſtom in England to leave the dead bodies of pirates on gibbets near the water-ſide, for a warning to ſeafaring men.

The hanging ſuch as are condemned for crimes committed at ſea by the water-ſide, and ſome of the moſt criminal in chains, has been practiſed ſince in this kingdom. Thoſe malicious fiſhermen who in the night make fires in dangerous places, to attract mariners thither, to the loſs of their ſhips, by making them believe they are near ports and inhabited places, deſerve the ſame puniſhment.

The word in the French which is rendered caution in Engliſh, is beliſe, properly a beacon; but in this place it is uſed metaphorically: for a gibbet would be an odd ſort of beacon in our language. There are ſeveral ſorts of theſe beliſes, or beacons at ſea, ſet up to direct mariners to the right courſe they ought to take to avoid danger. Theſe are very neceſſary in thoſe parts where there are bars, that is entrances, where there muſt be high tides to carry ſhips over them. Sometimes buoys are made uſe of for beliſes, and ſometimes trees, light-houſes, and other things.

The burning the criminals houſes mentioned in theſe two articles, and all that is in it, ſhews what an opinion the legiſlature had of the heinouſneſs of the crime. Coiners were in France burned in old times, and their falſe money with them; their buildings were levelled with the ground, their woods felled and rooted up, and the places that belonged to them condemned and ſtrewed with ſalt, as was the town of Poictiers in the reign of king Dagobert.

ARTICLE XXVII.

A veſſel being arrived at her port of diſcharge, and halled up there into dry ground, ſo as the mariners, deeming her to be in good ſafety, do take down her ſails, and ſo fit the veſſels aloof and aft, the maſter then ought to conſider an increaſe of their wages, kenning by kenning; and if in hoiſting up of wines, it happens that they leave open any of the pipes, or other veſſels, or that they faſten not the ropes well at the ends of the veſſel, by reaſon whereof it ſlips and falls, and ſo is loſt, and falling on another both are loſt, in theſe caſes the maſter and mariners ſhall be bound to make them good to the merchants, and the merchants muſt pay the freight of the ſaid damnified or loſt wines, becauſe they are to receive for them from the maſter and mariners, according to the value that the reſt of the wines are ſold for; and the owners of the ſhip ought not to ſuffer hereby, becauſe the damage happened by default of the maſter and mariners, in not making faſt the veſſels or pipes of wine.

OBSERVATION.

Kenning by kenning, veu par veu, is a phraſe uſed by mariners, as is alſo courſe by courſe, in the 19th article of theſe laws. Theſe phraſes are very ancient, and kenning was particularly uſed when navigation was performed by views, and by obſervation on the land from one proſpect to another, Plin. lib. vi. cap. 13. which was before the invention or knowlege of the uſe of the compaſs. It ſignifies what the logicians, or metaphyſicians, called agreement, the arithmeticians and geometricians proportion, and others expreſs otherwiſe.

ARTICLE XXVIII.

If two veſſels go on a fiſhing deſign in partnerſhip, as for mackrel, herrings, or the like, and do ſet their nets, or lay their lines, at Olonne, St Gilles, Survie, or elſewhere, the one of the veſſels ought to employ as many fiſhing-engines as the other, and ſo ſhall go in equal ſhares as to the gain, according to the agreement between them made. And if it happens that one of the ſaid veſſels, with her fiſhing inſtruments, engines, and crew, periſh, and the other eſcaping, arrives in ſafety: if the ſurviving friends of thoſe that periſhed, require of the other to have their part of the gain, as alſo of their fiſh, fiſhing-inſtruments, and boat, they are to have, upon the oaths of thoſe that eſcape, their part of the fiſh and fiſhing inſtruments; but they ſhall not have any part or ſhare in the veſſel itſelf.

ARTICLE XXIX.

If any ſhip, or other veſſel ſailing to and fro, and coaſting the ſeas, as well in the way of merchandizing as upon the fiſhing account, happen by ſome misfortune, through the violence of the weather, to ſtrike herſelf againſt the rocks, whereby ſhe becomes ſo bruiſed and broken that there ſhe periſhes, upon what coaſts, country, or dominion ſoever, and the maſter, mariners, merchant, or merchants, or any one of theſe eſcape, and come ſafe to land; in this caſe, the lord of that place or country where ſuch misfortune ſhall happen, ought not to let, hinder, or oppoſe ſuch as have ſo eſcaped, or ſuch to whom the ſaid ſhip or veſſel, and her lading belong, in uſing their utmoſt endeavours for the preſervation of as much thereof as may poſſibly be ſaved; but, on the contrary, the lord of that place or country, by his own intereſt, and by thoſe under his power and juriſdiction, ought to be aiding and aſſiſting to the ſaid diſtreſſed merchants or mariners, in ſaving their ſhipwrecked goods, and that without the leaſt embezzlement, or taking any part thereof from the right owners.

But, however, there may be a renunciation, or conſideration, for ſalvage to ſuch as take pains therein, according to right reaſon, a good conſcience, and as juſtice ſhall appoint; notwithſtanding what promiſes may in that caſe have been made to the ſalvers, by ſuch diſtreſſed merchants and mariners, as is declared in the 4th article of theſe laws: and, in caſe any ſhall act contrary hereunto, or take any part of the ſaid goods from the ſaid poor, diſtreſſed, ruined, undone, ſhipwrecked perſons, againſt their wills, and without their conſent, they ſhall be declared to be excommunicated by the church, and ought to receive the puniſhment of thieves, except ſpeedy reſtitution be made by them: nor is there any cuſtom or ſtatute whatſoever that can protect them againſt the aforeſaid penalties, as is ſaid in the 26th article of theſe laws.

Observation on the two foregoing articles.

The civil law almoſt every where allows all ſhipwrecked perſons a right to gather up their ſhipwrecked goods. The Codex and the Rhodian laws are particular in this matter, ſo is king Henry IIId's charter beforementioned.

ARTICLE XXX.

If a ſhip, or other veſſel entering into harbour, happens by misfortune to be broken and periſh, and the maſter, mariners, and merchants which were on board her, be all drowned, and if the goods thereof be driven aſhore, or remain floating on the ſea, without being ſought after by thoſe to whom they belong, they being ignorant of this ſad diſaſter, and knowing nothing thereof: in this moſt lamentable caſe, the lord of that place or country ought to ſend perſons to ſave the ſaid goods, which he ought to ſecure and to put into ſafe cuſtody, and give the relations of the deceaſed perſons who were drowned notice of it, and to ſatisfy for the ſalvage thereof, not out of his own purſe, but of the goods ſaved, according to the hazards run, and the pains taken therein; and what remains muſt be kept in ſafe cuſtody for one year or more; and if, in that time, they to whom the ſaid goods appertain do not appear and claim the ſame, and the ſaid year be fully expired, he may publickly ſell and diſpoſe thereof, to ſuch as will give moſt, and with the monies proceeding from the ſale thereof he ought to give among the poor, and for portions to poor maids, and other charitable uſes, according to reaſon and good conſcience. But if he aſſumes the ſaid goods, either in whole or in part unto himſelf, he ſhall incur the curſe and malediction of our mother the holy church, with the aforeſaid pains and penalties, without ever obtaining remiſſion, unleſs he make ſatisfaction.

OBSERVATION.

The keeping ſuch goods a year is in the civil law, 1, 2 Cod. Naufragiis: but the parliament of Paris, in the year 1584, pretended to reduce the time to two months, which time was to commence from the day of proclaiming ſuch goods in public market, and fixing a placart of it on the doors of the pariſh-church. The conſulate provides for the ſalvers more largely, allowing them half of the goods ſaved, and the lord and the poor the other half, cap. 252. By ſome laws in France, as long as the goods are in being and unalienated, the merchant to whom they belong has a claim to them, paying the charge of ſalvage: but if, after a lawful time, they are ſold, and become another's property, he has no claim to them. The caſuiſts are of opinion, That, if he who finds them is rich, he ought to give all to pious uſes; if poor, to keep all himſelf, Hoſtienſis in ſumma de pœnitentia; and the 36th article of the laws of Oleron agrees with the judgment of the caſuiſts.

ARTICLE. XXXI.

If a ſhip, or other veſſel, happens to be loſt by ſtriking on ſome ſhoar, and the mariners, thinking to ſave their lives, reach the ſhoar, in hope of help, and inſtead thereof it happens, as it often does, that in many places they meet with people more barbarous, cruel, and inhuman than mad dogs, who, to gain their monies, apparel, and other goods, do ſometimes murder and deſtroy theſe poor diſtreſſed ſeamen; in this caſe, the lord of that country ought to execute juſtice on ſuch wretches, to puniſh them as well corporally as pecuniarily, to plunge them in the ſea 'till they be half dead, and then to have them drawn forth out of the ſea, and ſtoned to death.

OBSERVATION.

To plunge them in the ſea, plonger en la mer, is what the French now call bailler la cale, and we keel-hauling.

The Goths heretofore uſed to practiſe it as a ſport or exerciſe, Olaus Magnus Hiſtoriæ Septentrionalis, lib. 5. and lib. 10. cap. 16. And one may conceive an idea of the barbarity of the northern nations, when that was a divertion to them, which was a puniſhment to others; as it was of old among the Celtes and Franks, and is now among the modern navigators.

Lazy and ſcandalous perſons had ſome ſuch ſort of puniſhment, by the cuſtoms or laws of the old Germans, Tacitus de Morbus Germanorum, num. 5. Turnus Herdonius was puniſhed thus to death, for abuſing and railing at the king. Tarquinius Superbus, T. Livius, lib. primo decadis primæ. Bawds and whores are ſerved ſo at Bourdeaux; and ſcolds ſomething like it in England, when they are put into the ducking-ſtool.

ARTICLE XXXII.

If by reaſon of tempeſtuous weather, it be thought expedient, for the lighting of any ſhip or veſſel at ſea, or riding at anchor in any road, to caſt part of the lading overboard, and it be done accordingly for the common ſafety, though the ſaid goods ſo ejected and caſt overboard, do become his that can firſt poſſeſs himſelf thereof, and carry them away: nevertheleſs, it is here to be further underſtood, that this holds true only in ſuch caſes, as when the maſter, merchants, and mariners have ſo ejected or caſt out the ſaid goods, as that they give over all hope or deſire of ever recovering them again, and to leave them as things utterly loſt, and given over by them, without ever making any enquiry or purſuit after them: in which caſe only, the firſt occupant becomes the lawful proprietor thereof.

OBSERVATION.

The property of things thrown overboard remains in the merchants, and the finder has no right to them, unleſs they were thrown out with an intention to leave them there and look no more after them, c. 2. in fine, l. qui lavandæ D. Lege Rhodia, l. quod ex naufragio, D. acquirenda vel amittenda poſſeſſione Neptunus ſaſtidioſus ædilis eſt. Si quæ ſunt improbæ merces jactat omnes; as Plautus ſays in Stichot. The ſea drives all things to land: maris hæc eſt natura, ut omne immundum, ſtercoroſumque in littoribus impingat. Seneca naturalium quæſt. lib. 3. cap. 26. On this aſſurance, every one that flings his goods overboard in time of danger, hopes and deſires to recover them again after ſeeking for them, and thoſe things non ſunt in derelicto, ſed in deperdito, l. ſi quis Merces, D. pro derelicto. It is true, what is abandoned through contempt or careleſſneſs, belongs to the firſt occupiers; quod dominus ea mente abjecit, ut in numerum rerum ſuarum eſſe nolit, qui primus occupaverit ſtatim dominus ſit jure naturali. Inſtit. de rerum diviſione 5. qua ratione, & lege 1. D. pro derelicto.

ARTICLE XXXIII.

If a ſhip, or any other veſſel, hath caſt overboard ſeveral goods or merchandizes, which are in cheſts well locked and made faſt; or books well claſped and ſhut cloſe, that they may not be damnified by ſalt water: in ſuch caſes it is to be preſumed, that they who did caſt ſuch goods overboard, do

ſtill retain an intention, hope, and deſire of recovering the ſame. For which reaſon, thoſe who ſhall happen to find ſuch things, are obliged to make inſtitution thereof to him who ſhall make a due enquiry after them, or put them to pious uſes, according to his conſcience, and the advice of ſome prudent neighbour.

OBSERVATION.

Well claſped; this is conformable to the gloſs on the laſt law. D. Lege Rhodia.

ARTICLE XXXIV.

If any man happens to find any thing in the ſea, or in the ſand on the ſhore, in floods or in rivers, if it be precious ſtones, fiſhes, or any treaſure of the ſea, which never belonged to any man in point of property, it belongs to the firſt finder.

ARTICLE XXXV.

If any ſearches the ſea-coaſts to fiſh, or find gold or ſilver, and he finds it, he ought to reſtore it all without any diminution.

ARTICLE XXXVI.

If any going along the ſea-ſhore to fiſh, or otherwiſe happens to find gold or ſilver, he ſhall be bound to make reſtitution thereof, deducting for his own pains; or, if he be poor he may keep it to himſelf; that is, if he knows not to whom to reſtore it; yet he ſhall give notice of the place where he found it, to the neighbourhood and parts next adjacent, and adviſe with his ſuperiors, who ought to weigh, and take into conſideration the indigence and poverty of the finder, and then to give him ſuch adviſe as is conſonant to good conſcience.

OBSERVATION on the three preceeding articles.

There are three ſorts of goods, which the ſea naturally drives to land: as entire wrecks; for which the cruel droit de bris was in old times eſtabliſhed by pernicious and barbarous cuſtom: but humanity, licences, and paſſports have aboliſhed it in ours. The ſecond is what is flung overboard, for the preſervation of mens lives, the ſhip and cargo. Neither of theſe, by law nor the cuſtom of the ſea, change their proprietors; but may be claimed and recovered by them, within the lawful time appointed by ordinances and cuſtoms to claim, even while the goods are in being and unſold, as appears by what has been ſaid in and upon the 30th art.

The third ſort comprehends the two firſt, which are not owned and demanded by the proprietor; and beſides that, includes all the treaſures of the ſea, which come out of it's bowels, and it naturally drives aſhore; as aromatic amber, on the coaſt of Guienne; amber ſuccinum, in the German ocean; red, black, and white coral, on the coaſt of Barbary; precious ſtones, fiſh-ſhells, and other riches, which the ſea produces, and which, in the 34th article of theſe laws, are called herpes marines, in Engliſh, treaſures of the ſea, for it cannot be otherwiſe ſo fully expreſſed. The word herpes was taken from an old Gauliſh term herpir, which ſignifies to take, and it's contrary, voerpir, is to leave.

Nor is he who firſt lays his hand on them, obliged to give thoſe that are there with him a ſhare of what he has found, unleſs he pleaſes to do it out of courteſy, notwithſtanding the conſtitution of the emperor Leo, which is contrary to it. This is the law of nature; but princes and lords of the coaſt have uſurped this privilege, and laid claim to all the treaſures of the ſea, that it throws on their royalties. The lords of the coaſts, that is, of the manors or lands on the coaſts of France, were notorious uſurpers in this, 'till the reign of Lewis XIII. when cardinal Richlieu, by an order of the council, bearing date the 13th of December, 1629, took away the pretended rights of ſeveral lords, or very much abridged them; but he did not reſtore the law of nature in this caſe: he only enlarged his own and his ſucceſſor's privileges and authority, he being great maſter, and ſuperintendant-general of the navigation and commerce of France, This regulation of council occaſioned great diſorders, and the count de Olonne was particularly ſo enraged at it, that his officers by main force drove away thoſe of the admiralty, who came upon his royalty. But the French kings were now maſters of their ſubjects lives and fortunes, and it would have been in vain for ſuch counts to have diſputed the king's edict with theſe words in it, car tel eſt nôtre plaiſir, the ſtanding reaſon of the French laws at this time.

ARTICLE XXXVII.

Touching great fiſh, that are taken or found dead on the ſea-ſhore, regard muſt be had to the cuſtom of that country, where ſuch great fiſh are taken or found. For, by the cuſtom, the lord of that country ought to have his ſhare; and with good reaſon, ſince the ſubject owes obedience and tribute to his ſovereign.

OBSERVATION.

This law declares, that by the antient cuſtoms of countries, as well ſovereigns, as all particular lords of royalties, to whom duties and tributes were due, had both heretofore certain rights to the eſpaves de mer, ſtrays of the ſea. The couſtomier de Normandie, under the article of Varech, ſpecifies what belongs to the one, and what belongs to the other; and particularly that whales and other oil-fiſh belong to the particular lord of the royalty where they were found; that is, off whoſe land they are taken on the ſhore: in the original it is, a la rive de la mer; and how far that is to be underſtood to belong to the lord of that royalty, may be found in the above-mentioned couſtoumier, where the varech underſtands as far as a man on horſeback can reach with his launce: for if the fiſh is found farther off the ſhore, the lord has no right to it, though it be brought or driven a-ſhore afterwards.

ARTICLE XXXVIII.

The lord ought to have his ſhare of oil-fiſh, and no other, according to the laudable cuſtom of the country where they are found; and he that finds them is no further obliged than to ſave them, by bringing them without the reach of the ſea, and preſently to make it known to the ſaid lord of the place, that he may come and demand what is his right.

OBSERVATION.

The couſtoumier de Normandie mentions two ſorts of fiſh; the royal fiſh, which are the dolphin, the ſturgeon, the ſalmon, the turbot, the ſea-dragon, the ſea-barbel, and, in general, all fiſh fit for a king's table: and oil-fiſh, as whales, porpuſſes, ſea-calves, and the like, of which oil may be made: all other fiſh are the property of thoſe that take them in the ſea, near the ſhore, or afar off. The duke of Eſpernon, which is the capital of a little territory called de Buch, had a right to the eighth penny of all the fiſh ſold in the market at Bourdeaux, that were taken within his precinct of de Buch, the fiſhermen having been heretofore vaſſals to the lords de Buch. And further, whatever part of the province of Guienne the duke was in, thoſe fiſhermen were on all faſt-days bound to ſupply his table with fiſh for himſelf and his family; but then the duke muſt pay a reaſonable price for them, and allow them ſomething for their trouble. This right is called bian, and was, 50 years ago, in uſe.

ARTICLE XXXIX.

If the lord of the place pleaſes, and it be the cuſtom of the country where the fiſh is found, he may cauſe the ſame to be brought, by him that found it, to the public and open market-place, but no where elſe; and there the ſaid fiſh ſhall be appraiſed by the ſaid lord, or his deputy, according to cuſtom. And the price being ſet, the other party that made not the price, ſhall have his choice, either to take or leave it at that price; and if either of them, whether per fas or nefas, be an occaſion of loſs or damage to the other, though but to the value of a denier, he ſhall be obliged to make him reſtitution.

ARTICLE XL.

If the coſt and charges of carrying the ſaid fiſh to the ſaid market-place would amount to a greater ſum than the fiſh itſelf may be worth, then the ſaid lord ſhall be bound to take his ſhare at the place where ſuch fiſh was found.

ARTICLE XLI.

The ſaid lord ought likewiſe to pay his part of the aforeſaid coſts and charges, becauſe he ought not, by another's damage, to enrich himſelf.

ARTICLE XLII.

If, by ſome chance or misfortune, the ſaid fiſh happens to be ſtolen away, or otherwiſe loſt from the place where it was found, after or before the ſaid lord has viſited it; in this caſe, he that firſt found it ſhall not any ways be obliged to make it good.

ARTICLE XLIII.

In all other things found by the ſea-ſide, which have formerly been in the poſſeſſion of ſome or other, as wines, oil, and other merchandize, although they have been caſt overboard, and left by the merchants, and ſo ought to appertain to him that firſt finds the ſame; yet herein alſo the cuſtom of the country is to be obſerved, as well as in the caſe of fiſh. But

if

if there be a preſumption that theſe were the goods of ſome ſhip that periſhed, then neither the ſaid lord, nor finder thereof, ſhall take any or convert any part of it to their own uſe; but, as has been ſaid, diſtribute the money it produces amongſt the poor and needy.

ARTICLE XLIV.

If any ſhip, or other veſſel at ſea, happens to find an oil-fiſh, it ſhall be wholly theirs that found it, in caſe no due purſuit be made after it; and no lord of any place ought to demand any part thereof, though they bring it to his ground.

ARTICLE XLV.

If a veſſel, by ſtreſs of weather, be conſtrained to cut her cables or ropes by the end, and ſo to quit and leave behind her both cables and anchors, and put to ſea at the mercy of the wind and weather; in this caſe, the ſaid cables and anchors ought not to be loſt to the ſaid veſſel, if there were any buoy at them; and ſuch as fiſh for them ſhall be bound to reſtore them, if they know to whom they belong: but they ought to be paid for their pains, according to juſtice. And if they know not to whom to reſtore them, the lords of the place ſhall have their ſhares, as well as the ſalvers; but, for preventing further inconveniencies, every maſter of a ſhip ſhall cauſe to be engraven, or ſet upon the buoys thereof, his own name, or the name of his ſhip, or of the port or haven to which ſhe belongs: and ſuch as detain them from him ſhall be reputed thieves and robbers.

ARTICLE XLVI.

If any ſhip, or other veſſel, by any caſualty or misfortune, happens to be wrecked and periſh; in that caſe the pieces of the bulk of the veſſel, as well as the lading thereof, ought to be reſerved and kept in ſafety for them to whom it belonged, before ſuch diſaſter happened, notwithſtanding any cuſtom to the contrary. And all takers, partakers, or conſenters, of or to the ſaid wreck, if they be biſhops, prelates, or clerks, they ſhall be depoſed, and deprived of their benefices reſpectively; and if they be laymen, they ſhall incur the penalties aforeſaid.

ARTICLE XLVII.

This is to be underſtood only, when the ſaid ſhip or veſſel ſo wrecked, did not exerciſe the trade of pillaging, and when the mariners thereof were not pirates, ſea-rovers, or enemies to popery; but if they are found to be either the one or the other, every man may then deal with ſuch as with rogues, and diſpoil them of their goods, without any puniſhment for ſo doing.

OBSERVATION on the three foregoing articles.

Every one has a droit de bris againſt pirates. Piratæ communes generis humani hoſtes ſunt, quos idcirco omnibus rationibus perſequi incumbit, ſays the lord Verulam de Bello Sacro. For which reaſon, according to the Civilians, ſunt ipſo jure diffidiati, cum quibus publice bellum habemus. Strachia in tertia parte de nautis; and again, it is cruelty to have any mercy towards pirates, ſolum pietatis genus eſt in hac re eſſe crudelem. There is no right of action amongſt them, and they have none to bring againſt one who attacks them or robs them. Quia in omnium furum perſona conſtitutum eſt, ne ejus rei nomine furti agere poſſint, cujus ipſi fures ſunt. Lege cum qui § quarto. lege qui re ſibi § primo. Lege qui res. § Si ego. De furtis, &c. They have no action among themſelves. Communi dividendo lege communi §. Inter præliones. D. communi dividendo. On the contrary, for one pirate to take from another is very lawful, and will bear no action. Lege ſed ipſi nautæ, &c.

The teſt of theſe laws in this copy is,

'Witneſs the ſeal of the iſle of Oleron, eſtabliſhed for all contracts in the ſaid iſle, the Tueſday after the feaſt of St Andrew, in the year one thouſand, two hundred, ſixty ſix.'

REMARKS.

This date of 1266, is too modern, and does not agree with the time when this piece was put forth, as the learned and curious Selden, libro ſecundo, capite 24, de dominio maris, very well obſerves: ſo that it is thought, that this date of the time of the delivery of the copy, from whence the edition printed at Rouen was taken, as the teſt, and the ſeal eſtabliſhed for contracts in the iſle of Oleron, denotes, that it was a copy taken out by a notary from the original.

ORCADES, or the Iſlands of Orkney in Scotland, are divided on the ſouth, from that part of the main land called Caithneſs, Pentland or Pictland Firth; which is twenty-four miles long, and from twelve to ſixteen in breadth. They have the Caledonian ſea on the weſt, the German on the eaſt, and the ſea that parts them from Shetland on the north. They are reckoned about thirty in number, and contain, according to Mr Templeman, an area of ſix hundred ſquare miles, but they are not all inhabited; the reſt, which are called Holmes, being uſed only for paſturage for ſheep and goats. The longeſt day amongſt them exceeds eighteen hours by ſome minutes. Their winters are not ſo ſubject to ſnow as to rain, which falls ſometimes in violent ſpouts, and the wind is often boiſterous. As theſe iſlands are larger, and have more inhabitants than thoſe of Shetland, the ſoil is better and more improveable; and as they are ſo much nearer to Scotland, there is more commerce, and much more converſation; for here are ſeveral gentlemen, of good families, who have good manſion-houſes on the iſland where their eſtates lie.

The principal iſlands of the Orcades, are South Ronaldſha, Swinna, Hoy, Burra, Lambholm, Flotta, Faira, Cava, Gramſay, Main-land, or the Chief Iſland, Copinſha, Strapinſha, Damſey, Inhallo, Stronſa, Papa-Stronſa, Sanda, North Ronaldſha, Eda, Rouſa, Wire, Garſa, Egleſha, North Faira, Weſtra, Papa-Weſtra.

The chief difference betwixt theſe iſlands, is in their ſituation, or their being more or leſs mountainous. The ſoil in ſome places is extremely dry and ſandy, in others wet and marſhy. They produce corn in abundance, but the chief of it is oats for bread, and barley or beer corn; for they have no wheat, rye, or pulſe, except in the gentlemens gardens. They have, however, all ſorts of wild fowl, partridges, moor fowl, plover, duck, teal, widgeon, rabbets, &c. and they want neither fiſh nor veniſon: ſo that the inhabitants have every thing to make life comfortable, except better bread, and warmer weather.

It is a very pleaſing proſpect to ſtand on the ſhore and behold the ſea in calm weather, in the narrow ſounds and paſſages between the iſlands; how the different tides run as from a ſluice, as well one way as the other, and to ſee a boat fly upon them, like an arrow out of a bow, it being as impoſſible to row againſt them, as to ſhoot London-bridge againſt a ſteep fall.

In the Pentland firth, behind the iſland Swinna, are two great whirlpools, called the Wells of Swinna, which are ſure to ſwallow up any veſſels that come within the draught; and the paſſage of the firth is of itſelf very dangerous, becauſe of the many ſtrong tides, which are not leſs than twenty-four, and make the ſea go very high upon the leaſt contrary wind. Theſe whirlpools are moſt dangerous in a calm, for if there be any wind, and the boat under ſail, they are paſſed without danger. If the mariners, who carry paſſengers between the main land and the iſles, happen to be drove near them by the tides, they throw a barrel, a bundle of ſtraw, or ſome other bulky thing into the whirlpools, which make them ſmooth enough, 'till the veſſel has paſſed them; and what is thus caſt in, is generally found floating a mile or two off. Mean time the natives on both ſides, who know the proper ſeaſons, paſs this firth every day very ſafe, except when the weather is tempeſtuous.

The trade of the Orkneys differs from that of Shetland, only in not depending upon the reſort of ſtrangers, but on their own produce. They export annually a very great quantity of corn, black cattle, ſwine, and ſheep, as alſo of butter, tallow, and white ſalt, together with ſeal-ſkins, otter-ſkins, lamb and rabbet-ſkins, &c. Alſo ſtuffs and great quantities of very good down, feathers, writing-quills and pens, hams and wool.

Their corn in particular is ſold as far as Edinburgh, from whence they bring what goods they want in exchange. But the chief of their commerce conſiſts in their fiſhing for herrings, and white fiſh, and in their corn and cattle. Hving NOT MERCHANTS TO EXPORT THEIR FISH WHEN TAKEN, THEY FISH FOR THE DUTCH, AND THE MERCHANTS OF INVERNESS, &c. And though upon this account, they ſometimes go far from home, yet as they are an adventurous hardy people, and good ſailors, they make no difficulty of fiſhing in the darkeſt nights, though at a great diſtance from the iſland; and yet their boats are none of the beſt.

Their white fiſhing trade lies chiefly on the weſt ſide of the iſlands, towards thoſe which we call the weſtern iſlands.

There have been ſeveral attempts, by the merchants both of England and Scotland, to eſtabliſh a fiſhery both in the Orkneys and the weſtern iſlands; but the extraordinary expence of building warehouſes, fiſhing veſſels, &c. always rendered it fruitleſs 'till lately; beſides that, the taking of the herrings in thoſe ſeas, does not turn to ſo good an account as thoſe taken on the eaſt ſide of Scotland, the markets being more remote. Indeed, the Glaſgow fiſhing-boats generally come up as far north as the Leuze, and fiſh for herring, as do likewiſe the fiſhermen from Londonderry, Belfaſt, and other ports of Ireland, by whom the people of the iſlands are ſupplied with many neceſſaries, eſpecially tobacco, wine, brandy, and other liquors, and ſome manufactures alſo for cloathing; but they meet with few or no returns, except fiſh and ſome oil, which the iſlanders make by killing porpoiſes, ſeals, and ſuch creatures.

ORDNANCE, ſee ARTILLERY.

ORES. Experience daily teaches us, that metals and minerals for the moſt part, ſuperabound with ſulphur and arſenic, which

which are ſeparated from them in the ſmelting furnace, and that the body does not become truly metallic, 'till after this ſeparation. In reverſing this operation by chemical experiments, we find, that if ſulphur and arſenic be added to a metal, a mixture is produced, which no longer reſembles metal, but rather an ore or mineral maſs. By theſe ſort of experiments, metal is brought back to the form of a mineral, therefore the operation is called mineralizing, and this name of mineralization is given to the action of the ſulphur and arſenic upon the metal.

True it is, we cannot always produce a matter that ſhall reſemble natural minerals, for the chemical production will often retain but a very ſmall appearance of them: from ſulphur and lead the true lead ore is produced: and from ſulphur and ſilver a real ore, known in our mines by the appellation of glaſs ore.

Sulphur and regulus of antimony will re-produce antimony; ſulphur and mercury will make cinnabar, which is the ore of quickſilver; and iron and arſenic will compoſe a mixture of different colours. Of orpiment, filings of iron and ſulphurated copper, may be made a kind of pyrites. But, from ſulphur and iron, ſulphur and copper, ſulphur and pewter, no true ore is produced.

The two firſt mixtures produce nothing but a kind of mineral gravel, and the laſt makes a ſort of pewter ore which is not natural. The celebrated Mr Henckel has already obſerved, that there was no occaſion to employ ſulphur in it's ſeparated form for mineralizatiou, as antimony, cinnabar, and pyrites, may be uſed for the ſame purpoſe. If that great man had puſhed his reſearches ſtill farther, and applied the ſame reaſoning to the arſenic, he might have been, perhaps, more happy in counterfeiting the mineral which he ſought (I know not for what reaſon) with ſuch eagerneſs.

Thus it hath been concluded from experience and obſervation, that ſulphur and arſenic are the two ſubſtances which reduce metals to the ſtate of ore, and preſerve them in that form. Yet we think, 'that ſulphur and arſenic are the only two ſub-'ſtances by which metals are found in the ſtate of ore.' On the contrary, are there not certain kinds of earth, without any appearance of ſulphur and arſenic, which nevertheleſs are capable of preſerving metals in the form of ore, and of mineralizing them by chemical operations?

If the true and natural mineralization of the metallic particles does not abſolutely depend upon the force of the acid, but rather is mechanically performed, as in all probability it is, a certain earth may inſinuate itſelf between the metallic leaves and particles, and keep them ſeparate as well as ſulphur and arſenic. Now, if this earth is neither fluid nor ſhining, the ore will not be looked upon as a mineral, and very little metal will be extracted from it in the aſſay. If, on the contrary, this earth is tinctured by the metal which it contains, and appears brown, red, yellow, green, or blue, then the colour teſtifies that it is impregnated with metal. From theſe ſorts of earth the aſſay-makers produce gold, ſilver, copper, &c. and it cannot be denied that theſe metals are mineralized in theſe earths, although they contain no ſenſible portion of ſulphur or arſenic; for theſe two matters ſoon manifeſt themſelves where they really are, by the fumes and ſcent which they exhale upon the fire.

It will, perhaps, be alledged, that theſe earths are formed of ore which has been altered by time, which hath expelled the ſulphur and arſenic by which they were formerly mineralized; but to this allegation it may be anſwered, that at leaſt ſomething vitriolic ſhould remain from the ſulphur, and that the arſenic ſhould leave a kind of ruſt which is found in other minerals, though no ſuch thing is found in theſe earths: beſides, theſe earths are extremely compact, ſo that we cannot preſume they have been altered by time, which generally renders them altogether porous and juicy: and they are moreover properly and naturally ſituated in forms of beds and layers, a circumſtance that is not to be obſerved in earth, which has been altered by time and air.

To theſe natural indications, let us add the operations of art, which repreſent ſomething of the ſame appearance. A mineralization of metals, reſembling that which we have mentioned, is made between pewter and lead. Pewter reduces lead to a kind of earth or aſhes: zink mineralizes gold, though in a different manner: but we ſhall here confine ourſelves to pewter and lead. Pewter being very earthy, partaking very little of the nature of glaſs, and having beſides very large pores, it's phlogiſton eaſily evaporates in the fire: when mixed with lead, it likewiſe deprives that metal of it's phlogiſton, which it allows to evaporate.

This example will explain what is properly underſtood, by the mineralization of metals, by means of earths; but, if we would examine this matter to the bottom, let us conſider how the crocus of Mars, when mixed in a metal, not by the art of man, but by accident, hinders it from being refined in the fuſion.

A ſulphur abounds with vitriolic acid, and arſenic is a violent corroſive, which likewiſe exerciſes it's acid by corroſion, it is plain that theſe two matters mineralize metals in quality of acids. This may be granted, without contradicting what has been advanced above: for, when a metal is melted, or very compact and ſolid in it's texture, certain it is all earth cannot penetrate this mechanic texture, and inſinuate itſelf into it's pores, which can only admit a ſubtle, fluid, acrimonious earth: now, this ſubtile, fluid, acrimonious earth, is no other than an acid; conſequently an acid, as ſuch, mineralizes metals. Whence may we not enquire, whether ſea ſalt, which likewiſe contains an acid, many not mineralize metals?

This ſalt reduces lead and regulus of antimony to aſhes in the fire; but, as every body will not allow that this change into earth is a mineralization, we will quote other examples to be ſeen in the ſame manner, in theſe three matters, namely, in a mineral, in a metal mineralized, and in a metal ſtrictly allied with the acid of kitchen ſalt.

This laſt is a Luna cornua, or again, a Saturnus cornuus, which after theſe metals are diſſolved in aqua fortis, have been precipitated by kitchen ſalt or it's acid. With regard to the two firſt of theſe matters, we may chuſe, for example, a mineral, or metal mineralized, and make the trial upon either, and we may be certain that the experiment will not fail, if properly conducted.

The effects of the mineralization by nature and art, are theſe. (1.) Part of the metal is volatilized in the fire. (2.) The minerals will not amalgamate with mercury. (3.) They will not be diſſolved by mercury. And (4.) part of the metal enters the ſcoria. Lead and ſilver which reſemble the cornua, produce the ſame effects, the fourth of which is likewiſe produced by ſalt upon copper and iron.

Indeed the poſſibility and imitation of mineralizing metals by the acid of kitchen ſalt, is manifeſted by the preceding experiments: but it is not enough to know theſe effects, for the principal point is to learn, if nature acts in this manner of herſelf; conſequently we muſt change the queſtion, and endeavour to know, whether there are not actually in nature, metallic ores which have been mineralized by the acid of kitchen ſalt?

We ſhall firſt ſpeak of iron ore, which in ſome ſhape ought to be divided into two kinds; for, when diſſolved, it becomes a reddiſh or yellow earth. We mean it's natural, rather than artificial ſolution. Every body knows, that when iron ore continues long expoſed to the viciſſitudes of dry and wet weather, it in time degenerates and diſſolves into a kind of earth and clay.

In this condition it is frequently found in the earth, where we ſee it ſome times degenerated through and through, or at leaſt externally, and changed into a red or yellow earth, which ought to be conſidered as a crocus martis naturally formed, and the colour ought to aſcertain the ſaline quality with which it is mixed. Now, we know from chemiſtry, that iron treated with ſulphur or vitriol, yields a red crocus. The colcothar, or caput mortuum of vitriol, is no other than ſuch an earth of iron, &c. Chemiſtry likewiſe teaches us, that iron diſſolved in the acid of kitchen ſalt, appears yellow in the ſolution, and that in drying or precipitating it exhibits a yellow earth or clay. Theſe experiments ſhould ſeem to demonſtrate the cauſes of the red and yellow iron ore; the firſt ſeems allied with the acid of ſulphur, and the yellow with the acid of kitchen ſalt; whence it reſults, that kitchen ſalt preſerves mineralized metals even in their natural ſtate.

It will perhaps be objected, that we have quoted the only example that is to be found in nature: but, provided the truth of this example is granted, it ought to ſerve in the ſame manner, with regard to a great many other minerals, ſince we find abundance that contain ſuch a yellow iron earth in their texture; conſequently, where-ever it is found, we may preſume there is an acid of kitchen ſalt. We ſhall, therefore, proceed no farther in minerology, otherwiſe we might deduce the ſame proofs from the blue, and bluiſh minerals of the copper.

Almoſt all the minerals of lead would confirm the proof; for it preciſely reſembles what is called lead ore, and of conſequence can be no other than the mineral of lead corroded by an acid. Nor is it more difficult to determine what that acid is, which thus corrodes it's mineral through it's whole extent; for the ſmall pieces of pyrites found ſtill in their natural ſtate within the mineral, prove that the acid, which formed this natural lead mine, muſt not have been of the ſtrongeſt kind, ſince it could not diſſolve the pyrites. But as all we propoſe in this place is by way of queſtion, we do not pretend to decide upon any thing.

I ſhall, however, anſwer another objection, which may be made even by thoſe people who are moſt converſant with minerology: they may alledge, that the vitriolic acid and arſenic, each ſimply conſidered as an acid, are not capable of effecting a mineralization; but, both being combined with an inflammable earth, they derive principally from thence, the power of producing the form of a mineral; but, they will add, where ſhall we find the acid of common ſalt combined with an inflammable earth, ſo as to produce the ſame effect? To this queſtion it may be replied, that art combines the acid of kitchen ſalt with a phlogiſton, when the phoſphorus is made; and this inſtance will ſerve, when they would puſh the propoſition ſtill farther, and confirm it by experiment. 'But in the earth (ſay they) no phoſphorus is either

'made

'made or found.' True, but in lieu of it, we find in ſea-coal, the acid of kitchen ſalt abundantly charged with phlogiſton: a convincing proof, that it is alſo naturally found in a condition not at all improper for naturalization.

In fine, ſome perſon may aſk what purpoſe can be ſerved by theſe theoretical queſtions, and ſubtile enquiries? It would be eaſy to aſſign a very good reaſon, if the queſtions we have propoſed were anſwered. But, that no body may think they are thrown away, without having any view to manifeſt utility, either in theory or practice; we ſhall obſerve, that perhaps, by a preciſe ſolution of theſe queſtions, minerology might be reduced to better order, and carried to much greater perfection. Minerals are commonly divided into certain claſſes, according to the metals and demi-metals; but as each claſs includes a good many kinds, there is a neceſſity for inventing a great number of ſub-diviſions. Would not the beſt way be to divide the mineral of each metal according to its mineralizing ſubſtance? For example, the minerals of ſilver are mineralized ſometimes by ſulphur, ſometimes by arſenic, and ſometimes by the acid of kitchen ſalt, &c.

Thus we ſpeak more conformably to nature, and this order may be obſerved in ranging them afterwards, according to the kind of rock, the limits of the mine, the layers of the earth, &c. Now as hitherto, nothing has been written or ſaid of any matter or mineralizing ſubſtance, except ſulphur and arſenic, and as we here give ſome conciſe inſtruction touching a third mineralizing acid, which is kitchen ſalt, it is eaſy to conclude that minerology by this means, gains an increaſe of one third; and that in the ſequel, we may diſcover a number of other minerals of this new diviſion, which are not now known to be ſo, or at leaſt, cannot be ranged in any claſs. By this likewiſe we give the key to an infinity of minerals, about which diſputes have been hitherto maintained, to know if they are true minerals or only crude productions of mountains: we mean, all kinds of volatile minerals, or ſuch as cannot be put in fuſion or ſeparated, and thoſe which appear in veins, as well as others in the mine, but are taken out in form of grains, &c. in which it is agreed that there is gold, ſilver, copper, &c. Theſe are looked upon as unripe, as well as the pyrites found at a diſtance from gold and ſilver, the minerals of talc, &c.

In regard to inſtances of this nature, the reader may remember what has been ſaid above, concerning the mixrure of common ſalt with the phlogiſton, and of the ſea-coal thence formed; and add to this, after the lights with which we are furniſhed by natural hiſtory, that agat is (if I may be allowed the expreſſion) the nobleſt kind of pit-coal; hence we perceive, that the ſame acid may repreſent a mineral either in form of coal, or as a blackſtone that ſhines like ice.

We know, that all theſe obſervations will appear to ſome as ſo many dreams of the imagination, and may be received as ſuch by our ordinary miners: thoſe eſpecially who boaſt of the productions of mountains, as of mineral metals, neither ſay nor prove any thing of their natural ſtate, mineralization, ſeparation, &c. The greateſt part of them, repeat only what they have heard from othet people, and utter what they have been told, without having made any reflections or reſearches of their own: thus a good cauſe is often very illy defended. On the other hand, thoſe who decry the ſame minerals, pretend to have made unſucceſsful trials of them, and think they have a right to diſpute on the ſtrength of their experiments, which are for the moſt part unſkilfully made. But if we would not overthrow all hiſtorical certainty, ſince proofs are to be found even at this day, the places from which the minerals have been taken, the minerals themſelves, and the deſcriptions which ſeveral people have given of them, in the courſe of ſo many ages, which agree perfectly well together, we ought at leaſt to ſuſpend our judgment in this reſpect. We are willing they ſhould compare paſt times to a dream, provided they will endeavour to ſhew that they themſelves are now thoroughly awake.

We ought likewiſe to ſay ſomething of the practical utility of theſe theoretical reſearches. According as minerology is divided, ſo the forges ought to be diſpoſed: we ought carefully to attend to this point, which is of great conſequence for a good theory and ſyſtem in the ſcience. At firſt, people were obliged to divide the forges according to the metals and ſemi-metals, and even according to the ſalt-pits; it is of no conſequence, though ſilver, copper, and lead, be worked in the ſame forge: this they are obliged to do in thoſe places where theſe metals are found together, but where each metal is alone, it is wrought by itſelf, and then there is a natural proceſs of the font for each.

Now, as the minerals of each metal are divided according to their different mineralizing principles, ſo the proceſſes of the font ought to be different, according to the mineralizing principle which is mixed in each. There is a particular kind of font for thoſe minerals which contain ſulphur, and this is what is called working rough or plumb. The arſenical minerals are of this number, but they muſt firſt paſs through the fire, and then they can no longer be properly reckoned among the arſenical minerals. But, a method of fuſion quite diſferent is required for metals, which are entirely arſenical, without any mixture of ſulphur: and a different method of fuſion muſt likewiſe be obſerved with antimonial minerals. Conſequently, a particular method muſt be uſed with minerals that are mineralized by the acid of kitchen ſalt.

We ſhall not expatiate upon this, for it is eaſy to conceive with what eye certain workmen of forges will regard us, if we undertake to introduce what they have never thought of. That, therefore, is not our intention. We ſhall content ourſelves with having ſhewn by example, how much theory might influence practice, and to have explained, in a few words, that by improving the ſcience of mines, the revenues of theſe works might be conſiderably augmented. Some may ſlight theſe ſuggeſtions to their loſs. While in working a mine, every thing remains upon the old footing, and people are ſatisfied with finding from time to time, ſome little new advantage; certain it is, the profit can never become very conſiderable: but, if we could diſcover new kinds of minerals, and invent proper methods for melting and ſeparating them, ſuch diſcoveries would become very important, and furniſh freſh matter for more uſeful ſpeculation. I will not preſume to ſay that we are capable of making ſuch diſcoveries, but think that it would be no difficult matter to attain to ſuch improvement, by a more careful cultivation of the ſcience of ores, minerals, and mining, than that which is at preſent practiſed.

It is with this view, that we endeavour to put the ſentiments of the moſt judicious in their proper light, in order to lay the foundation for ſuch improvement, in form of queſtions and problems: and with ſome reaſon for believing, that theſe principles may be found true by undoubted experience. We leave the ſolution of them to thoſe who are our ſuperiors in point of knowlege. After all, practice alone muſt decide the matter. It is ſhe who confirms all arguments, and rectifies all ſyſtems; and we know nothing poſitively, until it hath been ſanctioned by her. But we ought to acknowlege at the ſame time, that ſhe muſt be preceded by rational theories, which are the lights that conduct her reſearches into the ſecrets of nature. Without their aſſiſtance ſhe gropes along, blindly following a beaten track; and whatever progreſs ſhe makes, muſt be owing to chance, from which ſhe ought to claim no merit.

For what further relates to the whole buſineſs of ores and metals, ſee the following articles, viz. AQUA FORTIS, AQUA REGIA, ASSAY, BULLION, COPPER MINES, LEAD, TIN, IRON, MERCURY, SILVER, and GOLD; alſo FLUX, METALS, METALLURGY, MINES, MINING, MINERALS, MINEROLOGY, SMELTING.

ORIENTAL TRADE. Under the article LEVANT TRADE, we have ſhewn, from the principal authentic royal arrets, edicts, and ordonnances, iſſued by authority in France from time to time, from the year 1665 to the year 1749, what meaſures the French have taken for the regulation of the Levant trade of that kingdom; whereby it appears from FACTS, to what cauſes the preſent flouriſhing ſtate and condition of that commerce in France may be attributed, and by what ſteps this rival nation has ſupplanted the Engliſh in this branch of traffic. We have likewiſe under the ſame article, repreſented the genuine regulations of the Dutch, in relation to their Turkey trade. The policy of other nations being fairly laid before us, and compared with our own, we may be enabled to make a right judgment, whether the meaſures taken by our competitors, are preferable or otherwiſe to our own, and wherein our defects may be ſo ſupplied, as, at leaſt, to empower us to carry on this commerce in the Ottoman empire, upon a footing not leſs advantageous than that of other ſtates. And, without our taking theſe things into due conſideration, this kingdom can never be capable of regulating her commerce in any branch to the beſt advantage, or to an advantage equal to that of other countries. People may declaim and controvert to eternity, concerning the neceſſity of this or the other meaſure being requiſite to be taken by the legiſlature, but without having the polity of rival ſtates fairly laid before them, they will be ever liable to be miſled and deceived in matters of the laſt importance to the intereſt of trade. And yet it is to be feared, that as well in the ſolemn deliberation of the great council of the nation, as in our diſputes without doors, theſe matters are, in the general, too little enquired into, notwithſtanding they are the eſſentials whereby to ſteer and direct the public judgment.

As under the article of LEVANT TRADE, we had not room to ſtate our own caſe in regard to this branch of trade, we have referred to the articles ORIENTAL TRADE and TURKEY TRADE, that all facts and materials neceſſary may be exhibited before the public, whereon to bottom their judgment with reſpect to the means requiſite to be taken by this nation. Wherefore,

Here we ſhall give an hiſtorical view of the conduct and proceedings of our own Turkey company.

An HISTORICAL VIEW of the CONDUCT and PROCEEDINGS of the TURKEY COMPANY.

The company trading to the Levant Seas having ſubſiſted, as an excluſive ſociety, one hundred and forty-ſeven years, the moſt impartial and certain method of attaining to a clear-

and perfect knowlege of the advantages, either of continuing the excluſion, or opening the trade, is to take an hiſtorical view of their conduct and proceedings, from their firſt eſtabliſhment to the preſent time. For, though arguments may be controverted, and reaſonings oppoſed, yet plain facts are unanſwerable, and will ſpeak for themſelves: therefore, it was thought proper to lay before the world in this public manner, eſpecially before the honourable members of both houſes of parliament, the true ſtate of the caſe, as drawn from the books of the company themſelves, and from other authentic evidences, for the uſe of the committee of the honourable houſe of commons, in the year 1743-4. This committee was appointed the 16th of February, in conſequence of ſeveral petitions ſent up to parliament, from divers parts of the kingdom, complaining of the great decay of the Engliſh trade to Turkey, and the increaſe of the French on the ruin of ours; and aſcribing both theſe national evils to the monopolizing view of a few individuals, who checked and reſtrained the natural courſe of trade, by means of their excluſive powers.

The company likewiſe preſented a petition in their own behalf, ſetting forth the nature of their charter, their excluſive privileges, manner of trade, and the like: but as theſe things will occur in the courſe of the ſubſequent narration, it will be needleſs to inſert them here. The narration proceeds as follows:

This company now exiſts, by virtue of letters patent granted by king James Iſt, bearing date the 14th day of December, in the third year of his reign, 1606.

And of king Charles the IId, bearing date the 2d of April, in the thirteenth year of his reign, 1661.

King James, by his letters patent, did (among other things) grant to ſeveral perſons therein named, and to their ſons, and ſuch others as ſhould then after be admitted, or made free, that they ſhould be one fellowſhip, and one body corporate and politic, by the name of the Governor and Company of Merchants of England trading to the Levant Seas, and ſhould have perpetual ſucceſſion: and did direct, That all perſons, ſubjects of this realm, being then mere merchants, which then were, or after the date of the ſaid letters patent ſhould happen to be, under the age of 26 years, or not out of his or their apprenticeſhip, ſhould be admitted into the freedom of the ſaid company, if he or they ſhould demand the ſame, within one year next after he or they ſhould attain the age of 26 years, or within one year after the end of his or their apprenticeſhip; and ſhould pay to the ſaid governor and company, for his or their admittance, the ſum of 25l. And did further direct, That all perſons ſubjects of this realm of England, being mere merchants, above the age of 26 years, ſhould be admitted into the freedom of the ſaid company, upon paying a fine of 50l. And did alſo direct, That all and every the ſons of ſuch as were or ſhould be free of the ſaid company, and alſo all their apprentices employed in that trade, for the ſpace of three years or upwards, within the limits of the ſaid letters patent, ſhould, after the end of their apprenticeſhips, be admitted into the freedom of their ſaid company, on payment of the ſum of 20s. only. Company's books, viz. Letters patent, p. 1, 2, 3, 6, 7, 8, 9.

And, as the petition of the ſaid company ſets forth, ſeveral other privileges were granted by the ſaid letters patent, to the ſaid company.

Amongſt which, all perſons who traded to the ſaid Levant Seas, and were not free of the ſaid company, were obliged to pay to the ſaid company 20 per cent. upon the value of the goods, Page 22.

And they had power, at a general court, of making by-laws, for the good rule and government of the ſaid governor and company, &c. and a power of revoking the ſame, as occaſion ſhould require; which were to be performed and kept, under the pains and penalties therein mentioned, ſo as the ſame were not contrary or repugnant to the laws and ſtatutes of this realm, or derogatory to any treaties or leagues made, or to be made, with any other prince or potentate, nor tending to the hindrance of the trade or traffic of any of the ſaid company, behaving him or themſelves duly and orderly, as becometh good merchants of the ſaid company, without any fraudulent or diſordered attempts or practices. Page 16.

King Charles, by his letters patent, did ratify and confirm the ſaid letters patent of king James; and did further direct, That no perſon reſiding within 20 miles of the city of London, ſhould be admitted into the ſaid company, or have any benefit of the privileges thereof, unleſs he was made free of the ſaid city. Page 36.

Now, under pretence of making by-laws for the good rule and government of the members of this fellowſhip, the ſaid company (or rather the greater part of them) have frequently exerciſed a power of reſtraint upon their own members (tending to the hinderance of trade and traffic), by making orders to lay a broke [penalty] of 20 per cent. upon their goods, if they ſent them to Turkey at any other times, or in any other ſhips, than thoſe appointed by the company, which are called joint or general ſhips; ſo that if any merchant (though a member of the company) had never ſo large a quantity of cloth by him, and the want of cloth in Turkey was never ſo great, he could not ſend it, but at ſuch times, and in ſuch ſhips, as the ſaid company appointed, by reaſon 20 per cent. is equal to a prohibition.

Some remarkable inſtances of which, as well in early as late times, will appear, by copies of orders of general courts, which are hereafter ſtated, as alſo the method in which the trade has, from time to time, been carried on.

There was an order of general court, That no manufactures or commodities of this kingdom ſhould be ſent from hence, or from Leghorn or Meſſina, or any other parts of the Straights, to Conſtantinople, Smyrna, Scio, or Scandaroon, but in joint ſhips appointed by the company, under the penalty of a broke of 20 per cent. upon the value of all ſuch manufactures or commodities, to be levied where any ſuch goods were landed; but foreign commodities, as ſpices, pepper, &c. were excepted, and allowed to be carried in what ſhipping any man pleaſes. In 1625, 6 April (Company's books, page 127.)

It was ordered, according to an order of the laſt court, That no ſhip go from hence for any of the ports of Turkey, before the going of the joint ſhipping, which is appointed to be at Michaelmas next. In 1627, 2 Aug. (Page 172.)

☞ And for that there were then great quantities of cloth to be ſent thither, it was conceived fit, that a reſtraint for a certain time ſhould be made for all other ſhipping, that ſo the markets might not be overcharged with commodities, to the undue valuing thereof in the ſale: it was reſolved, upon the queſtion, by erection of hands, That no ſhip ſhould depart for any of the ports of Turkey, laden with Engliſh commodities (tin excepted), after the departure of the next general ſhipping, without the conſent of the company, at a general court, until Michaelmas come twelve months, under the penalty of a broke of 20 per cent.

And that no private ſhip do go from Leghorn to the Levant with money, &c. to engroſs the commodities, and to prevent the company's market, upon the aboveſaid penalties.

It was the opinion of the court (i. e. the court of aſſiſtants), That, both for the keeping up the price, and maintaining the cloth, and other Engliſh commodities, in good eſteem in Turkey, and ſo advance the ſales thereof there, and the returns at home, &c. the trade to Turkey ſhould be reſtrained to joint ſhipping; and it was ordered (if the next general court ſhould confirm the ſame) That no particular ſhip ſhould be freighted by any member of the company, and no Engliſh commodities laden (tin excepted) to any part in Turkey (Petras excepted), but upon joint ſhips, as the company ſhould at their general court appoint, under the broke of 20 per cent. In 1630, 2 March (page 231.)

This order was confirmed by a general court, 9 March, page 232.

☞ But ſee the effects of theſe reſtraints; for by a letter of the 13th of June 1631, from the conſul at Aleppo, it appears, that there was but a ſmall quantity of cloth in the factors hands at that place; and that it was probable, all would be ſold before any ſupply could get there

This letter being read in a general court, it became their conſideration, Whether they ſhould diſſolve the act of reſtraint, and to give liberty to ſend ſhips to all the parts of Turkey? But they only ordered one general ſhip for Aleppo, to depart from Gravefend before Chriſtmas-day. In 1631, 5 Octob. page 243.

The ſaid order was taken into conſideration, and a further order made to ſend a ſhip to Conſtantinople, to depart by the laſt of March; and it was ordered, that at Chriſtmas come twelve months, That a ſhip ſhall go to Conſtantinople, and another to Aleppo; and ſo conſtantly, from and after that time yearly, unleſs the company ſhould, upon weighty reaſons, think fit to order otherwiſe. 20 Octob. page 244.

The bad effects of theſe reſtraints ſtill continuing;

The court fell into diſcourſe, among other things, of the inconveniencies likely to enſue by the long forbearance of ſending ſhips and goods into the ſeveral parts of Turkey; whereby the French, and other ſtrangers, have the advantage, and take occaſion to ſupply thoſe places with commodities; which will redound to the great prejudice of this company and their trade, if ſome ſpeedy courſe be not thought of for preventing thereof: and hereupon it was moved, That there might be a yearly ſhipping reſolved on; or, in regard there is like to go very great quantities of goods upon the next ſhips, that another ſhipping might be appointed to go away at Michaelmas come twelve months, and yearly from that time, &c. but nothing was then determined, but left to the next general court. In 1633, 9 Jan. page 104.

The proceedings of the general court, among other things of the 9th inſtant, were read, approved, and confirmed. 14 Jan. page 105.

☞ This laſt proceeding of the general court is mentioned to ſhew, That even in theſe early times, when the French

French or other foreigners had little or no ſhare in this trade, the members of the company, who had the public good at heart as well as their own welfare, foreſaw the bad conſequences that would enſue from theſe reſtraints; and would have remedied the ſame, if the private gain of the reſt of their fellowſhip had not overballanced the general good of the trade.

However, from this time to the 10th of May 1649 (ſee the orders 12 Jan. 1635, 17 Febr. 1637, and 27 Octob. 1645) the trade was carried on by general annual ſhipping; and then it was reſolved, That the trade ſhould be open for every member of the company to lade when, and in what ſhips he pleaſed, under ſuch reſtrictions as the company ſhould ſee fitting. 1635, 12 Jan. page 209. 1637, 17 Feb. page 296. 1645, 27 Oct. page 192, 1649, 10 May, page 31.

From this time to the 6th of Auguſt, 1655, it was carried on by general annual ſhips (ſee the orders of the 25th of Auguſt, 7th of December, and 25th of January, 1654) when general ſhips, to depart at ſuch times as the company ſhould appoint, were reſolved on. 1654, 25 Aug. page 216. 7 Dec. page 232. 25th January, page 235. 1655, 6 Aug. page 256.

But this reſtraint was thought too great; and there being two private ſhips laden for Smyrna, it was reſolved, on the 3d of September, 1656, That liberty be given to any of the company to ſhip when he pleaſed. 1656, 3 Sept. page 289.

From this time to the 30th of November, 1660, the trade was carried on by private ſhips; and then it was confined to general ſhips under the uſual penalty of 20 per cent. on all goods, and ſo continued 'till the 4th of October, 1664, when it was reſolved, That the company would adhere to their former order for annual ſhipping. 1660, 30 Nov. page 7. 1663, 11 Sept. page 156. 1664, 4 Oct. page 229.

From this time to 1683, the trade was carried on by annual and general ſhips: and, from 1683 to 1713, ſometimes by private ſhips, and ſometimes by general ſhips.

From the 5th of June, 1713, in the 12th of queen Anne, ſince the concluſion of the then war, to the latter end of the year 1717, the trade was carried on by what is uſually called an open trade; that is, by ſuch ſhips as the reſpective members did appoint to carry away their cloth, and the cloth or ſuch other members as might be pleaſed to load upon them, to depart at ſuch ſeaſons of the year as was found to be moſt convenient, which was uſually in autumn, or by Chriſtmas; and the cloth ſhip, in 1717, departed about that time.

And many members of the company, expecting the trade would continue to be carried on in the ſame manner, went on in buying and finiſhing of cloth, as uſual, for the year 1718:

But, on the 26th of March, 1718, it being under the conſideration of the general court, whether the trade ſhould be carried on by general ſhipping, it was reſolved in the affirmative, and the further conſideration thereof adjourned to another general court to be held on that day month, being the 23d of April next. 1718, 26 March, page 213.

N. B. General ſhips, you will pleaſe to obſerve, by the aforeſaid orders, are always choſen by the company as a body collective, and do depart at ſuch ſeaſons as they think proper to appoint.

The ſaid reſolution was conſidered and confirmed; and it was alſo reſolved, That the ſaid order ſhould not be revoked withot the previous notice of a month given to the members of the company. 1718, 23 April, page 215, and 216.

☞ Then it is recited, 'Whereas the trade from hence 'to Turkey hath been carried on, for ſome years paſt. 'to a very great extent, in cloth and other woollen 'manufactures, and in money, in far greater quantity 'and value than that country hath uſually taken off, 'whereby the markets there are over-ſtocked, and our 'commodities depreciated, and the price of raw ſilk, 'and other returns, very much advanced there, and 'fallen here, to the great detriment of this trade in 'general, and of this company in particular; and to 'the end that a proper time may be given to our factors, 'to diſpoſe of our eſtates in Turkey to advantage, and 'for reducing the prices of goods uſually ſent for returns, it was reſolved, That, if any member of the 'company ſhould import into Turkey from hence, or 'from any part in Chriſtendom, any cloth, or any gold 'or ſilver, in coin or bullion, by other than general 'ſhips, to be appointed by the company, ſhall be liable 'to a broke of 20 per cent. upon the full value thereof, 'to be levied into Turkey.'

Uppn this Sir John Eyles informed the court, 'That he had 'bought up 500 cloths, and deſired that, notwithſtanding 'the reſolutions now agreed on, the company will pleaſe to 'give him leave to ſend the ſame to Turkey: and a motion 'was thereupon made, that the queſtion be put, Whether 'leave be given to ſuch members of this company as have 'provided cloth for Turkey, upon their affirming, upon the 'oath they have taken to the company, That they had 'bought the ſame before they had any intimation of the ſaid 'reſolution? And, a debate ariſing thereupon, the previous 'queſtion was put, Whether the queſtion be now put? and 'it paſſed in the negative: and it was reſolved, That the 'company would, on the 23d of October next, and not before, conſider at what time it may be moſt proper to take 'ſhips into the company's ſervice.'

This order was confirmed. 1718, 30 April, page 217.

The 23d of October elapſes; and, on the 6th of November, 1718, the court was called to conſider what time would be moſt proper to take ſhips into the company's ſervice; and it was reſolved to defer it until ſome time longer. 1718, 6 Nov. page 232.

Then a motion was made to affix the time to which this conſideration ſhould be deferred; and one week, one month, two months, and three months being propoſed, the queſtion was put for each time mentioned; and it was reſolved to be deferred for two months longer.

☞ Upon this further delay, a repreſentation was made to the then miniſtry, who were ſo ſenſible of this extraordinary proceeding, and the prejudice it muſt be to the common good, that Mr Secretary Craggs ſent for the company, and informed them, That he had received ſuch a complaint, and recommended it to the company to come to ſuch reſolutions as would prevent the conſequences which might attend the ſaid complaint, ſhould it come before his Majeſty and his council, or before the parliament.

This matter came under the conſideration of a general court, held on the 4th of December, and they reſolved, That, on the 8th, they would proceed on the election of general ſhips for Turkey. 1718. 4 Dec. page 237.

And, at the ſame time, a committee was appointed to wait on Mr Secretary Craggs, to return him thanks for the reſpect he had ſhewn the company.

Inſtead of appointing ſhips, it was reſolved only to receive propoſals for ſhips; and a committee was appointed to view them, and make a report on Thurſday the 22d. 1718, 8 Jan. page 247.

It was reſolved, That the company would adhere to their order for their driving the trade by general ſhips. 1718, 22 Jan.

Then it was propoſed, That a ſufficient number of ſhips be taken up to carry the cloth, that was then ready, to all parts of Turkey, by the firſt opportunity of convoy to the Mediterranean; and it paſſed in the negative: and it was reſolved That the company would very ſuddenly chuſe general ſhips to all parts of Turkey, to be ready to depart by the 1ſt of July next.

N. B. The 1ſt of July was then generally underſtood to mean winter, as the ſhips uſually had departed at that time, which would have compleated two years prohibition.

This being the caſe, ſeveral members of the company, who had provided large quantities of woollen cloth, and other goods, for Turkey, applied to the houſe of commons; and, on the 24th of January, 1718, a committee was appointed to conſider of the ſtate of the woollen manufacture of this kingdom, and particularly in relation to the exportation of woollen cloth.

This committee ſat, in purſuance of their appointment; and, on the 3d of February, the complainants attended, and delivered to the committee a repreſentation, ſetting forth the then ſtate of that trade, and the inconveniences ariſing from the delay of ſhipping; which is ſigned by P. Delmé, John Lock, Ro. Radcliffe, Edward Radcliffe, James Lock, John Hanger, and Joſeph Eyles, who were ſome of the moſt conſiderable merchants in the Turkey trade at that time; which paper has been in the cuſtody of Mr Kenn ever ſince, who attended the ſaid committee as clerk; no report being made, the complainants being made eaſy by the governing part of the company, at the interceſſion of Mr Secretary Craggs.

This application occaſioned a general court to be held, on the 6th of February; and then it was reſolved, That the trade ſhould be carried on by a general annual ſhipping. 1718, 6 Feb. page 254.

And a general court was held; and, at the deſire of the complainants, two general ſhips were choſen, and appointed for Smyrna and Conſtantinople, to depart from Graveſend the 15th of March, 1715; which makes the prohibition two years and a quarter. 1718, 12 Feb.

The laſt order is recited; and alſo that it was intended, that other general ſhips be in like manner choſen and appointed for Scanderoon, and for Smyrna and Conſtantinople, if deſired by any member of the company to depart the 1ſt of July. 1718, 24 Feb. page 271.

And it was reſolved, That from and after the departure of the aforeſaid general ſhips, no other general ſhips ſhould be appointed until Midſummer, 1720.

It

It is recited, That the trade was carried on to greater advantage by general than by private ſhips, if annually appointed: to the end, therefore, that the ſaid trade may again revive,
It is reſolved, That, for the future, general ſhips ſhall be annually choſen, and the time of their departure to be about Michaelmas:
And that, if the company ſhall not appoint ſuch ſhips, it ſhall be lawful for any member of the company to ſend cloth, or other woollen manufactures, by any ſhip, to depart from Graveſend on or before the laſt day of October; provided ſuch ſhips be not leſs than 200 tons, Britiſh-built, &c.
The ſame orders continued: 1722, 8 June.
And the trade was carried on by annual general ſhips, 'till the 2d of June, 1731, when the choice of general ſhips was ſuſpended for twelve months longer. 1731, 2 June, page 226.
From that time, to the 14th of May, 1734, it was carried on by annual general ſhips; but, on the 25th of October, 1733, it was ordered, that the ſhip ſent out this year to Scanderoon ☞ ſhould not be allowed to bring home any ſilk, or mohair yarn. 1733, 25 Oct. page 219.
And on the ſaid 14th of May, 1734, it was reſolved, That the trade ſhould be carried on by general ſhips. 1734, 14 May, page 7.
And the order of the 21ſt of October, 1724, for the general court to chuſe ſhips, was repealed; as alſo the article for the time of the ſhips departure:
And the 10th article for allowing private ſhips, when no annual general ſhips were appointed:
And it was reſolved, That the company will, at a proper time, agree when they will take up ſhips for the ſervice of the year.
From this time to 1735, the trade has been carried on by general ſhips:
And, from the 17th of June, 1735, to 1743, by general annual ſhips; with a proviſo, that, if the ſeveral ſhips were not provided to depart at the ſtated times, it ſhould be lawful to ſend cloths, or woollen manufactures, by any other ſhips, provided ſuch ſhips be not leſs than 200 tons, Britiſh-built, and to carry 15 men for every 100 tons they are in burden. 1735, 17 June, page 48.

N. B. Theſe are called act ſhips (vide the 14th of king Charles II.)

So that the trade to Turkey, from 1718 to 1743, has been reſtrained to annual general ſhips, to be appointed at ſtated times; or general ſhips, to be appointed when the company ſhould think fit; notwithſtanding the ſtrong reaſons given againſt carrying on the trade under ſuch reſtraints, in the repreſentations delivered to the committee of the houſe of commons in 1718; which repreſentation is as follows:
The complainants do admit, That the company have, time out of mind, carried on their trade to Turkey ſometimes by private ſhips, ſometimes by general ſhips: they deſire only to remind the honourable committee, that, by the whole tenor of thoſe old records by the company produced, it does appear, that they themſelves have frequently thought the delay of ſhipping of ſo dangerous a conſequence, that, if they departed not annually, liberty was then given to each and every member, to export his own goods in ſuch manner, and by ſuch ways, as he ſhould think proper:
And the complainants think it unneceſſary to enter into the conſideration what trade was, or how driven, 50 or 100 years ago, in it's infancy; or whether the Dutch or the French had any or no trade in thoſe days:
They deſire to come to the preſent times; and to conſider in what methods of trade the company have been, ſince the concluſion of the laſt war, and the alterations they have lately made: and it appears to have been carried on by what is uſually called an open trade, that is, by ſuch ſhips as the reſpective members did appoint to carry away their reſpective cloth, and the cloth of ſuch other members as might pleaſe to load upon them, to depart at ſuch ſeaſons of the year as were found to be moſt convenient, which was uſually in autumn, or by Chriſtmas.
Accordingly, the laſt cloth ſhips did depart about that ſeaſon of the year, anno 1717; and many members of the company expecting the trade would continue to be carried on in the ſame manner, went on in buying and finiſhing cloth, as uſual, for the year 1718:
But, on the 26th of March, 1718, the company in a court reſolved (as they themſelves have related it) that their members, for the future, ſhould trade only by general ſhips; which was underſtood to be, by ſhips choſen by themſelves, as a body collective, and to depart at ſuch ſeaſon as they ſhould think proper to appoint:
And, on the 23d of April, 1718, they reſolved, That if any members ſhould, in any other manner, ſend cloth to Turkey they would levy 20 per cent. on ſuch members cloth in Turkey; and added, that they would conſider of general ſhips on the 23d of October following, and not before:
And in their own preamble (as it was here read) they give this remarkable reaſon for their alteration, That it was in order to raiſe the value of Engliſh manufactures abroad, and ſilk at home; hereby evidently demonſtrating their private advantage, that of the nation, doubtleſs, lying more in a large conſume than in a large price, as the one may beat our neighbours out of the trade, whilſt the other muſt neceſſarily give them a ſhare in it. Now, although many members thought all this a great hardſhip, yet did they acquieſce, in full expectation that, at that time, they ſhould be permitted to export their cloth (at leaſt) in the company's own way:
But, on the 6th of November. they reſolved to adjourn the further conſideration of ſhipping for two months longer; and this made that evident, which was before ſuſpected, that they really intended no ſhipping at all:
Whereupon, a repreſentation of this grievance was made to the miniſtry, who became ſo ſenſible of this their extraordinary way of proceeding, and it's ſo highly interfering with the common good, that Mr Secretary Craggs ſent for the company (as they themſelves have obſerved) and deſired them to reconſider this matter:
Which the company did, in a general court on purpoſe aſſembled, on the 4th of December; when they reſolved, that they would chuſe ſhips for the immediate exportation of cloth, on the 8th of January following, and appointed a committee to attend Mr Secretary with this their reſolution:
But, when the 8th of January came, they, by a majority of one vote only, inſtead of chuſing ſhips, ordered a ſurvey of ſhips, and a report to be made on the 22d of January.
When the report was made, on the 22d of January, they then reſolved, That they would, in proper time, chuſe ſhips, but not to depart before the firſt of July next: now that 1ſt of July was then generally underſtood (before this application) to mean winter; and, in that caſe, it would have compleated two years prohibition of trade.
Now this irregular and uncertain proceeding of the company, was the cauſe that your complainants, thought the interpoſition of the honourable houſe of commons, in this caſe moſt proper, in order to their relief, in the exportation of that great quantity of cloth which has been ſo long prevented, to their own, and, as they conceive, to the nation's prejudice:
And they humbly offer the following reaſons for it:
That the company's charter does not warrant them in ſuch a prohibition, or reſtraint of trade; the clauſes particularly relating thereto are ſubmitted to the judgment of this committee, and will be ſpoken to by ſome of them.
Nor will Weſtminſter-Hall (it is conceived) warrant their levying 20 in the 100 upon their members eſtates; ☞ and therefore they always exerciſe this power in Turkey:
Nor can ſuch reſtraint be for the common good of the woollen manufacture of this kingdom, but evidently the contrary, as it neceſſarily encourages the French and Dutch trade to Turkey; and it is ſo adviſed at this very time, and letters are ready to be produced in proof of it:
Nevertheleſs it is granted, that there may be other letters, approving of this reſtraint, and adviſing that there was cloth remaining unſold, and particularly at Aleppo; but there is very good reaſon to believe that it may, by this time, be all ſold; and had moſt of it been long ſince ſold, had there not been an underſtanding between the managers here and there, in order, as the company's preamble ſets forth, to raiſe the price of cloth abroad, and the price of ſilk at home.

☞ This reſtraint may be alſo a great cauſe why ſo much wool, at this time, is ſent to France; becauſe they have a vent to Turkey, and we have none.

And the hindering the exportation of woollen goods to Turkey at this critical conjuncture, when none can go either to Old or New Spain, may deſerve conſideration.
And the complainants do hope, that it will be found by this committee, that ſuch members of the company as are willing to trade, ought to trade, and have a right to trade, even by the charter itſelf.
It has been objected, That the trade has been over-driven; and be it ſo: will not that, in the nature of the thing, reduce the exportation as far as may be needful, without a forcible reſtraint? And doth it not appear very odd, that a majority of the company, ſome of whom are unconcerned in the trade, and others but little, ſhould have more regard to the welfare of their largeſt trading members than they have for themſelves?
Our legiſlature never thought the over-driving the trade to Portugal, Spain, or Italy, a ſufficient reaſon to intruſt thoſe traders with a power of reſtraining it at their pleaſure.
It muſt be allowed, that the preſent ſituation of affairs has made great alterations in almoſt every thing.
Low intereſt raiſes land, enlarges trade, and reduces profit: but this is the evil; and, therefore, the remedy propoſed by theſe reſtraints ſteps in, viz. that cloth may be bought the cheaper at home, and ſell the dearer abroad:
That ſilk may be bought the cheaper abroad, and ſell the dearer at home.
But, all this while, the French and Dutch are encouraged to ſupply the woollen trade abroad; and to ſupply (in a larger degree) the ſilk manufactures at home:
And our own manufacturers, in the mean time, both in wool

and ſilk, ſo far deprived of their employments.—But ſhould the merchant loſe, yet the nation muſt gain.

It has been further objected, That, by a delay, more cloth will be exported; and ſo, probably, there may, ſhould the ſhips be yet detained twelve months longer.—But then the company ſhould take care to prohibit the French and Dutch, and the Turks too, who, at this very time, are carrying on a cloth manufacture of their own:

But there can be no doubt but the ſpeedy ſending abroad what is now provided, will be a greater encouragement to the buying more cloth than the detaining it can be; in that moſt of this muſt be ſold before another ſupply can follow it.

But were it otherwiſe, it is preſumed that thoſe who induſtriouſly have laid out their eſtates in cloth, ought not to be detained for the ſake of thoſe who have neglected it; and it is believed, it may be granted, that the complainants are as likely to buy more cloth as any other members whatever.

Although the company have frequently practiſed this way of trading by general ſhips, yet it has occaſioned frequent miſunderſtandings between the members themſelves, and alſo the manufacturers. Two inſtances hereof may be offered, one, upon a like occaſion with this: ſome members made application to king Charles in council; the company were heard, and pretended many difficulties: the king himſelf aſked the queſtion, Whether there might be any members that, notwithſtanding, were willing to trade? It was anſwered, There might: Then, ſaid the king, they ſhall; and ordered trade to be opened.

The other was a complaint of the manufacturers to the houſe of commons, upon a delay of ſhipping; when an annual ſhipping for Turkey, in ſummer for Aleppo, in winter for Smyrna and Conſtantinople, had probably been enacted, had not the company, by large promiſes of doing the thing, prevented it.

Now whether this pretended power to ſtop trade be warrantable, or whether it has been exerciſed for the common good, is humbly ſubmitted to this honourable committee.

P. DELME,
JOHN LOCK,
RO. RADCLIFFE,
EDWARD RADCLIFFE,
JAMES LOCK,
JOHN HANGER,
JOSEPH EYLES.

The CASE of the GOVERNOR and COMPANY of MERCHANTS of ENGLAND trading to the LEVANT SEAS, as laid before the PARLIAMENT by the TURKEY COMPANY, in the year 1743, in order to prevent the trade being laid abſolutely open, as was then aimed at.

If the Levant company ſaw reaſon to hope the bill, as now framed, which is depending, could anſwer the ends propoſed, of inlarging as well as regulating the Trade to Turkey, they ſhould think themſelves guilty of breaking the truſt repoſed in them, if they did not uſe their beſt endeavours to further it's being paſſed into a law: but they owe to the public the ſetting their charter in a true light, and the bearing teſtimony againſt attempts, how ſpecious ſoever, which threaten the nation with the loſs of the remains of this valuable trade.

The charter cannot be ſaid to eſtabliſh a monopoly, or excluſive trade: the company is already open to all manner of perſons not below the degree of mere merchants: it is expreſsly declared, That the trade ſhall not be confined to one port; and it is certain that none of the petitioners for the bill ever applied for their freedom of the company and were refuſed: all merchants, of what place or port ſoever, have a right to be admitted to their freedom, every perſon above 26 years of age paying a fine (for the uſe of the company) of 50 l. and every one under that age, 25 l. all ſons and apprentices of freemen are admitted upon paying 20 s. only.

There is, indeed, a condition required by a ſecond charter of king Charles II, of thoſe merchants dwelling in London, or within 20 miles of it, that they ſhall be free of the city: but this extends to them only, and does not, nor can be pretended, to affect perſons dwelling at a greater diſtance.

The fine taken upon admiſſion, with regard to the company, is not worth mentioning, further than obſerving, that the ſum cannot be deemed onerous to any one in a condition of engaging in a trade, which from it's diſtance, and other circumſtances, is of a very tedious circulation, and requires a large ſtock: it is ſmall with regard to the ſhare it admits to of the fruits of paſt very great expences, and is rather an advance made to the company than a fine; for, as it goes to the public ſtock, he who pays this fine, or advance, has his ſhare of it, by a proportionable leſs duty levied on his trade, and alſo of all other fines levied after his admiſſion.

The limitation to mere merchants is expreſſed, by the charter, to be for preventing the diſorders and inconveniences which had then been found by experience, and muſt ariſe from the too great reſort of low mean people, to places where the cuſtoms and laws are ſo intirely different from their own; where they muſt themſelves be expoſed to a variety of hazards and dangers, and by any fraudulent attempts, or even by their irregularities and follies, may offend the Grand Signior, and involve themſelves and others in troubles and dangers. When irregularities happen, if they are carried before a magiſtrate, expence muſt be the inevitable conſequence; and, no doubt, theſe irregularities would multiply upon a greater reſort of low people: and particular inſtances have fallen out, with regard to every nation eſtabliſhed in the Levant, where the lives and eſtates of the ſubjects of each nation, then reſident in Turkey, have been in danger, from the abſurdity or villainy of one man.

The quarrel between Sir Kenelm Digby and the Venetian admiral, in the bay of Scanderoon, coſt the Turkey company above 20,000 l. A diſpute with Sir Sackville Crew coſt above 80,000 l. A pretence that a quantity of pieces of eight were not of the true alloy, coſt 7 or 8000 l. A detention of the capitulations by a vizir, and other little diſputes about the ſame time, coſt as much: the roguery of a captain, who had taken a freight at Alexandria, coſt the Engliſh at Cairo a great deal of money, and had like to have occaſioned the murder of them all: and the indiſcretion of a young man, under Dutch protection at Aleppo, within theſe few years, cauſed an inſurrection in that city, which threatened the lives and eſtates of all the foreigners there: and, laſtly, the company have been obliged to pay the Turks, as an indemnification for captures made on them by Britiſh privateers, during the laſt war, no leſs a ſum than 12,000 l. Theſe are a very few of the many inſtances that are to be met with.

The trade to Turkey is carried on under the protection of the capitulations, or treaty of friendſhip and commerce between his Majeſty and the Sultan; which was procured, and has been ſince upheld and renewed, at great expences to the company.—By this treaty, the Britiſh ſubjects are put upon a much better foot, in point of trade, than even any of the Sultan's own ſubjects, by paying leſs cuſtoms, as well as in other reſpects.—Theſe exemptions muſt, no doubt, give uneaſineſs to the farmers of the cuſtoms, and the Sultan's ſubjects that are traders; ſo that it requires a very even and ſteady conduct to avoid giving occaſions of offence, which ſeldom eſcape animadverſion; and often ſlight ones are taken, or feigned ones urged, to extort money; and the greateſt care is taken by the company to ſupport the credit of this nation through the Grand Signior's dominions, by the moſt exact punctuality in all their dealings with the people of the country; and, more particularly, they have always guarded, in the moſt effectual manner, againſt all attempts to run cuſtoms, or to cover ſubjects or other ſtrangers goods: but if room is left for every one to become adventurers in this trade, to carry it on as they themſelves ſhall pleaſe, bad and perverſe people, free of all reſtraint, will break in upon all order, endanger the quiet and ſecurity of every body, and every thing, and endanger the total loſs of this ſtill valuable branch of the Britiſh commerce.

As the company ſtands at preſent, it cannot be properly called any thing more than a body eſtabliſhed for the well and orderly management of the trade into the Levant, and providing for the ſupport of the neceſſary expences attending it; which are, the maintenance of the king's ambaſſador at the Porte, the conſuls, and other neceſſary officers and ſervants, at the places of trade, and the obtaining and ſupporting the capitulations granted by the Porte at different times to the king's ſubjects; [ſee LEVANT TRADE] and the company have, at great expence, obtained very valuable privileges for the king's ſubjects from the Ottoman emperors, and hitherto ſupported them through many ſtruggles.—They have eſtabliſhed proper ſettlements for the management of their affairs; they have, for many years, carried on a conſiderable trade, greatly advantageous to the nation, in exporting it's manufactures and produce, and importing unmanufactured goods, though often under difficulties and diſcouragements to themſelves; and have at this time great dependencies abroad.

If it be true, as the petitioners for the bill ſet forth, that the trade of this company is decayed, it is an unwarrantable concluſion that the management under the preſent charter is the cauſe of it: but ſtill the Turkey company is ready to own, and deſirous it ſhould be known, that their trade is leſſened, and under difficulties, and the French trade increaſed; and they have made heretofore proper repreſentations of it, but the remedy is far out of the reach of any thing attempted by this bill, as the laying the trade between England and Turkey more open will not be the means to increaſe it, but probably quite the reverſe; which may be fairly inferred from the caſe of our neighbours the Dutch, where the trade to Turkey is open and free, and yet very inconſiderable, ſcarce any at all: and that the French trade does not owe it's increaſe to it's being more open or more free than the Engliſh, is plain from it's being under much more ſtrict regulations: [ſee LEVANT TRADE] a chamber of commerce has the ſuperintendency of this branch of commerce in France.—The cloth is exported only from one port there, viz. Marſeilles: no Frenchman goes to Turkey but with a licence; nor is permitted by the French government to ſettle in Turkey, without firſt giving ſecurity in France for his good behaviour in the Grand Signior's dominions: The number of houſes for the ſale of their cloth in Turkey is limited; the prices of their cloths are fixed in France, from

which they cannot depart ; and they are not at liberty to underſel one another in Turkey ; and when one houſe has ſold it's quantity allotted, that houſe can ſell no more 'till the other houſes have ſold theirs : ſo ſtrict are their regulations.

The French cloth-trade has gained ground by the encouragement and aſſiſtance it receives from the public : that manufacture was eſtabliſhed in Languedoc, by Mr Colbert, on purpoſe for the Turkey trade ; and at ſo vaſt an expence, that he expoſed himſelf to great cenſure by that meaſure, though the event has ſhewn the wiſdom of his views. Theſe cloths are chiefly made of Spaniſh wool : there is a premium allowed by the public on every piece of this cloth ; and, beſides, there are ſeveral eſtabliſhments (which are called royal manufactures) made at the expence of the public, or the province where there are conveniences for making a piece of cloth from the wool, to it's being packed to put aboard the ſhip ; and a clothier is put into one of thoſe rent-free, on the ſole condition of making a certain number of pieces of this cloth in a year. This is the moſt viſible reaſon why they can ſell cloth, made of thoſe fine materials, at a lower rate than we can ſell our cloth ; and however the French cloth may want the ſubſtance of ours, it has a preferable appearance, takes a beautiful colour, and is lighter than ours, and ſerves ſeveral of their purpoſes ; and though many repeated attempts have been made to imitate it in England, they have proved ineffectual. See the article MANUFACTURERS.

The next principal article of the Turkey trade, and the great branch of returns from thence, is ſilk : one half of that commodity uſed to come from Perſia through Turkey ; but the continual wars that have raged in Perſia, for many years paſt, have cut off all ſupplies of ſilk from thence ; and if things ſhould return to their former quiet ſtate in Perſia, and the ſilk provinces to the flouriſhing condition they were once in, it is uncertain whether this branch of trade would return to the Levant company, ſince it has been thought expedient to open another channel for it ; and the returns of ſilk from the Levant are, at this time, confined to the raw ſilk of the produce of Turkey, of which the company buy almoſt the whole that comes to market in Turkey for exportation ; and that the company purchaſe with Engliſh cloth, and other products, bartered in exchange : and if they were to ſend money (which they many years ago made a by-law to prohibit, out of a regard to the public good) they would not get more ſilk, would ſell little or no cloth, and the French would get that money in exchange for their cloth.

As to mohair-yarn, which is another conſiderable article of return, the company buy conſtantly as much as hath always been a full ſupply for this market ; and there is a conſiderable decreaſe (ariſing from the alteration of faſhions) in the conſumption of that commodity at home : and, to ſhew the company's readineſs of embracing every opportunity that offers of increaſing their trade, they have, in the article of cottons, which they found a demand for in England, and a ſupply in Turkey, increaſed their imports of that commodity from 400 bales to 5,000, within theſe few years ; which may ſerve to compenſate for ſome of the articles their trade is decreaſed in.

The latitude given by the bill, in exporting and importing, renders impracticable the reſtraints that may be neceſſary to obviate dangers of infection ; and the liberty given to import goods to all manner of perſons in the Levant, is putting all ſorts of ſtrangers upon the ſame foot as natural-born ſubjects ; and is, at leaſt, giving away the advantage of commiſſion : it alſo may raiſe dangerous diſputes about capitulations, and endanger the loſs of them.—Nay, by this latitude, the French factors may find means to ſend hither goods bought abroad with their manufactures.

But if the wiſdom of the legiſlature ſhall think fit to attempt the enlarging or retrieving the Levant trade, ſome more probable methods may be found out, and not liable to the ſame objections with thoſe in this bill ; ſuch as a proper encouragement, in whatever ſhape may be thought fit, for making ſuch ſorts of cloth as the French ſend ; or the aſſiſting the company in the burden of their expences, which run high upon the trade, as the ſame, or a greater ſum, is to be raiſed upon the remains of it, than when it was in it's moſt flouriſhing condition : but as to the means propoſed by the bill, ſome of them could not have any effect at all, and others may have very fatal conſequences. All which is humbly ſubmitted to the conſideration of the legiſlature.

An abſtract of what has been argumentatively urged, in oppoſition to the Turkey company, in order to lay that branch of trade quite open to all his majeſty's ſubjects, by a very ingenious gentleman *.

* Reflections on the Expediency of opening the Trade to Turkey, &c. Printed for T. Trye, near Gray's-Inn Gate, in Holborn, London, 1753.

I. All the powers in Europe are endeavouring to extend their commerce ; and if Great-Britain cannot extend her's in proportion, ſhe will be no longer able to preſerve that figure ſhe has hitherto preſerved †.

† This is a true maxim, but that laying the Turkey trade abſolutely open, is a meaſure conducive to that end, has been denied by many, and particularly by another very judicious gentleman, Mr. Hanway, in his travels, and his anſwer to the appendix of a pamphlet, entitled Reflections upon Naturalizations, Corporations, and Companies, &c. as this ſubject is occaſionally mentioned in Hanway's travels.—By the author of theſe travels. Printed for Dodſley and Millar.

II. Many of theſe countries, Spain in particular, which uſed to admit great quantities of Engliſh merchandize, are now ſetting up manufactures of their own, and laying burdens on ours, to prevent their introduction : ſo that it is become more expedient than ever, to ſeek out as many new markets as we can *.

* That this is matter of fact, is ſhewn throughout divers parts of our dictionary. See the articles BISCAY, CASTILLE, CATALONIA, INDIA-HOUSE OF SPAIN, SPAIN, SPANISH-AMERICA.

The Turkey company are not able, were they willing, to ſell the Engliſh manufactures ſo cheap as they might be rendered by a free trade : For,

(1). If no ſhips are allowed to be employed, but the general ſhips of the company appointed by the managers, a private member has no choice, but muſt ſubmit to all the expences and diſcouragements which the managers will lay upon him.

(2). The carriage of the goods up to London, the gains of factors, warehouſe-keepers, &c. are taxes heavy enough on the manufacture, to turn the ballance in favour of the French.

(3). The expence of package, porterage, hallage, loading and unloading, &c. are more exorbitant in London, than in any part of the kingdom.

(4). The dearneſs of victualling and manning of ſhips in the port of London, is another material article ; whereas many ports are not only cheaper, but more commodiouſly ſituated, as being nearer the places where the goods are manufactured.

IV. The gains of an excluſive company can never coincide with the welfare of the public ; inaſmuch as monopoliſts, eſtabliſhed by law, are thereby ſecured from rivals; ſo that their particular intereſt conſiſts in ſelling as dear as they can : whereas the intereſt of private adventurers is to ſell as cheap as poſſible, in order to get cuſtom by rivaling each other. Thus the public is benefited by emulation, as it promotes the circulation of labour and univerſal plenty ; but is hurt by monopoliſts, who are a check to induſtry, to the circulation of labour at home, and it's exportation abroad; and whoſe only view is to ſacrifice the general intereſt to that of a few.

V. The Turkey company is a monopoly in every ſenſe, as no private member is allowed to fit out a ſhip when he pleaſes, to export and import what quantities of goods he would chuſe.—As the trade is confined to the expenſive part of London.—As the freedom of the company is limited to merchants by profeſſion, and has been obſtructed under frivolous pretence.—As the members themſelves are fettered with by-laws.

VI. This excluſive ſociety not only exports a much leſs quantity of Engliſh labour than would be, were the Engliſh trade free, but alſo imports the leſs of raw materials, ſo neceſſary for ſeveral manufactures, and the employment of the poor.—That important article, raw ſilk in particular, which ſhould always be brought to market at the loweſt price poſſible, has by monopolies, been raiſed ſo high, as greatly to injure the ſilk manufacture. And this ariſes from two cauſes :

(1). The Turks will deal with thoſe that ſupply them with goods on the cheapeſt terms ; conſequently not with the Engliſh ; and ſell to thoſe, who give the higheſt price, [i. e. the greateſt quantity of labour in exchange] which an excluſive ſociety will not do : therefore our Engliſh company neither will, nor can make great returns in Turkiſh goods.

(2). After the goods are brought to England, the company keep up the price of their ſales as high as poſſible, in order to get immenſe profits on ſmall imports. And this they do with ſafety, becauſe there are none to rival them.

VII. Our woollen manufacturers are ready to make it appear, from the ſpecimens they have ſeen of the cloth of Languedoc deſigned for the Levant, that they are able to out-rival the French, provided this commerce has a free courſe, and every adventurer is permitted to ſhip off from what port he pleaſes.

VIII. Were ſuch liberty obtained, they have reaſon to conclude, that they could render their goods ſtill cheaper.

(1). Becauſe thoſe drugs for dyeing, which now paſs through the hands of a company, would be ſold at a more reaſonable rate.

(2). Becauſe the oils and aſhes for making Caſtille ſoap could be purchaſed on ſuch advantageous terms, as would induce the Engliſh to ſet up that branch of manufacture : which ſoap is made at preſent chiefly at Marſeilles, thence ſent to Leghorn, and from Leghorn imported into England ; by which means the Engliſh manufacturer is burdened with an heavy

heavy additional expence.—Nor is this the only evil; for our colonies in America are now wholly fupplied with French foap from Martinico, and the other iflands belonging to that crown, and even from France itfelf (the prefent Engliſh ſoap made of tallow not being fit for their climates): by which means ſeveral other ſpecies of French manufactures are introduced into our ſugar iſlands and northern colonies, to the great detriment of the commerce, revenue, and navigation of Great-Britain: But,

(3.) Another reaſon why the woollen cloths, deſigned for the Levant, might be vended cheaper, is, becauſe a conſiderable ſaving is to be made in the expence of dyeing. For were this trade to have a free courſe, the manufacturer might dye his own cloth at ſuch a ſeaſon as would not interfere with his other buſineſs, and contrive every thing to the beſt advantage: whereas, at preſent, the cloth is ſent up white to London, and dyed there in haſte, and at an exorbitant charge, both as living and wages are dearer, and as thoſe journeymen, who have not conſtant buſineſs, muſt have the higher wages while they are employed.

IX. All other parts of a cargo for the Turkiſh dominions, as well as woollens, might be rendered much cheaper, as the expence of carriage, ſhipping, &c. would be conſiderably leſs.—Moreover, there is the ſtrongeſt probability, that great demands would ariſe from the manufactures of iron, ſteel, braſs, and copper, for cutlery and Birmingham ware; for the produce of the looms of Mancheſter, Coventry, and Norwich; for printed linens, paper-hangings, and ſuch kinds of ornaments; as moſt of theſe articles might be exported from ſeveral places, at leſs charges than from London.—And as the Engliſh are known to excel other nations, both in fabric and cheapneſs: ſo that, were the trade free, the port of Marſeilles would labour under ſuch difficulties from thoſe circumſtances, as the advantage of it's ſituation could by no means compenſate.

X. Add to this, that the freight, and inſurance, and navigation of ſhips are much dearer, in proportion, at Marſeilles, than in England. The intereſt of money is alſo 6 per cent. and the price of tin and lead, and ſhot, muſt neceſſarily be much higher, ſo that the prodigious increaſe of their Levant trade, cannot poſſibly be aſcribed to any other cauſe, than to the monopolies and excluſions of the Engliſh againſt their own countrymen, in favour of the French. And therefore it ſhould be duly conſidered by every true patriot, and lover of his country, that the chief competition, in this ſtruggle for the liberty of commerce, is not between one Engliſh merchant and another,—but between Great-Britain and France.

XI. Were the trade laid open, the Turks, Greeks, and all the nations of thoſe vaſt territories would find a greater demand for their reſpective commodoties, and then they could afford to buy greater quantities of ours:—whereas, at preſent, they neither are able to purchaſe much, nor, if they were, are they inclined to do it, on account of the exceſſive dearneſs of the Engliſh merchandize.

XII. An increaſe of the exportation of our own manufactures muſt create an increaſe in the excife, and all inland duties; for the government is infallibly a gainer by every ſcheme that finds employment for the people, encourages labour, and promotes wealth, as theſe things neceſſarily occaſion the greater conſumption of all commodities that pay duties:—on the other hand, an increaſe of the importation of ſuch foreign materials, as excite the induſtry of the natives, is doubly advantageous, both by the cuſtoms they pay at firſt landing, and the hands they employ afterwards. Therefore, the increaſe of ſuch a trade is deſirable in every light, both to the government, and to the people.

XIII. If any of the merchants, belonging to the out-ports, ſhould happen to bring in ſuch raw materials as are not wanted on the ſpot, the advantages they receive in other reſpects would enable them to pay the expence of carriage to a proper market. And, indeed, the carriage of raw ſilk, camels hair, cotton, wool, &c. from Briſtol to Coventry, from Liverpool to Mancheſter and Derby, from Yarmouth to Norwich, &c. would not be ſo dear, as it is now from London to thoſe places. Beſides, it is natural to ſuppoſe, that as the trade increaſed, other towns in the north and weſt, and middle of England, and in Scotland alſo, would ſet up manufactures. So that every part of the united kingdom ought to conſider itſelf as intereſted in opening this monopoly.

XIV. Whatever regulations are judged neceſſary, under the inſpection of proper perſons, either at home or abroad, for the good government of a free trade, or the preſervation of health, and ſecurity from the plague, they will be gladly received, and thankfully ſubmitted to. And an open trade might be very eaſily put under much ſtricter examinations, not only as to the goodneſs of the manufactures exported, but alſo in relation to bills of health, and performing quarantine, [ſee QUARANTINE] than what the company have been ſubject to for many years paſt.—Though a plague in London would have been much more fatal, than in any other part of the kingdom.

XV. Were the trade to Spain or Portugal now in the hands of a company, and an attempt made to render it free, great pains would be taken, as there are now in the preſent caſe, to ſet forth the danger of permitting ſhopkeepers and low tradeſmen to go over to Spain or Portugal.

'They will raiſe the jealouſy of the populace, by interfering with their trades,—or inflame the zeal of bigots againſt countenancing hereticks:—low and indiſcreet people will import prohibited books, and ſo draw down the power and vengeance of the Inquiſition,—will give offence, by their behaviour, while the hoſt is paſſing by,—perhaps ridicule ſome of their religious proceſſions, and ſo cauſe tumults and inſurrections:—or, in general, they will not fail to excite an univerſal odium, by the diverſity of their dreſs and cuſtoms, and great licentiouſneſs of manners.—Therefore, by attempting to throw the trade open, we ſhall infallibly loſe it all.'

Thus it appears, that objections much more plauſible might be raiſed againſt opening the trade to Spain and Portugal, were it now in the hands of a company, than againſt the revocation of any excluſive grant now ſubſiſting. But, indeed, we muſt conſider all theſe kinds of objections as the mere dialect of monopoliſts, who uſe it, mutatis mutandis, againſt opening any trade, in order to carry their own private intereſt, under an appearance of public good.

But common ſenſe and daily experience are continually expoſing the falſity of ſuch ſuggeſtions. And were the trade opened to Turkey, there is no degrees of probability, that ſhopkeepers and low people would be fond of going there:—and if they did go, they certainly would agree with the natives, as well as the Engliſh failors do now.

XVI. If the trade to Turkey had a free courſe, what reaſon is there to imagine, that it would be engroſſed by the Jews? And why muſt it be ſuppoſed, that the Engliſh in particular would ſuffer in this reſpect, more than the French, Dutch, or Italians? Beſides, as the Jews might inſiſt upon the freedom of the company, as well as others, provided they are merchants by profeſſion; and as they reſide chiefly in London, and are a rich united body of merchants, this very objection might be urged with greater force againſt the confining ſuch a trade to a company, than againſt laying it open;—eſpecially as the Engliſh Jews, by means of their connection with their brethren in Turkey, who are the only brokers in that country, might be the better able to form a combination to ingroſs the whole trade themſelves, and execute it with ſucceſs. But, in fact, this objection betrays it's own weakneſs, and would never have been brought, if a ſtronger could be found; and it is the firſt time that the Jews were accuſed of being injurious to the intereſts of a trading nation.

XVII. It is equally incredible, that the government and people of Turkey ſhould be diſpleaſed at the diſſolution of the preſent monopoly. And what grounds are there for ſuch a ſuppoſition? For, in an open trade, Engliſh manufactures would be imported in greater quantity and variety, and on cheaper terms,—more Turkiſh goods be taken in barter, and a larger revenue would ariſe to the government. But, in a confined trade, fewer manufactures are imported, more exorbitant in price, demanding fewer goods in exchange, and paying leſs to the cuſtoms. And can we imagine, that the Turks would once heſitate, to which ſide the preference is due? Or have we ever found, that any of thoſe other nations, to whom we once traded by excluſive companies, have complained at the diſſolution of theſe deſtructive monopolies, and deſired their reſtoration?

To confirm this, we have a remarkable ſpeech recorded in Camden's Annals of one of the Czars of Muſcovy, when that country was thought to be over-ſpread with ignorance and barbariſm; which is mentioned by the reverend and ingenious Mr Smith, in his Memoirs of Wool, vol. i. p. 114, viz.

Theodore Joannides ſucceeding to the empire, granted to all merchants, of what nation ſoever, free acceſs into Ruſſia. And being oftentimes ſolicited by the queen [Elizabeth] to confirm the privileges granted by his father to the Muſcovy company of Engliſh merchants, to wit, that only Engliſhmen of that company ſhould come into, or trade into the north parts of Ruſſia, and that cuſtom free, in regard they were the firſt that diſcovered the paſſage thither by ſea: he thereupon deſired her to give liberty to all the Engliſh to trade into Ruſſia; for, to permit ſome, and deny others, was an injuſtice. Princes, ſays he, muſt carry an indifferent hand between their ſubjects, and not convert trade (which by the law of nations ought to be common to all) into a monopoly, to the private gain of a few. As for his cuſtoms, he promiſed to exact leſs by one half of that company than the reſt, becauſe they firſt diſcovered the paſſage thither by ſea. In other matters he confirmed their former privileges, and added ſome few more, out of his reſpect to the queen, and not for any deſert, as he ſaid, of the company, many of whom he found had dealt falſly with his ſubjects.

XVIII. But when an excluſive grant is once obtained, it muſt be defended by ſome kind of arguments, however weak and inconcluſive. Now the Turkey company was firſt erected, and afterwards eſtabliſhed in ſuch times, when the principles

of

of trade, and the nature of the landed and commercial intereſts of a kingdom were not underſtood;—or, if underſtood, not ſufficiently regarded:—in ſuch times when monopolies and excluſions carried all before them. Of the truth of which aſſertion, we need only conſult Rymer's Fœdera, and the common hiſtorians for the reigns of queen Elizabeth, king James I. and king Charles I. to find ſufficient evidence; many of which monopolies were again renewed by king Charles II. — And, at the time of the Revolution, were grown too powerful to be attacked with ſafety.

For, as to foreign trade, there was an excluſive company to Hamburgh and the Baltic,—to Muſcovy and Greenland,—to Germany and Flanders,—to France,—to Spain, and Portugal,—to Italy,—and to Africa.

Special licences were alſo to be purchaſed for the importation, or ſale of madder, logwood, deal-boards, wine, and tobacco:—likewiſe, for the exportation of corn, leather, and butter.

And, 2dly, As to our domeſtic commerce, there were pre-exemptions, or monopolies for tin, ſalt, and coals: excluſive patents for ſea-weed, kelp, and glaſs,—ſalt-petre and gunpowder, — ſoap and ſtarch, — gold and ſilver lace, — beaver hats, and demi-caſtors,—dyeing and dreſſing of cloth,—making of allum,—and even for gathering of rags.

Special licences were alſo neceſſary to be obtained for making iron, and cutting down wood for charcoal,—making of butter caſks,—uſing of wine caſks for ale and beer;—alſo for making of malt,—and brewing of ale for public vent.

Moreover, the gardeners, for ſix miles round London, were incorporated into an excluſive company, as were alſo the traders and artificers within the diſtrict of three miles.

Now all monopolies and excluſions (and many more might be enumerated) ſet out with pompous titles, and great profeſſions of zeal for the public welfare. They were all eſtabliſhed, either for the increaſe and good government of trade, —or to keep up the credit of the Engliſh manufactures in foreign markets,—or for preventing the ignorant and unwary from being impoſed upon at home. —But the true reaſon of their eſtabliſhment remains yet to be told, viz. JOBB and MONOPOLY.

This was the æra in which the Turkey company had it's birth and education. And all the others, while in being, had juſt the ſame pretentions of public good to alledge in their favour: but time has ſhewn, that we are much happier without them.

XIX. As London is the capital of the Britiſh empire, and the centre of the body politic, every acceſſion of wealth, trade, manufacture, navigation, and numbers of inhabitants, to other parts of the kingdom, muſt redound to the advantage of the metropolis. For the centre in the body politic, is like the heart in the natural body, which receives benefit itſelf, by the briſk and regular circulation of blood in the extremeties. But if any one ſhould doubt of this parallel, let experience and matter of fact determine. For when almoſt the whole trade of the kingdom was circumſcribed by excluſive grants, and thoſe monopolies confined to the ſingle city and port of London, this city made a very mean and inconſiderable appearance, to what it doth at preſent: but, in proportion, as the inland countries, and the out-ports began to ſhake off ſome of their fetters, and extend their commerce; in the ſame proportion did the metropolis increaſe in wealth and grandeur, number of inhabitants, and extent of buildings. In ſhort, if there was an acceſſion of wealth to the fartheſt iſles of Scotland, it would, ſooner or later, find it's way to London. [See our article MIDDLESEX.]

XX. Upon the whole, therefore, the continuation of this excluſive company, is no other in effect, than the payment of a very large tribute annually to France;—together with this mortifying reflection, that this is a tribute we are not forced to pay, but do it voluntarily; though we know, that ſome of her beſt provinces are ſupported by it, ſome hundreds of ſhips employed in the navigation, and the government enabled to turn the wealth and ſtrength, acquired by our indolence and miſmanagement, to our own deſtruction.

XXI. The landed gentlemen, in their reſpective counties, are more particularly concerned to exert themſelves on this intereſting occaſion; becauſe of the rents of lands and houſes will be higher, and the demand for the produce of eſtates, corn, wool, ſheep, cattle, butter, cheeſe, wood, coal, &c. &c. will be greater, in proportion as the inhabitants of any country do increaſe in numbers, riches, and manufactures. The poor alſo would be leſs numerous, as there is more employment, the weight of taxes will be lighter, when more perſons ſhare in the burthen,—and the tenants, by having better markets, will be better able to pay their rents: but theſe advantages cannot be obtained, while the preſent difficulties, which prevent induſtry, and ſtop the circulation of labour, are ſuffered to remain.—☞ In one word, all monopolies are ſo many combinations againſt the landed intereſt. And the more violently they are contended for, the more clearly may the gentlemen of landed property diſcern, whoſe intereſt is promoted, and whoſe is ſacrificed.

The principal points to be proved at the bar of both houſes, are the following:

1. That the Engliſh manufacturers can rival the French Turkey cloth.
2. That the port of London is the deareſt in the kingdom, both for exporting and importing of goods.
3. That not only woollens, but almoſt all other parts of a cargo to the Levant, can be purchaſed on cheaper terms in England, than at Marſeilles.
4. That freight and inſurance are very high at Marſeilles, as is alſo the intereſt of money.
5. That the excluſive powers of the Turkey company, by reſtraining and leſſening the exports of Engliſh manufactures, leſſen the labour, and of courſe, the wealth, power, and navigation of Great-Britain.—And, by leſſening the imports of foreign raw materials, greatly obſtruct the manufactures of thoſe materials.

REMARKS.

This is the ſubſtance of what has been urged to lay the Turkey trade abſolutely open.—But what may be ſaid, on the other ſide of the queſtion, we have not room to conſider here; we ſhall defer that to the article TURKEY TRADE, where we ſhall alſo conſider the late act of parliament, made in relation to this commerce, and conclude the ſubject, from an impartial review of what has been repreſented, as well under the article LEVANT TRADE, and this, as what ſhall be further ſaid under the article TURKEY TRADE.

And, in relation to the EAST-INDIA trade in general, as alſo our EAST-INDIA COMPANY in particular, ſee the articles EAST-INDIA TRADE in general, and EAST-INDIA COMPANY, DUTCH EAST-INDIA COMPANY, FRENCH EAST-INDIA COMPANY. But as it is rumoured, that people of weight and diſtinction will exert themſelves to lay the EAST-INDIA TRADE open to all his majeſty's ſubjects, and to annihilate abſolutely our Eaſt-India Company, as an excluſive trading corporation, we ſhall lay all the evidence impartially together, that we have been able to accumulate, on both ſides of the queſtion, that a right judgement may be made, whether ſuch a meaſure would or would not be expedient, and tend to the public intereſt or not. Wherefore, beſides the peculiar heads to which we have before referred, we ſhall alſo, in order to give this matter due conſideration, refer our readers to the article OSTEND EAST-INDIA COMPANY alſo in it's place.

ORLEANOIS, in France. In this government are the ſeven following diſtinct provinces, viz.

I. ORLEANOIS, properly ſo called, bounded on the north by Upper Beauce, on the eaſt by Gaſtinois, on the ſouth by Sologne, and on the weſt by Dunois and Vendomois.

ORLEANS, the capital city of this province, and one of the moſt conſiderable in France, is ſituated on the river Loire, by means of which, the trade it carries on is very conſiderable; it conſiſts in all ſorts of corn, wine, brandy, ſugar, ſilks, woollen-ſtuffs, oil, iron, ſteel, freſh and ſalt fiſh, fruit, timber, broads, and a great many other merchandizes. They have alſo ſome manufactories, viz. of ſtockings, both knit and wove, of prepared leather, of refining and baking ſugar, &c.

BEAUGENCI, on the ſame river, has a manufactory of ſerges and other woollen ſtuffs.

II. SOLOGNE. The limits of this province are not diſtinctly ſet down.

RAMORENTIN, on the little river Sauldre, has a conſiderable manufactory of ſerges and woollen cloth, which ſerves to clothe the army, ſo that they have a very good trade of it.

III. BEAUCE, lies between Orleanois, Blaiſois, Porche, and the iſle of France.

CHARTRES, the capital of this province, is ſituated on the banks of the river Eure. The chief trade here is that of corn. They have alſo ſome manufactures, for which the water of the Eure is reckoned very proper.

PLUVIERS, a ſmall town on the rivulet Oeuf. The neighbouring fields produce corn, of which they drive here a conſiderable trade. The ſoil produces alſo wine and ſaffron.

IV. DUNOIS. This little province has Orleanois on the eaſt, Blaiſois on the ſouth, Vendomois on the weſt, and Leſſer Perche on the north.

CHATEAU-DUN, ſtands on a hill near the river Loire. They make cyder here; and, in ſome pariſhes of this diſtrict, are manufactories of woollen ſtuffs, which they ſell at Tours, Orleans, and Paris.

V. VENDOMOIS, is bounded on the north by Perche, on the eaſt by Dunois, on the ſouth by Turrenne, and on the weſt by Maine.

They have in this duchy manufactories of woollen cloth, and gloves. There are alſo embroiderers and tanners; but the trade of gloves is by far the moſt conſiderable. Vendome, the capital, is ſituated on the Loire.

MONTOIRE, on the ſame river, is famous for the vaſt quantity of linen cloth made here.

VI. BLAISOIS, has Beauce on the north, Orleanois on the eaſt, Berry on the ſouth, and Touraini on the weſt.

BLOIS, on the Loire, is it's capital. The chief trade here conſiſts in wine and brandy, which they ſend to Orleans, Paris,

Tours,

Tours, Angers, Laval, and into Holland. It is alſo noted for the beſt watches in the kingdom.

VII. GASTINOIS is bounded on the north by Beauce, on the eaſt by Senonois, on the ſouth by Auxerrois, and on the weſt by Hurepois. Part of it belongs to the government of Orleanois, and the reſt to that of the Iſle of France. There are abundance of vineyards in this province, and a great many walnut-trees, of the fruit of which they make oil; the ſoil produces alſo a great deal of ſaffron.

CHATEAU-REGNARD, has a manufactory of woollen-cloth, proper to cloath Soldiers. They have alſo a trade of coarſe linen cloths, made in the neighbourhood of Montargis, Coſne, and St Fargeau. The Germans uſed formerly to trade hither for ſaffron.

OSTEND, eaſt longitude 2, 45, lat. 51, 15, a city and port town of the Auſtrian Netherlands in the province of Flanders, ſituate 12 miles from Bruges. See AUSTRIAN NETHERLANDS.

OSTEND EAST-INDIA COMPANY.

The late emperor Charles VI. attempted to eſtabliſh an Eaſt-India company at Oſtend in the year 1718, but was compelled to deſiſt from the deſign by the Engliſh and Dutch. See AUSTRIAN NETHERLANDS.

In order to give poſterity a juſt idea of this company, and how jealous the Dutch and the Engliſh were at this time of the eſtabliſhment of a new maritime power in Europe, to interfere with their Oriental commerce, it will be neceſſary to lay before our readers,

A MEMORIAL preſented by M. Peſters, reſident at the court of Bruſſels on the part of their high-mightineſſes the States-General of the United Provinces, to his excellency the lord marquis de Prie, grandee of Spain, knight of the order of the Anunciada, privy counſellor of ſtate to his imperial and catholic majeſty, and miniſter plenipotentiary for the government of the Auſtrian Netherlands.

To his excellency,

The undernamed their high-mightineſſes reſident, is commanded to have the honour to communicate to your excellency the remonſtrances, which the directors of the privileged Eaſt-India company, as alſo thoſe of the Weſt-India company eſtabliſhed in Holland, have lately renewed, about the navigation and trade which thoſe of the Auſtrian Netherlands, particularly thoſe of the town of Oſtend, ſtill carry on in the Indies, to the great prejudice of the ſaid companies, and of their grants, confirmed and made prohibitory by the treaty of Munſter, as well for the ſubjects of Spain, as for thoſe of the Republic, who out of the ſaid companies, are not allowed to navigate, or carry on any trade within the diſtricts of their grants.

It is upon theſe freſh remonſtrances of the ſaid directors, that their high-mightineſſes have charged their envoy extraordinary to his imperial and catholic majeſty, to repreſent to him anew, That having the honour to live in good correſpondence and amity with his imperial majeſty, and having nothing more at heart than the preſervation and continuance of the ſame good correſpondence and harmony, which at all times have ſubſiſted between the ſubjects on both parts, cannot behold, without grief, that the inhabitants of thoſe countries, ſubjects to his imperial and catholic majeſty, are undertaking matters that may diſturb and ruffle that good correſpondence, tending to the greateſt prejudice with the Republic can ſuffer, and contrary to the treaties ſubſiſting between his imperial and catholic majeſty and their high-mightineſſes, ſo that they have ſtrong and juſt reaſons to complain of the ſame; the rather, becauſe all the inſtances made on their part for redreſs, have proved ineffectual; and that on the contrary, the ſaid inhabitants extend daily their enterprizes, in which they ſeem the more encouraged by the grant, which according to the public news, they have obtained of his imperial and catholic majeſty, freely to navigate and trade to the Indies.

Their high-mightineſſes foreſeeing the unavoidable troubles that muſt attend this affair, if, on the one hand, his imperial and catholic majeſty, contrary to all expectation aad equity, ſhould permit his ſubjects to proceed in their undertakings with reſpect to their new navigation and trade to the Indies, againſt the expreſs tenor of treaties; and if, on the other hand, their high-mightineſſes making uſe of their right acquired by the ſaid treaties, ſhould oppoſe the ſame; and deſiring nothing more than that ſuch inconveniencies and troubles may be prevented, their high-mightineſſes could not avoid repreſenting afreſh to his imperial and catholic majeſty, That by the treaty concluded in 1648 at Munſter, between his majeſty the king of Spain then reigning and his ſucceſſors, on the one part, and their high-mightineſſes on the other part, the navigation and commerce to the Eaſt and Weſt-Indies were regulated and limited, with regard to the ſubjects of Spain, on the foot they then exerciſed and enjoyed their navigation and commerce to the Eaſt-Indies, without power of extending the ſame further; and with regard to the ſubjects of the Republic; it was agreed that they ſhould refrain from the places poſſeſſed by Spain. That theſe articles have always been religiouſly obſerved, and the inhabitants of the Spaniſh Netherlands have never been permitted to trade to the Indies: that the ſaid Netherlands being at preſent under the dominion of his imperial and catholic majeſty, have not in that reſpect, acquired more right or privileges than they had before; nor can it ever be imagined, that their high-mightineſſes after having made ſo great efforts, and contributed ſo much to the recovery of the ſaid Netherlands, and other parts of the monarchy of Spain, in favour of his imperial and catholic majeſty, purſuant to the engagements entered in on that behalf, could poſſibly depart from the charters they had granted, and from the right they have for ever acquired by the ſaid treaty of Munſter, to maintain the ſaid charters; or that his imperial and catholic majeſty had any intention in recovering the ſaid Netherlands, to make any alterations there, much leſs deſign, contrary to the ſtipulations therein ſo plainly expreſſed, to cauſe ſo great a prejudice to the ſtate, in a point ſo eſſential and important to the Republic, and which was ſo ſtrongly inſiſted upon in the negociations at Munſter, that had it not been obtained, the treaty would never have been concluded: to which it muſt be added, that by the 26th article of the barrier treaty it is expreſsly ſtipulated, That commerce, and all that depends on it, in the whole and in part, ſhall remain upon the foot eſtabliſhed, and the manner appointed by the articles of the ſaid treaty of Munſter, inſomuch that the treaty was confirmed by that of the barrier, under the guarantee of the king of Great-Britain, even at the time his imperial and catholic majeſty was already in poſſeſſion of the Netherlands. [See NETHERLANDS.]

And that the right of the States in this particular, being ſo manifeſt, their high-mightineſſes can but expect, both from the amity, and from the great equity and juſtice of his imperial and catholic majeſty, that he will not any ways infringe it, and therefore earneſtly deſiring and requiring that the patent which is ſaid to have by him been granted for the eſtabliſhment of the navigation and commerce of theſe countries to the Indies may not be publiſhed, but rather revoked, or at leaſt rendered ineffectual; and that ſuch orders may be iſſued out by his imperial and catholic majeſty, that ſuch kind of navigation and commerce, with or without patents, may not be carried on any longer, and that the treaties made on that behalf be executed.

This, Sir, is the ſubſtance and purport of the orders tranſmitted by their high-mightineſſes to their envoy extraordinary to his imperial and catholic majeſty, and thoſe received by the under-named reſident direct him, to import the ſame to your excellency, together with the remonſtrances of the directors of the ſaid two companies of the Eaſt and Weſt-Indies, which he has the honour to lay before your excellency, with a tranſlation of the ſame in French, being moreover charged to uſe the moſt earneſt endeavours to incline your excellency, by your good offices with his imperial and catholic majeſty, to ſecond the good and juſt intentions of their high-mightineſſes on the behalf above-mentioned, and to take care that things may not be carried to any extremity, 'till his majeſty's further reſolution. Done at Bruſſels this 5th of April 1723. Signed E. Peſters.

REMONSTRANCE II.

Of the directors of the Eaſt-India company of the United Provinces, to their high mightineſſes the lords the States-General of the United Provinces.

With all due reſpect, the directors of the privileged Eaſt-India company of this country ſhew, That in the years 1720, and 1721, they had the honour to inform your high-mightineſſes by ſeveral memorials ond repreſentations, of the great loſs the company had already ſuffered, and ſhould ſtill ſuſtain, by the eſtabliſhment of the new navigation and commerce of the Auſtrian Netherlands, and particularly of the town of Oſtend, in the Indies, ſince the ſaid Netherlands were ſeparated from the crown of Spain, and reſtored to his imperial and catholic majeſty, directly contrary to what was ſtipulated by the treaty of peace, concluded at Munſter 1648, between the king of Spain of glorious memory, and this ſtate; the principal object and view of which treaty then was, conformably to the inſtructions of your high-mightineſſes miniſters plenipotentiary (in the manner they were given, according to the remarks on the ſame, found in the books of Acitzema, in the year 1645, which agree with the report of the ſaid miniſters plenipotentiary) above all things, to ſecure the commerce and navigation of the ſaid company in the Eaſt-Indies, and to cauſe the charters granted by your high mightineſſes to be maintained and obſerved even in Spain; and that each of the contracting parties, that is, both the Caſtillians and the ſubjects of this ſtate, ſhould freely enjoy the limits or diſtricts of their commerce, with all the towns, forts, lodges, and fortreſſes therein ſituate, and that it ſhould not be permitted to the one to trade or traffic in the diſtrict of the other, not only in ſuch places the property whereof belonged reſpectively to either, but not even in thoſe, which being poſſeſſed by neither in property, and remaining their

own maſters, might grant liberty of trading to other nations: which laſt point was, indeed, looked upon by Spain as unreaſonable, as may be ſeen by the report of M. de Meynderſwyk, inſerted in that of the negociations of Munſter, dated February 7, 1647, ſince the miniſters of Spain alledged at that time, that it was not reaſonable to pretend to hinder the king from making conqueſts in Braſil and in the Indies upon the Portugueze, his rebellious ſubjects, and to extend his dominions in other parts of the ſaid Indies, whoſe inhabitants are their own maſters, and may give liberty of trade; but which, however, was obtained, and very expreſsly ſtipulated on the part of this ſtate, upon the preſſing inſtances of it's miniſters plenipotentiary, as is contained in the 5th and 6th articles of the treaty of Munſter, viz.

That the navigation and commerce to the Eaſt and Weſt-Indies ſhall be maintained, purſuant and conformably to the charters already granted, or afterwards to be granted, and that the preſent treaty of peace, and the ratifications that ſhall be given thereupon on both ſides, ſhall ſerve as ſecurity thereof; that purſuant thereto, the Spaniards ſhall reſerve and retain their navigation, in the manner they had it then in the Eaſt-Indies, without power of extending themſelves further, and that the inhabitants of the United Provinces ſhall likewiſe refrain from frequenting the Caſtillian places in the Eaſt-Indies. The petitioners, by their firſt memorial preſented to your high-mightineſſes in 1720, have ſhewn, that the three principal points agreed on in the ſaid articles, to wit, 1ſt, The peaceable poſſeſſion of the towns, caſtles, forts, fortreſſes, and rights of ſovereignity, that were yielded to them, and which the ſubjects of this ſtate have acquired in the Eaſt-Indies. 2dly, The regulation of the limits of navigation and trade in each diſtrict, according to the partition that was made, together with the ſolemn promiſe of maintaining the grant of the Eaſt-India company. 3dly And laſtly, The prohibition made to the ſubjects on both ſides, not to attempt any thing to the prejudice of the ſaid convention in their reſpective diſtricts, nor to ſet up any new trade, or make any ſettlement there by new fortreſſes and lodges, all which is comprehended in the words, not to extend themſelves further, have ſubſiſted and been ſo well obſerved, that ſince the concluſion of the ſaid treaty of peace, nothing has been done or attempted, either on the part of Spain, or on the part of the Eaſt-India company, from which any conſequence may be drawn to the prejudice, or the invalidating of the ſaid convention; but that, on the contrary, the Spaniards have kept to their navigation, as they exerciſed it at the time of the ſaid treaty of peace, and continued it from Europe by the ſtraights of Magellan in America, and from thence to the Philippine Iſlands, or Manilles, in the Eaſt-Indies, without either extending themſelves further, or frequenting or carrying on any trade in the towns, forts, or lodges ſituate within the limits of the grant of the ſaid Eaſt-India company, much leſs did they erect there any new ſettlements, fortreſſes, or factories, not even in the places the inhabitants whereof being their own maſters, may permit others to trade, ſuch as Bengal, Siam, &c. as on the part of the ſaid company, navigation and trade have ſtill been carried on towards the eaſt of the Cape of Good Hope, to Batavia and Java, the Red Sea, the coaſts of Aſia and the Indies, as alſo in the ſeas, rivers, and iſlands, ſituate between the Manilles and the iſle of Java, as far as Japan and the Moluccas incluſively, without extending to the Manilles, or any other places where the Spaniards trade.

Matters between Spain and this ſtate, or the Eaſt-India company, would, in all probability, have ſtood on the ſame footing without any occaſion of complaint, had not the Spaniſh Netherlands been reſtored to his imperial and catholic majeſty, which has given a handle to many ſubjects of the ſaid Netherlands very erroneouſly to maintain, that the emperor is not bound by the treaty made with the king of Spain, his imperial and catholic majeſty's predeceſſor, and that upon that foundation, they had acquired a new right and liberty of trade, which they never had before, viz. to traffic in the Indies, territories, ports, and harbours, which the king of Spain, with reſpect to navigation and commerce, ever held, out of the limits of Europe; that is to ſay, out of the common liberty of commerce, as it is expreſſed in the 4th article of the treaty of truce of the year 1609, becauſe the Caſtillians, and the king's ſubjects naturalized, who were reputed Caſtillians, had ſolely a right to traffic there, excluſive not only of the other nations, but alſo of all the other ſubjects of Spain, as is explained more at large by the Spaniſh civilian, John Evia de Bolano, in Curia Philippica, lib. 1. De Commerc. Terr. cap. 1. where he ſays, Ningun eſtrangero del reino puede tractar en las Indias. No aliens, who are not ſubjects of the kingdom, can trade in the Indies; naming afterwards the king's other ſubjects; for inſtance, the Aragoneſe, Neapolitans, Sicilians, eſtrangeros de las Indias, that is to ſay, ſuch as not being Caſtillians, have no right to trade in the Indies; which is alſo confirmed by the ſaid report of the negociation of peace, dated December 14, 1646, wherein it is ſaid, on the part of the miniſters of Spain, That the trade to the Indies was by no treaty granted to any foreign nation; the rather, becauſe it was not ſo much as permitted to the ſubjects of England, Denmark, and to the Portugueze, while they were under the king's obedience, nor to France before the war, nor to thoſe of Arragon, Naples, nor even to the inhabitants of the Spaniſh Netherlands, to carry on any commerce in the Eaſt-Indies, inferring from thence, that this Republic could not be allowed to enjoy what was denied to the king's own ſubjects.

This difference between the king's ſubjects, particularly with reſpect to the Flanderkins and thoſe of Brabant, has been obſerved, and was in very ſtrong terms expreſſed, in the deed of ceſſion made in favour of this infanta Clara Iſabella Eugenia, the 6th of May 1598, whereby the king yields and makes over to her the Spaniſh Netherlands upon certain conditions, and no otherwiſe, as may be ſeen in the 8th article of the ſaid deed, viz. That neither the infanta nor her conſort, nor any of her ſucceſſors, to whom the ſaid countries ſhould devolve, ſhall carry on any manner of commerce or trade in the Eaſt or Weſt-Indies, nor ſhall ſend into thoſe countries any ſort of ſhipping, under what title, name, or pretence ſoever, upon pain, in caſe of contravention, of forfeiture of the ſaid countries. And if any of the ſubjects of the ſaid Netherlands ſhall, contrary to this prohibition, tranſport themſelves to the Indies, that the ſovereigns of the ſaid Netherlands ſhall be obliged to puniſh them for it, by confiſcation of their eſtates, and greater penalties, even by death. An inſtance of the efficacy of this article is to be found in the hiſtory of Emanual de Metteren, among the occurrences of the year 1641, where he ſays, that thoſe of Antwerp being by the king ſuſpected of trading indirectly to the Indies, a commiſſioner from court was ſent into that city to inſpect the merchants books, and to proſecute thoſe who ſhould be found guilty of ſuch a contravention, 'till at laſt, to prevent many difficulties and proſecutions that would have enſued, the ſum of 600,000 ducats was to be paid, to buy off the king's diſpleaſure. Which therefore clearly ſhews, that the ſubjects of the Spaniſh Netherlands never had a right to trade in the Indies, as will be further evinced anon; that although they changed maſters at the time of the laſt barrier treaty, they cannot be deemed to have changed, or bettered their condition; and that the ſuppoſition, that his imperial and catholic majeſty is not bound by the treaty of Munſter, or that being a ſovereign, he may grant to the ſubjects of the ſaid countries ſuch a new right, to the prejudice of the ſaid treaty, ought to be looked upon as erroneous and illuſory, for the following reaſons:

Firſt, Becauſe the king of Spain, by the deed of ceſſion in favour of the ſaid infanta, and by the treaty of Munſter, not only bound himſelf and his heirs, but alſo in general, all his and their ſucceſſors, in what right ſoever the ſucceſſion may fall, not to permit, or ſuffer them to carry on that trade. Secondly, Becauſe all the motives which, at that time induced the king of Great-Britain as well as this ſtate, to enter into an alliance with the emperor againſt France and Spain, had no other foundation, and that the ſaid aliance was made and concluded with no other view, than to recover the crown of Spain for his imperial majeſty, as having a right to it, in the whole or in part, with the ſame obligations and engagements which the ſaid crown had contracted with Great-Britain and this ſtate, and which ſubſiſted at the time of the demiſe of the late catholic king of glorious memory, and in the ſame manner the ſaid monarcy was then conſtituted; which is a conſequence both by the ſaid engagement of the king of Spain for himſelf and his ſucceſſors, according to the treaty of Munſter, and, according to law, from the nature of the thing itſelf; to wit, That he who by right of ſucceſſion inherits and takes the place of the deceaſed, ſtands bound and engaged to obſerve and perform all the treaties and engagements which the deceaſed had contracted with others.

And the rather, becauſe his imperial and catholic majeſty was to engage himſelf thereto, in a ſpecial manner, by the 26th article of the barrier treaty, in receiving the Spaniſh Netherlands only upon this expreſs condition, viz.

That trade and all that depends upon it, either in the whole or in part, ſhall remain on the foot eſtabliſhed by the treaty of Munſter, and in the manner appointed by the articles of the ſaid treaty.

Which articles were, in the year 1715, confirmed between his imperial and catholic majeſty and this ſtate in ſuch manner, that no alteration having been made in them, the ſaid Netherlands cannot be conſidered or deemed, both with reſpect to the ſaid prior engagements, and to the privileges they enjoyed, but as belonging ſtill to the ſaid ſovereign, and as if they never have been ſevered from the crown of Spain.

Which your high-mightineſſes (with due ſubmiſſion be it ſaid) may the rather urge, becauſe having ſpent ſo much blood and treaſure to recover the Spaniſh Netherlands to the obedience of his imperial and catholic majeſty, you ought not to undergo ſo great a hardſhip, as that the ſaid Netherlands or their inhabitants, ſhould at preſent be allowed to undertake, to the detriment of your high-mightineſſes, what they were not permitted to do before, and what they were forbid to do by a ſolemn treaty.

It may even be maintained, That his imperial and catholic majeſty in his great equity and juſtice, underſtood and meant

it

it ſo, as has been obſerved in former memorials; ſince in the patents or paſſes which his Majeſty has granted to thoſe of Brabant and Flanders, there is a clauſe, whereby they are prohibited to trade on the coaſts of Africa, &c. in ſuch places where, according to treaties, his imperial and catholic Majeſty's ſubjects are not permitted to trade.

Which or other like clauſe, cannot always refer to any other treaties, but that of Munſter and to the barrier treaty, ſince there are no other treaties that any body knows of, concerning the navigation to the Indies, that regard either his imperial Majeſty or his ſubjects.

It may alſo be aſſerted, that the treaty of Munſter had never been concluded, nor peace made at that time, between Spain and this ſtate, had it not been for the preſervation and maintenance of the India Trade, in favour of the ſubjects of this ſtate.

All which evinces, that the ſubjects of the Spaniſh Netherlands, not having had before the liberty of trading to the Indies, were left in the ſame ſtate and condition they were put in, both by the prohibition of that commerce, and by the excluſive treaty made on that behalf with this ſtate, as alſo afterwards by the right of ſucceſſion of his imperial and catholic Majeſty, and by the barrier treaty concluded on the ſame foot; and that, conſequently, it would be the greateſt abſurdity to maintain, that at the time of the barrier treaty, a point ſo very important as the trade to the Eaſt-Indies, and the maintenance of the grant made to the company, ſhould have been omitted or given up by this ſtate, ſince the confirmation of the ſaid trade, was the principal and greateſt object of the treaty at Munſter, as was obſerved before, and as appears beſides, by what the miniſters plenipotentiary of France wrote to their king, the 21ſt of December, 1646, as is related in the book intitled Memoirs and ſecret Negociations of the court of France, touching the peace of Munſter, &c. in theſe words:

'Another thing that puzzles us, is the Spaniards yielding about the Indies, which undoubtedly is one of the moſt conſiderable articles of the treaty, in which the Hollanders find an advantage they had not expected, and which could not be granted them but upon ſome extraordinary motive. The king of Spain conſents to abridge himſelf of the power of extending his limits in the Eaſt-Indies, and to reſtrain them to what he poſſeſſes there at preſent.

It is very remarkable, that the miniſters plenipotentiary have, in their relation, made uſe of the words of *extending his limits*, without determining or reſtraining them to certain countries, towns, or fortreſſes: which proves that the diſtrict given up by Spain to the ſaid Eaſt-India company, does not only conſiſt of certain countries or places, whoſe property the company had acquired, but in a diſtrict of trade, or extent of limits, under which are alſo comprehended ſuch countries where the inhabitants are their own maſters, and may permit others to trade, as was ſhewn before.

The petitioners have alſo evinced, by their former memorials, that both reaſon, and the law of nations, as it is obſerved now a-days, dictate and juſtify, that navigation and commerce, which antiently were common, open, and free, are, at preſent, looked upon as limited, proper, and diviſible, inſomuch that trading nations ought reciprocally to refrain from trafficking in the diſtricts of others.

It was with this view that the charters granted to the Eaſt and Weſt-India companies, and all the treaties of peace made with the Crown of Spain, from the firſt treaty of truce, have been couched in ſuch terms, as plainly ſhew that the prohibition of trade and navigation was not ſolely reſtrained to the diſtrict or neighbourhood of ſome towns, lodges, or fortreſſes, with the adjacent lands, as one may ſay, as far as one's eyes can reach, or within cannon-ſhot; but, on the contrary, ſuch words and expreſſions have been uſed, as ſhew the reaſon and neceſſity both of the treaties and of the thing itſelf, which do not admit that they who are at the charge and expence of fortifications, maintenance of garriſons, and keeping up factories, be obliged to ſhare them with others, which would, however, come to paſs if the ſubjects of the Auſtrian Netherlands had, as they claim by the antient law of nations, the liberty of navigating and trading within the diſtrict of the Eaſt-India company of the United Provinces, even in all places where the Caſtillians were not permitted to trade, and whither they neither navigated or trafficked, from the treaty of Munſter to this preſent time.

So that, according to their opinion, the ſubjects of this ſtate ſhould be and remain bound, with reſpect to the Caſtillians, to reſrain from their diſtricts in the Indies, and they, on the contrary, (although ſubjects of Spain, and comprehended both in the treaty of Munſter, and in the barrier treaty) ſhould have acquired a new right of navigating and trading every where within the diſtrict of the company of the United Provinces, as they actually do, not only in China, but alſo at Surat, Bengal, Coromondel, Malabar, the Red-Sea, and elſewhere, deſigning and endeavouring to erect factories in any of thoſe places, and to do all that may enervate or vacate the grant of the ſaid Eaſt-India company, by enticing the ſubjects to become ſharers in this new trade, and employing on board their ſhips ſeamen that have been in the ſervice of the ſaid company; labouring to gain it's officers in the Indies, to engage them, againſt their oaths and duty, to aid and abet their enterprizes; and, in a word, to ſupplant the company; a thing which the Spaniards would never have thought of; ſince the late king of Spain ever did maintain the company's grant, in all it's parts, according to the treaty of Munſter, both with reſpect to the partition of the limits of commerce, and to the rights of ſubjects on both ſides, not ſuffering that the Caſtillians, or any of his ſubjects, ſhould attempt or undertake what was by treaties forbid to the ſubjects of this ſtate, within the diſtrict of the Spaniſh Indies, but that they ſhould abide by what had been ſtipulated, for greater and further ſecurity, by the 15th article of the treaty of navigation made with Spain in the year 1650, viz. That the ſubjects of either of the powers ſhould not be allowed a larger licence than the other for their navigation and trade, but that in this, and in all things, there ſhould be a reciprocation and equality on both ſides.

And it is moſt certain, that this reciprocation and equality could not abſolutely have their effect, according to the ſaid article, if either of the parties were obliged exactly to conform itſelf, and the other ſhould let it alone, upon pretence either of having changed maſters, or becauſe the antient law of nations (according to which navigation and commerce were free every where, and to every one) ſtill actually ſubſiſts, although nothing is more notorious, as was hinted before, than that pretended law of nations was changed by the general conſent, and unanimous practice of the moſt civilized nations of Europe; and that, even in relation to the preſent caſe, there is a ſpecial treaty contrary thereto, and whereby the king of Spain has promiſed not to extend himſelf that way, or not to ſuffer that diſtrict to be frequented for any trade, upon an expreſs renunciation and derogation to all laws, cuſtoms, and all other things thereunto contrary, binding and engaging, for the ſecurity and execution of the treaty, all his ſubjects, inhabitants, kingdoms, and dominions, both in and out of Europe.

Which being thus ſettled by treaty, and the Spaniſh Netherlands, with their inhabitants, being found to perform the ſame, by the ſovereign, as duke of Brabant and earl of Flanders, as the ſubjects of this ſtate are likewiſe bound and obliged to all that has been promiſed to the Caſtillians, viz. not to navigate or trade within the diſtricts of their commerce in the Indies: it would be the greateſt hardſhip in the world for the Eaſt-India company to ſtand bound and engaged towards the Caſtillians, whilſt, on the other hand, thoſe of the Auſtrian Netherlands ſhould be diſengaged from all ties and obligations, and ſhould do the company more hurt and prejudice than the Caſtillians themſelves could, in caſe they would break the engagements of the treaty of Munſter, and extend themſelves further in the Indies than they are allowed to do; for beſides that, in ſuch a caſe, the Eaſt-India company might do the like, and extend it's commerce within the diſtricts of the Caſtillians; the Spaniards have not, by much, the ſame occaſion with thoſe of the ſaid Netherlands, by reaſon of their ſituation and neighbourhood, to allure and draw the ſubjects of this ſtate to their intereſt, to the prejudice of the company's grant.

Moreover, if the pretenſions of the ſubjects of the ſaid Netherlands ſhould take place, the Eaſt-India company, by the recovery of the ſaid Spaniſh Netherlands for his imperial Majeſty, ſhould not only loſe all the efficacy of the treaty of Munſter, which was obtained with ſo much trouble, but would be in a worſe condition than if that treaty had never been concluded with Spain.

And as the petitioners are daily more and more ſenſible of their loſſes, by the fall of the price of their goods, occaſioned by the great quantities of the ſame imported into Europe, and by the great number of competitors; and foreſee that, in time, little more may be left to the Eaſt-India company than the charge of maintaining and keeping up their forts, garriſons, and factories, and the grief to ſee the profits carried off by others, even by thoſe who, according to the treaties and charters, have no manner of right to this trade, eſpecially if it be true (what public and private news poſitively affirm) that his imperial and catholic Majeſty has already granted a patent for the ſettlement of an Eaſt and Weſt-India company in the Auſtrian Netherlands, and that notwithſtanding the repreſentations made and repeated on the part of your high-mightineſſes, in order to maintain the right of the company of the United Provinces againſt the ſaid commerce; his imperial and catholic Majeſty does nevertheleſs endeavour, by his power and authority, to countenance and confirm a navigation and trade which, at all times, were prohibited to thoſe of the ſaid Netherlands, and from which they were ſo carefully excluded.

Therefore the petitioners again preſume to remonſtrate the whole matter to your high-mightineſſes, and to juſtify more at large what they have already offered in their former memorials, moſt humbly praying, That, in conſideration of the great prejudice which the licenſed Eaſt-India company has already ſuffered, and will ſuffer more and more, by the grant of the ſaid new patent, and by the notorious incroachment on their right to the Eaſt-India trade, your high-mighti-

neſſes

neſſes may pleaſe to cauſe your miniſters at the courts of Vienna and at Bruſſels, to continue and repeat the moſt earneſt and moſt effectual inſtances to engage his imperial and catholic Majeſty, in his great equity and juſtice, to put a ſtop to the navigation from the Auſtrian Netherlands to the Eaſt-Indies, not to put in execution the ſaid patent, and not to grant any new commiſſion or patent for their trading thither; and that your high-mightineſſes may pleaſe to uſe both this method, and all further means, which in your great wiſdom, and more extended lights, you ſhall judge more convenient and effectual to oppoſe this unlicenſed trade, and prevent it's progreſs, that the petitioners may quietly enjoy the effect and benefit of their charter: and the petitioners, &c.

REMONSTRANCE III.

Or petition of the directors of the Eaſt-India company, to their high-mightineſſes the lords States-General of the United Provinces.

The directors of the licenſed Eaſt-India company of this country, in all duty ſhew, That it is with great regret they have found themſelves obliged to apply ſeveral times to your high-mightineſſes, and from time to time to complain of the endeavours uſed in Brabant and in Flanders towards eſtabliſhing a new navigation and trade both to the Eaſt and Weſt-Indies; that your high-mightineſſes may remember, that the ſame has occaſioned the taking and confiſcating of ſome veſſels on both ſides; and, of late, of the taking of the ſhip called the Conmany, by the Oſtend privateers, for which loſs a due recompence has hitherto, againſt all reaſon, been denied; but that the petitioners have, at leaſt, had this ſatisfaction, that, ſince the taking of thoſe prizes, a ſtop has been put to the ſending out ſhips to the Weſt-Indies and Africa, apparently becauſe it has been acknowledged, by the repreſentations made on that ſubject, that the ſaid navigation is notoriouſly contrary to the 5th and 6th articles of the treaty of Munſter; that the petitioners thought they might hope, that, although they ſhould ſtill be denied amends for the ſaid loſs, they ſhould not, at leaſt, have freſh matter of complaint given them: but, inſtead of that, it appears by the public news, that there is a deſign to begin again, and to carry on with more vigour than before, the ſaid navigation and commerce to the Weſt-Indies and Africa, and that in order thereto a patent has already been obtained of his imperial and catholic Majeſty.

That this undertaking is ſo prejudicial to the general Weſt-India company eſtabliſhed in this country, and ſo directly contrary to the ſaid treaty of Munſter, that the petitioners, without any further repreſentation of the right to them belonging, by virtue of the ſaid treaty, and of the engagements entered into by his imperial and catholic Majeſty, as ſucceſſor of king Charles II. of glorious memory (mentioned ſeveral times before, and ſufficiently known) cannot forbear applying again to your high-mightineſſes, moſt humbly to pray your powerful protection, towards the putting a ſtop to the ſaid new navigation to the Weſt-Indies and Africa, and that the ſaid patent of his imperial and catholic Majeſty, may not have it's effect; and that his ſaid Majeſty be deſired not to grant, for the future, any new commiſſions or paſſes; as alſo that your high-mightineſſes be pleaſed to take ſuch further meaſures as your high-mightineſſes may think moſt effectual to obtain the ſame of the Emperor, moſt dutifully referring themſelves to what your high-mightineſſes ſhall find proper to do therein. Done at Amſterdam, the 22d of March, 1723, by order of the aboveſaid directors, and ſigned

JOHN DE LA BASSECOUR.

REMARKS.

By the ſteady reſolution of the States-General, in concert with the crown of Great-Britain, the abolition of this Oſtend Eaſt-India company was effectuated: but ſo great is the change in the ſyſtem of Europe ſince this time, that neither the States-General nor England ſeem to concern themſelves much about the eſtabliſhment of new Eaſt-India companies with, as encouraging privileges and immunities as England formerly granted to her trading corporations. And is not this very natural to be attempted by other nations, they knowing, from the experience of England, France, and Holland, that this meaſure has been attended with ſo great ſucceſs and proſperity to the commerce and navigation of thoſe reſpective potentates? Quere, therefore, Whether it may not require the moſt mature and deliberate conſideration, before we abſolutely aboliſh our own Eaſt-India company, while other ſtates are eſtabliſhing and vigorouſly ſupporting the like kind of companies?

If it was really for the advantage of England and Holland to ſuppreſs the late Oſtend Eaſt-India company, by reaſon only that it proved manifeſtly detrimental to both, can it be believed, from the ſame principle of reaſoning, that the total annihilation of our Eaſt-India company could tend to the trading advantage of the nation? Would not France, and perhaps Holland, and ſome other potentates, rejoice as much at the deſtruction of our Eaſt-India company, as the Dutch and Engliſh, and even the French, did at that of the Oſtend company?

We have, from the beſt of our judgment, ſtated the caſe of our Eaſt-India company, with all impartiality [ſee the articles EAST-INDIA TRADE and EAST-INDIA COMPANY]: and ſo far have we been from pleading in favour of this company, and attempting to juſtify them for not tradjng to all places within their charter, where it can be done with benefit to the nation, and without injury to themſelves; I have urged every thing argumentative that has been ſaid againſt them in this reſpect, and ſhewed the reaſonableneſs of private traders being admitted to traffic in thoſe parts of the Eaſt-Indies where the company do not: for the company have been roundly charged with cramping, inſtead of extending, their commerce within their charter.

As I have occaſionally introduced what matter has been ſtarted in oppoſition to the conduct of the company in this reſpect, ſo it is a duty on the impartial man to repreſent fairly what reply has been made to a charge of this nature, that the public may be able to make a right judgment of the matter before them.

'The firſt charge againſt the Eaſt-India company, ſays Mr Rammell, is their not attempting to trade on the weſt ſide of the Red Sea, which is ſaid to be inhabited by Chriſtians: to which I reply, continues that gentleman, that, as I lived ſix years in the company's factory at Mocha, it cannot be ſuppoſed but that I have ſome ſhare of knowlege of the trade in the Red Sea, and the ports frequented by the merchants on both the ſhores.

The firſt place where I know of any trade in the Abyſſine country, is at Zelah, a ſmall port a little without the Baabs; it is under the juriſdiction of the Mocha governor; there is a ſmall fort, and garriſon of Arabs: at proper ſeaſons of the year boats go from Mocha with an ordinary cargo of piece goods, and, in return, bring back hides, ſheep, and clarified butter; there is ſome ſmall places within the Baabs on that coaſt, which the Banians of Mocha trade to in boats, but they employ Abyſſiners for their factors, of whom there is a great number always at Mocha; the boats crew are of the ſame country as the factors, for the Arabs are not fond of putting themſelves in the power of ſo uncivilized a people: there is no port, I believe, on what is called the Abyſſine country, within the Baabs, large enough for a trade to be carried on there by ſhipping; but on the Ethiopian coaſt there is, but they are poſſeſſed by the Turks, the Chriſtians living all inland, and I believe the country they poſſeſs is ſtiled the interior Ethiopia, and the neareſt ſea-port to their territories is, if I miſtake not, called Muſſoah, and, as I obſerved before, is in the poſſeſſion of the Turks, ſo I leave the world to judge, if there is any manner of proſpect of the European Chriſtians carrying on a trade with the Chriſtians in Ethiopia by ſea, whilſt the Turk keeps poſſeſſion of the avenues to the country. I have known a ſmall Mahometan ſhip from Surat make a voyage to that port with piece goods, &c. and have brought back elephants-teeth, ſome civet, and a ſmall quantity of gold duſt. During the time of my reſidence at Mocha, the chief of the French factory ſent a ſmall veſſel thither, with Mahometan ſailros in her, and a Greek for the ſupercargo, who had lived many years amongſt the Turks and Arabs, (and I believe had been circumciſed) but the voyage turned to ſo indifferent an account, that I have not heard of any veſſel belonging to the Chriſtians going thither ſince. The Mahometan governments in the Red Sea are much prejudiced againſt the Chriſtians, on account of their religion (which may be owing to the vicinity of their prophet's tomb) and frequently treat them ill, without the leaſt occaſion, as I have often experienced. One of the governors of Mocha, in my time, iſſued out his orders that the centinels at the town gates ſhould knock down any of the French, Dutch, or Engliſh companies ſervants that ſhould preſume to ride in or out of them, though, at the ſame time, they were free for all others to paſs unmoleſted: this order was in force ſeveral months. The governor of Mocha always inſiſted on having the company's lead at his own price (and I believe the iron likewiſe) which was very low, ſo that it uſed to be ſent from thence to Bombay or Surat: the myrrh and drugs that are the product of Abyſſine and Ethiopia, are brought to Mocha in ſmall boats; but their aloes are no better than thoſe which grow on the Arabian ſhore, which are in little eſteem in Europe; thoſe that uſed to be purchaſed on the company's account were brought from the iſland of Socatra.

The next article is, that the company doth not trade to Siam, a rich and great kingdom, nor to Pegu, a country that produces rubies, gum-lacque, gum-dragon, and all materials of fine India varniſh, the Indians being induſtrious, a great trade might be carried on there. The objectors then go on, and mention Tonquin, Cochin-China, the kingdoms of Japan and Corea: I ſhall give for anſwer to the foregoing, that I think the reaſon is very obvious, which is, that the managers thereof are well ſatisfied that it would not anſwer their purpoſe, and therefore it would be injuring the proprietors to carry on a loſing trade.

As

As to the trade of Siam, I ſhall not paſs it over without ſaying ſomething relating thereto: I remember that about ſix or ſeven-and-thirty years ago, I was concerned in an adventure ſhipped on board the Morning Star, Capt. Alexander Hamilton commander, bound from the ports of Surat and Bombay to Siam, at which port he met with a ſhip from Fort St George; the commander of whom, or ſome other perſon belonging to the ſhip, inſtigated the government of Siam againſt the ſaid Capt. Hamilton in ſuch a manner, that they were the cauſe of his being arraigned for his life (for no other reaſon but to overſet his voyage) and though Capt. Hamilton eſcaped the executioner's hands, it anſwered the others purpoſe as well as if he had been hanged, for he was not permitted to do any buſineſs there; ſo that he ſailed down the river with his ſhip, and anchored off the port, where he continued ſeveral days, with a full reſolution of taking a prize, in order to reimburſe the owners for what they were like to be ſufferers by his not being permitted to diſpoſe of his cargo in the port; (the particulars of this affair may be read in the ſaid Hamilton's Voyages, printed about 23 years ago) but at laſt was obliged to quit his ſtation without any booty, on account of the changes of the ſeaſons, or want of proviſion, I can't tell which. Now, for argument's ſake, I will ſuppoſe he had taken a Siam veſſel, or the ſhip from Fort St George (which I am almoſt poſitive I have heard him declare he would have attempted, had ſhe ſailed out whilſt he lay before the river's mouth) with Siam, or other India merchants freighters on board: had, I ſay, this been the caſe, the ſaid merchants would, in all probability, have received ſome ſatisfaction for the outrage committed againſt them by the ſaid Capt. Hamilton; but had there been no Engliſh Eaſt-India company ſubſiſting, and he had been on his return to England inſtead of Bombay, I don't ſee that it would have been in the power of all the king's governors abroad to have done juſtice to the poor injured Siamers; but ſuppoſe it was, 'tis moſt likely that the king of Siam would have gone a much ſhorter and ſurer way to work, than to complain to them about the affair, by making reprizals on the next Engliſh ſhip that put into his port: for the trade in Aſia, and it's policy, is not of a piece with that of Europe, where, if the ſubject of one nation is ill treated in another prince's dominions, the miniſter or conſul of the nation he belongs to, will, on a proper application being made to him, endeavour to get him redreſſed: but, as I have obſerved, it is otherwiſe in the Eaſt-Indies; ſo that it is very probable, if the trade thither was laid open, the Engliſh would ſoon be involved in diſputes and broils with ſeveral potentates in India (where the king of Great-Britain had no garriſons) whilſt the French, and other nations from Europe, would carry on their trade uninterrupted, and the Engliſh would be looked upon no better than pirates, through the indiſcretion and hot-headedneſs of ſome of the Engliſh commanders; which there is no danger of whilſt things are on the preſent footing, by reaſon that, if any of the preſent commanders employed in that trade ſhould commit a raſh or an unjuſt action, whilſt trading from port to port in the Eaſt-Indies, on his return from the port he ſet out from, or to the port where he is to take in his loading for England, the affair would come to light, and all the Engliſh ſettlements apprized thereof, as ſoon as conveniently they could, that they might take their meaſures accordingly. It was rivalſhip in trade that gave riſe to Hamilton and Quarrel, the ſhips belonging to different employers: and the ſame cauſe will always exiſt, if the Eaſt-India company is laid aſide, and no doubt will frequently be attended with the like conſequences.

As for the port of Pegu, the India company uſed to have a reſident in that king's dominions, but, by reaſon of troubles in the country, I believe there has not been one for ſome years paſt; but I have of late heard talk that their governor at Fort St George had inſtructions from the company about ſettling that place again: though Pegu, and ſome other countries, may produce commodities proper for an Europe market, yet the ſending one of their ſhips for them would ſo enhance the price of the goods, that, in the end, they would ſtand them in more than they could expect to ſell them for. The Tonquiners may be an induſtrious people, but I have been told that they are ſo very poor, that they never have a ſtock of goods by them; and thoſe that expect to meet with a cargo there, or indeed, any quantity of goods fit for the Europe markets, ſhould go with a reſolution of ſtaying a conſiderable time at that port. I remember that a little ſhip called the Fame, Capt. Gregory commander, ſailed from Bombay to that port, where he and both the ſupercargoes were murdered in their houſe on ſhore; the ſhip got ſafe back again to Bombay; and, though I continued 14 years in India after this affair happened, I can't call to mind that the gentlemen at Bombey ſent any other ſhip thither.—The trade to Cochin-China is in a manner prohibited to all Europeans; and although I have been acquainted with India affairs for 40 years paſt, I don't remember to have heard but of one ſhip belonging to Europeans making a voyage thither, and that was commanded by one Capt. Pearce, or ſome ſuch name, and was fitted out either from Madras or Bengal; but the voyage did not anſwer: the year before that he intended his voyage, he by ſome means or other (the particulars, though he told them me, I can't recollect) procured the king's grant, or permiſſion, to come to his country: it was wrote, or ſtampt, I believe on a piece of ſolid gold, of about five or ſix inches long, and about two inches broad, whereon was inſerted the captain's name, and the number of men and guns his ſhip carried.—As for a trade to Japan and Corea, I am well ſatisfied that, if any of the Engliſh governors, or free merchants abroad, had thought it worth their attempting, they would not have admitted it (and I can't call to mind of any experiment being made in my time); for whatever the gentlemen in England may think of the matter, I am well ſatisfied, that, amongſt the company's ſervants and free merchants abroad, there is not wanting men of abilities, fortunes, or inclinations, to trade to every creek or port in India, where there is but any proſpect of ſucceſs; which is to be done for leſs than half the expences by what is called country ſhips, than can be performed by ſhips from England. And, as an undeniable proof of the flouriſhing condition the private trade was in when I lived at Surat (and may be ſo ſtill for any thing I know to the contrary) I declare on my own certain knowlege, that, at that port only, it amounted to about 250,000 l. per annum. This I infert to ſhew what a ſpirit of trade reigns amongſt the Engliſh in the Eaſt-Indies. The author of the paragraphs in ſome public papers, on which I have made the foregoing remarks, deſires the candidates at the approaching general election to enquire into the matter, and to uſe their endeavours for laying the trade to the Eaſt-Indies open; and concludes the paragraph by ſaying, That, in a little time, the pariſhes might be diſcharged from the poor's tax: to which I reply, That I ſuppoſe the company at preſent employs as many ſhips to the Eaſt-Indies as is conſiſtent with prudence, and they all go out with their full loading of Europe cloth, &c. It is not at all unlikely, but that if the trade was open, there would for the firſt year or two be a greater quantity of woollen goods carried thither than what the company at preſent export; but, if the returns back did not anſwer, it cannot be expected that the profits on cloth out would bear any proportion to the expence of ſending a ſhip to the Eaſt-Indies: the difficulties of procuring cargoes for the return of the ſhips to England, is an article perhaps not much conſidered, or known properly to thoſe gentlemen who are not concerned in the trade to India; for, notwithſtanding that the company ſend orders to their governors, &c. abroad, a year at leaſt beforehand, of the tonnage they may expect out, and that the proper cargoes may be got ready againſt the ſhips expected in India arrive, yet it ſometimes happens that ſome of their ſhips are obliged to be employed a year or two in India, for want of a loading. When the company's orders reach India, their governors, &c. ſend for the black merchants, and contract with them to make the inveſtment, and generally advance a good part of what it will amount to for the carrying it on. In the pepper ſettlements, likewiſe, they frequently are under a neceſſity of advancing part of the money before the crop is gathered. If the king's governors were to be put in poſſeſſion of the company's garriſons and factories, the trade could not be ſupported or carried on, but by perſons on the ſpot having very conſiderable ſums of money by them, to buy up the pepper, as well as to advance money for the cloth inveſtment, otherwiſe the black merchants would quit the Engliſh bounds, and ſettle elſewhere. In ſuch caſe, I deſire to know what benefit our fortifications, &c. would be of?—As I have ſhewn the improbability of the India trade being carried on with ſucceſs without very great ſums being left there yearly, it next falls under conſideration who is to advance it; no private perſon is capable of doing it; and if it is to be the concern of ſeveral merchants in conjunction, pray what is that but a little new company, of which I doubt not but ſeveral would by degrees ſpring up, out of the ruins of the old, who would ſoon be at variance with each other, and prove each other's ruin: for the more bidders there are at any market, the greater price muſt they be obliged to give for the commodity they want: and when they diſpoſe of their Europe cloth, &c. they will be under as great a diſadvantage; for, when the India merchants have ſeveral warehouſes to go to at the ſame place, they will not be wanting to beat down the price, and our people muſt be content, eſpecially the moſt needy ones, to ſell their goods for the moſt the market will afford them, whether they get any thing by the ſale or not. It is well known, that, during the time the old and new Eaſt-India companies had each their factory at Surat, the price of the goods they wanted at that market roſe conſiderably, and that they frequently incenſed the country government againſt each other, of which they took advantage, and fleeced both in their turns.

I am now come to the laſt paragraph, wherein is recommended the incorporating the black merchants with the white, which has already been done by his Majeſty's moſt gracious charter; and thoſe that now live on the iſland of Bombay, or within the company's bounds at Bengal or Fort St George, are intitled to the ſame privileges and immunities, and governed by the ſame laws, as the Engliſh. If the ſcheme takes place, of the trade to India being laid open, ſome people

take upon them to advance, that the Engliſh reſiding in India will not only be able to defray their own charges (as if they had not done it hitherto) but give aſſiſtance towards paying off the national debt. This laſt is a noble thought, and breathes the true air of patriotiſm; but, to make the ſucceſs more certain, I beg leave to recommend the ſending out with the king's governors and officers, one million of the nation's caſh, to provide cargoes for the ſhips they may expect from England, and for trading from port to port in the Eaſt Indies; for there is no doubt but they will prove moſt excellent merchants. I have now finiſhed my remarks on what was publiſhed in regard to the Eaſt India company's not trading to Ethiopia, &c. and have likewiſe ſet forth ſome of the evils that I apprehend will accrue to this nation in caſe the company ſhould be aboliſhed; my deſign herein being an honeſt endeavour to undeceive the deceived.

Jeruſalem Coffee-Houſe. THO. RAMMELL.'

OVERISILL, in the United Netherlands. This province is bounded on the north-weſt by Frieſland, and part of the Zuyder Sea; on the weſt by that part of Guelderland called the Veluwe; on the ſouth by the county of Zutphen; on the eaſt by the biſhopric of Munſter; and on the north by the province of Groningen. The ſoil in many places is barren, being full of ſands, heaths, and marſhes; but, in ſome parts, they have good corn and paſture: it is the worſt peopled of any of the provinces, partly on account of it's barrenneſs, and becauſe their ſituation is not convenient for trade.

ZWOL ſtands on the river Aa, which falls here into the Vecht, and runs into the Zuyder ſea, making a channel, into which the tide flows, which advances the trade of the town: it conſiſts chiefly in timber, cattle fattened in the neighbouring paſtures, Bentheim ſtones, wool, corn, butter, and cheeſe.

CAMPEN ſtands on the Iſſel, a little above where it falls into the Zuyder Sea. It's trade is decayed of late, the harbour being ſo choaked up with ſand, that it does not admit large veſſels. It has two ſuburbs, inhabited chiefly by fiſhermen, there being plenty of fiſh in it's neighbourhood.

VOLLENHOVEN, on the Zuyder Sea, has a great market for corn from the Baltic.

BLOCKZYL, on the ſame ſea, at the mouth of the river Aa, is a place of conſiderable trade, and very populous: it's harbour will hold above 200 veſſels.

OXFORDSHIRE, an inland county of England, bounded with Buckinghamſhire on the eaſt; with Glouceſterſhire on the weſt; on the north, where it terminates in form of a cone, it has Northamptonſhire on one ſide, and Warwickſhire on the other; and, on the ſouth, it is ſeparated from Berkſhire; and is about 130 miles in circumference.

Fuel here is ſcarce, that it is commonly ſold by weight in the city of Oxford, and other towns in the north part of the ſhire. Though many parts of the country bear corn very well, it abounds moſt with meadows and paſtures.

The city of OXFORD ſtands at the conflux of the Charwel and Iſis, in a plentiful country: it's chief trade is in ſending malt by barges to London.

WOODSTOCK has a manufacture of fine ſteel chains for watches, and other things of poliſhed ſteel.

HENLEY UPON THAMES is a town of good wealth and building: it's chief trade is in malt, of which, and of other corn, it is thought above 300 carts are ſold here on ſome market-days; the inhabitants being generally mealmen, maltſters, and bargemen, who live by carrying corn and wood to London.

WHITNEY has a trade in ſpinning for the neighbouring clothiers; but it's greateſt manufacture is rugs and blankets, which laſt are commonly from 10 to 12 quarters wide, and ſo preferred before all others for their whiteneſs, that they have in a manner engroſſed the whole trade of the nation for that commodity. They have 150 looms almoſt continually employed in it, with above 3000 people, from eight years old and upwards; and it is ſaid 100 packs of wool are ſpent in it every week. They ſcour them in the river Windruſh, whoſe waters, ſome think, have a more abſterſive nitrous quality than others. They alſo make duffels here, which are a yard and ¼ wide, and exported to Virginia and New England, for cloathing the Indians. Cuts for hammocks, and tilt-cloths for bargemen, are likewiſe made here; and there is a great number of fellmongers in the town, who having dreſſed and ſtained their ſheep-ſkins, make them into jackets, breeches, &c.

BAMPTON lies on a river navigable by boats; and it's market is noted for the great quantity of ſellmonger's wares, as leather jackets, gloves, breeches, ſtockings, &c. brought hither from Whitney, and ſold here into Berkſhire, Wiltſhire, and Dorſetſhire, no town in England having ſuch a trade for theſe wares.

OYSTERS.

The hiſtory, the generation, and ordering of GREEN OYSTERS, commonly called COLCHESTER OYSTERS.

In the Month of May the oyſters caſt their ſpawn (which the dredgers call their ſpat) it is like to a drop of candle, and about the bigneſs of an half-penny.

The ſpat cleaves to ſtones, old oyſter-ſhells, pieces of wood, and ſuch-like things, at the bottom of the ſea, which they call cultch.

It is probably conjectured, that the ſpat in 24 hours begins to have a ſhell.

In the month of May the dredgers (by the law of the admiralty court) have liberty to catch all manner of oyſters, of what ſize ſoever.

When they have taken them, with a knife they gently raiſe the ſmall brood from the cultch, and then they throw the cultch in again, to preſerve the ground for the future, unleſs they be ſo newy ſpat that they cannot be ſafely ſevered from the cultch, in that caſe they are permitted to take the ſtone or ſhell, &c. that the ſpat is upon, one ſhell having many times 20 ſpats.

After the month of May, it is felony to carry away the cultch, and puniſhable to take any other oyſters, unleſs it be thoſe of ſize, that is to ſay, about the bigneſs of an half-crown piece, or when the two ſhells, being ſhut, a ſair ſhilling will rattle between them.

The places where theſe oyſters are chiefly catched, are called the Pont, Burnham, Malden, and Colne waters, the latter taking it's name from the river of Colne, which paſſeth by Colne-Cheſter, gives the name to that town, and runs into a creek of the ſea at a place called the Hythe, being the ſuburbs of the town.

This brood, and other oyſters, they carry to creeks of the ſea at Brickle Sea, Merſey, Langs, Fringrego, Wivenho, Toleſbury, and Salt-Coaſt, and there throw them into the channel, which they call their beds, or layers, where they grow and ſatten, and, in two or three years, the ſmalleſt brood will be oyſters of the ſize aforeſaid.

Thoſe oyſters which they would have green, they put into pits about three feet deep, in the ſalt marſhes, which are overflowed only at ſpring tides, to which they have ſluices, and let out the ſalt water until it is about a foot and a half deep.

Theſe pits, from ſome quality in the ſoil co-operating with the heat of the ſun, will become green, and communicate their colour to the oyſters that are put into them, in four or five days, though they commonly let them continue there ſix weeks or two months, in which time they will be of a dark green.

To prove that the ſun operates in the greening, Toleſbury pits will green only in ſummer; but that the earth hath the greater power, Brickle Sea pits green both winter and ſummer: and, for a further proof, a pit within a foot of a greening pit will not green; and thoſe that did green very well, will in time loſe their quality.

The oyſters, when the tide comes in, lie with their hollow ſhell downwards, and, when it goes out, they turn on the other ſide; they remove not from their place unleſs in cold weather, to cover themſelves in the ouſe.

The reaſon of the ſcarcity of oyſters, and conſequently of their dearneſs, is, becauſe they are, of late years, bought up by the Dutch.

There are great penalties, by the admiralty court, laid upon thoſe that fiſh out of thoſe grounds which the court appoints, or that deſtroy the cultch, or that take any oyſters that are not of ſize, or that do not tread under their feet, or throw upon the ſhore, a fiſh which they call a five fingers, reſembling a ſpur-rowel, becauſe that fiſh gets into the oyſters when they gape, and ſucks them out.

The reaſon why ſuch a penalty is ſet upon any that ſhall deſtroy the cultch, is becauſe they find that, if that be taken away, the ouſe will increaſe, and then muſcles and cockles will breed there, and deſtroy the oyſters, they having not whereon to ſtick their ſpat.

The oyſters are ſick after they have ſpat; but in June and July they begin to mend, and in Auguſt they are perfectly well. The male oyſter is black-ſick, having a black ſubſtance in the fin: the female white-ſick (as they term it) having a milky ſubſtance in the fin. They are ſalt in the pits, ſalter in the layers, but ſalteſt at ſea.

There are various other ſpecies of oyſters, which are ſo well known, that it is needleſs to enlarge upon this article.

The LAWS of ENGLAND in regard to OYSTERS.

I. Stat. 10 Geo. II. cap. 30. § 2. All oyſters imported from France ſhall be rated at 7d. per buſhel ſtrike-meaſure, according to the Wincheſter corn-buſhel, and ſhall pay the old ſubſidy according to that rate, and not according to the values affirmed by the importers.

II. Sect. 3. Where the ſaid oyſters are ſubject to the further ſubſidy, the one-third ſubſidy, the two-thirds ſubſidy, the additional impoſt, or the duty payable upon goods imported from France, according to the values ſet thereon for the old ſubſidy, the ſame ſhall be paid according to the values ſet thereon for the old ſubſidy aforeſaid, and not according to the oath of the importer.

III. Sect. 4. Upon exportation of the ſaid oyſters, the duties ſhall not be drawn back or allowed.

IV. Sect. 5. The ſeveral duties upon the ſaid oyſters ſhall be paid, or ſecured, by ſuch ways, and under ſuch penalties, &c. as are mentioned in the ſeveral acts of parliament which granted or continued the ſame.

THE BUSINESS OF THE CUSTOMS CONTINUED FROM LETTER N, WITH REGARD TO OFFENCES AGAINST THE STATUTES.

OFFENCES againſt penal ſtatutes may be proſecuted, tried, &c. by way of action, &c. before juſtices of aſſize, niſi prius, goal-delivery, oyer and terminer, or juſtices of peace for the county, &c. where committed. 21 Jac. I. c. 4. § 1.

———Informer or plaintiff not proving the offence by evidence to the jury, the defendant to be found not guilty. 21 Jac. I. c. 4. § 2.

WITH REGARD TO OFFICERS OF THE CUSTOMS.

OFFICERS OF THE CUSTOMS.—Not to obtain their offices for gift, favour or affection, but for deſert, as being of the beſt and moſt lawful men, and ſufficient to their eſtimation and knowledge. 12 Rich. II. c. 2. § 1.

———Not to have their offices for life on term of years, but during the ſovereign's pleaſure only; and the ſaid officers to remain in his hands, under the government of the treaſury: And,

———LETTERS PATENTS, charters, or grants, made otherwiſe are void. 14 Rich. II. § 1. and 17. Rich. II. c. 5. § 1. and 1 Hen. IV. c. 13. § 1. and 20 Hen. VI. c. 5. § 0. and 31 Hen. VI. c. 5. § 1.

———To reſide by themſelves, or their ſufficient deputies, at the ſeveral head ports, members and creeks, on penalty of 100l. loſs of office, and impriſonment. 1 Hen. IV. c. 13. § 1. and 14 Hen. IV. c. 20. § 1. and 13 Hen. IV. c. 5. § 1. and 1 Eliz. c. 11. § 8. and 13 and 14 Car. II. c. 11. § 14.

———No perſon may bargain or ſell any office, or the deputation thereof, or any part thereof, nor receive any money, fee, or reward, or any promiſe, agreement, or aſſurance for any office in the cuſtoms, upon penalty of forfeiting the place by the ſeller, and buyer to be adjudged incapable to enjoy the ſame, and the bargain, ſale, &c. to be void. 5 and 6 Edw. VI. c. 16. § 2, 3.

———Or their deputies or clerks, not to have any ſhips of their own, nor to freight any ſhips, nor to buy or ſell any merchandize, nor to have any wharfs or keys, nor hold any common hoſteries, or taverns, nor to be factors for any merchant, denizen or alien, or hoſt to any merchant alien, on forfeiture of 40l. 14 Rich. II. c. 10. § 1. and 4 Hen. IV. c. 21. § 1. and 11 Hen. IV. c. 2. § 1. and 20 Hen. VI. c. 5. § 1.

———No perſon to be cuſtomer, comptroller, or ſearcher in any port, where he is common officer, or deputy to ſuch common officer, upon forfeiture of 40 l. for every half year he executes both offices. 3 Hen. VII. c. 7. § 1.

———Two of the commiſſioners firſt named in the commiſſion are, before the chancellor, or chief baron of the Exchequer, or maſter of the Rolls; and every other of the commiſſioners, patent-officers, their deputies, clerks, or ſervants, and all other officers of the cuſtoms in the port of London, are, before any two of the ſaid commiſſioners, upon their admiſſion, to take their corporal oaths for the true and faithful execution of their truſts and employments, to the beſt of their knowledge and power, and that they will not take or receive any reward or gratuity, except their ſalaries, and what is allowed them from the crown, or their regular fees eſtabliſhed by law. 6 and 7 W. and M. c. 1. § 5, 6.

———Officers in the OUT-PORTS at their admiſſion to take the like oath before two juſtices of the peace.

———Refuſal or neglect of taking ſuch oath, is forfeiture of office.

———The taking of ſuch oath to be certified to the next general quarter ſeſſions. 6 and 7 W. and M. c. 1. § 5, 6.

———Deputies, clerks, and ſervants before employed in the cuſtoms, are to take their corporal oaths before the commiſſioners and principal officers in the port of London, or the principal officers in the out-ports, or any two of them, for the true and faithful execution and diſcharge of their truſt and employments, to the beſt of their knowledge and power, which oaths are to be entered and regiſtered in the cuſtom-houſes of the reſpective ports where the perſons are employed. 13 and 14 Car. 2. c. 11. § 33.

——— In England.---To receive the ſacrament of the Lord's ſupper, according to the uſage of the church of England, in ſome public church, upon a Lord's day, within three months after admiſſion, under the penalties, forfeitures, and diſabilities as in article 16. 25 Car. II. c. 2. § 2. and 1 Geo. I. c. 13. § 24.

———A certificate thereof, under the hands of the miniſter and churchwardens, muſt be produced in the court where the oaths mentioned in the following article are directed to be taken; and there confirmed by the oaths of two creditable witneſſes at the leaſt. 25 Car. II. c. 2. § 3.

———At any time before the end of the next term, or general quarter-ſeſſions, after admiſſion, are to take and ſubſcribe the oaths of allegiance, ſupremacy and abjuration (in the words preſcribed by 1 Geo. I. cap. 13.) if they reſide within London or Weſtminſter, or within 30 miles thereof, in the courts of Chancery, King's Bench, Common-Pleas, or Exchequer, or elſe at the general quarter-ſeſſion of the county, &c. where they reſide, between the hours of nine and twelve in the forenoon, upon forfeiture of office, unleſs it be in inheritance, and a deputy be appointed, who qualifies himſelf, and is approved by his majeſty under his privy-ſignet. 25 Car. II. c. 2. § 2, 4, 5. and 1 Ann. c. 22. § 5. and 1 Geo. I. c. 13. § 1, 3, 9, 10, 20, 29. and 2 Geo. II. c. 31. § 3, 4.

———Executing their office after the expiration of the time, without compliance, are diſabled to ſue in courſe of law, or to be guardian to any child, or executor, or adminiſtrator to any perſon, and rendered incapable of any legacy, or deed of gift, or of enjoying any office, or of voting for members of parliament, and to forfeit 500l. 25 Car. II. c. 2. § 2, 4, 5. and 1 Ann, c. 22. § 5. and 1 Geo. I. c. 13. § 1, 3, 9, 10, 20, 29. and 2 Geo. II. c. 31. § 3, 4.

———But upon compliance, after forfeiture, may be capable of a new grant either of the ſaid office, or any other, if not granted to, or enjoyed by another perſon. 25 Car. II. c. 2. § 14. and 1 Geo. I. c. 13. § 16, 27.

———Perſons not bred up in Popiſh religion, and profeſſing themſelves to be Popiſh recuſants, ſuffering their children to be educated in the ſaid religion, are incapable of any office. 25 Car. II. c. 2. § 8, 9.

———Such children likewiſe incapable, 'till they are converted to the church of England, and have taken the oaths of allegiance and ſupremacy, and ſubſcribed a declaration againſt tranſubſtantiation, before the juſtices of the peace, at the quarter-ſeſſions, and have received the ſacrament after the uſage of the church of England, and obtained a certificate thereof under the hands of two or more of the ſaid juſtices. 25 Car. II. c. 2. § 8, 9.

WITH REGARD TO SCOTLAND.

———IN SCOTLAND.—To take and ſubſcribe the oaths of allegiance and abjuration, and ſubſcribe the aſſurance, in the court of ſeſſion, juſticiary, exchequer, or quarter-ſeſſions, within three months after admiſſion, under the ſame penalties, forfeitures, and diſabilities, as the officers in England. 1 Geo. I. c. 13. § 1, 4, 5, 9, 10, 16, 20, 29.

———The deputations or authorities granted to collectors, ſurveyors, or other inferior officers of the cuſtoms, not void by the death or removal of the commiſſioners who granted them. 12 Ann, c. 8. § 13.

———Taking a bribe, or conniving at a falſe entry of any goods, to the prejudice of his majeſty, or ſuffering prohibited goods to paſs, are incapable of any office for the future, and to forfeit 100 l. and the perſon giving the bribe, or offering any bribe, whether it is accepted or not, to forfeit 50l. 13 and 14 Car. II. c. 11. § 19. and 9 Geo. II. c. 35. § 24.

———But the offenders revealing their offences within two months, to the treaſurer of England, the chancellor, under-treaſurer, or barons of the Exchequer, are to be acquitted. 13 and 14 Car. II. c. 11. § 20.

———Illegally detaining goods, or neglecting or refuſing to make repayments and allowances, or after notice given, not giving out and executing their warrant, liable to double coſts and damages. 13 and 14 Car. II. c. 11. § 34.

———Or their deputies, may go on board any ſhips, and there remain 'till all the goods be diſcharged. 13 and 14 Car. II. c. 11. § 4.

———Upon oath made before the lord treaſurer, or any of the barons of the Exchequer, or the chief magiſtrate of the place, that goods liable to duties have been landed or conveyed away without due entry, they may iſſue out a warrant to enable any officers of the cuſtoms, with the aſſiſtance of a ſheriff, juſtice of the peace, or conſtable (within one month after offence committed) to enter into any houſe in the day time; and in caſe of reſiſtance, to break them open, and to ſeize the ſaid goods. 12 Car. II. c. 19. § 12.

———The information upon ſuch houſe falſe, the party injured may recover full coſts and damages againſt the informer. 12 Car. II. c. 19. § 4.

Authorized by writ of aſſiſtant out of the court of exchequer, may in the day-time (at any time after the offence) with a conſtable, &c. enter any houſe, ſhop, &c. and in caſe of reſiſtance, break open doors, cheſts, &c. in order to ſeize and bring away prohibited and uncuſtomed goods, and ſecure them in his majeſty's ſtorehouſe of the port. 13 and 14 Car. II. c. 11. § 5.

———Forcibly hindered, affronted, abuſed, beaten, or wounded in the due execution of their office, the next juſtice of the peace, or other magiſtrate, may commit the offender to priſon, till the next quarter-ſeſſions; when the juſtices may puniſh him by fine, not exceeding 100 l. and the ſaid offender is to remain in priſon 'till diſcharged of the fine and impriſonment by the court of exchequer, or he diſcovers the perſon that ſet him on work. 13 and 14 Car. II. c. 11. § 6.

———Eight or more armed perſons, tumultuouſly aſſembled, ſo offending, to be tranſported to the Britiſh plantations for any term not exceeding ſeven years. 6 Geo. I. c. 21. § 34.

OYS

———Such offenders returning into Great-Britain, or Ireland, before the expiration of the ſaid term, to ſuffer as felons. 6 Geo. I. c. 21. § 35.

———Offenders diſcovering two or more of their accomplices to the commiſſioners of the cuſtoms, within two months, are to be acquitted, and to receive 40 l. for each, to be paid by the receiver-general of the cuſtoms, upon a certificate of their conviction, under the hand of the judge or juſtice of the court. 6 Geo. I. c. 21. § 36, 38.

———The like, beſides other rewards and advantages, for other perſons diſcovering within three months. 6 Geo. I. c. 21. § 37.

———A member of the houſe of commons may not, by himſelf or deputy, or any other perſon in truſt for him, enjoy or execute any office relating to the cuſtoms, upon penalty of being incapable of ſitting or voting in the ſaid houſe. 12 and 13 W. III. c. 10. § 87, 88. and 6 Ann, c. 7. § 25.

———May not in any manner endeavour to perſuade or diſſuade any elector in his vote for the choice of a member to ſerve in parliament, upon the penalty of 100l. one moiety thereof to the informer, and the other to the poor of the pariſh, and incapacity to hold any office under his majeſty. 12 and 13 W. III. c. 10. § 89.

———Cuſtomer and comptrollers to take bonds from, and give oaths to gentlemen or officers in the army, going over ſea to ſerve foreign princes, that they will not turn papiſts, nor enter into conſpiracies againſt his majeſty; receiving for every bond 6 d. and to return a regiſter thereof yearly into the exchequer, upon forfeiture of 5 l. for every bond, and 20 s. for every oath not certified. 3 Jac. I. c. 4. § 19, 20, 21.

———Granting a warrant for, or ſuffering any of the enumerated goods from the plantations, to be carried to any other country, until firſt landed in Great-Britain, forfeit their places, and the value of the goods. 15 Car. II. c. 7. § 9.

———Or other razing, counterfeiting, or falſifying any cocket, tranſire, let-paſs, certificate, or other cuſtom-houſe, forfeit 100l. and ſuch diſpatch to be void. 13 and 14 Car. II. c. 11. § 8.

———Granting a falſe coaſt-certificate, forfeit their office, and 50 l. to be impriſoned a year without bail, and to ſuffer ſuch corporal puniſhment as the court of exchequer ſhall think fit, and to be incapable of ſerving again in the cuſtoms. 33 Hen. VIII. c. 7. § 5. and 13 and 14 Car. II. c. 11. § 8.

———Viz. Cuſtomers, not mentioning the colour, length, content, weight, and value of foreign goods in coaſt-certificates, are to forfeit their office, and to be fined at the king's pleaſure. 3 Hen. VII. c. 3. § 1.

———Viz. Cuſtomers and collectors of the cuſtoms, within ten days notice from the king, or ſix of his privy-council, are to declare what money due to the king is in their hands, and to pay the ſame when commanded, upon forfeiture of office. 7 Edw. VI. c. 1. § 13.

———Viz. Cuſtomers, upon yielding their accounts in the exchequer, to be ſworn thereto. 5 Hen. IV. c. 20. § 1.

———Viz. Cuſtomers, collectors, and comptrollers, concealing the cuſtoms duly entered and paid, forfeit treble the value of the goods, and are to make fine and ranſom. 4 Hen. VI. c. 3. § 1. and 18 Eliz. c. 9. § 5.

———Viz. Collectors detaining public money, are to pay intereſt for the ſame, after the rate of 12 l. per cent. per annum, with treble damages to the perſon grieved, and to be diſmiſſed. 20 Car. II. c. 2. § 1.

———Viz. Collectors, diverting or miſapplying the money received on the branches therein appropriated, are to be diſmiſſed, rendered incapable to ſerve his majeſty, and to forfeit double the ſum diverted or miſapplied, and 12 per cent. intereſt. 9 Ann. c. 21. § 14.

———Appointed for managing, collecting, &c. the reſpective branches, refuſing or neglecting to pay the monies into the Exchequer, or diverting or miſapplying any part thereof, are to forfeit their offices, aud to be rendered incapable of ſerving his majeſty in any place of profit and truſt, and to forfeit double the value of the ſum diverted or miſapplied.

———Collectors detaining any monies received for any of the ſaid duties, are to be diſmiſſed, and to be charged with intereſt at 12 l. per cent. per annum, and be liable to treble damages. 9 and 10 W. III. c. 44. § 42. and 4 Ann. c. 6. § 10. 5.---c. 19. § 12 and 5.---c. 19. § 12 and 6.---c. 11 § 7 and 8.---c. 4. § 12. and 8.---c. 7. § 37. and 9.---c. 6. § 20. and 9.---c. 11. § 48 and 9.---c. 12. § 29. and 10.---c. 19. § 122. and 10.---c. 26. § 76. and 12.---c. 9. § 32. and 6. Geo. I. c. 11. § 22. and 10. Geo. I. c. 10. § 45.

———Viz. Cuſtomers, collectors, receivers, &c.---All lands, tenements, profits, commodities, and hereditaments, which any officer, whoſe whole receipt from the beginning, or yearly receipt, exceeds 300 l. hath or ſhall have, whilſt he remains accountable, ſhall be liable to the payment of his arrearages or debts, and may be put in execution for the ſame, by way of extent. 13 Eliz. c. 4. § 1, 10.

———If arrearages are not paid within ſix months after the account be finiſhed, or debt known, the king may, by letters patent, make ſale of ſo much of the lands, &c. as will ſatisfy the debt. 13 Eliz. c. 4. § 2, 3.

———Such ſale may be made, though the officer be dead, if the account be ſtated, or debt known within eight years after his death; unleſs ſuch officer had a quietus eſt, or a diſcharge in his life-time. 27 Eliz. c. 3. § 2, 3.

———Lands, &c. purchaſed after the perſon became an officer, if for his own uſe, though in the name of another perſon, yet to be liable to the crown's debts, 13 Eliz. c. 4. § 5.

———The crown's debts being fully, or in part ſatisfied, by ſale of the lands, &c. the officers ſureties are to be diſcharged accordingly. 13 Eliz. c. 4. § 15. and 27 Eliz. c. 3. § 5.

———Who ſit above ſtairs in the cuſtom-houſe, their time of attendance,

———To diſpatch merchants in their turns.---Rule 13th at the end of letter A.

———Below ſtairs, their attendance.

———Embezzling any lodged in any warehouſe in their cuſtody, are to forfeit double the value, and full coſts. 8 Ann, c. 13. § 27.

———May not exact unlawful fees.---Vide FEES.

———But may take ſuch recompence for extraordinary ſervice and attendance at times and places not required by law, as the commiſſioners in the port of London, and the collector, cuſtomer, and comptroller of the out-ports, or any two of them, ſhall determine. 6 and 7 W. III. c. 7. § 15.

———of the Exciſe.---Attempting to corrupt them, the penalty is 500 l. 11 Geo. I. c. 30. § 40.

———Or their aſſiſtants, being reſiſted or moleſted in the execution of their duty, by perſons paſſing armed with prohibited or uncuſtomed goods, may oppoſe force to force in defence of themſelves, and execution of their duty; and if apprehended for beating, maiming, or killing any perſon ſo reſiſting them, are to be admitted to bail. 9 Geo. II. c. 35. § 35.

———Either by patent, grant, or otherwiſe, are not void by the demiſe or death of his majeſty, his heirs and ſucceſſors, but are to continue in force for the ſpace of ſix months after, unleſs ſooner ſuperſeded, or made void by the ſucceſſor: but the officers not required to take any oaths, de novo, in reſpect of being continued for ſuch ſix months only. 1 Ann. c. 8. § 2. and 4. and 5 Ann, c. 8. § 0. and 6 Ann. c. 7. § 8, 18. 1 Geo. II. c. 5. § 2. and c. 23. § 7.

———Of the cuſtoms, exciſe, and ſtamp duties, ſeverally continued for ever; with a proper number of commiſſioners, and a comptroller, in each of them. 9 Ann. c. 21. § 12.

———Of profit, and all other payments from the crown, are liable to a deduction not exceeding 6 d. in the pound, which his majeſty may, by warrant under the great ſeal of Great-Britain, privy-ſeal, or royal ſign manuel, cauſe to be made, out of all ſalaries, fees, wages, and other payments, or any arrearages thereof from the crown, for the uſe of his majeſty's civil liſt. 7 Geo. I. c. 27. § 19. and 11 Geo. I. c. 17. § 19. and 12 Geo. I. c. 2. § 26.

P.

PACKERS. This is eſteemed a very reputable trade, though they are really what their title expreſſes, packers as well as preſſers of all ſorts of bale-goods (intended for exportation) for the great trading companies and merchants, for which they are anſwerable, if they ſhould happen to receive any damage through bad package: beſides this, ſeveral of them are conſiderable dealers.

PAINTERS. There are four ſorts of painting, which are properly called trades.

1. Houſe-painting, which is moſtly plain work within and without.

2. Ship-painting, which is alſo for the moſt part plain, but with a great deal of carved-work, and gilding ſometimes.

3. Sign-painting, which is moſtly rough figure-work: there are alſo ſhop-keepers, who are alſo a ſort of carvers and joiners, and make and ſell all ſorts of wooden ſigns; but there are ſome alſo of pewter, which is the pewterer's work to caſt, and the ſign-painter's to draw.

4. Coach-painting, which is partly plain, and partly in figures, and ſome of it very curious: there are alſo arms-painters, which are much uſed on coaches, &c. Houſe and ſhip-painter's work is by far the moſt populous, but the heavieſt and moſt unwholſome.

PAINTING.

Of Picture-Painting.

Whoever would apply himſelf to painting, ſays that celebrated Italian painter Leonardo da Vinci, muſt, in the firſt place, learn perſpective*: this will enable him to diſpoſe things in their proper places, and to give the due dimenſions to each: having done this, he muſt learn to deſing; chuſing for that purpoſe ſome able maſter, who, at the ſame time, may give him an inſight into the colours of figures: he ought then to conſult nature, to confirm himſelf in what he has already learnt; and, laſtly, let him apply himſelf to the ſtudy and imitation of the greateſt maſters, in order to get a habit of reducing what he has learnt into practice.

* That perſpective is an eſſential requiſite in a good painter, is atteſted by all our moſt eminent artiſts, and is moreover confirmed by almoſt every author, who has wrote with judgment upon painting; nay, the very term painting implies perſpective. For, to draw a good picture, is to draw the repreſentation of nature, as it appears to the eye; and to draw the perſpective repreſentation of any object, is to draw the repreſentation of that object, as it appears to the eye: therefore, the terms painting and perſpective ſeem to be ſynonimous, though I know there is a critical difference between the words. Yet this will ſerve, at leaſt, to ſhew the near alliance between painting and perſpective; that if the one doth not comprehend the other, perſpective, however, may be ſaid to be the baſis upon which painting is built; and therefore, he who attempts to paint a picture, without having a general knowlege of it, will always wander in the mazes of uncertainty, be ſubject to the greateſt errors, and his works, like thoſe of Boticello, will be the leſs regarded. And what is ſaid of the uſefulneſs of perſpective to painters in particular, may be applied to artiſts in general; ſuch as engravers, architects, ſtatuaries, chaſers, carvers, &c.

To deſign well, and to diſpoſe the lights and ſhadows of figures ſuitably to their ſituations, being the moſt conſiderable parts of this art, and thoſe on which the greateſt ſtreſs depends; it is in theſe that a painter, who would make any great proficiency, ought principally to exerciſe himſelf.

Of all animal operations, we plainly perceive ſight to be the moſt quick: it moves with incredible velocity, and diſcovers a thouſand objects in an inſtant. But then it ſees them very confuſedly, and, in effect, does not diſcern above one at a time. For inſtance, if you glance your eye over a page of this book, you will immediately perceive it full of different characters; but what theſe characters are, or what is intended by them, will be ſtill a ſecret: inſomuch, that to gain any determinate knowlege of what you have ſeen, you muſt conſider them by piece-meal, forming the letters into words, and thoſe again into periods; ſo a man who would mount to the top of a building, is content to go up ſtep by ſtep, as knowing it impoſſible otherwiſe to reach it: in the ſame manner, a perſon who would attain to ſkill in painting, muſt begin with the parts of objects, before he can proceed to repreſent them entire; and muſt take them in order, never advancing to a ſecond, before he has got a good habit of doing the firſt: for, otherwiſe, his time will be thrown away, or at leaſt, his advances rendered extremely ſlow and imperceptible. He muſt further inure himſelf to work with patience and ſteadineſs, always remembering, that a ſlow diligence will out-ſtrip a haſty negligence.

Some people have a fancy for painting, who yet want the neceſſary diſpoſitions tqereto: this is eaſily diſcoverable in children, who amuſe themſelves with drawing imperfect ſketches, never troubling themſelves to ſhadow any thing they undertake.

A painter deſerves but a ſmall ſhare of reputation, who only ſucceeds in ſome one branch of his art; as for inſtance, in painting a nudity, a head, drapery, animals, landſkips, &c. ſince the heavieſt genius, by inceſſant plodding on the ſame thing, cannot fail, at length, of performing it well.

A painter muſt therefore be univerſal, and apply himſelf to the ſtudy and conſideration of all objects; but ſo as to attend in a particular manner to thoſe parts of each, which are the moſt beautiful and perfect: by this means his imagination will become like a mirrour, repreſenting every thing laid before it, in it's proper character and colour.

But further, a painter, who is not equally pleaſed with all parts of his art, will never become univerſal. Boticello, for inſtance, had a peculiar pique againſt landſkips, and thought them much beneath his application; the effect of which was, that being a very ſorry landſkip painter, his merit, in other matters, was the leſs regarded. It was a ſaying of his, that a palet full of colours being thrown againſt the wall, would leave a ſtain behind it properly enough repreſenting a landſkip. It is true, indeed, that by help of a ſtrong fancy, one may ſpy heads, battles, rocks, ſeas, clouds, woods, &c. in a wall ſo ſmeared; it being here, as in the ringing of bells, where every body is at liberty to make them ſay what he pleaſes.

But then, though ſuch a fortuitous mixture of colours may ſtart a hint, or give riſe to a new invention, yet it will not furniſh the leaſt aſſiſtance towards the execution, or finiſhing any thing that is occaſioned.

A painter who would appear univerſal, and pleaſe people of different taſtes, muſt ſet off ſeveral figures in the ſame piece, both with very deep and very ſoft ſhadows; taking care by the way, to make the reaſon of ſuch diverſity apparent.

A painter ought to have his mind continually at work, and to make remarks on every object, worthy of notice, that he meets. He ought even to ſtand ſtill, in order to view them with the greater attention; and afterwards to form rules on what he has obſerved, with regard to lights, ſhadows, place, and other circumſtances. Let him make himſelf a maſter of the theory, before he meddles with the practice, and be very curious in comparing the limbs and junctures of different animals with one another; taking minutes of every thing he learns, the better to fix them in his memory.

A painter who has no doubts in his ſtudies, makes but a ſmall progreſs in his art; it being an infallible ſign, where all this appears eaſy, that the workman is inſufficient, and the work above his pitch. But when once a painter has got a juſt ſenſe of the whole difficulties of his work, every new reflection he makes, will give him new ſtrength to ſurmount them; inſomuch, that if he perſeveres in it, every day will contribute ſomething towards his improvement and perfection.

Let a novice in the firſt place exerciſe his hand, in copying the deſigns of ſome able maſter; after he has got a habit of doing this, he may proceed to relievos, deſigning after them with proper application.

The firſt ſketch of a hiſtory piece muſt be very ſlight, and the figures very imperfectly formed, your principal regard being to the juſtneſs of their ſituation: having adjuſted the

ordonnance * of the piece, you may finiſh the members at your leiſure.

* Ordonnance is the placing regularly the figures, in reſpect of the whole compoſure; or the particular diſpoſition of figures, as to the different groupes, maſſes, contraſts, decorum, aſpect, and ſituation.

Whenever either your own reflection, or the information of your friends, points out any fault in your work, correct it immediately; leſt in expoſing the piece to the world, you expoſe your own weakneſs: nor flatter yourſelf, that what reputation you loſe by letting it eſcape, may be retrieved in your next performance. It is not with painting as with muſic, which dies in the breath that gives it birth: painting is of a more durable nature, and whatever over-ſights of this kind you make public, will be ſtanding reproaches to you ever afterwards.

Nothing deceives us more than the judgment we form of our own works, nor are the opinions of our friends much more to be relied upon: a friend is, in effect, a ſecond ſelf, and therefore to be held in the ſame degree of ſuſpicion. It is the critic of our enemies, that we ought to form ourſelves by: this is uſually ſincere, which is more than I can ſay, either for myſelf or my friend.

Among other things, I ſhall not ſcruple to deliver a new method of aſſiſting the invention; which, though trifling in appearance, may yet be of conſiderable ſervice in opening the mind, and putting it upon the ſcent of new thoughts; and it is this; if you look at ſome old wall covered with dirt, or the odd appearance of ſome ſtreaked ſtones, you may diſcover ſeveral things like landſkips, battles, clouds, uncommon * attitudes, humourous faces, draperies, &c. out of this confuſed map of objects, the mind will be furniſhed with abundance of deſigns and ſubjects perfectly new.

* Attitude implies little more than action and poſture; though it is ſometimes uſed, where neither of theſe would be proper: for inſtance, action is not applicable to a dead corpſe: nor do we ſay, that ſuch a figure is in a handſome poſture, but in a graceful attitude or diſpoſition,

I have often found it for uſe to recollect the ideas of what I had conſidered in the day, after I was retired to bed, and incompaſſed with the ſilence and obſcurity of the night. For by thus repeating the contours, and other parts of figures which require a cloſer attention, their images are ſtrongly impreſſed on the memory, and familiarized to the mind.

If you intend to become a proficient, be ſure never to deſign any thing ſlightly, or in haſte; but take time to conſider, with regard to lights, which parts receive the ſtrongeſt, and, in ſhadows, which are the deepeſt; obſerve how theſe mingle together, and in what quantity, ſtill comparing the one with the other. As to the contours, conſider towards what part they are to be directed, what quantity of light and ſhadow meet within the lines, where they are more or leſs ſtrong, larger or ſmaller; and, laſtly, take care that your lights and ſhadows do not terminate abruptly, but that they fall ſoftly into one another, and at laſt loſe themſelves inſenſibly, like ſmoke. After you have once habituated yourſelf to be thus punctual and exact in your deſigns, expedition and diſpatch will come a-pace.

While a painter is employed either in deſigning or painting, he ought to liſten with attention to the different ſentiments which different people entertain of his performance: there being no body, how ignorant in painting ſoever, but who underſtands the ſhape of a man, and can readily tell whether he be hump-back'd, crooked-legg'd, have any thing monſtrous in his hand, or any the like blemiſh: why may not a perſon then, who can ſo well diſtinguiſh the defects of nature, be allowed to judge of thoſe of arts?

It is ridiculous in a painter to confide ſo far in his memory, as think it capable of retaining all he has ſeen and obſerved in nature: the memory is a faculty too weak, as well as too narrow for that purpoſe; and the only ſure way is to copy, as much as poſſible, from nature herſelf.

A painter loſes a great deal of his dignity, by confining his genius, and never venturing out of his ordinary courſe: there are ſome, for inſtance, who apply themſelves to the painting of nudities; but ſo as ſtill ſtrictly to obſerve the ſame proportions, and never introducing the leaſt variety. Whereas, they ſhould conſider, that a man may be well proportioned, whether he be thick or ſlender, ſhort or tall. By diſregarding this diverſity of proportions, a painter ſeems to caſt all his figures in the ſame mould, which is an error of the firſt magnitude.

A painter well acquainted with the theory of his art, may, without any great difficulty, render himſelf univerſal. For all terreſtial animals have this in common with each other, that their members are compoſed of muſcles, nerves, and bones; the only difference between them lying in their different lengths and thickneſſes, as is demonſtrated by the anatomiſts. As to aquatic animals, in which indeed there is a great variety, I think a painter who is well adviſed, will not trouble himſelf about them.

Thoſe who venture on the practice, without firſt qualifying themſelves in the theory, are like mariners putting out to ſea without either helm or compaſs, ignorant what courſe to take. The practice ought always to be built on a rational theory, of which perſpective is both the guide and the gate, and without which, it is impoſſible to ſucceed, either in deſigning, or in any of the arts depending thereon.

A painter ſhould never tie himſelf to imitate the * manner of any other; his buſineſs being not to repreſent the works of men, but thoſe of nature; who at the ſame time is ſo abundant in her productions, that it is ridiculous to have recourſe to her ſervants, who have nothing but what they borrowed from her, when the miſtreſs herſelf is ſo ready to entertain them.

* Manner is the habitude that painters have acquired, not only in the management of the pencil, but alſo in the three principal parts of painting, viz. invention, deſign, and colouring: it is by the manner in painting that we judge this piece to be Titian's, Tintoret's, or Vinci's hand; as by the ſtile in writing, we gueſs this book to be this or that author's.

To deſign after nature, or the life, you muſt be removed from the object, three times it's magnitude; taking care, as you draw each ſtroke, to obſerve what parts of your * model meet under the principal, or perpendicular line.

* The model is generally taken for any natural object that preſents itſelf to be drawn; in particular, it ſignifies a ſtatue, nudity, or the like, ſet up in the academies, to be copied by the novices in painting.

To judge of the goodneſs of a picture, drawing, or print, ſays Mr Richardſon, it is neceſſary to eſtabliſh to ourſelves a ſyſtem of rules, to be applied occaſionally: theſe are no other than thoſe which he that is to give ſuch judgment, would have been directed by, had he been to have made, what now he is to judge of.

And theſe rules muſt be our own; whether as being the reſult of our own ſtudy and obſervation, or by others examined and approved by ourſelves.

To aſſiſt the judgment herein, the following rules have been laid down.

I. The ſubject muſt be finely imagined, and, if poſſible, improved in the painter's hands; he muſt think well as an hiſtorian, poet, philoſopher, or divine, and moreover as a painter, in making a wiſe uſe of all the advantages of his art, and finding expedients to ſupply it's defects.

II. The expreſſion muſt be proper to the ſubject, and the characters of the perſons. It muſt be ſtrong, ſo that the dumb-ſhew may be perfectly well, and readily underſtood. Every part of the picture muſt contribute to this end; colours, animals, draperies, and eſpecially the actions of the figures, and above all the airs of the heads.

III. There muſt be one principal light, and this, and all the ſubordinate ones, with the ſhadows and repoſes, muſt make one intire harmonious maſs; the ſeveral parts muſt be well connected and contraſted, ſo as the tout-enſemble muſt be grateful to the eye, as a good piece of muſick is to the ear. By this means the picture is not only more delightful, but better ſeen and comprehended.

IV. The drawing muſt be juſt; nothing muſt be flat, lame, or ill-proportioned, and theſe proportions ſhould vary according to the characters of the perſons drawn.

V. The colouring, whether gay or ſolid, muſt be natural, beautiful, and clean, and what the eye is delighted with, in ſhadows, as well as lights and middle tints.

VI. And whether the colours are laid on thick, or finely wrought, they muſt appear to be done by a light, and accurate hand.

Laſtly, nature muſt be the foundation that muſt be ſeen at the bottom; but nature muſt be raiſed and improved, not only from what is commonly ſeen, to what is but rarely, but even yet higher, from a judicious and beautiful idea in the painter's mind, ſo that grace and greatneſs may ſhine throughout; more or leſs, however, as the ſubject may happen to be. And herein conſiſts the principal excellency of a picture or drawing.

Theſe few plain rules being thoroughly comprehended and remembered, which may be done with a tolerable meaſure of good ſenſe, a little trouble in reading, and a good deal of obſervation on nature and pictures, and drawings of good maſters, may greatly contribute to enable a perſon to be a tolerable judge in theſe matters, as being derived from, and founded upon, reaſon; and though not deſtitute of abundant authority, yet neither borrowed from thence, or at all truſting to that for their ſupport.

For, whatever authorities there are for any propoſition, their value conſiſts in their being derived from reaſon, and they weigh with men of ſenſe in proportion only as they ſee they do ſo; they then become our own, and we have no occaſion to produce the author but the reaſon: or, (if that be obvious) leave it to be obſerved by the reader.

The matter would terminate here, though we had a book of rules for painting, ſaid to be written by Appelles himſelf, and it were allowed that what Appelles ſaid were infallibly true; for then, inſtead of ſaying, are theſe rules good, are they founded upon reaſon? the queſtion would only be, are they really of him? Their authority then will reſt, not upon the credit of Apelles, but upon the teſtimony of thoſe that ſay they are his. Which we ſhall not want, if we find the rules to be good, and if we do not, it will be inſufficient; and all this without the leaſt prejudice to the profound reſpect we have for Appelles, nay it is a neceſſary conſequence of it.

To judge of the degrees of goodneſs of a picture or drawing, it is neceſſary that the connoiſſeur ſhould be thoroughly acquainted, and perpetually converſant with the beſt. For how perfectly foever he may be maſter of the rules of the art, he will know that thoſe are like what divines call precepts of perfection; that is, they are given as what we ſhould endeavour to go by, as far as we are able. The beſt things we know will be the ſtandard by which we ſhall judge of thoſe, and all the reſt. Carlo Maratti and Guiſſeppe Chiari, will be a Raphael and Giulio Romano, to him who has never ſeen better; and then an inferior maſter will make a good Carlo. We have been ſurprized to obſerve what pleaſure ſome connoiſſeurs have taken, in what another looked upon with little, if not with contempt, 'till we have conſidered one was not ſo well acquainted with the works of the beſt maſters as the other, and that accounts for it ſufficiently.

All the different degrees of goodneſs in painting may be reduced to theſe three general claſſes. The mediocre, or indifferently good, the excellent, and the ſublime. The firſt is of a large extent, the ſecond much narrower, and the laſt ſtill more ſo. I believe moſt people have a pretty clear and juſt idea of the two former, the other is not ſo well underſtood; which we take to conſiſt of ſome few of the higheſt degrees of excellence in thoſe kinds, and parts of painting, which are excellent: the ſublime therefore muſt be marvellous and ſurprizing; it muſt ſtrike the mind powerfully, and captivate it irreſiſtably.

The ſublime may be confined to hiſtory and portrait-painting; and theſe muſt excel in grace and greatneſs, invention, or expreſſion. Michael Angelo's great ſtile intitles him to the ſublime, not his drawing; it is that greatneſs, and a competent degree of grace, and not his colouring, that makes Titian capable of it: as Corregio's grace, with a ſufficient mixture of greatneſs, gives this noble quality to his works. Vandyke's colouring nor pencil, though perfectly fine, would ever introduce him to the ſublime; it is his expreſſion, and that grace and greatneſs he poſſeſſed (the utmoſt that portrait-painting is capable of), that ſets ſome of his works in that exalted claſs; in which, on that account, he may, perhaps, take place of Raphael himſelf in that kind of painting, if that great man's fine and noble ideas carried him as much above nature then, as they did in hiſtory, where the utmoſt that can be done is commendable, a due ſubordination of characters being preſerved; and thus Vandyke's colouring and pencil, may be judged equal to that of Corregio, or any other maſter.

Remarks.

The management of the pencil, and the mixture of colours, with the knowlege of perſpective, and a habit of deſigning, wherewith moſt painters ſeem to content themſelves, make but a part of the art, according to the ſentiments of the moſt celebrated artiſts. To theſe the aſſiſtance of other arts muſt be called in; anatomy, optics, meterology, mechanics, &c. ſearching attentively into the power of nature, in order to form an art that may imitate her; and, from the depths of philoſophy, drawing means for the improvement of painting. It is not in painting alone, but in philoſophy likewiſe, that the moſt eminent have excelled their brethren of the pencil; nor does it appear improbable, but that it was from uncommon ſkill in the latter, to which, in great meaſure, they have owed their ſucceſs in the former. Theſe are two faculties that may be nearer a-kin, than every one, perhaps, is aware of; nor would there be any thing daring in the aſſertion, ſhould it be affirmed, that philoſophy is abſolutely neceſſary, by way of preliminary to painting.

To paint, it is allowed, is to imitate nature; but is not the knowlege of nature requiſite to the imitation of her beauties? Muſt it not be pleaſant to ſee men about to repreſent natural objects, who are unacquainted with the nature and properties of the objects to be repreſented? Quacks, indeed, there may be in painting, as well as in other profeſſions; but to become a regular painter, it is indiſpenſably neceſſary, that a man ſerve an apprenticeſhip to philoſophy.

We have people who pretend to cure diſeaſes, without knowing any thing of the animal œconomy, or of the powers of medicines; we have others, who would be thought to paint by the mere mechaniſm of a hand, and the motion of the pencil: but, as the college will never allow the former to be phyſicians, ſo there is no reaſon why the latter ſhould be complimented with the title of painters.

That this art requires ſuitable inſtitutions for it's advadcement and encouragement in this nation, may be naturally urged, if we conſider it only in the commercial light. For there may be great pecuniary advantages accrue therefrom, ſuch as ought to engage the attention of the mere merchant. If we had more regular artiſts, and in greater number, not only much money, which is now ſent to France and Italy, might be ſaved, but a very profitable exportation might be made of thoſe works that were not purchaſed by our own connoiſſeurs. If we conſider the great number of foreign ſtatues, paintings, and prints, that are brought into this kingdom, the prodigious price that is given for ſome, and the more than equitable price that is given for all; muſt not the conſideration ſuggeſt to us, that this article is highly diſadvantageous to the nation? We often hear of a ſum given for a ſingle piece, the work of an antient or foreign maſter, that equals the annual revenue of a gentleman's eſtate. And, ſometimes, the ignorance of the purchaſer, or the confident knavery of the ſeller, impoſes on us a copy of little value, inſtead of an original. And whatever is paid for one of theſe extravagant articles of luxury, more than it will ſell for again at a foreign market, is ſo much loſs to the common national ſtock, as well as to the private fortune of the immediate ſufferer.

That we have annually a great many of theſe loſing articles, will ſcarce be diſputed; and whatever one nation, by ſuch means, draws from another, muſt contribute proportionably to it's advantage. The ſmalleſt branch of trade, if carried on to our diſadvantage, muſt, in time, contribute to impoveriſh us, and enrich thoſe who deal with us on the beneficial ſide.

But, if the Britiſh artiſts became ſuperior to the French and Italian, and could raiſe a tribute on thoſe nations for any curious productions, we ſhould not only ſave all the balance againſt us on this account, but draw into the nation as much more to their diſadvantage. This would be adding continually to our wealth, and conſequently to our ſtrength and influence.

But what would this be, compared with the great influx of riches that would accompany perſons of diſtinction from foreign nations? Do we viſit Italy for the purity of it's religion, or ſuperiority of virtue and wiſdom? Or France for the freedom of it's government? An Italian or Frenchman will not ſay this, unleſs he be ignorant, and a bigot. Is it becauſe they are commercial nations, more than ourſelves? Neither can that be admitted. Why then is it, but becauſe the cities of Italy abound with temples and palaces, venerable and antient in themſelves, and enriched with all the profuſion of art by the greateſt maſters? But becauſe France is in the road to Italy, whom ſhe has robbed of many of her treaſures, and whom ſhe rivals in expenſive projects, though not in the beauty of execution. Had we as curious works of our own, in the ſame abundance, ſhould we be at ſo much expence, and, perhaps, loſs of time, to viſit thoſe of our neighbours? They who are loudeſt againſt the folly and abuſe of travel, can ſcarcely be of this opinion: there would be no pretence for the fops and fools, if the men of taſte and good ſenſe did not meet with ſome entertainment. Admitting, therefore, that the greateſt part of our travellers are of the former claſs, thoſe of the latter muſt, in this reſpect, always lead the faſhion. Travel will always be commendable in men of taſte and real curioſity, while neighbouring nations have theſe means of inſtruction or delight, which we are deficient in ourſelves: but could we only rival our neighbours in the elegant and polite arts (as we already confeſſedly do in literature) the ſame motive would not remain: the men of ſenſe would not waſte the time which they eſteem precious, and the grand tour of our petits maitres would not be juſtified by grave example.

The Lacedominians were certainly a brave, and hiſtory has called them a wiſe, people; yet they forbad travel to their youth, as it contributed, in their opinion, to ſoften and corrupt their manners. If we have not been already too much ſoftned and corrupted, the compariſons made betwixt former ages, and the preſent, are unjuſt. But do not all who make theſe compariſons, aſcribe the difference to the bad habits we have learned from foreigners, whom, in point of bravery, our anceſtors would have deſpiſed? Not only the cnlture of our lands, and the manufactures of our productions, but the arts of peace and war were known to thoſe anceſtors: what then do moſt of our young gentlemen learn? Are the dancing a minuet, and humming an Italian air, ſo great excellencies? Admitting they were, the care of the preſent age has provided maſters capable of teaching both, even at home. No body can ſay that we are not, in this and other reſpects, ſhameful to mention, ſufficiently Frenchified and Italianized. See the article Dancing Master.

All that we would aim at is, to ſpirit up our own country, as well to excel in the art of painting, as in all other the polite arts, which contribute either to the wealth, or to the delight or ornament of the nation; that we may at leaſt draw foreigners of merit and diſtinction into our own country, in the like proportion that they draw Britons of figure and worth into other countries. See the articles Design and Engraving.

PALATINATE of BAVARIA, or the UPPER PALATINATE, in the circle of Bavaria, in Germany, ſometimes

ſometimes called the Nortgow, from it's northern ſituation, in reſpect of the elector of Bavaria's other dominions. It is bounded by Voigtland in the circle of Upper Saxony on the north, by Bohemia and Auſtria on the eaſt, by the river Danube, which ſeparates it from the Danube of Bavaria on the ſouth, and by Swabia and part of Franconia on the weſt, being about 70 miles long and 40 broad; a mountainous, rocky country, but in ſome places their vallies produce good corn and paſture. They have alſo ſome vineyards, but their wine has a ſharp, unpleaſant taſte. In their hills are rich mines of copper, ſilver, and iron; and the forges and manufactories of iron, are very conſiderable in this country.

PALATINATE of the RHINE, ſituated in the circle of the Lower Rhine, in Germany, is bounded by the archbiſhoprics of Mentz and Triers on the north, by the circles of Franconia and Swabia on the eaſt, and by Alſatia and Lorrain on the ſouth and weſt, being upwards of 100 miles long, and from 50 to 70 broad. The Rhine, the Neckar, and other fine rivers running through it, contribute to render it one of the pleaſanteſt and moſt fruitful provinces of Germany; only unhappy in lying on the frontiers of France, whoſe princes have burnt and plundered this country, and demoliſhed it's fine towns ſeveral times during the wars. It is always obliged to ſubſiſt large armies of friends as well as enemies, whenever there happens a quarrel between France and the German princes. The revenues of the Palatinate ariſe by a toll on all veſſels going along the Rhine, Neckar, and other rivers; and from the duties on corn, wine, and other proviſions; the whole eſtimated at 300,000 l. per annum. That prince keeps up a body of 6 or 7000 men in time of peace, and in the late wars maintained 12,000 regular forces many years. There is a diſpute ſubſiſting between the elector Palatine and the elector of Hanover, about the titular office of arch-treaſurer of the empire.

PALM, a meaſure taken from the extent of the hand. The modern palm is different in different places where it obtains. —At Rome it contains 7 inches $\frac{1}{2}$: at Naples 8 inches: at Genoa 8 inches $\frac{4}{5}$: at Morocco and Fez, 7 inches $\frac{1}{3}$: in Languedoc and ſome other parts of France, 8 inches $\frac{1}{3}$.— The Engliſh palm is 3 inches. At Leghorn there are two kinds of palms, the one for woollen, the other for ſilks: the firſt one third ſhorter than the latter.

PALESTINE, a part of Aſiatic Turkey, is ſituated between 36 and 38 degrees of eaſt longitude, and between 31 and 34 degrees of north latitude, bounded by mount Libanus, which divides it from Syria on the north, by mount Hermon, which ſeparates it from Arabia Deſerta on the eaſt, by the mountains of Sier and the deſerts of Arabia Petræa on the ſouth, and by the Mediterranean Sea on the weſt; ſo that it ſeems to have been extremely well ſecured againſt foreign invaſions. It was called Paleſtine, from the Philiſtines, who inhabited the ſea-coaſts. It was called alſo Judea, from Juda; and the Holy Land, from our Saviour's reſidence and ſufferings in it: and it is called Canaan, and the Promiſed Land, in the ſcriptures. It is 150 miles in length and upwards, and 80 in breadth; and, in the time of Solomon, it ſeems to have extended from the Mediterranean Sea to the river Euphrates. It is generally a fruitful country, producing plenty of corn, wine, and oil, where it is cultivated; and would be able to ſupply it's neighbours with corn and wine, as it did formerly, if the preſent inhabitants were as induſtrious. The country about Jeruſalem is the moſt mountainous and rocky; but theſe mountains feed great herds of cattle, abound in milk and honey, and produce excellent wine and olive-oil where they are cultivated, as the vallies between the mountains do good crops of corn.

PAPER, a thin flexible matter, uſually white to write upon, and other ſorts for divers other uſes.

Paper owes it's origin to the neceſſity that mankind were always under, to communicate their ſentiments when at a diſtance from one another, and to the deſire of tranſmitting their thoughts to poſterity. For this purpoſe they firſt thought of carving or painting upon the bark or leaves of trees, the characters which they uſed. The natives of America ſtill uſe the ſame expedients, and theſe may be looked upon as a living proof of what is recorded of the firſt men of the old world.

They found inconvenience in having books compoſed of ſmall bits of bark ſtrung upon twiſted leaves, or on one piece of bark or leaves rolled up, and endeavoured to find another matter which might be more commodiouſly uſed. The Egyptians, who firſt ſettled a well governed ſtate, were likewiſe the firſt who endeavoured to procure this advantage; nevertheleſs it was not (according to Pliny) 'till the time of Alexander's victories, that they made this diſcovery. They fell upon a method of making, from a kind of dog-graſs, a ſubſtance, which ſoon became a conſiderable and lucrative branch of trade, and this manufacture was the firſt thing that deſerved the name of paper.

Rome, as much as it was poſſible, furniſhed itſelf with this paper, and as often as the Gauls could procure it, they gave it the preference to the birch bark; but the difficulty of bringing it from ſuch a diſtant country as Egypt, weighing too equally againſt it's property of taking any deſired form, and of being folded together in ſheets, the Gauls, and other nations endeavoured, in like manner, to find the means of ſupplying it among themſelves. They accordingly found the method of making it with cotton: and according to Montfaucon, in his Eſſay upon the Egyptian paper, inſerted among thoſe of the academy of the Belles Lettres, at the end of the ninth century, this deſtroyed the Egyptian paper manufacture through all the eaſt; and this diſcovery led to that of our paper, which is made of rags; the æra of which, as ſettled by Montfaucon, is in the twelfth century.

Yet long before that period, the Chineſe (according to P. du Halde) made it with cotton-rags. He ſays, in the article of Chineſe paper, that in the 95th year of the Chriſtian æra, a mandarine of the palace manufactured paper of the bark of different trees, old rags of ſilk and hemp that had been uſed. Be that as it will, as ſoon as the rag paper appeared, it ruined the Egyptian paper in the weſt, as the cotton paper had formerly ruined it in the eaſt. We muſt own, however, that the advantages of paper made of rags, ought not to have been ſo fatal to that of Egypt, but on the contrary engaged their manufacturers to bring it to perfection Every thing ſeemed to lead the way.

The different kinds of paper had always been made of plants: and although the birch bark and the prepared leaves, were, not properly ſpeaking, of that ſpecies, yet the facility of folding and rolling, ſhewed a flexibility in the fibres, capable of that preparation which is given to rags. It may be obſerved, that theſe very rags are no other than fibres of a plant, which had ſuffered a kind of decompoſition, which had not happened to thoſe that they made uſe of. It was therefore natural to think, that if they had undergone the ſame preparation, they would have produced ſuch a paper, or at leaſt a kind that would have reſembled our own.

Let us not ſeek for matter of reproach againſt the Ancients. Their occaſions for paper were not probably ſo preſſing as ours; ſince, notwithſtanding the quantity of rags which is collected, the price of it ſometimes riſes ſo high, that the manufacturers are deſirous of finding other materials for the ſame purpoſe, or compelled to have recourſe to expedients which are prohibited, in ſome countries, by the regulations touching paper-works, though they always find means to conceal them from the vigilance of the inſpectors.

When the rags that are proper for making white paper become ſcarce, they employ thoſe which at other times are uſed for the coarſe paper, and prepare them with chalk-water. By this preparation they conſume, and indeed deſtroy the foreign bodies which are in theſe coarſe materials, but at the ſame time diſcompoſe the fibres of the rags, ſo that there muſt certainly be a great waſte. If we ſhould do no more then, but find a method for preventing this waſte, and procure ſuch materials as the workmen at ſuch times deſire to have, ſhould we not gain a great advantage to the paper works? This new matter might be uſed for coarſe paper, and the other enter into the compoſition of white paper, and of conſequence the price of fine rags would fall, or at leaſt never become exceſſively dear. In my opinion, therefore, we ought to have been for a long time, employed in ſearch of a remedy for thoſe times of dearth, and in preventing the conſequences ſo naturally drawn from the manner in which we now manufacture our paper.

It is not from the workmen we are to draw ſuch conſequences. He himſelf who makes any diſcovery, very rarely perceives all it's conſequences: the novelty often blinds us, touching what is already diſcovered, and makes us deſpiſe it, inſtead of engaging us to bring it to perfection. It therefore requires men who, together with a diſcerning underſtanding, have a deſire to bring the arts to perfection, and to enable mankind to enjoy them at a ſmall expence.

M. de Reaumer, in an eſſay publiſhed in the year 1719, upon waſps, ſeems to perceive theſe conſequences. Waſps built habitations, the outward parts of which ſeem to be of paper or ſtrong paſteboard: in ſuch a manner do they prepare bits of rotten wood, as to make them aſſume that conſiſtence.

M. de Reaumer took a hint from this obſervation, touching the perfection of paper-works. He in his eſſay explains his own idea of that ſubſtance, and wiſhes thoſe who have an opportunity would examine, if it is ſuch as he has conceived it to be: and this ſubject he has renewed in the ſixth volume of his hiſtory of Inſects.

Seba likewiſe, in the firſt volume of his Natural Hiſtory, has invited the curious to proſecute the ſame project in theſe words. 'This country, ſays he, does not ſeem to want trees fit for making paper, if people would give themſelves the neceſſary trouble and expence. Alga marina, for example, which is compoſed of long, ſtrong, viſcous filaments, might it not be proper for this purpoſe, as well as the matts of Muſcovy, if they were prepared as the Japoneſe make their timber? The curious may at leaſt try the experiment.' Whether there are no people, as Seba demands, who have opportunities of proſecuting this work, or that every body is averſe to go to work, except upon his own plan, I know not one author who has communicated any thing upon this ſubject.

P. du Halde, in the firſt volume of his Hiſtory of China, pretends that the Chineſe make paper of the ſecond bark of bamboo,

bamboo, of the bark of different trees, particularly the mulberry, of ſtraw, rue, and hemp. Kœmpfer, in his voyage to Japan, and after him Seba, in the aforementioned book, report, that paper is made in that country of the inner bark of a kind of mulberry-tree.

M. de la Loubaire ſays, that the Siameſe make it of old cotton cloth, or the bark of a tree called toncoë. Flacourt deſcribes the manner in which the inhabitants of Madagaſcar make theirs of a kind of mallow, which they call avo. Finally, all the travellers to India as well as to America, recount with emphaſis, the advantages drawn from the palm-tree for making ſtuffs, of which, when they are worn, it would doubtleſs be eaſy to make paper. The opportunity which the paper-mills in the neighbourhood of Eſtampes, ſeemed to afford me, of fulfilling the wiſh of ſome, and verifying what hath been ſaid by others, touching our trees and plants that are analogous to thoſe mentioned by the authors above, has induced me to collect ſeveral of theſe plants. After having ſurmounted all the difficulties, which we always find among workmen, when any novelty is introduced among them relating to their occupation, I have at length ſucceeded ſo far as to have tried ſome experiments, and flatter myſelf which being able to continue thoſe which I have in view.

Hitherto I have only ſpoke, as if paper was made of nothing but vegetable ſubſtances, and that no materials could be taken from animal nature. Nevertheleſs, it is doubted whether in China, paper is not made of ſilk. Pere du Halde ſays, that they gather the refuſe cods, when they are unwound in the ſilk manufactures, and make paper of them; but, notwithſtanding the aſſertion of that author, the fact has been always conſidered as problematic.

I will relate an experiment which may help to explain this queſtion: but before I deſcribe my ſucceſs, I believe I had better diſtinguiſh the different plants I have mentioned above, and preſent them in a methodical manner. By theſe means the public will have a botanical hiſtory of paper, and ſee the plan of the work propoſed.

The materials for paper then may be divided into two general claſſes, namely vegetable ſubſtances, and thoſe that belong to the animal kingdom.

In the great number of plants uſed for making paper, or of which people ſuppoſe it might be made, a regular order may be found. People of different countries, have been conducted by a kind of natural analogy. They have not ſought to employ plants that were very different from thoſe already in uſe. They have taken them of different claſſes, in different kinds, but always in ſome of thoſe which had been before uſed, though probably they were ignorant of that circumſtance. In effect, the greateſt part of plants ſeems to be compoſed of long, longitudinal fibres, nearer or cloſer to one another, and covered with a ſubſtance which fills up the intervals: ſuch are the palmiferous, the gramineous, and the liliaceous.

The claſs of the palmiferi is one of thoſe, which have been of moſt ſervice to the Indians, Aſiatics, and Americans, in furniſhing them with cloathing, cordage, ſails and other utenſils; almoſt every part of theſe trees has ſerved ſome of thoſe uſes, though they do not indifferently take every part of the ſame tree. Theſe people have in the palm-tree, which they found among them, choſen what was moſt ſuſceptible of manufacture. In ſome they choſe the ſpatha, which invelops the regimen of fruits before they are ripe, or that which ſuſtains the young leaves: and in others they employed the down which ſurrounds the fruit. The young and tender leaves have been preferred to this wool or down, which was not conſiderable in other kinds; and when all theſe could not be compared to the bark for goodneſs and quantity, they made uſe of this laſt.

The down of the fruit of the cocoa-nut-tree, the ſpatha, the leaves and bark have been uſed, as ſeveral travellers relate. Rumphius, in his Hiſtory of the Plants of Amboyna, ſays as much of the calapa: the pinanga, the wild lonturus, the tetum, the hakum, the wanga, all different kinds of the palm-tree, furniſh in their leaves a thread more or leſs fine, of which thoſe people make ſtuffs.

They have even prepared the leaves of the hakum, and foribe, and uſed them inſtead of paper. The advantages which the Indians drawn from the palm-tree being already ſufficiently important, I ſhall not probably be blamed for not having inſerted what is mentioned by Ray after ſome authors: he reports, in his Hiſtory of Plants, that the cocoa-tree contains, in lieu of pith, a quire of paper of fifty or ſixty ſheets, on which people may write. This is like that which is found in the middle of a fruit of Peru, mentioned by M. Frezier, author of a Voyage to the South Sea. All this wonderful phænomenon, when reduced to it's juſt value, is in my opinion, no more than that the pith of the palm-tree and the pulp of that fruit, may be eaſily made into ſheets in the ſame manner as that of the Chineſe alder, which is made into thoſe fine artificial flowers that are brought from that country, or the books made of the roots of a kind of mallow, which requires no more than to be artfully dried and cut in leaves. The muſa or banana-tree, has been employed for ſuch-like purpoſes.

The claſs of the liliaceous includes the aloes, the yucca: from the aloes is obtained the thread of pitte, known by the uſe to which it is put.

Father du Tertre, in his Natural Hiſtory of the Antilles, deſcribes the manner in which that thread is got. Sir Hans Sloane, in his Catalogue of the Plants of Jamaica, likewiſe mentions theſe aloes. In the number of ſynonimous names which he recites, ſome of them are taken from the uſe that is made of thoſe plants, and which I cannot help, for that reaſon, repeating in this place.

The ſecond ſpecies of that author, is by Gaſpar Bauhin, in his Pinax, p. 20. called the eleventh ſpecies of papyrus, employed for paper. Cluſius, in his treatiſe of Exotic Plants, p. 6. mentions a ball of thread made of the bark of a tree, which according to Sloane, is this aloes. John Bauhin, tom. i. p. 384. copies Cluſius, and ſays, this thread is very fine and extremely white. The third ſpecies of aloes, according to Sloane, which nevertheleſs is a true ſpecies of yucca, is known to Luet, p. 645. under the name of an excellent kind of hemp or flax, which even approaches very near to the fineneſs of ſilk.

Seba in the firſt volume of his work, has given the figure of two leaves of a plant, which he calls the aquatic bullruſh of Surinam, compoſed of innumerable threads or filaments. This bullruſh, ſays that author, ought to be examined with regard to it's utility.

It was from the gramineous claſs, as already ſaid, that they obtained materials for the firſt paper, which deſerves that name. Michilli, in his New Genera of Plants, has inſerted in the number of ruſhes, the plant called by Gaſpard Bauhin, in his Pinax, p. 19. and in his Theatre of Plants, p. 333. the paper of Syria or Sicily. Is this the ſpecies formerly employed in Egypt? The figure and deſcription of it given by Proſper Alpinus, namely that of Veſlingius and the Antients, leave it doubtful, whether this laſt plant be a ruſh or not. Proſper Alpinus ſays, it is the paper called beid by the Egyptians.

M. de Juſſieu, at whoſe houſe people will always find lights in all doubts that can occur upon theſe ſubjects, and who finds pleaſure in communicating inſtruction, hath ſhewn an Egyptian plant that ſeems to be a true ruſh, and when compared with that of Michilli, exhibits no difference.

Dodo conſiders the flag as a plant proper for paper, and gives it the name of papyrus. We have obſerved above, that Pere du Halde ſays, the Chineſe made paper of ſtraw or the blades of rice. Bamboo is likewiſe employed in the ſame country for a kind of paper; and, according to the ſame author, is the reed-tree of Gaſpar Bauhin, in his Pinax, p. 18.

The birch, which is of the claſs of cat's-tail flowers, was one of the firſt trees, upon the bark of which people wrote. As the word bark may be deemed equivocal, it will not be amiſs in this place to fix it's ſignification. Are we to underſtand by this word bark, that part of trees which covers externally the trunk and branches? Or, is not rather that interior layer, which ought to become woody, and is called liber? Without all doubt, it muſt be this inner covering which we are to underſtand by the bark of birch; it ſeems alſo, that in this ſenſe it ought to be underſtood in thoſe authors, who treat of the different kinds of paper uſed by different nations. Moſt of theſe writers ſay, it is the ſecond bark which is uſed. Others have only ſaid, that they uſed the bark; but the preparations which they deſcribe, plainly ſhew, that it was this inner part that was employed.

Rumphius deſcribes two trees with cat's-tail flowers, one of which he calls the domeſticum gnemon, and the other gnemon campeſtre. The inhabitants of Amboyna, according to that author, obtain a thread from the bark of the boughs, which they beat a little; and this thread is proper for making nets, which they boil in a certain infuſion, to make them ſtronger and leſs apt to rot in the water. This ought the more carefully to be examined, as the knowlege derived from ſuch enquiry, may ſerve to bring to perfection the cordage of ſhips, as well as that of which the fiſhers make their nets.

Here we ought to recal the idea which M. de Reaumur has produced upon the ſubject of rotten wood; an idea ſo much the more happy, as it furniſhes others upon abundance of ſubſtances eaſily got: the foreſt preſents but too many of them ſometimes. The ſhops of our carpenters ſupply us with cuttings, which, by their thinneſs, are in a condition to undergo, in a little time, the neceſſary degree of rottenneſs; for here, as in every other thing, there is a proper degree which muſt be laid hold on. When the wood is too rotten, it's fibres are too much divided, they have loſt that binding which connects their parts, they become too earthy, and I believe it would then be difficult, not to ſay impoſſible, to bind them together: therefore the waſps do not uſe indifferently all ſorts of rotten wood, but know how to diſtinguiſh that which is proper for their purpoſe.

The nettle, the mulberry, and the hemp, are ranked in a claſs which is called incomplete, becauſe theſe plants want the flower, or the calix, or the petala, or both theſe parts.

Kœmpfer, in his Catalogue of the Plants of Japan, mentions one which in the Japoneſe idiom is called white hemp, and to which that author has given the appellation of the great common nettle, which bears real flowers, and yields ſtrong

thread proper for linen and other works. The ſame author calls the mulberry, which is employed for paper, the papyrus, whoſe fruit reſembles that of the mulberry, and whoſe bark is made into paper. Seba has given it the name of the mulberry-tree, which affords paper, and is cultivated at Japan. Pere du Halde ſays, tom. ii. p. 212. that before the mulberry branches, with whoſe leaves the Chineſe feed their ſilk-worms, are deſtined to the fire, ſome people ſtrip off the thin bark from theſe branches, and make of it a kind of paper, which is ſtrong enough to cover their ordinary umbrellas, eſpecially when it is oiled and coloured. I do not here join the other plant which the Japoneſe employ, becauſe Kœmpfer leaves it uncertain under what claſs it ought to be ranged. He calls it the papyrus, which lies upon the ground, yields milk, has plated leaves, and a bark proper for making paper. For the ſame reaſon we likewiſe mention here a tree, which Sloane calls the tree with broad, long, jagged, ſmooth, ſhining leaves, like thoſe of the laurel, whoſe interior rind may be extended into a fine cloth like muſlin for ruffles; this tree is commonly called lagetto, tom. ii. tab. 168, 169. The people among whom this tree is found, make cloaths of it. It is needleſs to mention the uſe of hemp in making paper, every body knows we uſe it for that purpoſe; but hitherto no paper has been made of hemp, until it had paſſed through the ſtate of rags. Yet Peru du Halde reports, that at Nangha, paper is made of hemp beaten and mixed with lime-water, tom. iv. p. 373. And this confirms the notion I entertained, that the ſtalks, or what falls upon the form in dreſſing hemp or flax, might ſerve for the ſame purpoſe. We ſhall ſpeak of this below.

The malvaceous ſpecies diſpute the preference with all the other claſſes, for this kind of employment. All the kinds of the mahot, yield a ſort of thread proper for cordage. Sloane mentions two mallows, one of which he names the mallow-tree on the ſea-ſhore, with round, ſmall, prickly leaves, white below, which bears a yellow flower, and a bark that may be made into thread. Catalogue of the Jamacia Plants, p. 95. This is one of the mahots of father du Tertre. The other is mentioned by the name of the mallow-tree with round leaves, a very large flower of a fine red colour, like the fleur de lys, and a bark which yields thread. Ibid. This is another of du Tertre's mahots. It would be unneceſſary to mention the different kinds of cotton which are uſed in making paper. I have obſerved above, that cotton-paper was invented in the eaſt, and that in China, paper was made of cotton-rags; and, indeed, theſe are not neglected even in our manufactures. Although I have advanced, that people have never ſought after plants that were far removed from thoſe claſſes which had been formerly uſed, I think I ought to except the flax, the linden-tree, and the thiſtle.

Linen-rags have entered, and now enter, into the compoſition of paper: the workmen, in picking the rags, reject only thoſe which are produced from woollen ſtuffs and hides of animals: they pretend that theſe ſtuffs cannot be beaten, but this they ſay, perhaps, becauſe they are beaten with more difficulty than produced from the fibres of plants, the parts of which are more eaſily divided. They do not reject the others in thoſe paper works where coarſe grey paper is made; the buſineſs then is to have a very fine paſte, and the hair may be beaten ſufficiently, to incorporate with the fibres of other rags, although they may not be ſo well bruiſed.

Veſlingius, in his little treatiſe upon the Utility of cultivating Plants, pretends that the down of certain thiſtles has been uſed in making ſtuffs: ex acantii lanugine demptis ſpinis, veſtes effecerunt, ſays that author. By the word acantium we muſt underſtand a kind of thiſtle. The antients often employed the word in this ſignification. The linden-tree was and is uſed in making ropes, a circumſtance that denotes a flexibility in the fibres of that tree, capable of undergoing the neceſſary preparation for making paper.

What Veſlingius, whom we have mentioned, has writ concerning the luffa Arabum, which may be conſidered as a kind of cucumber, ought to induce us to examine ſeveral plants. He ſays, that the inſide of the fruits when the ſeeds are taken out, is no other than a little net that ſeems to be made of flax; whence he conjectures, it would yield a thread like that which the Ethiopians and Indians, according to Theophraſtus, made of their cotton-apples, and the Arabians, according to Pliny, of their gourds.

I know no author but Seba, who has ſuſpected that paper might be made of ſea-plants and alga marina. When I read that part, I recollected that I had been ſtruck with the whiteneſs which it will aſſume, bleached no doubt by the ſpray of the ſea-water, by the rains and dews, and loſing that glue with which all the marine plants are covered. Upon the ſea-coaſts, the fucus is uſed for dunging the vines and circumjacent lands; and I have obſerved that this, when tranſported to the grounds, likewiſe acquires a certain degree of whiteneſs, and, like the alga, preſerves its figure, together with a ſtrong conſiſtence, nothing is ſo common on the ſea-ſhore as the fucus, which in ſome places covers the coaſt, and nothing can be more eaſily collected.

There is another plant which is likewiſe found on the ſea-ſhore, but more commonly in ponds, and the baſons of gardens; it is the conferva of Pliny, and in ſome authors bears a name that ſeems to promiſe conſiderable utility. Imperatus calls it the ſea-flax. Lœſel, in his Catalogue of the Plants in Pruſſia, gives it the name of aquatic moſs, compoſed of very fine ſilky filaments. I can ſcarce doubt, that ſome people have attempted to ſpin this plant. When it is wet, it has a flexibility that deceives people, and the great quantity of it found in thoſe places that favour it's multiplication, and by which means the fibres are interwoven in ſuch a manner, as to produce a kind of ſtuff like coarſe camblet, muſt have more than once induced people to try to make the plant uſeful in the commercial arts. I know that a great princeſs, ſtruck with the quantity and fineneſs of this plant, was deſirous of having it ſpun; but it becomes too brittle when out of the water, to be ſuſceptible of this operation. I ſhall, in the ſequel, relate the ſucceſs I had in treating it, with a view to the paper manufacture.

I thought it neceſſary to enter into a circumſtantial detail of the plants which have been uſed in the compoſition of paper, and thoſe which may be uſed for that purpoſe, in order to give, as before obſerved, a botanical hiſtory of that manufacture; and by the different claſſes which I have deſcribed, the public ſees the plant which relate to it. At the ſame time it muſt be owned, that ſome of theſe claſſes are not ſo rich here as in foreign countries. We are altogether ſtrangers to the claſs of the palmiferi: but by way of recompence, the gramineous claſs is in greater abundance. The courſe of ſome rivers is retarded by a kind of foreſt of reeds, ruſhes, and flags; and in ſome places nothing is ſo common as mallows: there is ſcarce a perſon among us, who is not ſometimes incommoded by the quantity of nettles and thiſtles. Cotton is nothing but a kind of down that ſurrounds the grain of that plant. I have therefore included in this deſign, the down of different plants, ſuch as that of willows and linagoſtris. The grounds planted with willows, are covered at one ſeaſon with the fall of the cat's tails of theſe trees; and ſome meadows, eſpecially thoſe that are barren, are full of the linagoſtris.

The ſtalks of hemp and flax are compoſed of two parts, the filamentous and that which partakes of the nature of pith. We cannot poſſibly doubt the utility of the firſt, which indeed compoſes our paper. Nevertheleſs, this thread is rejected as uſeleſs. It would therefore be a great advantage to render that part uſeful, even though the other never could ſerve any purpoſe. What prodigious quantities of materials would be acquired by theſe means! We know how much hemp is brought from Berry and Champaign in France. In the rope-works, and eſpecially thoſe of the arſenals belonging to the ſea-ports of that kingdom, great reſources would be found; they are now made into tow, which often mounts to ſuch a quantity, that they are obliged to throw it away, or make uſe of it as dung for the beds in their garden; in all the Lower Poictier, there is ſcarce a peaſant who does not reſerve a piece of ground for flax-ſeed.

It is not therefore for want of materials, that we do not endeavour to procure a paper which may vie in beauty with our white paper, or at leaſt furniſh us with a kind proper for covers and bundles. Perhaps I may be thought to have found too many plants ſuſceptible of this operation, and ſeem inclined to transform every thing into paper. Although what is related of foreign plants, may be a prejudice ſtrong enough to inſpire a notion of the utility we may reap from our own plants, I know at the ſame time, we may be impoſed upon by analogy, which is always deceitful. In other reſpects, the experiments which I wiſh we could attain, give reaſon to perfection to which I have made, although far from that hope, that one day we may acquire a certain degree of that perfection.

Thinking I ought firſt of all to examine the ſtalks of hemp as the moſt common materials, and thoſe from which I thought I had reaſon to expect ſome ſucceſs, I cauſed them to be ſteeped in water for a certain time, that they might acquire a degree of rottenneſs, which would facilitate their trituration. When they were ſuppoſed to be ſufficiently rotten they were beaten, but by a miſtake, which by the bye, I had endeavoured to avoid, theſe ſtalks were beaten with mallows and nettles, which I had ordered to be gathered and left to rot in a ſeparate place. Yet theſe different ſubſtances incorporated together: though it muſt be confeſſed, that their connection was not very ſtrong, but, on the contrary, produced a very imperfect tiſſue.

I look upon this eſſay, as ſcarce deſerving to be recounted: yet it ſhews, that the leaves of plants as well as the filaments, may unite and incorporate; and that, if thoſe different parts had been beaten ſeparately, and a proper degree of trituration beſtowed upon each, ſo as to form a well-binding paſte, ſomething better might have been produced. I will even venture to ſay, this doubtleſs would have been the caſe, having obſerved what happens in ponds and marſhes. Nature, more tranquil than art, frequently forms a very fine paper of plants that rot in thoſe watery places. I have found in ſome of the pools of water of the foreſt of Dourdon, when they have been entirely dried up, maſſes of a ſubſtance that altogether reſembles paper. They were compoſed of ſeveral lamina or

leaves,

leaves, eaſily ſeparated from one another; they tore like paper, and, though I could not then determine whether they were formed of rotten leaves, or only a kind of byſſus, it ſeemed to me that, if any of this laſt plant entered it's compoſition, there was likewiſe in it part of leaves, trees, and other plants. I have not fulfilled the aim which this obſervation inſpired me with; diverted by a variety of other occupations, I could not beſtow upon this work the time, attention, and neceſſary preciſion it required. It was more eaſy for me to repeat the experiment upon hemp alone: I therefore put in water to rot ſome very fine hemp, well cleaned from the parenchymatous part, or pith that falls from the inſtrument in dreſſing it: the paper which it produced was very ſtrong, and convinced me that it was very eaſy to make it of that part of the hemp which is thrown away in rope-works, or other workhouſes where it is dreſſed or employed.

The conviction I reaped from this experiment touching the hemp, neceſſarily influenced my notions concerning cotton, that down much ſofter and more flexible than hemp, muſt eaſily undergo the neceſſary preparation for making paper. I ought indeed, to regard the experiment I made upon cotton as ſuperfluous, after that which I had tried upon hemp; yet as authors, thoſe at leaſt whom I have read, do not ſay that cotton paper was made immediately of cotton, before it had paſſed through the ſtate of cloth, and Pere du Halde reports that the Chineſe make theirs with cotton rags, I thought proper to remove that doubt entirely, becauſe it ſeemed to me eſſential that no ſcruple ſhould remain with regard to that fact, and the ſucceſs ſeemed to influence all thoſe parts of plants to which we commonly give the name of down. Of this kind there are ſeveral, namely the linagoſtris, the cat's-tail of the willow, dog's-bane, and trumpet-wood; which, though not ſo eaſily ſpun as cotton, ſeem to me ſuſceptible of that conſiſtence which is neceſſary to the paſte or pulp of which paper is made: the cotton being therefore, beaten to a ſufficient degree, produced a ſmooth white paper, of a ſtrong texture, which promiſed to have all the advantages of our own.

I will not, however, pretend to propoſe it as an advantage to make paper of cotton: the hemp-rag is a material in our poſſeſſion, which would be altogether uſeleſs if we did not know how to employ it for this purpoſe; but by knowing, from this and other experiments, that it is poſſible to make paper with theſe different materials, even though they have not paſſed through an intermediate ſtate, we afford a ſuccedaneum to thoſe who are in want of ordinary rags, which are not ſo common as people may imagine, in countries remote from great cities.

In ſome places of our American colonies, cotton is more common than hemp-rag, which may be the means of making that trade more lucrative, and of greater conſequence; but perhaps this is giving views of utility which many other reaſons may render uſeleſs: beſides, to know whether or not it would be uſed to advantage, would require more delicate experiments, and a more minute enquiry touching the price which that paper would bring, and the profit which is acquired in the ordinary cotton-trade. I have neither made the calculations nor the experiments that are requiſite; all that I am in ſearch of, is the poſſibility of the thing, and not it's advantages or diſadvantages.

I proceeded then to try the other downs, though I have been able only to examine that of the dog's-bane, called wad, and of the two kinds that are obtained from thiſtles, that only with ſeeds of divers kinds, which are crowned, but not the rind which the antients obtained from the leaves that have been mentioned above. This experiment did not ſucceed ſo well as that which I made with cotton. The paſte formed of the down of theſe plants was not of ſuch a good conſiſtence or coherence as that of the pulp made with cotton; yet with much care and precaution, it was formed into ſheets of paper ſtrong enough to be hung upon cords to dry, but very eaſily torn; the parts did not adhere, they not being ſufficiently interwoven and bound together; and without this quality no paper can be good.

So great a difference between theſe kinds of down, may appear ſingular, but this difficulty will be explained by the following obſervation. That which is upon wad and thiſtle, is not, properly ſpeaking, a down, but formed of a ſort of hair, ſuſtained upon the ſeeds of theſe plants: theſe hairs are commonly called, by botaniſts, tufts and plumes, becauſe they form upon the ſeeds a kind of tufr, and many of them puſh out branches on the ſides, by which they reſemble real plumes, or feathers.

Cotton, on the contrary, is a down that ſurrounds the grain, without order or regularity, ſticking cloſely to it, without any conſtant figure. When this is pulled off, and the ſeed wiped clean, we can eaſily perceive that it iſſues from ſmall points, like ſo many holes. If this operation is performed while the fruit is young, the thread or hairs are found ſofter, and leſs dry, than when it is farther advanced; and it is difficult to refute the notion, particular as it is, that cotton is no other than a matter which tranſpires from the ſeed. When we know what forms the down of certain thiſtles which we before have mentioned, the ſingularity of this notion vaniſhes.

The leaves and ſtalks of thiſtles are roughened with a quantity of hairs, which are ſo many pipes giving iſſue to a clear limpid liquor, a little viſcious and glutinous, which dries in the air, and aſſumes a conſiſtence like that of cotton: nay it really is ſo to ſuch a degree, that when this down is collected, it is eaſy to form a thread of it between the fingers: ſuch an obſervation may, perhaps, appear very delicate to make, and thence doubtful and hazardous; yet it does not require ſo much attention as people may imagine; all that is neceſſary is, to procure a microſcope with a focus of ſome inches, to obſerve the threads, and the kind of wheel in which they are formed: and both theſe being diſtinguiſhed, you may perceive, by the naked eye, all that paſſes in this operation of nature.

That this may be ſeen the plainer, you may chuſe the carduus benedictus of the Pariſians, or that which has the round head, covered with down: theſe are, in my opinion, more proper than many others of the ſame claſs, for proving this obſervation: the interior part of the ſcales that form their head, is provided with an infinite number of glands, that filtrate a liquor like that which I have mentioned; and this liquor changes in the air to threads, which form the down that ſurrounds the heads of thoſe thiſtles. This will not admit of a moment's doubt, ſeeing this thread may be perceived forming under the very eye: if we will gradually and cautiouſly ſeparate the ſcales from one another, we then have the pleaſure to ſee this matter lengthen and extend like gum, roſin or wax, and in a moment change into white threads, reſembling thoſe of paper.

Now we perceive the ſimilitude there is between cotton and the wool of thiſtles, and the difference between both and the pretended down of thoſe laſt and of wad. The cotton iſſues from the ſeeds, which it ſurrounds like the wool of thiſtle-heads, and both ſweat from certain parts, which may be conſidered as a kind of glands. On the contrary, what is ſuppoſed to be down in the thiſtle, conſiſts of parts that are ſtiff and dry, conſequently brittle, eaſily grouped into little ſmooth maſſes, which are not compoſed of a quantity of ſmall fibres, that partly detaching themſelves from one another, form in the cotton and thiſtle-wool that ſoftneſs and flexibility, which makes what in theſe ſubſtances is commonly called the cottoneous part, a quality which renders them eaſy to mix together, when they are beaten or pounded, in order to form a paſte for paper. Muſt we, therefore, intirely reject theſe downs? No, ſurely; perhaps in the twinkling of an eye they may be rendered uſeful. I know it may be difficult to catch that point of view, than which nothing requires ſo much addreſs in improving the arts; but we ſhall endeavour, at the concluſion of this article, to give ſome hints on the ſubject; for it would be very advantageous to find the means of employing a kind of down which is in ſuch abundance, and coſts nothing but the trouble of gathering it.

We ſhall now proceed to another experiment, which, though unſucceſsful, ought to be related: it was tried upon the alga marina, which Seba exhorts us to examine. Under this name is comprehended not only that which is uſeful in packing glaſs-ware, and wrapping round the bottles of liquor which come from Montpelier, and from thence called the glaſs-makers weed; we ſay, not only this is regarded as an alga, but likewiſe the fucus, or varus, which has a better title to that name, ſince the glaſs-makers weed is not properly of that ſpecies, but of the claſs of dog's-graſs: however, we have always mentioned it as an alga, becauſe it is better known by that than the name of cyperus.

This plant having been treated like the others beforementioned, did not form the paſte that would cohere in any ſhape, for it's leaves has but few fibres: they are, in ſome ſort, compoſed of parenchymatous parts, which may be conſidered as a bundle of ſmall veſicles, the ſphericity of which is an obſtacle to that union that muſt obtain among the parts of paper. Two ſpheres can only touch one another in one point; this is a truth demonſtrated in geometry, as well as this other, that plain ſurfaces may be in contact through their whole ſurfaces; a property which facilitates the intertexture of the parts of cotton-hemp in the compoſition of paper, and to which the other is an obſtacle. To this I likewiſe attributed the little ſucceſs I had an experiment which I made with corralloides a kind of plant of the glaſs of alga, which abounds in all our woods, and in ſome places almoſt intirely covers the trees and rocks. Theſe plants are in ſome meaſure diſſolved by the trituration; and when they were ſpread in water, according to the practice of making ſheets of paper, they could not be re-united upon the form. The ſame thing happened to the conſerva of Pliny, which is alſo of the ſame tribe.

It may be conſidered as a loſs to the paper-manufacture, that we cannot give a body to theſe plants when they are triturated: the whiteneſs they acquire when drying, and their prodigious quantity, make us regret this circumſtance, eſpecially if they cannot be employed with ſucceſs in ſome other manufacture; and we can eaſily conceive what impreſſions the report of the commiſſioners of the academy muſt have made, upon the minds of thoſe who conſulted it about the advantage that might be reaped from a cottonous matter they had gathered in the pond of Petz, at the diſtance of a league

and

and a half from Metz, and was found to be no other than dried conferva, which did not deſerve the attention that had been beſtowed upon it; for they had already founded great hopes on the diſcovery, relating to the trade of the country.

A ſubſtance that might, perhaps, turn out to more advantage, is the cods of common catapillars, which, in ſome years, are in ſuch plenty as almoſt to cover the trees. Theſe cods, though not proper for ſpinning, may, nevertheleſs, enter into the compoſition of paper. The eſſay which was made gives room to hope for the ſucceſs. In effect, theſe cods, cleared of the leaves that ſtuck to them, being beaten, were eaſily reduced to a kind of pulp, which being ſpread in the water, was without difficulty collected on the form, and made into ſheets of paper that might be brought to a degree of perfection, which it muſt be owned they had not: nevertheleſs, though this paper ought rather to be ranked with the coarſe brown than with the white fine ſort, it gives room to believe, that it may in time acquire a certain degree of whiteneſs; ſome of the ſheets were whiter than others: nay, the ſame ſheets were ſometimes whiter in one part than another: and the buſineſs will be, to find a remedy for this inconvenience. One of the beſt (which, by the bye, I could not employ) is, without contradiction, to pound the cods in the ordinary mortars of the mills, or bray them under the cylinder: the quantity of cods gathered by my direction was not enough to fill the mill-mortar, ſo that the workman made uſe of an ordinary mortar, which was attended with two defects; the ſubſtance was not beaten uniformly, and the foreign bodies were not diſcharged: theſe evils are prevented in the mill: the peſtles are always moved equally, or at leaſt more equally than with the hand of a workman who uſes an ordinary mortar: ſo that the ſubſtance muſt be more effectually triturated in the mill. Beſides, the mortars of the machine are open on one ſide, near the bottom: this hole is covered with a hair-cloth, the interſtices of which are large enough to tranſmit what has undergone a ſufficient degree of trituration. Thus the paſte becomes whiter, an advantage we cannot obtain from any ordinary mortar, and which the ſilk paper I made could not have: for ſome of the ſheets were ſprinkled with ſeveral little black points, occaſioned by the excrement of the catapillars, which were interwoven with the ſilk of the cods; and the water which paſſes into the mortar of the mill would have carried off theſe excrements; nay, perhaps the ſilk loſes a part that ſerves no purpoſe but to render the paper of a greyer colour, when it continues mixed in the pulp. This part is more eaſily diſſolved and diſengaged from the paſte by the water that continually runs through the mortars. The ſmall fragments of leaves that may be left after the picking, will alſo be beaten with more difficulty in a common mortar, and the paper will be ſpoiled by them, as it happened to ſome ſheets of that which we made.

This inconvenience would be avoided by putting the cods in the mill mortars, where, at leaſt, the leaves would be more eaſily beaten, and this they might be, in the ſtate wherein they appear in the cods: for the catapillars have diveſted them of their parenchymatous parts, on which they feed, and nought remains but the fibres, which by the net-work they form, ſupported the parenchyma that filled up the interſtices. Though theſe fibres be like thoſe of a tree, they are, at the ſame time, more ſlender and fine, and have already by the work of the caterpillars, acquired an elaboration that wants only a little of our aſſiſtance. The beginning of rottenneſs might ſuffice. The preparation given to the rags before they are put under the peſtle, is one of the methods that may be the moſt uſeful on this occaſion. The rags being picked, are cut into ſmall pieces, and laid in heaps where they grow warm, and acquire a kind of fermentation, that gives them a degree of rottenneſs, which renders them the more fit for trituration. In the opinion of the workmen, this preparation is ſo indiſpenſibly neceſſary, that, when the rags are clean, and deſtitute of the greaſe which is then requiſite, they think themſelves obliged to ſupply this defect. The ſame method may be taken with cods mixed with leaves. Theſe leaves, aſſiſted with a little moiſture, will heat and rot to a certain degree, which it is our buſineſs to diſtinguiſh, that then they may be beaten as eaſily as the ſilk.

It were to be wiſhed that theſe leaves were not mixed with the ſilk, whereas the greateſt part of the cods are compoſed of them; yet there are ſome which conſiſt of pure ſilk, and are uſually found in the angle formed by the union of two branches. Theſe are no other than threads of ſilk ſtretched from one bough to another, in different ways. The others, conſiſting partly of leaves, are placed in the middle of leaves, which, after the caterpillars have partly conſumed, they bind and unite them together, thus forming larger or ſmaller bundles of pods, of the ends of little branches. There is no room to doubt that the ſilk of other caterpillars might likewiſe be employed: the cods of pure ſilk, and even thoſe that are partly formed of the hair which covers the caterpillars, are equally proper materials for paper: nor ſhould the cods belonging to the caterpillars of the pine-tree be rejected.

We ought, however, to be ſure that it is poſſible to make paper of ſilk; but is it made of that ſubſtance in China? Though it may appear unneceſſary to reſolve that queſtion, I will examine the reaſons that are advanced to prove that it is not made of ſilk. It is uſually ſaid, That if the Chineſe paper, which is pretended to be made of ſilk, was actually compoſed of that ſubſtance, it would in burning twiſt itſelf different ways, and be ſhrivelled up like parchment, which is made of prepared ſheep-ſkin; whereas that paper burns as equally as that made of the rags of hemp-cloth and linen. Theſe facts cannot be contradicted; but yet the ſilk paper which I made burned like ordinary paper, though the cods, which were the chief materials, ſhrunk up in burning, in the ſame manner as parchment. What, therefore, is the cauſe of this difference? I believe we muſt ſeek for the explanation in the tiſſue or texture, which is very different in the paper from what it was in the cod; there the threads are long, diſpoſed in different manners, ſo as that one ſingle thread often forms ſeveral folds.

The fibres of paper are very ſhort, and, though differently arranged and bound together, the connection is not ſo ſtrong: it is no longer one or ſeveral threads of a conſiderable length. It happens then, that when the cods are burned, their threads are drawn different ways; thoſe of one ſurface draw thoſe of another, and, therefore, they muſt twiſt and turn ſometimes to one ſide, and ſometimes to another; whereas the fibres of paper being ſo ſhort, and connected together only by juxtapoſition, they muſt act very little, if any thing at all, upon one another, conſequently will burn equally. What proves the juſtneſs of this application is, that, in paper, there is ſometimes one place where the ſilk has not been well beaten, and is ſtill too much interwoven, and that place always is ſhrivelled up in burning. This explanation is, perhaps, ſufficient to clear up the queſtion relating to ſilk paper; and howſoever the Chineſe paper may be made, I think we ought to be perſuaded that it is poſſible to make it of ſilk: neither ought we to entertain any doubt about the uſe to which we might put the ſtalks of hemp and flax; and I think we have reaſon to hope, that one day an advantageous uſe may be found for the different kinds of down, not only of the cotton, of which, it is, perhaps, very ſingular to have entertained any ſuſpicion, but alſo of the thiſtle, the trumpet-wood, and the wad, which more than any other would merit an happy ſucceſs, it's paper having a gloſs and ſilver brilliancy which might be of ſome uſe in many caſes.

All that remains, therefore, in order to fulfil our hope of this down, as well as of the others, is to find out ſome method, perhaps very eaſy and ſimple, and, for that very reaſon the more difficult to invent. If, for example, when the materials are ready to be beaten, inſtead of ſimple water, we ſhould ſubſtitute a gummy or mucilaginous water, like that in which have been boiled the parings of leather, roots of marſh-mallows, the great comfrey, or ſuch ſubſtances, the paſte by theſe means would be endued with a kind of glue, which might be an expedient by means whereof the parts would cohere more ſtrongly; perhaps it would be ſufficient to prepare in this matter the water of the tub in which the paſte is diluted when it comes from under the peſtle.

If, notwithſtanding this preparation, the paſte ſhould not have body enough, perhaps by ſubſtituting compreſſion in the room of immerſion, which is the ordinary method of forming the ſheets of paper, we ſhould be able to render the parts of the paſte more coherent; and I imagine this is the method which muſt be taken with that cottoneous ſubſtance that owes it's origin to the conferva of Pliny. The heaps formed by the reunion of the different feet of this plant, are already of a certain thickneſs, and not eaſily torn; ſo that, in extending the paſte made of this plant, we might give what thickneſs we would to every ſheet, and the compreſſion would afterwards do the reſt. It might be found impracticable to make ſheets as thin as thoſe of ordinary paper; but even if we could do no more than make paſteboard, it would be an advantage which we ought not to neglect, but, on the contrary, proſecute with care. An enquiry into the materials which may be uſed for making of paper, by Mr. Guettard, of the Royal Academy of Sciences, and phyſician to his ſerene highneſs the duke of Orleans.

Remarks.

The reader will pleaſe to obſerve, from this account of divers materials whereof paper may reaſonably be preſumed to be made, the great utility that a knowlege in natural hiſtory has to advance the manufactural arts; and, therefore, how beneficial it may prove to our artiſts and the nation, to have thoſe things duly propagated in a trading empire. Every artiſan and manufacturer will hence diſcern how importantly uſeful to their reſpective employments thoſe gentlemen are, who have ſtudied the productions of nature, and have ſuggeſted rational experiments thereon, in order to promote the trafficable arts. Princes, ſtateſmen, and landed gentlemen in general, muſt be convinced, from inſtances of this kind, how neceſſary it is to encourage and honour thoſe who apply themſelves to ſtudies that have ſo happy a tendency to inſpire a general induſtry and ingenuity, and to advance the arts. Thoſe who are wholly buſied in the active life, have rarely leiſure for reſearches of this nature, or a proper turn to make

experiments ſuitably adapted to the advancement of their ſeveral branches of buſineſs: but it well becomes thoſe who are engaged in the hurry of life, to devote ſome portion of their time to the peruſal of books wrote upon Natural Hiſtory, and for the improvement of the manufactural and mechanic arts. By this means our paper, as well as other manufactures, may arive at their ultimate perfection, and be made from ſuch materials as are little ſuſpected. See the articles MUSÆUM [REMARKS thereon], and ROYAL SOCIETY of LONDON.

INCUMBUSTIBLE PAPER is made of the Aſbeſtos [ſee ASBESTOS] which will bear burning without injury; and if an ink could be made of the ſame permanent nature, it might be a great preſervative of writings of conſequence from that conſuming element, in caſes of accident.

Mr Lloyd, in the Philoſophical Tranſactions, No. 166. deſcribes the manner of making this paper. He pounded a quantity of the aſbeſtos in a ſtone mortar, 'till it became a downy ſubſtance, then ſifted it through a fine ſieve, and by this means purged it pretty well from it's earthy parts; ſo that what earthy or ſtony matter he could not ſeparate before, or in the pounding, being reduced to a powder, came through the ſearce. This done he brought it to the paper-mill, and putting it in water in a veſſel juſt big enouugh to make a ſheet with ſuch a quantity, he ſtirred it pretty much, and deſired the workmen to proceed with it in the uſual method, with their writing-paper mould, only to ſtir it about always before they put it in their moulds, conſidering it as a far more ponderous ſubſtance than what they uſed, and that, if not immediately taken up after it was agitated, it would ſubſide.

The paper made thereof proved but coarſe, and too apt to tear; but there is reaſon to believe it might be much improved, in caſe it was pounded in one of their mortars for the ſpace of 24 hours.

Paper is of various kinds.---With regard to colours, they are divided into white, brown, blue, &c. and to quality, into fine, ſecond, baſtard, ſuperfine, &c.---With reſpect alſo to uſe, into writing, printing, preſſing, cap, cartridge, copy, poſt, &c.---With regard to dimenſions, into demy, crown, fool's-cap, pot, royal, ſuper-royal, imperial, elephant, atlas, &c. There is alſo printed, raiſed, and imboſſed paper, wherewith to hang rooms, and wherein there is a large conſumption, and in whieh our artiſts have arrived to a great perfection.

MARBLED PAPER is a ſort variouſly ſtained with divers colours, made after the following manner:

Take clear white gum-tragant, put it into an earthen pan, pour freſh water to it, 'till it is two hands high over the gum; cover it, let it ſoak 24 hours, then ſtir it well together, add more water to it, keep it often ſtirring for a whole day, or longer, and it will ſwell according as you find your gum is freſh or ſtale, for the freſh will diſſolve ſooner than that which has lain by a long time. When you find it well diſſolved, pour it through a cullender into another pan, add to it more water, and, after it has ſtood a little and been ſtirred about, ſtrain it thtough a clean cloth into another clean pan; keep it well covered, to hinder the duſt, or any other thing from coming to it; this water, when you go to make uſe of it in marbling your paper or books, muſt be neither too thick nor too thin; you may try it with your comb, by drawing the ſame from one end of the trough to the other; if it ſwells the water before it, it is a ſign that it is too thick, and you muſt add in proportion a little more water.

Your trough muſt be of the bigneſs of your paper, or rather ſomething wider, and about four inches deep.

After you have filled your trough with the aforementioned water, and fitted every thing for the work, then (before you lay on your colours) take a clean ſheet, and draw the furface, which will be a thin ſort of film, off of it; then have your three colours, namely indico mixed with white-lead, yellow oker, and roſe-pink, ready prepared at hand, and for each colour have two galley-pots, in order to temper them, as you would have them in different ſhades.

All your colours muſt be ground very fine with brandy.

The blue is eaſily made deeper or lighter, by adding more or leſs white-lead.

The yellow uſed for that purpoſe is either yellow orpiment or Dutch pink.

For blue, grind indigo and white lead, each by itſelf, in order to mix that colour either lighter or darker.

For green, take the aforeſaid blue and white, and ſome yellow to it, and temper it darker or ligher, as you would have it.

For red, take either lake or roſe-pink.

Every one of theſe colours are, as we ſaid before, firſt ground very fine with brandy, and, when you are ready to go to work, add a little ox or fiſh-gall to them; but thls muſt be done with diſcretion, and you may try them by ſprinkling a few drops upon your gum-water; if you find the colour fly and ſpread too much about, it is a ſign of too much gall, which, to remedy, add more of the ſame colour that has none, but when you ſee the colour ſpread, and retract itſelf gently, it is right.

When thus you have your colours, and all things in good order, then take a pencil, or the end of a feather, and ſprinkle or put firſt your red colour, then the blue, yellow, green, &c. begin your red from No. 1, and go along your trough to No. 2; alſo the blue from No. 3, all along to No. 4; the yellow and green put here and there in the vacant places; then with a bodkin, or a ſmall ſkewer, draw a ſort of a ſerpentine figure through the colours, beginning from No. 1 to No. 2: when this is done, then take your comb and draw the ſame ſtraight along from No. 1. to No. 2. If you would have ſome turnings or ſnail-work on your paper, then with a bodkin give the colours what turns you pleaſe.

Thus far you are ready in order to lay on your paper, which muſt be moiſtened the day before, in the ſame manner as book-printers do their paper for printing; take a ſheet at a time, lay it gently upon your colours in the trough, preſs it ſlightly with your finger down in ſuch places where you find the paper lies hollow; this done, take hold at one end of the paper, and draw it up at the other end of the trough, hang it up to dry on a cord, when dry, glaze it, and it is done.

You may alſo embelliſh your paper with ſtreaks of gold, by applying muſcle gold or ſilver, tempered with gum-water, among the reſt of the colours.

To gild paper.

Take yellow oker, grind it with rain water, and lay a ground with it upon the paper all over; when dry, take the white of eggs, beat it clear with white ſugar-candy, and ſtrike it all over; then lay on the leaf gold, and when dry, poliſh it with a tooth.

Some take ſaffron, boil it in water, and diſſolve a little gum with it; then they ſtrike it over the paper, lay on the gold, and, when dry, they poliſh it.

To ſilver paper, after the Chineſe manner, without ſilver.

Take two ſcruples of clear glue, made of neats leather, one ſcruple of white allom, half a pint of clean water, ſimmer the whole over a ſlow fire, 'till the water is conſumed, or the ſteam ceaſes; then your ſheets of paper being laid on a ſmooth table, you dip a pretty large pencil into that glue, daub it over as even as you can, repeat this two or three times, then ſift the powder of talc through a fine ſieve, made of horſe-hair or gauſe, over it, and then hang it up to dry, and, when dry, rub off the ſuperfluous talc, which ſerves again for the ſame purpoſe. The talc you prepare in the following manner:

Take fine white tranſparent talc, that which comes from Muſcovy, boil it in clear water for four hours, then take it off the fire, and let it ſtand ſo for two days: then take it out, waſh it well, and put it into a linen rag, and beat it to pieces with a mallet: to 10 pounds of talc add three pounds of white allom, and grind them together in a little hand-mill, ſift it through a gauze ſieve, and being thus reduced to a powder, put it into water, and juſt boil it up: then let it ſink to the bottom, pour off the water from it, place the powder in the ſun to dry, and it will become a hard conſiſtence. This beat in a mortar to an impalpable powder, and keep it for the uſe abovementioned, free from duſt.

To make fine red paper.

Take a pan full of water, put ſome quick-lime into it, to make it into a lee, and let it ſtand over-night; then put Brazil chips into a clean pot, about half full, fill it with the lees, and boil it to half, and, when it is juſt hot, add to it a little allum; when you would uſe it, mix it with a little gum or ſize, and then with a pretty large pencil lay your colour on the paper with an even hand.

Of JAPAN PAPER.

The paper is made in Japan of the bark of the morus papyrifera ſativa, or true paper-tree, after the following manner: every year, when the leaves are fallen, or in the tenth Japaneſe month, which commonly anſwers to our December, the young ſhoots, which are very fat, are cut off into three feet long, or ſhorter ſticks, and put together in bundles, to be afterwards boiled with water and aſhes.

If they ſhould grow dry before they can be boiled, they muſt be firſt ſoaked in common water for about 24 hours, and then boiled. Theſe bundles or faggots, are tied cloſe together, and put upright into a large and ſpacious kettle, which muſt be well covered, and then they are boiled 'till the bark ſhrinks ſo far, as to let about half an inch of the wood appear naked at the top. When the ſticks have been all ſufficiently boiled, they are taken out of the water, and expoſed to the air 'till they grow cold; then they are ſlit open length ways, for the bark to be taken off, which being done, the wood is thrown away as uſeleſs, but the bark dried, and carefully preſerved, as being the ſubſtance out of which they are in time to make their paper, by letting it undergo a farther preparation, conſiſting in cleanſing it anew, and afterwards picking out the better from the worſe.

In order to this, it is ſoaked in water for three or four hours, and being grown ſoft, the blackiſh ſkin which covers it, is ſcraped off, together with the green ſurface of what remains, which is done with a knife, that they call Kaadſi Kiuſaggi,

that is, a Kaadſi Razor. At the ſame time alſo, the ſtronger bark, which is of full a year's growth, is ſeparated from the thinner, which covered the younger branches, the former yielding the beſt and whiteſt paper, the latter only a dark and indifferent ſort. If there is any bark, of more than a year's growth, mixed with the reſt, it is likewiſe picked out and laid aſide, as yielding a coarſe and worſe ſort of paper. All groſs knotty particles, and whatever alſo looks in the leaſt faulty and diſcoloured, is picked out at the ſame time, to be kept with the leaſt coarſe matters.

After the bark has been ſufficiently cleanſed and prepared, and ſorted according to it's differing degrees of goodneſs, it muſt be boiled in clear lye. As ſoon as it comes to boil, and all the while they keep it on the fire, they are perpetually ſtirring it with a ſtrong reed, pouring from time to time ſo much freſh lye in, as is neceſſary to quench the evaporation, and to ſupply what hath been already loſt by it. This boiling muſt be continued 'till the matter is grown ſo thin, that being but ſlightly touched with the finger, it will diſſolve and ſeparate into flocks and fibres.

Their lye is made of any ſort of aſhes in the following manner: two pieces of wood are laid a-croſs over a tub, and covered with ſtraw, on which they lay wet aſhes, and then pour boiling hot water upon it, which as it runs through the ſtraw into the tub underneath, is imbued with the ſame ſaline particles of the aſhes, and makes what they call lye.

After the boiling of the bark, as above deſcribed, follows the waſhing thereof. This is a buſineſs of no ſmall conſequence in paper-making, and muſt be managed with great judgment and attention.

If it hath not been waſhed long enough, the paper will be ſtrong indeed, and of a good body, but coarſe, and of little value. If, on the contrary, the waſhing hath been continued too long, it will afford, it is true, a whiter paper, but too greaſy, blotting, and unfit for writing. This part of paper-making, therefore, muſt be managed with great care and judgment, ſo as to keep to a middle degree, and to avoid either extreme. They waſh it in a river, putting the bark into a ſort of pan or ſieve, which will let the water run through, and ſtirring it continually with the hands and arms, 'till it comes to be diluted into a delicate ſoft wool or down. For the finer ſort of paper the waſhing muſt be repeated, but the bark put in a piece of linen inſtead of a ſieve, becauſe the longer the waſhing is continued, the more the bark is divided, and would come at laſt to be ſo thin and minute, that it would run out through the holes of the ſieve, and be loſt. At the ſame time alſo, what hard knots or flocks, and other heterogeneous uſeleſs particles remain, muſt be carefully picked out, and put up with a coarſer ſort of bark for worſe paper.

The bark having been ſufficiently and thoroughly waſhed, is put upon a thick ſmooth wooden table, in order to it's being beat with ſticks of the hard Kufnoki wood, which is commonly done by two or three people, until it is wrought fine enough, and becomes withal ſo thin, as to reſemble a pulp of ſoaked paper, which being put into water, will diſſolve and diſperſe like meal.

The bark being thus prepared, is put into a narrow tub, with the fat ſlimy infuſion of rice, and the infuſion of the oreni-root, which is likewiſe very ſlimy and mucous. Theſe three things being put together, muſt be ſtirred with a thin clean reed, 'till they are thoroughly mixed in an uniform liquid ſubſtance of a good conſiſtence.

This ſucceeds better in a narrow tub. But afterwards the mixture is put into a larger one, called in their language fine, which is not unlike thoſe made uſe of in our paper-mills. Out of this tub the leaves are taken off, one by one, and proper patterns, made of bulruſhes inſtead of braſs wire, and called miis. Nothing remains now but a proper management in drying them. In order to this, they are laid up in heaps upon a table, covered with a double mat, and a ſmall piece of reed (which they call kamacura, that is, a cuſhion) is put between every leaf, which ſtanding out a little way, ſerves in time to liſt them up conveniently, and take them off ſingly. Every heap is covered with a ſmall plank or board, of the ſame ſhape and ſize with the paper, on which are laid weights, firſt indeed ſmall ones, leſt the leaves, being then as yet very wet and tender, ſhould be preſſed together into one lump, but by degrees more and heavier, to preſs and ſqueeze out all the water. The next day the weights are taken off, the leaves lifted up one by one, by the help of the ſmall ſtick abovementioned, and with the palm of the hand clapped to long rough planks made for this purpoſe, which they will eaſily ſtick to, becauſe of the little humidity ſtill remaining. After this manner they are expoſed to the ſun, and when full dry, taken off, laid up in heaps, pared round, and ſo kept for uſe or ſale.

I took notice, ſays Kœmpfer, that the infuſion of rice, with a gentle friction, is neceſſary for this operation; becauſe of it's white colour, and a certain clammy fatneſs, which at once gives the paper a good conſiſtence, and pleaſing whiteneſs. The ſimple infuſion of rice-flour would not do it, becauſe it wants that clammineſs, which is a very neceſſary quality. The infuſion, I ſpeak of, is made in an unglazed earthen pot, wherein the rice grains are ſoaked in water, and the pot afterwards ſhaken, gently at firſt, but ſtronger by degrees. At laſt freſh cold water is poured upon it, and the whole percolated through a piece of linen. The remainder muſt undergo the ſame operation again, freſh water being put to it, and this is repeated ſo long as there is any clammineſs remaining in the rice. The Japaneſe rice is by much the beſt for this purpoſe, as being the whiteſt and fatteſt ſort growing in Aſia.

The infuſion of the oreni-root is made after the following manner. The root pounded or cut ſmall, is put into freſh water, which, in one night's time, turns mucilaginous, and becomes fit for uſe, after it hath been ſtrained through a piece of linen. The different ſeaſons of the year require a different quantity of this infuſion to be mixed with the reſt. They ſay, the whole art depends almoſt entirely upon this. In the ſummer, when the heat of the air diſſolves the jelly, and makes it more fluid, a greater quantity is required, and leſs in proportion in the winter, and in cold weather.

Too much of this infuſion mixed with the other ingredients, will make the paper thinner in proportion, too little, on the contrary, will make it thick and parched. Therefore a middle quantity is required to make a good paper, and of an equal thickneſs. However, upon taking out a few leaves, they can eaſily ſee, whether they have put too much or too little of it. Inſtead of the oreni-root, which ſometimes, chiefly at the beginning of the ſummer, grows very ſcarce, the paper-makers make uſe of a creeping ſhrub called ſane kadſura, the leaves whereof yield a mucilage in great plenty, though not altogether ſo good for this purpoſe, as the mucilage of the abovementioned oreni-root.

The juncus fativus is cultivated in Japan with great care and induſtry. It grows tall, thin, and ſtrong. The Japaneſe make ſails of it, and very fine mats to cover their floors.

It hath been obſerved, that the leaves when they are freſh taken off from their patterns, are laid up in heaps, on a table covered with two mats Theſe two mats muſt be of a different fabric; one, which lies lowermoſt, is coarſer, but the other, which lies uppermoſt, thinner, made of ſlender bulruſhes, which muſt not be twiſted too cloſe one to another, to let the water run through with eaſe, and very thin; and not to leave any impreſſions upon the paper.

A coarſer ſort of paper, proper to wrap up goods, and for ſeveral other uſes, is made of the bark of the kadſura ſhrub, after the method above deſcribed. The Japaneſe paper is very tight and ſtrong, and will bear being twiſted into ropes.

A thick ſtrong ſort of paper is ſold at Syriga (one of the greateſt towns in Japan, and the capital of the province of that name) which is very neatly painted, and folded up, ſo much in a piece as there is wanting for a ſuit. It looks ſo like ſilken or woollen ſtuffs, that it might be eaſily miſtook for them.

A thin neat ſort of paper, which hath a yellowiſh caſt, is made in China and Tonquin, of cotton and bambooe. The Siamites make their paper of the bark of the pliokkloika. They have two ſorts of it, one black, and another white, both very coarſe, rude and ſimple, as they themſelves are. They fold it up into books, much after the ſame manner as fans are folded, and white on both ſides, not indeed with a pencil, in imitation of thoſe more polite nations who live fartheſt eaſt, but with a rude ſtylus made of clay. Thus far the deſcription of the way of making paper in the eaſt, which the late learned Becmannus was ſo deſirous to know, and ſo earneſtly intreated travellers to enquire into, miſtaken however in that thought, and ſeemed to be perſuaded, that it was of cotton; whereas it evidently appears, by this accounr, that all the nations beyond the Ganges make it of barks of trees and ſhrubs. The other Aſiatic nations on this ſide the Ganges (the black inhabitants of the more ſouthern parts excepted) make their paper of old rags, of cotton ſtuff, and their method differs in nothing from ours in Europe, but that it is not altogether ſo intricate, and that the inſtruments they make uſe of are groſſer.

To compleat the account propoſed to be given of the paper-manufactures in Japan, we have here added the deſcription of the plants and trees whereof it is made.

The Paper Tree.

From a ſtrong, branched, lignous root, riſes a ſtraight, thick, equal trunk, very much branched out, covered with a ſat, firm, clammy, cheſnut-coloured bark, rough without, and ſmooth on the inſide, where it adheres to the wood, which is looſe and brittle, with a large moiſt pith. The branches and twigs are very fat, covered with a ſmall down or wool, green, inclining to a dark purple. They are channelled 'till the pith grows, and quickly decay when broke off. The twigs are irregularly beſet with leaves, at two or three inches diſtance, or more, ſtanding on ſlender, hairy, two inch long foot-ſtalks, of a dark purple caſt, and the bigneſs of a ſtraw. The leaves differ much in ſhape and ſize, being ſometimes divided into three, ſometimes into five ſerrated, narrow, unequally deep, and unequally divided lobes, reſembling in ſubſtance, ſhape and ſize, the leaves of the urtica mortua, being flat

and

and thin, a little rough, dark green on one ſide, and of a lighter green, inclining to white, on the other.

They dry quickly, when broke off, as do all other parts of this tree. Strong ſingle fat nerves (leaving a remarkable hollow on the oppoſite ſide) run from the bottom of the leaves towards the top, and ſend out many tranſverſe ribs, almoſt parallel to one another, which ſend out others ſtill ſmaller, turned in towards the edges. In June and July come forth the fruits, upon the extremities of the twigs, ſtanding on ſhort footſtalks, round, ſomewhat larger than a pea, ſurrounded with long purple hairs, compoſed of acini, firſt of a greeniſh colour, which turns to a black purple when ripe: the fruit is full of a ſweetiſh juice. I did not obſerve, whether or no there are any juli that come before the fruit. The tree is cultivated for the uſe and improvement of the paper manufactures, on hills and mountains. The young, or two foot long twigs, are cut off and planted in the ground at moderate diſtances, about the tenth month, which ſoon take root, and the upper part, which ſtood out of the ground, quickly drying, they ſend forth many fine young ſhoots, which are fitteſt to be cut for uſe towards the latter end of the year, when they are come to be about a fathom and a half long, and about the thickneſs of an arm of a middle ſized man. There is alſo a wild ſort of kaadſi, or paper tree, growing on deſart and uncultivated mountains; but it is ſcarce, and otherwiſe not very proper for paper-making, and therefore never uſed.

1. Thoſe who would excel in the art of paper-making, ſhould be acquainted not only with the common methods of making the different kinds of paper, but enquire into every ſort of material wherewith the ſame may be made in the cheapeſt and the beſt manner.

2. This buſineſs ſhould be conſidered with a chemical view, in order to ſhorten and improve the proceſs.

3. The methods of making the whiteſt paper, and giving any kind of colour thereto, ſhould be well known.

4. Attempts ſhould be made to render paper more durable, and leſs apt to be gnawed or torn by domeſtic animals.

5. The ſtate of this art ſhould be well known, as practiſed in China, France, Holland, and England, in order to advance the manufacture for every uſe.

6. The ways of emboſſing and printing of paper for hangings, ſhould be advanced, the conſumption therein being great.

7. The application of this art to the Aſbeſtos [ſee ASBESTOS], ſo as to make incombuſtible paper, ſhould be ſtudied.

8. A method of diſcharging the printers ink out of paper ſhould be enquired into.

9. The beſt way of making filtring paper, for chemical uſes, ſhould be invented.

☞ In the journals of the houſe of commons of the kingdom of Ireland, that I have by me, from the 11th year of king James I. to the 25th year of the reign of his preſent majeſty king George II. incluſive; printed at Dublin, upon a good paper, and with a good letter, I was well pleaſed to find at the concluſion of them, the following, viz.

Theſe JOURNALS are printed on an Iriſh paper, manufactured by Mr Thomas Slator, at Temple-Onge; and the types caſt in Dublin, by Meſſieurs Daniel Malone and Robert Perry, letter-founders.

REMARKS ON PAPER, in another Light.

Before the Revolution, there was hardly any other paper made in England than brown; but the war enſuing, and duties being laid, from time to time, on foreign paper, it gave ſuch encouragement to our paper makers, that moſt of them began to make white paper, fit for writing and printing; and they have brought it, by degrees, to ſo great perfection, both for quantity and goodneſs, that they make now above ſeven eighths of what is conſumed in Great-Britain; and ſeveral of them make it as white and as well bearing as any that comes from abroad.

The neceſſity of having writing and printing paper is well known to every body; but it will not perhaps be amiſs to make it appear, how profitable and beneficial that manufacture is to Great-Britain.

Rags are the main ingredient paper is made of in theſe kingdoms, which were formerly caſt away and thrown to the dunghill, but are now gathered with great care by poor people, who get honeſtly their livelihood by it, and would otherwiſe beg their bread: this employs abundance of hands. When theſe rags are gathered, they are brought to the mill, and this ſtill employs more hands. After they are in the mill, they let them lie a while, 'till they are ſufficiently mellow or rotten, and then put them into the tubs under the hammers, to be beaten into a kind of jelly or white ſubſtance, looking like milk; and being thence carried into the fat, the chief workman, upon a pair of molds for that purpoſe, takes up the ſheets or water-leaves (of which he makes 4 or 5000 a day, more or leſs, according to the ſize of the paper).

Theſe water-leaves, after being well preſſed between two felts, and the water well drained out, are carried up into the drying rooms, and there hung upon a multitude of ropes to dry: and from thence being brought down again into the ſizing room, a liquor is there prepared for ſizing or gumming every ſheet; the paper which is for printing being but moderately ſized, but that which is for writing more nicely gummed, that it may bear ink.

This paper, after ſizing, is a ſecond time preſſed, and carried up into the garrets, and hung upon the ropes to dry once more; and then, with a great deal of care and hard labour, preſſed a third, a fourth, and a fifth time, to make it ſmoth and of a good grain; and then put up into quires and reams.

Now, conſidering how many hands every individual ſheet of paper paſſes through, before it is brought to perfection, it is plainly perceived that a great number of people is employed in each mill, then thoſe who gather the rags up and down in all the counties of England, and bring them to the mills: thoſe who make the felts, which takes up a good quantity of wool, being very thick, and for every ſheet of paper, a piece of felt of the ſame ſize, or a little larger; the rope-makers, the mold-makers, the carpenters, wheelwrights, timber-merchants, ſmiths, (for this work conſumes a great deal of iron, by the hammers beating perpetually upon the iron plates) and ſeveral other trades, who depend upon the building and keeping the mills in repair; thoſe who fell allum, copperas, cuttings and parings of gloves, parchment and leather; all which are uſed in ſizing or gumming of paper: theſe things conſidered, it cannot be denied, but a vaſt many people get their livelihood, or receive a benefit, by this uſeful and ingenious manufacture.

There is ſtill one farther uſe we would make of this information, and this is, to compute by it, the value of paper which was heretofore annually imported from the French nation.

Upon the interruption of our French commerce, in the late queen's wars, we increaſed our importation of paper from other countries, and the manufacture of this commodity in Great-Britain. Indeed the manufacture of white paper commenced in this kingdom, not long before that æra. At this time there were about one hundred and twenty fats within 60 miles of London for white paper; which, at 8 reams per day, muſt produce near 300,000 reams per annum: and if thoſe of Yorkſhire and Scotland, together with the increaſe of our importations from Italy and Holland, were then allowed to produce above 100,000 reams more for the conſumption of this kingdom, (as they certainly did, if the whole paper-manufacture of Britain was then, as computed, but two thirds of our conſumption) the whole quantity made in this kingdom, or imported from other countries inſtead of French paper, amounted to 400,000 reams per annum; then ſuch therefore muſt have been our annual importation from France, and the value of this, at 5 s. per ream muſt have amounted to 100,000 l. per annum.

The paper-manufacture hath, for many years, been eſtabliſhed in moſt countries; though France, Holland, and Genoa, are the places where it has beſt ſucceeded. The quality certainly depends upon the materials whereof it is made; and where it is done from linen rags, it depends much on the quality of the linen worn in the country where it is made: where that is fine or coarſe, or brown, the rags, and conſequently the paper made thereof, muſt be ſo too. Though the Engliſh manufacture of paper is not yet arrived to the perfection of ſome other nations; yet it is daily improving, and we doubt not but our artiſts will equal thoſe of any other nation, when they are wiſe enough to make ſmall trials upon all ſorts of materials which bid fair to make a more beautiful manufacture than what they have. The vegetable kingdom, we have ſeen, admits of an infinite variety of ſubjects, whereon to make experiments, at a very trifling expence: and whether many cheap foſſils, of a beatiful white, may not, by proper managements, be brought to a due coheſive conſiſtence for the purpoſe, may deſerve notice.

As this is a manufacture of ſuch general uſe, both for writing, printing, engraving, packing, &c. it cannot be made too good nor too cheap for the great variety of purpoſes wherein we find it ſubſervient to other arts.

Extract of two edicts of the French king, concerning the paper manufacture.

Arrêt of the king's council, prohibiting the exportation of old linen, old cloaths, rags, &c. 1697.

The king having been informed, That the exporting old linen, old cloaths, rags, &c. is a very conſiderable prejudice to the manufactures of paper and cards of this kingdom, had ordained, by a former arrêt of the 28th of January, 1697, That the ſaid goods ſhould pay 12 livres per hundred weight upon their exportation, inſtead of 6 livres per hundred weight, payable by the tariff of 1664; but his ſaid majeſty having ſince that been informed, That notwithſtanding double duty, divers particular merchants continue to export ſuch great quantities out of the kingdom, as would cauſe a ſcarcity thereof to the manufacturers in the provinces aforeſaid; for remedy whereof, his majeſty ordains, and hereby makes an expreſs prohibition to all perſons, of what rank or condition ſoever, to export out of the kingdom, without his permiſſion,

any

any old linen, old cloaths, or rags, from the day of the publication hereof, upon pain of confiſcation, and three thouſand livres fine, of which the third part to the informer.

Done at Verſailles, May 29, 1697. Signed, DU JARDIN.

Arrêt of the king's council, taking off the duties of exportation upon all cloth of gold and ſilver, and ſilks, and upon paper, paſte-board, and cards; and moderating the duties upon ſtuffs of wool, and thread linen-cloth, and other merchandizes, December 24, 1701.

Likewiſe his majeſty ordains, That for paper of all ſorts, white, brown, blue, and all other colours; books, printed, bound, and not bound; cards, paſte-boards, and cards to play with, going out of this kingdom into foreign parts, there ſhall not be paid any duties at all.

Done at Verſailles, Dec. 24, 1701. Signed, PHILIPEAUX.

By theſe two abſtracts of the French king's arrêts, it may be perceived, how careful he is of his manufactures in general, and of that of paper in particular.

There are ſeven provinces in France where the manufacture of paper is ſettled, viz. Champaigne, Normandy, Brittany, Angoumois, Perigord, Limouſin, and Auvergne; the three laſt provinces are full of large foreſts of cheſnut-trees, and abound ſo much in that kind of fruit, that the common people have no other food all the year round, and no other drink but water; ſo that they can afford their work very cheap, and do it for next to nothing, except ſome of the upper workmen, who earn a ſmall ſalary by the week. This is ſo true, that conſiderable parcels of paper were imported, ſome years ſince, from thence, although the duties paid here exceed one hundred per cent. on the firſt coſt; notwithſtanding which, the French merchants were long able to under-ſell us greatly.

Now if cheſnuts, and ſuch-like ſpontaneous productions of the earth, for which we are chiefly beholden to nature, very little to the labour of man, are the greateſt part of the ſubſiſtence of the people employed in the paper-manufacture of France, there can be little doubt of their living on leſs wages than our Engliſh labouring people: no one will aſſert, that a belly-full of cheſnuts, which grow without the labour of man, ſhall coſt as much as a belly-full of bread, which pays ſo much to the ploughman, the ſeedſman, the reaper, the threſher, the miller, the baker, and innumerable other labourers, who have beſtowed ſome work upon every loaf that was ever eaten. Our people therefore are ſubſiſted at a great charge, and the French manufacturers in this article, for almoſt nothing, in compariſon to what ours are.

Ought not every requiſite meaſure, therefore, to be taken by this kingdom, ſo to reduce the price of the common neceſſaries of life, that our manufacturers may be able to afford their labour ſo cheap, that our competitors may not in time run away with the whole trade? But how can this be ever effectuated, while the kingdom is incumbered with taxes neceſſary to pay intereſt-money for ſo enormous a national debt wherewith we are now loaded?

PAPER CREDIT. Under the articles BANKS and BANKING, CASH, CIRCULATION, CURRENCY, [PAPER CURRENCY], MONEY, the reader will find our ſentiments in relation to theſe points; which having an affinity with what we ſhall ſay, upon the preſent occaſion, may be neceſſary to be conſulted.

PAPER-CREDIT ſignifies, in the general, whatever property is circulated in a ſtate, or transferred from one perſon to another, by the means of any written paper-obligation, inſtead of hard money, or merchandizes, or lands; ſuch as exchequer bills, bank notes, bills of exchange, promiſſory notes, bonds, mortgages; and ſome include herein all transfers made by ſtocks, &c.

The term conſidered in this acceptation, including the conveyance of property of any kind whatever, from perſon to perſon, and from nation to nation, by the means of paper-authority only, comprehends a wonderful circulation of property over the whole trafficable world; without which, the concerns of commerce could not poſſibly be carried on with that extent and facility they are at preſent.

In order to render what we ſhall obſerve of uſe chiefly to our own country, we ſhall reſtrain our conſideration to the circulation of property of this ſort within ourſelves.

Eraſmus Phillipps, Eſq. computes in the year 1725, * the whole money-tranſactions of this nation at 126,199,328 l. which he does in the following manner, viz.

* See The State of the Nation, in reſpect to her commerce, Debts, and Money, p. 42, & ſeq.

'It is a ſtupendious thought, ſays this gentleman, to conſider the money-tranſaction of this kingdom; perhaps it may not be unacceptable to give ſome account of it. I believe I ſhall be allowed to compute the rents of this kingdom at - - -	l. 20,000,000
And upon the ſuppoſition that the lands of England are not taxed at half the value, this account may be near the truth.	
The duties on the cuſtoms produce per ann. about - - - - - -	1,600,000
Which, upon an average of 30 l. per cent. ad valorem, ſhews our imports to be for about - - - - - -	5,300,000
Beſides our re-export, which may be about	1,500,000
The reſt of the duties and funds - - -	2,199,328
If it is allowed me, that there are eight millions of people in this nation, I believe I ſhall not exceed, if I reckon the manufactures conſumed at home to amount to per annum - - - - -	16,000,000
I ſhall not mention the intereſt ariſing from mortgaged land, that being computed before in the rental; but I muſt take notice of the mortgages themſelves, becauſe they are often transferred, and may be reckoned money in circulation; and theſe have been computed at a fifteenth part of the land, which will come to about - - -	26,000,000 princ. money.
The next thing I ſhall mention is the great national debt;	
And this is about - - - - -	53,000,000
The malt produces more, about	600,000
So that the whole money-tranſaction of this nation ſeems to be for about - -	126,199,328
And all this is carried on with no more than of ſpecie.	15,000,000

And perhaps I may be particular in ſaying, the reaſon of this prodigious circulation is the debt itſelf; for the large and regular intereſt that has been paid on theſe ſtate-actions, have exhauſted all private hoards, and made theſe ſecurities become like a new ſpecies of money, current in every body's hands.'

REMARKS before the laſt War.

Since Mr Phillips wrote, not only the national debts, but the public revenue has greatly augmented, and conſequently our paper-circulation has increaſed in the like proportion; and yet it is to be feared that the quantity of ſpecie, at preſent, is much below 15,000,000 at which, when that gentleman wrote, he computed it. And to what degree the price of labour and our native commodities are affected by the weight of our national debts and taxes, or in conſequence of this paper-credit ſo greatly exceeding the quantity of real ſpecie, may be ſeen under the article DUTIES, LABOUR, to which we refer the reader. To corroborate what is there urged, ſee likewiſe the article BONDING, in regard to the DUTIES OF CUSTOMS.

And how detrimental to the kingdom, in other reſpects, this great increaſe of paper-credit is likely one day to prove, may be inferred from what follows, according to the ingenious Mr Hume*.

* See Hume's political Diſcourſes.

Firſt, It is certain, ſays that gentleman, that our national debts cauſe a mighty confluence of people and riches to the capital, by the great ſums which are levied in the counties to pay the intereſt of thoſe debts; and perhaps too, by the advantages in trade, which they give the merchants in the capital above the reſt of the kingdom.

Secondly, Public ſtocks, being a ſpecies of paper credit, have all the diſadvantages attending that ſpecies of money. They baniſh gold and ſilver, from the moſt conſiderable commerce of the ſtate, reduce them to common circulation, and by that means render all proviſions and labour dearer, than otherwiſe they would be.

Thirdly, The taxes which are levied to pay the intereſt of theſe debts, are a check upon induſtry, heighten the price of labour, and are an oppreſſion on the poorer ſort.

Fourthly, As foreigners poſſeſs a ſhare of our national funds, they render the public, in a manner tributary to them, and may, in time, occaſion the tranſport of our people and our induſtry.

Fifthly, The greateſt part of public ſtock being always in the hands of idle people, who live on their revenue, our funds give great encouragement to an uſeleſs and inactive life.

But though the injury that ariſes to commerce and induſtry from our public funds, will appear, upon ballancing the whole, very conſiderable, it is trivial in compariſon of the prejudice that reſults to the ſtate, conſidered as a body politic; which muſt ſupport itſelf in the ſociety of nations, and have various tranſactions with other ſtates, in wars and negociations. The ill there is pure and unmixed, without any favourable circumſtance to attone for it: and it is an ill too, of a nature the higheſt and moſt important.

We have, indeed, been told, that the public is no weaker upon account of it's debts, ſince they are moſtly due amongſt ourſelves, and bring as much property to one, as they take from another. It is like transferring money from the right-

hand

hand to the left, which leaves the perſon neither richer nor poorer than before. Such looſe reaſonings and ſpecious compariſons will always paſs, where we judge not upon principles. We aſk, is it poſſible, in the nature of things, to overburthen a nation with taxes, even where the ſovereign reſides among them? The very doubt ſeems extravagant; ſince it is requiſite in every commonwealth, that there be a certain proportion obſerved betwixt the laborious and the idle part of it. But if all our preſent taxes be mortgaged, muſt we not invent new ones? And may not this matter be carried to a length, that is ruinous and deſtructive?

In every nation, there are always ſome methods of levying money more eaſy than others, ſuitable to the way of living of the people, and the commodities they make uſe of. In Britain, the exciſes upon malt and beer afford a very large revenue, becauſe the operations of malting and brewing are tedious and impoſſible to be concealed; and at the ſame time, theſe commodities are not ſo abſolutely neceſſary to life, as that their price would very much affect the poorer ſort.

Duties upon conſumptions are more equal and eaſy, than thoſe upon poſſeſſions. What a loſs is it to the public, that the former are all exhauſted, and that we muſt have recourſe to the moſt grievous method of levying taxes!

Were all the proprietors of land only ſtewards to the public, muſt not neceſſity force them to practice all the arts of oppreſſion uſed by ſtewards, where the abſence and negligence of the proprietor render them ſecure againſt enquiry?

It will ſcarce be aſſerted, that no bounds ought ever to be ſet to national debts, and that the public would be no weaker, were 12 or 15s. in the pound land-tax mortgaged, along with all the preſent cuſtoms and exciſes. There is ſomething therefore in the caſe, beſides the mere transferring of property from one hand to another. In 500 years, the poſterity of thoſe now in the coaches, and of thoſe upon the boxes, will probably have changed places, without affecting the public by theſe revolutions.

It muſt be confeſſed, that there is a ſtrange ſupineneſs, from long cuſtoms, crept into all ranks of men, with regard to public debts, not unlike what divines ſo vehemently complain of with regard to their religious doctrines. We all own, that the moſt ſanguine imagination cannot hope, either that this or any future miniſtry, will be poſſeſſed of ſuch rigid and ſteady frugality, as to make any conſiderable progreſs in the payment of our debts; or that the ſituation of foreign affairs will, for any long time, allow them leiſure and tranquillity, ſufficient for ſuch an undertaking *. What then is to become of us? The events here will depend little upon the contingencies of battles, negotiations, intrigues, and factions. There ſeems to be a natural progreſs of things, which may guide our reaſoning.

* In times of peace and ſecurity, when alone it is poſſible to pay debts, the monied intereſt are averſe to receive partial payments, which they know not how to diſpoſe of to advantage, and the landed intereſt are averſe to continue the taxes requiſite for that purpoſe. Why therefore ſhould a miniſter perſevere in a meaſure ſo diſagreeable to all parties? For the ſake, I ſuppoſe, of a poſterity, which he will never ſee, or of a few reaſonable reflecting people, whoſe united intereſt, perhaps, will not be able to ſecure him the ſmalleſt borough in England. It is not likely we ſhall ever find any miniſter ſo bad a politician. With regard to theſe narrow deſtructive maxims of politics, all miniſters are expert enough,

As it would have required but a moderate ſhare of prudence, when we firſt began this practice of mortgaging, to have foretold, from the nature of men and of miniſters, that things would neceſſarily be carried to the length we ſee; ſo now that they have at laſt ſo happily reached it, it may not be difficult to gueſs at the conſequence. It muſt, indeed, be one of theſe two events; either the nation muſt deſtroy public credit, or public credit will deſtroy the nation. It is impoſſible they can both ſubſiſt, after the manner they have been hitherto managed, in this as well as in ſome other ſtates. See the article MONIED INTEREST.

There was, indeed, a ſcheme for the payment of our debts, which was propoſed by an excellent citizen, Mr Hutchinſon, above 30 years ago, and which was much approved of by ſome men of ſenſe, but never likely to take effect: he aſſerted, that there was a fallacy in imagining, that the public owed this debt; for that really every individual owed a proportional ſhare of it, and paid, in his taxes, a proportional ſhare of the intereſt, beſides the expenſes of levying theſe taxes. Had we not better, ſays he, make a proportional diſtribution of the debt among us, and each of us contribute a ſum ſuitable to his property, and by that means, diſcharge at once all our funds and public mortgages? He ſeems not to have conſidered, that the laborious poor pay a conſiderable part of the taxes by their annual conſumptions, though they could not advance at once, a proportional part of the ſum required. Not to mention, that property in money, and ſtock in trade, might eaſily be concealed or diſguiſed; and that viſible property in lands and houſes would really at laſt anſwer for the whole; an inequality and oppreſſion, which would never be ſubmitted to. But though this project is never likely to take place, it is not altogether improbable, that when the nation becomes heartily ſick of the debts, and cruelly oppreſſed by them, ſome daring projector may ariſe, with viſionary ſchemes for their diſcharge. And, as public credit will begin, by that time, to be a little frail, the leaſt touch will deſtroy it, as happened in France, and in this manner it will die of the doctor *. See the article MISSISSIPPI.

* Some neighbouring ſtates practiſe an eaſy expedient, by which they lighten their public debts. The French have a cuſtom (as the Romans formerly had) of augmenting their money; and this the nation has been ſo much familiarized to, that it hurts not public credit, though it be really cutting off at once, by an edict, ſo much of their debts. The Dutch diminiſh the intereſt without the conſent of their creditors; or, which is the ſame thing, they arbitrarily tax the funds as well as other property. Could we practiſe either of theſe methods, we need never be oppreſſed by the national debt; and it is not impoſſible but one of theſe, or ſome other method, may, at all adventures, be tried on the augmentation of our incnmbrances and difficulties. But people in this country are ſo good reaſoners upon whatever regards their intereſts, that ſuch a practice will deceive no body; and public credit will probably tumble at once, by ſo dangerous a trial.

But it is more probable, that the breach of national faith will be the neceſſary effect of wars, defeats, misfortunes, and public calamities, or even, perhaps, of victories and conqueſts. It muſt be confeſſed, when we ſee princes and ſtates fighting and quarrelling amidſt their funds, debts, and public mortgages, it always brings to my mind, a match of cudgel-playing fought in a China ſhop. How can it be expected, that ſovereigns will ſpare a ſpecies of property, which is pernicious to themſelves and to the public, when they have ſo little compaſſion on lives and properties, which are uſeful to both?

Let the time come (and ſurely it will come if we continue to increaſe our national debts) when the new funds, created for the exigencies of the year, are not ſubſcribed to, and raiſe not the money projected. Suppoſe either that the caſh of the nation is exhauſted, or that our faith, which hath been hitherto ſo ample, begins to fail us. Suppoſe that, in this diſtreſs, the nation is threatened with an invaſion, a rebellion is ſuſpected or broke out at home, a ſquadron cannot be equipped for want of pay, victuals, or repairs, or even a foreign ſubſidy cannot be advanced. What muſt a prince or miniſter do in ſuch an emergeney? The right of ſelf-preſervation is unalienable in every individual, much more in every community. And the folly of our ſtateſmen muſt then be greater than the ſolly of thoſe who at firſt contracted debts, or, what is more, than that of thoſe who truſted, or continue to truſt this ſecurity, if theſe ſtateſmen have the means of ſafety in their hands and do not employ it.

The funds created and mortgaged, will, by that time, bring in a large yearly revenue, ſufficient for the defence and ſecurity of the nation: money is perhaps lying in the Exchequer, ready for the diſcharge of the quarterly intereſt: neceſſity calls, fear urges, reaſon exhorts, compaſſion alone exclaims: the money will immediately be ſeized for the current ſervice, under the moſt ſolemn proteſtations, perhaps, of being immediately replaced. But no more is requiſite. The whole fabrick, already tottering, falls to the ground, and buries thouſands in it's ruin. And this may be called the natural death of public credit. For to this period it tends as naturally, as an animal body to it's diſſolution and deſtruction *.

* So great dupes are the generality of mankind, that notwithſtanding ſuch a violent ſhock to public credit, as a voluntary bankruptcy in England would occaſion, it would not probably be long, e'er credit ſhould again revive in as flouriſhing a condition as before. The preſent king of France, during the late war, borrowed money at lower intereſt than ever his great-grandfather did; and as low as the Britiſh parliament, comparing the natural rate of intereſt in both kingdoms. And though men are commonly more governed by what they have ſeen than what they foreſee, with whatever certainty; yet promiſes, proteſtations, fair appearances, with the allurements of preſent intereſt, have ſuch powerful influence as few are able to reſiſt. Mankind are, in all ages, caught by the ſame baits: the ſame tricks, played over and over again trepan them.

The heights of popularity and patriotiſm, are ſtill the beaten road to power and tyranny, flattery to treachery, ſtanding armies to arbitrary government, and the glory of God to the temporal intereſt of the clergy. The fear of an everlaſting deſtruction of credit, allowing it to be an evil, is a needleſs bugbear. A prudent man, in reality, would rather lend to the public immediately after they had taken a ſponge to their debts than at preſent, as much as an opulent knave, even though you could not force him to pay, is a preferable debtor to an honeſt bankrupt. For the former, in order to carry on buſineſs, may find it his intereſt to diſcharge his debts, where they are not exorbitant. The latter has it not in his power. The reaſoning of Tacitus, Hiſt. lib. 3. as it is eternally true, is very applicable to our preſent caſe. Sed vulgus ad magnitudidem beneficiorum aderat:

aderat: ſtultiſſimus quiſque pecuniis mercabatur: apud ſapientes caſſa habebantur, quæ neque dari neque accepi, ſalva republica poterant. The public is a debtor, whom no man can oblige to pay. The only check which the creditors have on it, is the intereſt of preſerving credit; an intereſt which may eaſily be overballanced, by a very great debt, and by a difficult and extraordinary emergence, even ſuppoſing that credit irrecoverable. Not to mention, that a preſent neceſſity often forces ſtates into meaſures, which are, ſtrictly ſpeaking, againſt their intereſt.

Theſe two events, ſuppoſed above, are calamitous, but not the moſt calamitous.

Thouſands are thereby ſacrificed to the ſafety of millions. But we are not without danger, that the contrary event may take place, and that millions may be ſacrificed for ever, to the temprory ſafety of thouſands*. Our popular government, perhaps, will render it difficult or dangerous for a miniſter to venture on ſo deſperate an expedient, as that of a voluntary bankruptcy. And though the houſe of lords be altogether compoſed of the proprietors of lands, and the houſe of commons chiefly, and conſequently neither of them can be ſuppoſed to have great property in the funds; yet the connections of the members may be ſo great with the proprietors, as to render them more tenacious of public faith, than prudence, policy, or even juſtice, ſtrictly ſpeaking, requires.

* I have heard it has been computed, that the whole creditors of the public, natives and foreigners, amount only to 17,000. Theſe make a figure at preſent on their income, but in caſe of a public bankruptcy, would, in an inſtant, become the loweſt, as well as the moſt wretched of the people, The dignity and authority of the landed gentry and nobility, are much better rooted, and would render the contention very unequal, if ever we come to that extremity. One would incline to aſſign to this event a very near period, ſuch as half a century, had not our fathers prophecies of this kind been already found fallacious, by the duration of our public credit, ſo much beyond all reaſonable expectation. When the aſtrologers in France were every year foretelling the death of Henry IV. theſe fellows, ſays he, muſt be right at laſt. We ſhall, therefore, be more cautious, than to aſſign any preciſe date, and ſhall content ourſelves with pointing out the event in general.

And, perhaps too, our foreign enemies, or rather enemy, (for we have but one to dread) may be ſo politic as to diſcover, that our ſafety lies in diſpair, and may not, therefore, ſhow the danger, open and barefaced, 'till it be inevitable. The balance of power in Europe, our grandfathers, our fathers, and we, have all juſtly eſteemed too unequal to be preſerved without our attention and aſſiſtance. But our children, weary with the ſtruggle, and fettered with incumbrances, may ſit down ſecure, and ſee their neighbours ſo oppreſſed and conquered; 'till at laſt, they themſelves and their creditors lie both at the mercy of the conqueror. And this may properly enough be denominated, the violent death of our public credit. See the articles MONEY, CREDIT [PUBLIC CREDIT], DEBTS [NATIONAL DEBTS], FUNDS.

Theſe ſeem to be the events, which are not very remote, and which reaſon foreſees as clearly almoſt as ſhe can do any thing, that lies in the womb of time.

And though the ancients maintained, that, in order to reach he gift of prophecy, a certain divine fury or madneſs was requiſite, one may ſafely affirm, that, in order to deliver ſuch prophecies as theſe, no more is neceſſary, than merely to be in one's ſenſes, free from the influence of popular madneſs and deluſion.

REMARKS on PAPER-CREDIT, ſince the laſt War, and the Peace of 1764.

Our public debts having near trebled ſince Mr Phipps wrote, the judicious reader will duly apply the ſame, in conjunction with what that gentleman has obſerved: certain it is, that the weight of our additional taxes has enhanced the prices of every thing taxed, in proportion thereto. See our Articles DUTIES and LABOUR, and BONDING AT THE CUSTOM-HOUSE.

This increaſe of paper circulation, of which is before ſpoken, in a degree proportionate to the augmentation of our national debts and taxes, 'tis to be feared may occaſion ſuch an exorbitant riſe in the price of our Engliſh manufactures in general, that foreigners will not be in a condition to purchaſe them of us: and if we cannot ſell our wares, how ſhall we be able to purchaſe thoſe of foreigners? if once this proves to be our caſe, what will become of the REVENUE OF CUSTOMS? When we are unable to ſend our Engliſh manufactures, what will alſo become of the REVENUE OF EXCISE, when the greateſt part of our manufacturing people is rendered incapable to purchaſe EXCISEABLE COMMODITIES? Inſtead of theſe revenues producing any degree of a SINKING FUND for the gradual diſcharge of our PRINCIPAL MONEY PUBLIC DEBT, how ſhall we raiſe the intereſt? Flatter ourſelves as much as we will, there muſt aſſuredly be a NE PLUS ULTRA to our FUNDING AND BORROWING, or at length we muſt become a bankrupt nation, if we continue to increaſe our paper circulation more and more. Will not this at laſt enable our competitors in trade to beat us out of all the markets in the world; and then what chance ſhall we have to beat them with the ſword, when the national wealth is exhauſted, and we have not but paper to circulate, which we can never realize on the greateſt exigency?

PAR, in affairs of commerce, ſignifies any two things equal in value: and, in the exchange of money with foreign countries, the perſon to whom the bill is payable is ſuppoſed to receive the ſame value as was paid the drawer by the remitter; but this is not always the caſe with relation to the intrinſic value of the coins of different countries, which is owing to the fluctuation in the prices of exchange amongſt the ſeveral European countries and the great trading cities. In order to judge of the intrinſic par of foreign coins for mercantile uſes, ſee the articles COIN and EXCHANGE; for the uſe that may be made of this knowlege, alſo in a national light, ſee the article BALLANCE of TRADE.

Beſides the intrinſic par of exchange, there is another par, which, with no leſs propriety, we may diſtinguiſh by the extrinſic par of exchange. For the nature, uſes, and private advantages that may be made by this ſkill in the exchanges, ſee the articles ARBITRATION of EXCHANGE, and alſo the capital trading cities of Europe, under the articles of their reſpective provinces, &c.

PARAGUAY, a province of South America, is bounded by the country of the Amazons on the north, by Brazil on the eaſt, by Patagonia on the ſouth, and by Peru and Chili on the weſt, lying between 12 and 37 degrees of ſouth latitude, and between 50 and 75 degrees of weſt longitude, being 1500 miles in length from north to ſouth, and almoſt as much in breadth. Some make it's extent far more conſiderable, but they are thought to exaggerate the matter. Some geographers make it to comprehend the ſeveral provinces or diſtricts following, 1. Paraguay, properly ſo called. 2. Chaco, or Tucuman. 3. Rio de la Plata. 4. Guayra, Parana, Urvaig, and, according to others, the captainric del Rey in Brazil.

If ſo, the extent is ſo conſiderable, that it muſt be ſuppoſed to have a variety of climates, ſoils, products, and inhabitants, the particulars whereof ſhall be given under the heads of each province above-mentioned.—To avoid needleſs repetitions, we ſhall firſt give a general account of the whole.

The land is, generally ſpeaking, very rich and fruitful, producing plenty of wheat, and other European grain, ſome vines, but chiefly abounds in ſugar-canes; and has whole woods of peaches, almonds, figs, &c. It is at preſent ſo well ſtocked with all ſorts of cattle, ſmall and large, that they run in a manner wild. The Portugueze in the Brazils kill them in great numbers only for their hides and ſuet, and let the fleſh rot on the ground. [See PORTUGUEZE AMERICA]. The natives eat their fleſh, but half raw. In ſome parts they are obliged to deſtroy their calves, to prevent their growing too numerous, through the richneſs of their paſture. They have alſo great plenty and variety of other beaſts, wild and tame horſes and mules in ſuch prodigious quantities, that the former run wild every where, and of the latter they ſupply Peru with 50,000 per ann. according to ſome, beſides what they ſend elſewhere, and keep for their own uſe.

Mines of iron and copper have been diſcovered in many parts of Paraguay, beſides ſome rich ones of gold and ſilver, and of the fineſt amethyſts.

PARAQUAY PROPER, ſo called, is the moſt northern of all, and neareſt to Brazil, being bounded by that on the north, on the eaſt by the province of Guayra, on the ſouth by thoſe of Rio de la Plata and Parana, and on the weſt by that of Chaco or Tucuman. But on the weſt and north, geographers do not ſeem to be acquainted with it's boundaries.

Paraguay Proper is divided into two equal parts almoſt, eaſtern and weſtern, by the river of it's name, which runs through the midſt of it from north to ſouth.

This river hath it's ſpring-head in the ſouthern part of the country of the Amazons, a little above the territories of the Xarayes, which lie from latitude 16 to 20 ſouth, and longitude weſt, ſpread themſelves from 50 to 55, and beyond, and are ſaid to abound with mines of gold and ſilver. In it's courſe from north to ſouth, it forms a large lake, called the Laguna de los Xarayes, from which it enters into the province of Paraguay Proper, where it waters the towns of Porto de la Candelaria, and the city of Aſſumption, the capital, whence it runs into the territory of Rio de la Plata. The chief rivers it receives are, Rio de los Payaguas, Botetes, Jacarii, Taraiti, Guacuri, Pilai, Tabati, Peribibus, Salado, Araguaig, Cunagba, Tibiquari, Japſur, Piſcomay, Parana, and Vermejo; and after having received theſe two laſt into it's ſtream, it then aſſumes the name of Rio de la Plata, near the town of Corrientes. (De Liſle.) According to the obſervations made by the jeſuits, anno 1702 and 1703, which are the lateſt and the beſt that ever were made; this river is found to ſpring from the mountains of Potoſi in Peru, of which we ſhall ſpeak in it's proper place. Father Techo reckons it one of the greateſt rivers in America, and gives it

a courſe

a courſe of 300 leagues before it falls into the Parana; and adds, that it is navigable about 200 when joined to it.

Father Jepp, who was there ann. 1691, ſays, that ſilver was then cheaper than iron, and that a common two penny knife would fetch a crown, a two ſhilling hat, ten or twelve crowns, a gun of ten or twelve ſhillings thirty crowns, and ſo of the reſt. As to the healthineſs of the climate, though we can ſay nothing to contradict it, yet moſt of our accounts tell us, the natives are far from enjoying the benefit of it; which is chiefly owing to their gorging themſelves with ſuch prodigious quantities of half raw fleſh, as fills them with worms and other crudities, that turn at length into dangerous diſeaſes.

The miſſionaries in thoſe parts where the natives are converted, take care to ſow great tracks of land with wheat, that they may have plenty of white bread, not only for themſelves, but to impart to the natives, who living moſtly on their Indian corn, are ſo fond of this, that they will give two or three horſes for a white loaf. They likewiſe take care to cultivate their vines, that they may not want wine to their muſic and good chear; and we are told, that they have ſo many of them, as yield 500 caſks of it in a year, if not ſpoiled by the piſmires, which are here very numerous, or by the waſps and birds, or blighted by the north-winds; for in this caſe it will make that liquor ſo dear, that a caſk will coſt twenty or thirty crowns, and after all cannot be preſerved from turning ſour, without a great mixture of lime. They have plenty of roots and herbs, and the only thing they want is oil to their ſallads, inſtead of which they are forced to uſe honey and ſugar. Silver is ſo plenty among them, that old ſhoes and hats are much more valued, and an ell of linnen hath fetched four or five crowns: whereas iron is ſo ſcarce that a horſeſhoe and a bitt for a bridle has been exchanged for ſeveral horſes.

The chief towns in Paraguay Proper and Chagua, lie in the following order:

1. Aſſumption. 2. Villa Rica. 3. Maracaju. 4. Arcacia. 5. Ypane. 6. Sant Ignatio. 7. Noſt. Sign. de la Fé. 8. Xeres, Conception Antiqua.

ASSUMPTION town, the metropolis of Paraguay, ſtands on the eaſtern banks of the river of it's name, a little above the place where the Picolmago falls into it, having Villa Rica on the north, and that of La Plata on the ſouth, and about ſeven or eight leagues from each. It was built by the Spaniards anno 1538 (De Laet, Rogers) and is famed for its healthy and advantageous ſituation, as well as for the number of it's inhabitants. The territory about it is exceeding rich and fruitful, produces plenty and variety of fruits, not only of thoſe which are natural to the country, but of thoſe which have been tranſplanted thither from Spain; and the air is there ſo temperate, that the trees are cloathed with a conſtant delightful verdure.

There are likewiſe very noble and rich paſtures, in it's neighbourhood around, on which are bred vaſt herds of cattle; ſo that there is ſuch an extraordinary plenty of all proviſions in the town, as makes the natives, blacks and others, ambitious of living in it.

VILLA RICA, or the RICH TOWN, ſtands near the ſame eaſtern banks of the Paraguay, about eight leagues (ſome ſay much farther) north of that of Aſſumption, on a ſmall river of no great note.

Thoſe called PUERTO DE LA CANDELARIA, and NOPA SENHORA DE FE, are the two moſt diſtant towns northward from the metropolis abovementioned, and have nothing worth notice except their fruitful territories.

II. The province of TUCUMAN, is bounded on the north partly by that called De los Chicas, in Peru, and partly by that of Chaco; and on the ſouth partly by that of Cayo, and partly by the territory of the Pampas; on the eaſt by Paraguay Proper, and Rio de la Plata; and on the weſt by the imperial biſhopric of St Jago in Chili, and by the ſouth end of the Chica's; extending itſelf from Rio Vermejo, which parts it from Chaco on the north, to that called Rio Quarto, which divides it from Cayo on the ſouth, almoſt 10 degrees, that is, from the 24th to the 34th of ſouth latitude; and from eaſt to weſt, where broadeſt, that is, from the river Salado to the ridge De la Cordillera, which parts it from Chili, almoſt 7 degrees, that is, from 62 to 69 ½ of weſt longitude: ſo that it lies for the moſt part in a very temperate and healthy climate; and though it hath no mines diſcovered of either gold or ſilver, yet it's territory is both rich and well cultivated, eſpecially towards the government of Chili; but it hath ſome deſert cantons towards the Magellanic ſide. The climate is moderately hot, being all within the temperate zone, and their ſummer begins about the 10th of our September, and ends about the 9th of March.

The ſoil is of a ſandy nature, and almoſt without ſtones, which makes it very inconvenient for building; but the land is very well watered not only with ſome large rivers, but alſo with plenty of ſmall ones, brooks, and variety of ſprings and lakes; all which are commonly bordered with gardens, orchards, vines, and groves, which yield a noble proſpect, and delightful ſhade and verdure. The country between thoſe rivers produces plenty of cotton, wax, honey, paſtel, whichthey uſe for dyeing, beſides variety of fruits, roots, Indian wheat, &c. They likewiſe breed up vaſt quantities of cattle, large and ſmall, with great plenty of deer, and other game, fowl wild and tame, eſpecially partridges in great quantities, and a great variety of other fowl.

This country, which is commonly called Traplanda, and, by the inhabitants of the government of Chili, the province De la Sal, is computed to extend about 300 leagues in length, from north to ſouth, and abour 150 in breadth, where broadeſt, but varies as it runs more towards the ſouth, where it ends ſomewhat in the figure of a cone. It is inhabited chiefly by three ſavage nations, viz. the Tucumans, from whom the whole diſtrict is called, the Jurios, and Diaguites, the laſt of which employ themſelves in feeding of cattle, eſpecially ſheep, the wool of which is manufactured and dyed by them, and a great commerce is made of it through this whole province. Theſe ſheep are very large and ſtrong, though their wool is fine, and the inhabitants uſe them likewiſe for carriage, as we do here our horſes. The inhabitants are cloathed with their woollen and cotton manufactures, which they dye of ſeveral colours with their paſtel, and other ingredients.

The chief places in Tucuman are, 1. San Jago del Eſtero. 2. San Salvador, al Xuxui. 3. San Miguel. 4. Salta, or Lerma. 5. Londres. 6. Cordoua. 7. Eſteco, al N. S. de Talavera. 8. Rioja. 9. Putupas. 10. Soto la Punta. 11. Capo de San Luis. 12. De los Santos.

SAN JAGO DEL ESTERO, the metropolis of this province, and an epiſcopal ſee, is ſituated on the banks of the Dolce, or Sweet River, which is here pretty large and navigable, being able to carry large veſſels, and affords plenty and variety of fiſh: the town, however, is not very conſiderable, it conſiſting but of about 300 houſes, ſome ſay 500 families, and is without walls, ditch, or any other defence. The inhabitants are moſtly of the Maſticho and Mulatto kind, of dark yellow complexions, lazy, and ſickly, occaſioned by the heat of the climate, and more given to pleaſure than to any traffic or work. The country about it is rich, and produces plenty of wheat, rice, barley, fruits of all ſorts, particularly figs and raiſins.

SAN SALVADOR, or XUXUI, ſtands near the confines of Peru, at the foot of a high mountain, which forms part of the famed ridge called the Andes. It has a conſiderable river running by it, a little above the place where it falls into the Leon, from which both deſcend into the Rio Vermejo, or Red River. This town has about 300 houſes, and is the moſt northerly of all this province, and within a degree of the ſouthern tropic, about 83 leagues from Potoſi.

SAN MIGUEL, al ST MICHAEL, the firſt town the Spaniards founded in this country, is pleaſantly ſituated on a fertile plain, and near the banks of a ſmall river, which falls into the Rio Dolce, near San Jago, from which it is diſtant about 18 leagues to the north-weſt. Mr Baudrand, who calls it S. Michael de Eſtero, ſays it is the capital of Tucuman, and a biſhop's ſee, under the metropolitan of La Plata. The plain on which it ſtands is fertile, producing plenty of wheat, rye, barley, graſs, &c. ſo that it breeds great quantities of cattle, produces cotton, flax, ſome wine, and great abundance of wood for all uſes. The air is reckoned one of the ſweeteſt and healthieſt in all Paraguay, and the country well inhabited, and ſtored with all conveniencies of life.

SALTA ſtands on a ſmall river, which ſoon after falls into a neighbouring lake, and is at ſome ſmall diſtance ſouth-eaſt from San Salvador, and eaſt from the burning mountain of Capiapo, and about 15 leagues from Eſtero, and hath a bridge over the river. It is inhabited moſtly by Spaniards, to whom both it and the territory about it belongs, and hath about 400 houſes, and five or ſix churches or monaſteries. It hath neither walls, ditches, nor any other defence but it's inhabitants, who are about 500 men that bear arms, beſides their ſlaves, negroes, as well as Mulattoes, which may amount to about thrice that number. Salta is a place of great reſort, on account of the quantity of corn, meal, wine, cattle, ſalt meat, and ſuch other commodities, which are ſent hence into Peru, and other parts. Martiniere.

LONDRES, ſituate near a great marſh of it's name, cauſed by a ſmall river which comes down from the Andes, and falls into it, was built by Tarita, governor of this province, ann. 1555, in order to keep the natives in awe, and called it Londres, in compliment to our queen Mary, then married to king Philip of Spain. (Wood Rogers.) It ſtands near the frontiers of Chili, in latitude 29. 12 ſouth.

CORDOVA, ſituate about 100 leagues ſouth of San Jago del Eſtero, and 160 north-weſt-ward of Buenos-Ayres, is a conſiderable town in this province, but ſituate on a marſhy, though a rich and fertile ground, and bigger than Buenos-Ayres. It ſtands in latitude 31. 30. ſouth longitude, 63. 30. weſt, in a temperate climate and healthy, with equal winter and ſummer, and all the territory about it full of cattle, both great and ſmall, and abounding with excellent paſture. It all produces plenty of corn, fruits, and other neceſſaries, and hath ſeveral plentiful ſalt-pits; ſo that the town drives a conſiderable trade in thoſe commodities with Peru, it being ſituate on the road to Buenos Ayres. The inhabitants are Spaniards, and amount to about 300, who are moſtly employed in tilling the

the ground, and manufacturing of cotton cloth, which they ſend to Potoſi.

II. Rio De La Plata, ſo called from the famed river of that name, along whoſe banks it extends itſelf on each ſide about 200 leagues in length, from north to ſouth, and about 100 leagues, where broadeſt, from eaſt to weſt; is bounded on the north by the provinces of Chaco, Paraguay Proper, and Parana; on the eaſt by that of Urvaig; on the ſouth by the territory of Pampas; and on the weſt by Tucuman.

We muſt, however, remind our readers, that the limits of theſe provinces are far from certain or agreed on, eſpecially thoſe between this province and Tucuman, there being no boundaries fixed between them, becauſe the whole country is plain and champaign, without mountains or hills, or even ſo much as a tree, houſe, or hut, by which they might be terminated.

However, the climate is here moderate and healthy, and pretty far in the temperate zone, the country extending itſelf from the 32d, to almoſt the 37th degree of ſouth latitude. Their winter is in May, June, and July, when the nights are indeed very cold, but the days moderately warm; the froſt is neither violent or laſting, and the ſnows very inconſiderable.

The river De La Plata receives ſeveral conſiderable ones in it's courſe, ſo that it ſwells at ſome times to ſuch a degree, as to cover a great deal of land on each ſide, which, upon the abating of the water, is found to be much the fertiler by them. At ſuch ſeaſons, the natives betake themſelves to their canoes, wherein they put their families and goods 'till the inundation aſſuages, and then return to their old habitations. (Rogers.) The ſtream of it into the ſea is ſo ſtrong and rapid, that it ſweetens it for a great way. The water of it is ſaid to be very clear, and excellent for the lungs and wind, inſomuch that the people who live near it are ſaid to have very clear and melodious voices, and to be generally inclined to muſic. (Covaglie.) Our author adds, that it petrifies the branches of the trees that fall into it, and that veſſels are naturally formed of it's ſand, which are of various figures, look as if they were poliſhed by art, and keep the water cool. It likewiſe abounds with ſuch plenty and variety of fiſh, that the people catch it in great quantities, without any other inſtrument than their hands, and all along the banks are ſeen the moſt beautiful birds of all kinds. (Sepp.)

The plains about it are likewiſe affirmed to be ſo large and even, without any obſtruction to the ſight, that the ſun ſeems to riſe and ſet in them. It's courſe, from the confluence of thoſe two rivers that forms it, to it's mouth, is above 200 leagues: it runs moſtly to the ſouth and ſouth-eaſt, and is navigable all the way by the largeſt veſſels, and full of delightful iſlands. Among the large rivers that fall into it on both ſides, thoſe called the Rio Vermejo, or Crimſon River, the Rio Dolce, or Salado, the Careaval, and ſome others, flow into it on the weſt, and the celebrated one of Urvaica, and ſome others on the eaſt ſide: ſo that, upon the whole, this famed river may, in all probability, be the greateſt in the world for breadth and continued depth, though perhaps that of the Amazons, Quebec, and ſome others, may equal or even excel it in length of courſe.

As the country on both ſides this river is very plain and extenſive, ſo their way of travelling is eaſy and pleaſant, viz. by high carts covered with hoops and ox-hides, and with conveniencies for travellers to ſleep in; which is ſo much the more convenient, becauſe they travel moſtly in the night, to avoid the exceſſive heat.

The product of this province is much the ſame with that of the others, that is, all ſorts of European and American fruits, both of wheat, cotton, ſugar, honey, &c. but the moſt wonderful increaſe in this country is that of the cattle of all kinds. For the plains here extending themſelves near, if not more, than 200 leagues, and abounding with ſuch an excellent paſture, the beaſts brought hither from Spain have multiplied to ſuch a degree, that they are all in common, no man claiming any property to them, but every man taking what he hath occaſion for.

The number of black cattle eſpecially, is here ſo prodigious, that they kill many thouſands of them merely for their hides, every time the ſhips go for Spain, and leave their carcaſes to be devoured by beaſts and birds of prey, which are here likewiſe very numerous: ſometimes, when they cannot vend their hides, they will kill them for their tongues, and thoſe that care not to be at the trouble of fetching them from the plains, may buy them for a ſhilling or two.

Thoſe likewiſe that make uſe of their milks, either for food or drink, may go into thoſe paſtures, and milk as many cows as they will, or carry off as many of their calves, and kill them for their food, they being all at the mercy of the firſt comer, and no man claiming more property to them than another. Horſes are no leſs numerous and cheap, and in common like the other cattle; ſo that they may be had likewiſe for fetching, in what quantities a man pleaſes; and of thoſe that are already broke, one may buy ſome of the beſt, and of the true Spaniſh breed, fit for ſervice, for a piece of eight per head; and it is confidently affirmed, if our author's accounts are not greatly exaggerated, that the Spaniards can bring 30,000 horſe into the field, all of Indians, well mounted, diſciplined, and accoutred. (Sepp.)

Game fowl is here in no leſs plenty; and the partridges, which are as large and tame as our hens, are in ſuch vaſt quantity, that one may kill them with a ſtick. Their wheat makes the fineſt and whiteſt of bread; and, in a word, they ſeem to want for nothing here, eſpecially the natives, but ſalt and fuel: the former the Spaniards have brought to them from other parts, and the latter they ſupply with planting of vaſt groves of almond, peach, and other trees, which require no other trouble than putting the kernels into the ground, and by the next year, we are told, they begin to bear fruit. The return for European goods is ſo prodigious, that it almoſt exceeds belief, inſomuch that an ordinary two-penny knife, or pair of ſciſſars, will fetch a crown, a gun of 10 or 12 ſhillings value, 20 or 30 crowns, and ſo of the reſt, down to old hats, ſhoes, needles, &c.

The chief towns in this province are, 1. Buenos-Ayres. 2. Santa Fé. 3. Corrientes. 4. Santa Luiſa; and 5. Chanas, beſides ſeveral others of leſs note.

The town of Buenos-ayres is ſo called from it's pleaſant and healthy ſituation, it being ſeated under the 34th degree of ſouth latitude, upon a riſing ground, at about 50 leagues from the mouth of the Rio de la Plata, and upon the ſouth ſide of it, that river being here 7 leagues in breadth, and navigable by any ſhip 60 leagues above the town, and no farther, by reaſon of a great cataract.

The territory about it, which is of a vaſt extent, is very fertile in fruits of all ſorts, and paſture grounds covered with vaſt quantities of cattle; and would be ſtill more ſo; if duly cultivated, eſpecially in corn, but the people there are lazy, and content themſelves with what nature produces, without labour. It bore formerly very excellent vineyards, from which they made ſome ſorts of exquiſite wines, beſides the vaſt quantity of grapes they dried for uſe: but they were deſtroyed by the piſmires, which chanced one year to appear in ſuch ſwarms, that they eat them all up, root and branch, ſo that they were forced to pluck them up.

Santa Fe' is the next Spaniſh eſtabliſhment in this province to that of Buenos Ayres, to which it is diſtant about 70 leagues to the north-weſt, in latitude 31. 40. ſouth: it ſtands on the mouth of a river, which falls into that of La Plata, and on the ſouth-weſt ſide of this latter. All the territory not only about it, but quite down to Buenos-Ayres, on each ſide of that river, is very rich in all productions, and vaſtly delightful. The town is built of brick, and encompaſſed with the ſmall river abovementioned, and was built by the Spaniards for the defence of both that of de la Plata, and of the rich gold and ſilver mines which are in the neighbonrhood of this ſettlement, though the Spaniards do not care to open them, leſt that ſhould encourage ſome of their enemies to come and take them from them. (Coreal, Rogers.)

Corrientes, or Corientes, is the next in courſe up the river, and ſtands about 80 leagues higher, being built by the Spaniards, on the confluence of the Parana and Paraquay, but is ſmall and inconſiderable, and no ways anſwering the dignity of it's ſituation between thoſe two famed rivers.

IV. The province of Parana, ſo called from the great river of it's name beforementioned, and which is it's boundary on the ſouth and eaſt, where it divides it from thoſe of Rio de la Plata, laſt deſcribed, and Urvaica; on the north it joins to that of Guayra, and the unknown iſlands of Brazil, and Paraguay Proper on the weſt. It's extent, as far as it is well known, that is, conquered and converted, is computed about 200 miles, all that is beyond being unknown to us as yet, and the breadth about 115 leagues, more or leſs according as it's limits wind more in or out.

The Parana hath it's ſpring-head in ſome of the unknown tracks of ſouthern Brazil, and holds it's courſe from north-eaſt to ſouth-weſt, in which it croſſes, and waters the provinces of Guayra and Urvaica, as well as this of Parana. It's longeſt courſe, excluſive of it't windings, is computed at 300 leagues, before it joins it's waves with thoſe of the Paraguay, near the town of Corientes, lately mentioned, on the moſt northern verge of Rio de la Plata, laſt deſcribed.

The towns belonging to this diſtrict did lie on the Parana, in the following order, San Ignatio, on the weſt ſide of it, about 30 leagues above the place where it joins with the Paraguay; Itapoa, or the Incarnation, about 16 leagues higher on the ſame ſide; Corpus, about 20 leagues higher on the eaſt ſide; Mondais, on a river of it's name, near its fall into the Parana on the weſt; Santa Maria d'Ignazu, on it's confluence with it on the eaſt, and now lying in ruins; Acarai, overagainſt it, on the weſt ſide; Jovara, on the river of it's name, where it falls into this on the weſt; and Paquiri, on another of it's name, overagainſt it. We know very little of theſe towns, except their ſituation, and much leſs of thoſe of Loretto and San Ignatio, on the Cucapa and Yuti, which lie more remote from the river, and of that of St Anne, on the lake of Apupan.

V. The Province of Guayra, is bounded on the north by the unknown tracks of Brazil, and the nations of the Tupiques; on the eaſt by the captainric of St Vincent, in the ſame

ſame country, and partly by the Northern Ocean; on the ſouth it hath the province of Urvaica, and part of that of Parana; and on the weſt the remainder of the ſame province, from which it is divided by the river of that name: it's extent, from eaſt to weſt, is computed about 150 leagues, and about 140 from north to ſouth; it's boundaries towards Brazil are uncertain.

The tropic of Capricorn cuts it almoſt into two equal parts, ſo that it's climate muſt of courſe be very hot, though moiſt, by reaſon of the vaſt dews and rains, ſo that it is very fruitful in proviſions, as well as diſeaſes; inſomuch that ſome repreſented it as a fitter habitation for wild beaſts than human creatures: and yet we are told that it was pretty well peopled at the firſt coming of the Spaniards.

It is watered by ſeveral rivers, which fall into the Parapana, which laſt deſcends from the ſouthern mountains of Brazil, and is of a conſiderable bigneſs before it falls into the Parana. The chief of thoſe that fall into the Parana, are the Tibaxiva, Pirapus, and Itangua, beſides ſome others of leſs note. Both ſides of thoſe rivers are covered with ſeveral ſorts of trees, the moſt valuable of which among the natives are the cedars, which are very numerous, and ſo tall and large, that they make veſſels of one ſingle trunk, which will carry 20 oars. Others produce excellent fruits, and ſome of them yield a good kind of balſam.

VI. The province of URVICA, commonly called URVAIG, and URVAIGA, is bounded by that of Guayra, laſt deſcribed, on the north; on the ſouth by the mouth of Rio de la Plata; on the eaſt by the captainric Del Rey; and on the weſt by the province of Parana, from which it is parted by the river of that name. It extends itſelf from 25 to 33. 20. of ſouth latitude; the length of it, from north-eaſt to ſouth-weſt, being computed ſomewhat above 210 leagues, and the breadth of it, from eaſt to weſt, about 130 where broadeſt, but much narrower in other parts. It is divided into two parts, viz. eaſt and weſt, by the river of it's name, which riſes out of a ſmall ſpring in the country called Ibiturua, near the mountains of South Brazil, and runs quite through the midſt of it, from north to ſouth: ſome Geographers gave it the name of the river of the Miſſions, but it is very ſmall and inconſiderable during a courſe of ſeveral ſcore of miles, 'till it comes to receive divers others into it's ſtream, which ſwell it ſo far, that it becomes at length almoſt equal to that of Paraguay, and falls into the Rio de la Plata, almoſt overagainſt the town of Buenos-Ayres.

In it's courſe, upon leaving the mountains of Brazil, and through the territory of Ibiturua, it's ſtream runs moſtly ſouth-weſt, after which it winds more to the ſouth, and runs almoſt parallel with the Parana. It's ſtream runs near 200 leagues from it's ſource, with a prodigious noiſe, occaſioned by huge rocks and ſtones, which lie in it at certain diſtances, and make it incapable of carrying ſhips of burthen; but, in winter, the vaſt floods and ſtreams that pour down into it, make it look more like a ſea, and overflow a great deal of land on each ſide. After a courſe of about 200 leagues, it begins to enlarge it's ſtream, and flows more gently and ſmoothly about as many more, the whole courſe of it being computed about 400 leagues.

Captain Woods Rogers, who calls this large river Uruguay, adds, on the authority of Father Sepp, that it hath a prodigious cataract, which he looks upon as an obſtacle appointed by divine providence, to preſerve the poor natives from the avarice and cruelty of the Spaniards, who are thereby prevented from proceeding farther up, and ſettling themſelves in thoſe rich cantons. He obſerves, that theſe Indians are very harmleſs and ignorant, and not only fall into the vices of the Spaniards, but likewiſe under their heavy yoke; for it ſeems they make no difference between converts and idolaters, but uſe all with the like tyranny, and as if they were no better than brutes.

The plains formerly were full of oſtriches, lions, ſeveral ſorts of goats and deer, but at preſent all that vaſt extent of land on both ſides of the river Urvaig is turned into paſture grounds, covered with an infinite number of cattle, eſpecially cows and horſes, which run wild upon them.

CAPITANIA DEL REY, or the ROYAL CAPTAINRIC. This diſtrict is by ſome joined with the captainrics of Brazil, and by others made a province of Paraguay: it extends itſelf along the eaſtern coaſt of the latter, quite from the captainric of St Vincent, from which it is divided by the river of St Francis quite to the mouth of the Rio de la Plata, that is, from 26 to 35 degrees of latitude, extending itſelf, from north-eaſt to ſouth-weſt, the length of 10 degrees, and about four in breadth, where broadeſt. It has no places of any note, nor indeed any river worth deſcribing, except that of the Holy Ghoſt, and that called Rio de Martin de Souza; the former of theſe is alſo called Rio Grande, and it's mouth Barra de Rio Grande de Alagoa, and Puerto de San Pedro; it is formed by the two rivers of Tibiquari and Igat, both which have their courſe near the mountains of Ibiturua, but by a different courſe, the one directly ſouthward, of above 100 leagues, and the other ſouth-weſtward, of above 160; during which, each of them receives ſeveral others; they unite their ſtreams at laſt, in the territory called Terra dos Patos, and thence taking a turn ſouth-weſtward, and parallel to the ſea-coaſt, form a ſlip of land of about five leagues in breadth, and 50 in length, and empty themſelves into the Northern Ocean, at the barra abovementioned, and is is from the confluence of thoſe two rivers to this place that it hath the name of Santo Spiritu, or St Eſprit; the other, called Rio de Martin de Souza, ſprings from the mountains in the country of Tape, and runs directly ſouthward into the ſame ocean, about 60 leagues from the bar, or mouth, of the Holy Ghoſt.

The country is poorly inhabited, either by natives or Portugueze, the latter having formerly made ſuch havock of the former, that thoſe that were leſt were glad to retire farther into Paraguay, to avoid their cruelty.

REMARKS.

The Jeſuits of Paraguay having been ſo daring as to oppoſe, with an armed force, a new regulation of limits agreed upon in America, between the crowns of Spain and Portugal, as appears by late accounts from Madrid, it may ſeem ſurprizing how thoſe reverend fathers ſhould reſiſt the orders of ſuch good friends to them as the Spaniſh and Portugueze governments are, and much more ſo, that they ſhould be able to reſiſt them effectually: therefore, we doubt not but the following account, extracted from the beſt authors, will be acceptable to ſuch as are ſtrangers to the empire which the Jeſuits have founded in that country.

The ſettlement made by the Jeſuits upon the river Paraguay in America, is extremely remarkable. Theſe good fathers, every where indefatigable in improving their apoſtolical talents, and turning the ſouls of men into eccleſiaſtical traffic and power, began there by drawing together, into one fixed habitation, about 50 families of wandering Indians, whom they had perſuaded to take their word implicitly for whatever they told them: for this is what they call converſion, and is, indeed, the true art of making Papiſts, who have no other ground for their faith but the aſſertions of their prieſts.

From this beginning, and ſuch encouragement, theſe holy fathers ranging the country, and dazzling the ſtupid ſavages with their ſhining beads, charming them with their pious tales and grimaces, and their tuneful devotions, made ſuch a harveſt of converts, as to form a commonwealth, or rather an empire of ſouls: for every convert is a ſubject moſt blindly obedient.

The holy fathers, not 50 in number, are thus ſovereigns of a noble country, larger than ſome kingdoms, and better peopled. It is divided into ſeveral large diſtricts, each of them governed by a ſingle Jeſuit, who is, as it were, a provincial prince, but more powerful and revered, and better obeyed, than any European, or even any eaſtern monarch.

His word is not only a law, but even an oracle; his nod infers ſupreme command: he is abſolute lord of life, and death, and property, may inflict capital puniſhment for the lighteſt offence, and is more dreaded, and therefore more obeyed, than the Deity. His miniſters and officers, civil and military, are doomed by him to the meaneſt puniſhments, and whipped, not only like common ſlaves, but like common felons: nor is this all their puniſhment, at leaſt all their abaſement, which, to a man of ſpirit, is the worſt puniſhment: while they are yet marked and mangled with the laſh, they run (colonels and captains run) and kneel before their holy ſovereign, condemn themſelves for having incurred his pious diſpleaſure, and, humbly kiſſing his reverend ſleeve, thank him for the fatherly honour he has done them, in correcting them like dogs.

So much tameneſs and vaſſalage is part, and an important article, of their converſion: they pretend to be even pleaſed with their ſtate of bondage, and care not what they do and ſuffer here, for the mighty treaſures of joy and liberty which are inſured to them hereafter by the good father, who gives them all that he has to give in the next world, and, by way of barter and commands, takes all that they have in the preſent.

The poor Indians cultivate the ground, dig and plow, and reap and ſow; they make ſtuffs, and other manufactures; they rear fowls, they breed cattle, they carry burthens, and ſlaviſhly labour above-ground, as well as under it, where, in ſweat and darkneſs, and in peril of periſhing, they drudge in the mines: yet, with all this induſtry, they earn nothing for themſelves: all their earnings, all the profit and advantages appertain not to them, but ſolely to their Popiſh prieſts, their ſpiritual ſovereigns, who rewards them to the full with what coſt them nothing, bleſſings and maſſes, and diſtant proſpects, which they leave to God, while they tyrannize over them like devils upon earth. Their grain and manufactures are all carried into their prieſts warehouſes, their cattle and fowls into their yards, their gold and ſilver into their treaſury: they dare not wear a rag of their own ſpinning, nor taſte a grain of their own ſowing, nor a bit of meat of their own feeding, nor touch the metal of their own producing; no not ſo much as an egg from the hens they rear: they themſelves are fed and ſubſiſted from day to day, by a limited allowance, furniſhed them by the appointment, and at the mercy of their great lord, a worthleſs and imperious prieſt.

Yet, under all theſe diſcouragements, they are diligent and laborious to the laſt degree, and vie with one another for the high price and diſtinction beſtowed by the father upon ſuch

as excel moſt in their work and induſtry, even the bewitching honour of kiſſing his ſleeve. The ſecond commandment in their table of duties is, To fear the Jeſuit, and to obey him; as the two next are much akin to it, and of the like tendency, even to ſtudy humility, and to contemn all worldly goods, in order to inrich the prieſt. The precept of fearing God ſeems to be prefixed for form, and in policy only, ſince it is impoſſible there ſhould be any knowlege of God where the exerciſe of reaſon is not known nor permitted; nor can God be ſaid to be regarded by thoſe who uſe the images of God like beaſts.

All theſe ſtores and warehouſes, ſo much grain, ſo much gold and ſilver, ſo many commodities, from ſo fine, ſo large and ſo plentiful a country, abounding in mines, in rivers, and meadows full of horſes and ſheep and black cattle, of timber and fruit-trees, of flax and indico, hemp and cotton, ſugar, drugs, and medicinal herbs, as we have ſeen, muſt enable theſe good fathers, who have renounced all wealth, and the world itſelf, to carry on an infinite and moſt lucrative trade, in which, though they have vowed poverty, they are extremely active, and conſequently muſt make that Jeſuitical government a moſt powerful one.

It hath advantages which no other government ever had, an abſolute independency upon it's people and their purſes, the whole wealth of the country in their preſent poſſeſſion, the people abſolutely ſubmiſſive, and reſigned to their good pleaſure, and all it's calls; no factions; not a malecontent; an army of 60,000 men, all tame and tractable, devoted to blind obedience, commanded in chief by Jeſuits, and obſtinately averſe to be commanded by any other generals; a vaſt revenue of many millions; no trouble in taxing, nor any time loſt in collecting taxes, the people being moulded by their prieſts to throw all their property at their feet. Behold, Britons, and tremble at the ſhocking effects of Popery!

Such a government, whilſt it proceeds upon the ſame principle, is unchangeable. No wonder theſe jeſuits are extremely jealous and tender, not only in keeping the poor natives ſlaves to ignorance and bigotry, in order to keep them vaſſals to themſelves; but in concealing ſo much empire and wealth from all the world, eſpecially from Spain, from whence they were ſent, at the expence of that crown, to convert the Indians, and make them ſubject to the Spaniſh monarchy.

The good fathers are ſo far from meaning any ſuch thing, that they not only carefully avoid teaching them the Spaniſh tongue, but preſs it upon them, as a point of conſcience, not to converſe with the Spaniards. If any Spaniard happens to come amongſt them (a thing which the jeſuits are ſo far from encouraging, that they care not to ſee it) he is indeed civilly uſed, but carefully confined within the walls of their holy citadel, the preſbytery: or if, by earneſt intreaty, he obtains leave to walk through the town, he is cloſely guarded by a jeſuit at his ſide, and ſees not a native in the ſtreets; for they are ordered to ſhut themſelves up, and faſten their doors, upon any ſuch occaſion.

Beſides, theſe vigilant fathers keep five or ſix thouſand men, employed in ſeveral detachments (apoſtolic troops) to watch and ſcour the frontiers, in order to cut off all intercourſe with the neighbouring countries, not yet ſubjected to theſe pious fathers of the church. Towards one of their frontiers particularly, leſt the rich mines in it might invite a ſettlement from abroad, they have deſtroyed all the houſes, in order to diſcourage any ſuch ſettlement. For theſe ſelf-denying friars, who are ſworn to poverty, have an ardent zeal to ſecure all theſe wealthy mines to themſelves for religious purpoſes, as they impiouſly pretend.

Theſe poor-rich humble ſovereign miſſionaries, as they are maſters of ſuch immenſe wealth, all conſecrated to their own uſe, that is, to the uſe of religion, make a proper diſplay of it. The churches are ſpacious, magnificent in their ſtructure, and ſet off with all pomp and decorations, grand porticoes and colonnades, rich altars, adorned with baſſo relievo, pictures in frames of maſſy gold, and ſaints of ſolid ſilver, the foot and ſides covered with cloth of gold, and the pedeſtals with plates of gold; the tabernacle made of gold; the pyx, or box for the ſacrament, of gold, ſet round with emeralds and other coſtly jewels; the veſſels and candleſticks made of gold; the whole, when illuminated, making a ſhew almoſt beyond belief. A proper bait for the eyes of the poor deluded natives, who, by ſuch fine ſights, and the pious mountebankry attending them, are retained in due awe and wonder.

The princely perſons of the poor jeſuits are ſuitably lodged in a ſpacious palace, containing grand apartments, furniſhed with many pictures and images, with proper lodgings for their train of officers and domeſtics; the quadrangles and gardens all in proportion; the whole court making a ſquare of ſome miles. And the numerous opulent warehouſes, belonging to theſe holy diſintereſted men, are their property, ariſing out of the induſtry and labour of the poor people.

Such is the ſituation, ſuch the ſtate and inimitable authority of every jeſuit in Paraguay. There are but forty odd of theſe monks in all that great track of country, and in it they have above a million of ſouls, not only to obey them, but to worſhip them; nor do theſe, their ſightleſs and abject ſlaves, know any other god: for where the true God is ever ſo little known, no man will worſhip friars, who always paint him as like themſelves, as they themſelves are, in reality, unlike him.

REMARKS in another Light, before the laſt War, on our article PARAGUAY.

The climate and ſoil of Buenos-Ayres has been thought ſo inviting, that ſome have ſuggeſted extraordinary advantages would ariſe to Great-Britain by a ſettlement to be made here in time of war; and, indeed, as we have been ſo many years very roughly treated by the Spaniards, in our Weſt-India commerce, we ſhould caſt about in times of peace for every place, the taking of which in time of war, might prove beneficial to us, and injurious to the Spaniards, in order to bring them to reaſon by force, if we cannot do ſo by other meaſures.

Would it not be the higheſt act of benevolence, would it not be acting according to the pure and uncorrupt ſpirit of Chriſtianity, to relieve ſuch a country from the oppreſſion and tyranny of Popiſh prieſtcraft?

There runs a noble highway from Buenos-Ayres to the province of Los Charcos, in which and Potoſi, the moſt conſiderable mines are found; and as this province is the ſouthermoſt of the whole kingdom of Peru, ſo conſequently all South America may be ſupplyed with goods or merchandize of all kinds they want this way, infinitely cheaper than any other.

The reaſon why the Spaniards do not make uſe of it for this purpoſe, ſhall be given hereafter. But we think it not amiſs, to give our reader here an account how all South America has been ſupplied with European commodities.

In the firſt place, the goods that come from England are ſhipped at Cadiz aboard the galleons, which carry them to Porto Bello, where they are unloaded, and ſent over-land on mules backs to Panama, and there re-ſhipped on board ſhips in the South-Sea, and carried to Callao, and from thence diſperſed over-land again to the ſeveral provinces of that vaſt continent; from whence, it is plain, the charges of exportation exceed the prime coſt of the goods four or five times.

Whereas, by Buenos-Ayres the charges would be inconſiderable, in compariſon with the uſual way: for the journey from hence to Peru, is made with much eaſe in ſixty days; and for horſes or mules for the carriages, no country in the world is ſo plentifully ſtocked with them as this, for all Peru is ſupplied with theſe animals from hence: and throughout the whole journey they paſs not in the leaſt danger of any hoſtile Indians, for the province of Tucuman, through which they paſs, hath enjoyed a perfect tranquillity from the firſt planting of it by the Spaniards, excepting about Salta, which borders upon the valley of Calchaqui, from whence they uſed to be plagued by the Chileans; and for which reaſon the requas or caravan of mules, which uſe this trade, never come near it.

They meet likewiſe upon this road at every forty or fifty leagues with good towns, as Cordova, St Jago de Leſtro, St Michael de Tucuman, Effeco, Xuxio, Omagoaca, Soechoa, and others, and ſingle plantations diſperſed up and down the country, which make the way both pleaſant and commodious.

The intelligent reader will conſider the vaſt differences betwixt the way now in uſe, and that to ſupply this part of Spaniſh America by the way of Buenos-Ayres, by caſting his eyes upon the maps to help him to form a true judgment upon the matter: he ought, at the ſame time, to remember the inconveniences, as well as charge in entering all the goods at Cadiz in Spaniſh names, to prevent confiſcation, before they can be put on board the galleons, and the many hazards they are expoſed to in embarking and re-embarking ſo often; beſides the land-carriage very often of ſeveral hundred leagues before they come to their intended market, which makes them ſo exceſſive dear, that what coſts one hundred pounds at Cadiz, muſt of neceſſity be ſold for near a thouſand, to recompence the merchant, in any tolerable degree, for the charges and riſque he hath run, as well as the long time he muſt be out of his money.

Whereas, by this way of Buenos-Ayres, when the goods can be carried thither in Engliſh bottoms, if what coſt one hundred pounds in England, be only ſold at market for 250 l. the merchant will gain conſiderably more by it, and be able to have three returns in the time he made one the other way. And it is certain, upon ſo conſiderable a fall of thoſe goods they ſtand in ſo much need of, the conſumption of them will be much augmented; for our ſtuffs and cloths are ſo unreaſonably dear, for the reaſons already mentioned, that the poorer ſort, and even the trading people, make uſe of Quito cloth for their wearing apparel, and only the better ſort uſe Engliſh cloths and ſtuffs. But if we could ever be able to ſettle our trade effectually this way, we ſhould utterly ruin the manufacture at Quito in a few years.

Though much more might be ſaid on this head, yet for the ſake of brevity we omit it: we have ſaid enough to thoſe who are competent judges. This is an article of great importance to England. If we were once neſted here ſecurely

(which

(which if we can ever be perſuaded to undertake heartily, I do not in the leaſt doubt may be eaſily effected in time of war, and our poſſeſſions ſecurely maintained) we ſhould be able, in deſpite both of French and Spaniards, to enjoy a more lucrative trade than ever with South America. For,

Buenos-Ayres, and the country depending on it, afford ſeveral commodities that Peru cannot be without: in the firſt place, all the mules and horſes that are uſed in the preſidency of Los Charcos, where they have ſo great occaſion for them in carrying firſt the ore, and afterwards the ſilver, from place to place, come from hence; and they would have much to do to ſubſiſt at Potoſi, was it not for the great quantity of dried cow's fleſh that is brought from Buenos-Ayres hither, which the ordinary people ſubſiſt upon.

It is not to be imagined how dear proviſions of all kinds are at the mines; and it is worth taking notice of, that all countries in the world that afford gold or ſilver in any plenty, are deſtitute of all other conveniences, and very unhealthy, Chili only excepted.

But what is yet of more importance than all the before-mentioned commodities, is the herb of Paraguay, that is only to be found in the country adjacent, and depending upon the government of Buenos-Ayres; a thing of that mighty conſequence to Peru and Chili, that without it they would find it impoſſible to dig any ſilver ore out of the mines: for thoſe poor wretches, negroes and Indians, that are employed in working in them, are almoſt every hour ſuffocated with mineral vapours, which they meet with in thoſe vaſt ſubterranean caverns; and then nothing will recover them but a liquor, made by infuſing this herb in warm water, ſweetened with ſugar, and drank plentifully, which reſtores them to their former vigour.

Sometimes, when the caſe is very bad, and the ſlaves almoſt dead before they can be brought into the freſh air, they uſe it for an emetic, which is done by making the infuſion ſtronger, and leaving out the ſugar, which clears the ſtomach of the offenſive matter, and ſaves their lives, where every thing elſe is found ineffectual.

The inhabitants that live on the ſurface are likewiſe extremely plagued by theſe mineral exhalations, and their bodies dried, or rather parched up to that degree, that if it was not for this ſame remedy, or liquor, which they are all day ſipping, there would be no living near the mines. And with all the care they can take, without doubt their lives are ſhortened extremely; but what is not avarice capable of doing? In a word, without this herb the mines would be of little or no uſe, and the province of Los Charcos very thinly inhabited.

This herb is gathered in the country of Paraguay, near the city of Aſſumption, which is ſituated upon the river of Plate, about one hundred leagues above Buenos-Ayres, and there made into packs, and ſent down the river to Santa Fé, a ſmall village about eighty leagues above Buenos-Ayres, and depending upon that government; where the merchants from Chili and Peru come to buy it, and load it upon mules, and convey it to their reſpective cities.

This village of Santa Fé, is the only paſs by which it can go to Peru; for people muſt not imagine that one can pick and chuſe which way they will go in thoſe countries, as they can in Europe; it is very providential they have that one good road through ſo large a country, ſo ſparingly inhabited. But ſuppoſe they could do this, it would be to little purpoſe; for if ever we become poſſeſſed of Buenos-Ayres, we muſt likewiſe fortify Santa Fé, which at preſent contains not many houſes, without any great fortification, and take Aſſumption, and ſettle it with a colony of our own.

This city is ſaid to contain about 1000 families, but is no better defended than the other.

It was ſettled by people that had, by their lazineſs and ill management, out-run their fortunes in Peru; and, to this day, ſerves for a retreat to all ſuch people as can live no where elſe in the Indies.

The country round it affords every thing neceſſary for life, even in too great abundance, for which reaſon the inhabitants are exceeding lazy, and utterly neglect commerce, ſpending their time in feaſting and playing on the guitar.

They have very little money ſtirring amongſt them, bartering one thing for another like the Indians. This herb ſerves to procure them cloathing from Buenos-Ayres, as well as all other European goods they want: in ſhort, the country is much too good for it's worthleſs inhabitants, and it's much more worthleſs prieſts. We deſire our readers to obſerve, that all the places we have deſcribed, as Buenos-Ayres, Santa Fé, and Aſſumption, are ſituated upon the ſame river; and though the diſtance between them at firſt ſeems to be very conſiderable, yet their having a direct and eaſy communication by water, makes the paſſage more convenient than fifty miles by land would be.

It is very obvious, therefore, to every common eye, that if we can ever ſettle ourſelves at Buenos-Ayres, the Spaniards will be under an abſolute neceſſity to open a trade with us; nay, it is in our power to impoſe what terms we pleaſe upon them; but if we had no other way to obtain it, than the affording our goods as cheap again as they can furniſh themſelves with the other way, even that, with a little patience, would infallibly produce it. But without truſting to that, we ſhould have them in a manner at our mercy, by having the herb of Paraguay in our hands.

But we have ſtill another lure for the Spaniards, as powerful and as proper to produce the deſired effect, as any yet mentioned; which is, the ſupplying them with negroes in ſufficient number, and cheaper than formerly.

This is the great inconveniency, which the Spaniards have laboured under this laſt age; for having in a manner utterly deſtroyed the natural inhabitants, they are obliged now to perform the work by negroes, of which they could never get the number they wanted; and it is certain, if they were fully ſupplied, they would get yearly above twice the quantity of ſilver they now do.

It muſt be confeſſed they uſed all means imaginable to obtain them. The Genoeſe undertook to ſupply them at a concerted price betwixt them, for which end they formed a company called the Aſſiento, who had their factors at Jamaica, Curaſoa, and Brazil; and let it be conſidered what a prodigious tour they made before they got to the mines; firſt from Guinea to Jamaica, from thence to Porto Bello, and then to Panama, where they were re-ſhipped on board the fleet when returning to Callao; which is a voyage of four months at leaſt, for they have the wind in their teeth every league of this voyage. After ſtaying ſome little time at this laſt mentioned port, they were put on ſhip-board again, and ſent to Africa, which is a voyage of a month, or thereabouts; and when landed, they can't have leſs than 150 miles to the mines: from whence it is obvious, that not above one negroe in three arrived at Potoſi, or the adjacent mines, of thoſe that were originally bought by their factors for that end. Whereas, the negroes that might be ſent from Buenos-Ayres (as was done by the late Aſſiento contract, veſted in the South-Sea company) would be liable to none of the inconveniences that the other poor wretches ſuffered, as paſſing through ſo many different unhealty climates, and ſo many tedious voyages by ſea, enough to wear out bodies of ſteel, eſpecially conſidering how the miſerable creatures are accommodated all the time both with lodging and diet: but this way, they would have but one ſhort voyage by ſea; for, from the coaſt of Guinea to Buenos-Ayres, they would ſail four parts in five of the voyage before the wind; and when landed, paſs through one of the moſt plentiful and healthieſt countries in the world, even in a manner to the mine's mouth: ſo that one may venture to affirm, that with careful management, they would not loſe one in ten. This article alone is of prodigious conſequence, and capable to render our African trade infinitely more flouriſhing than it is at preſent; for a cargo, rightly ſorted for Guinea, conſiſts of fourſcore different commodities at leaſt, of which ſeventy are of the manufactures and produce of this country; and they return us gold, ſlaves, ivory, and wood for dyeing.

There is another capital article of commerce in Buenos-Ayres, which ſhould not be omitted; which is that of hides: though this article ſounds meanly, after ſo many great ones already mentioned; yet, when better examined, will be found of no ſmall conſequence. Monſieur Acarete du Biſcay, the Spaniſh hiſtorian, ſays, when he firſt arrived there, he found riding in the port twenty-two Dutch ſhips, who had on board, one with another, 14000 hides each; and he computes the hides to be worth, in Europe, no more than twenty-five ſhillings a-piece (which is far from the caſe at preſent): and he further ſays, that if there had been fifty ſhips, they might have had the like loading; this therefore is no deſpicable article. This happened when Oliver had declared war againſt Spain, which had put ſuch a ſtop to the trade betwixt Cadiz and America, that the inhabitants were obliged to trade with the Dutch, or want all ſorts of European goods; for, by the law of Spain, this was capital, and the governor, notwithſtanding the neceſſity, was ſome ſmall time after ſent, for this very thing, a priſoner to Spain, and all he had was ſeized for the king's uſe.

The court of Spain ſuffers but two ſhips to go yearly from Cadiz to this colony; and there is not a little ſtriving, who ſhall be the people concerned in them; for they gain above double what the merchants do that ſend their goods in the galleons, and have their returns in much leſs time.

The Spaniſh miniſters of ſtate have been very often ſtrongly ſollicited to bring home all the treaſures of Peru and Chili this way, and utterly forſake that of Porto Bello, as apparently more expoſed to all enemies, eſpecially ſince they have loſt Jamaica. The court was very much inclined to this advice, as being ſenſible of the truth of the allegations, by many ſorrowful experiences in the wars they have had both with the Dutch and us; but upon ſcanning this propoſal more deliberately, they rejected it, becauſe they plainly perceived, if they ſhould abandon the uſual way, a great many cities, and tracks of land, that were then in a flouriſhing condition, would, in a ſhort time, become deſolate, becauſe they abſolutely depend upon the paſſage of the ſilver, and other merchandizes of Peru and Chili, either through or near them; by which means the other nations of Europe, that have not ſuch choice of countries to ſettle, would ſeize upon them, and become

become nearer neighbours to the Spaniards than their true intereſt will allow of.

It muſt be confeſſed, that the Spaniards, upon this occaſion, made a true judgment upon the matter in debate. But if any nation in war with them, ſhould ſeize upon Porto Bello, and think that way to diſtreſs them by hindering them from bringing home the ſilver of Peru, they would find themſelves extremely deceived, and laughed at by the Spaniards, who would very readily change the courſe of it this way; and when the war was over, re-ſettle it again if they ſaw occaſion. I cannot help taking notice here, of a great many people, who, at the beginning of the late war, were full to the brim with the notion of taking Porto Bello and Panama, as if they thought to impriſon the ſilver in the mines; for, by their politics, the Spaniards were neither to have negroes to work them, or a paſſage to bring it to Europe. I have loſt too much time in mentioning ſuch a weak ineffectual project, if it was not in every body's mouth almoſt that pretends to ſpeak of this matter. Nor is this mentioned to depreciate the merit of the worthy, upright, and public-ſpirited admiral, who has always laboured to do his country all ſervices in his power.

If my countrymen have this at heart, as one would think there ſhould be little reaſon to doubt of, let them turn their thoughts upon Buenos-Ayres or Chili; but the firſt is by much to be preferred, for many reaſons: for a voyage to Chili and back again, cannot take up leſs time than twenty months, and a ſhip muſt paſs through as ſtormy and tempeſtuous a ſea as any in the world; whereas to the river of Plate will not take up half the time, and in all probability will meet with little or no bad weather in the whole voyage. Secondly, the viceroy of Peru will not be able to diſturb you at Buenos Ayres, before you probably will have received a ſecond ſupply or reinforcement, but not ſo with Chili. Thirdly, we are more certain of procuring a trade with Peru from hence than from Chili, becauſe of the ſeveral commodities that Buenos-Ayres, and the country adjacent afford, which Peru ſtands in abſolute need of, and can no way diſpenſe without them: there are yet many more reaſons, and, in my opinion, very cogent ones, which, for brevity's ſake, I omit.

When this acquiſition is once made, you need never fear procuring inhabitants, for there will be more occaſion for the bridle than the ſpur; the certain proſpect of being enriched, the plenty and healthineſs of the country, will be ſuch incitement to people impoveriſhed by want of trade and Popiſh ſlavery, that the country would infallibly abound with inhabitants on a ſudden.

But there ought to be better order obſerved in ſettling this country, than that we have hitherto practiſed in our other colonies in America; for it is the greateſt wonder in the world they ever arrived to any perfection: and, indeed, it was in a great meaſure owing to our civil wars, which made many wealthy people fly thither with their ſubſtance. This was the occaſion of the haſty growth of thoſe of Barbadoes and Virginia; indeed New England and Penſylvania, owe their riſe to the ſectaries.

It hath both angered and grieved me, to obſerve in our contiguous colonies upon the continent, this want of foreſight; for I am very ſure if one was attacked by an enemy, the governor of the next, though ever ſo well diſpoſed, would find it the hardeſt matter imaginable to get 500 men together to march to the relief of his neighbour, though they were ſure their own turn would be the next. This is but a ſmall inſtance to what I can give, if I thought it proper. But it is to be hoped, this will ſoon be effectually remedied by the authority of a Britiſh parliament; for we ſee at this time, what inſult the colony of Virginia has lately ſuffered by the French. See the articles BRITISH AMERICA and NORTH CAROLINA.

In the peopling Buenos-Ayres, if ever it ſhould become the Britiſh poſſeſſion, I adviſe my country to follow the Turkiſh policy, and make the people hold their land by the ſame tenure as their Timariote; only it ſhould deſcend to their heirs, upon keeping or obſerving the original contract: which is, to be ready to come completly armed to the appointed rendezvous, and ſerve wherever, and as long as the government requires. The number of acres that might be then allowed for every ſoldier, muſt be ſettled after ſome years obſervation. Another thing that muſt be remembered, is, never to grant too great a tract of land to one man; for this is the greateſt hindrance to the peopling a colony that can be, and is the very diſeaſe that ſome of our plantations are ſick of, as Carolina, New York, and the Jerſeys; neither is Virginia or Maryland free from this diſtemper, which is occaſioned by raſcals taking up the land, becauſe the free rent is little or nothing, and hardly ever paid, in hopes to ſell it dear to new comers; though in the mean time they neither ſtock the ground, or any other way make it uſeful to the public. This very thing hath done ſeveral of our plantations incredible damages, by forcing people away who came to ſettle in them. See the article BRITISH AMERICA, PLANTATIONS.

Buenos-Ayres will allow of theſe, and yet more reſtrictions, if it is found neceſſary; for here they enter upon the Spaniſh improvements without any of their labour, and will have ſo many other advantageous ways of growing rich, by the ſituation and proper commodities of the country, that it may juſtly be reckoned a favour to be permitted to ſettle here, and to have reaſonable tracks of land granted them upon equitable conditions.

This country will, in a very few years, have funds of it's own, without any ways oppreſſing the inhabitants, more than ſufficient to defray the charges of the government; as a ſmall duty upon negroes brought hither for the Spaniards, the like upon exported hides, and a very conſiderable one upon the herb of Paraguay, which will render it one of the leaſt chargeable, and yet one of the moſt important, colonies the crown of Great-Britain ever had.

That this place might have been as eaſily taken at the commencement of the laſt war, [in 1740] as Porto Bello, is little to be doubted; and it's conſequence to Great-Britain, had we poſſeſſed it no longer than during the continuance of the war, would have been of ſo great importance to our trade, as to have in a great meaſure re-imburſed the nation the expence of the war; for by this channel, we might have thrown immenſe quantities of the Britiſh manufactures into Peru: and if the circumſtances of affairs had obliged us to part with this place for the ſake of peace, ſhould we not have been able to have made far better terms with the Spaniards, than we did by giving up only the paltry iſland of Ratan? Before we had parted with Buenos-Ayres, might we not have compelled the court of Spain to have ratified and confirmed to us by treaty, our RIGHT TO THE LOGWOOD TRADE, AND TO A FREE AND UNINTERRUPTED NAVIGATION TO OUR OWN PLANTATIONS? If for the ſake of the Dutch and our Eaſt-India trade, the court of Great-Britain ſhould have judged it eligible to have given up CAPE BRETON, there would have been no reaſon to have parted with Buenos-Ayres, or any other important place we might have taken from Spain, 'till we had made our own terms with that court, and obtained at leaſt thoſe rights which engaged us in the war. See the articles WEST-INDIES and LOGWOOD.

REMARKS on our article PARAGUAY ſince the laſt war, and the DEFINITIVE TREATY of 1763.

By the treatment, it is not only rumoured, but really credited at the time of writing this, our Britiſh logwood cutters have met with in violation of the late treaty of peace, it looks as if the Spaniards had no ſincere intention to adhere to the terms and conditions of peace. Should this prove the caſe, and we ſhould be obliged to come to a freſh rupture with Spain, the fulneſs of time ſeems then to be come to compel us to put an end to the Spaniſh power in America: And as we are now very happily ſituated, by virtue of the laſt treaty, to deprive them of their MEXICON TREASURES, [ſee MEXICO] why not alſo of their PERUVIAN? And Buenos-Ayres, down the river La Plate, being the receptacle of a part of the treaſures from PERU, why ſhould this be unthought of longer? Why ſhould not at length a partition of the richeſt parts of SPANISH AMERICA take effect, either to preſer BRITISH ALLIES, and in that manner ſatisfy them for contributing after a ſucceſsful war, in conjunction with England, to humble Spain once for all?

Jeſuitiſm having met with a great blow lately in Europe, their great place of refuge will certainly be amongſt their fraternity in Paraguay. What they loſe in Europe, therefore, they may gain in Spaniſh America; and while their dominion ſhall encreaſe ſo near to a fountain of Spaniſh Peruvian riches, the more difficult it will be to extirpate them. But on a future Spaniſh war, 'tis to be hoped, England and her Proteſtant allies will be induced to get a footing as near to PERU, as Great-Britain is at preſent to MEXICO, and then we may laugh at the Spaniards for ever after, for any injury they will ever after be able to do to this kingdom or her allies. See our articles AMERICA, BRITISH AMERICA, FRENCH AMERICA, FLORIDA, MEXICO, PERU.

PARAYBA. The captainric of Parayba in Brazil, belonging to the king of Portugal, is ſo called from the river of it's name, lies between that of Rio Grande and that of Tamerac or Itamarika on the ſouth, having the ocean on the eaſt, and the Figuares on the weſt. It's extent from north to ſouth, that is, from Rio de San Juan de Stau to Capo Blanco, is about 35 leagues; that is, from 5 deg. 50 min. of latitude to 7 deg. 40 min. but as to it's depth into the inland parts we can affirm nothing.

The country is watered by two conſiderable rivers, viz. the Parayba abovementioned, and San Domingo al Monogoapa; the former of which lies under 6 deg. 24 min. ſouth latitude, four leagues from Capo Blanco, and diſcharges itſelf by two mouths into the ocean, being ſeparated by a large ſand-bank. This river, though very ſhallow in ſummer, doth ſwell ſo high in winter, that it overflows all the adjacent low lands, and often carries off numbers of men and cattle. The other which lies farther north, is ſaid to be larger towards it's ſource than at the mouth; between thoſe two lies the bay called

Ponto

Ponto de Lucena, between which and Cabo Ledo is a bay, which affords a ſafe ſtation to the largeſt ſhips.

This country did formerly belong to the French, who were diſpoſſeſſed of it by the Portugueze anno 1584, who built in it a large city of it's name, together with ſome other towns and villages, and made ſome conſiderable plantations of ſugar-canes, and erected a number of ſugar-mills on the rivers above-named.

The whole territory is fertile, not only in that commodity, but likewiſe abounds with the Brazil wood, cattle, hides, tobacco, cotton, the roots maniok, aypi, roucou, &c. and much uſed by the natives, who are called Pettiguares, and are at perpetual war with their next neighbours the Figuares.

The city of PARAŸBA, is ſituate at the mouth of the river of that name, and on the ſouth bank of it about three leagues from the main ocean. The river is navigable up to it, and a ſhip may carry without any danger, 6 or 700 barrels of ſugar. The country along the river is pretty low, plain, and rich, but at ſome diſtance from it, it begins to raiſe itſelf gradually into fertile hills and dales, which yield a delightful verdure and product; but the flat country being much the richer, is divided into various cantons under their ſeveral names, all which being fertilized by the overflowing of the river above-mentioned, produce plenty of barley, ſugar, Indian wheat, potatoes, ananas, cocoa-nuts, melons, citrons, oranges, bananas, pakanas, and other neceſſaries of life. The hills are no leſs fertile in good paſture, and the cattle that feed upon them, are in great numbers, inſomuch that their very hides amount to a conſiderable income.

PARCHMENT, in matters of traffic, is made of ſheep or goats-ſkin, prepared after a peculiar manner, which renders it proper for ſeveral uſes, particularly for writing on and covering of books, &c.

Parchment is begun by the ſkinner, and ended by the parchment-maker. It conſtitutes a very conſiderable article in commerce.

MANUFACTURE of PARCHMENT.

The ſkin having been ſtripped of it's wool, and paſſed the lime-pit after the manner of leather [ſee LEATHER], the ſkinner ſtretches it on a kind of frame, conſiſting of four pieces of wood, mortified into each other at the four angles, and perforated lengthways from diſtance to diſtance, which holes are furniſhed with wooden-pins that may be turned at pleaſure, like theſe of a violin.

To ſtretch the ſkin on this frame, they make little holes all around it, and through every two holes draw a little ſkewer; to this ſkewer they tie a piece of ſmall packthread, and tie that over the pins; ſo that, coming to turn the pins equally, the ſkin is ſtrained tight every way, like that of a drum.

The ſkin being thus ſufficiently ſtretched on the frame, the fleſh is pared off with a ſharp inſtrument for that purpoſe; this done, it is moiſtened with a rag, and a kind of white ſtone or chalk reduced to a fine duſt, ſtrewed over it; then with a large pumice ſtone, flat at bottom, much after the manner of a muller for grinding colours, they rub over the ſkin, as if about to grind the chalk, and thus ſcours off the remains of the fleſh. Then they go over it again with the iron inſtrument; again moiſten it as before, and again rub it with the pumice-ſtone, without any chalk underneath; this ſmoothens and ſoftens the fleſh-ſide very conſiderably. They drain it again, by paſſing it over the iron inſtrument as before. The fleſh-ſide thus drained, they paſs the iron on the wool or hair-ſide, then ſtretch it tight on the frame by means of the pins, and go over the fleſh-ſide again with the iron: this finiſhes it's draining; and the more the ſkin is drained, the whiter it ever becomes.

They now throw on more chalk, ſweeping it over with a piece of lamb-ſkin that has the wool on; this ſmoothens it ſtill further, and gives it a white down or nap. It is now left to dry, and when dried, taken off the frame, by cutting it all round.

The ſkin, thus far prepared by the ſkinner, is taken out of his hands by the parchment-maker; who firſt ſcrapes or pares it dry on the ſummer, with an iron inſtrument like that above-mentioned, only finer and ſharper; with this, worked with the arm from top to bottom of the ſkin, he takes away about one half of it's thickneſs. The ſkin thus equally pared on both ſides, they paſs the pumice-ſtone over them, to ſmoothen it. This laſt preparation is performed on a kind of form or bench covered with a ſack ſtuffed with flocks, and leaves the parchment in a condition for writing on.

The paring the ſkin dry on the ſummer, is the moſt difficult preparation in the proceſs; for which reaſon the ſkinners ſeldom dare meddle with it, but uſually leave it to thoſe more experienced in it: the ſummer whereon it is performed, is a calf-ſkin well ſtretched on a frame, ſerving as a ſupport to the ſkin, which is faſtened a-top of it with a wooden inſtrument that has a notch cut in it. Laſtly, that the iron-knife may paſs the eaſier between the ſummer and the ſkin to be pared, they put another ſkin, which they call the counter-ſummer. The parings thus taken off the leather, are uſed in making glue, ſize, &c. What is called vellum, is only parchment made of the ſkins of abortive calves, or at leaſt of ſucking calves; it is finer, whiter, and ſmoother, than the common parchment, but it is prepared in the ſame manner as that, abating that it is not paſſed through the lime-pit.

PARLIAMENT, a grand aſſembly of the three eſtates of the kingdom, viz. lords ſpiritual, lords temporal, and commons, ſummoned to meet the king, to conſult of matters relating to the common-weal, and to enact and repeal laws.

'Till the Conqueſt, the great council, conſiſting only of the great men of the kingdom, was called magnatum conventus, and prælatorum procerumque concilium. The Saxons called it Wittinagemote, or an aſſembly of wiſe men.

After the Conqueſt, about the beginning of the reign of king Edward I. ſome ſay in the time of Henry I. it was firſt called parlementum, from the French parler, to ſpeak; though it ſtill only conſiſted of the barons, or great men of the nation, 'till in the reign of Henry III. according to ſome, the commons were alſo called to ſit in parliament, the firſt writs ſent out to ſummon them, bearing date 49 Henry III. anno 1217, though Sir Walter Ralegh thinks, the commons were firſt called in the 17th of Henry I. and Dr Heylin fixes the time of their firſt admiſſion to the reign of Henry II.

Sir Edward Coke, Dodderide, Prynne, and others, have ſhewn, that the commons of England had ever a ſhare in the legiſlature, and a place in the great aſſemblies; though not on the preſent footing, as making a diſtinct houſe, and as compoſed of knights, citizens, and burgeſſes.

Parliaments are to be ſummoned, prorogued, and diſſolved by the king alone; nor can a parliament begin without the king's preſence, or his commiſſioners. At firſt new parliaments were called every year, by degrees their term grew longer. In the time of king Charles II. they were held a long time, with great interruptions between. Both which methods were found of ſo ill conſequences, that in the beginning of the reign of king William, an act was paſſed, whereby the term of all parliaments was reſtrained to three ſeſſions, or three years, hence called the triennial act. Since that, from other views, the period of parliaments is again, 3 Geo. I. lengthened to ſeven years.

A parliament is called by the king's writ or letter, directed to each lord, commanding them to appear; and by othet writs directed to the ſheriffs of each county, to ſummon the people to elect two knights for each county, and one or two burgeſſes for each borough, &c.

Anciently all the people had votes at the elections; 'till it was enacted by Henry VI. that none but freeholders reſiding in the county, and who had a yearly revenue of 40 s. ſhould be admitted to vote; nor were any to be elected that were under 21 years of age.

That the members might attend in parliament with more freedom, they and all their menial ſervants, were privileged from all arreſts, attachments, impriſonments, &c. for debts, treſpaſſes, &c. but not from arreſts for treaſon, ſelony, and breach of peace.

The place where the parliament meets, is wherever the king pleaſes; of late it has been in the palace of Weſtminſter; the lords and commons each in a diſtinct apartment. In the lords houſe, the princes of the blood are placed in diſtinct ſeats; the great officers of ſtate, dukes, &c. and biſhops on benches; and the viſcounts and barons on others acroſs the houſe, all according to their order of creation, place, &c.

The commons ſit promiſcuouſly, only the ſpeaker has a chair at the upper end, and the clerk and his aſſiſtants at a table near him. Before any matters be done, all the members of the houſe of commons take the oaths, and ſubſcribe their opinions againſt tranſubſtantiation, &c. which teſt, the lords too, though they do not take the oaths, are obliged to take.

The houſe of lords is the ſovereign court of juſtice of the realm, and the dernier reſort; the houſe of commons is the grand inqueſt, but no court of juſtice like the lords.

Any member may move to have a bill brought in for any thing; which, upon a queſtion put, being agreed to by the majority, that perſon, with others, are ordered to prepare and bring in the ſame. When ready, a time is appointed for reading: after reading it by the clerk, the ſpeaker reads the abſtract thereof, and puts the queſtion; Whether or no it ſhall have a ſecond reading? After a ſecond reading, the queſtion is, Whether or no it ſhall be committed? Which is either to a committee of the whole houſe, if it be of importance, or to a private committee?

The committee appointed, and a chairman choſen, the chairman reads the bill, paragraph by paragraph, puts every clauſe to the queſtion, fills up blanks, and makes amendments, according to the opinion of the majority. The bill thus gone through, the chairman makes his report at the ſide-bar of the houſe, reads all the additions and amendments, &c. and moves for leave to bring up the report to the table; which granted, he delivers it to the clerk, who reads the amendments, &c.

The ſpeaker then puts the queſtion, Whether they ſhall be read a ſecond time? and, if agreed to, reads them himſelf. To ſo many as the houſe acquieſces in, the queſtion is now put, Whether the bill thus amended, ſhall be engroſſed, the ſpeaker holds it in his hand, and aſks if it ſhall paſs? If the majority be for it, the clerk writes on it, ſoit baille aux

ſeigneurs. Or in the houſe of lords, ſoit baille aux communes.—If a bill be rejected, it cannot be any more propoſed during that ſeſſion.

Forty members conſtitute a houſe of commons, and eight a committee. A member of the commons, to ſpeak, ſtands up, uncovered, and directs his ſpeech to the ſpeaker of the houſe of commons only. In the lords houſe they vote, beginning at the puiſne or loweſt baron, and ſo up orderly to the higheſt, every one anſwering apart, content or not content. In the houſe of commons they vote by yea's and nay's; and, if it be dubious which is the greater number, the houſe divides. If the queſtion be about bringing any thing into the houſe, the ay's go out; if it be about any thing the houſe already has, the no's go out. In all diviſions the ſpeaker appoints four tellers, two of each opinion. In a committee of the whole houſe they divide by changing ſides, the ay's taking the right, the no's the left of the chair, and then there are but two tellers.

If a bill paſs one houſe, and the other demur to it, a conference is demanded in the Painted Chamber, where certain members are deputed from each houſe; and here the lords ſitting covered, the commons ſtanding bare, the caſe is debated. If they diſagree, the affair is null; if they agree, this, with the other bills that have paſſed both houſes, is brought down to the king, in the houſe of lords, who comes thither cloathed in the royal robes, and with the crown on; before whom the clerk of the parliament reads the title of each bill, and as he reads, the clerk of the crown pronounces the royal aſſent or diſſent.

The names of counties, cities, corporations, borough-towns, and ſtewarties, in Great-Britain, with the number of knights, commiſſioners of ſhires, citizens, and burgeſſes, choſen in each to ſerve in parliament.

A ſcheme of the proportions the ſeveral counties in England paid to the land-tax in 1693, and to the ſubſidies in 1697, compared with the number of members they ſend to parliament.

In this ſcheme the proportions are thus conſidered, viz. That as the whole kingdom ſend 513 members to parliament; ſo the whole of each tax is divided into 513 equal parts; and the firſt column ſhewing the name of the county, the ſecond ſhews how many of the 513 parts each county paid to the land-tax in 1693, the third how many of the 513 parts each county paid to the ſubſidies in 1697, and the fourth how many of the 513 members each county ſend to parliament.

Counties.	Parts of the land-tax.	Parts of the ſubſidy.	Parliament members.

Note, That the proportions of the 6 northern and 5 weſtern counties marked thus * are	103	88	216
And that Middleſex and Eſſex are	104	198	16

Cities are included in their reſpective counties.

MEMBER OF PARLIAMENT, being, according to the conſtitution of our government, obliged to be poſſeſſed of a landed eſtate; and the proſperity of the landed intereſt depending on that of trade, we judge it may not be altogether uſeleſs or diſagreeable to many, to take due notice, in a work of this kind, of a perſonage of ſo high concernment in this kingdom, and upon whom, indeed, the riſe or decline of the national commerce ſo greatly depends.

It will hardly be diſallowed, that a member of parliament is a man of as much conſequence as any in the kingdom. He is placed in the higheſt ſtation, which his country has in it's diſpoſal, and inveſted with the greateſt truſt the people can beſtow upon him. He has the properties, the liberties, nay the lives of thoſe who chuſe him, in his hands; and what is more, he is accountable to no man for what he does. Thus inveſted with almoſt abſolute power, how circumſpect, how cautious ſhould he be of acting in any manner unworthy of this great truſt; a truſt, which is by much the more ſacred, becauſe thoſe who gave it, have diveſted themſelves of the power of calling him to account, for any neglect, or non-performance of his duty in it?

The accompliſhment of a perſon of this conſequence ſhould not be mean, nor his mind baſe and vitiated. There are two ſorts of men, whom we look upon as utterly unfit to preſide in the government of a Commonwealth. Of the firſt are they, who have only wet their lips and taſted of the firſt elements of reaſon and wiſdom, without going through the whole diſcipline and inſtitutions thereof; whereby the thirſt of our inordinate deſires, and the fire and violence of our paſſions are effectually allayed and extinguiſhed. Such men generally give into a way of life, oppoſite to all the precepts of virtue and public ſpirit, becauſe wiſdom and philoſophy have not taken deep root. Had it done ſo, it would have made them learned in the acquiſition of all thoſe virtues, which would have qualified them for ſo conſpicuous and momentous a ſtation.

There is another kind of men, quite different from the former; who, from their very infancy have made wiſdom and philoſophy their whole ſtudy and delight. Their ſpeculative notions, and contemplative way of life, having no regard to the common good of ſocieties, are therefore of no uſe to the public. However ſuch may be juſtly reckoned men of learning and ingenuity; yet, becauſe they are wrapped up in one ſingle ſyſtem of philoſophy, and never bring forth their learning for the public benefit, are therefore deſervedly looked on as unqualified in the affairs of a ſtate.

Plato is of opinion, that ſuch of thoſe recluſe philoſophers, who are in their nature civilized, and well turned for the buſineſs of the world, and capable of being brought to do their duty in a public character, to their own glory, and the advantage of their country, ſhould be compelled to leave their retirement, and to take ſome public truſt upon them. But in relation to thoſe who are of a quite different genius, he gives them up to the enjoyment of their ſolitudes, and leaves them and their philoſophy to grow old together. Wherefore, it has been the opinion of the wiſeſt men, that they who have only made little, or a very mean, progreſs in the exerciſe of the underſtanding, and given no teſtimony of their public virtues; nor they who are wholly immerſed in mere ſpeculation, ſhould never be admitted into a public ſtation in the concerns of government. Not the former, becauſe they have not yet obtained that honeſt and virtuous way of living, that wiſdom and juſtice preſcribe: nor the latter, becauſe they imagine they have attained to more happineſs, than what is to be met with in the civil and political life, and that ſolitude is the only ſtate of bliſs, and therefore they look on all high dignities with contempt and indignation.

Hence it is, that the public is under the neceſſity of ſeeking out a middle claſs of men, well qualified for the adminiſtration of public affairs: ſuch are they, who, in their conduct and ſtudies, have no other view but the acquiſition of ſuch accompliſhments, as are conducive to the happineſs of human ſociety, and the good government of the Commonwealth. This is that peculiar ſort of wiſdom, of which the Britiſh ſenator makes himſelf maſter: whereby he will become well inſtructed, how to bear rule in his own country, and approve himſelf a common friend and public bleſſing to mankind.

A good education, ſays Plato, is the ſource of all knowlege. Parents are now grown neglectful of this, and we ſee them ſhifting off the charge of beſtowing a virtuous and liberal education upon their own children, and giving it into the hands of ſtrangers: the heirs of a noble and generous family are delivered over to the cuſtody of a wretched pedant, or unſkilful

unſkilful pedagogue. The care of Cato, in the education of his ſon, is never to be enough commended. He would by no means ſuffer his own wife to waſh and bathe him, or to ſwathe and dreſs him, unleſs himſelf was preſent, to overſee and aſſiſt her. He had in his family one Chylo, a grammarian, a man well enough verſed in learning, as a domeſtic tutor to his ſon in that branch; yet he thought it an indignity to have a ſervant reproach and domineer over him, or give him correction when faulty.—When he was fit to be inſtructed in literature, and in the laws and cuſtoms of his country, the father himſelf would have the ſole care of him. None but he muſt teach him, even to fling the javelin, to go through the whole exerciſe at arms, to underſtand horſemanſhip, with the manner of fighting in cloſe combat, the art of ſwimming, and all other atchievements, by which youth are inured to the bearing the extremes of heat and cold.

It is alſo ſaid, that Cato wrote a hiſtory for the uſe of his ſon, to bring him acquainted with the exploits of his anceſtors, and with the art of preſiding with glory in the affairs of the ſtate. Whenever his ſon was preſent, the father would never ſuffer any obſcene converſation, or let ſlip any expreſſion, that ſavoured of raſhneſs and anger, or of vice or folly; being as cautious, as if a veſtal virgin was preſent. Such was the behaviour of the great Cato, and ſuch in the general the good conduct of all the Romans, in the education of their children! Among the ſeveral nations and republics of Greece, there was the ſame care uſed in the training up their youth. Theſe were the great maſters and teachers of that uſeful knowlege, which ſhews us the way how to live happily in a private ſtation, and in what manner communities of men are to be beſt governed. It is the general wiſh, that the governors of our literary inſtitutions would be more careful to inſtruct youth in the art of living well, than the art of controverſy, and inſtil into them only the grand branches of knowlege truly ſerviceable to the ſtate, inſtead of the jargon of wrangling, and the little friſkiſh arts of ſporting with words. Were this the caſe, we ſhould ſee their ſcholars become more uſeful repreſentatives of the people, and promoters of the welfare of the kingdom.

The old academies of Greece were the ſeminaries of their republics; out of which, as out of the Trojan horſe, came their beſt kings, and moſt renowned generals and governors. Alexander and Scipio, two of the greateſt commanders that ever lived, with others too numerous to be recounted, had their firſt riſe in glory from the Grecian inſtitutions for literature: and in the ſame way ſhould all thoſe be trained, who may be expected from their birth and fortune to be placed in any diſtinguiſhed ſtation, and more eſpecially the ſenatorial one. Hence it comes to be a national concern; and it is certainly the duty of every government to have public ſchools and colleges, ſo well ordered, that they may be as nurſeries, out of which the ſtate may be furniſhed with perſons endowed with all the virtues and good accompliſhments, that can adorn human nature.

In the progreſs towards the complete education of a perſon of this character, he ſhould from his youth be well inſtructed in the art of ſpeaking, both properly and gracefully; for without this talent, though he may think and judge ever ſo juſtly, yet if he is incapable of expreſſing himſelf with a becoming and maſterly elocution, that the aſſembly may thoroughly underſtand his ſentiments, the aſſembly cannot receive the benefit of his judgment, nor can ſuch a one have the ſatisfaction to obſerve that regard paid to his underſtanding which he merits. At his firſt ſetting out in his enquiry after truth, there are three arts requiſite to be acquired, grammar, logic, and rhetoric. For theſe are the portals to the palace, wherein true wiſdom reſides. From theſe are to be learned the rules of debating and converſing, which muſt be confirmed and improved by uſe and exerciſe, and by reading and imitating the works of the moſt intelligible and pureſt writers. When the ſtudent has made a proficiency thus far, let him not content himſelf with theſe trite and ordinary attainments; but let him graſp at higher improvements; let him enter into philoſophy, and take a view of the ſyſtem of the univerſe; and then let him look into the life, actions, and ways of men, to ſee how families are ordered, and in what manner cities and Commonwealths are eſtabliſhed and governed. In the former of theſe enquiries, Natural Philoſophy, Metaphyſics, and Mathematics are our chief guides: in the latter, Moral Philoſophy, Policy, and Œconomy. Both theſe ſorts of philoſophy have but one and the ſame end in view, by enabling us the better to exerciſe our intellectual faculties to the beſt purpoſes: they differ in this particular indeed; the one of them is conſiſtent with a life of eaſe and leiſure, whilſt the other is converſant with buſineſs, and always in a ſtate of activity. Hence it is that happineſs is either private or public. They who repoſe their happineſs in an active life, in the exerciſe of all the virtues, are always to be eſteemed the moſt beneficial members of the Commonwealth; for every good thing, by being communicated to many, gains ſo much greater addition to it's intrinſic worth; the felicity, which diffuſes itſelf to multitudes, is certainly preferable to that mere contracted happineſs, which centers within the individual. Yet a life of ſpeculation is firſt in order, and more honourable, that preceding practice, and giving life and dignity to the nobleſt actions.

But ſince the good ſenator's happineſs, and all his knowlege and wiſdom, are converſant with a life of activity and public buſineſs; and he ought to be one who knows how to meaſure his actions by the rule of integrity and right reaſon, who is qualified to manage affairs both private and public, and who underſtands how to govern a city by wiſe counſel, how to ſecure a conſtitution by wholeſome laws, and reform it by a due execution of juſtice; it follows, that he ought to make himſelf acquainted with that part of philoſophy which preſcribes the precepts of virtue, which are the limits of human actions, and contain the whole ſcience of behaving well in a national adminiſtration. How ſhall he be able to ſet a ſenate right, in the fundamental duties of juſtice, prudence, and fortitude? Or, how ſhall he appeaſe a multitude, or quell a ſedition, diſpenſe, or expound laws, who is ignorant of the principles of juſtice and prudence? Can ſuch a one be able, wiſely to give his advice about a war or a peace, a league or a treaty, who knows not when a war is juſt or otherwiſe, a peace honourable or the contrary, and a league dangerous or well made, and fit to be kept ſacred and inviolable? The ſubſtance of this knowlege is not to be obtained, but by ſtudying the moſt approved authors in moral philoſophy, policy, and œconomy. For out of theſe treaſures we may make a collection of all the virtues, and of all the arts of government.

There is another ſort of learning likewiſe, not leſs neceſſary to the accompliſhment of this character, by which we are brought acquainted with the moſt remarkable ſayings and exploits of the great and wiſe, who have lived before our times. Theſe are to be met with in the monuments of faithful annaliſts and hiſtorians. Theſe, according to Tully, are the witneſſes and evidences of paſt times, the torch-bearers and guides of truth, human nature's remembrancers, the leaders and conductors of our actions, and the meſſengers and envoys ſent to us by our forefathers.

To this ſtock of knowlege, many additions are to be made, before the Britiſh ſenator can be thoroughly qualified. He muſt be well acquainted with the cuſtoms of his own country, the manners of his countrymen, their way of living, their diſpoſition, and their ſentiments concerning the preſent poſture of affairs, and all the remarkable occurrences of public life. Beſides this, he muſt be ſure to make himſelf maſter of that truly uſeful and neceſſary knowlege, which completes the character of a wiſe ſtateſman. He muſt be well acquainted with the true nature of war and peace, what quarrels his people are engaged in, what leagues and treaties ſubſiſt between them and their neighbours, as alſo between other potentates; what taxes, duties, and cuſtoms are already impoſed, or may be neceſſary in future, and whether they are as wiſely regulated, as they ought to be, conſiſtent with the intereſt of commerce and the liberties of a free people: what the rights of the ſubject are, and what the proceedings of the miniſtry: in what manner the laws are executed; what are the diſcontents or differences among the people, and how they are to be allayed and pacified: what is the preſent ſtate of morality: how the youth of his country are educated and employed: what principles, cuſtoms, and rules of conformity are neceſſary to be introduced, in order to reform and moralize a people; and what is the preſent ſtate of religion.

Nor ſhould the good ſenator be ignorant of what paſſes omong the allies and confederates of his own country; what are their rights and demands: he muſt, in a word, be acquainted with all the reaſons and ends of government, underſtand the cuſtoms and uſages of his people, the proceedings of all courts of judicature, and all public aſſemblies. Nor ſhould he be a ſtranger to the examples and characters of all about him, and to the deſires and expectations of his fellow ſubjects. A good counſellor, ſays Anthony, is ſuch a one, who well underſtands, and always adhercs to, whatever may contribute to the eſtabliſhment and welfare of a ſtate, or increaſe it's happineſs. Such counſellors and ſenators were the Lentuli, the Gracchi, the Metelli, the Scipio's and the Lælii of Old Rome. But in theſe our times, ſuch examples are uncommon enough: we often ſee men crouding for honours and offices, and becoming candidates for the ſenatorial dignity, without the neceſſary qualifications of knowlege, wiſdom, and experience.

If, here and there, a candidate of an exalted character appears in public, yet, perhaps, his only recommendation is a ſingle campaign, or the ſervices of one year, or a little ſmattering of the law, or the greatneſs of his wealth, or the popular clamour of his dependants, and partizans; whilſt he has a very ſlender acquaintance with what have been intimated. The knowlege of men and things, is the riſe and foundation of all true wiſdom, which can never be attained, but by a knowlege of theſe arts, and that ſound policy which is the grand ſupport of the ſtate: without theſe, it is impoſſible for him to think, and ſpeak, and act well or wiſely.

For the perfecting of this character of wiſdom and prudence, it may be neceſſary to become acquainted with the laws and cuſtoms of foreign countries. This ſort of knowlege is attained by travel. The benefit to be made by which, ariſes from obſerving the manner and civilities of thoſe abroad,

and

and ſuch of their rights and cuſtoms as are worthy our imitation; and from remarking their predominant follies and vices, which we muſt avoid. The laws of foreign nations, their juriſdiction, liberties, way and manner of living, their civil and military diſcipline, with the management of their domeſtic affairs, the ſituation of their country, their clime and ſoil, their public buildings, their ornaments and fortifications, deſerve our notice. It may alſo be of uſe to know the real character of every prince, whoſe dominions we viſit; to enquire what opinion the people have of him, and how they are affected towards his government. If there is a ſenate or great council, how are they choſen, and what are the people's ſentiments of their conduct? In what manner is juſtice adminiſtered? What is the national genius of the country? What men they have eminent for their wiſdom and learning, and what great generals? Theſe are proper enquiries to be made by a judicious traveller: beſides theſe, he ſhould endeavour to make ſome uſeful and advantageous diſcoveries, in the commercial arts and found polity, and bring them home, for the ſervice of his own country upon emergencies. But great caution ought to be uſed not to introduce any ſtrange cuſtom into our country, leſt we infect the people with the itch of novelty, and corrupt their minds with effeminacy; whereby they will be brought to forget the rigid virtues and plain honeſty, with the good manners, wiſe laws and cuſtoms of their anceſtors. For the populace are changeable enough, and nothing is more fatal to a government, than extraordinary innovations.

If one who would qualify himſelf for this great office, has no opportunity of travelling, let him ſupply this defect by reading the moſt approved coſmographers, geographers, and hiſtorians: and let him be careful to ſtore up ſuch a ſtock of knowlege, as may preſerve him from that childiſh behaviour, which is the effect of ignorance. In that part of philoſophy, which treats of the more abſtruſe ſecrets of nature, he ſhould not be entirely unſkilful: but he may be very ſparing of this ſort of ſtudies; to run too far into them is not compatible with a character of this kind. Wiſdom has a boundleſs field to range in. The ſciences muſt be cantoned out, ſince no ſingle perſon can become maſter of them all. The compaſs of our knowledge may be comprehended under what is honeſt, pleaſant and profitable. What is honeſt and pleaſant, ſerves rather to make life agreeable, than to qualify us for the governor, court, the roſtrum, or the tribunal; it ſerves us to retire to, and gives new ſtrength and vigour to the underſtanding, by ſeaſonably indulging in lawful eaſe and delicacy. This ſort of philoſophy may poſſibly do the public ſervice, if it's followers delight more in a life of public buſineſs, than to immure themſelves in cells and ſolitude.

There is, however, a retired ſort of philoſophy, which is of great uſe to the public. For we are not to look upon them as the only philoſophers, who are qualified to direct the affairs of a ſtate; ſince, beſides thoſe, there are others, to whoſe written labours, and immortal works, we are indebted for the remains and monuments of true wiſdom and learning. And there is alſo a third ſort, whoſe buſineſs it is to inſtruct thoſe under their care in the rules of virtue, and in the art of government. Theſe men certainly deſerve well at our hands; becauſe, by their leiſure and retirement, we are inſtructed in buſineſs, and taught to come abroad with reputation and advantage. The Antients had many philoſophers of this order: ſuch were Theophraſtus, Heraclides of Pontus, Dicæarchus, Socrates, and Pythagoras: it is remarkable, that the book which Dicæarchus wrote upon government, was, by a decree of the Spartan commonwealth, ordered to be read publicly once a year, and that all the youth ſhould be aſſembled together to attend the lecture.

The great end of true philoſophy, is to cultivate the mind, to plant in it the ſeeds of virtue, and not to grate or tickle the ears with wrangle and contention. All contumelious and paſſionate language, all noiſy combats about words, ſeem unworthy of the name of true philoſophy. All arts and ſciences are not, properly ſpeaking, virtues; they are only the inſtruments and ornaments, by which virtue is attained and perfected. There are various ſects in philoſophy, but theſe differences ought not to diſtract the mind of the wiſe and good ſenator.

When he hath made himſelf maſter of what has been ſpoke of, the attainment he is poſſeſſed of, will become conſpicuous by eloquence, which is the ornament of wiſdom. Where this is wanting, all his other accompliſhments, let them be never ſo extenſive, will inſenſibly dwindle into obſcurity. The art of ſpeaking nervouſly and elegantly, will enable a gentleman in this capacity, not ouly to maintain his own dignity, but to defend the rights and liberties of private perſons, and the intereſt of the community. By this the minds of men, when raiſed to an undue ferment, are eaſily pacified: by this, where they are lulled and becalmed, they are eaſily put in agitation; and this has done more ſure and fatal execution, than the ſword or the ſpear. When the ſenator riſes to ſpeak, let him ſpeak with all the force of reaſon and wiſdom, and with all the graces and ornament of a chaſte and manly eloquence, neither too verboſe and diffuſive, nor too laconic. Let his ſpeech be well weighed, and yet ſeem to be extempore; let the dignity of pathetic action and geſture always accompany whatever he has to communicate.

Next to eloquence, let him endeavour to make himſelf a maſter of the civil law, the deſign of which, is to preſerve an exact equality in the diſtribution of all things. For, who is ſo well qualified to decide the controverſies of his countrymen, to ſuppreſs ſedition, well and wiſely to defend the laws of his own nation, or the rights of the people, as the man who is really a maſter of law and equity?

The houſe of a good and upright lawyer is the national oracle. But the lawyer who ſhould be excluded from the ſenate, is the notorious brawler and tongue-pad. For this ſort of creatures are of a low vulgar order, ſervile and mercenary, capable of being the miniſters of falſhood and injuſtice: wretches, who bring their tongues and their minds well armed and inſtructed, into a court of juſtice, and employ them in the defence of wrong and oppreſſion. It is hardly poſſible for that man to be a ſincere lover of truth and equity, who will proſtitute his eloquence, and let out his tongue to hire. On the other hand, it is part of the office and duty of the good ſenator, to preſerve the proceedings of judicature from all corruptions of fraud and deceit; to become a voluntary accuſer, and ſtrenuous adverſary of all wicked and traiterous ſubjects, and a no leſs zealous defender of the good and virtuous; being actuated by a juſt ſenſe of his own high dignity, a love of juſtice, and affection for his fellow-ſubjects; ſuch was the behaviour, and ſuch the principles, of the wiſeſt and moſt noble Romans, that ever ſat in their ſenate.

In the courſe and progreſs of all conſultations, particular care muſt be taken, that every ſubject brought into debate, may be well weighed and thoroughly examined, in as nice, accurate, and judicious a manner, as human prudence, or human wit, can preſcribe or deviſe. We may enumerate five different ſorts of things, which are the proper ſubjects of public debate and conſultation, viz. the raiſing of money by ſubſidies and taxations; the proclaiming of war, and the making of peace; the defence and ſafeguard of the realm; the ballance of the imports and exports of trade and commerce, and the enacting of good and ſalutary laws.

If a conſultation is to be held upon ways and means to raiſe money, a thorough enquiry muſt be made into the ſtate of the duties and cuſtoms, and every branch of taxation, of which the public revenue conſiſts; that if they are too ſmall, they may be augmented; and if too great, diminiſhed: for no new taxes ought to be impoſed but upon urgent occaſions; becauſe all extraordinary impoſitions are grievous to the ſubject, and occaſion civil diſorders. When the emperor Tiberius was perſuaded to lay a new tax upon the people, he readily anſwered, That a good ſhepherd had a right to the fleeces of his flock, but had none to ſlay and devour them.

A complete knowlege in the finances of this kingdom is no eaſy acquiſition; we do not mean a knowlege only of what money has been raiſed, and how it has been applied: all this is entering little into the heart of the matter; the ſpecific funds, which have produced the revenue, ſhould be enquired into as minutely as a gentleman of œconomy would enquire into every branch of his eſtate; and not only the nett produce of the whole ſhould be ſtated before the national financier, but the groſs produce, that he may be able to judge accurately of the public expence in the collection of ſuch revenue, what proportion that bears to the nett proceeds, and what incumbrance to the ſtate, officers, and tax-gatherers, and all concerned in the revenue, really are to the kingdom. By which means, the wiſe ſenator will be enabled to judge, whether ſuch annual revenue cannot be raiſed at a far leſs expence to the people, with leſs incumbrance to commerce and navigation, with greater advantage to the public credit, and with more glory and ſafegard to the king and the nation.

Nor ſhould the judicious ſenator ſtop here in his enquiries into the MONEY AFFAIRS of the kingdom: he ſhould ſtrictly ſcrutinize into the RATES laid upon all merchandizes imported, that he may be capaciated to enter into the primitive reaſon and foundation of theſe rates, and to know whether the ſame reaſons ſtill ſubſiſt, that gave riſe to them; and whether our connections with certain foreign countries, may not be ſo altered, ſince the time of ſuch rates being laid, as to make it requiſite to alter them likewiſe upon many ſpecies of goods. And to make a right judgment of this matter, it is neceſſary to be acquainted with every ſpecific ſort of merchandize imported, and to know to what uſes in every branch of trade and commerce ſuch ſort of commodities is applied, from their importation to their conſumption, or re-exportation, either in their firſt ſtate of importation, or in a manufactured one. Nor is it enough to know theſe things; the ſenator muſt be knowing in all the ſubſidies and impoſts laid upon ſuch merchandizes, the ſeveral diſcounts to which the merchant is juſtly intitled, and the computation of the nett duties and drawbacks thereupon; whereby he will become ſo minutely acquainted with every branch of the public revenue, as to judge rightly when any alteration may be neceſſary to be made in the rates, or in the ſubſidies and impoſts of any kind; and more eſpecially ſo, if he takes into his conſideration, to what degree the foreign nation, from whence ſuch

commodities are brought, they lay duties upon the Britiſh produce or manufactures of a ſimilar nature to thoſe we lay duties on, and whether they inviolably adhere to, or deviate from, thoſe treaties of commerce which ſubſiſt between our nation and theirs: for this is the criterion whereby to judge when this nation is treated in their merchandize as we ought to be, and upon an equal footing with thoſe nations that have no right by treaty to be upon more advantageous terms than our own.

'The proſperity of a trading kingdom depends on a wiſe regulation of it's revenues, ſays a a judicious Spaniſh author. When taxes are not levied in the manner they ought to be, they are the ruin of trade, a moth in a treaſury, the univerſal lamentation of a nation, and the intereſt and joy of foreigners. But a prudent diſpoſition of them is the ſoul of a ſtate, the life of the people, glory to a prince, grief and diſtreſs to foreigners, and a perpetual fountain of the richeſt bleſſings to human life.' See our articles DUTIES, TAXES, LABOUR, REVENUE, and the CONTENTS for the practical buſineſs of the cuſtom-houſe.

Nothing can be of greater concernment to a trading nation than the wiſe regulation of it's duties and cuſtoms, and the moſt vigilant eye over it's exports and imports; for the grandeur of a kingdom depends ſolely upon ſelling much, and buying little, or upon ſelling more than is bought. He that is conſtantly buying more than he ſells, let him be a ſecond Crœſus in treaſure, muſt be at length reduced to the unhappy ſtate of a beggar, for his ſtock is diminiſhed in proportion to the overballance of goods brought in: but whoever is conſtantly ſelling more than he buys, let him be poor as Lazarus, muſt by ſuch a tranſaction acquire the happy circumſtances of the rich: for, as much as the ballance is in favour of the amount of ſales, juſt ſo much is added to his capital. It is upon this principle the wiſeſt nations diſcourage the importation of foreign goods into their country*, but leave their gates wide open to let their own manufactures go abroad and bring in riches from every quarter.

* When a great proportion of the public revenue of a nation ariſes from the money raiſed by the DUTIES paid by enhanſing the price of foreign imports, which exhauſt the nation's treaſure, the greater thoſe DUTIES and IMPORTS are, the more the nation is drained of it's ſolid wealth; and if the ſupport of the PUBLIC CREDIT depends, in a good meaſure, on the greatneſs of the ſum raiſed by ſuch duties of cuſtom, does not ſuch temporary ſupport of the public credit depend on the gradual ruin of the kingdom? Should not this induce the great repreſentative to think of ſuch a gradual change in the conſtitution of the revenue, that the proſperity of the ſtate may go hand in hand with the height of the revenue, and not riſe upon it's deſtruction? And in relation to the other branches of the public revenue, ſuch as EXCISES, &c. do not theſe demonſtrably tend ſo to raiſe the price of our produce and manufactures, as to enable our foreign competitors in commerce to underſell us at all foreign markets? Is it impoſſible to fall upon meaſures whereby theſe evils may be happily prevented? Is there any thing of this kind inſuperable to the wiſdom of a Britiſh ſenate? Every impartial man muſt readily grant, that it is infinitely more for the ſafeguard and proſperity of an empire, for the good plight and condition of it's finances, to conſiſt and harmonize with the proſperity of it's commerce, than for the one to counteract the other, and that the money we raiſe by virtue of our trade ſhould tend gradually to it's abſolute deſtruction!

Commerce and navigation are the great ſupports of our all: and every expedient to uphold the PUBLIC CREDIT that does not ariſe from the apparent proſperous ſtate and condition of our tratde, can be looked upon only as temporary political amuſements. The more money is raiſed both upon foreign and native comodities, the worſe is the ſtate of our commerce, the former ſhewing that we augment our IMPORTS, whilſt the latter renders us leſs able to increaſe our EXPORTS upon a par with nations which can afford itſelf cheaper than we. Theſe principles are obvious, and muſt, at length, terminate in what every man of diſcernment cannot avoid ſeeing. The good ſenator, therefore, will endeavour to bottom the ſyſtem of our funds upon principles that quadrate with our commercial intereſt; in which caſe the PUBLIC CREDIT will ſtand upon a rock, not to be ſhaken either by the nefarious arts of ſtock-jobbing and bubbles, neither by South-Sea nor Miſſiſſippi ſchemes, nor even by rebellions, or inſults from foreign courts; for, when other nations know the conſtitution of our finances to be ſo wiſely and happily framed, the crown of Great-Britain will have infinitely greater weight in Europe, than it can have whilſt the ſtate of the public revenue is founded upon principles diametrically oppoſite to theſe. Under ſuch circumſtances, we ſhould be as little intimidated to declare war againſt thoſe who offered any dignity to our king and country, as compelled to make a peace any way diſhonourable to the nation, or injurious to it's trade and navigation: and, 'till this comes to be our caſe, and we are enabled gradually to diſcharge our debts, or to leſſen them to ſuch a degree that we may eaſily ſupport them, it is greatly to be feared our miniſters will daily loſe their weight and influence in foreign courts, and, conſequently, be diſabled from treating with them but upon the moſt advantageous terms. See our articles CREDIT [PUBLIC CREDIT], DEBTS [NATIONAL DEBTS], FUNDS, INTEREST of MONEY, MONIED INTEREST, DUTIES.

In deliberating on the two great affairs of war and peace, it is firſt neceſſary to know what is the preſent military and naval ſtate of our country, and how numerous it's forces are both by ſea and land, and how far our finances will admit of their augmentation; of what ſort the war is which we are entering upon, and with what enemy we engage. A ſtrict enquiry ought alſo to be made into the ſtrength of our enemy, and any confederacies againſt us; whether their forces are diſciplined in the ſame, or a different manner from our own, and whether they have better engineers, generals, and admirals, and whether they are a match for us, or inferior in number and ſtrength, that we may regulate our conduct accordingly, and make peace with thoſe who are too mighty for us, and war with thoſe who are unable to reſiſt us, if they attempt to encroachments upon rights, according to the laws of nations, and to ſubſiſting treaties; and the ſcheme of the war, when we are obliged to enter into one, and all it's operations, ought to be well ſettled, upon the beſt principles of prudential foreſight and conſideration. It may likewiſe be of uſe, on theſe occaſions, to look over the hiſtorical accounts of former wars, their riſe, progreſs, and event: for ſimilar and parallel inſtances always explain and illuſtrate each other.

The occaſion of every war, and the juſtice of it, muſt alſo be well weighed and thoroughly ſcrutinized into; and we muſt be well aſſured, after many trials, that the matters in difference cannot be honourably decided, but by the ſword: for, as the comedian obſerves, it is a wiſe way to try all expedients for an accommodation, before we come to blows: an honourable peace is always preferable to an unjuſt war.

And if the debate be upon trade and commerce, and the exports and imports of a country, it is in the firſt place requiſite to enquire, whether any neceſſaries of which the people are in want, do ever go out of the kingdom; whether any thing is exported to foreigners except ſuperfluities, or the reſidue or what is ſpent at home. We muſt alſo take care to make a juſt eſtimate and calculation of the price and value of all commodities, ſold to, or exchanged with, foreign countries, and to balance the difference between profit and loſs, that the public treaſure, or current coin of the commonwealth, may not be diminiſhed [ſee the articles BALANCE of TRADE, and EXCHANGE]. And we muſt likewiſe be ſtrict in prohibiting the importation of all ſuch conſumeables, as ſerve to introduce and encourage luxury and effeminacy.

That the knowlege of trade, both practical and political, is not a matter of a light and trivial nature, we are apt to believe will ſatisfactorily appear to the candid and judicious, who ſhall do us the honour to peruſe theſe our labours. The ſubject conſidered in theſe lights is, perhaps, not leſs extenſive than moſt, and requires no leſs application and ability to become well acquainted with it, than a knowledge of the belles lettres, or any branch of ſcience: it is, indeed, comprehenſive of many of the more lucrative arts, as well as ſciences. See our article MERCANTILE COLLEGE, and our INDEX.

Laſtly, the moſt conſummate prudence is always requiſite in the enacting of good laws, for therein conſiſts the very being, as well as happineſs of the public. On this occaſion, it is neceſſary we ſhould be well acquainted with the whole ſtate, condition, and circumſtances of a nation; the preſent ſituation of it's affairs, what laws it ſtands in need of, what will be well received by the people, or more effectually conducive to the preſerving and ſtrengthning of the conſtitution, and ſecuring and promoting the common felicity; for the commonwealth was not made for the law, but the law for the commonwealth. The better to inform ourſelves upon this ſubject of legiſlation, it will prove of no little uſe to enquire into the laws of other countries, as well as of our own: whereby we may know how to guard againſt the evils under which our neighbours labour, and take example by them, in ſuch inſtances of wiſdom for which they are remarkable. It will be of great advantage in all deliberations upon matters of the firſt conſequence, not to depend altogether on our own judgment, but to adviſe with others, becauſe it is impoſſible for an individual to have more wiſdom than many counſellors.

There are, as Cicero obſerves,—Three ſorts of public things upon which men deliberate, or give or take advice: theſe are things honeſt and profitable, and the differences that are between them whenever they are inconſiſtent with each other.—If in theſe three points the ſenator is fully knowing and experienced, he can never be at a loſs to make a good judgment on any affair of public life. And where two ſubjects of the ſame ſort are offered to conſideration, it is a characteriſtic of a ſound diſcernment to decide which of the two is preferable; which is the moſt honeſt or profitable to the ſtate.

Sometimes a gentleman in this ſituation is called upon to give extemporary advice, and is ſurprized into a neceſſity of delivering his opinion at the moment it is demanded: but, whenever

whenever this happens to be the caſe, we muſt never vary from the cardinal points of profit and honeſty; we muſt always chuſe the good, and reject the evil, and of two evils, where both are inevitable, muſt make choice of the leaſt. The beſt way of forming good and wholeſome counſels, is to keep a ſteady eye upon the firſt and greateſt good, and to have that always in view, whether we are deliberating on matters of public or private concerns, of what relates to our own or to our country's happineſs: for from this firſt principle all our thoughts and counſels ought to be directed. Unleſs the public happineſs be our chief aim, all our deliberations and advice are vain and fruitleſs. How can the mariner ſteer a right courſe, when he is ignorant of the port to which he is bound? In debating within ourſelves what advice is proper, the utmoſt prudence is required; in giving it to others, the utmoſt ſincerity. We muſt ever be cautious to leave as little room as poſſible for fortune to interpoſe, for chance ſeldom brings about events that bear the characteriſtics of wiſe and rational contrivance: let, therefore, all his counſels be the effects of prudence, goodneſs, fidelity, mature experience, thorough deliberation, impartiality, and freedom of thought; without the ſtain of criminal craft and cunning, of temerity, or ſecret ill-will to the public.

Subtle and artful, or daring undertakings, are extremely pleaſant and entertaining; they dazzle with a falſe luſtre, but it is hard to proſecute them aright, and they are often fatal in conſequence. It is of great uſe and ſervice to a commonwealth to obſerve this ſtanding rule, that the ſenate never enter upon any buſineſs within doors, but what has been before thoroughly canvaſſed without; it being a great folly to imagine, that the moſt important affairs can be preſently diſpatched, or require no more conſideration than that only of a ſhort hour, or a few tranſitory moments.

After conſultation regularly had and taken, nothing remains but the giving judgement, in any affair of ſtate under conſideration: ſuch a judgement is an open declaration of the thoughts and counſels of the mind. There is a judicial faculty implanted in mankind by nature: we often find ſome men, who have no character for learning or wiſdom, are yet greatly to be depended on for their judgement, and in time come to be maſters of good ſenſe, great cunning and ſagacity, by dint of uſe and experience. Men of more years than learning are, therefore, much to be relied on for a ſound judgment, becauſe age and experience have, in effect, ſupplied them with a third eye, whereby they take a ſurvey of paſt tranſactions and future events, as well as of the preſent, with ſo much the more accuracy.

We know nothing of a man 'till we have been witneſſes to his converſation; and, 'till a ſenator has delivered his ſentiments, there is no forming a juſt notion either of his wiſdom or prudence. Socrates one day meeting a youth whom he had never ſeen before, looked for ſome time earneſtly upon him, and at laſt ſaid to him, Speak, that I may know what you are. The ſame experiment muſt be tried, before we can approve the wiſdom and gravity of the candidate for this office, or pronounce him duly qualified for ſo high a ſtation: for ſpeech is the image and repreſentative of the mind, and by this muſt the ſenator give proofs of his judgement, and of the force and extent of his capacity.

There are ſome orators whoſe ſpeeches are all gloſs and falſe colouring, intended rather to pleaſe the ear, and touch the paſſion, than inform the judgement: their words are all tinſel and feather, and they have more regard to elegance and delicacy, than to plain and ſolid truth, and cloſe reaſoning. Were their ſpeeches taken to pieces, they would appear to be mere froth and emptineſs, void of weight and ſolidity, veracity or ſincerity. The ſenator's rhetoric muſt never be thus adulterated: he may diſplay his eloquence before the wiſe and eloquent, but he ſhould ſpeak truth even before fools.

There is another ſort of ſpeakers, who are ſwoln with pride, malice, and jealouſy, incenſed by private animoſity; and, whenever they have an opportunity of ſpeaking in public, lay about them with perſonal reflection and calumny. Theſe men are of no advantage to the public, and ſerve only to kindle a fire, infuſe jealouſies and miſunderſtandings, and to ruffle the peace of a country, by introducing parties and factions, diſcord and contention. If they were really good men, they would ſtifle their private animoſities and perſonal reſentments, and make it their choice, as well as think it their duty, not to trouble the commonwealth with them, under pretence of doing it ſervice.

There is a third ſort of members, who for want of capacity, for counſel, and abilities in ſpeaking, implicitly give into the ſentiments of others, and always tread in their ſteps. They who behave in this manner are really not to blame, unleſs they are obliged to it by ignorance and ſtupidity. It is of uſe and benefit to a ſtate to have the leſs able and ſkilful members of it's council readily complying with the ſentiments of their wiſe and more experienced leaders. Sometimes a ſenate is unanimous: on which occaſion it is much the wiſeſt way to concur in the general opinion, and not to give oppoſition only for the ſake of making a ſpeech, and ſpin out the time with tedious bombaſt and fulſome harangues.

Differences in opinion will unavoidably happen, and occaſion debates and altercations, whereby this great aſſembly may be ſplit into oppoſite parties. In all attempts to compoſe theſe differences, and bring ſuch debates to a happy concluſion, we muſt be careful to avoid indecent language, exceſs of paſſion, or perſonal obloquy, with whatever elſe may interrupt the courſe of a deliberate and wiſe conſultation, or ruffle the affections of brethren in the ſame truſt.

The opinions and reſolutions of a ſenate are to be valued by their weight, not by the tale or number of voices: and care muſt be taken that the beſt and wiſeſt member of the great council of the nation may not be borne down by the multitude or majority. Ariſtotle permits a counſellor, deliberating upon any affair of moment, to be twice in doubt; but if, after this, he could not come to any ſettled reſolution, he was for that time to loſe his right of giving any opinion at all. Caution ſhould be uſed not to protract the day, and ſpend too much time in debating a queſtion, without coming to any reſolution: we are guilty of a double fault when we tire both ourſelves and others with tedious harangues. A decent brevity is always to be obſerved in ſpeaking, as alſo an honeſt plainneſs, and an open ſincerity. We muſt not be over eager to ſpeak, or lay ſnares for others, by mingling low artifices or falicies with what we deliver. Every thing ſaid ſhould have real weight, and carry with it a ſerious and important meaning, and muſt be well ſeaſoned with ſimplicity and truth, and with plain but nervous language; for that takes deep root, and ſhews the man of buſineſs in oppoſition to the florid babbler, whoſe words are wind, and leave no impreſſion behind them.

The three rules laid down by Cicero in his laws ought to be duly obſerved by every member of parliament; (1.) That he conſtantly give his attendance in the aſſembly, becauſe a full houſe gives a greater weight to all it's decrees and reſolutions. (2.) That he ſpeak only in his proper turn, or when he is called upon. And (3.) That he ſpeak in ſuch a manner as always to keep cloſe to the ſubject in debate, without ſallying into boundleſs mazes of perplexity and impertinence. That ſenator who wilfully and careleſsly abſents himſelf from the public ſervice without a juſtifiable cauſe, ought (as the ſame author injoins) to be cenſured and puniſhed as a criminal.

Neither is it convenient that ſenators ſhould be permitted to leave the city in which ſuch aſſemblies are held, and to withdraw themſelves into foreign territories, unleſs they are ſent abroad by their ſovereign, to take upon them a command of conſequence, or to execute an embaſſy, &c. leſt, by thinning the ſenate, ſome detriment ſhould unhappily befal the commonwealth. The Romans took care to prevent the ill conſequence of ſuch a practice, by a law made for that purpoſe. After all, the fundamental principle which gives riſe to, and will ever maintain, the ſenatorial dignity, and crown the character of ſo diſtinguiſhed a perſonage, is his conformity in his words and actions, and in all the relative capacities and offices of life, to the rules of virtue, by approving himſelf a juſt, and good man, and adorning his private ſtation with a ſteady conduct, that will give a ſanction to all he ſays and does in public life. It is not enough that we are wiſe and prudent, unleſs we are upright in the whole of our conduct: for prudence without juſtice and goodneſs, dwindles into craft and cunning, and is looked upon rather as a vice than a virtue. Wiſe men are denominated from their wiſdom, but it is ſolid virtue that gives the juſt, the equitable, and the honeſt man his proper titles, and makes him in character what he is really called by name; and good men take their ſtile from their virtues, and not from their wiſdom. Who then is a truly good man, but ſuch a one as is deſcribed by Plato, who well underſtands what virtue is, who takes it into his boſom and cloſeſt embraces, and lives up to it's commands and dictates, and who chuſes to die for the ſake of his country, and to ſave her from any imminent danger, or from falling into an abject ſtate of ſervitude, or from being oppreſſed by the arbitrary dominion of tyrants and uſurpers, or of men remarkable only for their baſeneſs and infamy?—Such truly great and good patriots will endure every thing rather than ſee the ancient conſtitution of their native country overturned.

There are ſome men raiſed to high ſtations and dignities in the ſtate, who thruſt themſelves into public buſineſs by a prompt and eaſy fluency of ſpeaking, and by giving proofs of a lively wit, and more than ordinaray ſagacity, whilſt their hearts are full of deceit and ſubtilty. When ſuch men as theſe are engaged in ſupporting the laws, or in defending the liberties of their country, no orators deliver themſelves with a better grace, or with more beauty and elegance, but, when their ſpeeches are ſifted to the bottom, they are all ſediment and corruption; wrong and injuſtice are the lees of all their fluency and rhetoric; there is nothing truly great and noble in what they ſay, for all their pretences to public good are a vizor, and the tongue does not act in concert with the heart.

There is not a greater plague that can infect the body politic than a ſet of ſuch men, lurking within the bowels of a government, eſpecially if their power and authority are ſo ſituated as to be able to diſtreſs it. Amongſt this claſs are

comprehended

comprehended all thoſe who are of a debauched and licentious character, and ſet themſelves up for men of penetration, artifice and ſtratagem, by a readineſs to commit all manner of oppreſſion and injuſtice, by promoting tumults and ſeditions in a ſtate. Bad as theſe men are, in nothing is their villainy more conſpicuous, and at no time more ſucceſsful, than when they can ſeduce thair countrymen to believe they are really honeſt, upright, and faithful ſubjects: for as man in general, when raiſed to the moſt exalted dignity and higheſt attainments of his nature, is the beſt and nobleſt of animals; ſo when he degenerates as far beneath the ſtandard of law and juſtice, he is, of all the reſt of his own ſpecies, the moſt vile and dangerous.

And if public affairs ſhould ever happen to light into ſuch hands, and reduce the ſtate into great diſorder and confuſion, we muſt put our chief hopes in the king, at the head of a parliament. While that place contains men of courage and public ſpirit, matters cannot long proceed amiſs: whoever, therefore, undertakes that truſt, ſhould continually have before their eyes how much the common welfare depends upon their virtues; but, above all things, they ſhould have diſintereſted and ſelf-denying minds.

It can hardly be conceived, but by thoſe who have ſeen it, what reverence is paid, even by his enemies, to a man of ſteady principles, the tenor of whoſe words and actions are always tha ſame, who is neither to be bought nor frighted: he is admired and followed; all he ſays has it's due weight; his honeſt hoary head is dear to all mankind. Whereas, as Dr d'Avenant ſays, the whiffling prowlers after places, and little buſy intriguers, are contemptible to the very men of whom thay are the wretched inſtruments; and, let the ambitious think what they pleaſe, that man has moſt real power in this country, who is believed to be of the moſt unſhaken integrity towards the public; and he who has ſuch a character, enjoys more true greatneſs than all the vain pomp and honours a court can give.

The employments of England are yet but few, and their profits but inconſiderable, to what they are in ſeveral nations; however, ſmall as they ſeem to be, it is to be feared that ſome time or other they will be made the engines wherewith bad men will endeavour to ſubvert this conſtitution.

It is true, at preſent, we may be out of ſuch a danger, but if, in future times, we ſhould chance to ſee all employments reſerved for men in one certain ſtation; if the road to preferment ſhould lie but through one paſſage; when this happens, we ſhall have cauſe to be alarmed.

They who feel within themſelves abilities to ſerve the public, are by no means blameable in deſiring to be upon the ſtage of buſineſs; on the contrary, that ſour philoſophy which makes ſome perſons at all ſeaſons retire, and abandon the ſtate, is by no means to be commended. They do, according to Tacitus, but Nomine magnifico, ſeque otium velare: if the poſture of affairs will poſſibly admit of it, good men ſhould rather ſtrive to be in power, that the commonwealth may not be ingroſſed by corrupt and unſkilful hands.

A wiſe man can eaſily diſcern whether the miniſters are ſuch, that he may with honour and ſafety mix in councils with them. If the adminiſtration be ſound and right, or if he has but a face looking that way, it is a proper ſeaſon for men of probity, ſkill, and virtue, to produce their talents, and to puſh themſelves forward, in order more fully to mend things: and, at ſuch a time, they ſhould be ready to aſſiſt the ſtate to the utmoſt of their power, nor ſhould they lazily ſuffer the perfections of their minds to be uſeleſs and inactive. And if among theſe there be any very eminent, ſtrong in friends, verſed in affairs of ſtate, of a deep reach and foreſight, who have eloquence to ſway aſſemblies, and courage to reſiſt and overcome popular fury; ſuch ought not to deſpair of the public, but aſſiſt with their wiſdom, to redeem a people from their weak hands who ſhall get into power, when the nation, perhaps, has been in a high ferment, as in boiling liquors the ſcum will get uppermoſt; and there is ſuch a reverence paid to thoſe who have a truly great genius, and a good heart, that, when they offer themſelves to ſerve the commonwealth, the weight of the people will bear down all the upſtart pretenders, and force them to give way, and make room for merit ſo ſuperior.

But if it ſhould ever happen, that the adminiſtration ſhould be intirely bad and deſtructive in their meaſures, then ought good men to have no ſhare nor hand in it; they ſhould withdraw from any participation in the negligence or guilt; they ſhould quit what they cannot honourably hold; they ſhould concern themſelves no more in public buſineſs, leaving ſuch miniſters to govern by themſelves, who will not govern well, and be contented to ſerve their country by defending liberty in one poſt againſt any encroachments; they ſhould not make ſo ill a uſe of that affection the people may bear them, and of the intereſt they may have in the nation, as to be a ſhelter for the crimes or folly of others: nor ſhould they, as it were, lend their countenance, and be the ſcreen, behind which bad men may ſafely attempt to undermine the conſtitution.

If the times are good, ſilent merit will be ſought after; but, if they are bad, ill men will be lifted up to the offices and dignities of the ſtate, by the applauſe of their adherents, and the faction of their friends; but, at ſuch a ſeaſon, it is no ſhame not to be employed. Tacitus ſpeaking of Ælius Lanira ſays, Et non permiſſa provincia dignationem addiderat.

Great men are often liable to one unfortunate vanity: they believe their parts, dexterity, and wiſdom to be ſuch, that they can mend things, give them a new complexion, correct all errors, and at leaſt that they ſhall preſerve themſelves ſound, though every one elſe be tainted; and, upon theſe preſumptions, ſome of the men in beſt eſteem have heretofore engaged with a depraved miniſtry; but we could never ſee that they were able to make any converts: on the contrary, inſtead of changing the court, the court changed them. Courts are but ſlowly mended, and that not by the authority or example of any ſingle perſon, except it be of the prince himſelf, ſtrongly bent to ſet matters upon a right foot; and yet we have more inſtances of courts which have ſpoiled their prince, than of princes that have reformed their courts.

And if it be aſked, When is the moſt proper time for perſons of probity and virtue to undertake the management of affairs? it may be anſwered, It is then ſeaſonable, when things call loudly to be mended, when unſkilful pilots have run the ſhip a-ground, ſo that ſhe ſticks faſt, ready to ſplit at the next coming of the waves; when ignorant men are quite bewildered in their errors; when the whole people ſee and feel the effects of ill government; when the prince grows aſhamed of theſe, whom his ſubjects hate and fear; when the commonwealth cannot emerge out of it's debts and difficulties, without help from abler hands: then is the true time for the beſt and wiſeſt men to offer themſelves to the ſervice of their country. At ſuch a ſeaſon, honeſty will not ſtand alone, weak, defenceleſs, and out of countenance, at the ſight of proſperous vice. Nor can courts be ever ſafe 'till the circumſtance and neceſſity of the times bring thither a party of honeſt and able men, ſtrong enough to maintain itſelf againſt thoſe who are grown great by wicked arts, and conſpicuous ignorance in public buſineſs.

If Engliſhmen will be content in this ſingle point, all muſt of courſe go well; if they who have noble commands in the country will ſcorn meanly to depend in town; if they who have brave ſeats of their own, will deſpiſe the crowded antichambers of the great ones here; if they who have plentiful eſtates, will ſlight a troubleſome, dependent, and precarious employment, they are more happy than a court can make them: if our nobility and gentry would conſider how miſerable the noblemen of France are, with all their mighty places, they would at no time hereafter deſire to wear the livery of bondage. And if they are truly ſeaſoned with theſe notions, That their liberties are above all price, and (as Sir Benjamin Rudiard was wont to ſay) That there is nothing worth being a knave for; the head muſt be very ſkilful, and the heart very bold, that will undertake to invade our fundamental rights.

It is true, what has been here advanced, may ſeem needleſs at preſent, when all things are preſumed to go well; but theſe notions may be of uſe to after-ages.

The duty which private perſons owe to the public lies in a very narrow compaſs, and, when that is thoroughly performed, a country ſeldom fails to ſee a ſteady courſe of wiſdom and honeſty in ſuch as are truſted with the adminiſtration. This duty may chiefly conſiſt in the following particulars:

1ſt, That ſuch as repreſent the people be uncorrupt, unbiaſſed, and diſintereſted.

2dly, That they diligently attend the nation's ſervice.

3dly, That they carfully watch any innovation or incroachments upon the conſtitution.

4thly, That they make proviſion againſt future evils.

5thly, That they look narrowly into the income and expence of the kingdom, and examine which way immenſe debts have been contracted, and how that money has been diſpoſed of which the nation has already granted, and how theſe debts may be gradually leſſened and diſcharged.

6thly, That they hold a ſtrong hand over the men of buſineſs, calling thoſe to an account who, either through folly, or upon ſome wicked deſign, peruſe deſtructive meaſures.

1ſt. That ſuch as repreſent the people be uncorrupt, unbiaſſed, and diſintereſted. This point we have handled ſufficiently; and to what has been already ſaid upon that ſubject, we ſhall now only add, that Rome was once free, that France heretofore had the three eſtates, which were the guardians of it's liberty; that Spain had formerly many rights and privileges, of which nothing now but the ſhadow remains; That Denmark and Sweden had once conſtitutions ſomething like that of England; and that all theſe countries have been enſlaved by their own corruptions.

2dly, That they diligently attend the nation's ſervice; for otherwiſe they do not diſcharge that duty to which they are choſen. It has been formerly a matter of great wonder, that gentlemen ſhould even waſte their fortunes to be elected repreſentatives in parliament, and yet afterwards never mind that ſtation, which they ſeemed before ſo vehemently to court. Cato had many virtues too high for practice, but he may be eaſily imitated in one good quality he had, of never failing to

be

be preſent in the ſenate. Such ſhould give way to others, and make room for men of more leiſure, who can afford to employ their time in the ſervice of their country. But, above all others, they are to blame who can be drawn from their duty by luxury, lazineſs, and pleaſures. Liberty can be hardly wounded in a full houſe; the attempts made upon it in former reigns were made when ſuch as had no dependance upon the court were abſent about their country buſineſs: the ill miniſters of thoſe days took that opportunity to promote taxes, which would never paſs in a full aſſembly, to paſs dangerous laws, to ſet a-foot new-invented corporations, which may be fatal in their conſequences, and to form projects, either deſtructive to the nation in general, or ruinous to particular men. All the ill things that were done have been compaſſed when the negligence of ſome had made one ſide ſtrong, and the other weak.

And if, in after-ages, any of the men of buſineſs ſhould be ſo wicked as to proceed by the ſame councils, and to go by the like meaſures, they will promote their dark deſigns in ſome ſuch juncture, when the beſt patriots ſhall be gone away, quite tired out by ſeſſions artificially prolonged.

But it is the duty of all who love England, to defeat, by unwearied patience, ſuch a conſpiracy againſt the people; and to obviate ſuch a miſchief, if the ordinary rules cannot do it, extraordinary laws may be thought on to oblige the members to that attendance which they owe their country.

He who does not attend, injures the borough for which he ſerves; for it may ſo happen, that in his abſence a thing may paſs to their ruin who have ſent him, and which his preſence might have prevented; his electors, therefore, ſeem to have ſuch a right to his ſervice as in reaſon no others ought to diſpenſe with, without their conſent.

Deſerting in this manner the public is a growing evil, upon which account it ought to have a timely remedy. Perhaps it might not be amiſs, if a bill were brought in to make it highly penal for any member to be abſent from the houſe above 14 days, without expreſs leave firſt had under the ſeal of the borough for which he ſerves.

3dly, That they carefully watch any innovation or incroachments upon the conſtitution. There is nothing lulls a people aſleep more, than the reign of a good prince, reverenced for his wiſdom, feared for his high courage, beloved for his lenity, and admired for a number of other virtues; whereas, under a bad reign, the ſubjects are jealous and vigilant, though often to little purpoſe: however, it is agreed upon by all wiſe men, that the mild rule of Auguſtus contributed more to confirm the ſlavery of Rome, than all the ſeverity and cunning of Tiberius.

The beſt times likewiſe produced the worſt precedents; for, in good times, the people let many things ſlip, being then at their eaſe, not ſuſpicious, and, conſequently, not watchful over the government; but, where this ſupine temper prevails, mixed governments decline immediately into abſolute power. The frequent conteſts that were of old between the ſenate and the people of Rome, without doubt preſerved their freedom: for, where all are of one mind, ill uſe may be made of that unanimity, by ſome ſubtle, eloquent, and ambitious man, who may turn and rule it as he pleaſes: therefore to preſerve conſtitutions that have a mixture in them of popular government, it is neceſſary there ſhould be always ſome diviſion, juſt enough to keep the minds of men awake, that they may obſerve what advantages one part of the ſtate gets over the other.

Bad kings provoke many to look into their actions; but when the people have a good prince, they give a favourable interpretation to all he does.

And the beſt man that ever reigned may be ill ſerved. It is a maxim of our law, That the king can do no wrong, but if an ill be committed in matters of ſtate, the council muſt anſwer for it; if in matters of juſtice, the judges muſt anſwer for it. But though the laws exempt our kings from blame, they are not freed from the bad effects of ill conduct in their miniſters.

He, therefore, who repreſents his country, cannot do the nation nor his prince better ſervice, than to ſee thoſe who ſit at the helm do not run the ſhip upon dangerous rocks. Abſolute dominion is a bait with which the greateſt minds may be tempted; for they whoſe goodneſs is unlimited, may deſire that their power ſhould be ſo too; but no one man ought to think of being omnipotent, unleſs he could be omnifcient and omnipreſent. Beſides, though princes may deſire great power, that they may be able to do great good, ſuch as ſerve them rarely proceed upon this principle. They often deſire their maſters ſhould be arbitrary, in order to their own impunity, and to build a large fortune for themſelves; for which reaſon they ſhould be watched in all their windings, and followed in all their dark and ſubtle mazes.

It ſeldom happens that the liberties of a country are invaded all at once the ſteps of power are leiſurely and ſlow; miniſters who have it in their thoughts to change the nature of a government, go to work by degrees. At firſt they make uſe of the moſt popular hands they can poſſibly procure, ordering it ſo that the people may not perceive who it is that puts their fetters on; but theſe popular men they ſhove out, at the firſt convenient ſeaſon, that all may be of a piece. Their next buſineſs is to corrupt ſuch perſons as have the cleareſt fame, whom they diſcard when ſufficiently tainted, and this they do that the people may think all mankind alike, which naturally drives them to follow thoſe only who are in power, and who can do them ſervice. Afterwards, they get from the nation all the money they can, the collecting of which erects new employments, and creates them a number of dependants, who, in one certain place, ate their chief ſtrength and beſt ſupport: by the diſtribution of theſe ſums, they likewiſe make more friends. But being never out of fear of accounting for all at laſt, their principal aim is to procure their maſter ſuch a STANDING REVENUE, as may make him ſubſiſt without the peoples help, without the neceſſity of a parliement. If they find this impoſſible or difficult, then by accuſations, by exorbitant proceedings without any precedent, and by harraſſing private perſons, either in their fame or fortune, they endeavour to make all the different ranks of the people out of love with their ancient conſtitution.

It has been often obſerved of this nation, That we have loſt by TREATIES what we have gained by VALOUR; and indeed it is very evident, that we have been conſtantly out-witted in the pacts and ſtipulations we have made with foreign ſtates and princes, as well concerning intereſt as dominion: they who could never face us in the field have over-reached us in the cabinet, and all along we have ſeemed ſtronger in a battle than in council.

It is, perhaps, no wonder that our honeſt and plain anceſtors ſhould not have ſufficient ſkill to deal with the riper heads of warmer climates; but we may admire how it comes to paſs that our neighbours the Hollanders in all treaties, but chiefly ſuch as reſpect COMMERCE, have been ever too able for us, whom our vices have made crafty enough in other matters.

Their ſoil does not generally produce better underſtandings than that of England; learning flouriſhes with us as much as with them; our people have ſharper wits; we are more cunning in a court than they; and yet, when we come to treat with them, they are always too ſubtle for us.

But the reaſon of this is apparent to ſuch as examine into the buſineſs; for, as Sir Joſiah Child has excellently well obſerved, 'They have in their greateſt councils of ſtate and war TRADING MERCHANTS, that have lived abroad in moſt parts of the world, who have not only the THEORETICAL KNOWLEGE, but the PRACTICAL EXPERIENCE of TRADE, by whom laws and orders are contrived, and peaces with foreign princes projected, to the great advantage of their trade.

And the concerns of commerce being made among them a matter of ſtate (as it ſhould be in this nation particularly) they commit the care of it to the ableſt heads they have, by whoſe aſſiſtance and wiſdom they have all along got the better of us and other countries.

In the reign of king James I. they obtained that the buſineſs of Amboyna ſhould be ſlurred over; and ſo they have ſecured to themſelves a firm poſſeſſion of the Spice Iſlands.

The peace of Munſter was likewiſe very advantageous to the Dutch in all matters that had relation to their traffic, but eſpecially in the plate trade from Cadiz.

In the reign of king Charles II, by delays and artifice, they got the taking of Bantam paſſed over in ſilence, by which, in a manner, they have engroſſed to themſelves the rich commodity of pepper.

It is likewiſe ſaid, when the book of rates was compiled, that the French knew how to plant ſomewhere a great ſum very ſkilfully, by the help of which they procured that the CUSTOMS and DUTIES upon their product ſhould be light, and heavy upon that of Spain; though apparently we got by one country, and though we were thought to loſe by the other in the general ballance.

It will not, perhaps, be ſeaſonable to expect any redreſs as to paſt injuries, and peradventure ſome of our former errors are capable of little remedy for the preſent; but the wiſdom of the ſtate will undoubtedly provide, that England ſhall be better dealt with in future treaties.

Our LAND-WARS have plunged us in debt, and incumbered us with taxes unſpeakably injurious to our commerce. It is well known our proper buſineſs had been to have inſiſted only upon our STRENGTH AT SEA, for a large fleet would have always guarded and ſecured our traffic, and would have kept that money within the kingdom which has been ſent out to pay LAND-ARMIES IN FOREIGN COUNTRIES.

But as in purſuing quite a contrary courſe, we more conſulted the direct and immediate concern and intereſt of others than our own; ſo, in reaſon and equity, the peaces which our money and arms have chiefly procured, ſhould have been as advantageous to this kingdom, as convenient to the reſt of Europe.

And yet we ſhall reap but little profit from all our expence of blood and treaſure, unleſs the traffic of England be thereby put upon a ſafe and equal foot with all it's neighbours.

The protection and care of trade will, therefore, very much conſiſt in the meaſures that ſhall be taken in this preſent juncture, to ſecure us againſt our neighbours.

Theſe memento's may poſſibly have their uſe, more eſpecially with the younger and leſs experienced members of that auguſt aſſembly, from whoſe wiſdom we expect every bleſſing.

An act of paaliament made in the third year of Geo. III. relating TO BANKRUPTS, BEING INTITLED TO THE PRIVELEGE OF PARLIAMENT, AND BECOMING INSOLVENT.

Whereas merchants, bankers, brokers, factors, ſcrivenors, and traders, within the deſcription of the ſtatutes, relating to bankrupts, having privilege of parliament, are not compellable to pay their juſt dubts, or to become bankrupts, by reaſon of the freedom of their perſons from arreſts upon civil proceſs; and ſome doubts have alſo ariſen, whether in caſes of bankruptcy, a commiſſion can be ſued out during the continuance of ſuch privilege: To remedy which inconveniences, and to ſupport the honour and dignity of parliament, and good faith and credit in commercial dealings, which require that in ſuch caſes, the laws ſhould have their due courſe, and that no ſuch merchants, bankers, brokers, factors, ſcriveners, or traders, in caſe of actual inſolvency, ſhould by any privilege whatever, be exempted from doing equal juſtice to all their creditors; it is enacted, &c.

That from and after 12 May 1764, it ſhall be lawful for any ſingle creditor, or two or more croditors, being partners, whoſe debt or debts ſhall amount to 100 l. or upwards, and for any two creditors, whoſe debts ſhall amount to 150 l. or upwards, or any three or more creditors, whoſe debts ſhall amount to 200 l. or upwards, if any perſon or perſons deemed a merchant, banker, broker, factor, ſcrivener, or trader or traders, within the deſcription of the acts of parliament relating to bankrupts, having privilege of parliament, at any time, upon affidavit or affidavits being made and filed on record in any of his majeſty's courts at Weſtminſter, by ſuch creditor or creditors, that ſuch debt or debts is or are juſtly due to him or them reſpectively, and that every ſuch debtor, as he or they verily believe, is a merchant, banker, broker, factor, ſcrivener, or trader, within the deſcription of the ſtatutes relating to bankrupts, to ſue out of the ſame court ſummons, or an original bill or ſummons, againſt ſuch merchant, banker, &c. and ſerve him with a copy thereof; and if ſuch merchant, banker, &c. ſhall not within two months after perſonal ſervice of ſuch ſummons, (affidavits of the debt or debts having duly been made and filed as aforeſaid) pay, ſecure, or compound for, ſuch debt or debts, to the ſatisfaction of ſuch creditor or creditors, or enter into a bond in ſuch ſum, and with two ſuch ſufficient ſureties, as any of the judges of that court, out of which ſuch ſummons ſhall iſſue ſhall approve of, to pay ſuch ſum as ſhall be recovered in ſuch action or actions, together with ſuch coſts as ſhall be given in the ſame, he ſhall be accounted and adjudged a bankrupt from the time of the ſervice of ſuch ſummons; and any creditor or creditors may ſue out a commiſſion againſt any ſuch perſon, and proceed thereon in the like manner as againſt other bankrupts.

Provided always, and it is hereby declared, that this act ſhall not extend, or be deemed or conſtrued to extend, to any ſuch debt or debts as aforeſaid contracted, before the eighth day of March 1763, any thing herein contained to the contrary thereof in any wiſe notwithſtanding.

And be it further enacted, That if any merchant, banker, &c. ſhall, after the laſt day of this ſeſſion of parliament, commit any act of bankruptcy, that then, and in ſuch caſe, any creditor or creditors as aforeſaid, may ſue out a commiſſion of bankrupt againſt ſuch merchant, banker, &c. and the commiſſioners in ſuch commiſſion, and other perſons may proceed thereon in like manner as againſt other bankrupts; any privilege of parliament to the contrary notwithſtanding.

Provided nevertheleſs, and be it enacted, That nothing in this act ſhall ſubject any perſon intitled to privilege of parliament to be arreſted, or impriſoned, during the time of ſuch privilege, except in caſes made felony by the acts relating to bankrupts, or any of them.

PARTNERSHIPS in trade, are where two or more perſons agree to engage in commerce, either in equal ſhares or otherwiſe.

With reſpect to domeſtic partnerſhips in trade in England, there are various adjudicated caſes, which ought not to be diſregarded by thoſe who enter into ſuch kind of agreements.

Where there are two joint traders, and one accepts a bill, drawn on both him and partner, it binds both if it concerns the trade; otherwiſe, if it concerns the acceptor only in a diſtinct intereſt and reſpect. 1 Salk. 126.

A. and B. were partners as woollen drapers, A. received money in the ſhop of S. S. and gave a note for it ſigned for himſelf and partner; A. and B. being both dead, and A. not leaving ſufficient aſſets, it was held on a bill brought by S. S. againſt the executors of both the partners, that this note being given by one of the partners, it ſhould bind them both; and that though at law it binds only the executor of the ſurviving partner, yet in equity the creditor may follow the eſtate of the other, though no proof was made that this money was brought into the ſtock, or uſed in trade. 2 Vern. 277.

The act of one partner ſhall be preſumed the act of the other, and ſhall bind him, unleſs he can ſhew a diſclaimer, and a refuſal to be concerned. 1 Salk. 292.

A. and B. are copartners, and a judgment is had againſt A. and the goods of both taken in execution; it was held by the court, that the ſheriff muſt ſeize all, becauſe the moieties are undivided; for if he ſeize but a moiety and ſell that, the other will have a right to a moiety of that moiety; therefore he muſt ſeize the whole, and ſell a moiety thereof undivided, and the vendee will be tenant in common with the other partner. 1 Salk. 392.

But though a moiety of a joint ſtock may be taken in execution on judgment againſt one partner; yet, if copartners become bankrupts, the joint eſtate is to diſcharge the joint debts in the firſt place, and the ſeparate eſtate to pay the ſeparate debts; and if there be no ſeparate eſtate, then the reſidue of the joint eſtate, after the joint creditors are ſatisfied, to be applied among the ſeparate cteditors, and ſo vice verſa; for the commiſſioners of bankrupts are intruſted both with a legal and equitable juriſdiction, and may therefore marſhal the different effects. and apply them in diſcharge of the different creditors according to equity and juſtice. 2 Vern. 293. 706. 2 Chon. Ca. 228.

The plaintiff's huſband (to whom ſhe is adminiſtratrix) and the defendant were copartners for many years in the trade of a druggiſt; the plaintiff brought her bill for a diſcovery of the eſtate, and her proportion and dividend thereof, &c. the defendant anſwered, and it appearing that many debts owing to the joint trade ſtood out, it was moved on behalf of the plaintiff, that an able attorney might be appointed to ſue for, and receive thoſe debts; it being alleged in the bill, that the defendant carrying on a diſtinct trade for himſelf, with the perſons that were debtors to the joint trade, to oblige them, he forbore to call in their debts; it was ordered accordingly, unleſs the defendant, within a week, would give ſecurity to the plaintiff, to anſwer her moiety of the debts that were ſtanding out. 1 Vern. 118.

For accounts as ſtated in partnerſhip, according to the moſt accurate methods of double entry. See our article MERCANTILE ACCOUNTANSHIP.

For other ſorts of PARTNERSHIPS in trade, ſee our article ANONYMOUS PARTNERSHIPS.

PARMA, a duchy in Italy, is bounded on the north by the Po, which divides it from the Milaneſe and Cremoneſe; on the ſouth it has part of the territory of Genoa, and duchy of Modena; on the eaſt, part of the duchy of Modena; and on the weſt, the Pavieſe.

The parts into which it is commonly divided are, the duchy of Parma ſtrictly ſo called, that of Placenza, the ſtate of Buffeto, and part of that of the valley of Taro, commonly called Val di Taro. Between Parma and Modena are the ſtates of Pallavicini and Londi, which are commonly diſtinguiſhed from thoſe duchies, becauſe they anciently formed two ſeparate ſtates from them. The firſt of them contains the marquiſate of Buffeto, and Borgo de ſan Domino, and wholly belongs to the duke of Parma; and that of Londi is divided between that prince, who hath in it the Val de Taro, and the prince of Doria, who hath that of Bandi.

The revenue of this dukedom is reckoned to amount to 400,000 crowns, and the ordinary forces of it to 5 or 6000 men. The country is very delightful and fertile, producing great plenty of corn of all ſorts, excellent wine and oil, and was famous formerly for it's fine cheeſe, which was in high requeſt all over Europe; but they are now much outdone by the city and territory of Lodi. Other manufactures, ſuch as ſilk, woollen, linen, &c. are likewiſe carried on here, as in other parts of Italy.

The chief places of this duchy are, Parma, the capital, Placenza, Borgo de Santo Domino, Borgo de Val de Taro, and Ferenzula or Florentiola.

Beſides theſe, there are reckoned above 30 other towns belonging to it, which, for the moſt part, are conſiderable for their largeneſs, or on ſome other accounts.

PARMA, the famed metropolis of this dukedom, is pleaſantly ſituate on the river of that name, but whether it gave it to, or received it ſtom it, is not eaſy to gueſs. It has three ſtately ſtone bridges over it, by which it keeps a convenient communication with it's ſuburb on the other ſide of it: and is about four miles in circumference, well-peopled, and ſeated in the midſt of a pleaſant fertile ſoil, which ſupplies it with plenty of corn, wine, oil, fruits, and every thing it wants for uſe or delight.

It ſtands about 10 miles from the Po, on the ſouth ſide of it, and in the middle way between Modena and Placenza, 35 miles eaſt of the firſt, and as many weſt of the other, 73 north-weſt from Florence, 77 ſouth-eaſt from Milan, and above 200 from Rome, lat. 44. 43. lon. 10. 55. eaſt.

PLACENZA, ſo called from it's moſt agreeable ſituation and exquiſite beauty, above all other cities of Italy, is ſeated in the midſt of a ſpacious fertile plain, about 100 yards diſtant

ſiom

from the Po and the Trebia, and watered with a number of ſmall brooks and canals, and ſheltered on all ſides with pleaſant hills, and both they and the plain producing great plenty of corn, wine, oil, fruits, &c. excellent each in their kind. It has likewiſe very good paſture-grounds, breeds great quantities of cattle, and is famed for making a fine ſort of cheeſe, not inferior to that of Parma and Lodi. Here are likewiſe in it's neighbourhood ſome ſalt ſprings, from which they make a fine ſalt, exceeding white, and in great requeſt. The hills about it have iron mines, plenty of wood, timber, warrens, and parks, all which are ſo inviting and commodious, that the city is always full of inhabitants, eſpecially merchants and tradeſmen, who carry on a very conſiderable commerce; inſomuch that one of their fairs, which begins on the 15th of April, laſts to the end of the month.

PASSPORT, SAFE-CONDUCTS, and PROTECTIONS.

A paſſport, or ſafe-conduct, is a ſecurity given by the king, under the great ſeal, to a ſtranger, for his ſafe coming into and paſſing out of the realm, and touching which there are ſeveral ſtatutes. A paſſport ſignifies a licence granted by any perſon in authority, for the ſafe paſſage of a man, or any ſhip, &c. from one place or country to another.

As to protections, there are two ſorts, a public protection, where a prince takes upon him the defence of another prince or ſtate, for his honour or profit, or a private protection of perſons or ſhips, which is, in effect, no more than a paſſport for ſuch purpoſe. By the law of protection, he that is protected owes all reſpect and honour to his protector, againſt whom he ought not to conſpire, or attempt any thing; and, on the other hand, the protector ought to ſuccour and defend the protected, and uſe him well, for otherwiſe he may withdraw himſelf from the protection, and ſeek another. The Genoeſe having put themſelves under the protection of the French king, revolted, whereupon he changed their conditions into privileges, to the end it might be in his will to deprive them of them when he ſhould think fit. Molloy, Jur. Marit. 84.

In protections of ſhips and perſons, there is generally great faith kept by the granters thereof; for at this day, if a ſhip hath the emperor of Barbary's protection, the pirates of that nation, if they ſeize any ſhip, will reſtore it; and if there be no protection, yet, if the ſhip be taken within ſight of their caſtles, the prize is not abſolute; but if reſiſtance is made, and there be a caption, ſhe then becomes the captor's for ever, as the price of blood.

The ſtatute of Magna Charta, 9 Hen. III. cap. 30. ordains, That all merchants ſtrangers ſhall have ſafe-conduct of coming into, going out of, and remaining in England, to buy and ſell, &c. if they are not openly prohibited, except in time of war, and they are of an enemy's country; and; by 27 Edw. III. cap. 2. ſafe-conduct is to be granted to merchants ſtrangers, not alien enemies, to come and dwell in this kingdom, and return at their pleaſure, as alſo to ſell their goods and commodities, without having them taken from them againſt their wills.

By the act 15 Hen. VI. cap. 3. it is recited, That whereas the lord the king hath granted his letters of ſafe-conduct to certain perſons to come in and go out of the realms of England and Ireland, with a certain number of ſhips charged with their merchandizes, and faith and credit ſhould as well be given to the copy called Vidimus, ſealed under the authentic ſeals, and approved, as to the original of the ſaid letters; and that one John de Guntier granted and delivered ſuch copy of the ſaid ſafe-conduct, to as many perſons as he pleaſed, ſealed with the ſeal of him that called himſelf king of France, under colour of which, a great navy of enemies was aſſembled, and took many ſhips, and the king's liege ſubjects and victuals to the towns and fortreſſes of the adverſaries carried, to the great damage of the king, and his realm of England, &c.

The ſaid lord the king, at the grievous complaint to him made thereof by the commons in parliament, conſidering the great inconveniences which might enſue by ſuch evil uſe of his letters of ſafe-conduct, doth will and ordain, and hath commanded by the authority aforeſaid, to the keepers of his great and privy ſeal, that they ſhall not ſuffer ſuch clauſe Vidimus to be put in any ſafe-conduct from henceforth to be granted, unleſs ſome great or notable cauſe move the ſame lord the king to grant the ſame in ſuch wiſe: and willeth alſo, that in all ſafe-conducts to be granted for the future to any perſon or perſons, the names of them, of the ſhips, and of the maſters, and the number of the mariners, with the portage of the ſhips, ſhall be expreſſed.

By the 18th of Hen. VI. cap. 8. it is ordained, That merchants aliens may at their pleaſure charge ſhips and veſſels of Spain, and other parts enemies of the king, if the maſters, owners, or merchants of ſuch veſſels and ſhips, have the king's letters patents of ſafe-conduct, ſurety, or ſafe-guard, for the ſaid ſhips and merchandizes, making mention of the names of the ſhips or veſſels, and of the maſters thereof, as the manner is. And if any ſuch ſhips charged or loaden with any merchandizes of ſuch merchants aforeſaid, be taken upon the ſea by the king's ſubjects, not having authentic ſafe-conducts for them, within the board of ſuch ſhips or veſſels, at the day of the taking, or not being enrolled in the chancery of record, then the takers and poſſeſſors of the goods and merchandizes ſo taken may enjoy and hold the ſame; and proclamation is to be made of this ſtatute on the ſea-coaſts, to the intent that the ſaid merchants aliens may have knowlege thereof.

The goods and merchandizes loaded in the ſaid ſhips and veſſels of Spain, and other parts, enemies aforeſaid, ſometimes by falſe witneſs, marks, and letters teſtimonials, contrived before the making of this act, were reſtored to the ſaid merchants aliens, together with damages and expences, on ſuit made before the king and his council, or before the chancellor of England, to the great loſs of the owners, maſters, and mariners, takers of the ſaid ſhips, &c. and diſcouragement of the king's liege people to take ſuch ſhips and veſſels, and alſo the hindrance of the navy of the realm: all which is ſet forth in the preamble of the ſaid ſtatute.

By 20 Hen. VI. cap. 1. All letters of ſafe-conduct granted to the king's enemies, or any other perſons, ſhall be enrolled in the chancery of the lord the king, of record, before ſuch letters ſhall be delivered to them to whom the ſame ſhall be granted, or ſhall be void and of no effect: and if, at any time hereafter, any goods or merchandizes are taken by Engliſh ſubjects upon the ſea, or the coaſts of the ſame, loaden in any ſhip or veſſel belonging to enemies, and not having ſufficient letters of ſafe-conduct, enrolled in form aforeſaid, they which ſhall ſo take the ſame goods ſhall enjoy them, without any reſtitution thereof to be made, to whatever perſons the ſaid goods or merchandizes, at the time of taking, or before, were belonging.

And the king's ſubjects taking ſuch ſhips laden with merchandize, not having or ſhewing letters of ſafe-conduct, and bringing them by force to a certain port within the realm, ſhall not receive damage in their perſons or goods for ſo doing, if they be ready to make full reſtitution of the ſame ſhips and merchandize, within a reaſonable time after they ſhall have knowlege of letters of ſafe-conduct enrolled in the ſaid chancery of record before the taking of them.

The ſtatute 31 Hen. VI. cap. 4 enacts, That if any ſubjects offend upon the high ſeas, or in any port within the kingdom, and do damage to any perſon or perſons being ſtrangers in amity, league, or truce with us, or having the king's ſafe conduct, and eſpecially in attacking any ſuch ſtrange perſon, and robbing and ſpoiling of him, his ſhip or goods, &c. the chancellor of England for the time being (as well for the deliverance of any ſuch perſon ſo attacked, as to make reſtitution to every perſon robbed or ſpoiled of ſhips or goods, of the value thereof) ſhall have authority, calling to his aſſiſtance one of the judges, upon a bill of complaint to him made in this behalf, to make ſuch proceſs out of the chancery againſt the offenders, to bring them in there, to anſwer to the parties grieved as aforeſaid, and againſt any other perſons to whoſe hands any perſon ſo attacked, ſhip or goods ſhall come, and alſo for delivery and reſtitution by them to be made of the ſame perſons, ſhips, and goods, as ſhall ſeem to the ſaid chancellor expedient and neceſſary.

And upon this proceſs made out, the chancellor ſhall further proceed, if the caſe ſo require, by advice of any ſuch judge, to make to the perſons ſtrangers that are grieved, full delivery and reſtitution of any perſon attacked, and of all ſuch ſhips and goods, and likewiſe all their coſts, expences, and loſſes diſburſed and ſuffered by them, and thereupon to award all manner of execution out of the chancery, as ſhall be neceſſary for ſuch delivery and reſtitution to be had and made as aforeſaid.

A late act, 4 Geo. II. cap. 18. recites, That treaties are ſubſiſting between the king and the ſeveral ſubjects of Barbary, by which it is ſtipulated, that all ſhips belonging to his Majeſty, or his ſubjects, may paſs the ſeas, and enter into the harbours of the ſaid governments, without any ſeizure or moleſtation, upon producing paſſes of a certain form, under the hand and ſeal of the commiſſioners for executing the office lord high-admiral, called Mediterranean paſſes. It is, therefore, enacted and ordained, That if any perſon ſhall, within his Majeſty's dominions, or without the ſame, falſly forge or counterfeit any paſs for any ſhip, commonly called a Mediterranean paſs, or ſhall utter or eraze any paſs made out by the commiſſioners for executing the ſaid office of lord admiral; or ſhall publiſh as true, any forged, altered, or erazed paſs, knowing the ſame to be forged, &c. every ſuch perſon being convicted in Great-Britain, Ireland, or his Majeſty's plantations where ſuch offence ſhall be committed, ſhall be guilty of felony without benefit of clergy.

And the ſaid offences, which ſhall be committed in any place out of Great-Britain, either within the dominions of his Majeſty or without, may be tried and adjudged in any county of England, by virtue of the king's commiſſion of oyer and terminer and goal delivery, or before any court of juſticiary in Scotland.

By the laws of France, no veſſel ſhall go out of any port of that kingdom to put to ſea, without a paſſport from the admiral, recorded at the admiralty-office, of the place from whence the maſter departs, and within twenty-four hours after

ter the maſter's arrival in any port, he ſhall preſent his paſſport, and declare the place and time of his departure, the burthen and lading of his ſhip, the courſe he has ſteered, the hazards he hath run, the diſorders happened in his ſhip, and all the conſiderable circumſtances of his voyage, &c.

And by a treaty marine, made by king Charles II. with the king of France [ſee MARINE TREATIES] in the year 1677, a form of paſſport (or ſea brief) is appointed, to be given by the lord high-admiral of England, or thoſe to whom the exerciſe of admiralty juriſdiction is ordinarily committed; or by the mayor or other chief magiſtrate, or the commiſſioners or other principal officers of the cuſtoms, in their reſpective ports, and places within the dominions of the king of Great-Britain, to ſhips and veſſels, which paſſport is as follows, viz.

An Engliſh paſſport for ſhipping.
